Chapter 1. Introduction

This document is intended for use with IBM® Cognos® Business Intelligence PowerPlay®. Cognos PowerPlay is a web-based business intelligence solution with integrated data analysis and exploration features. It also includes a Windows-based client that you use to view, explore, format, and distribute reports.

This document provides the information you need to install and configure Cognos PowerPlay on a Microsoft Windows operating system using a single-server installation with default settings. This installation is the quickest and easiest way to get started and is suitable for setting up a test or evaluation environment.

For information about how to upgrade or install and configure Cognos PowerPlay on more than one computer or in a distributed installation, see the IBM Cognos PowerPlay Installation and Configuration Guide.

For information about migration and about the differences between IBM Cognos Series 7 PowerPlay and IBM Cognos PowerPlay, see the IBM Cognos PowerPlay Migration and Administration Guide.

Audience

To use this guide, you should be familiar with:

- database concepts
- basic Microsoft Windows operating system administration skills
- the existing server environment and security infrastructure in your organization

Finding information

To find IBM Cognos product documentation on the web, including all translated documentation, access one of the IBM Cognos Information Centers (http://publib.boulder.ibm.com/infocenter/cogic/v1r0m0/index.jsp). Release Notes are published directly to Information Centers, and include links to the latest technotes and APARs.

You can also read PDF versions of the product release notes and installation guides directly from IBM Cognos product disks.

Accessibility Features

Accessibility features help users who have a physical disability, such as restricted mobility or limited vision, to use information technology products. This product has accessibility features. For information on these features, see “Accessibility features,” on page 13. IBM Cognos HTML documentation has accessibility features. PDF documents are supplemental and, as such, include no added accessibility features.

Forward-looking statements

This documentation describes the current functionality of the product. References to items that are not currently available may be included. No implication of any future availability should be inferred. Any such references are not a commitment.
promise, or legal obligation to deliver any material, code, or functionality. The development, release, and timing of features or functionality remain at the sole discretion of IBM.

**Samples disclaimer**

The Great Outdoors Company, GO Sales, any variation of the Great Outdoors name, and Planning Sample depict fictitious business operations with sample data used to develop sample applications for IBM and IBM customers. These fictitious records include sample data for sales transactions, product distribution, finance, and human resources. Any resemblance to actual names, addresses, contact numbers, or transaction values is coincidental. Other sample files may contain fictional data manually or machine generated, factual data compiled from academic or public sources, or data used with permission of the copyright holder, for use as sample data to develop sample applications. Product names referenced may be the trademarks of their respective owners. Unauthorized duplication is prohibited.
Chapter 2. Cognos PowerPlay installation on one computer

Installing and configuring IBM Cognos PowerPlay on a single computer using default settings is suitable for a test or evaluation environment.

This document provides instructions for the following type of Cognos PowerPlay installation:

- On a single computer running a supported version of a Microsoft Windows operating system
- Using either Cognos Content Database or IBM DB2® as the content store
- Using Apache Tomcat as the application server which is included with installation
- Using a supported web server on the computer installed with the Cognos PowerPlay software
- With no security enabled

If you are installing Cognos PowerPlay with IBM Cognos Business Intelligence server, install and configure IBM Cognos Business Intelligence server first. Both Cognos PowerPlay and the IBM Cognos Business Intelligence components must be the same version. For more information, see the IBM Cognos Business Intelligence Installation and Configuration Guide.

For information about customizing the installation, distributing the components across multiple computers, using another database or application server, or about upgrading an existing installation, see the IBM Cognos PowerPlay Installation and Configuration Guide.

Additionally, you might want to install the Cognos PowerPlay samples that contain sales and marketing information for a fictional company named the Samples Outdoors Company. You can use sample packages and reports to help you learn how to use Cognos PowerPlay.

The installation process creates log files that include details about transferred files and installation errors. The log files are located in the \c10_location\instlog directory.

System requirements for installing Cognos PowerPlay

Use the following tables to check the minimum hardware and software requirements to install and run IBM Cognos PowerPlay components on one computer.

**Table 1. Hardware requirements to install Cognos PowerPlay**

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operating system</td>
<td>Microsoft Windows</td>
</tr>
<tr>
<td>RAM</td>
<td>Minimum: 2 GB</td>
</tr>
</tbody>
</table>
### Table 1. Hardware requirements to install Cognos PowerPlay (continued)

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Disk space</td>
<td>Minimum: 6.25 GB</td>
</tr>
<tr>
<td></td>
<td>A minimum of 2.5 GB of free space is required to install the software and 4 GB of free space on the drive that contains the temporary directory used by IBM Cognos components.</td>
</tr>
<tr>
<td></td>
<td>For all databases, the size will increase over time. Ensure that you have sufficient disk space for future requirements.</td>
</tr>
</tbody>
</table>

### Table 2. Software requirements to install Cognos PowerPlay

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Web server</td>
<td>A web server must be installed and started.</td>
</tr>
<tr>
<td>Database</td>
<td>Cognos Content Database can be installed and configured as the default content store database in a test or proof-of-concept system.</td>
</tr>
<tr>
<td></td>
<td>If you do not install the Cognos Content Database component, you can use another database, including IBM DB2, Microsoft SQL Server, Oracle, Sybase, or Informix®.</td>
</tr>
<tr>
<td></td>
<td>This document includes steps for using Cognos Content Database and IBM DB2. For the other databases, see the IBM Cognos Business Intelligence Installation and Configuration Guide.</td>
</tr>
<tr>
<td></td>
<td>TCP/IP connectivity is required for all database types.</td>
</tr>
<tr>
<td>Web browser</td>
<td>For all web browsers, the following must be enabled:</td>
</tr>
<tr>
<td></td>
<td>• cookies</td>
</tr>
<tr>
<td></td>
<td>• JavaScript</td>
</tr>
<tr>
<td></td>
<td>For Microsoft Internet Explorer only, the following must be enabled:</td>
</tr>
<tr>
<td></td>
<td>• Run ActiveX controls and plug-ins</td>
</tr>
<tr>
<td></td>
<td>• Script ActiveX controls marked safe for scripting</td>
</tr>
<tr>
<td></td>
<td>• Active scripting</td>

<tr>
<td></td>
<td>• Allow META REFRESH</td>
</tr>
</tbody>
</table>

### Installing Cognos PowerPlay server

In a single computer installation, IBM Cognos PowerPlay server is installed on the same computer as the other Cognos PowerPlay components.

### Before you begin

Apply all required operating system patches and use only the versions of other software that are supported for an IBM Cognos product.

To review an up-to-date list of environments supported by IBM Cognos products, including information about operating systems, patches, browsers, web servers, and database servers, visit the [IBM Cognos Customer Center](http://www.ibm.com/software/data/cognos/customercenter/).
You can install Cognos PowerPlay regardless of whether you have installed the IBM Cognos Business Intelligence software.

**Procedure**

1. Insert the IBM Cognos product disc or go to the location where the installation files were downloaded and extracted.
2. If the installation wizard does not start automatically, go to the operating system directory and double-click the isetup.exe file.
3. The language that you select determines the language of the user interface. You can change the language of the user interface to any of the installed languages.
4. On the Component Selection page, accept the defaults to install all the required components.
   - If you want to install the Cognos Content Database, select **Cognos Content Database**.
   - If you do not install Cognos Content Database, you can use an IBM DB2 database for your content store. Information for using a database other than IBM DB2 are provided in the *IBM Cognos Business Intelligence Installation and Configuration Guide*.
5. Follow the directions in the installation wizard.

**What to do next**

If you installed in a language other than English and want to see user documentation in the same language, you must install the translated user documentation from the Supplementary Language Documentation disc.

If you want to use the samples that are available for Cognos PowerPlay, see Chapter 3, “Installing the Cognos PowerPlay samples,” on page 11.

---

### Setting up database connectivity for a DB2 content store

If you did not install the Cognos Content Database, you can set up database connectivity for a DB2 content store.

If you installed the Cognos Content Database, the database connectivity is already configured for you, and you can proceed to “Saving your settings and starting the IBM Cognos Service” on page 6.

#### Before you begin

DB2 must be installed.

#### Procedure

1. Stop the DB2 services and the HTML Search Server.
2. Copy the following files from the DB2_installation\sql1ib\java directory to the c10_location\webapps\p2pd\WEB-INF\lib directory:
   - The universal driver file, db2jcc.jar.
   - The license file, db2jcc_license_cu.jar.
   - If you installed IBM Cognos PowerPlay to the default location, copy the files to the C:\Program Files\ibm\cognos\c10\webapps\p2pd\WEB-INF\lib directory.
3. Restart the DB2 services and the HTML Search Server.
Creating a content store in IBM DB2

The content store is a database that Content Manager uses to store global configuration data, global settings (such as the language and currency formats shown in the user interface), connections to data sources, and product-specific content.

If you install Cognos Content Database, you do not have to create a content store database.

Before you begin

The database user account must exist.

The DB2 library files must be copied to the c10_location\webapps\p2pd\WEB-INF\lib directory. For example, for DB2 9.7 Microsoft Windows operating system, copy the db2jcc.jar and db2jcc_license_cu.jar files from the C:\Program Files\IBM\SQLLIB\java\ directory to the c10_location\webapps\p2pd\WEB-INF\lib.

Procedure

1. From the Windows Start menu, click IBM Cognos 10 > IBM Cognos Configuration.
2. In the Explorer window, under Data Access, Content Manager, click Content Store.
3. In the Properties window, for the Database name property, type the name of the database or the database alias.
4. Change the logon credentials to specify a valid user ID and password.
   • Click the Value box next to the User ID and password property and then click the edit button when it appears.
   • Type the appropriate values and click OK.
5. In Database server and port number, enter the name of your computer and port number on which DB2 is running. For example, localhost:50000. 50000 is the default port number used by DB2.
6. Right-click Content Store, and click Generate DDL.
7. Click Details to record the location of the generated DDL file.
   The DDL file named createDB.sql is created. The script is created in the c10_location\configuration\schemas\content\db2 directory.
   Use this script to create a database in IBM DB2. For more information about using a DDL file, see your IBM DB2 documentation.

Saving your settings and starting the IBM Cognos Service

You must save your configuration settings and start the IBM Cognos service before users can access IBM Cognos Connection, the product portal.

Procedure

1. From the Start menu, click IBM Cognos 10 > IBM Cognos Configuration.
2. Click File > Save to save your configuration settings.
3. Click Actions > Start.
   It may take a few minutes for the IBM Cognos service to start.
   If you have not configured the mail server information, click OK when prompted, and then click Continue to continue starting the services.
If you have installed the Cognos Content Database component, the Cognos Content Database service will also be started.

### Configuring the web server to view static content

Before you use web pages generated by IBM Cognos Business Intelligence you must configure your web server. You must set up virtual directories to IBM Cognos Business Intelligence directories.

#### Procedure

Create the virtual directories shown in the following table:

<table>
<thead>
<tr>
<th>Alias name</th>
<th>Location</th>
<th>Permission</th>
</tr>
</thead>
<tbody>
<tr>
<td>ibmcognos</td>
<td>c10_location\webcontent</td>
<td>Read</td>
</tr>
<tr>
<td>ibmcognos\cgi-bin</td>
<td>c10_location\cgi-bin</td>
<td>Execute</td>
</tr>
</tbody>
</table>

- You can use a name other than `ibmcognos` in the aliases. However, you must use `cgi-bin` as the second part of the alias and you must change the virtual directory in the Gateway URI property in Cognos Configuration to match the new IBM Cognos alias.
- For Apache Web Server, ensure that you define the `ibmcognos\cgi-bin` alias before the `ibmcognos` alias in the `httpd.conf` file located in the `Apache_installation:\conf` directory. The `ibmcognos\cgi-bin` alias must be defined as a ScriptAlias.

### Using the CGI gateway on Microsoft Internet Information Services version 7

If you are using Microsoft Internet Information Services (IIS) version 7 or later, use the following task to configure the CGI gateway.

#### Procedure

1. Click **Start** then click **Control Panel** then click **Programs and Features**.
2. Click **Turn Windows features on or off**.
3. If you are using Microsoft Windows 2008 Server, take the following steps:
   a. Click **Server Manager** then click **Roles** then click **Web Server (IIS)**.
   b. If CGI is set to **Not installed**, select CGI and click **Add Role Service**.
4. If you are using Microsoft Windows 7, take the following steps:
   a. Expand **Internet Information Services** then click **World Wide Web Services** then click **Application Development Features**.
   b. If CGI is not selected, select CGI.
   c. Click **OK**.
5. In the **Internet Information Services (IIS) Manager** console, under **Connections**, select your server name.
   If you are using Microsoft Windows 7, click **Start > Control Panel > System and Security** then click **Administrative Tools** to access the IIS Manager console.
6. In the **IIS group**, double-click **ISAPI and CGI Restrictions**.
7. Under **Actions**, click **Add**.
8. Enter the path to the cognos.cgi file. The file is located in the c10_location\cgi-bin directory.
   You must enter the full path including the filename. If the path includes spaces, ensure you use quotation marks around the path. For example, enter: "C:\Program Files\ibm\cognos\c10\cgi-bin\cognos.cgi"

9. Enter a Description, such as Cognos CGI.

10. Select Allow extension path to execute, and click OK.

11. Under Actions, click Edit Feature Settings, select Allow unspecified CGI modules, and click OK.

12. Under Connections, expand Sites, and under your web site, add the virtual directories as shown in the table:

   Table 4. Required virtual directories

<table>
<thead>
<tr>
<th>Alias</th>
<th>Location</th>
</tr>
</thead>
<tbody>
<tr>
<td>ibmcognos</td>
<td>c10_location/webcontent</td>
</tr>
<tr>
<td>ibmcognos/cgi-bin</td>
<td>c10_location/cgi-bin</td>
</tr>
</tbody>
</table>

13. Select the cgi-bin virtual directory you created.

14. In the IIS group, double-click Handler Mappings.

15. Under Actions, click Add Module Mapping and take the following steps:
   a. In Request Path, type cognos.cgi.
   b. In Module, select CgiModule.
   c. Leave Executable (optional) blank.
   d. In Name, enter a name for the entry, such as CognosCGI.
   e. Click OK.

Results

Users can access the CGI gateway by entering http://servername/ibmcognos in their Web browsers.

Testing the server components

You can test your access to the portal using your Web browser. Accessing the portal, will also verify whether your installation is running.

Procedure

1. Open a web browser.

2. Test the connection to the IBM Cognos Business Intelligence portal by typing the Gateway URI value from IBM Cognos Configuration. For example, http://host_name:port/ibmcognos/cgi-bin.cognos.cgi

   The default value for host_name:port is localhost:80 and ibmcognos is the virtual directory you created when you configured the web server.

   Note: You do not need to specify the port number, if using the default port number.

   It may take a few minutes for the web page to open. If you see the Welcome page of IBM Cognos Connection, your IBM Cognos Business Intelligence installation is working.
Uninstalling the Cognos PowerPlay software

If you no longer require IBM Cognos PowerPlay, you can uninstall all Cognos PowerPlay components.

Before you begin

To ensure all files are removed, close all programs before you uninstall the PowerPlay software.

About this task

When you uninstall Cognos PowerPlay components, files changed since installation, such as your configuration and user data files, are retained on the computer. You can use these configuration and data files when upgrading to a newer version.

The cognos_uninst_log.htm log file located in the \temp directory records activities associated with the uninstall process.

Procedure

1. From the Start menu, click Programs, IBM Cognos 10, Uninstall IBM Cognos, Uninstall IBM Cognos.
2. Follow the instructions to uninstall components.
3. Delete all temporary Internet files.
Chapter 3. Installing the Cognos PowerPlay samples

To use the samples, install them from the IBM Cognos Business Intelligence Samples disc or from the location where you downloaded and extracted the files.

About this task

The samples include data sources, models, cubes, reports, and other types of content, to support all IBM Cognos Business Intelligence components.

Procedure

1. Insert the IBM Cognos samples disc or go to the location where the installation files were downloaded and extracted.
2. Double-click the isetup.exe file.
   The Welcome page of the installation wizard appears.
3. Select the language to use for the installation.
4. Follow the directions in the installation wizard.
   Install the samples in a different directory than other IBM Cognos PowerPlay components.

What to do next

To set up the samples, you must create a data source connection and import the samples. After setting up the samples, you can use them to learn how to use the Cognos PowerPlay software.

Creating a data source connection to the PowerCube samples

IBM Cognos Business Intelligence PowerPlay uses data source connections to connect to the PowerCube samples and run sample reports or use sample packages. You must create a data source connection to IBM Cognos PowerCube to use the samples.

Procedure

1. Open IBM Cognos Administration by connecting to the IBM Cognos BI portal and clicking Administer IBM Cognos Content on the Welcome page.
2. Click the Configuration tab, and click Data Source Connections.
3. Click the new data source icon.
4. In the Name box, type great_outdoors_sales_en and then click Next. The name must be all lowercase and include the underscore characters.
5. In the connection page, select IBM Cognos Power Cube.
6. In the location box, type the path and file name for the great_outdoors_sales_en.mdc. For example, if you are creating a connection to samples installed to the default location on the local computer, type C:\Program Files\ibm\cognos\c10\webcontent\samples\datasources\cubes\PowerCubes\EN\great_outdoors_sales_en.mdc.
7. To confirm that you entered all parameters correctly, click Test the Connection.
8. On the Finish page, do not select Create a Package.
Importing the Cognos PowerPlay samples

To use the sample package and other content, you must import them from the sample deployment archive.

Before you begin

Before you import the content, ensure that you have created a data source connection to IBM Cognos PowerCube.

Procedure

1. Copy the IBM_Cognos_PowerPlay.zip file from the c10_location/webcontent/samples/content directory to the c10_location/deployment directory.
2. Connect to the IBM Cognos BI portal and on the Welcome page click Administer IBM Cognos Content.
3. On the Configuration tab, click Content Administration.
4. On the toolbar, click the New Import button.
5. In the Deployment Archive box select IBM_Cognos_PowerPlay.
6. Click Next.
7. In the Public Folders Content box, select the Samples folder.

Results

IBM_Cognos_PowerPlay appears in Content Administration and a Samples folder appears in Public Folders in IBM Cognos Connection.

Testing a sample report

To test that your samples were imported successfully, open a sample report in Cognos Viewer. Cognos Viewer is the default viewer when opening a report in IBM Cognos Connection.

Procedure

1. In IBM Cognos Administration, from the toolbar, click Launch, IBM Cognos Connection.
2. In the Public Folders list, open Samples, PowerPlay.
3. Click great_outdoors_sales_en.
4. Click any report in the list. The report opens in IBM Cognos Viewer.
Appendix. Accessibility features

Accessibility features help users who have a physical disability, such as restricted mobility or limited vision, to use information technology products.

See the [IBM Accessibility Center](http://www.ibm.com/able) for more information about the commitment that IBM has to accessibility.

Keyboard Shortcuts for the Installation Wizard

Keyboard shortcuts, or shortcut keys, provide you with an easier and often faster method of navigating and using software.

The installation wizard uses standard Microsoft Windows operating system navigation keys in addition to application-specific keys.

**Note:** The following keyboard shortcuts are based on US standard keyboards.

The following table lists the keyboard shortcuts that you can use to perform some of the main tasks in the installation wizard on the Windows operating system.

*Table 5. List of keyboard shortcuts on a Windows operating system*

<table>
