Today's Model

iSeries AD, IBM Toronto

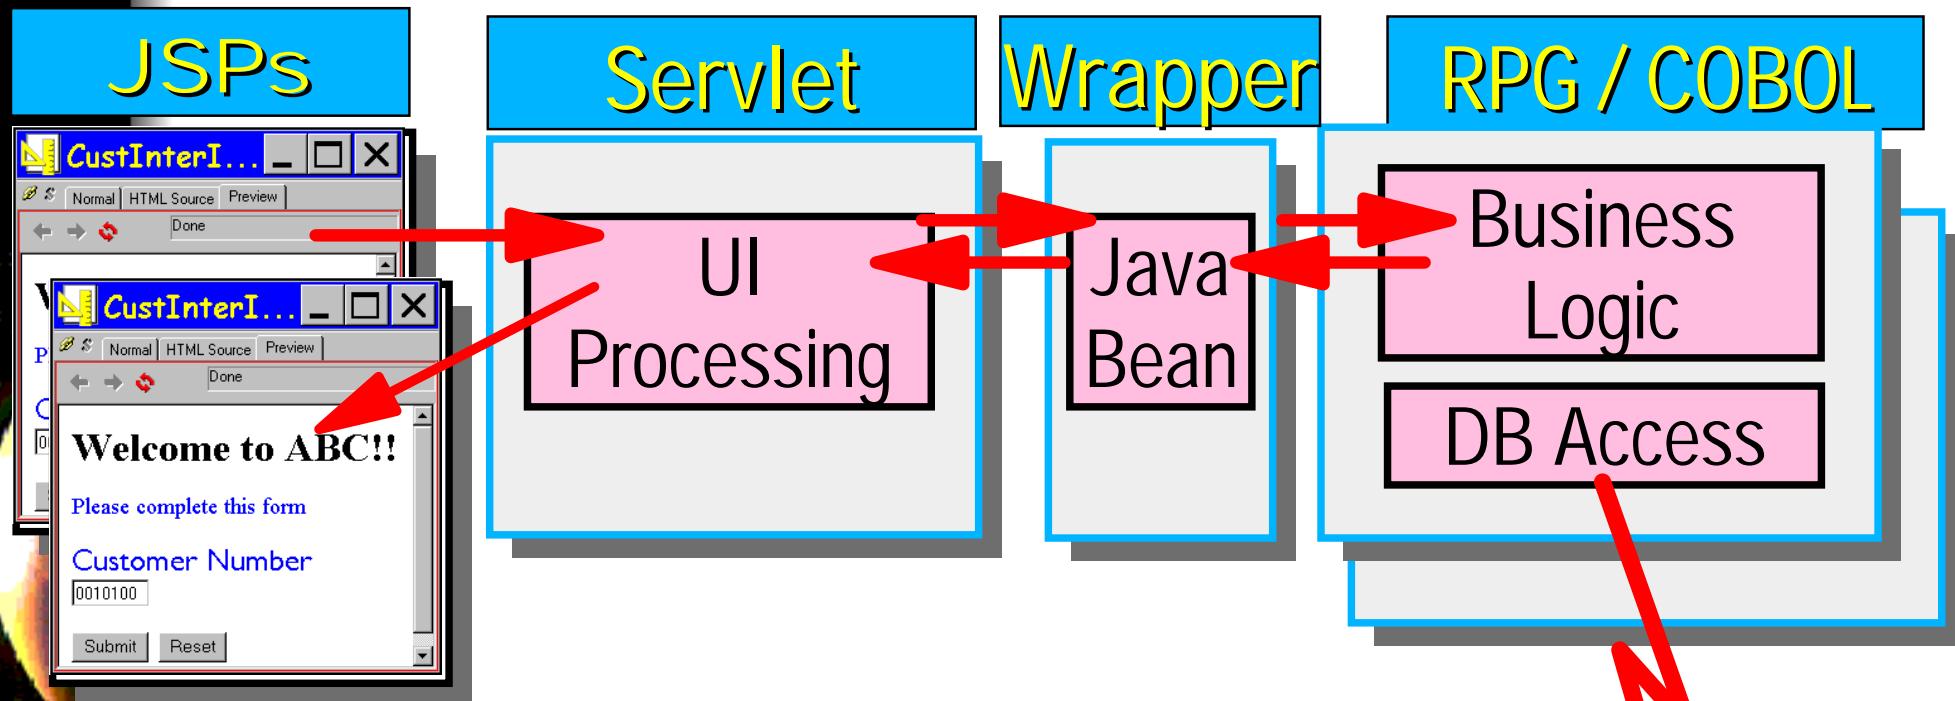

B2/400

eBusiness Application

iSeries AD, IBM Toronto

1. JavaServer Pages (JSPs) for UI

- ▶ HTML tags for constant part
- ▶ JSP tags for dynamically substituted data
- ▶ HTML FORMS for user input fields

2. Servlets for UI processing

3. Java Bean encapsulation of business logic DB2/400

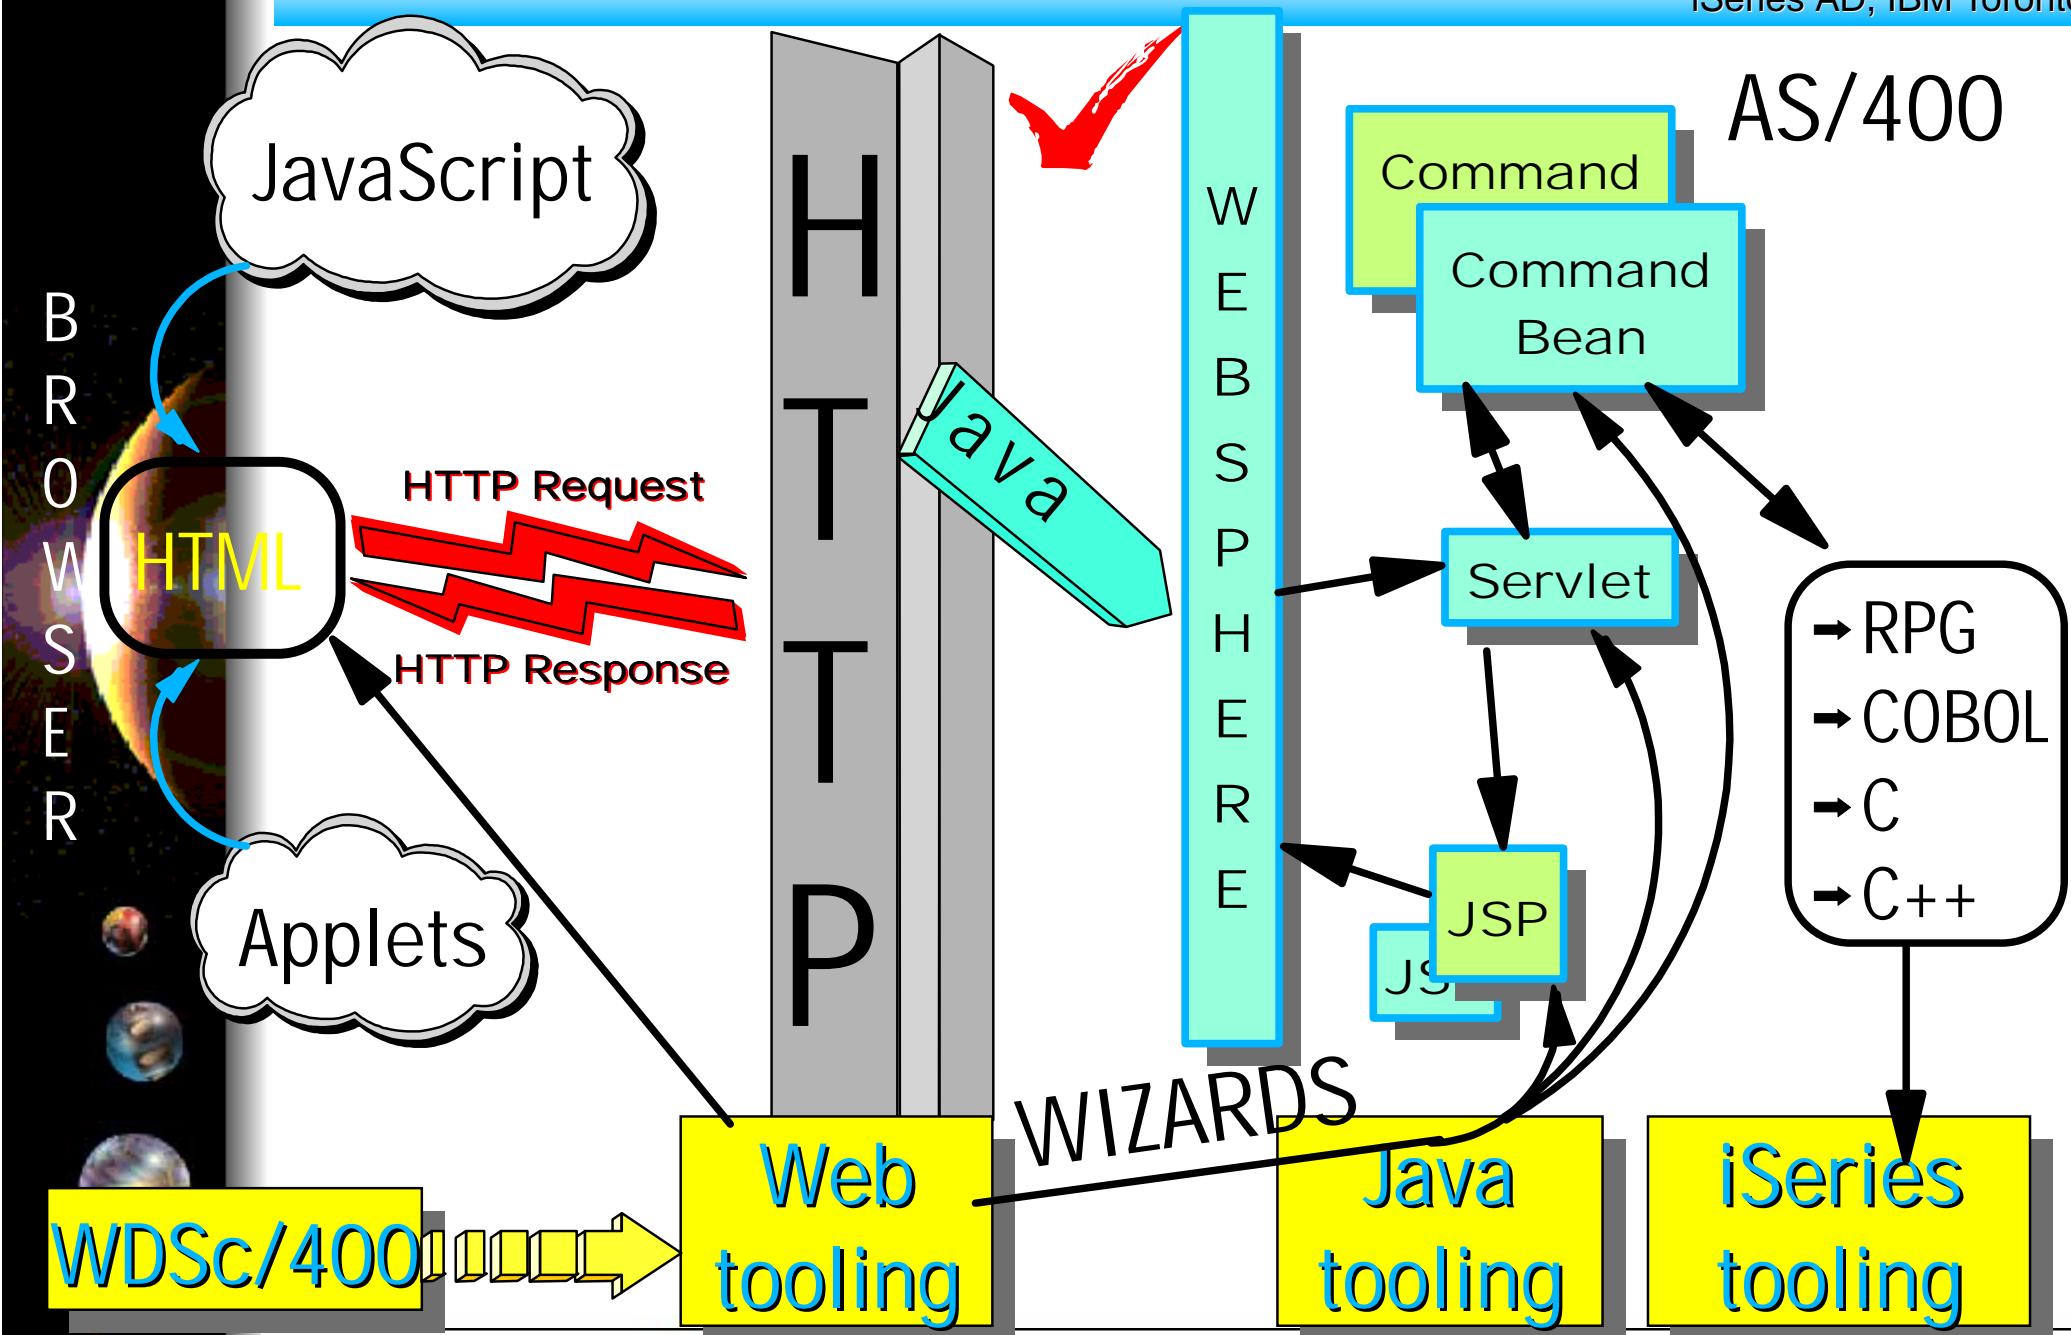

4. Business Logic: *PGM or ILE procedures

Big Picture

iSeries AD, IBM Toronto

What Are JSPs?

iSeries AD, IBM Toronto

- ▶ JavaServer Pages (JSPs) are ...
 - .jsp files
 - ▶ containing html tags plus JSP tags
- ▶ JSP tags ...
 - Allow dynamic data to be inserted into the static HTML
 - ▶ Data is extracted from Java Beans passed to the JSP
- ▶ JSPs are called ...
 - By your servlet
 - The input to JSPs are ...
 - ▶ Java Beans passed from your Servlet
 - The output of a JSP is ...
 - ▶ A full Web page, displayed to user

JSP example . . .

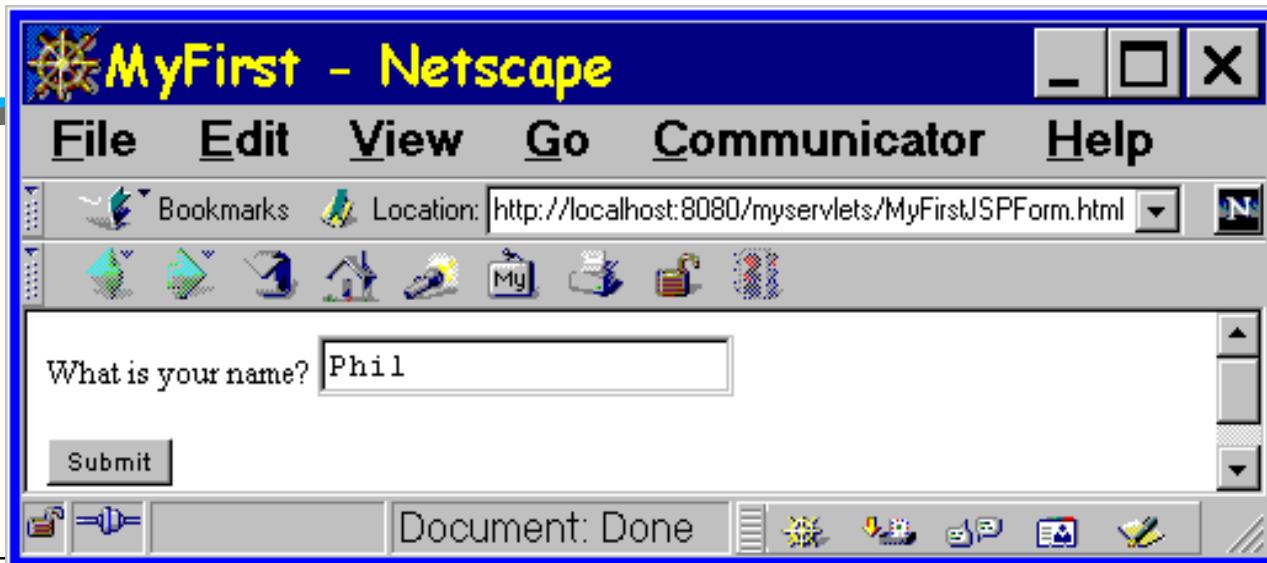

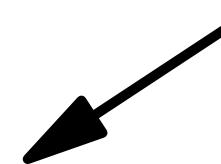

iSeries AD, IBM Toronto

\myservlets\MyFirstJSPForm.html

```
<HTML>
<HEAD><TITLE> MyFirst </TITLE></HEAD>
<BODY>
<FORM METHOD=POST
      ACTION="http://localhost/myservlets/MyFirstjsp.jsp">
What is your name?
<INPUT TYPE="text" NAME="name"><P>
<INPUT TYPE="submit" VALUE="Submit">
</FORM>
</BODY>
</HTML>
```

Call the JSP
when SUBMIT
pressed

JSP Example . . .

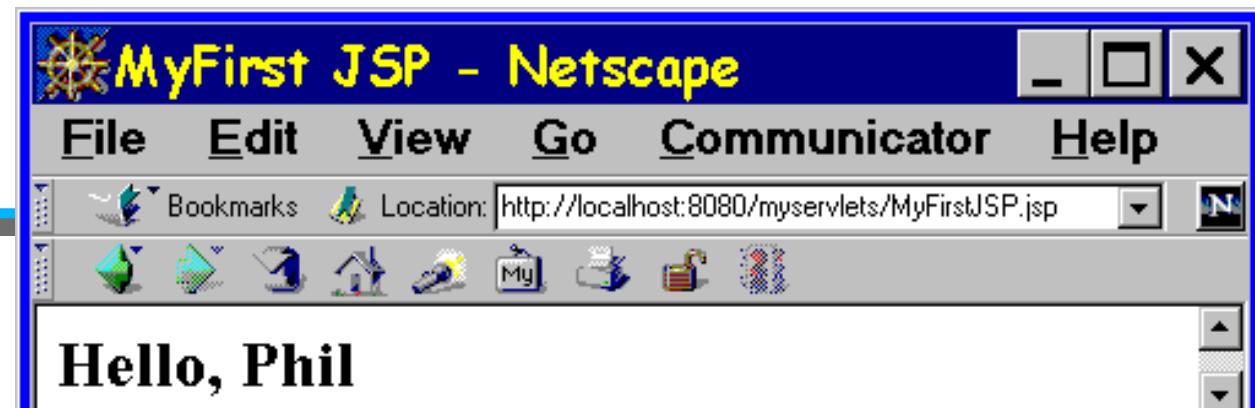

Series AD, IBM Toronto

\myservlets\WEB-INF\jsps\MyFirstJSP.jsp

```
<HTML>
<HEAD><TITLE> MyFirst JSP </TITLE></HEAD>
<BODY>
<h1>
<% if
  (request.getParameter( "name" )
   == null) {%
Hello World
<%} else {%
Hello,
<%= request.getParameter( "name" )%>
<%}%
</H1>
</BODY>
</HTML>
```

Embedded Java code! Java code
is run on the server, not the client.
The resulting all-html file is sent
to the client

You don't have to
compile!

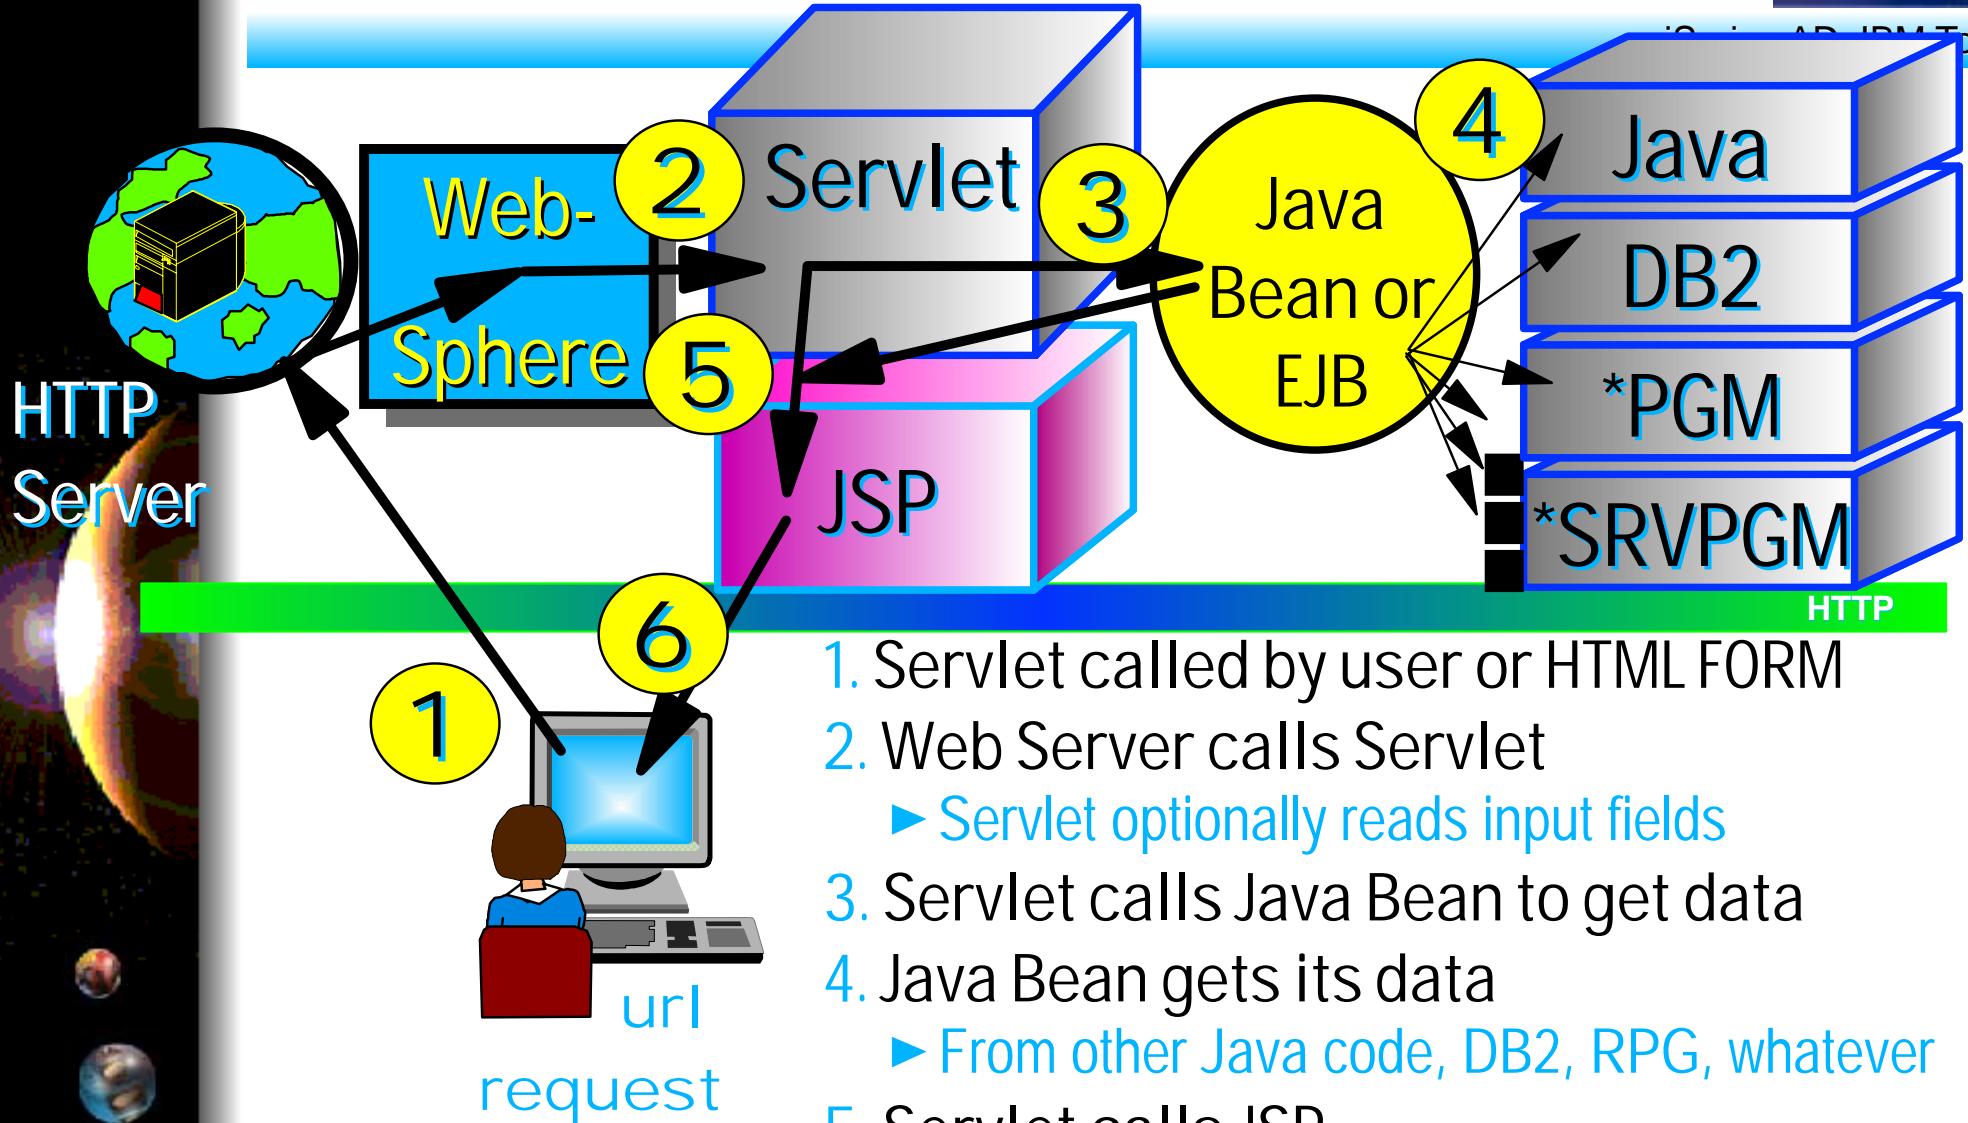

What Are Servlets?

- ▶ Servlets are . . .
 - Java classes (programs written in Java)
- ▶ Servlets run . . .
 - On the server (eg, AS/400)
- ▶ Servlets are called . . .
 - By your HTTP Server software
 - When a user goes to your Web page
- ▶ The input to Servlets are . . .
 - User-entered data from a Web page
- ▶ The output of a Servlet is . . .
 - Java Bean, passed to a JavaServer Page

Web Model

1. Servlet called by user or HTML FORM
2. Web Server calls Servlet
 - ▶ Servlet optionally reads input fields
3. Servlet calls Java Bean to get data
 - ▶ From other Java code, DB2, RPG, whatever
4. Java Bean gets its data
 - ▶ From other Java code, DB2, RPG, whatever
5. Servlet calls JSP
 - ▶ Passes Java Bean containing data
 - ▶ JSP merges data with HTML => new page
6. HTTP Server sends new page to user

- ▶ Allows you to solicit user input
- ▶ Can build HTML document that contains:
 - ▶ checkboxes
 - ▶ radio buttons
 - ▶ push buttons
 - ▶ entry fields
 - ▶ selectable lists
 - ▶ ... others
- ▶ Collect data from user
 - **send to server program**
 - ▶ The **FORM** tag specifies the name of the program
 - ✓ Historically a CGI-bin program
 - ✓ New option is a Java Servlet

Anatomy of a FORM

```
<HTML>
<HEAD>
  <TITLE>A Simple Input Form</TITLE>
</HEAD>
<BODY>
  <FORM action="http://localhost/servlet/MyServlet">
    <input type="submit">
  </FORM>
</BODY>
</HTML>
```

server-side CGI-bin program or Java servlet to call when SUBMIT button pressed

how to call server when SUBMIT pressed

body: one or more input controls plus regular html

"SUBMIT" button

```
graph TD
    A["<FORM action='http://localhost/servlet/MyServlet' method='post'>"] --> B["server-side CGI-bin program or Java servlet to call when SUBMIT button pressed"]
    C["<input type='submit'>"] --> D["how to call server when SUBMIT pressed"]
```

A curly brace on the left side of the slide groups the entire HTML code block.

Example of a FORM

```
<FORM action="http://localhost/servlet/MyServlet"
      method="post">
  Name <INPUT type="text" name="name"><BR> entry field
  Age <INPUT type="text" name="age" size="3" maxlength="3"><BR>
  Country <SELECT name="country">
    <OPTION selected>Canada</OPTION>
    <OPTION>Mexico</OPTION>
    <OPTION>United States</OPTION>
  </SELECT> <BR> selectable list
  e-mail <INPUT size="30" type="text" name="email"><BR> entry field
  <BR>
  <INPUT type="radio" name="sex" value="M" checked>Male radio
  <INPUT type="radio" name="sex" value="F">Female<BR><BR> buttons
  <INPUT type="checkbox" name="mail" checked>e-mail me<BR><BR> check box
  <INPUT type="submit" value="Register"> SUBMIT button
  <INPUT type="reset" value="Reset"> RESET button
</FORM>
```

<http://www.w3.org/TR/REC-html40/>

Example of a FORM

iSeries AD, IBM Toronto

A Simple Input Form

Name entry field

Age

Country selectable list

e-mail

Male Female radio buttons

e-mail me check box

SUBMIT button

My Computer

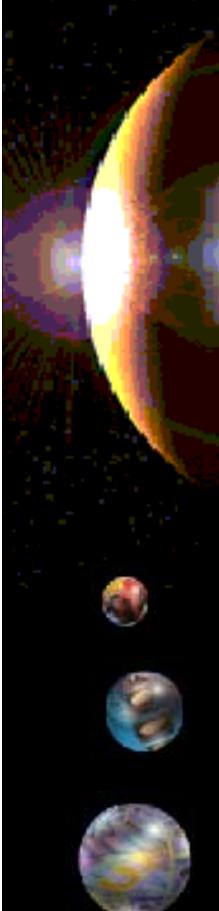

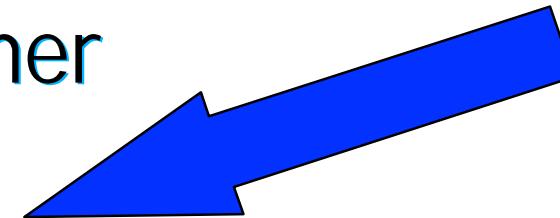

A screenshot of a web browser window titled "A Simple Input Form". The browser interface includes a menu bar with File, Edit, View, Favorites, Tools, and a toolbar with Back, Forward, Stop, Refresh, and Home buttons. The address bar shows the URL "E:\WebSphere\St...". The main content area contains several form elements: a text input field labeled "Name", a text input field for "Age", a dropdown menu for "Country" set to "Canada", a text input field for "e-mail", two radio buttons for gender ("Male" is selected), and a checkbox for "e-mail me" which is also selected. At the bottom, there are three buttons: "Register", "Reset", and "RESET button". A large red box highlights the "SUBMIT button" at the bottom left, with an arrow pointing towards the "Register" button. Another red box highlights the "entry field" (the "Name" text input). A light blue box highlights the "selectable list" (the "Country" dropdown). A red box highlights the "radio buttons" (the gender radio buttons). A light blue box highlights the "check box" (the "e-mail me" checkbox). A red box highlights the "RESET button" at the bottom right.

AGENDA

iSeries AD, IBM Toronto

- What is in WDSc 5.0?
- e-business Primer
 - ▶ AD Model, traditional and web
- Web Application Primer
 - ▶ JSPs, Servlets, forms, etc
- Mixing Java and RPG
- What is Web Tool for iSeries
- Introducing WDSc for iSeries
 - ▶ RPG Example
 - ▶ iSeries Design time controls (DTCs)
 - ▶ Web Interaction
 - ▶ Publishing
- Conclusion

Say we have the following RPG code . . .

```
FCUSTOML3    IF      E          K DISK
DCUSTINFO
D Number
D Name
C *ENTRY      PLIST
C             PARM          CUSTINFO
C   Number     SETLL        CUSTOM01
C   Number     READE        CUSTOM01
C             EVAL         Name = CUSTNA
C             MOVE         *ON           *INLR
C
***** End of data *****
```

Pass in Customer ID and receive back customer name.

Create XML required tags

```
<pcml version="1.0">

    <!-- Create a Data Structure -->
    <struct name="custinfo">
        <data name="Number" type="char" length="7"
              usage="inputoutput" init="0014400"> </data>
        <data name="Name"   type="char" length="40"
              usage="inputoutput" init="  "> </data>
    </struct>

    <!-- Program getcust -->
    <program name="getcust"
              path="/QSYS.lib/FARR.lib/GETCUST.pgm">
        <data name="gotback" type="struct"
              usage="inputoutput" struct="custinfo"> </data>
    </program>

</pcml>
```

Call RPG from Java Servlet

```
public static void main(String[] argv)
{
    AS400 as400System = new AS400();
    ProgramCallDocument pcml = null;
    String msgId, msgText;
    Object value = null;

    try {
        System.out.println(
            "Creating ProgramCallDocument for GetCust pgm.");
        pcml = new ProgramCallDocument(as400System, "GETCUST");
        boolean ok = pcml.callProgram("getcust");
        System.out.println(" rc is---> " + rc);
        if (!ok)
            { /* Retrieve list of AS/400 messages & display them */ }
        else
            {
                value = pcml.getValue("getcust.gotback.Name");
                System.out.println("Customer name: " + value);
            }
    } catch (PcmlException exc) {
        System.out.println("**** Call to getcust failed. ****");
        System.exit(0);
    }
    System.exit(0);
} // end main method
```

File: GetCust.java
Class: GetCust

Mixing Java and RPG

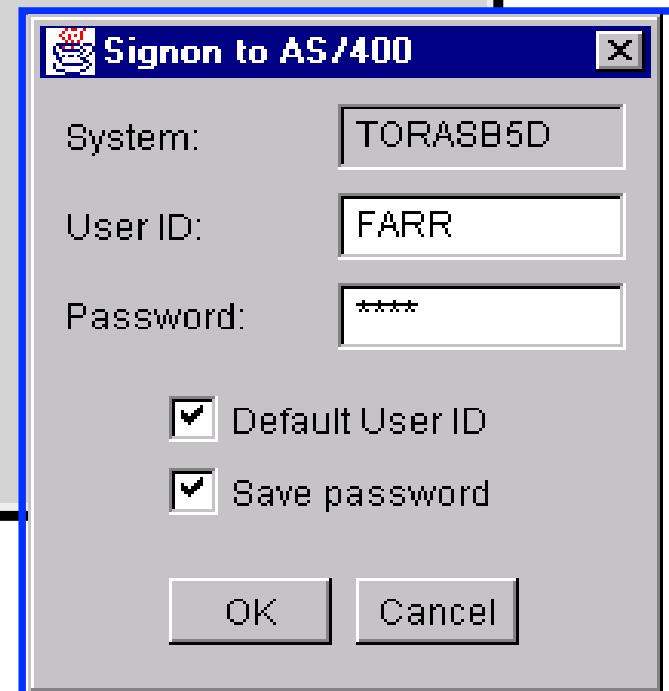

iSeries AD, IBM Toronto

Results . . .

Command Prompt

```
f:\toolbox\examples>javac GetCust.java
f:\toolbox\examples>java GetCust
Constructing ProgramCallDocument for GetCust pgm...
rc is---> true
Customer name: Great Neck Industries

f:\toolbox\examples>

+ payable

- page1.html

www.mydomain.com/accounts/payable/page1.html

+ META-INF

- MANIFEST.MF

+ theme

- corporate.css

+ WEB-INF

- web.xml

+ classes

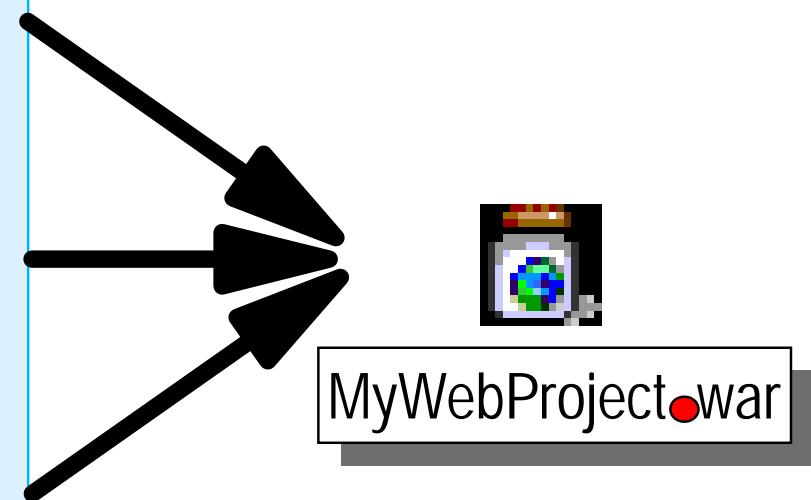

+ lib

► Web Archive Files (WAR)

- One file containing
 - ▶ Whole folder structure of Web application
 - ▶ Including web.xml file
 - ▶ Optionally including source
- Used to
 - ▶ Install and configure Web application in an application server

```
*Web application folder (root folder)
+source
    - all non-deployed files (java)
+webApplication
    - all Web files (html, jsp, gif, ...)
+META-INF
    - MANIFEST.MF
+theme
    - .css style sheets
+WEB-INF
    - web.xml
+classes
    - Java classes of this app (usually
        generated)
+lib
    - Supporting classes and jar files
```

Terms: EAR Files

iSeries AD, IBM Toronto

J2EE
EJB
Spec
1.1

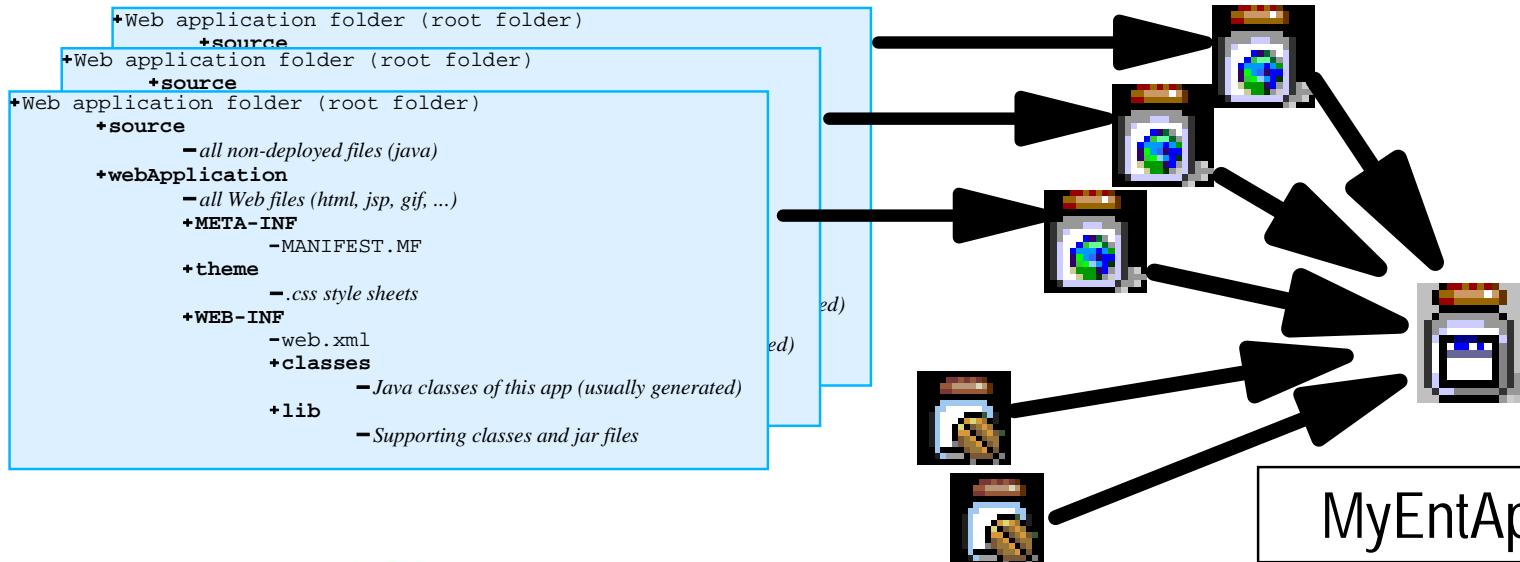

► Enterprise Archive Files (EAR)

- One file containing:

- ▶ Zero or more Web Archive (war) files
- ▶ Zero or more EJB jar files
- ▶ A J2EE deployment descriptor

- Used to install and configure:

- ▶ All pieces of a J2EE Enterprise Application
 - ✓ Web application plus EBJs plus EJB clients
- ▶ All Web applications for a Web site (say)

MyEntApp•ear

► WDSc Web Tools At A Glance:

- **Web projects**
- **Web Editors**
 - ▶ For JSP and HTML files
 - ▶ For Cascading Style Sheets
 - ▶ For logos, images, and animation
- **Link viewing and management**
- **Import/Export**
 - ▶ Numerous formats
- **Wizards**
 - ▶ for servlets, Web pages from DB or JavaBean
- **WebSphere 4.0 Built-in Test Environment**
- **WebSphere Local/Remote Server support**
- **iSeries special support**

► Web Projects

- **Special type of project**

- ▶ With its own "new" wizard
- ▶ With its own perspective
- ▶ With its own tools

- **Created with J2EE folder layout**

- **Created with simple web.xml file**

- ▶ Automatically updated as resources are created
- ▶ Has specialized web.xml editor

Web Projects

iSeries AD, IBM Toronto

Create a Web Project

Define the Web Project

Create a Web project and add it to a new or existing Enterprise Application project.

Project name: MyWebProject

Use default location

Location: E:\WDSC\WSSD\workspace\MyWebProject

Enterprise Application project name: DefaultEAR

Create CSS file

< Back

Automatically associates with a supplied EAR file for easy auto-cfg of Application Server

Optional: Optionally creates a CSS style for whole Web app

Module Dependencies

Select dependent JARs for the module within the Enterprise Application project.

Project name: MyWebProject

Enterprise Application project name: DefaultEAR

Available dependent JARs:

JAR/Module	Project

Manifest Class-Path:

Identify runtime dependent jar/war files

< Back

Eclipse

IBM eServer. For the next generation of e-business.

Page (32)

Web Projects

iSeries AD, IBM Toronto

Create a Web Project

Define Java Build Settings

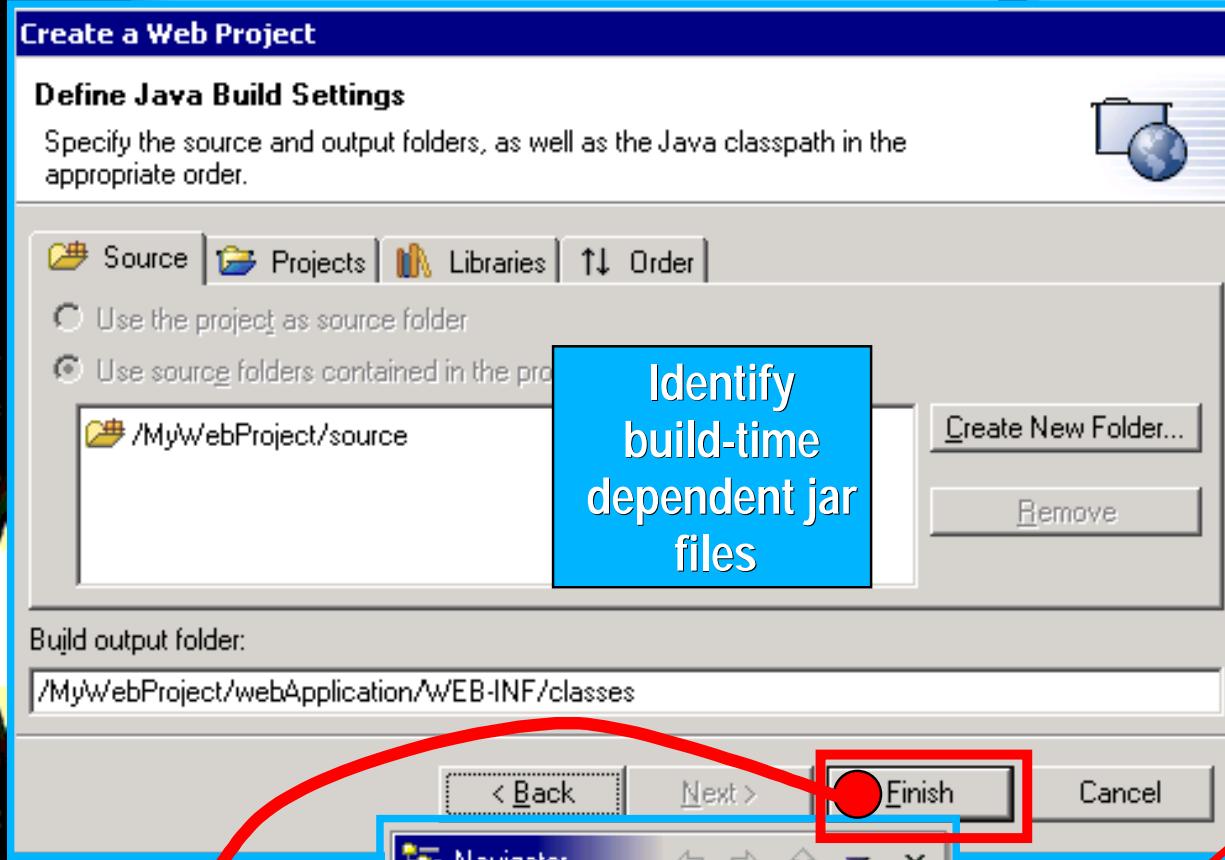

Specify the source and output folders, as well as the Java classpath in the appropriate order.

Use the project as source folder
 Use source folders contained in the project

/MyWebProject/source

Build output folder:
/MyWebProject/webApplication/WEB-INF/classes

A blue callout box labeled "Identify build-time dependent jar files" points to the "Create New Folder..." button.

source

- ▶ for non-deployed files
- ▶ webApplication
- ▶ for deployed files
- ▶ .jspx and .html files go here
- .../theme
- ▶ for style sheets
-/WEB-INF
- ▶ run-time dependencies
- ▶ jar files go here

► WDSc Web Tools At A Glance:

- ▶ **Web projects**
 - ✓ Created with J2EE-defined folder structure for Web Applications
 - ✓ Superset of Java projects (so contain all Java Tool support too)
- ▶ **Automatic creation/maintainence of web.xml file**
- ▶ **Editor support**
 - ✓ JSP and HTML files
 - ✓ Support for creating, validating, editing and debugging
 - ✓ Including WYSIWYG PageDesigner
 - ✓ Custom JSP tags (taglib) support
 - ✓ based on the Sun Microsystems JSP 1.1 Specification
 - ✓ Images and animation
 - ✓ Cascading Syle Sheets (CSS)
- ▶ **Import/Export from/to a variety of sources**
 - ✓ HTTP/FTP/WAR
- ▶ **Link viewing and management**
 - ✓ Converting links, flagging broken links, and fixing up links as linked resources are moved or renamed
- ▶ **Wizard for servlets, Web pages from DB or JavaBean**
- ▶ **Integration with WebSphere Unit Test Environment**

File View

Eclipse

The screenshot shows the Web Development Studio Client interface with the following components:

- Toolbar:** Standard file operations like Open, Save, Print, and various selection tools.
- Menu Bar:** File, Edit, Perspective, Project, Toolbar, Insert, JSP, Format, Table, Frame, Page, Tools, Window, Help.
- Navigator View:** Shows the project structure with a 'source' folder containing 'MyFirstInterac' and 'ProgramReco' files, and a 'webApplication' folder containing 'WEB-INF', 'blue_p6b.gif', 'error.jsp', 'logo2.gif', 'MyFirstInterac', and 'MyFirstJSP.jsp' files.
- Central Editor:** Displays the JSP page 'MyFirstJSP.jsp' with the title 'Customer File'. The page contains the text 'Enter Customer Number:' and an input field, followed by an 'ok' button.
- Gallery View:** Shows options for 'Image', 'Wallpaper', 'Webart', 'Sound', 'Style Sheet', and 'Script'.
- Bottom Task Bar:** Includes tabs for 'Design', 'Source', and 'Preview', and a 'Tasks' view showing 6 items.

Blue arrows highlight specific features:

 - An arrow points from the word 'File' to the 'File' item in the menu bar.
 - An arrow points from the word 'View' to the 'View' item in the menu bar.
 - An arrow points from the word 'Eclipse' to the 'Navigator' view.
 - An arrow points from the word 'Different Views' to the 'Tasks' view at the bottom.

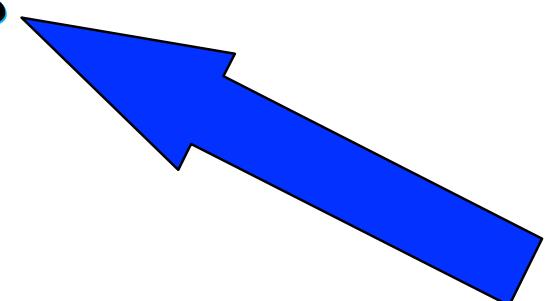

The status bar at the bottom displays the path: MyFirstWebProject/webApplication/MyFirstJSP.jsp

J2EE Navigator Welcome Development St...s, Version 5.0

This page will help you start to use the tools in WebSphere Development Studio Client Advanced Edition for iSeries. To get started, read the below and click on the related links.

Getting Started

To know what to do first, consult the [Product Overview](#). You should also look at the new information map in the [online help](#) to decide how you can most effectively start using the advanced product.

Perspectives

You can learn all about perspectives in the [online help](#), but it is important for performance reasons to understand how to switch between perspectives without opening a new one. Hint: Use the icons along the left-hand frame.

Remote System Explorer

To navigate through your iSeries objects, use the power of the [Remote System Explorer](#). The first thing you need to do is [create a connection](#). From there, you can use many of the navigation features to find and work with objects on your iSeries host, as you might have done with PDM.

The next steps

You can use WebSphere Development Studio Client Advanced Edition for iSeries to take your RPG and COBOL applications to the Web. You can update the interface of your application from DDS display files to JavaServer Pages and JavaScript technology using the [IBM WebFacing Tool](#). You can apply your own custom Web interface with the Program Call wizard or the Web Interaction wizard and then use the Web tools for iSeries that help you create...

AGENDA

iSeries AD, IBM Toronto

- What is in WDSc 5.0?
- e-business Primer
 - ▶ AD Model, traditional and web
- Web Application Primer
 - ▶ JSPs, Servlets, forms, etc
- Mixing Java and RPG
- What is Web Tool for iSeries
- Introducing WDSc for iSeries
 - ▶ RPG Example
 - ▶ iSeries Visual Control Tags (VTCs)
 - ▶ Web Interaction
 - ▶ Publishing
- Conclusion

- ▶ Two modes to interaction wizard:

1. Generate input/output Web pages

- ▶ Given the parameter description of the API to call

2. Generate mappings

- ▶ Given the input/output pages
- ▶ Given the parameter description of the API to call
- ▶ Given the mappings
 - ✓ between input parms & input fields
 - ✓ between output parms & output fields

Interaction Wizard

Web Interaction

Specify a Name and Location for your Web Interaction

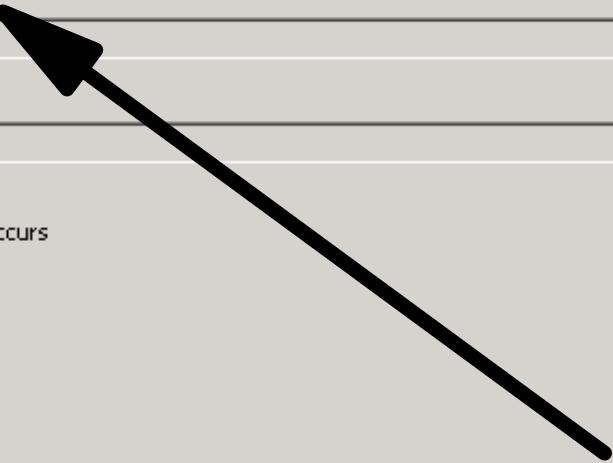

Destination folder: /MyFirstApplication/Web Content

Web Interaction name: MyFirstInteraction

Java package:

Use error page

Invalidate session after the interaction occurs

Just a name!!!
Like a field name

< Back

► iSeries Web Interaction Wizard

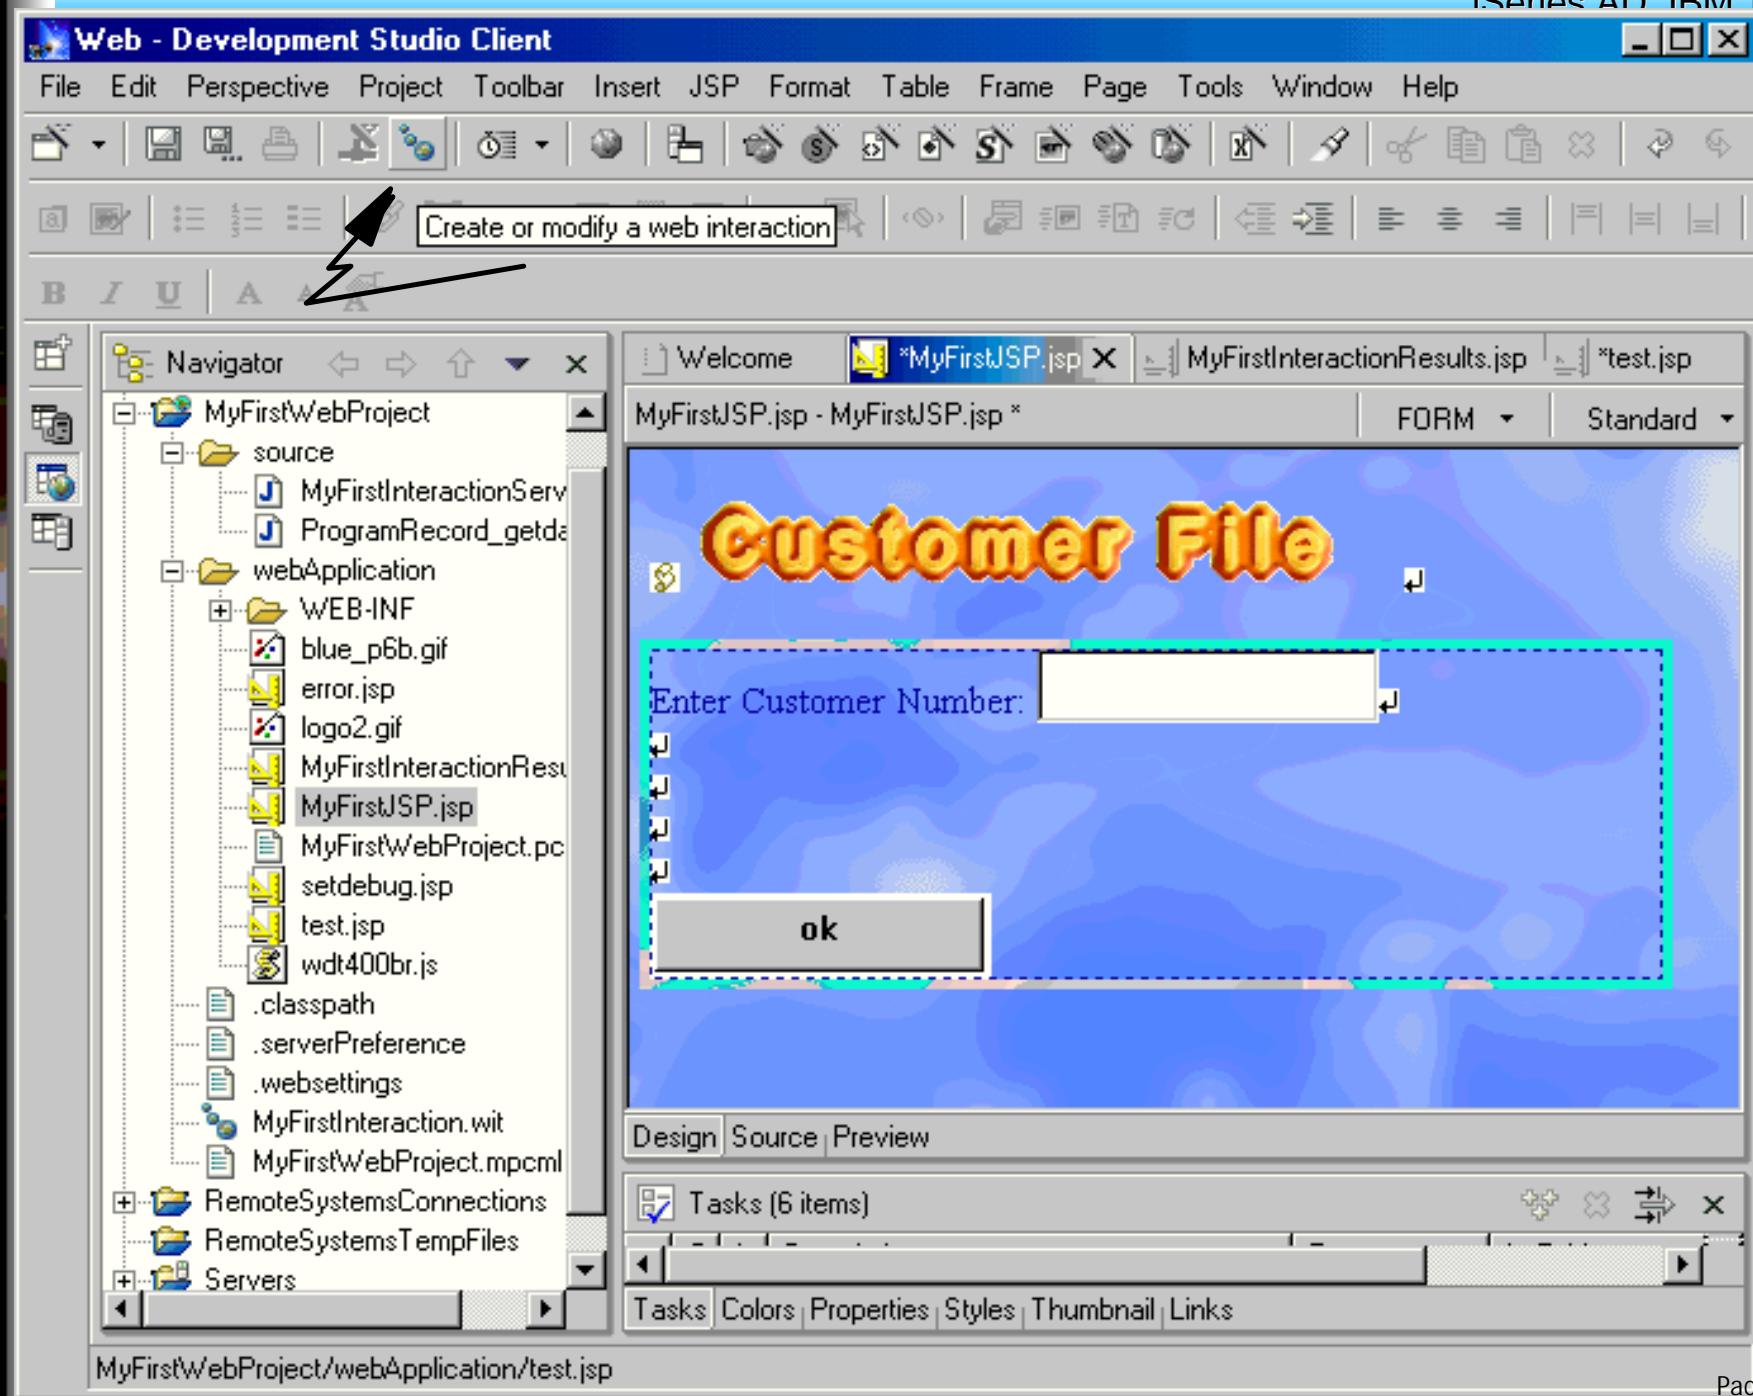

The screenshot shows the iSeries Web Interaction Wizard interface divided into two main sections:

- Left Panel (Web Interaction Wizard):** This panel is titled "Specify a Name and Location for your Web Interaction". It includes fields for "Destination folder" (set to "/MyWebProject/webApplication"), "Web Interaction name" (set to "carRentTest1"), "Java package" (set to "car.rent.test1"), and checkboxes for "Use error page" and "Invalidate session after the interaction occurs". At the bottom are buttons for "< Back", "Next >" (highlighted with a red circle), "Finish", and "Cancel". A tip box is overlaid on this panel:

Tip: pre-create a Java package in your Web project, under source folder, and specify it here
- Right Panel (Web Interaction Wizard):** This panel is titled "Specify the Input and Output Pages for your Web Interaction". It contains two main sections:
 - Input Section:** Contains radio buttons for "Generate input JSP" (selected) and "Use input pages:".
 - Output Section:** Contains radio buttons for "Generate output JSP" (selected) and "Use output pages:".Both sections have "Add...", "Remove", and "Preview" buttons. A blue callout box labeled "Mode 1: Generate input and output Web pages" points to the "Generate input JSP" and "Generate output JSP" options.

Red arrows and circles highlight specific controls: a red circle around the "Finish" button in the left panel, a red box around the "Generate input JSP" radio button in the right panel, a red box around the "Generate output JSP" radio button in the right panel, and a large red arrow pointing from the right panel's "Finish" button back to the left panel's "Finish" button.

Restore from Session:	false
Save to Session:	false

Buttons at the bottom: < Back, Next >, Finish, Cancel.

iSeries Web Interaction Wiz

iSeries AD, IBM Toronto

The screenshot shows the 'Web Interaction' application interface. On the left, a sidebar has two blue callout boxes: 'Generated files' and 'Use "Run on Server" to test'. The main window title is 'Design the Input Form'. It displays 'Input parameters:' with a checked checkbox for 'number'. To the right are buttons for 'Move up', 'Move down', 'All', and 'None'. Below this is a table of properties:

Property	Value
Page Title	Input Form
Background Color	RGB {128, 255, 128}
Title Color	RGB {0, 0, 160}
Field Color	■ (0,64,128)

At the bottom, tabs for 'Page' and 'Fields' are visible, along with navigation buttons: '< Back', 'Next >', 'Finish', and 'Cancel'.

The preview window on the right shows a green page titled 'Input Form' with the text 'number:' followed by an input field.

Two additional blue callout boxes are overlaid on the preview area: 'Use Page Designer to finesse generated pages'.

The screenshot shows the 'Web Interaction' application window titled 'Design the Result Form'. On the left, under 'Output parameters', a checkbox labeled 'name' is selected. To its right are buttons for 'Move up', 'Move down', 'All', and 'None'. Below this is a table titled 'Property' with columns 'Property' and 'Value'. The table contains four rows: 'Page Title' set to 'Result Form', 'Background Color' set to 'RGB {128, 0, 255}' with a color swatch, 'Title Color' set to '■ (0,0,0)' with a color swatch, and 'Field Color'. A red box highlights this table. At the bottom of the table are tabs for 'Page' and 'Fields'. On the right side of the window, a preview area titled 'Result Form' shows a purple background with the text 'name:'.

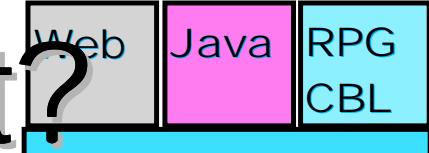

Select output parameters to display in output page

Tailor attributes of generated prompt per parameter

Tailor attributes of overall output page

Immediately see results of tailoring parameter and page attributes

You are done! What's Next?

iSeries AD, IBM Toronto

- What did you do so far?
 - ▶ You used the designer to create the input page
 - ▶ The output page was generated for you
 - ▶ Created your Files on the iSeries
 - ▶ Created your RPG Program
 - ▶ Created an 'iSeries Web Interaction' Interaction to link your program parameters to the input page and output page
- Next?

- ▶ Run On Server
 - Now this is **VERY COOL!**
- ▶ When ready to test your Web app
 - Right click on initial html or jsp file
 - ▶ or whole project, which implies the index.html file
 - Select "Run on Project"
 - Wait for the magic...
- ▶ Your Web application will run!
 - Opens Server perspective
 - ▶ Publishes it to built-in copy of WAS
 - ▶ Starts built-in copy of WAS
 - ▶ Brings up a Web Browser
 - ▶ Runs your application!!
 - ✓ Tip: you can set breakpoints in your Java code!

► WebSphere Test Environment

- **A full copy of WAS 4.0 Single Server Edition is embedded in the IDE**
 - ▶ Integrated with Server Tools to enable instant and dead-easy testing of Web projects within WDSc.
 - ✓ Standalone all-in-one testing
 - ✓ No dependency on WAS installation or availability
 - ✓ No dependency on an external database
 - ▶ Provides the ability to debug live server-side code
 - ▶ Supports configuring multiple Web applications
 - ▶ Supports multiple servers that can be configured and run at the same time
 - ▶ Provides access to the profiling feature that is available in the workbench
 - ▶ Provides the ability to version Server Tools server configurations
 - ▶ Provides access to the WAS Administration Client

Run it!

Page (67)

First Page

A screenshot of the WebSphere Development Studio Client Advanced Edition for iSeries interface. The window title is "Web - WebSphere Development Studio Client Advanced Edition for iSeries". The menu bar includes File, Edit, Navigate, Search, Project, Profile, Run, Window, Help. The toolbar has various icons for file operations. The left pane shows the "J2EE Navigator" with files like struts-template.tld, web.xml, error.jsp, getnameInput.jsp, getnameResults.jsp, Input, MyFirstApplication.pcml, MyFirstInteractionInput.jsp, MyFirstInteractionResults.jsp, and output.jsp. The central pane displays a web page titled "Input Form" with a text input field containing "number: 0010100" and two buttons: "Submit" and "Reset". Below the browser view is a "Console [WebSphere v5.0 Test Environment (WebSphere v5.0)]" window showing server logs. The logs include entries like "rstemOut O {name=[Ljava.lang.String;@2f9c848e}" and "I SRVE0180I: [MyFirstApplication] [/MyFi...". The bottom navigation bar includes tabs for Gallery, Library, Outline, Web Str..., Attributes, and buttons for Tasks, Links, Thumbnail, Styles, Colors, Servers, and Console.

Make sure that server is
ready for business!

Output Page

iSeries AD, IBM Toronto

The screenshot shows the WebSphere Development Studio Client Advanced Edition for iSeries interface. The window title is "Web - WebSphere Development Studio Client Advanced Edition for iSeries". The menu bar includes File, Edit, Navigate, Search, Project, Profile, Run, Window, Help. The toolbar has various icons for file operations like Open, Save, Print, Copy, Paste, etc. The left pane is the "J2EE Navigator" showing a project structure with files like struts-template.tld, web.xml, error.jsp, getnameInput.jsp, getnameResults.jsp, Input, MyFirstApplication.pcml, MyFirstInteractionInput.jsp, MyFirstInteractionResults.jsp, and output.jsp. Below it are tabs for "J2EE Navigator" and "Server Configuration". An "Attributes" panel displays the message "No attributes are available." The main workspace shows a "Result Form" with the text "name: Meridien Electronics Ltd". Above the workspace is a browser-like header with tabs for CALC..., CHAN..., PRO..., Application, WebS..., and a URL field showing http://localhost:9080/MyFirstApplication/My. The bottom pane is a "Console [WebSphere v5.0 Test Environment (WebSphere v5.0)]" showing log entries:

```
[2/5/03 12:08:14:835 EST] 730b8488 SystemOut O WI

M Toronto

The screenshot shows the WebSphere Development Studio Client Advanced Edition for iSeries interface. The J2EE Navigator panel on the left lists various files and libraries, including `getnameInput.jsp`, `getnameResults.jsp`, `Input`, `MyFirstApplication.pcml`, `MyFirstInteractionInput.jsp`, `MyFirstInteractionResults.jsp`, `NameOfTable.gph`, `output.jsp`, `setdebug.jsp`, `wdt400br.js`, `getname.wit`, `MyFirstApplication.mpcml`, `MyFirstDiagram.gph`, and `MyFirstInteraction.wit`. A context menu is open over the `Draw` option, showing options for `Action Mapping Node`, `Form Bean Node`, `Java Bean Node`, `Web Page Node`, and `Web Application Node`. A blue callout box points to the `Web Page Node` option with the text: "For input and output page use Web page node". Another blue callout box points to the `Draw` button in the toolbar with the text: "Pgm or Service pgm use Action".

IBM @server. For the next generation of e-business.

Web Diagram Editor

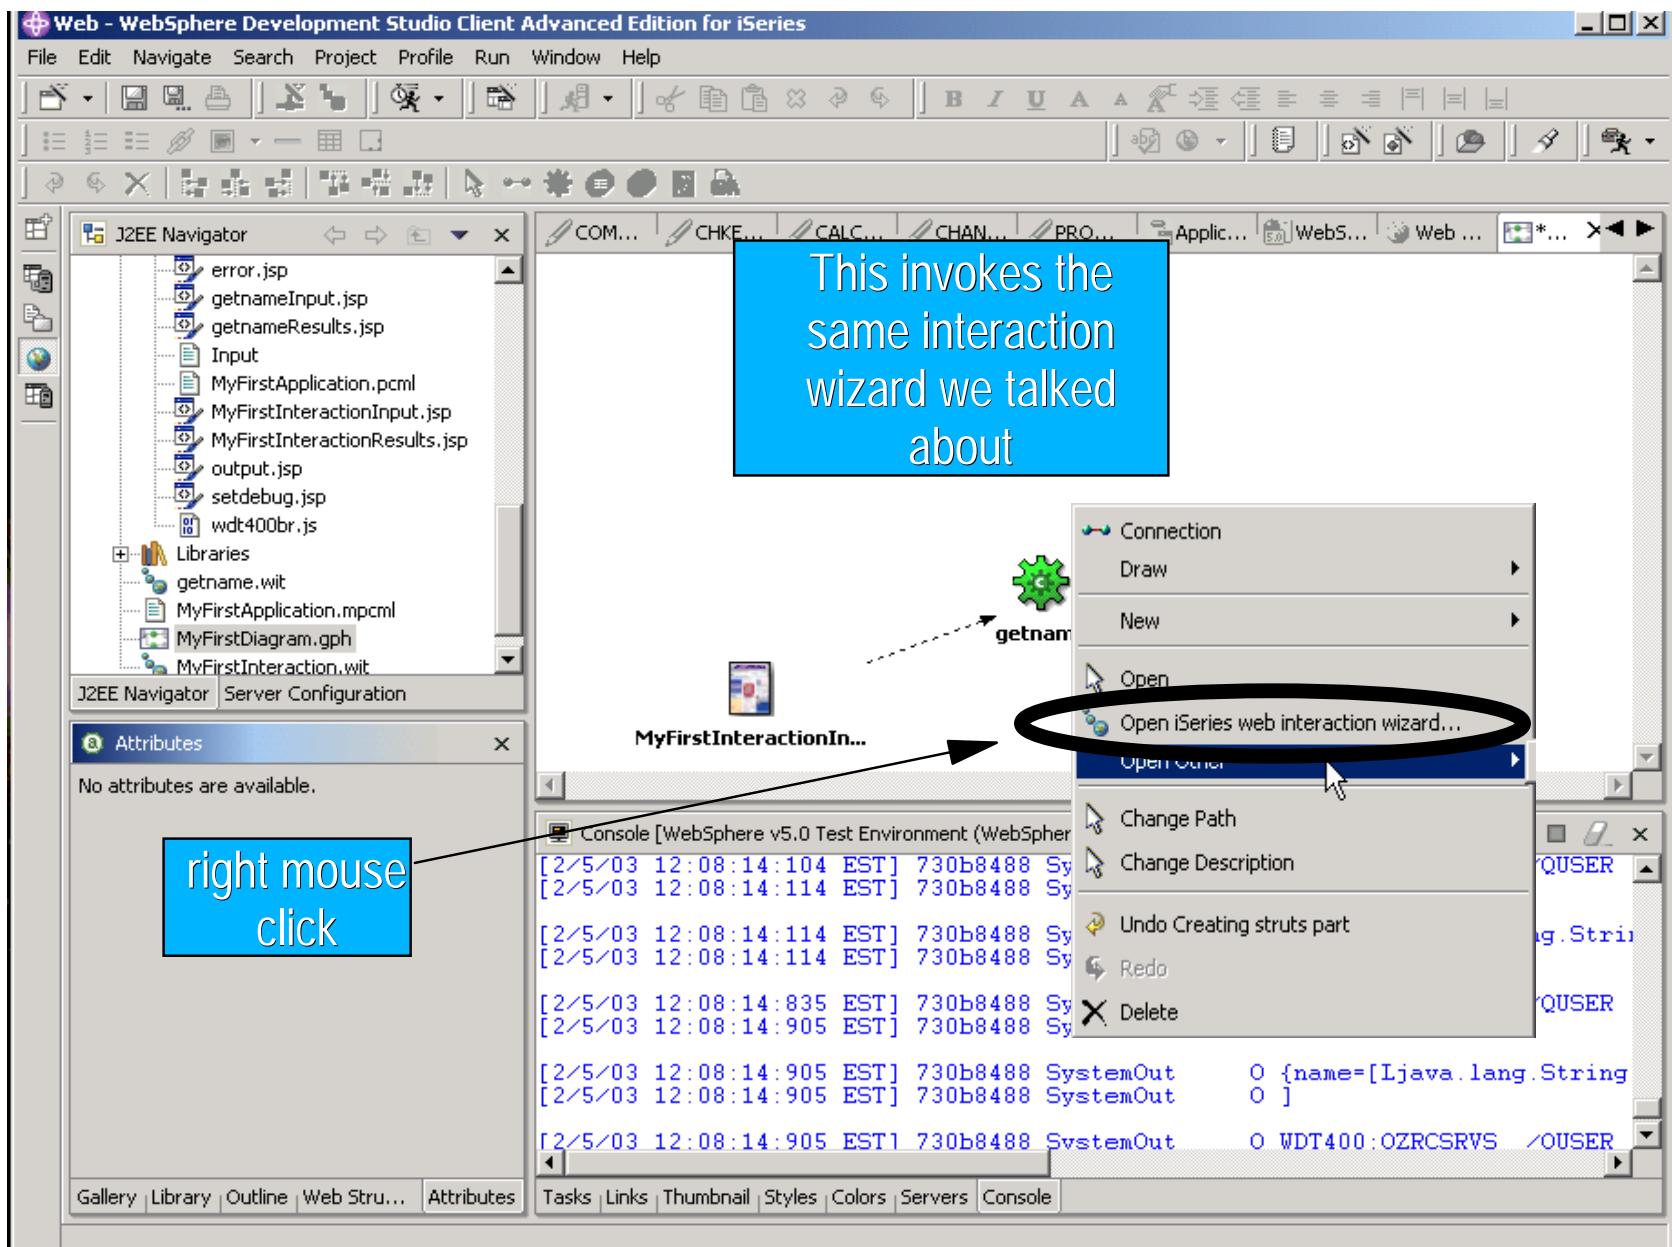

iSeries AD, IBM Toronto

The screenshot shows the WebSphere Development Studio Client Advanced Edition for iSeries interface. The left pane displays the J2EE Navigator with files like error.jsp, getnameInput.jsp, getnameResults.jsp, Input, MyFirstApplication.pcml, MyFirstInteractionInput.jsp, MyFirstInteractionResults.jsp, output.jsp, setdebug.jsp, and wdt400br.js. The middle pane shows a process flow diagram with a central gear icon labeled "getname". Above it is a blue box containing the text "*PGM or *SRVPGM". Below the gear are two rectangular boxes: "MyFirstInteractionIn..." on the left and "MyFirstInteractionRe..." on the right. Arrows point from the gear to both boxes. The bottom pane is a "Console [WebSphere v5.0 Test Environment (WebSphere v5.0)]" window showing a log of system output. A blue box labeled "Input page" points to the "MyFirstInteractionIn..." box, and another blue box labeled "Output page" points to the "MyFirstInteractionRe..." box. The console log contains several entries:

```
[2/5/03 12:08:14:104 EST] 730b8488 SystemOut O WDT400:QZRCRSV /QUSER  
[2/5/03 12:08:14:114 EST] 730b8488 SystemOut O Form data [

```

Invoke Interaction Wizard!

iSeries AD, IBM Toronto

► iSeries Web Tools, at a glance

- **Tools optimized for iSeries developers!**

- ▶ **Web Interaction wizard**

- ✓ You define the parameters to a *PGM/*SRVPGM, wizard generates input JSP prompting for input parm, output JSP showing output parms, and all the glue in-between
 - ✓ Or you pre-create the input and/or output pages, and map the input/output fields on the pages to the input/output parameters in the *PGM/*SRVPGM, and it generates the glue to bind them

- ▶ **Host Information wizard**

- ✓ Set runtime information such as library list and sign-on information, to be used by glue generated by all Web Interaction wizards for this Web project

- ▶ **Design Time Controls (Web GUI Widgets)**

- ✓ Web GUI Widgets that support DSPF-like attributes such as error checking by datatype, and edit-code and edit-word

Standards

iSeries AD, IBM Toronto

► Industry Standards

Standards

iSeries AD, IBM Toronto

► Industry Standards Supported

- By WSSDa, WSAD and WDSc:

- ▶ EJB 1.1
- ▶ Servlet 2.2
- ▶ JSP 1.1
- ▶ JRE 1.3
- ▶ Web Services Definition Language (WSDL) 1.1
- ▶ Apache SOAP 2.1
- ▶ XML DTD 1.0 10/2000 Revision
- ▶ XML Namespaces 1/99 Version
- ▶ XML Schema 5/2001 Version
- ▶ HTML 4.01 (other levels should work)
- ▶ CSS2 (PageDesigner displays a subset)

All customer examples described are presented as illustrations of how those customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics may vary by customer.

Information in this presentation concerning non-IBM products was obtained from a supplier of these products, published announcement material, or other publicly available sources and does not constitute an endorsement of such products by IBM. Sources for non-IBM list prices and performance numbers are taken from publicly available information, including vendor announcements and vendor worldwide homepages. IBM has not tested these products and cannot confirm the accuracy of performance, capability, or any other claims related to non-IBM products. Questions on the capability of non-IBM products should be addressed to the supplier of those products.

All statements regarding IBM future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only. Contact your local IBM office or IBM authorized reseller for the full text of the specific Statement of Direction.

Some information in this presentation addresses anticipated future capabilities. Such information is not intended as a definitive statement of a commitment to specific levels of performance, function or delivery schedules with respect to any future products. Such commitments are only made in IBM product announcements. The information is presented here to communicate IBM's current investment and development activities as a good faith effort to help with our customers' future planning.

Performance is based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput or performance that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput or performance improvements equivalent to the ratios stated here.

Photographs shown are of engineering prototypes. Changes may be incorporated in production models.
