

TM1 Technical Bulletin

Updating Planning Manager for TM1 Web 9.1

Date: February 16, 2007

Relevant TM1 Versions: 9.1

This bulletin describes how to install the Planning Manager 1.2 hot fix for TM1 9.1. The hot fix is distributed as a .zip archive named **Planning Manager 1.2 HF4.zip**. You can acquire this archive from your Applix representative.

To install the hot fix:

1. Extract the archive to your TM1 Web directory.

If you accepted the default directory during installation, the full path to this directory is C:\inetpub\wwwroot\TM1Web.

2. Set the DisplayCustomToolbar key in the Web.config file as follows:

```
<add key="DisplayCustomToolbar" value="Y;Url=TM1WebPlanManToolbar.aspx;Height=28" />
```

3. Copy all keys from the web.config Planning Manger keys text file and paste them into the Web.config file within the <appSetings></appSettings> tags. Do not overwrite other keys when pasting into the Web.config file.

The web.config Planning Manger keys text file is distributed as part of the Planning Manager 1.2 HF4.zip archive and is extracted to your TM1 Web directory in Step 1 above.
