Planning Manager																Same as TM1 Support	✓	✓	✓

Notes:

- Requires Excel 2000, 2002 (XP), 2003 or 2007. Note: Excel 2000 and Excel XP (2002) are in Microsoft extended support. Cognos will make a best effort to address any issues but may be limited by the support available through Microsoft. Excel 2007 support is limited; Documents to be viewed via TM1 Web must be saved in 2003 format; ODBO support via Excel 2007 Pivot tables is not supported. Rules Editor requires .NET Framework 1.1 on the client.
- Cognos TM1 Connector for use with SAP BW - BW version 3.5 and Netweaver BI 7 supported.
- Excel 2003 or 2007 (with latest service pack) recommended on the Web Server. (Excel 2002 supported - see release notes for installation note); Web Application requires .NET 1.1;
- We support Windows 2003 R2 x64 on the Microsoft supported processors - Microsoft lists support for AMD Opteron, AMD Athlon 64, Intel Xeon with EM64T, and Intel EM64T (see MS site <http://www.microsoft.com/windowsserver2003/64bit/x64/editions.msp>)
- Cognos tests and supports only single-language, single-locale configurations of the TM1 system. That is, all software components – client and server operating systems, version of Excel, version of TM1, browser, etc. are set to the same language and locale (e.g., US English, UK English, French FR). If these conditions are not valid, for example if client settings are different from server settings, some problems may be manifested. Cognos will make best efforts to fix such issues related to mixed language environments in subsequent service packs and releases.

Supported but untested Cognos does not actively test the releases with the software listed below, however, we are not aware of any technical issues that would prevent the software from working properly. Should an issue arise within these environments, Cognos will make a best effort to fix it.)

Third Party Software

- TM1 Client running under Citrix
- TM1 Server with VMWare ESX

Database Connectivity

- MS Access 2000, 2002 (XP) and 2003
- MS SQL 2000
- Oracle 8i and higher

Unsupported* (There are known issues when using this version of TM1 with the following)

- Versions of Solaris prior to 10
- TM1 Web with .Net 2.0

* Unsupported list is not meant to be exhaustive but to represent items we are aware of or have been asked about
