Appendix. Notices ........................................ 35
Configure Access for Web (CFGACCWEB2)

Where allowed to run: All environments (*ALL)
Threadsafe: No

The Configure iSeries Access for Web (CFGACCWEB2) command is used to configure iSeries Access for Web for the following web serving environments:

- IBM WebSphere Application Server V5.0 for iSeries
- IBM WebSphere Application Server V5.0 - Express for iSeries
- IBM WebSphere Application Server V5.1 for iSeries
- IBM WebSphere Application Server V5.1 - Express for iSeries
- IBM WebSphere Application Server V6.0 for OS/400
- IBM WebSphere Application Server Network Deployment V6.0 for OS/400
- IBM WebSphere Portal V5.0
- Apache Software Foundation (ASF) Tomcat

Before iSeries Access for Web can be used, it must be configured using this command.

Input parameters are conditional based on the value specified for the Web application server type (APPSVRTYPE) parameter.

This command will use the input configuration parameters to add iSeries Access for Web servlet or portlet configuration information to the web application server.

If multiple web application servers are configured and running on the iSeries server, iSeries Access for Web can be configured to run within each of those web application servers.

When configuring iSeries Access for Web for multiple web application servers, the new configuration can be created based on an existing configuration. The new configuration can share user-generated data with other configurations or a copy of the existing user data can be made for the new configuration.

This command will create a directory structure for user-generated data. User data will be stored to the following locations, depending on the value specified for the Web application server type (APPSVRTYPE) parameter:

- WAS50 - /QIBM/UserData/Access/Web2/was50base/<instance_name>/<application_server_name>
- WAS50EXP - /QIBM/UserData/Access/Web2/was50exp/<instance_name>/<application_server_name>
- WAS51 - /QIBM/UserData/Access/Web2/was51base/<instance_name>/<application_server_name>
- WAS51EXP - /QIBM/UserData/Access/Web2/was51exp/<instance_name>/<application_server_name>
- WAS60 - /QIBM/UserData/Access/Web2/was60/<profile_name>/<application_server_name>
- WAS60ND - /QIBM/UserData/Access/Web2/was60nd/<profile_name>/<application_server_name>
- WP50 - /QIBM/UserData/Access/Web2/wp50/<instance_name>
- ASFTOMCAT - /QIBM/UserData/Access/Web2/asftomcat/<server_name>

When the command runs status information will be displayed indicating what the command is processing. As the command runs, detailed status and error information will also be logged to stream file /QIBM/UserData/Access/Web2/logs/cmds.log.
After the command completes, the web application server may have to be ended and restarted. The iSeries Access for Web configuration will need to be started before it can be accessed.

Restrictions:
- You must have all object (*ALLOBJ) special authority to run this command.
- WebSphere Application Server V5.0/V5.1/V6.0 specific restrictions:
  - The WebSphere Application Server application server, or subsystem, must be ended and restarted after running this command.
  - The WebSphere Application Server subsystem must be running and in a ready state before running this command. Refer to the WebSphere documentation for information on starting the WebSphere subsystem and determining when it reaches a ready state.
  - The application server configured within the WebSphere instance/profile must be running before executing this command.
  - WebSphere Application Server instances/profiles managed by IBM WebSphere Application Server Network Deployment are not supported by iSeries Access for Web.
- WebSphere Portal V5.0 specific restrictions:
  - WebSphere Portal V5.0 must be deployed to a WebSphere instance.
  - WebSphere Portal V5.0 must be running before running this command. This command will call the WebSphere Portal configuration servlet to perform configuration changes to WebSphere Portal for iSeries Access for Web.
- ASF Tomcat specific restrictions:
  - The ASF Tomcat server must be ended and restarted after running this command.

Parameters

<table>
<thead>
<tr>
<th>Keyword</th>
<th>Description</th>
<th>Choices</th>

</tbody>
</table>

"Configure Access for Web (CFGACCWEB2)" on page 1
Web application server type (APPSVRTYPE)

 Specifies which web application server to configure iSeries Access for Web to run under.

This is a required parameter.

*WAS50
WebSphere Application Server V5.0 for iSeries

*WAS50EXP
WebSphere Application Server V5.0 - Express for iSeries

*WAS51
WebSphere Application Server V5.1 for iSeries

*WAS51EXP
WebSphere Application Server V5.1 - Express for iSeries

*WAS60
WebSphere Application Server V6.0 for OS/400 (Base and Express)

*WAS60ND
WebSphere Application Server Network Deployment V6.0 for OS/400

*WP50
WebSphere Portal V5.0

*ASFTOMCAT
Apache Software Foundation (ASF) Tomcat

Web server instance name (WASINST)

 Specifies which IBM WebSphere Application Server instance to configure to run iSeries Access for Web.

This parameter is only applicable when the Web application server type (APPSVRTYPE) parameter is set to one of the following web application servers

- *WAS50 - WebSphere Application Server V5.0 for iSeries
- *WAS50EXP - WebSphere Application Server V5.0 - Express for iSeries
- *WAS51 - WebSphere Application Server V5.1 for iSeries
- *WAS51EXP - WebSphere Application Server V5.1 - Express for iSeries
- *WP50 - WebSphere Portal V5.0

When the Web application server type (APPSVRTYPE) parameter is set to *WP50, this parameter is the WebSphere instance that WebSphere Portal has been configured to run within.

*DEFAULT
When IBM WebSphere Application Server was installed, a default instance was automatically created for the WebSphere installation except for WebSphere - Express for iSeries.

For WebSphere - Express for iSeries environments, an instance is not automatically created and must be created by the system administrator.

When *DEFAULT is specified, iSeries Access for Web will be configured within the default WebSphere instance.

name Specify the name of the WebSphere instance to configure to run iSeries Access for Web.
Web server profile name (WASPRF)

Specifies which IBM WebSphere Application Server profile to configure to run iSeries Access for Web.

This parameter is only applicable when the Web application server type (APPSVRTYPE) parameter is set to one of the following web application servers

- *WAS60 - WebSphere Application Server V6.0 for OS/400
- *WAS60ND - WebSphere Application Server Network Deployment V6.0 for OS/400

*DEFAULT

When IBM WebSphere Application Server was installed, a default profile was automatically created for the WebSphere installation.

When *DEFAULT is specified, iSeries Access for Web will be configured within the default WebSphere profile.

name Specify the name of the WebSphere profile to configure to run iSeries Access for Web.

Tomcat server name (TCSVRNAME)

Specifies the existing Apache Software Foundation (ASF) Tomcat server that will be configured to run iSeries Access for Web.

A parameter value is required when *ASFTOMCAT is specified for the Web application server type (APPSVRTYPE) parameter.

name Specify the name of an existing ASF Tomcat server.

Tomcat home directory (TCHOMEDIR)

Specifies the Apache Software Foundation (ASF) Tomcat home directory that the ASF Tomcat server was configured to use.

When the ASF Tomcat server was configured, an integrated file system (IFS) path was specified as the location for the ASF Tomcat servlet engine and its associated files. By default, the directory may have been set to /ASFTomcat/<server_name>. The path can be verified by checking the Tomcat server settings.

This home directory contains subdirectories for logs, applications, and configuration information for the ASF Tomcat server.

The CFGACCWEB2 command will create directories and files within this path for iSeries Access for Web.

A parameter value is required when *ASFTOMCAT is specified for the Web application server type (APPSVRTYPE) parameter.

path-name Specify the path name of the ASF Tomcat home directory.
**Tomcat user profile (TCUSRPRF)**

Specifies the user ID that the Apache Software Foundation (ASF) Tomcat server was configured to use.

The CFGACCWEB2 command will use this value to grant the ASF Tomcat server user ID access to iSeries Access for Web files.

This parameter is required and only applicable when *ASFTOMCAT is specified for the Web application server type (APPSVRTYPE) parameter.

*simple-name*  
Specify the name of the user profile for the ASF Tomcat server.

"Configure Access for Web (CFGACCWEB2)" on page 1

---

**Application server name (APPSVR)**

Specifies the existing application server to which iSeries Access for Web is to be configured.

A WebSphere instance/profile can contain one or more application servers. The application server provides the environment in which deployed web applications execute.

This parameter is only applicable when the Web application server type (APPSVRTYPE) parameter is set to configure iSeries Access for Web for one of the following web application servers:

* WAS50 - WebSphere Application Server V5.0 for iSeries
* WAS50EXP - WebSphere Application Server V5.0 - Express for iSeries
* WAS51 - WebSphere Application Server V5.1 for iSeries
* WAS51EXP - WebSphere Application Server V5.1 - Express for iSeries
* WAS60 - WebSphere Application Server V6.0 for OS/400
* WAS60ND - WebSphere Application Server Network Deployment for OS/400

*DEFAULT*  
The following applies when the APPSVRTYPE parameter is set to *WAS50/*WAS51/*WAS60/*WAS60ND:

* When the WASINST or WASPRF parameter is set to *DEFAULT, this value will be set to ‘server1’
* When the WASINST or WASPRF parameter is set to something other than *DEFAULT, this value will be set to the value specified for the WASINST or WASPRF parameter.

The following applies when the APPSVRTYPE parameter is set to *WAS50EXP/*WAS51EXP:

* When the WASINST parameter is set to *DEFAULT, this value will be set to ‘default’.
* When the WASINST parameter is set to something other than *DEFAULT, this value will be set to the value specified in the WASINST parameter.

*name*  
Specify the name of the application server within the WebSphere instance/profile that is to be configured.

"Configure Access for Web (CFGACCWEB2)" on page 1

---

**Node name (NODENAME)**

Specifies the name of the node within the WebSphere instance to which iSeries Access for Web is to be configured.
This parameter is only applicable when the **Web application server type (APPSVRTYPE)** parameter is set to one of the following web application servers:

- *WAS50 - WebSphere Application Server V5.0 for iSeries
- *WAS50EXP - WebSphere Application Server V5.0 - Express for iSeries
- *WAS51 - WebSphere Application Server V5.1 for iSeries
- *WAS51EXP - WebSphere Application Server V5.1 - Express for iSeries

**DEFAULT**

The following applies when the APPSVRTYPE parameter is set to *WAS50/*WAS51:

- When the WASINST parameter is set to *DEFAULT, this value will be set to the name of the iSeries server.
- When the WASINST parameter is set to something other than *DEFAULT, this value will be set to a combination of the iSeries server name and the value specified for the WASINST parameter. For example, if the iSeries server name is SERVERA and the WASINST parameter is set to 'TEST', this value would be set to 'SERVERA_TEST'.

The following applies when the APPSVRTYPE parameter is set to *WAS50EXP/*WAS51EXP:

- When the WASINST parameter is set to *DEFAULT, this value will be set to a combination of the iSeries server name and 'default'. For example, if the iSeries server name is SERVERA and the WASINST parameter is set to *DEFAULT, this value would be set to 'SERVERA_default'.
- When the WASINST parameter is set to something other than *DEFAULT, this value will be set to a combination of the iSeries server name and the value specified for the WASINST parameter. For example, if the iSeries server name is SERVERA and the WASINST parameter is set to 'MYINST', this value would be set to 'SERVERA_MyINST'.

**name**  Specify the name of the node within the WebSphere instance that is to be configured.

---

**Target server (TGTSVR)**

Specifies the iSeries server to which iSeries Access for Web is to connect.

This parameter allows iSeries Access for Web to be configured on a central iSeries server to provide a gateway-like function to allow access to another iSeries server in the network.

A web application server such as WebSphere Application Server and iSeries Access for Web may not need to be installed or configured on the iSeries server specified in this parameter.

**DEFAULT**

iSeries Access for Web will connect to and serve data from the iSeries server to which it has been installed.

**name**  Specify the fully qualified domain name for the target iSeries server you want iSeries Access for Web to access data from. The domain name can be determined by accessing the TCP/IP configuration information on the target server.

---

**Authentication type (AUTHTYPE)**

Specifies whether the application or the application server authenticates the user.
This parameter is only applicable when the **Web application server type (APPSVRTYPE)** parameter is set to one of the following web application servers:

- *WAS50 - WebSphere Application Server V5.0 for iSeries*
- *WAS50EXP - WebSphere Application Server V5.0 - Express for iSeries*
- *WAS51 - WebSphere Application Server V5.1 for iSeries*
- *WAS51EXP - WebSphere Application Server V5.1 - Express for iSeries*
- *WAS60 - WebSphere Application Server V6.0 for OS/400*
- *WAS60ND - WebSphere Application Server Network Deployment V6.0 for OS/400*

**APP**

iSeries Access for Web will authenticate with i5/OS using a user profile and password.

This option uses HTTP basic authentication to prompt for the user profile and password. To secure authentication information during transmission, HTTPS (secure HTTP) should be used.

**APPSVR**

WebSphere Application Server will authenticate with the active user registry. iSeries Access for Web uses Enterprise Identity Mapping (EIM) to map the authenticated WebSphere user identity to an i5/OS user identity.

This option enables iSeries Access for Web to participate in WebSphere single sign-on (SSO) environments.

This option requires global security be enabled for the WebSphere Application Server instance being configured.

This option also requires the IBM Identity Token Connector be installed in the WebSphere Application Server instance being configured.

For additional information, please refer to the iSeries Access for Web InfoCenter information http://www.ibm.com/servers/eserver/iseries/infocenter/

**Authentication method (AUTHMETHOD)**

Specifies the method used by the application server to identify the user.

This parameter is only applicable when the **AUTHTYPE** parameter is set to a value of *APPSVR.*

**FORM**

This method uses an HTML form to prompt for the user ID and password. The information is transmitted in clear text. To secure authentication information during transmission, HTTPS (secure HTTP) should be used.

**BASIC**

This method uses HTTP basic authentication to prompt for the user ID and password. To secure authentication information during transmission, HTTPS (secure HTTP) should be used.

For additional information, please refer to the iSeries Access for Web InfoCenter information http://www.ibm.com/servers/eserver/iseries/infocenter/

**WebSphere Portal user ID (WPUSRID)**

Specifies the IBM WebSphere Portal administrative user ID that will be used to configure iSeries Access for Web within WebSphere Portal.
Changes to the WebSphere Portal configuration require a user ID be specified to make the changes. This is the same administrator level user ID that would be used to login to the WebSphere Portal user interface to perform administrator level functions.

This value is sent to the server unencrypted using an HTTP connection. If the connection could be compromised, this command should only be run within a protected intranet environment.

A parameter value is required when *WP50 is specified for the Web application server type (APPSVRTYPE) parameter.

**character-value**

Specify the administrative user ID.

---

**WebSphere Portal password (WPPWD)**

Specifies the password for the IBM WebSphere Portal administrative user ID specified for the WPUSRID parameter.

This value is sent to the server unencrypted using an HTTP connection. If the connection could be compromised, this command should only be run within a protected intranet environment.

A parameter value is required when *WP50 is specified for the Web application server type (APPSVRTYPE) parameter.

**character-value**

Specify the password for the IBM WebSphere Portal administrative user.

---

**WebSphere Portal config URL (WPURL)**

Specifies the universal resource locator (URL) to access the WebSphere Portal configuration servlet. This servlet will add the necessary iSeries Access for Web configuration information to WebSphere Portal.

This URL is comprised of the following elements:

- The portal host name.
- The base universal resource identifier (URI) for the portal, as specified during WebSphere Portal installation (default value was ‘/wps’).
- The servlet extension ‘/config’.

An example for this value would be ‘server_name.your_company.com/wps/config’.

A parameter value is required when *WP50 is specified for the Web application server type (APPSVRTYPE) parameter.

**character-value**

Specify the URL to access the WebSphere Portal configuration servlet.
**WebSphere Portal default pages (WPDFTPAG)**

When configuring for WebSphere Portal default WebSphere Portal pages can be created and populated with iSeries Access for Web portlets.

**CREATE**
Create a default iSeries Access for Web WebSphere Portal page containing multiple sub-pages. The sub-pages will be populated with iSeries Access for Web portlets.

**NOCREATE**
Default iSeries Access for Web WebSphere Portal pages will not be created and iSeries Access for Web portlets will not be deployed to any WebSphere Portal pages.

**WebSphere user ID (WASUSRID)**

If the WebSphere application server instance/profile specified in the WASINST/WASPRF and APPSVR parameters has security enabled, this parameter is required.

When this command runs it will make changes to the WebSphere instance/profile configuration or the running state of the iSeries Access for Web web application. When WebSphere security has been enabled for an instance/profile, authentication information must be supplied to make those changes.

The WASUSRID and WASPWD parameters provide the required authentication information.

To determine what value to specify for this parameter, refer to the Authentication Mechanisms and User Registries settings under the Security configuration in the WebSphere administration console.

This parameter does not apply to the WebSphere Portal or ASF Tomcat environments.

*character-value*
Specify the user ID.

For additional information, please refer to the WebSphere Security information in the iSeries InfoCenter information [http://www.ibm.com/servers/eserver/iseries/infocenter/](http://www.ibm.com/servers/eserver/iseries/infocenter/)

**WebSphere password (WASPWD)**

If the WebSphere application server instance/profile specified in the WASINST/WASPRF and APPSVR parameters has security enabled, this parameter is required.

When this command runs it will make changes to the WebSphere instance/profile configuration or the running state of the iSeries Access for Web web application. When WebSphere security has been enabled for an instance/profile, authentication information must be supplied to make those changes.

The WASUSRID and WASPWD parameters provide the required authentication information.

To determine what value to specify for this parameter, refer to the Authentication Mechanisms and User Registries settings under the Security configuration in the WebSphere administration console.

This parameter does not apply to the WebSphere Portal or ASF Tomcat environments.

*character-value*
Specify the password for the user ID.
For additional information, please refer to the WebSphere Security information in the iSeries InfoCenter information http://www.ibm.com/servers/eserver/iseries/infocenter/

**Source web server type (SRCSVRTYPE)**

Specifies an existing web application server that has been configured to run iSeries Access for Web. The new iSeries Access for Web configuration will be created based on this existing iSeries Access for Web configuration.

This parameter is not applicable and will be ignored when the **Web application server type (APPSVRTYPE)** parameter is set to *WP50.

*NONE*  
The new iSeries Access for Web configuration is not based on an existing iSeries Access for Web configuration.

*WAS50*  
WebSphere Application Server V5.0 for iSeries

*WAS50EXP*  
WebSphere Application Server V5.0 - Express for iSeries

*WAS51*  
WebSphere Application Server V5.1 for iSeries

*WAS51EXP*  
WebSphere Application Server V5.1 - Express for iSeries

*WAS60*  
WebSphere Application Server V6.0 for OS/400

*WAS60ND*  
WebSphere Application Server Network Deployment V6.0 for OS/400

*ASFTOMCAT*  
Apache Software Foundation (ASF) Tomcat

**Source web server instance (SRCSVRINST)**

This parameter specifies the name of a WebSphere instance/profile or an ASF Tomcat server name where iSeries Access for Web is already configured.

The new iSeries Access for Web configuration will be based on this existing configuration.

The WebSphere instance/profile name or ASF Tomcat server name specified with this parameter must be configured within the web application server specified for the **Source web server type (SRCSVRTYPE)** parameter.

This parameter is not applicable and will be ignored when the **Web application server type (APPSVRTYPE)** parameter is set to *WP50.

*DEFAULT*  
When the web application server was installed, a default instancePROFILE may have been automatically created. When *DEFAULT* is specified, iSeries Access for Web will be configured based on an instancePROFILE named ‘default’.
*WASINST/*WASPRF

When *WASINST/*WASPRF is specified, the value specified in the WASINST/WASPRF parameter will be used.

name  Specify the name of the WebSphere instance/profile or ASF Tomcat server that has already been configured to run iSeries Access for Web.

Source application server (SRCAPPSVR)

The application server provides the environment in which deployed web applications execute. This parameter specifies the name of an application server within a WebSphere instance/profile where iSeries Access for Web is already configured.

The new iSeries Access for Web configuration will be based on this existing configuration.

This parameter is only applicable when the Web application server type (APPSVRTYPE) parameter is not set to *WP50 and the Source web server type (SRCVRTYPE) parameter is set to one of the following web application servers:

- *WAS50 - WebSphere Application Server V5.0 for iSeries
- *WAS50EXP - WebSphere Application Server V5.0 - Express for iSeries
- *WAS51 - WebSphere Application Server V5.1 for iSeries
- *WAS51EXP - WebSphere Application Server V5.1 - Express for iSeries
- *WAS60 - WebSphere Application Server V6.0 for OS/400
- *WAS60ND - WebSphere Application Server Network Deployment V6.0 for OS/400

*DEFAULT

The following applies when the SRCVRTYPE parameter is set to *DEFAULT:

- *WAS50/*WAS51/*WAS60/*WAS60ND:
  - When this parameter is set to *DEFAULT and the SRCVRINST parameter is set to *DEFAULT, this parameter will be set to 'server1'.
  - When this parameter is set to *DEFAULT and the SRCVRINST parameter is set to something other than *DEFAULT, this parameter will be set to the value specified for the SRCVRINST parameter.

The following applies when the SRCVRTYPE parameter is set to *WAS50EXP/*WAS51EXP:

- When this parameter is set to *DEFAULT and the SRCVRINST parameter is set to *DEFAULT, this parameter will be set to 'default'.
- When this parameter is set to *DEFAULT and the SRCVRINST parameter is set to something other than *DEFAULT, this parameter will be set to the value specified for the SRCVRINST parameter.

name  Specify the name of the application server within the WebSphere instance/profile that the new configuration will be based on.

Share user data (SHRUSRDTA)

When configuring based on an existing iSeries Access for Web configuration this parameter specifies whether the new configuration will share user-generated data with the existing configuration.
A parameter value is required when a value other than *NONE is specified for the SRCSVRTYPE parameter.

*NO  The new configuration will start with a copy of the existing configuration’s user-generated data.

*YES  The new configuration will share the user-generated data with the existing configuration.

**Examples**

**Example 1: Configuring WebSphere Application Server V5.0 for iSeries**

`CFGACCWEB2 APPSVRTYPE(*WAS50) WASINST(DEPTXYZ) APPSVR(XYZSERVER)`

This command will configure iSeries Access for Web for a user created WebSphere instance named DEPTXYZ containing an application server named XYZSERVER within WebSphere Application Server for iSeries V5.0.

**Example 2: Configuring WebSphere Application Server V5.0 - Express for iSeries**

`CFGACCWEB2 APPSVRTYPE(*WAS50EXP) WASINST(MYINST) APPSVR(*DEFAULT) SRCSVRTYPE(*WAS50) SRCVRINST(DEPTXYZ) SRCAPPSVR(XYZSERVER) SHRUSRDTA(*NO)`

This command will configure iSeries Access for Web for the MYINST instance of WebSphere Application Server V5.0 - Express for iSeries. This example also shows that this new configuration will be based on a configuration that was performed in a previous example. User-generated data will be copied from the source configuration to this new configuration.

**Example 3: Configuring WebSphere Application Server V6.0 for OS/400**

`CFGACCWEB2 APPSVRTYPE(*WAS60) WASPRF(default) APPSVR(server1) SRCSVRTYPE(*WAS50EXP) SRCVRINST(MYINST) SRCAPPSVR(*DEFAULT) SHRUSRDTA(*NO)`

This command will configure iSeries Access for Web for the default instance of WebSphere Application Server V6.0 for OS/400. This default instance contains an application server named server1. This example also shows that this new configuration will be based on a configuration that was performed in a previous example. User-generated data will be copied from the source configuration to this new configuration.

**Example 4: Configuring WebSphere Application Server Network Deployment V6.0 for OS/400**

`CFGACCWEB2 APPSVRTYPE(*WAS60ND) WASPRF(default) APPSVR(server1) SRCSVRTYPE(*WAS50EXP) SRCVRINST(MYINST) SRCAPPSVR(*DEFAULT) SHRUSRDTA(*NO)`

This command will configure iSeries Access for Web for the default instance of WebSphere Application Server Network Deployment V6.0 for OS/400. This default instance contains an application server named server1. This example also shows that this new configuration will be based on a configuration that was performed in a previous example. User-generated data will be copied from the source configuration to this new configuration.

**Example 5: Configuring WebSphere Portal**

`CFGACCWEB2 APPSVRTYPE(*WP50) WPUSRID(wpsadmin) WPPWD(wpspassword) WPURL('myserver.mydomain.com/wps/config') WPDFTPAG(*CREATE)`
This command will configure iSeries Access for Web for WebSphere Portal V5.0. This example inputs the WebSphere Portal administrator user ID and password, the URL to the portal configuration servlet, and tells the command to create the default iSeries Access for Web WebSphere Portal pages and populate the pages with portlets.

Example 6: Configuring ASF Tomcat

```
CFGACCWEB2     APPSVRTYPE(*ASFTOMCAT)  TCSVRNAME(TOMCAT)
                TCHOMEDIR('/ASFTomcat/tomcat')
                TCUSRPRF(QTMHTTP)
                SRCVRTYPE(*WAS50)  SRCVRINST(DEPTXYZ)
                SRCAPPSVR(XYZSERVER)  SHRUSRDTA(*YES)
```

This command will configure iSeries Access for Web for an Apache Software Foundation (ASF) Tomcat server named TOMCAT. This example also shows that this configuration will be based on a configuration that was performed in a previous example. User-generated data will be shared between the source configuration and this new configuration.

**Error messages**

*ESCAPE Messages

**IAW0001**
Configure iSeries Access for Web command failed.

**IAW000A**
The SHRUSRDTA parameter is required.

**IAW000B**
Value specified for parameter APPSVRTYPE is not valid.

**IAW000C**
Value specified for parameter SRCVRTYPE is not valid.

**IAW000D**
The TCSVRNAME and TCHOMEDIR and TCUSRPRF parameters are required.

**IAW0011**
The WPUSRID, WPPWD, and WPURL parameters are required.
End Access for Web (ENDACCWEB2)

Where allowed to run: All environments (*ALL)
Threadsafe: No

The End iSeries Access for Web (ENDACCWEB2) command is used to end, or stop, the running iSeries Access for Web configuration within the web application server IBM WebSphere Application Server.

This command will end the running configuration that was defined using the Configure Access for Web (CFGACCWEB2) command.

When the command runs status information will be displayed indicating what the command is processing. As the command runs, detailed status information and error information will also be logged to stream file /QIBM/UserData/Access/Web2/logs/cmds.log.

The iSeries Access for Web configuration can also be ended (stopped) using the web application server’s administration interface.

Restrictions:
• You must have all object (*ALLOBJ) special authority to run this command.
• iSeries Access for Web must be configured using the CFGACCWEB2 command before running this command.
• This command is only available for the following web application servers:
  – WebSphere Application Server V5.0 for iSeries
  – WebSphere Application Server V5.0 - Express for iSeries
  – WebSphere Application Server V5.1 for iSeries
  – WebSphere Application Server V5.1 - Express for iSeries
  – WebSphere Application Server V6.0 for iSeries
  – WebSphere Application Server Network Deployment V6.0 for iSeries
• WebSphere Application Server specific restrictions:
  – The WebSphere Application Server subsystem must be running and in a ready state before running this command. Refer to the WebSphere documentation for information on starting the WebSphere subsystem and determining when it reaches a ready state.
  – The application server configured within the WebSphere instance/profile must be running before executing this command.
• The administration interface for the following web application servers should be used to end the iSeries Access for Web configuration:
  – WebSphere Portal
  – Apache Software Foundation (ASF) Tomcat

*End Access for Web (ENDACCWEB2)* on page 15

**Web application server type (APPSVRTYPE)**

Specifies a web application server that contains a iSeries Access for Web configuration to be ended.

This is a required parameter.

*WAS50
WebSphere Application Server V5.0 for iSeries

*WAS50EXP
WebSphere Application Server V5.0 - Express for iSeries

*WAS51
WebSphere Application Server V5.1 for iSeries

*WAS51EXP
WebSphere Application Server V5.1 - Express for iSeries

*WAS60
WebSphere Application Server V6.0 for OS/400

*WAS60ND
WebSphere Application Server Network Deployment V6.0 for OS/400

*End Access for Web (ENDACCWEB2)* on page 15

**Web server instance name (WASINST)**

Specifies an IBM WebSphere Application Server instance that contains an iSeries Access for Web configuration to be ended.
This parameter is only applicable when the **Web application server type (APPSVRTYPE)** parameter is set to one of the following web application servers:

- *WAS50 - WebSphere Application Server V5.0 for iSeries*
- *WAS50EXP - WebSphere Application Server V5.0 - Express for iSeries*
- *WAS51 - WebSphere Application Server V5.1 for iSeries*
- *WAS51EXP - WebSphere Application Server V5.1 - Express for iSeries*

*DEFAULT*  
When *DEFAULT* is specified, iSeries Access for Web will be ended within the instance called ‘default’.

**name**  
Specify the name of the WebSphere instance that contains an iSeries Access for Web configuration to end. This is the same instance name that was used when the Configure Access for Web (CFGACCWEB2) command was run.

---

**Web server profile name (WASPRF)**

Specifies an IBM WebSphere Application Server profile that contains an iSeries Access for Web configuration to end.

This parameter is only applicable when the **Web application server type (APPSVRTYPE)** parameter is set to one of the following web application servers:

- *WAS60 - WebSphere Application Server V6.0 for OS/400*
- *WAS60ND - WebSphere Application Server Network Deployment V6.0 for OS/400*

*DEFAULT*  
When *DEFAULT* is specified, iSeries Access for Web will be ended within the profile called ‘default’.

**name**  
Specify the name of the WebSphere profile that contains an iSeries Access for Web configuration to end. This is the same profile name that was used when the Configure Access for Web (CFGACCWEB2) command was run.

---

**Application server name (APPSVR)**

Specifies the existing application server to which iSeries Access for Web has been configured and is to be ended.

A WebSphere instance/profile can contain one or more application servers. The application server provides the environment in which deployed web applications execute.

This parameter is only applicable when the **Web application server type (APPSVRTYPE)** parameter is set to end iSeries Access for Web for one of the following web application servers:

- *WAS50 - WebSphere Application Server V5.0 for iSeries*
- *WAS50EXP - WebSphere Application Server V5.0 - Express for iSeries*
- *WAS51 - WebSphere Application Server V5.1 for iSeries*
- *WAS51EXP - WebSphere Application Server V5.1 - Express for iSeries*
- *WAS60 - WebSphere Application Server V6.0 for OS/400*
- *WAS60ND - WebSphere Application Server Network Deployment V6.0 for OS/400*
*DEFAULT
The following applies when the APPSVRTYPE parameter is set to
*WAS50/*WAS51/*WAS60/*WAS60ND:
  • When the WASINST/WASPRF parameter is set to *DEFAULT, this value will be set to ‘server1’
  • When the WASINST/WASPRF parameter is set to something other than *DEFAULT, this value will be set to the value specified for the WASINST/WASPRF parameter.

The following applies when the APPSVRTYPE parameter is set to *WAS50EXP/*WAS51EXP:
  • When the WASINST parameter is set to *DEFAULT, this value will be set to ‘default’.
  • When the WASINST parameter is set to something other than *DEFAULT, this value will be set to the value specified in the WASINST parameter.

name Specify the name of the application server within the WebSphere instance/profile where iSeries Access for Web is to be ended.

**WebSphere user ID (WASUSRID)**
If the WebSphere application server instance/profile specified in the WASINST/WASPRF and APPSVR parameters has security enabled, this parameter is required.

When this command runs it will make changes to the WebSphere instance/profile configuration or the running state of the iSeries Access for Web web application. When WebSphere security has been enabled for an instance/profile, authentication information must be supplied to make those changes.

The WASUSRID and WASPWD parameters provide the required authentication information.

To determine what value to specify for this parameter, refer to the Authentication Mechanisms and User Registries settings under the Security configuration in the WebSphere administration console.

This parameter does not apply to the WebSphere Portal or ASF Tomcat environments.

**character-value**
Specify the user ID.

For additional information, please refer to the WebSphere Security information in the iSeries InfoCenter information http://www.ibm.com/servers/eserver/iseries/infocenter/

**WebSphere password (WASPWD)**
If the WebSphere application server instance/profile specified in the WASINST/WASPRF and APPSVR parameters has security enabled, this parameter is required.

When this command runs it will make changes to the WebSphere instance/profile configuration or the running state of the iSeries Access for Web web application. When WebSphere security has been enabled for an instance/profile, authentication information must be supplied to make those changes.

The WASUSRID and WASPWD parameters provide the required authentication information.

To determine what value to specify for this parameter, refer to the Authentication Mechanisms and User Registries settings under the Security configuration in the WebSphere administration console.
This parameter does not apply to the WebSphere Portal or ASF Tomcat environments.

**character-value**

Specify the password for the user ID.

For additional information, please refer to the WebSphere Security information in the iSeries InfoCenter information http://www.ibm.com/servers/eserver/iseries/infocenter/

**Examples**

**Example 1: Ending iSeries Access for Web in a WebSphere Application Server V5.0 for iSeries**

```
ENDACCWEB2 APPSVRType(*WAS50) WASINST(DEPTXYZ)
APPSVR(XYZSERVER)
```

This command will end the iSeries Access for Web configuration within WebSphere Application Server V5.0 for iSeries. In this example, the configuration within the user created instance DEPTXYZ will be ended.

**Example 2: Ending iSeries Access for Web in a WebSphere Application Server V5.0 - Express for iSeries**

```
ENDACCWEB2 APPSVRType(*WAS50EXP) WASINST(MYINST)
APPSVR(*DEFAULT)
```

This command will end the iSeries Access for Web configuration within WebSphere Application Server V5.0 - Express for iSeries. In this example, the configuration within the user created instance MYINST will be ended.

**Example 3: Ending iSeries Access for Web in a WebSphere Application Server V6.0 for OS/400**

```
ENDACCWEB2 APPSVRType(*WAS60) WASPRF(default)
APPSVR(server1)
```

This command will end the iSeries Access for Web configuration within WebSphere Application Server V6.0 for OS/400. In this example, the configuration within a profile called default and an application server named server1 will be ended.

**Example 4: Ending iSeries Access for Web in a WebSphere Application Server Network Deployment V6.0 for OS/400**

```
ENDACCWEB2 APPSVRType(*WAS60ND) WASPRF(default)
APPSVR(server1)
```

This command will end the iSeries Access for Web configuration within WebSphere Application Server Network Deployment V6.0 for OS/400. In this example, the configuration within a profile called default and an application server named server1 will be ended.

**Error messages**

*ESCAPE Messages*

IAW0003

End iSeries Access for Web command failed.
IAW000B

Value specified for parameter APPSVRTYPE is not valid.

"End Access for Web (ENDACCWEB2)" on page 15
Remove Access for Web (RMVACCWEB2)

Where allowed to run: All environments (*ALL)
Threadsafe: No

The Remove iSeries Access for Web (RMVACCWEB2) command is used to remove the iSeries Access for Web configuration from the web application servers:

- IBM WebSphere Application Server V5.0 for iSeries
- IBM WebSphere Application Server V5.0 - Express for iSeries
- IBM WebSphere Application Server V5.1 for iSeries
- IBM WebSphere Application Server V5.1 - Express for iSeries
- IBM WebSphere Application Server V6.0 for iSeries
- IBM WebSphere Application Server Network Deployment V6.0 for iSeries
- IBM WebSphere Portal V5.0
- Apache Software Foundation (ASF) Tomcat

This command will remove the configuration that was defined using the Configure Access for Web (CFGACCWEB2) command.

This command will not delete iSeries Access for Web from the server. This command will only remove the iSeries Access for Web configuration from the specified web application server.

This command will not delete user data that was generated while using iSeries Access for Web. User data was written to the following locations based on the value specified for the Web application server type (APPSVRTYPE) parameter when the configuration was defined using the CFGACCWEB2 command:

- *WAS50 - /QIBM/UserData/Access/Web2/was50base/<instance_name>/<application_server_name>
- *WAS50EXP - /QIBM/UserData/Access/Web2/was50exp/<instance_name>/<application_server_name>
- *WAS51 - /QIBM/UserData/Access/Web2/was51base/<instance_name>/<application_server_name>
- *WAS51EXP - /QIBM/UserData/Access/Web2/was51exp/<instance_name>/<application_server_name>
- *WAS60 - /QIBM/UserData/Access/Web2/was60/<profile_name>/<application_server_name>
- *WAS60ND - /QIBM/UserData/Access/Web2/was60nd/<profile_name>/<application_server_name>
- *WP50 - /QIBM/UserData/Access/Web2/wp50/<instance_name>
- *ASFTOMCAT - /QIBM/UserData/Access/Web2/asftomcat/<server_name>

When the command runs status information will be displayed indicating what the command is processing. As the command runs, detailed status and error information will also be logged to stream file /QIBM/UserData/Access/Web2/logs/cmds.log.

The iSeries Access for Web configuration could be removed using the web application server’s administration interface. This is not recommended! The RMVACCWEB2 command will clean up internal configuration information that the web application server’s administration interface will not.

Restrictions:
- You must have all object (*ALLOBJ) special authority to run this command.
- iSeries Access for Web must be configured using the CFGACCWEB2 command before running this command.

© Copyright IBM Corp. 1998, 2006
• WebSphere Application Server V5.0/V5.1/V6.0 specific restrictions:
  – The WebSphere Application Server application server, or subsystem, must be ended and restarted after running this command.
  – The WebSphere Application Server subsystem must be running and in a ready state before running this command. Refer to the WebSphere documentation for information on starting the WebSphere subsystem and determining when it reaches a ready state.
  – The application server configured within the WebSphere instance/profile must be running before executing this command.
• WebSphere Portal V5.0 specific restrictions:
  – WebSphere Portal V5.0 must be running before running this command. This command will call the WebSphere Portal configuration servlet to perform configuration changes to WebSphere Portal for iSeries Access for Web.
• ASF Tomcat specific restrictions:
  – After the RMVACCWEB2 command completes, the ASF Tomcat server must be ended and restarted. This will remove any iSeries Access for Web configuration information that may be loaded in memory. Use the ASF Tomcat management functions available in the web-based IBM Web Administration for iSeries interface to end the ASF Tomcat server.

Web application server type (APPSVRTYPE)

Specifies a web application server that contains an iSeries Access for Web configuration to be removed.

This is a required parameter.

*WAS50
WebSphere Application Server V5.0 for iSeries

*WAS50EXP
WebSphere Application Server V5.0 - Express for iSeries

*WAS51
WebSphere Application Server V5.1 for iSeries

*WAS51EXP
WebSphere Application Server V5.1 - Express for iSeries

*WAS60
WebSphere Application Server V6.0 for OS/400

*WAS60ND
WebSphere Application Server Network Deployment V6.0 for OS/400

*WP50
WebSphere Portal V5.0

*ASFTOMCAT
Apache Software Foundation (ASF) Tomcat

Web server instance name (WASINST)

Specifies an IBM WebSphere Application Server instance that contains an iSeries Access for Web configuration to remove.

This parameter is only applicable when the Web application server type (APPSVRTYPE) parameter is set to one of the following web application servers:

- *WAS50 - WebSphere Application Server V5.0 for iSeries
- *WAS50EXP - WebSphere Application Server V5.0 - Express for iSeries
- *WAS51 - WebSphere Application Server V5.1 for iSeries
- *WAS51EXP - WebSphere Application Server V5.1 - Express for iSeries
When the **Web application server type** (**APPSVRTYPE**) parameter is set to *WP50, this parameter is the WebSphere instance that WebSphere Portal has been configured to run within.

*DEFAULT

When *DEFAULT is specified, iSeries Access for Web will be removed from the instance called 'default'.

**name**

Specify the name of the WebSphere instance that WebSphere Portal has been configured to run within. This is the same name that was used when the Configure Access for Web (CFGACCWEB2) command was run.

"Remove Access for Web (RMVACCWEB2)" on page 21

---

**Web server profile name (WASPRF)**

Specifies an IBM WebSphere Application Server profile that contains an iSeries Access for Web configuration to remove.

This parameter is only applicable when the **Web application server type** (**APPSVRTYPE**) parameter is set to one of the following web application servers:

- *WAS60 - WebSphere Application Server V6.0 for OS/400
- *WAS60ND - WebSphere Application Server Network Deployment V6.0 for OS/400

*DEFAULT

When *DEFAULT is specified, iSeries Access for Web will be removed from the profile called 'default'.

**name**

Specify the name of the WebSphere profile that contains an iSeries Access for Web configuration to remove. This is the same name that was used when the Configure Access for Web (CFGACCWEB2) command was run.

"Remove Access for Web (RMVACCWEB2)" on page 21

---

**Application server name (APPSVR)**

Specifies the existing application server to which iSeries Access for Web has been configured and is to be removed.

A WebSphere instance/profile can contain one or more application servers. The application server provides the environment in which deployed web applications execute.

This parameter is only applicable when the **Web application server type** (**APPSVRTYPE**) parameter is set to remove iSeries Access for Web from one of the following web application servers:

- *WAS50 - WebSphere Application Server V5.0 for iSeries
- *WAS50EXP - WebSphere Application Server V5.0 - Express for iSeries
- *WAS51 - WebSphere Application Server V5.1 for iSeries
- *WAS51EXP - WebSphere Application Server V5.1 - Express for iSeries
- *WAS60 - WebSphere Application Server V6.0 for OS/400
- *WAS60ND - WebSphere Application Server Network Deployment V6.0 for OS/400

*DEFAULT

The following applies when the APPSVRTYPE parameter is set to *WAS50/*WAS51/*WAS60/*WAS60ND:

...
• When the WASINST/WASPRF parameter is set to *DEFAULT, this value will be set to ‘server1’
• When the WASINST/WASPRF parameter is set to something other than *DEFAULT, this value will be set to the value specified for the WASINST/WASPRF parameter.

The following applies when the APPSVRTYPE parameter is set to *WAS50EXP/*WAS51EXP:
• When the WASINST parameter is set to *DEFAULT, this value will be set to ‘default’.
• When the WASINST parameter is set to something other than *DEFAULT, this value will be set to the value specified in the WASINST parameter.

name Specify the name of the application server within the WebSphere instance/profile where iSeries Access for Web is to be removed.

Tomcat server name (TCSVRNAME)
This parameter specifies the name of an Apache Software Foundation (ASF) Tomcat server that contains an iSeries Access for Web configuration to remove.

A parameter value is required when *ASFTOMCAT is specified for the Web application server type (APPSVRTYPE) parameter.

name Specify the name of an existing ASF Tomcat server.

WebSphere Portal user ID (WPUSRID)
Specifies the IBM WebSphere Portal administrative user ID that will be used to remove the iSeries Access for Web configuration in WebSphere Portal.

Changes to the WebSphere Portal configuration require a user ID be specified to make the changes. This is the same administrator level user ID that would be used to login to the WebSphere Portal user interface to perform administrator level functions.

This value is sent to the server unencrypted using an HTTP connection. If the connection could be compromised, this command should only be run within a protected intranet environment.

A parameter value is required when *WP50 is specified for the Web application server type (APPSVRTYPE) parameter.

character-value Specify the administrative user ID.

WebSphere Portal password (WPPWD)
Specifies the password for the IBM WebSphere Portal administrative user ID specified for the WPUSRID parameter.

This value is sent to the server unencrypted using an HTTP connection. If the connection could be compromised, this command should only be run within a protected intranet environment.

A parameter value is required when *WP50 is specified for the Web application server type (APPSVRTYPE) parameter.
character-value

Specify the password for the IBM WebSphere Portal administrative user.

WebSphere Portal config URL (WPURL)

Specifies the universal resource locator (URL) to access the WebSphere Portal configuration servlet. This servlet will remove the iSeries Access for Web configuration information in WebSphere Portal.

This URL is comprised of the following elements:

• The portal host name.
• The base universal resource identifier (URI) for the portal, as specified during WebSphere Portal installation (default value was ‘/wps’).
• The servlet extension ‘/config’.

An example for this value would be ‘server_name.your_company.com/wps/config’.

A parameter value is required when *WP50 is specified for the Web application server type (APPSVRTYPE) parameter.

class-value

Specify the URL to access the WebSphere Portal configuration servlet.

WebSphere Portal default pages (WPDFTPAG)

When removing the iSeries Access for Web portlets from the WebSphere Portal configuration, the default WebSphere Portal pages that may have been created using the CFGACCWEB2 command can be deleted.

*DELETE

Delete the default iSeries Access for Web pages that were created when the CFGACCWEB2 command was run.

*NODELETE

The default iSeries Access for Web pages that were created when the CFGACCWEB2 command was run will not be deleted.

WebSphere user ID (WASUSRID)

If the WebSphere application server instance/profile specified in the WASINST/WASPRF and APPSVR parameters has security enabled, this parameter is required.

When this command runs it will make changes to the WebSphere instance/profile configuration or the running state of the iSeries Access for Web web application. When WebSphere security has been enabled for an instance/profile, authentication information must be supplied to make those changes.

The WASUSRID and WASPWD parameters provide the required authentication information.

To determine what value to specify for this parameter, refer to the Authentication Mechanisms and User Registries settings under the Security configuration in the WebSphere administration console.
This parameter does not apply to the WebSphere Portal or ASF Tomcat environments.

**character-value**
Specify the user ID.

For additional information, please refer to the WebSphere Security information in the iSeries InfoCenter information http://www.ibm.com/servers/eserver/iseries/infocenter/

---

**WebSphere password (WASPWD)**

If the WebSphere application server instance/profile specified in the WASINST/WASPRF and APPSVR parameters has security enabled, this parameter is required.

When this command runs it will make changes to the WebSphere instance/profile configuration or the running state of the iSeries Access for Web web application. When WebSphere security has been enabled for an instance/profile, authentication information must be supplied to make those changes.

The **WebSphere user ID (WASUSRID)** and **WebSphere password (WASPWD)** parameters provide the required authentication information.

To determine what value to specify for this parameter, refer to the Authentication Mechanisms and User Registries settings under the Security configuration in the WebSphere administration console.

This parameter does not apply to the WebSphere Portal or ASF Tomcat environments.

**character-value**
Specify the password for the user ID.

For additional information, please refer to the WebSphere Security information in the iSeries InfoCenter information http://www.ibm.com/servers/eserver/iseries/infocenter/

---

### Examples

**Example 1: Removing the Configuration from WebSphere Application Server V5.0 for iSeries**

RMVACCWEB2 APPSVRTYPE(*WAS50) WASINST(DEPTXYZ) APPSVR(XYZSERVER)

This command will remove the iSeries Access for Web configuration from a user created WebSphere instance named DEPTXYZ within WebSphere Application Server for iSeries V5.0.

**Example 2: Removing the Configuration from WebSphere Application Server V5.0 - Express for iSeries**

RMVACCWEB2 APPSVRTYPE(*WAS50EXP) WASINST(MYINST) APPSVR(*DEFAULT)

This command will remove the iSeries Access for Web configuration from the instance named MYINST in the WebSphere Application Server V5.0 - Express for iSeries configuration.

**Example 3: Removing the Configuration from WebSphere Application Server V6.0 for OS/400**

RMVACCWEB2 APPSVRTYPE(*WAS60) WASPRF(default) APPSVR(server1)
This command will remove the iSeries Access for Web configuration from the profile named default, application server named server1, in the WebSphere Application Server V6.0 for OS/400 configuration.

**Example 4: Removing the Configuration from WebSphere Application Server Network Deployment V6.0 for OS/400**

```
RMVACCWEB2 APPSVRTYPE(+WAS60ND) WASPRF(default)
    APPSVR(server1)
```

This command will remove the iSeries Access for Web configuration from the profile named default, application server named server1, in the WebSphere Application Server Network Deployment V6.0 for OS/400 configuration.

**Example 5: Removing the Configuration from WebSphere Portal**

```
RMVACCWEB2 APPSVRTYPE(+WP50) WPUSRID(wpsadmin)
    WPPWD(wpspassword)
    WPURL('myserver.mydomain.com/wps/config')
    WPDTFTPAG(*DELETE)
```

This command will remove the iSeries Access for Web configuration from WebSphere Portal V5.0. This example inputs the WebSphere Portal administrator user ID and password, the URL to the portal configuration servlet, and tells the command to delete the default iSeries Access for Web WebSphere Portal pages.

**Example 6: Removing the Configuration from ASF Tomcat**

```
CFGACCWEB2 APPSVRTYPE(*ASFTOMCAT) TCSVRNAME(TOMCAT)
```

This command will remove the iSeries Access for Web configuration from the Apache Software Foundation (ASF) Tomcat server named TOMCAT.

Start Access for Web (STRACCWEB2)

Where allowed to run: All environments (*ALL)
Threadsafe: No

The Start iSeries Access for Web (STRACCWEB2) command is used to start the iSeries Access for Web configuration within the web application server IBM WebSphere Application Server.

This command will start a configuration that was created using the Configure Access for Web (CFGACCWEB2) command.

iSeries Access for Web must be started before it’s functions can be accessed.

When the command runs status information will be displayed indicating what the command is processing. As the command runs, detailed status information and error information will also be logged to stream file /QIBM/UserData/Access/Web2/logs/cmds.log.

iSeries Access for Web can also be started using the web application server’s administration interface.

Restrictions:
• You must have all object (*ALLOBJ) special authority to run this command.
• iSeries Access for Web must be configured using the CFGACCWEB2 command before running this command.
• This command is only available for the following web application servers:
  – WebSphere Application Server V5.0 for iSeries
  – WebSphere Application Server V5.0 - Express for iSeries
  – WebSphere Application Server V5.1 for iSeries
  – WebSphere Application Server V5.1 - Express for iSeries
  – WebSphere Application Server V6.0 for iSeries
  – WebSphere Application Server Network Deployment V6.0 for iSeries
• WebSphere Application Server specific restrictions:
  – The WebSphere Application Server subsystem must be running and in a ready state before running this command. Refer to the WebSphere documentation for information on starting the WebSphere subsystem and determining when it reaches a ready state.
  – The application server configured within the WebSphere instance/profile must be running before executing this command.
• The administration interface for the following web application servers should be used to start the iSeries Access for Web configuration:
  – WebSphere Portal
  – Apache Software Foundation (ASF) Tomcat

"Start Access for Web (STRACCWEB2)" on page 29

Web application server type (APPSVRTYPE)

Specifies a web application server that contains an iSeries Access for Web configuration to be started.

This is a required parameter.

*WAS50
  WebSphere Application Server V5.0 for iSeries

*WAS50EXP
  WebSphere Application Server V5.0 - Express for iSeries

*WAS51
  WebSphere Application Server V5.1 for iSeries

*WAS51EXP
  WebSphere Application Server V5.1 - Express for iSeries

*WAS60
  WebSphere Application Server V6.0 for OS/400

*WAS60ND
  WebSphere Application Server Network Deployment V6.0 for OS/400

Web server instance name (WASINST)

Specifies an IBM WebSphere Application Server instance that contains an iSeries Access for Web configuration to start.
This parameter is only applicable when the **Web application server type** (APPSVRTYPE) parameter is set to one of the following web application servers:

- *WAS50 - WebSphere Application Server V5.0 for iSeries*
- *WAS50EXP - WebSphere Application Server V5.0 - Express for iSeries*
- *WAS51 - WebSphere Application Server V5.1 for iSeries*
- *WAS51EXP - WebSphere Application Server V5.1 - Express for iSeries*

**DEFAULT**

When *DEFAULT* is specified, iSeries Access for Web will be started within the instance called ‘default’.

**name**

Specify the name of the WebSphere instance that contains an iSeries Access for Web configuration to start. This is the same instance name that was used when the Configure Access for Web (CFGACCWEB2) command was run.

---

**Web server profile name (WASPRF)**

Specifies an IBM WebSphere Application Server profile that contains an iSeries Access for Web configuration to start.

This parameter is only applicable when the **Web application server type** (APPSVRTYPE) parameter is set to one of the following web application servers:

- *WAS60 - WebSphere Application Server V6.0 for OS/400*
- *WAS60ND - WebSphere Application Server Network Deployment V6.0 for OS/400*

**DEFAULT**

When *DEFAULT* is specified, iSeries Access for Web will be started within the profile called ‘default’.

**name**

Specify the name of the WebSphere profile that contains an iSeries Access for Web configuration to start. This is the same profile name that was used when the Configure Access for Web (CFGACCWEB2) command was run.

---

**Application server name (APPSVR)**

Specifies the existing application server to which iSeries Access for Web has been configured and is to be started.

A WebSphere instance/profile can contain one or more application servers. The application server provides the environment in which deployed web applications execute.

This parameter is only applicable when the **Web application server type** (APPSVRTYPE) parameter is set to start iSeries Access for Web for one of the following web application servers:

- *WAS50 - WebSphere Application Server V5.0 for iSeries*
- *WAS50EXP - WebSphere Application Server V5.0 - Express for iSeries*
- *WAS51 - WebSphere Application Server V5.1 for iSeries*
- *WAS51EXP - WebSphere Application Server V5.1 - Express for iSeries*
- *WAS60 - WebSphere Application Server V6.0 for OS/400*
- *WAS60ND - WebSphere Application Server Network Deployment V6.0 for OS/400*
**DEFAULT**

The following applies when the APPSVRTYPE parameter is set to 
*WAS50/*WAS51/*WAS60/*WAS60ND:

- When the WASINST/WASPRF parameter is set to *DEFAULT, this value will be set to ‘server1’
- When the WASINST/WASPRF parameter is set to something other than *DEFAULT, this value will be set to the value specified for the WASINST/WASPRF parameter.

The following applies when the APPSVRTYPE parameter is set to *WAS50EXP/*WAS51EXP:

- When the WASINST parameter is set to *DEFAULT, this value will be set to ‘default’.
- When the WASINST parameter is set to something other than *DEFAULT, this value will be set to the value specified in the WASINST parameter.

**name** Specify the name of the application server within the WebSphere instance/profile where iSeries Access for Web is to be started.

---

**WebSphere user ID (WASUSRID)**

If the WebSphere application server instance/profile specified in the WASINST/WASPRF and APPSVR parameters has security enabled, this parameter is required.

When this command runs it will make changes to the WebSphere instance/profile configuration or the running state of the iSeries Access for Web web application. When WebSphere security has been enabled for a instance/profile, authentication information must be supplied to make those changes.

The WASUSRID and WASPWD parameters provide the required authentication information.

To determine what value to specify for this parameter, refer to the Authentication Mechanisms and User Registries settings under the Security configuration in the WebSphere administration console.

This parameter does not apply to the WebSphere Portal or ASF Tomcat environments.

**character-value**

Specify the user ID.

For additional information, please refer to the WebSphere Security information in the iSeries InfoCenter information http://www.ibm.com/servers/eserver/iseries/infocenter/

---

**WebSphere password (WASPWD)**

If the WebSphere application server instance/profile specified in the WASINST/WASPRF and APPSVR parameters has security enabled, this parameter is required.

When this command runs it will make changes to the WebSphere instance/profile configuration or the running state of the iSeries Access for Web web application. When WebSphere security has been enabled for an instance/profile, authentication information must be supplied to make those changes.

The WASUSRID and WASPWD parameters provide the required authentication information.

To determine what value to specify for this parameter, refer to the Authentication Mechanisms and User Registries settings under the Security configuration in the WebSphere administration console.
This parameter does not apply to the WebSphere Portal or ASF Tomcat environments.

character-value
   Specify the password for the user ID.

For additional information, please refer to the WebSphere Security information in the iSeries InfoCenter information http://www.ibm.com/servers/eserver/iseries/infocenter/

Examples

Example 1: Starting iSeries Access for Web in a WebSphere Application Server V5.0 for iSeries

```
STRACCWEB2 APPSVRTYPE(*WAS50) WASINST(DEPTXYZ)
APPSVR(XYZSERVER)
```

This command will start the iSeries Access for Web configuration within WebSphere Application Server V5.0 for iSeries. In this example, the configuration within the user created instance DEPTXYZ will be started.

Example 2: Starting iSeries Access for Web in a WebSphere Application Server V5.0 - Express for iSeries

```
STRACCWEB2 APPSVRTYPE(*WAS50EXP) WASINST(MYINST)
APPSVR(*DEFAULT)
```

This command will start the iSeries Access for Web configuration within WebSphere Application Server V5.0 - Express for iSeries. In this example, the configuration within the user created instance MYINST will be started.

Example 3: Starting iSeries Access for Web in a WebSphere Application Server V6.0 for OS/400

```
STRACCWEB2 APPSVRTYPE(*WAS60) WASPRF(default)
APPSVR(server1)
```

This command will start the iSeries Access for Web configuration within WebSphere Application Server V6.0 for OS/400. In this example, the configuration within a profile called default and an application server named server1 will be started.

Example 4: Starting iSeries Access for Web in a WebSphere Application Server Network Deployment V6.0 for OS/400

```
STRACCWEB2 APPSVRTYPE(*WAS60ND) WASPRF(default)
APPSVR(server1)
```

This command will start the iSeries Access for Web configuration within WebSphere Application Server Network Deployment V6.0 for OS/400. In this example, the configuration within a profile called default and an application server named server1 will be started.

Error messages

*ESCAPE Messages

IAW0002
   Start iSeries Access for Web command failed.
IAW000B

Value specified for parameter APPSVRTYPE is not valid.
