

Applix TM1 Technical Bulletin

Manually Registering Microsoft ASP.NET Framework for TM1 Web

Date: June 19, 2006

Relevant TM1 Versions: 9.0 SP2

This technical bulletin describes how to manually register the Microsoft .NET Framework version 1.1 before installing TM1 Web. In some situations, the TM1 installation may display an error and not successfully complete if the .NET Framework is not properly installed and registered.

Overview

Applix TM1 Web requires the Microsoft ASP.NET Framework 1.1, along with the .NET Framework 1.1 Service Pack 1, to be installed on the Web server used to deliver TM1 Web.

IMPORTANT: TM1 9.0 SP2 does not support the ASP.NET Framework 2.0.

You can download and install the .NET Framework 1.1, along with the 1.1 Service Pack 1, from the Microsoft Web site:

<http://www.microsoft.com/downloads/results.aspx?poId=&freetext=.net%20framework&DisplayLang=en>

Manually Registering .NET Framework v1.1

To ensure that the Microsoft ASP.NET Framework 1.1 is properly installed and registered on your computer, perform these steps:

1. Manually register the Microsoft ASP.NET Framework 1.1 by opening a Command Prompt window and changing to the following directory:

C:\windows\Microsoft.NET\Framework\v1.1.4322

2. Execute the following command:

```
aspnet_regiis.exe -i
```

If you do not perform the previous steps, or for some reason the Microsoft ASP.NET Framework 1.1 is installed but not registered on your computer, you may receive the following error when installing TM1:

If you experience this error, follow these steps to correct the error and successfully install TM1:

1. Uninstall TM1 using **Add/Remove Programs** in the Windows Control Panel.
2. Manually register the Microsoft ASP.NET Framework 1.1 as explained above.
3. Run the TM1 installation again.
