# Editing Saved Values

In this section you will learn how to modify the input and output values of a panel saved during a simulation. These values after being modified can be reused for a new simulation.
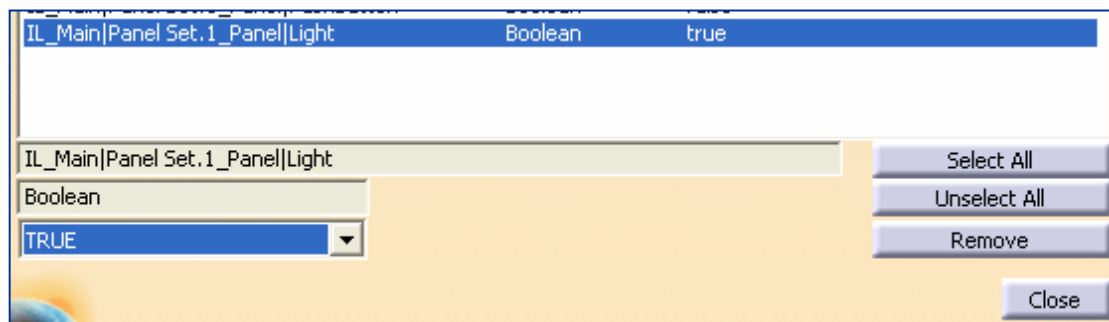

A Panel Edition window should be opened in the **HMI Control Panel Design** workbench. This state has been saved during a simulation (refer to the **CSM Module & Block** or the **CLM Device Logic design** user's guide for more details).

1. Click **Edit Saved Values** (o) in the **Control Panel Management** toolbar. The following dialog box appears:

2. Select one of the signals.

3. Click the combo box to modify the value.

4. Click **Close** to save the modification.
