

**Cognos TM1 Executive Viewer version 9.3 build 1 patch 1
Customer reported issues since version 9.2 build 2 patch 3
November 2007**

| ID | Product | Description |
|--------------------|------------------|---|
| EV-65 | Client | When sorting members that contain a quote in the member unique names, the MDX query used to execute the sort will fail. As a result an error message will show in Executive Viewer Client. |
| EV-75 | Server | When connecting to a TM1 Server that does not have any Dimension Security defined, the error 'Insufficient access rights to one or more dimensions' is shown when logging in as a user that does not have Administrator rights. |
| EV-168 | Server | Executive Viewer Server does not respond anymore when copying an Item with the character '%' in Executive Viewer Explorer. |
| EV-342 | Client | In the German translation the label of the Save button in the toolbar is called 'Ansicht Speichern'. Because it is too long you only see 'Ansicht...'. This can be confusing. |
| EV-354 | Client | The ActionCellClick Event does not return a value for the MemberName argument when clicking on a point in the Scatter Chart. |
| EV-622 | Server | The Render method returns a complete HTML page by default. |
| EV-838 | Client | Selecting a member using a DynaSelect is slower than selecting the member manually. |
| EV-920 | Client | The SetFormula method does not respect parenthesis when applying a new formula. |
| EV-941 | Client | In SSAS dimensions show up with double names if the dimension and the hierarchy have exactly the same name. |
| EV-945 | Client | View notes are lost when using 'Save As...'. |
| EV-1056 | Server | Drill through shows more than 10 rows even when using the option 'Limit Rows to 10'. This only happens on SSAS 2005 databases. |
| EV-1327 | Client | When using HTTP tunneling over a reverse proxy server, some reverse proxy servers may return an invalid or unrecognized response. |
| EV-1348 | Server/Client | When using the Essbase Security Provider, users might receive an Essbase exception stating the maximum number of connections have been exceeded. Further login attempts will fail. |
| EV-1402 | Client | Text lines in the Audit Report that are longer than the page width are not wrapped when saving as PDF. |
| EV-1418 | Desktop Explorer | It is not possible to create a Custom Item in the repository by dragging the Item from the file system into Executive Viewer Desktop Explorer. |
| EV-1432 | Client | Cell lines look dashed when using a 3D border. |
| EV-1433 | Client | Cells addressed by more than one member, representing an Executive Viewer calculation containing a Dynamic function, show 'error!'. |
| EV-1435 | Desktop Explorer | When opening a View that is copied from Executive Viewer Desktop Explorer into the file system, a message is shown stating it is not possible to open the View. |
| EV-1438 EV-1487 | Client | If you reopen some Views that contain a DynaSelect and a Dynamic Calculation, the cells in the view may show 'error!' and the calculation may be removed. |

**Cognos TM1 Executive Viewer version 9.3 build 1 patch 1
Customer reported issues since version 9.2 build 2 patch 3
November 2007**

| ID | Product | Description |
|-----------|----------------|--|
| EV-1439 | Client | Removing calculations from a View may cause a protected memory error. |
| EV-1448 | Client | Maps may show names in wrong locations. |
| EV-1450 | Client | 3D Pie charts drawn on Maps may not be painted correctly when: <ul style="list-style-type: none"> • one of the pie slices represents a value close to zero or; • there are only two slices in the pie chart. |
| EV-1466 | Client | When using the 'Automatic Group Spacing' option, the result is not immediately shown. |
| EV-1472 | Client | When opening a View that contains an Audit Report, members are not listed correctly in the Audit Report. |
| EV-1478 | Client | When reconnecting a View to a Database that contains the same Members as the original Database, Members that are used in calculations may shown 'unknown'. |
| EV-1488 | Server | When using a TM1 database than contains a dimension with multiple root members containing one element that is named the same as the dimension itself, 'error!' is displayed in the cells. |
| EV-1508 | Server | When Attribute Security has been applied to a member of the Measures Dimension in SSAS, Executive Viewer Client shows an 'Invalid parameter' error in the Connection Information Dialog when connecting to an SSAS Database. This error will be shown for each Database on the same SSAS server. |
| EV-1515 | Server | Executive Viewer fails to connect to Essbase 9.3 patch 1. |
