Expansion Unit

Version 5 Release 3

SA41-5017-02
Before using this information and the product it supports, be sure to read the information in “Safety and Environmental Notices” on page v and “Notices” on page 51.
Safety and Environmental Notices

Data Integrity and Verification

IBM® computer systems contain mechanisms designed to reduce the possibility of undetected data corruption or loss. This risk, however, cannot be eliminated. Users who experience unplanned outages, system failures, power fluctuations or outages, or component failures must verify the accuracy of operations performed and data saved or transmitted by the system at or near the time of the outage or failure. In addition, users must establish procedures to ensure that there is independent data verification before relying on such data in sensitive or critical operations. Users should periodically check the IBM support websites for updated information and fixes applicable to the system and related software.

Danger Notices

A danger notice calls attention to a situation that is potentially lethal or extremely hazardous to people.

DANGER

An electrical outlet that is not correctly wired could place hazardous voltage on metal parts of the system or the products that attach to the system. It is the customer’s responsibility to ensure that the outlet is correctly wired and grounded to prevent an electrical shock. (RSFTD201)

DANGER

To prevent a possible electrical shock when installing the system, ensure that the power cords for all devices are unplugged before installing signal cables. (RSFTD202)

DANGER

To prevent a possible electrical shock when adding or removing any devices to or from the system, ensure that the power cords for those devices are unplugged before the signal cables are connected or disconnected. If possible, disconnect all power cords from the existing system before you add or remove a device. (RSFTD203)

DANGER

To prevent a possible electrical shock during an electrical storm, do not connect or disconnect cables or station protectors for communications lines, display stations, printers, or telephones. (RSFTD003)
DANGER

To prevent a possible electrical shock from touching two surfaces with different electrical grounds, use one hand, when possible, to connect or disconnect signal cables. (RSFTD004)

Caution Notices

A caution notice calls attention to a situation that is potentially hazardous to people because of some existing condition.

CAUTION:
Telecommunications Statement: This unit contains over-voltage circuits between the ac power outlet and the unit. These circuits meet the standard limits described in International Electrical Commission (IEC) 664, installation category II. It is the customer’s responsibility to ensure that the power outlet meets the standards of IEC 664, installation category II. (RSFTC214)

Laser Compliance

All Lasers are certified in the U.S. to conform to the requirements of DHHS 21 CFR Subchapter J for class 1 laser products. Outside the U.S., they are certified to be in compliance with the IEC 825 (first edition 1984) and as a class 1 laser product. Consult the label on each part for laser certification numbers and approval information.

Laser Safety Information

CAUTION:
This product may contain a CD-ROM which is a class 1 laser product. (RSFTC240)

CAUTION:
All IBM laser modules are designed so that there is never any human access to laser radiation above a class 1 level during normal operation, user maintenance, or prescribed service conditions. Data processing environments can contain equipment transmitting on system links with laser modules that operate at greater than class 1 power levels. For this reason, never look into the end of an optical fiber cable or open receptacle. Only trained service personnel should perform the inspection or repair of optical fiber cable assemblies and receptacles. (RSFTC243)

Product Recycling and Disposal

Components of the system, such as structural parts and circuit cards, can be recycled where recycling facilities exist. IBM does not currently collect and recycle used IBM products from customers in the United States other than those products that are involved in trade-in programs. Companies are available to disassemble, reutilize, recycle, or dispose of electronic products. Contact an IBM account representative for more information.

The system unit contains batteries and circuit boards with lead solder. Before you dispose of this unit, these batteries and circuit boards must be removed and discarded according to local regulations or recycled where facilities exist. This book contains specific information on each battery type where applicable.

Battery Return Program

In the United States, IBM has established a collection process for reuse, recycling, or proper disposal of used IBM batteries and battery packs. For information on proper disposal of the batteries in this unit, please contact IBM at 1-800-426-4333. Please have the IBM part number that is listed on the battery available when you make your call. For information on battery disposal outside the United States, contact your local waste disposal facility.
Environmental Design

The environmental efforts that have gone into the design of the system signify IBM’s commitment to improve the quality of its products and processes. Some of these accomplishments include the elimination of the use of Class I ozone-depleting chemicals in the manufacturing process, reductions in manufacturing wastes, and increased product energy efficiency. For more information, contact an IBM account representative.
Setting up your 0588, 0595, 5088, 5094, 5095 or 5294 Expansion Unit V5R3
About Setting Up Your 0588, 0595, 5088, 5094, 5095 or 5294 Expansion Unit (SA41–5017)

This book contains installation about setting up your expansion unit. You may elect to set up your new expansion unit yourself. It will take approximately one to three hours to install the hardware.

You also may elect not to install the expansion unit yourself. You may contact IBM or an authorized dealer to make arrangements for them to install it for a fee.

Who should read this book

You should be familiar with the system, display, and keyboards. You should also know how to power down the system and perform a system initial program load. You should also know how to power down system peripherals such as printers, monitors, and PCs.

Prerequisite and related information

Use the iSeries Information Center as your starting point for looking up technical information.

You can access the Information Center two ways:

• From the following Web site:
  http://www.ibm.com/eserver/iseries/infocenter

• From the iSeries Information Center, SK3T-4091-04 CD-ROM. This CD-ROM ships with your new iSeries hardware or IBM Operating System/400 software upgrade order. You can also order the CD-ROM from the IBM Publications Center:
  http://www.ibm.com/shop/publications/order

The iSeries Information Center contains new and updated iSeries information such as software and hardware installation, Linux, WebSphere®, Java™, high availability, database, logical partitions, CL commands, and system application programming interfaces (APIs). In addition, it provides advisors and finders to assist in planning, troubleshooting, and configuring your iSeries hardware and software.

With every new hardware order, you receive the iSeries Setup and Operations CD-ROM, SK3T-4098-02. This CD-ROM contains IBM @server IBM e(logo)server iSeries Access for Windows and the EZ-Setup wizard. iSeries Access Family offers a powerful set of client and server capabilities for connecting PCs to iSeries™ servers. The EZ-Setup wizard automates many of the iSeries setup tasks.

How to send your comments

Your feedback is important in helping to provide the most accurate and high-quality information. If you have any comments about this book or any other iSeries documentation, fill out the readers’ comment form at the back of this book.

• If you prefer to send comments by mail, use the readers’ comment form with the address that is printed on the back. If you are mailing a readers’ comment form from a country or region other than the United States, you can give the form to the local IBM branch office or IBM representative for postage-paid mailing.

• If you prefer to send comments by FAX, use either of the following numbers:
  – United States, Canada, and Puerto Rico: 1-800-937-3430
  – Other countries or regions: 1-507-253-5192

• If you prefer to send comments electronically, use one of these e-mail addresses:
Comments on books:
    RCHCLERK@us.ibm.com
Comments on the iSeries Information Center:
    RCHINFOC@us.ibm.com

Be sure to include the following:
• The name of the book or iSeries Information Center topic.
• The publication number of a book.
• The page number or topic of a book to which your comment applies.

X Setting up your 0588, 0595, 5088, 5094, 5095 or 5294 Expansion Unit V5R3
Chapter 1. Prepare to set up your expansion unit

Are you installing 0595 in a rack?

- No: Continue with these instructions.
- Yes: Go to Chapter 5, “Install 0595 expansion unit in a rack,” on page 23. Then return here and continue with the set up.

This chapter explains what you need to do before you set up your expansion unit. This includes the following tasks:
1. Unpack your expansion unit (refer to the instructions for unpacking that came with your expansion unit).
2. Plan layouts for your cables.
3. Power down your system unit. All system units in a cluster must be powered down.

Before you begin the installation process, carefully plan where you will install your new expansion unit. You should consider several factors that include size, security, and environmental factors. Before you set up your new expansion unit, refer to the iSeries Information Center Web site http://www.ibm.com/eserver/iseries/infocenter

and select Planning

Hardware requirements

If you are installing your new expansion unit directly to your system unit, you should remember these rules:

- You need to have an available or unused high speed link (HSL) connector.
- You need to have an unused or available system power control network (SPCN) connector.

Identify HSL and SPCN cables

Use the following tables to identify your High Speed link (HSL) and System Power Control Network (SPCN) cables. Your system uses HSL cables to communicate with your expansion unit. Your system uses SPCN cables to control power to your expansion unit.

Depending on your requirements, you might not have every HSL or SPCN cable listed below.

Plan your cable layout

When you decide where to place your cables, follow your site plan and keep the following things in mind:

- Refer to http://www.ibm.com/eserver/iseries/infocenter and select Hardware installation and use—>Cabling your server
- You can also refer to “System unit cable options” on page 5, “Expansion unit cable options” on page 5 and “Maximum HSL loops” on page 6.
- Avoid creating a safety hazard.
- Avoid damaging the cables.
- Avoid placing cables parallel to high-voltage lines.

Examples of HSL loops

The following diagrams show different examples of HSL loops:

![Diagram of HSL loops]
Redundant links

A redundant link is a secondary HSL connection that your system uses if the primary link experiences a failure. Create a redundant link configuration by connecting a redundant HSL cable link between the expansion units and the system unit.
Your new expansion unit may have disk units. To ensure continued access to your disk units in the event of a link failure, a redundant link should be planned for your cable layout.

Refer to Figure 1 to see how to plan your cables with a redundant link configuration with one expansion unit. If you are linking two expansion units, refer to Figure 2. If you are setting up stacked expansion units, refer to Figure 3 on page 5.

Figure 1. Planning for redundant link one expansion unit

Figure 2. Planning for redundant link with two expansion units

Power down your iSeries system unit

You need to power down your system unit before you can connect your new expansion unit to it. All system units in a cluster must be powered down. Follow the steps below to power down your system unit.

1. Ensure that you have a current backup of your operating system and licensed programs. If you have backed up the operating system and licensed programs since the last time you applied program temporary fixes (PTFs), that backup is acceptable.

2. If you have installed logical partitions on your system unit, refer to Logical partitions in the iSeries Information Center. In the iSeries Information Center you can find instructions on powering down a system with logical partitions.

3. If an IXA is present on the system, shut it down using the OS/400® options.

4. Ensure that all jobs are complete.

5. When all jobs are complete, type pwrdownsys *immed on a command line and press the Enter key.

Note: If you encounter difficulties during the installation, contact your authorized dealer or service provider.

6. After your system unit has completely powered down, power off all PCs and devices, such as printers and display stations, that are connected to the system unit.

7. Unplug any power cords, such as for printers, expansion units, and display stations, that are connected to the system unit.

8. Unplug all the power cords for the system unit from the electrical outlet.

9. Did you receive a 7002 internal flex cable with your expansion unit?
   
   No: Go to Chapter 2, “Set up your expansion unit,” on page 13.
   
   Yes: Go to “Installing the 7002 cable” on page 8.
Installing the 7002 cable

If your system unit came with the 7002 internal flex cable, you need to install it before you can set up your unit. To install the 7002 cable follow these steps:

1. Remove the right side cover (view from back):
   a. Loosen the screws.
   b. Slide the cover from front to back until it stops.
   c. Pull the cover out.

Your system unit contains a battery that only trained personnel can replace.

CAUTION:
The battery is a lithium battery. Only trained service personnel may replace this battery using the instructions in the Problem Analysis, Repair, and Parts service manual. To avoid possible explosion, do not burn or charge the battery. Exchange only with the IBM-approved part. Discard the battery as instructed by local regulations. (RSFTC241)
2. Attach the disposable wrist strap to prevent electrostatic discharge from damaging a device. Figure 5 shows an example of where to attach the adhesive part of the foil on the wrist strap to an unpainted surface.

Figure 5. Attach wrist strap

3. Remove the plate covering the HSL cable ports at E (Figure 6 on page 10).
4. Place gasket D over connectors C.
5. Install connector C in HSL cable port at E.
6. Install retaining screws into connector B.
7. Plug connector B into backplane at A.
8. Remove the wrist strap.

9. **Figure 7 on page 11** shows how to install the system unit side cover by aligning the tabs on the top and bottom edge. Press forward to make sure that all tabs enter the slots. Slide the cover toward the front of the system unit until it stops and install the screws.
Figure 7. Install system unit side cover
Chapter 2. Set up your expansion unit

This instruction describes how to set up your expansion unit.

1. If you have not powered down your system unit, go to “Power down your iSeries system unit” on page 7. Once you have powered down your system unit, return here.

2. Remove or open the back cover, if you have one.
   See Appendix A, “Remove or open the back covers,” on page 31 if you need help removing or opening the covers on your expansion units or system unit.

3. Find the connector locations.
   See Appendix B, “Connector locations,” on page 37 if you need help finding the connectors on your expansion units or system unit.

4. If your system unit has a migration unit, go to the iSeries Information Center and refer to Installation, upgrades and migration before you proceed.

5. Review the “Examples of HSL Connections” on page 11 and “Examples SPCN Connections” on page 16 and then continue with “Connect your unit with HSL cables” or “Connect your unit with SPCN cables” on page 15.

Connect your unit with HSL cables

If you encounter difficulties during the procedure, contact your authorized dealer or service provider.

2. If you have just one set of HSL connectors on your system unit, they are labeled A0 and A1.
   If you have more than one set of HSL connectors on your system unit, the first set is labeled A0 and A1. The remaining HSL connectors are labeled alphabetically. For example, if you have a model 830, there are four sets of HSL connectors on your system. They are labeled A0 and A1; B0 and B1; C0 and C1; D0 and D1.
   Refer to “HSL loop addressing” on page 7.

3. Write down which set of HSL connectors are available here: _____, _____.

4. Label and connect the cables to your unit.
   Unused HSL connectors may be covered with metal clips. Remove the clips before you install the HSL cables.
   a. Find the HSL cables and power cable that was shipped with your expansion unit.
   b. Attach a label to each end of the HSL cables.
   c. Label one HSL cable 0 at both ends.
   d. Label the other HSL cable 1 at both ends.
   e. To connect one expansion unit, do the following:
      1) Connect the HSL cable that is labeled 0 to the HSL connector that is labeled 0 on your expansion unit.
      2) Connect the HSL cable that is labeled 1 to the HSL connector that is labeled 1 on your expansion unit.
   f. To connect more than one expansion unit:
      1) Label the next HSL cable 0 at one end and 1 at the other end.
      2) Connect the HSL cable that is labeled 0 to the HSL connector that is labeled 0 on your expansion unit.
      3) Connect the HSL cable that is labeled 1 to the HSL connector that is labeled 1 on your expansion unit.
4) Repeat the above steps until all expansion units are connected.

5. Connect the cables to the available HSL connectors on your system unit. See step 3 on page 13.
   Connect the cable that is labeled 0 to the HSL connector that is labeled 0 and the cable that is
   labeled 1 to the HSL connector that is labeled 1.

6. Continue with “Connect your unit with SPCN cables” on page 15.

Examples of HSL Connections

The following diagrams are examples that show HSL connections:

![Diagram 1]

![Diagram 2]

![Diagram 3]
Connect your unit with SPCN cables

If you encounter difficulties during the procedure, contact your authorized dealer or service provider.

2. Label and connect the cables to your unit.
   a. Find the SPCN cable and power cable that was shipped with your expansion unit.
   b. Connect the cable to connector J15 on your system unit.
   c. Connect the other end of the cable to connector J15 on your first expansion unit.
d. Connect another cable to connector J16 on your first expansion unit.

e. Connect the other end of the cable to connector J15 on your next expansion unit.

f. Repeat the above steps until all expansion units are connected.

g. Connect the power cable. Do not plug into the wall outlet.

3. Close or replace the back cover if you have one.

4. If you are installing a new server with this expansion unit, return to the Cabling instructions.

Examples SPCN Connections

The following diagrams are examples that show SPCN connections:
Chapter 2. Set up your expansion unit
Setting up your 0588, 0595, 5088, 5094, 5095 or 5294 Expansion Unit V5R3
Chapter 3. Complete your installation

Perform the following steps to complete your installation:

1. Make sure that you have reinstalled all of the covers on the following system components:
   a. System unit.
   b. All system expansion units.

DANGER

An electrical outlet that is not correctly wired could place hazardous voltage on metal parts of the system or the products that attach to the system. It is the customer’s responsibility to ensure that the outlet is correctly wired and grounded to prevent an electrical shock. (RSFTD201)

Note: The fans may start, and system reference codes will appear when you plug the power cord for your system unit. These actions are normal. They do not indicate that your system unit is performing an initial program load (IPL).

2. Plug the power cords for the following system components into electrical outlets:
   a. Your system unit.
   b. All expansion units attached to the system.
   c. The system unit console.
   d. The system printer.

3. Turn power on to each of the following system components by using the associated power-on button:
   a. The system printer (if present).
   b. The system control console.

4. Look at the Function/Data display on the control panel. See Appendix C, “System unit control panel,” on page 49 if you need information about your control panel.

5. If your system unit is an Model 270, 800, or 810, go to step 7.

6. If your system unit is an Model 820, 825, 830, 840, 870 or 890, go to step 8 on page 20.

7. Does 01 B M V=S appear in the Function/Data display?
   a. Yes: Go to step 9 on page 20.
   b. No: Do the following:
      a. Press the Increment/Decrement push button until 02 appears in the Function/Data display.
      b. Press the Enter push button on the control panel.
      c. Press the Increment/Decrement push button until B appears in the Function/Data display.
      d. Press the Enter push button on the control panel.
      e. Press the Increment/Decrement push button until M appears in the Function/Data display.
      f. Press the Enter push button on the control panel.
      g. Press the Increment/Decrement push button until S appears in the Function/Data display.
      h. Press the Enter push button on the control panel.
      i. Press the Increment/Decrement push button until 01 appears in the Function/Data display.
__ j. Press the Enter push button on the control panel. 

01 B M S should appear in the Function/Data display. If it does not, repeat steps 7a through 7j on page 19.

__ k. Go to step 9

__ 8. Does 01 B V=S appear in the Function/Data display?

Note: If you are using Operations Console remote control panel, it may be necessary to click Enter to verify IPL speed.

Yes " No

↓ Do the following:

__ a. Press the Mode Select button until the Manual indicator (a small hand) lights up.
__ b. Press the Increment/Decrement push button until 02 appears in the Function/Data display.
__ c. Press the Enter push button on the control panel.
__ d. Press the Increment/Decrement push button until B appears in the Function/Data display.
__ e. Press the Enter push button on the control panel.
__ f. Press the Increment/Decrement push button until S appears in the Function/Data display.
__ g. Press the Mode Select button until the Normal indicator (OK) lights up.
__ h. Press the Increment/Decrement push button until 01 appears in the Function/Data display.
__ i. Press the Enter push button on the control panel. 

01 B S should appear in the Function/Data display. If it does not, repeat steps 8a through 8h.

__ j. Go to step 9

__ 9. Power on your system unit by pushing the white power-on button.

Note: The time needed to do a complete IPL varies depending on the model and configuration.

__ 10. Sign on your system unit. Ensure that you have service tools authority.

Chapter 4. Verify your new configuration

Verify your new configuration by performing the following:

1. Type `sst` on the command line. Press Enter.

2. Type your service tools userid and service tools password on the System Service Tools (SST) Sign On display.
   Press Enter.

3. Select Start a service tool on the System Service Tools (SST) display.
   Press Enter.

4. Select Hardware service manager on the Start a Service Tool display.
   Press Enter.

5. Select Packaging hardware resources (system, frames, cards...) on the Hardware Service Manager display.
   Press Enter.

Your new expansion unit appears on the list. Record the Frame ID and Resource name here:_________ , __________. If your expansion unit does not appear, you need to verify your installation by performing these steps:

   a. Make sure that you powered on your expansion unit.
   b. Make sure that you installed the cables correctly.

6. You need to update vital product data (VPD) for your new expansion unit:

   a. Press F3 to return to the Hardware Service Manager display.
   b. At the Hardware Service Manager display, select System power control network (SPCN).
   c. Press the Enter key twice.

Notes:

1. If you installed a 5294, you need to find the Frame ID and Serial Number for both 5294-002 and 5294-001.
2. You can also find the Frame ID by looking at the display on the expansion unit. For example, if the Frame ID for your 5294-002 (the upper unit) is 4, a *04 will appear on the display.
3. Enter a 3 (Write VPD) for your expansion unit. Press Enter.

Example: If the Frame ID for your expansion unit is 2, enter option 3, as is shown in the example below. Use the Frame ID with a 0 in the Unit field.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

4. Enter a 3 (Write VPD) for your expansion unit. Press Enter.

   a. At the Write Vital Product Data (VPD) display enter the following information:
1) At the Type field enter 0588, 0595, 5088, 5094 or 5095.

2) At the Model field, enter 001. Except if you have a 5294, enter 001 for 5294–001 (the lower unit) or 002 for the 5294–002 (the upper unit).

3) Enter the serial number at the Serial Number field (located on the frame of the expansion unit).

f. Press the Enter Key.

f. The message: Vital product data has been successfully written appears.

7. Press F3 to return to the Hardware Service Manager display.

8. From the Hardware Service Manager display press F6 (print the configuration) to print the configuration list.

10. To return to the Main menu, press F3 (Exit) two times and press the Enter key.
Chapter 5. Install 0595 expansion unit in a rack
Chapter 5. Install 0595 expansion unit in a rack
Setting up your 0588, 0595, 5088, 5094, 5095 or 5294 Expansion Unit V3R3
Setting up 0588, 0595, 5088, 5094, 5095 or 5294 Expansion Unit V5R3
Return to Chapter 1, “Prepare to set up your expansion unit,” on page 1 and continue with the instructions.
Appendix A. Remove or open the back covers

Locate your unit:
- “270, 800, 810, 820, and 5075 back cover”
- “825 back cover”
- “830, 5074, 5094, 5095 back cover” on page 32
- “840, 5079 and 5294 back cover” on page 33
- “870 and 890 back cover” on page 34

270, 800, 810, 820, and 5075 back cover

Remove the back cover for the system unit by gripping the upper corners of the cover and pulling it up and toward you.

Note: The 270 and 820 back covers do not look the same. However, the procedure to open them is the same.

Figure 8. Removing the 5075 and 270 back cover

825 back cover

Remove the back cover for the system unit by gripping the upper corners of the cover and pulling it up and toward you.
1. Use the latch shown at A to open the back cover on your expansion unit.
2. If needed, use the latch shown at B to remove the back cover.

---

830, 5074, 5094, 5095 back cover

**Figure 9. Removing the 825 back cover**
Figure 10. Removing the 830, 5074 and 5094 back cover

840, 5079 and 5294 back cover

Open the back cover on your 840 or 5079 by pressing the latch at A.
870 and 890 back cover

1. Use the latch shown at A to open the back cover on your expansion unit.

Figure 11. Opening the 840, 5079 or 5294
Figure 12. Opening the 870 or 890 back cover
Accessing units in a rack

1. Move to the back of the rack, press latch A, and open the back door of the rack.
Appendix B. Connector locations

Locate your unit and connector locations:

- “270, 800, and 810 HSL connector locations” on page 38
- “820 HSL connector locations” on page 38
- “825 HSL connector locations” on page 39
- “830 HSL connector locations” on page 40
- “840 HSL connector locations” on page 41
- “870 and 890 HSL connector locations” on page 42
- “5079 connector locations” on page 43
- “5074 connector locations” on page 44
- “5075 connector locations” on page 44
- “5078 or 0578 connector locations” on page 45
- “5088 or 0588 connector locations” on page 45
- “5094 connector locations” on page 46
- “5095 or 0595 connector locations” on page 46
- “5294 connector locations” on page 47
- “8079 connector locations” on page 47
- “8093 connector locations” on page 47
- “8094 connector locations” on page 47
- “9094 connector locations” on page 48
270, 800, and 810 HSL connector locations

**Electronic Emission Notices**

**Federal Communications Commission (FCC) Statement**

*Note:* This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

Properly shielded and grounded cables and connectors must be used in order to meet FCC emission limits. IBM is not responsible for any radio or television interference caused by using other than recommended cables and connectors or by unauthorized changes or modifications to this equipment. Unauthorized changes or modifications could void the user’s authority to operate the equipment.

This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

**Responsible Party:**

International Business Machines Corporation  
New Orchard Road  
Armonk, NY 10504

Telephone: 1-919-543-2193

**Industry Canada Compliance Statement**

This Class A digital apparatus meets the requirements of the Canadian Interference-Causing Equipment Regulations.

**Avis de conformité à la réglementation d’Industrie Canada**

Cet appareil numérique de la classe A respecte toutes les exigences du Règlement sur le matériel brouilleur du Canada.

**European Community Compliance Statement**

This product is in conformity with the protection requirements of EU Council Directive 89/336/EEC on the approximation of the laws of the Member States relating to electromagnetic compatibility. IBM cannot
accept responsibility for any failure to satisfy the protection requirements resulting from a non-recommended modification of the product, including the fitting of non-IBM option cards.

**Australia and New Zealand Class A Statement**

**Attention:** This is a Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.
