The Agenda

- Remote Systems Explorer
- Communications Console
- Advanced Functions
- Working Disconnected
- Customizing the Editor
 - REXX Macros
 - Editor profiles
 - LPEXLET
- Demo

WebSphere Development Studio for iSeries

WebSphere Development Studio client

WebSphere Studio Site Developer Advanced

- ✓ Web tools
- ✓ Java tools
- ✓ XML tools

WebFacing

iSeries tools (Remote Systems Explorer)

Classic tools

✓

CODE

For RPG, COBOL, CL, C, C++, DDS

- ✓ VisualAge RPG

For RPG GUI

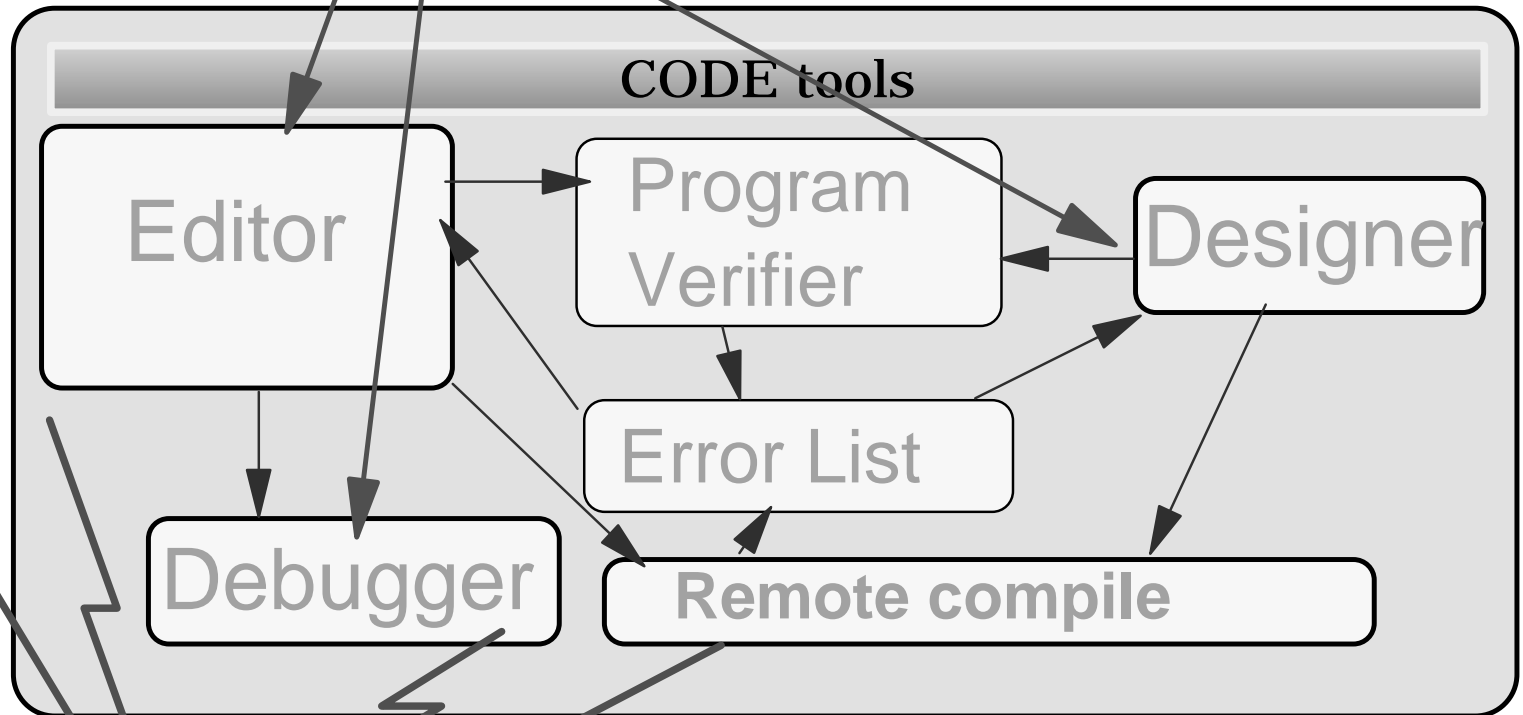

CODE - integrated in WDS

WSSDA + iSeries tools

Remote Systems Explorer (RSE)

**Work with
iSeries objects
Invoke any
iSeries
command
work with jobs
and more**

WDS Sc: RPG and Cobol Tools

✓ Remote Systems Explorer Perspective

- Drill-down or filtered access to remote:
 - ▶ **QSYS Libraries, Objects and Members**
 - ▶ **IFS Folders and Files**
 - ▶ **Linux, Unix, Windows and Local Folders and Files**
- Remote command execution of
 - ▶ **QSYS Commands and QSHELL Commands**
 - ▶ **Linux, Unix and Windows Commands**
- Exploration of Jobs in QSYS

✓ iSeries Projects

- For structured, project-based development
- Local team-sharable project
- Holds source files, members and save files
- Each project associated with an iSeries and library
 - ▶ **Push action to copy local files to associated library**

Remote Systems Explorer Perspective

- ✓ Manages connections to remote systems
 - ▶ Where you create/manage connection information
 - ▶ Connections subsequently used in all iSeries tools
 - ▶ Start by using the 'New Connection' wizard
 - ✓ Connection appears in tree view
 - ✓ Expand it to see "subsystem" -> functional groupings

RSE Connections

New Connection

Remote System Connection

Define connection information

Remote Systems Explorer - Development Studio Client

File Edit Perspective Project Window Help

The interface shows a tree view of remote systems. The 'My iSeries' connection is selected, and its properties are displayed in the Properties window below. The Properties window shows the following details:

Property	Value
Connection status	No subsystems conn
Default User ID	COULTHAR (Inherite
Description	
Host name	TORONTO
Name	My iSeries
Number of children	4
Parent profile	coulthar
Remote system type	iSeries
Tune	Connection

Commands window: My iSeries | iSeries Comman

Commands | Tasks | Outline | iSeries Job Log

Remote Systems Perspective

Expand filter to see objects resulting from resolution of filter

Actions available in the context menu depend on object type

The screenshot shows the 'Remote Systems Explorer - Development Studio Client' window. The main pane displays a tree view of remote systems: QUSRSYS, WSSLABXX, and CODELABXX. Under CODELABXX, a list of files is shown, including CLR1.*pgm.cle, PAYROLLG.*pgm.rpgle, STRCODECPP.*pgm.c, EMPMST.*file.pf-dta, MSTDSP.*file.dspf, PRJMST.*file.pf-dta, QCLSRC.*file.pf-src, QDDSSRC.*file.pf-src, and EMPMST.pf. A context menu is open over the MSTDSP.*file.dspf file, listing actions such as 'Open With' (with sub-options LPEX Editor, CODE Editor, and CODE Designer), 'Rename', 'Copy', 'Move', 'Delete', 'Compile', 'Compile (No Prompt)', and 'Properties'. The Properties window at the bottom shows the selected object's name as MSTDSP. The bottom status bar includes tabs for 'iSeries Job Log', 'Tasks', 'Commands', and 'Outline', with 'Commands' currently selected.

RSE Customization

✓ Library Filters

- To view groups of libraries.

✓ Object Filters

- To view one or more types of objects in one or more libraries.

✓ Member Filters

- To view one or more member types in one or more files in one or more libraries.

✓ User Actions

- Add an action to the popup menu for all objects or one specific object type.

STRCODE vs TCP/IP auto-connect servers

STRCODE

Started from 5250 emulation

Libraries defined in Communication Properties are added to the ones set from user profile

**Shutdown for single session from Communication Properties
Shutdown all from Editor, Action bar, Daemon context menu**

Use whenever iSeries screen I/O is required: Prompting for iSeries commands or CL , CL Help

**Program Generator
Debugging pgms with screen I/O**

TCP/IP

**Defined in Properties dialog or generated by RSE
Started at first use**

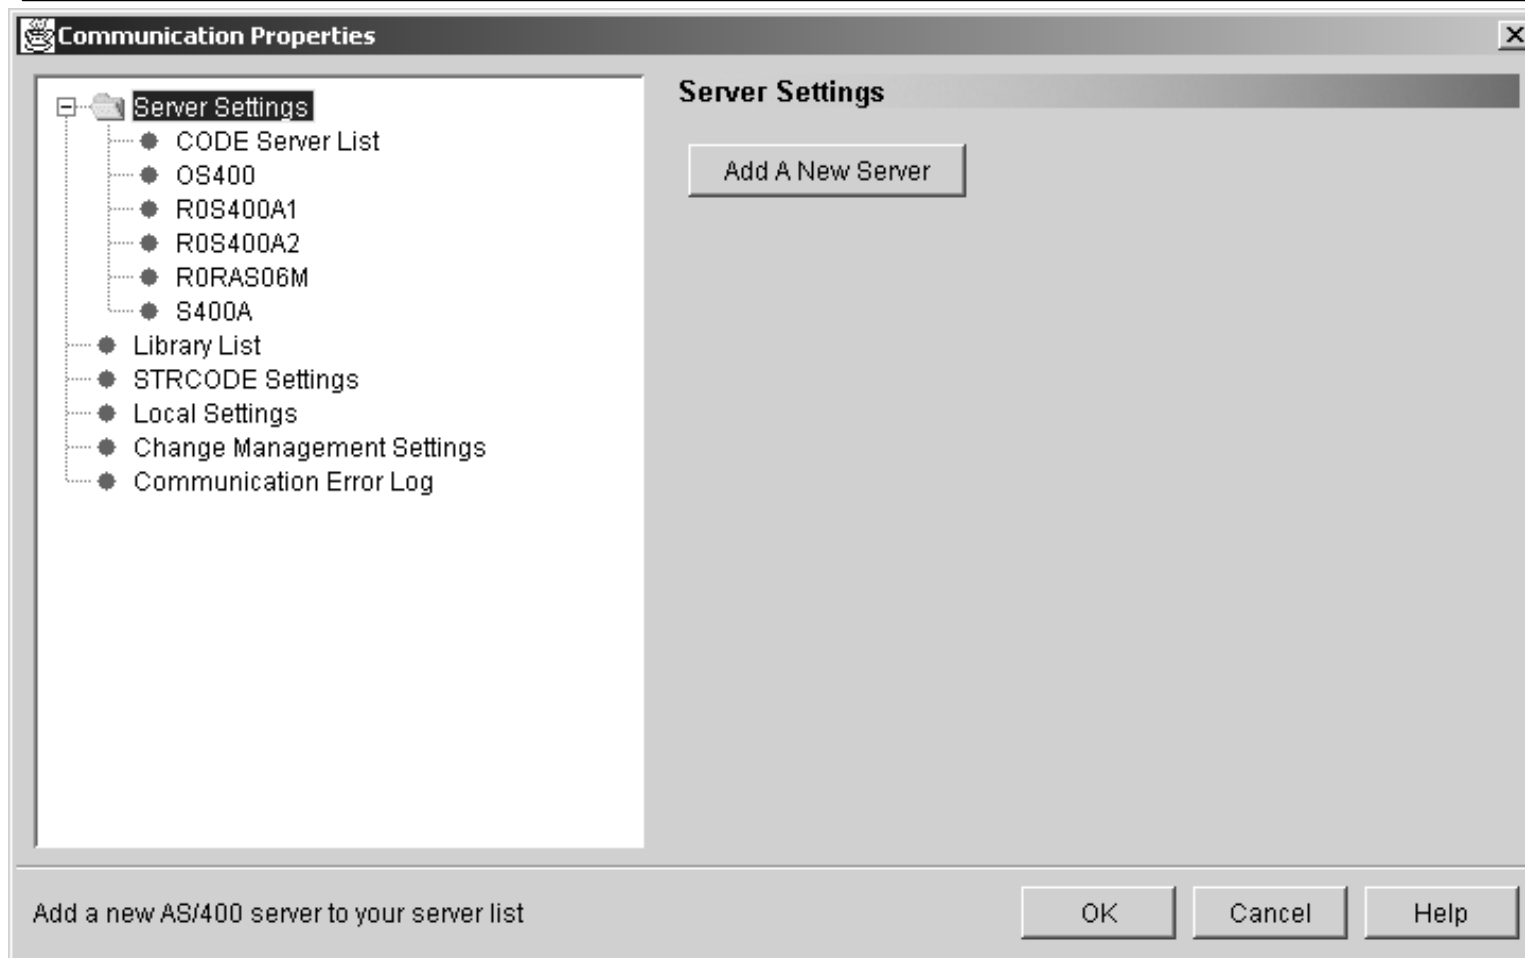

Libraries defined in Communication Properties are added to the ones set from user profile

**Deleted from Properties
RSE servers deleted at shutdown**

**Edit sessions, Program Verifier, Designer, etc.
Debugging programs without screen I/O**

Communication Console

Available from:

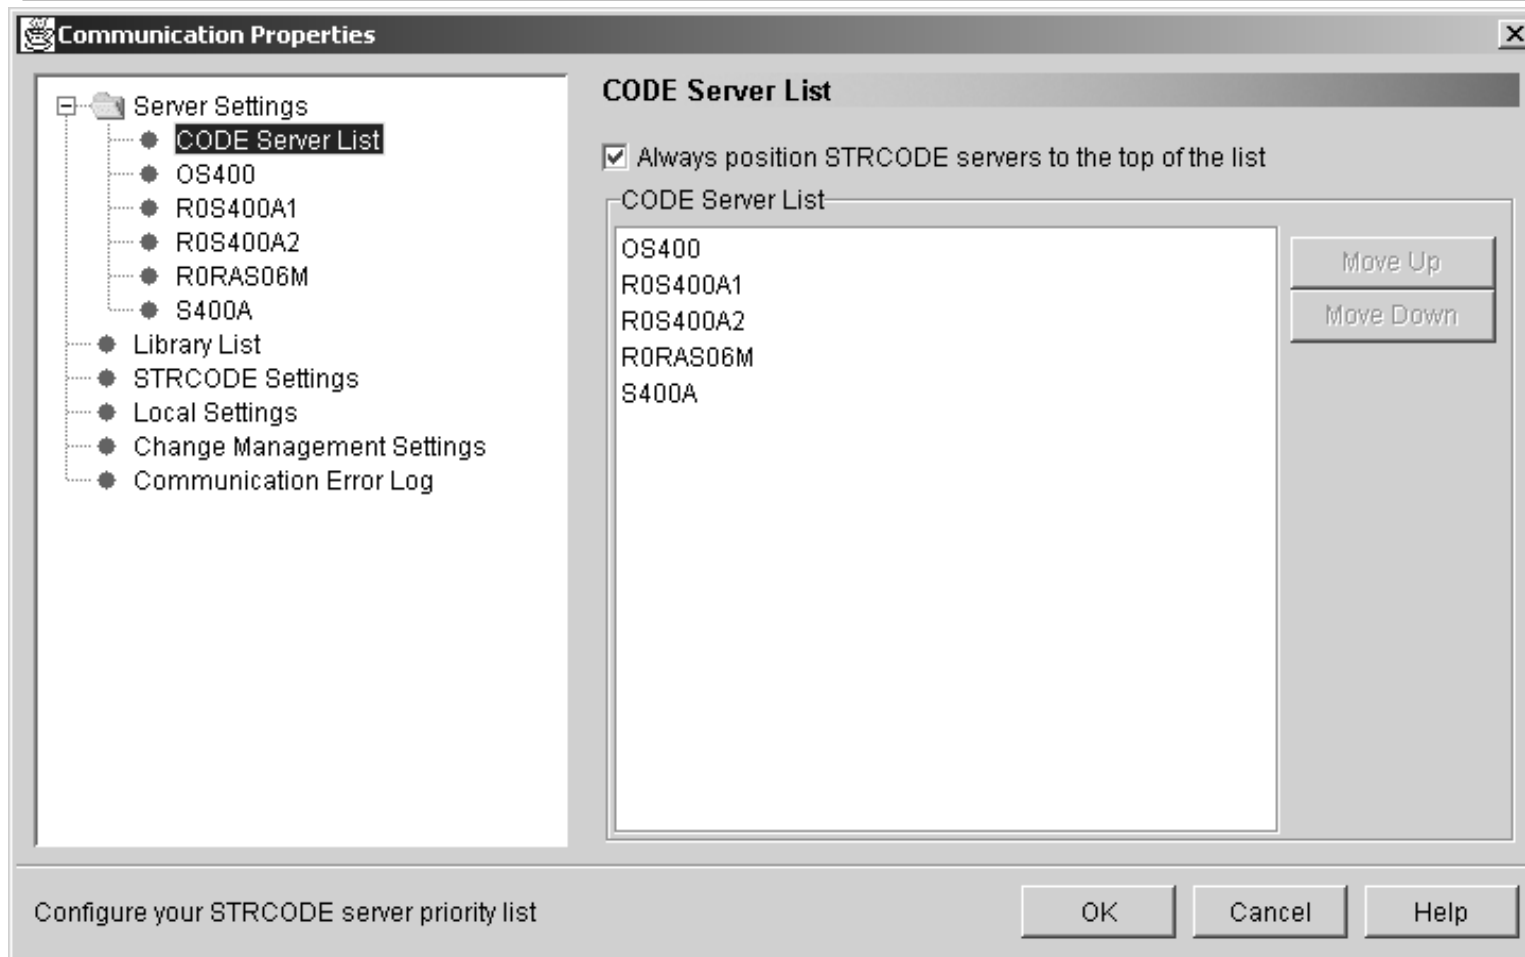

Start menu -> Programs -> IBM WebSphere Development Tools for iSeries ->
Communications -> Communications Console

Editor -> Windows -> Communications -> Properties

CODE Daemon context menu -> Properties

Comm. Properties - CODE Server List

Used to:

select to have STRCODE servers first in the list

reorder the servers - some functions like Verifier use first available server

Communication Properties - Server Info

The screenshot shows the 'Communication Properties' dialog box with the 'Server Settings' tree on the left. The 'Server Settings' tree is expanded to show 'Server Settings' with sub-items: 'CODE Server List', 'ROS400A1', 'ROS400A2', 'RORAS06M', and 'S400A'. Below this are 'Library List', 'STRCODE Settings', 'Local Settings', 'Change Management Settings', and 'Communication Error Log'. The 'ROS400A1' server is selected. The main area shows the 'Server Information' for 'ROS400A1' with the following fields: 'AS/400 IP Name or Address' (ROS400A1), 'CODE/400 Server Name' (ROS400A1), 'User ID', 'Password', and 'Password Confirmation'. To the right of these fields are buttons for 'Change', 'Delete', 'Shutdown', and 'Check PTFs'. Below the fields is a table with columns 'Number', 'Product', and 'APAR'. The table has one row with a checkbox in the first column. At the bottom of the dialog are 'OK', 'Cancel', and 'Help' buttons. A footer text reads 'Configure your individual server information'.

Number	Product	APAR
<input type="checkbox"/>		

Used to:

add, modify or delete TCP/IP auto-connect servers

Shutdown the selected STRCODE or RSE server

Check PTFs for all installed components of WDS

Communication Properties

- Library List
 - ▶ Set or change the library list for one specific server or all servers (*ALL).
 - ▶ Use Move Up and Move Down buttons to change the order.
- Change Management Settings
 - ▶ *NONE or Application Development Manager/400
- Communication Error Log

HTML Support

The screenshot shows two windows. The left window is the CODE editor, displaying an HTML file named 'readme.htm'. The editor's 'Actions' menu is open, showing options like 'Issue edit command...', 'Compare...', 'Keystroke recorder', 'Launch browser...', and 'Create tag'. The 'Create tag' option is selected, and a sub-menu is visible with options like 'Bold', 'Italics', 'Underline', 'Center', 'Heading', 'Paragraph', 'List', 'List element', 'Unordered list', 'Ordered list', 'Simple list', 'Line break', 'Horizontal line', 'Image', 'Link', and 'New file'. The code in the editor includes a table, a heading, and a list. The right window is Netscape, displaying the rendered HTML page titled 'Java README File'. The page content includes a heading 'Welcome to Java!', a paragraph of text, a bulleted list with items 'classes.jar' and 'sample.jar', and a 'NOTE' section. Arrows point from the 'Launch browser...' menu item to the Netscape window and from the 'List' menu item to the rendered list in the browser.

- Token highlighting
- Ctrl+M, Ctrl+Shift+M to select matching tag
- Create tags from Actions menu

Launch browser from Actions menu

CODE Editor - Filters

Various Text Filters

To filter by text, select
'View'-'>'Filter'

To filter by line
type, select
'View'-'>'Show'

Row	Column 1	Replace
002200	C	MOVE *BLANKS
002300	C	MOVE '0'
002400	C	MOVE 'FIRST'
002500	C	MOVE 'SECOND'
004300	C	MOVE 'SUBR1'
004400	C	MOVE '1'
004900	C	MOVE 'SUBR2'
005000	C	MOVE '0'

To filter by date, select
'View'-'>'Filter date'

Row	Column 1	Replace
001200	H*	same or similar results will be obt
001300	H*	Customers attempting to adapt these
001400	H*	to their environments do so at thei
001500	H*	-----
002100	C*	BEGINNING OF DEMO CODE *****
002800	C*	END OF DEMO CODE *****

004600	C*	THIS IS A COMMENT LINE - SECOND SUBR

Ctrl+A to show everything

CODE Editor - SET DEFAULT.EXPANDHIDE ON

The screenshot shows the CODE Editor interface with a search filter dialog open. The dialog is titled "Filter" and contains the text "Include all lines with this string" and a search box containing "begsr". There are checkboxes for "Case sensitive" and "Pattern match", both of which are unchecked. The dialog has "Filter", "Cancel", and "Help" buttons.

The main editor window shows the following code listing:

Row	Column	Replace
000396	C	ACDESR BEGSR
000397	C*	
000398	C*	Housekeeping, clear display fields and reset indicators
000399	C*	
000400	C	MOVE *BLANKS EMESS
000401	C	MOVE '0' *IN60
000402	C	MOVE '0' *IN90
000403	C*	
000404	C*	The following compare and branch (CABEQ) statements per
000405	C*	two functions. First it determines the type of mainten

Below the main editor window, there is a smaller window showing the command "SET DEFAULT.EXPANDHIDE ON".

At the bottom of the screenshot, there is another window showing a list of code listings:

Row	Column	Replace
000050	C	MAIN BEGSR
000339	C	EDITSL BEGSR
000396	C	ACDESR BEGSR
000418	C	ADDCDE BEGSR
000433	C	CHGCDE BEGSR
000450	C	DELCDE BEGSR
000451	C	MOVE '1' *IN90
000452	C	*IN50 IFEQ '1'
000453	C	MOVE '1' *IN60

Field Cross Reference

The screenshot shows the 'RPG Cross Re...' window with a tree view of the code file. The tree view includes folders for Identifiers, ARRAY, ARRAY(2), ARRAY(3), DS, INSTALL, and Indicators. A callout box labeled 'List of fields' points to the ARRAY folders. Another callout box labeled 'Line #s where referenced' points to the 'OK' folder. A third callout box labeled 'List of indicators' points to the Indicators folder. A 'Refresh' button is at the bottom of the window.

The code editor window shows the following code:

Row	Column	Replace	17 changes.
00002	FQSPRT	O	F 132 PRINTER
00008	D	OK	1 8 INZ('VERIFI
00010	C	EVAL	OK = 'FAILED'
00011	C	MOVE	ARRAY(2) ARRAY
00012	C	RESET	OK
00013	C	SETON	
00014	OQSPRT	T	LR 1 1

Annotations in the image:

- Select line # in list
- Line positioned, highlighted in editor
- List of fields
- Line #s where referenced
- List of indicators

Refresh

available for RPG and COBOL

CODE Editor - RPG Conversion

- Convert RPG III to ILE RPG

Actions -> Convert RPG Source

- ▶ Converted RPG gets stored locally
- ▶ Same result as iSeries command

CVTRPGSRC

- Convert ILE RPG free-form

Actions -> Convert selection to C Free-Form

Actions -> Convert all to C Free-Form

The Navigator

CODE - E:\adtswin\system\NAVIG.OUT

File Edit View Actions Options Windows Help

E:\adtswin\system\NAVIG.OUT

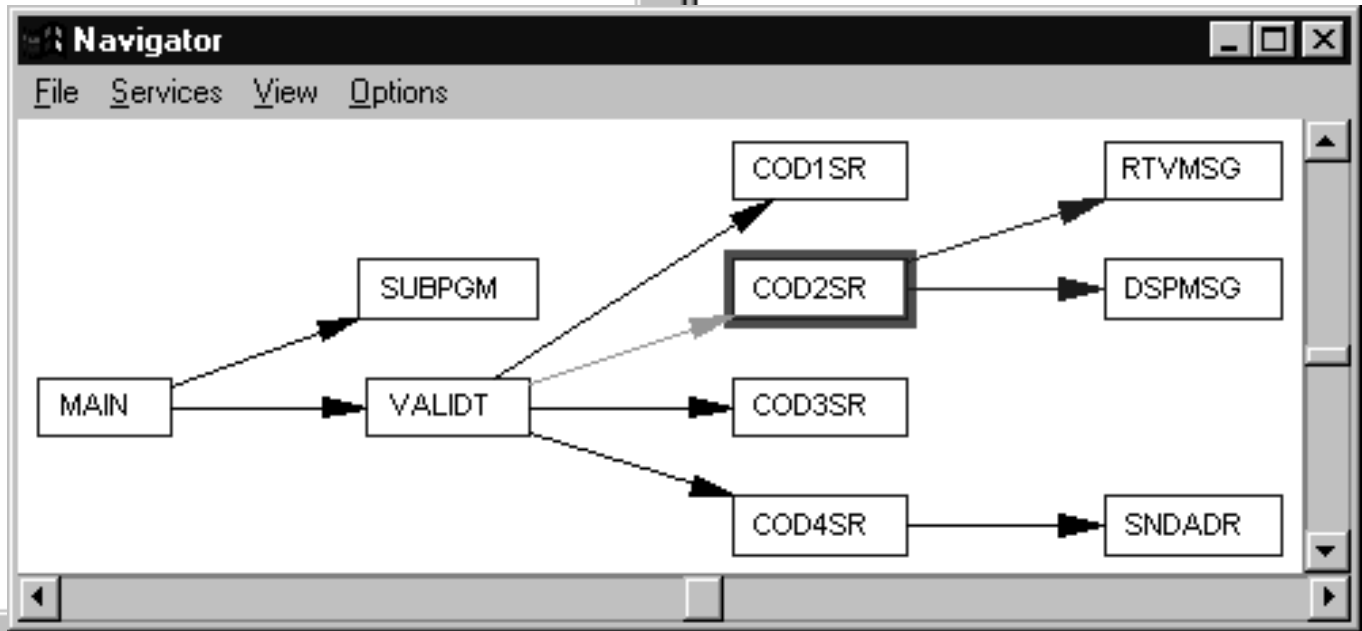

Navigator statistics - E:\ADTSWIN\LOCAL\samplev2.rpg

Total functions: 10

Called functions

MAIN	SUBPGM
	VALIDT
	VALIDT
	SUBPGM
VALIDT	
	COD1SR
	COD2SR
	COD3SR
	COD4SR
COD1SR	
COD2SR	
	RTMSG
	DSPMSG

To create a file that lists the called and calling functions, select 'Services' -> 'Topology'.

CODE Program Generator

Command

Debug view parameter *ALL

Create Debuggable ILE RPG
module

Command parameters

Debugging batch jobs

The screenshot shows the 'Attach' dialog box on the left and a terminal window on the right. The 'Attach' dialog box has the following fields and options:

- Compiled: Interpreted AS/400
- TCP/IP name of AS/400 host: Host: TORAS644
- Job to debug: /iweiss/036538
- Specify the name of the program to add to debug: codelabxx/testbatch
- Use program profile:
- Step into:
- Debug Java:
- Buttons: Attach, Cancel, Help

The terminal window shows the following command and output:

```
MAJOR Major Command Groups
Select one of the following:
1. Select Command by Name          SLTCMD
2. Verb Commands                   VERB
3. Subject Commands                SUBJECT
4. Object Management Commands     CMDOBJMGT
5. File Commands                   CMDFILE
6. Save and Restore Commands       CMDSAVRST
7. Work Management Commands        CMDWRKMGT
8. Data Management Commands        CMDDTAMGT
9. Security Commands               CMDSEC
10. Print Commands                 CMDPRT
11. Spooling Commands              CMDSPL
12. System Control Commands        CMDSYSCTL
13. Program Commands               CMDFPGM
More...

Selection or command
==> SBMJOB CMD(CALL PGM(CODELAB01/TESTBATCH)) HOLD(*YES)
F3=Exit F4=P
F16=AS/400 Mai
Job 001079/WEI
MA b
```

Submit job to the Jobq with the HOLD option set to *YES:

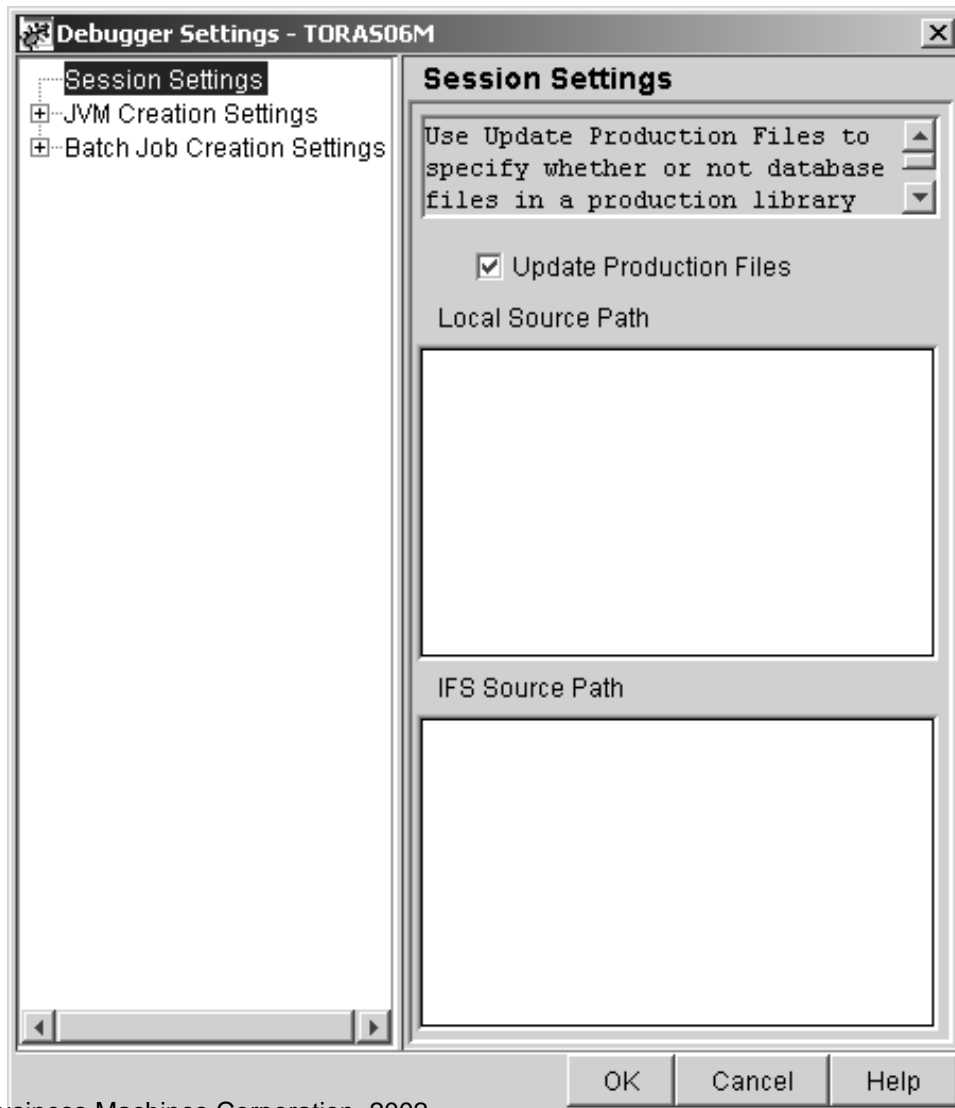

- SBMJOB CMD(CALL PGM(CODELAB01/TESTBATCH)) HOLD(*YES)
- Start debugger from the Start menu or command line or the CODE editor as Running application.
- Get job info of submitted job
- Start debug session
- Debugger will release the job and display the source when the program starts running.

Note: If you start from the CODE editor, you will have to release the job yourself.

Debugger Settings - Session Settings

Debugger Settings are per host

- Debugger Settings are available from the Load Program or Attach dialog.
- ◆
- Check 'Update Production Files' to allow access to production libraries while debugging.
- ◆
- Set Local and IFS Source Path for Java and C++.

Debugger - Monitor Expression dialog

The screenshot shows the IBM Distributed Debugger interface. The 'Monitors' menu is open, showing 'Monitor Expression...' (Shift+F9). The 'Monitor Expression' dialog box is active, with the following content:

Enter the expression to be evaluated:
AR1(5)

Program monitor
 Storage monitor

File:	*PGM	EW37TEST/EWIRPG05
Line:		1
View:	*Text	
Thread:		1

Buttons: OK, Monitor, Cancel, Help

In the background, the 'Monitors' pane shows a list of monitored variables:

Expression ...	Value
AR1	
AR1(5) = 025.	

The source code window shows the following code:

```
25 D* STRUC2 has 10 occurrences.  
26  
27  
28  
29  
30  
31  
32
```

monitored variables

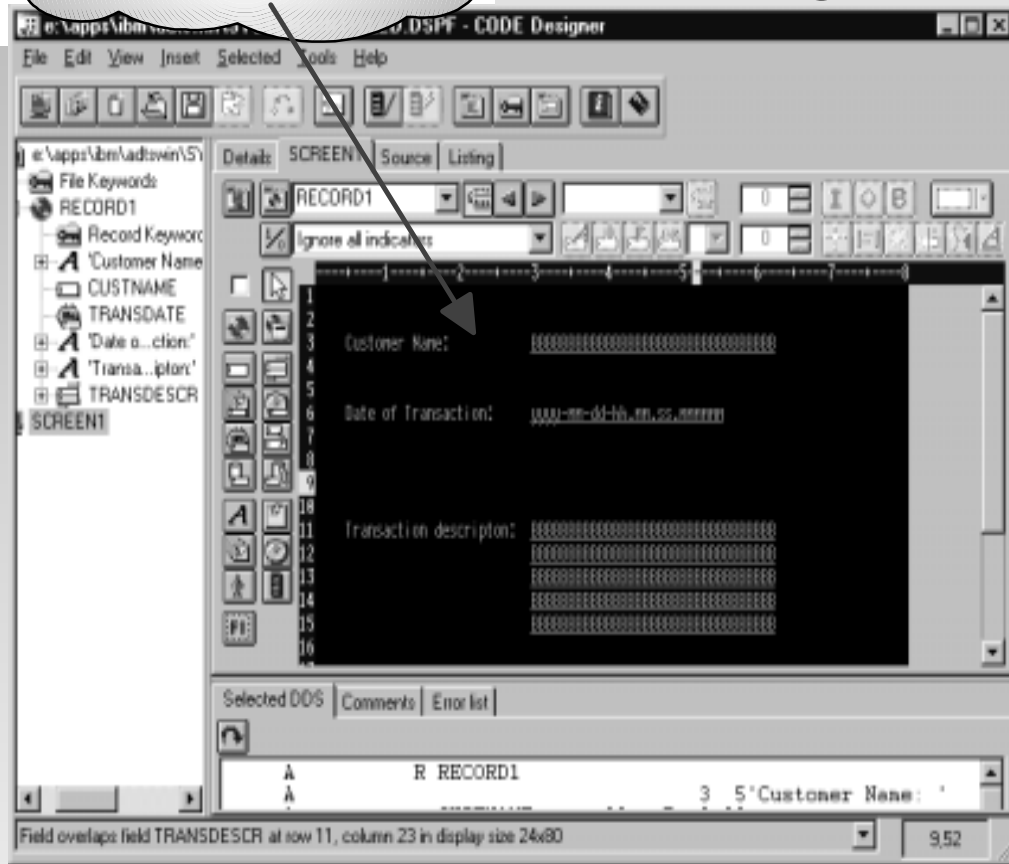

Monitor variables:
Select Monitors -->
Monitor Expression
Type the variable name and optionally
add occurrence
Note: The dialog gets prefilled with any
selected variable.

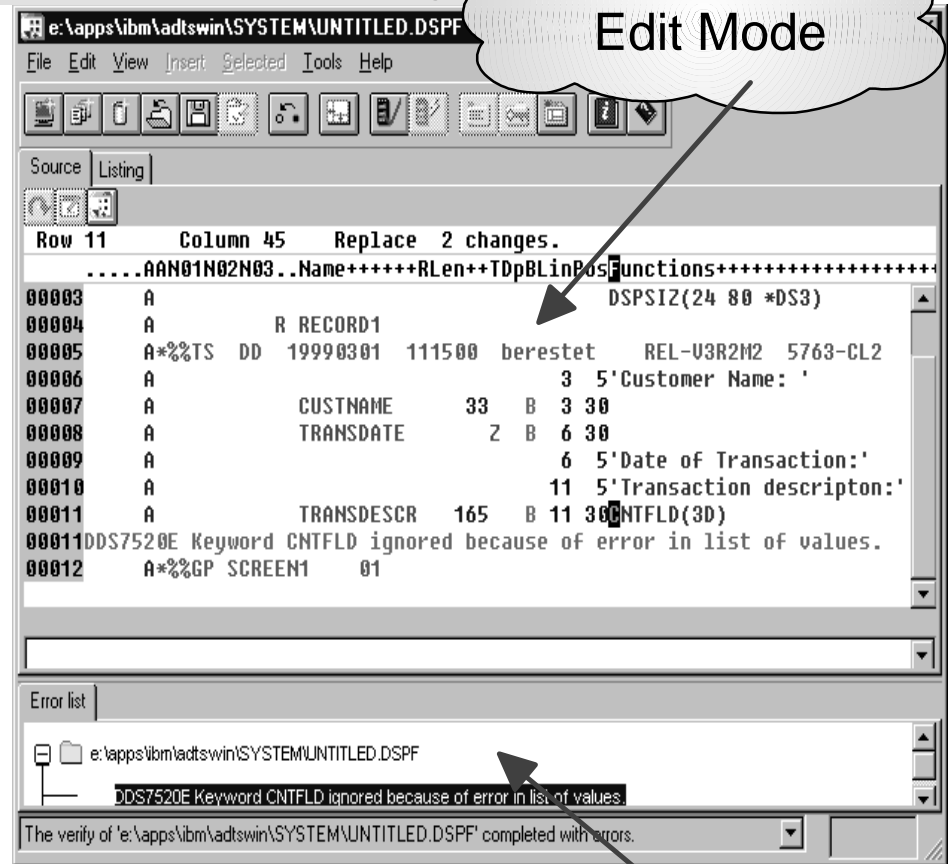

CODE Designer - Editing DDS

You can switch between 'Design' and 'Edit' modes. Use 'File'->'Edit DDS source' and 'File' -> 'Design DDS source' respectively

Design Mode

Edit Mode

NOTE: Some of the changes made in the 'Edit Mode' may cause problems going back to the 'Design Mode'!!!

When you verify DDS source in the 'Edit Mode', all errors go to the integrated 'Error List' window.

CODE Designer - Checkpoints

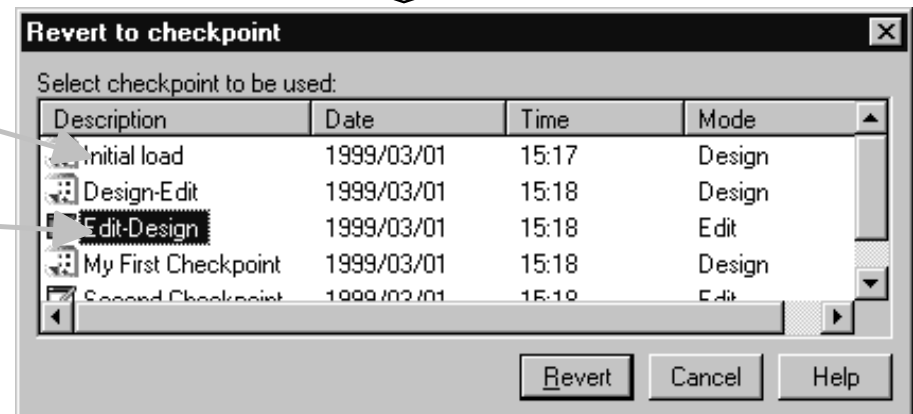

■ Checkpoints

- ▶ Snapshot of the entire DDS source at a given point in time.
- ▶ Two types: automatic and user-defined
- ▶ User-defined checkpoints are saved between sessions.
- ▶ You can 'revert' back to a checkpoint.

Certain 'drastic' changes in 'Edit Mode' (e.g. delete a record line) may get you in trouble!
Revert to previous checkpoint in such cases.

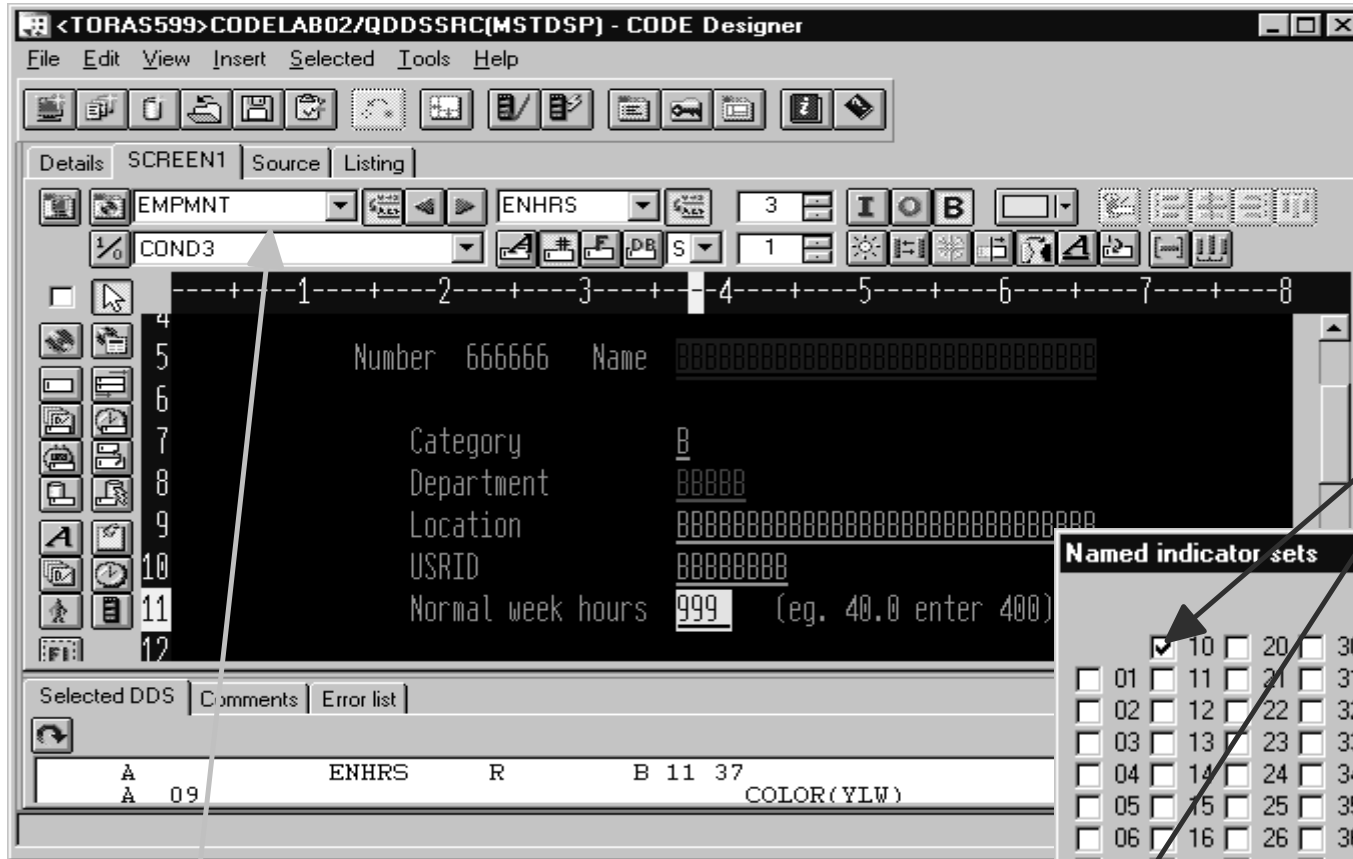

Checkpoints taken in
'Design Mode'

Checkpoints taken in
'Edit Mode'

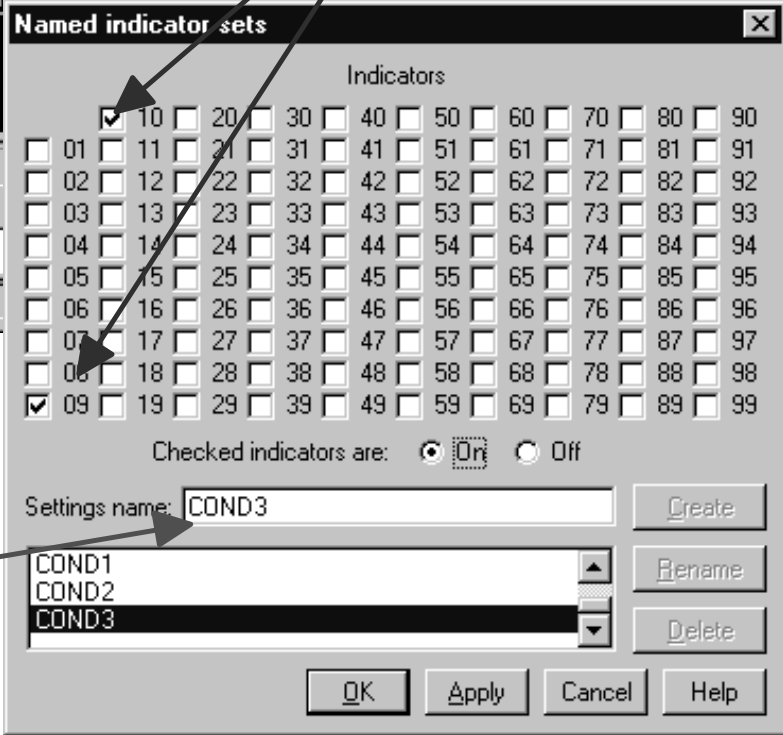

CODE Designer, Named Indicators sets

'F7' brings up the dialog

Check which Indicators are in set

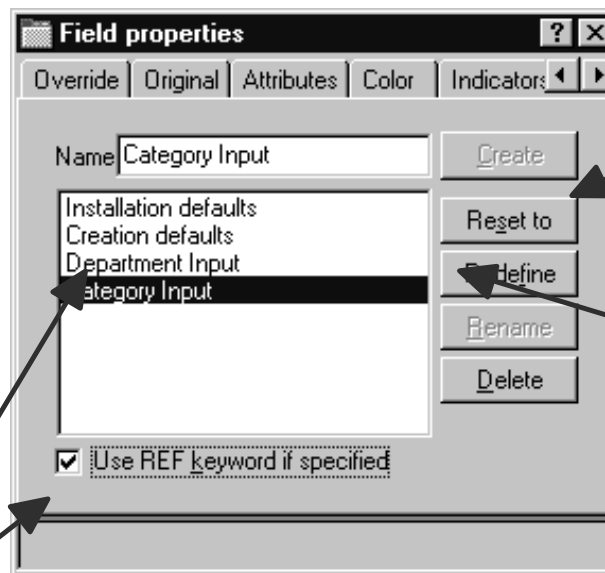

Select which set is in effect

Name of set

CODE Designer, Styles page

- ▶ Save the settings of an object as a style and then reset other objects of the same type to that style.
- ▶ Change creation defaults of objects.
- ▶ Alternatively can use REF keyword for DB Reference fields

Change the DDS object (record/field) to be like selected style

Change style to be like the current DDS object

New fields are created using:
REF keyword if checked
Otherwise Creation defaults

CODE Designer, Convert to Field

- Convert text constant to field with F11.
- All appropriate editing codes are created.
 - ◆ \$999,999.99
- Allows SDA syntax.
 - ◆ +B(10)

Before conversion

1 fields converted.

A	R RECORD1				
A		2	4	'\$999,999.99'	
A		6	4	'+B(20)'	

Copyright International Business Machines Corporation, 2002

After conversion

1 fields converted.

A	R RECORD1				
A	FIELD1	8Y	2B	2	4EDTCDE(1 6)
A	FIELD3	20A	B	6	4

Start CODE tools from PDM

- You can create user-defined options in PDM to invoke CODE tools.
- To invoke the CODE Editor on a source member you would use the following syntax:

```
CALL QDEVTOOLS/EVFCFDBK PARM('37' 'Y' 'OS400'  
'<LOCAL> CODEEDIT "<server>&L/&F(&N)" ')
```

- For V4R5 iSeries use:

```
CALL QCODE/EVFCFDBK PARM('37' 'Y' 'OS400'  
'<LOCAL> CODEEDIT "<server>&L/&F(&N)" ')
```

Working disconnected

What You CAN DO while disconnected

- ✓ Work with local source.
- ✓ Syntax check RPG, ILE COBOL, and DDS
- ✓ Prompt RPG, COBOL, and DDS.
- ✓ Access language reference help for RPG, COBOL, and DDS.
- ✓ Verify RPG, COBOL, and DDS (without caching, copy members and information on database fields will not be available).

What You CAN NOT DO while disconnected

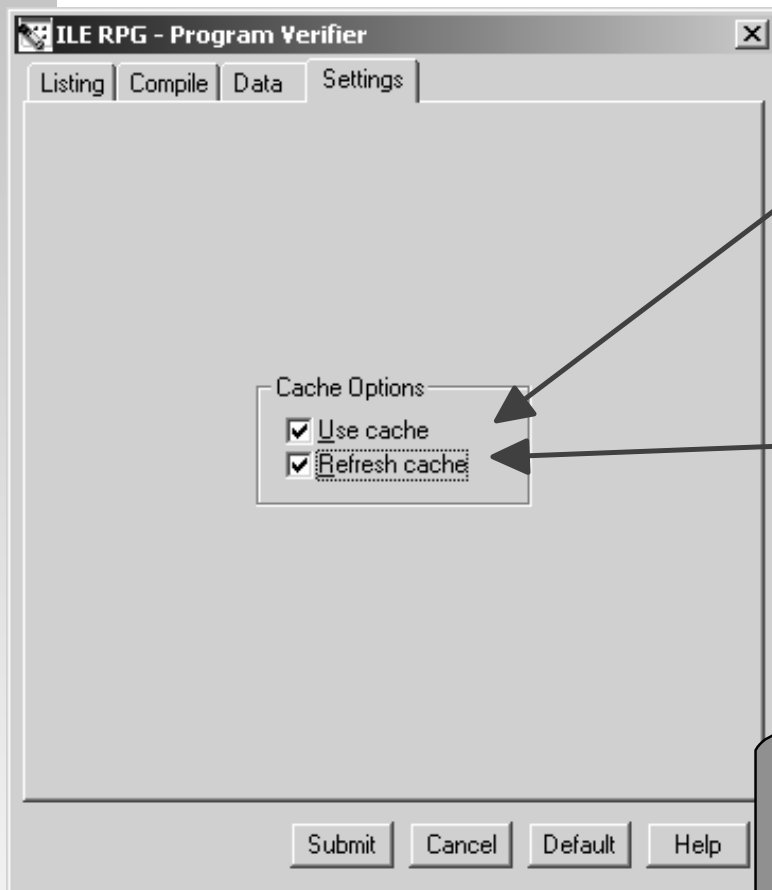

Edit, design, or compile host source.
Debug host programs.
Execute host commands.
Prompt CL statements.

Caching

Information retrieved from the iSeries during your session is saved locally. CODE searches locally for the host information. If all the necessary information is cached, no host connection is needed.

In Program Verifiers, select '**Verify program**'->'Prompt', in Settings tab select "Use cache".

Shortens verify times, since subsequent verifies do not need to access the host.

If host information changes, you have to "refresh" the contents of the cache. In verifiers, select "Refresh cache".

The local files are saved in the WDSC\CACHE directory (Occasionally, you will want to clean up this directory to free up space)

Editor Programming

- ✓ Why program it?
 - ▶ Need for a new editor function
 - ▶ Repetitive task, fastpath key for heavily used function
 - ▶ Tailor the editing environment for your shop
- ✓ What can you do?
 - ▶ Specify editor default settings
 - ▶ Add editor functions and your own macros to the menus and toolbar
 - ▶ Assign/re-assign keys and/or line commands to editor functions and your own macros
 - ▶ Interact with the host via the CODESRV command
- ✓ How do you do it?
 - ▶ Write macros in REXX or Java + editor commands
 - ▶ Use the 'profiles' to load in the macros.

CODE Editor - Key shortcuts

Text manipulation example:
Ctrl+ Backspace - delete entire line
Ctrl+Delete -- delete to end of line

Unlimited undo and redo
Ctrl+Z Ctrl+Shift+Z

Block marking of lines, characters,
or rectangles with copy, move,
overlay, and delete operations
example: Alt+U -- unmark text

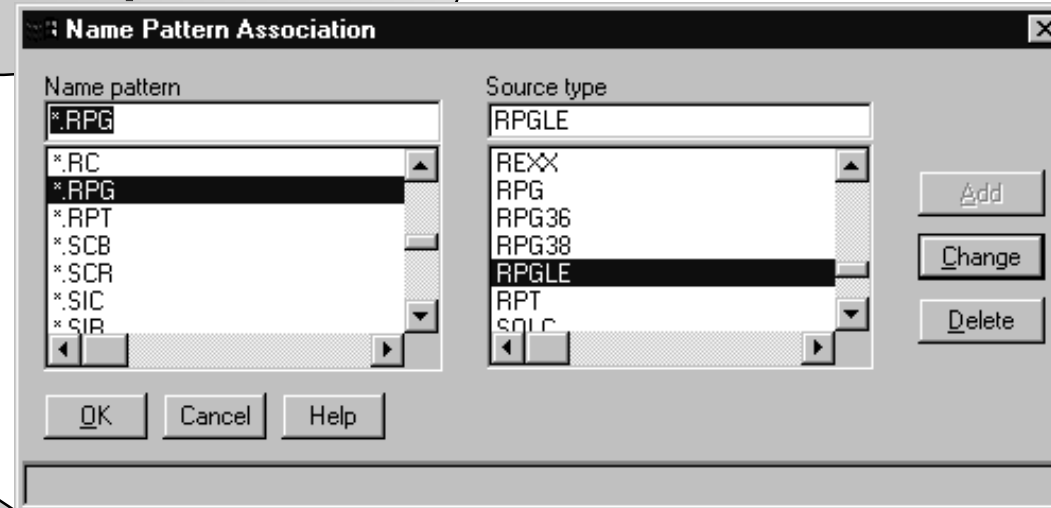

For more info select:
'Help' -> 'Keys help'

Shortcut	Description
Ctrl+Right	Move cursor to
Ctrl+Left	Move cursor to beginning of word or previous word
Ctrl+C	Copy selected text to clipboard.
Ctrl+X	Cut selected text to the clipboard.
Ctrl+V	Paste text from the clipboard.
Alt+L	Select a line of text, or extend selected text by additional lines for copying, moving, or deleting (and deselect any text selected from any other file view).
Ctrl+T	Select word/token
Alt+U	Unmark text selected with Alt+L (applies to any file view opened).
Alt+B	Select a block of text.
Alt+R	Select a rectangular block of text.
Alt+K	Convert selected text to uppercase.

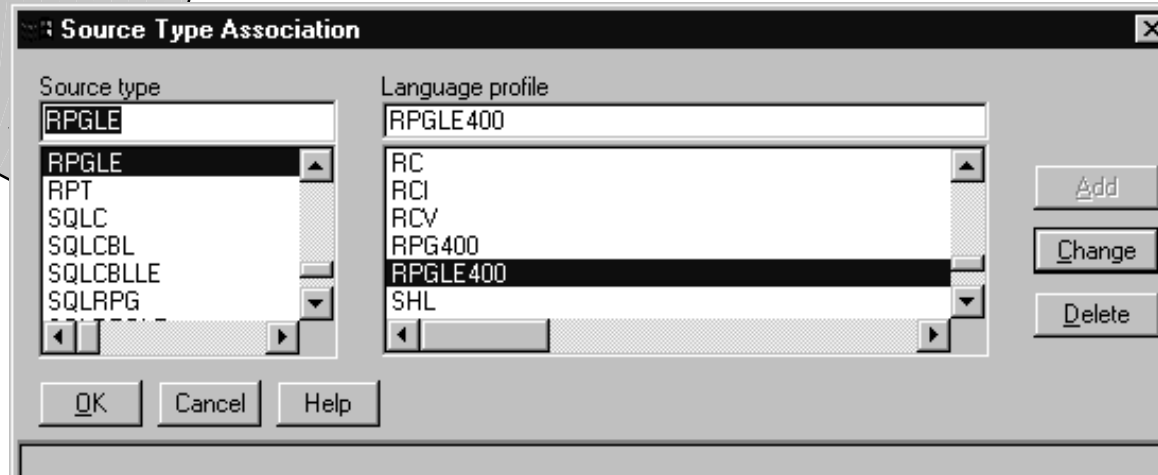

CODE Editor - Associations

To map file name to source types select:
Options -> Associations -> Name patterns

To map source type to a specific language profile select:
Options -> Associations -> Source types

Editor Programming - commands

■ Editor Commands

▶ To issue a command, press ESC and enter the command.

▶ To position to line number 12.

FIND LINE 12

▶ To insert a new line.

INSERT

▶ To change the current line's text.

SET CONTENT this is new

▶ To display message on message line.

MSG this is a message

Editor Source Editing Area

```
CODE - <TORAS599>CODELAB02/QRPGLESRC(PAYROLLG)

Editor Command Line

Editor Programming - commands

- Add function to the menubar
SET ACTIONBAR.pulldown.item command
- Add function to the toolbar
SET TOOLBAR.button_text position command
- Assign keyboard shortcut
SET ACTION.key command
- Add function to the popup menu
SET POPUPMENU.menuitem command
- Get help when editor command fails
 - ▶ **Windows->Macro log** to view messages.

Editor Programming - Reference

'Editor Reference' online documentation contains help for all editor commands, sorted alphabetically!

Parameters Summary - Netscape

File Edit View Go Communicator Help

Back Forward Reload Home Search Guide Print Security Stop

Bookmarks Location: <http://localhost:49213/cgi-bin/vahwebx.exe/vahelp/va400/Extract/0/lpex/ref/rlparref.htm#top>

group	Specifies the conditions by which a menu item will be enabled or disabled (Query only)
help	Specifies the help information associated with a menu item (Query only)
hex	Returns the hexadecimal ASCII code of the character at the current cursor position. (Query only)
highlight	Sets the classes to be highlighted.
horizscroll	Sets the increment for the horizontal scroll bar.
hoverhelp	Enable or disable hoverhelp for the toolbar.
idletime	Sets the idle seconds required before auto-saving.
impmacro	Processes unknown commands as macros.
impset	Processes unknown commands as set query.
include	Specifies the list of classes for which member lines are to be included.

'Editor Reference' is available from the 'Help' pulldown. This information is invaluable when writing editor macros!

Editor Programming - Macros

- Text files with extension **.LX**
- Contain **REXX** statements and embedded editor commands
- Query and set attributes of the editor
- Use **CODESRV** command to invoke iSeries commands, retrieve lists, etc.
- Invoked from editor by
"MACRO macro_name parameters"

Editor Programming - EXTRAS

- EXTRAS macro updates path the editor searches when macros are executed.
 - ▶ Default is WDSC\MACROS
- Add WDSC\EXTRAS (which contains many example macros) to path

Actions -> Enable EXTRAS

- Add your own directory to path

EXTRAS ON d:\mymacros

- ▶ Use d:\mymacros to store your own macros and profiles. This helps prevent changes being lost on release upgrades.

Editor Programming - EXTRAS

- Remains on until disabled

EXTRAS OFF or EXTRAS -> Disable Extras

- Change at any time

EXTRAS ON d:\myothermacros

- Specify multiple directories

EXTRAS ON d:\mymacros;e:\workmacros

- Open local files

- ▶ The LX editor command used to open files uses same search path for local files.

Writing a REXX macro

1 Open a new ILE RPG file:
'testfile.rpg'

```
CODE - testfile.rpg
File Edit View Actions Options Windows Help Extras
testfile.rpg
Row 1 Column 1 Replace
.....*..1.....+.....2.....+.....3.....+.....4.....
00001
File "testfile.rpg" has been created.
macro rpgproc
```

3 Prompt for the name of the new procedure.
User enters name and clicks OK.

```
RPG Procedure name
Enter the name of the procedure:
MyProc
[OK] [Cancel] [Help]
```

2 Execute macro rpgproc

2

Create a template for the procedure **MyProc** (name, entered by the user...)

4

```
CODE - testfile.rpg *
File Edit View Actions Options Windows Help Extras
testfile.rpg *
Row 11 Column 1 Replace 1 change.
.....PName+++++.....B.....Keywords++
00002 D* -----
00003 D* Prototype for procedure: MyProc
00004 D* -----
00005 D MyProc PR
00006
00007 P* -----
00008 P* Procedure Name: MyProc
00009 P* Purpose:
00010 P* -----
00011 P MyProc B
00012 D MyProc PI
00013
00014 C* Your calculation code goes here
00015
00016 C RETURN
00017 P MyProc E
```

REXX macros - creating prompts

```

CODE - H:\adtswin\codelab\rpgproc.lx
File Edit View Actions Options Windows Help Extras
H:\adtswin\codelab\rpgproc.lx
Row 1      Column 1      Insert
-----1-----2-----3-----4-----5-----6-----
00001/*****
00002/* RPGPROC.LX                               */
00003/*                                           */
00004/* This macro builds an RPG procedure template */
00005/*                                           */
00006/*****
00007
00008'set lineread.title RPG Procedure name'      /* S
00009'set lineread.prompt Enter the name of the procedure: ' /* Prompt

00013
00014if ((lastline = '') | (lastkey = 'ESC')) then do
00015  'msg Request cancelled'
00016  exit
00017end
H:\adtswin\codelab\rpgproc.lx saved

```

Every REXX program starts with a comment. It is customary to explain what the macro is doing...

Setup the following parameters:

- Prompt box title
- Prompt box label
- Size of the entry field

Retrieve the following

- Text typed in the entry field
- Which button was pressed

NOTE:The 'Cancel' button is equivalent to 'ESC' key...

If the user did not enter any text, or pressed 'Cancel', put up an error message and bail out...

REXX macros - creating template

```
CODE - e:\apps\ibm\adtswin\Extras\rpgproc.lx *
File Edit View Actions Options Windows Help Extras
e:\apps\ibm\adtswin\Extras\rpgproc.lx *
Row 38 Column 51 Insert 2 changes.
-----+-----1-----+-----2-----+-----3-----+-----4-----+-----5-----+-----6-----
00019procName = lastline
00020/* Pad procName with blanks to make it 10 characters long */
00021do procLength = length(lastline) to 9
00022  procName = procName' '
00023  end
00024
00025/* The procName is 10 characters long including blanks */
00026'insert      D* -----'
00027'insert      D* Prototype for procedure: 'procName
00028'insert      D* -----'
00029'insert      D 'procName'      PR'
00030'insert      .
00031'insert      P* -----'
00032'insert      P* Procedure Name: 'procName
00033'insert      P* Purpose: '
00034'insert      P* -----'
00035'insert      P 'procName'      B'
00036'insert      D 'procName'      PI'
00037'insert      .
00038'insert      C* Your calculation code goes here' |
00039'insert      C
00040'insert      C      RETURN'
00041'insert      P 'procName'      E'
```

Pad procName with blanks if needed to make sure it is 10 characters long!!!

Substitution variables are placed outside the quotes!

Setup procedure beginning

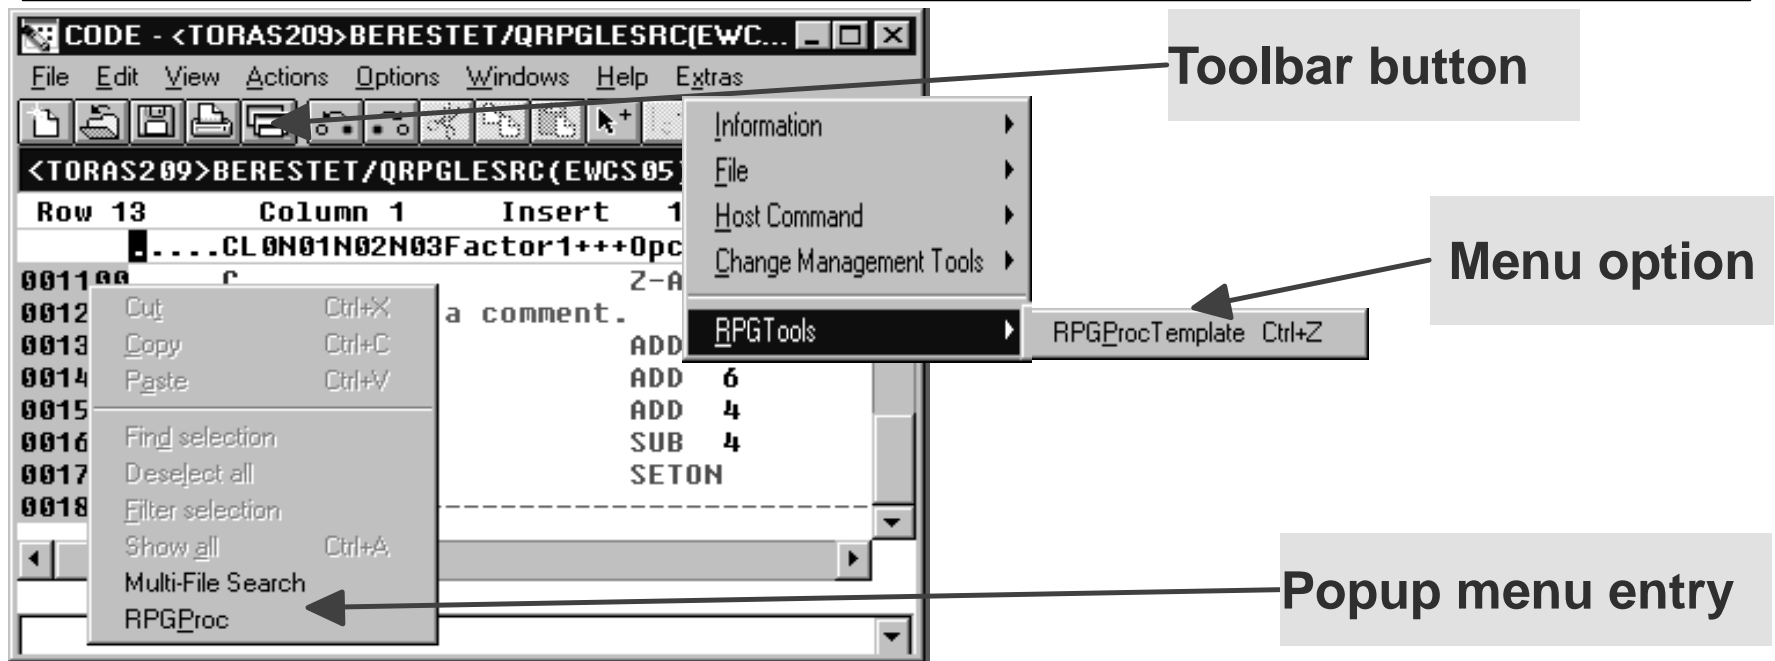

The C specs of your procedure will be inserted here!

Setup Procedure declaration part.

Setup procedure end

Setting up toolbar and menus

- Add rpgproc macro to the toolbar

```
SET TOOLBAR.RPGProc BITMAP _33 HELP "Proc template" 4 macro rpgproc
```

- Add rpgproc macro to the 'Extras' menu

```
SET ACTIONBAR.E~xtras.~RPGTools.RPG~ProcTemplate\tCtrl+Z macro rpgproc
```

- Add rpgproc macro to the popup menu

```
SET POPUPMENU.RPG~Proc rpgproc
```

Editor Profiles

Special editor macros run at specific times

Profile	When does it run?	Can I change it?
PROFINIT.LXU	When the editor starts.	Yes
PROFSYS.LXU	Just before each file is loaded.	Yes
xxx.LXL xxx = cbl,rpgle400, etc.	After PROFSYS.LXU, but before a file of type xxx is loaded.	No
xxx.LXU	After xxx.LXL but before the file is loaded.	Yes. Add your own xxx specific commands here.
PROFILE.LX	The last profile run before each file is loaded.	Yes
xxx.LXS	Whenever a file of type xxx is saved.	Yes

Editor Profiles: RPGLE400

```

'SET POPUPMENU.RPG~Proc rpgproc'
```

CODESRV command

- **CODESRV** is a workstation command that can be used to:

- ▶ Get a list of active host CODE servers.

CODESRV SERVER

- ▶ Shutdown all or specific servers.

CODESRV SHUTDOWN

CODESRV /S OS400

- ▶ Send commands to the iSeries.

**CODESRV EXEC OS400 STRSEU OPTION(6)
SRCFILE(CODELAB01/QDDSSRC)
SRCMBR(MSTDSP)**

CODESRV command, cont'd

- ▶ **Download source**

```
CODESRV GET OS400
```

```
"CODELAB01/QDDSSRC(MSTDSP)" c:\mstdsp.dspf
```

- ▶ **Upload source**

```
CODESRV PUT OS400 c:\mstdsp.dspf
```

```
"CODELAB01/QDDSSRC(MSTDSP)"
```

- ▶ **Get lists of objects that match a filter**

```
CODESRV LIST OS400 "CODELAB01/QDDSSRC(*)"
```

- You can imbed the command in your macros.

Using CODESRV in a macro

SEUPRINT macro prints the current member being edited on the host. It is shipped with CODE.

```
/* SEUPRINT - a macro to print the current member being edited on the host. It uses the */
/*      SEU print option.                                     */

/* Blank out the message line */
'msg' ' '
/* Get full name of file being edited */
'extract name'
/* Get the name of the server, file and member */
parse var name '<' server '>' fn '(' mn ')'
/* Drop /ADM from server name if it exists */
parse var server host '/' junk
/* Issue error if this is a LOCAL file... */
if host = 'LOCAL' then do
  'msg Host Print is not valid for local files.'
  'ALARM'
  exit
end

/* Prompt user to save source, then print it on host... */
'SAVEALL PROMPT START CODESRV EXEC 'host' STRSEU SRCFILE('fn')
SRCMBR('mn') OPTION(6) (LOG'

'msg Member printed using STRSEU. See Command Shell for status.'
```

Use the CODESRV command to save the source and print it using SEU print option.

Editor Programming - Lpexlets

■ Lpexlets

- ▶ Use Java to customize the editor. Same capability as REXX but with power to create graphical-user-interfaces
- ▶ Classes that can access the editor inherit from the LpexCommand class, the LPEX Java Programming Interface. These classes are called "Lpexlets".
- ▶ Invoke from editor by "RUNJAVA class_name". The class file must be in the CLASSPATH and the class name is case-sensitive.
- ▶ Many samples in sample.jar in WDSC\JAVA.
- ▶ The Java Development Kit (JDK1.2.2) is required to develop Lpexlets. The JDK or Java Runtime Environment (JRE) is required to run them. Both are available from JavaSoft's web site www.javasoft.com.

Editor Programming - Lpexlets

We will enhance our RPGPROC macro with the dialog written in Java - an Lpexlet

Vadim RPG Procedure Template

Procedure Name

Programmer Name

Ok Cancel Clear

We are going to ask for the

- Procedure Name
- Programmer Name

In addition to 'OK' and 'Cancel' we will add a 'Clear' button

Editor Programming - Lpexlets

Every Lpexlet must inherit from the *LpexCommand* class.
You will implement *lpexEntry()*, main entry function.

Other *LpexCommand* members to be implemented include *lpexNotify()* and *lpexExit()*

```
import RPGProcFrame;

public class RPGProc extends LpexCommand
{
    static RPGProcFrame rpgProcFrame = null;

    /* lpexEntry() - main entry point from LPEX. Overrides LpexCommand's. */
    public static int lpexEntry (String arg)
    {
        if( rpgProcFrame == null )
            rpgProcFrame = new RPGProcFrame();
        rpgProcFrame.setVisible(true);
        return 0;
    } // end lpexEntry()

    // Once the Ok button is pressed, need to set DOCVARs
    public static int setDocVars(String procName, String pgmrName)
    {
        lpexCommand("SET DOCVAR.PROCNAME " + procName);
        lpexCommand("SET DOCVAR.PGMRNAME " + pgmrName);

        lpexCommand("MACRO RPGPROCJAVA");
        return 0;
    } // end setDocVars()
} // end class RPGProc
```

Create an *RPGProcFrame* object and show the dialog box...

lpexCommand() function executes editor commands.
We need to SET DOCVARs so that these values can be read later by the REXX macro.

Our Lpexlet will call REXX macro to generate the procedure template code

Editor Programming - Lpexlets

Data definitions for the RPGProcFrame class.

Every GUI control has a private data member associated with it.

```
import javax.swing.*;
import javax.swing.event.*;
import java.awt.*;
import java.awt.event.*;

public class RPGProcFrame extends JFrame implements ActionListener
{
    private JPanel contentPane = null;

    private JButton cancelButton = null;
    private JButton clearButton = null;
    private JButton okButton = null;

    private JLabel pgmrNameLabel = null;
    private JLabel procNameLabel = null;
    private JTextField pgmrNameTextField = null;
    private JTextField procNameTextField = null;
    .....
    .....
} // end class RPGProcFrame
```

It is a good programming practice to initialize all data members to null.

***RPGProcFrame* class extends *JFrame* class and implements *ActionListener* interface.**

Java's ideas of multiple inheritance!

JPanel object provides a 'home' for all other GUI controls. In the literature, people may call it a client canvas.

Editor Programming - Lpexlets

```
/* Class constructor */
public RPGProcFrame()
{
    super();
    setSize(426, 240);
    setTitle("Vadim RPG Procedure Template");

    // Create Ok button object
    okButton = new JButton("Ok");
    okButton.setBounds(42, 170, 85, 25);
    okButton.addActionListener(this);

    // Create text label for procedure name
    procNameLabel = new JLabel("Procedure Name");
    procNameLabel.setBounds(35, 27, 146, 20);
    // Creating an entry field for procedure name
    procNameTextField = new JTextField();
    procNameTextField.setBounds(218, 27, 169, 19);

    // Construct the JPanel object - client canvas and add all controls
    contentPane = new JPanel();
    contentPane.setLayout(null);

    // Add all entry controls and corresponding Labels to the client pane
    contentPane.add(procNameLabel, procNameLabel.getName());
    contentPane.add(procNameTextField, procNameTextField.getName());
    contentPane.add(okButton, okButton.getName());

    // Now that everything is constructed, set the client pane to contentPane
    setContentPane(contentPane);
    .....
    .....
} // end constructor()
```

Every class needs a constructor!

Creating an 'OK' button and making the *JFrame* object listen to the button clicks.

Creating a label and an entry field for the Procedure Name

A *JPanel* object that resides inside the *JFrame*!

Adding freshly created GUI controls to the *JFrame*.

Editor Programming - Lpexlets

***actionPerformed()* is defined by the *ActionListener* interface. It has to be implemented by any class that implements this interface!**

Usually used for processing button and menu events..

```
/**
 * Overwrite actionPerformed() method of the ActionListener interface
 * If any registered button is pressed, this method gets invoked
 */
public void actionPerformed(ActionEvent evt)
{
    // First of all figure which button was just pressed
    String arg = evt.getActionCommand();

    if( arg.equals("Ok") )
    {
        RPGProc.setDocVars(procNameTextField.getText(), pgmrNameTextField.getText());
        dispose();
    } // end if(Ok button is pressed)
    else if( arg.equals("Cancel") )
    {
        dispose();
    } // end if(Cancel button is pressed)
    else if( arg.equals("Clear") )
    {
        procNameTextField.setText("");
        pgmrNameTextField.setText("");
    } // end if(Clear button is pressed)
} // end actionPerformed()
```

Figure which button was pressed.

In the case of 'OK' button, call into the RPGProc class to set the DOCVARS.

On 'Cancel' just dispose() of the dialog...

'Clear' button was pressed - clear up all entry fields.

Editor Programming - Lpexlets

Lpexlet has set the DOCVARs. That is how we retrieve the values of the Procedure and Programmer Name

```
/* Read in the DOCVARs that are set by the Lpexlet */  
'EXTRACT DOCVAR.PROCNAME INTO 'procName  
'EXTRACT DOCVAR.PGMRNAME INTO 'pgmrName
```

```
/* Pad procName with blanks to make it 10 characters long */  
do procLength = length(procName) to 9  
  procName = procName' '  
end
```

```
/* The procName is 10 characters long including blanks */
```

```
'insert  D* -----'  
'insert  D* Prototype for procedure: 'procName  
'insert  D* -----'  
'insert  D 'procName'  PR'  
'insert  '  
'insert  P* -----'  
'insert  P* Procedure Name: 'procName  
'insert  P* Purpose:      '  
'insert  P* Written by:   'pgmrName  
'insert  P* -----'  
'insert  P 'procName'  B'  
'insert  D 'procName'  PI'  
'insert  '  
'insert  C* Your calculation code goes here'  
'insert  '  
'insert  C          RETURN'  
'insert  P 'procName'  E'
```

```
'trigger fullparse'
```

We will re-use the template generation code from the already written REXX macro RPGPROC.LX
(Just add Programmer's name)

Editor Programming - Lpexlets

The Prompt

The generated template

Vadim RPG Procedure Template

Procedure Name

Programmer Name

Ok Cancel Clear

```
CODE - one.rpg *
File Edit View Actions Options Windows Help Extras
one.rpg *
Row 1      Column 1      Replace 2 changes.
.....*..1.....+.....2.....+.....3.....+.....4.....+.....5.....+
00001      D* -----
00002      D* Prototype for procedure: MyProc
00003      D* -----
00004      D MyProc          PR
00005
00006      P* -----
00007      P* Procedure Name: MyProc
00008      P* Purpose:
00009      P* Written by:    Vadim Berestetsky
00010      P* -----
00011      P MyProc          B
00012      D MyProc          PI
00013
00014      C* Your calculation code goes here
00015
00016      C                      RETURN
00017      P MyProc          E
```

Compare to the template generated by the REXX macro.
We added the Programmer's Name

Creating Smart Guides

RPG Procedure SmartGuide

IBM
CODE/400 SmartGuide Framework Introduction

The ability to write CODE editor extensions in Java ("lpezlets"), combined with the new Java user interface library called SWING, offer a powerful environment for extending the CODE editor with your own rich productivity enhancing extensions.

A popular form of tool extensions these days are wizards, or SmartGuides, which ask the user a series of questions and based on the answers do a complex task or generate the necessary code to do a complex task. Authoring and
```

Suggestion

To unpack SmartGuide Framework examples, read '**LPEX Java readme**'. It is available from: **Help > Java help**.

Summary

- IBM's follow-on to SEU, PDM, RLU, SDA
- New world, new servers, new tools!
 - ▶ Much higher productivity
 - ▶ Much more fun programming again
 - ▶ Much easier to attract/retain talent
 - ▶ Much more flexibility
 - Working disconnected, at home, on the road
 - Tailor extensively to suit your needs
 - ▶ Much easier transition to future
 - Today: host applications, new tools
 - Tomorrow: Web applications!
 - RPG IV, ILE, GUI, VisualAge, Java, WebSphere. . .
