IBM Software Services for WebSphere®

IBM WebSphere Studio for iSeries™ Skills Transfer

The IBM WebSphere Development Tools for iSeries Services provide you with skills transfer, training and mentoring services for building an e-business application using WebSphere Development Tools for iSeries. The IBM WebSphere Studio for iSeries Skills Transfer shows you how to build an e-business application using WebSphere Studio for iSeries as a Web development tool.

Your Business Challenge

• You are an iSeries customer who would like to use WebSphere Studio for iSeries to create a Web development project

• You would like to build an e-business structure that has access to your iSeries data and applications

Services Solution

The WebSphere Studio for iSeries Skills Transfer will train and mentor your staff on how to use WebSphere Studio for iSeries to create and manage your Web development project based on your iSeries data and applications. Through a mentored workshop and a proof of concept, your staff will have the opportunity to learn about WebSphere Studio for iSeries and apply this knowledge to create and deploy a web application on your iSeries environment.

Benefits

During the IBM WebSphere Studio for iSeries Skills Transfer, you will:

• Acquire valuable skills for WebSphere Studio and WebSphere Application Server for iSeries

• Learn how to build an e-business application using WebSphere Studio for iSeries

• Gain greater assurance that your migration to an e-business has a successful outcome, resulting in the minimization of risk, higher productivity, and lower costs

IBM Software Services for WebSphere

Statement of Work

During the 5-day customized workshop, our Software Services consultants will mentor your staff on the following topics:

- IDE environment

- Files check-in and check-out capabilities

- Page Designer

- Web palette parts to generate standard HTML and Java Script, including:

    - Entry field with validity checking and edit code support

    - Subfile parts and

    - Other parts

- Deployment setup with focus on the WebSphere Application Server and IBM HTTP Server setup

- Configuration for Web project deployment

During the 5-day proof of concept, your staff will:

- Create some screens of a Web application

- Create servlets and JSP of a Web application

- Create a Web application that accesses iSeries data and applications

- Debug and test the application

- Deploy the Web project to WebSphere Application Server for iSeries

Your responsibilities

- Provide classroom facilities and appropriate hardware and software

- Provide someone with business domain knowledge

Duration

The IBM WebSphere Studio for iSeries Skills Transfer is 10 days long. All work will be completed using a time and materials contract.
