i want stress-free IT.
   i want control.
      i want an i.

Abstract

If you are looking for a extremely simple and highly functional way to work with System i resources, then System i Access for Web is the best option!
Users simply start up their favorite browser and point-and-click their way through easy-to-use GUIs and wizards. This session shows how users can run host applications, work with the database, printers, and the IFS. Network administration is a breeze as nothing is installed or configured on the PC, and control is at the server. You will see how to:

- Run host applications (5250 emulation), upload and download database information, and use the iSeries as a file and print server

- Convert spooled printer output to PDF and either print it or email it

- Work with printers, jobs, run commands, send messages -- all through easy-to-use GUIs designed around the browser interface

- How an administrator can set up different views ('window') of the iSeries for different groups of users.

- Learn about the new features in the V5R4 version of System i Access for Web.

iSeries Access Family and System i (continued)

The iSeries Access products provide users with simplified GUIs to work with i5/OS resources. Users can quickly and easily:

– **Access traditional i5/OS applications using 5250 emulation**

– **Query and retrieve DB2 information without understanding SQL concepts**

– **Upload spreadsheet information into DB2 for i5/OS**

– **Use i5/OS IFS as a file server**

– **Access i5/OS printer output, convert it to .PDF, and print it on PC printers**

– **Incorporate the use of their email server to distribute files, database information, and printer output through simple point-and-click interfaces.**
