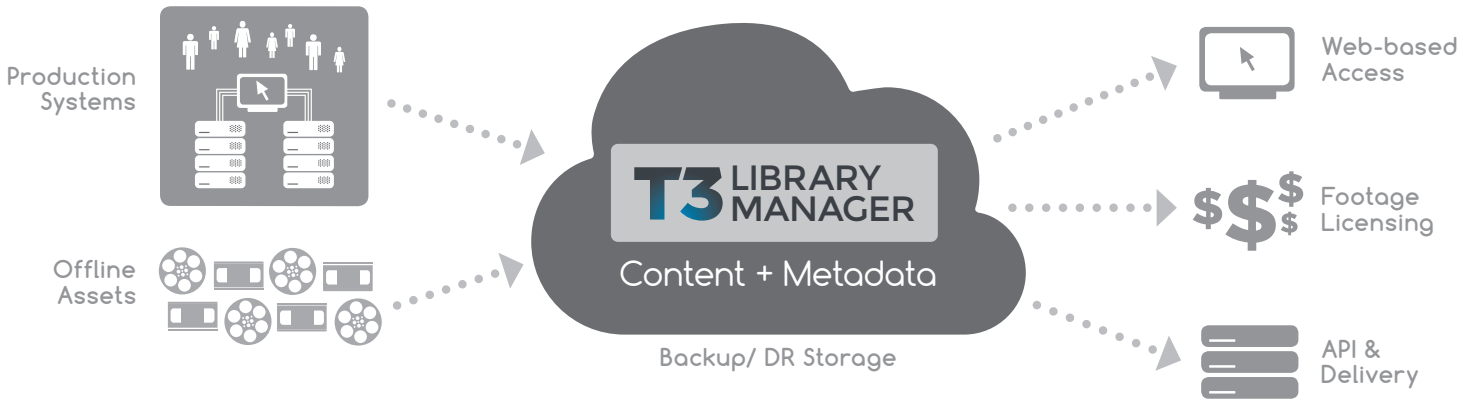
T3Media Thought Equity Motion | PLATFORM

IBM's open source Linear Tape File System

T3Media utilizes **IBM's open source Linear Tape File System™ (LTFS)** and **LTO-5 tape drive technology** within its Platform to provide flexible and scalable cloud-based video storage solutions. This provides media and entertainment companies with streamlined, cost efficient way to store, access, manage and distribute large-scale video libraries.



Benefits

- Brings a new level of ease-of-use and portability to tape storage
- Can help reduce long term data storage costs by roughly 50 percent
- Provides cross platform interoperability
- Enables file management and application features on tape in a manner similar to working with disk files or other removable media
- Self-describing format supports access without traditional tape restoring methods or proprietary software
- Supports "Federated Archive" offering – master-quality archive stored offsite in T3Media's Platform cloud and second copy of LTFS tape kept locally for high availability access
- Can help provide reduced IT footprint
- Supports for evolving requirements of archiving

Customers

Supports Storage and Archive Use Cases for:

- Studios
- TV & film production
- Sports leagues
