

Part 4.

- **Tips for Managing End User Access**
- **More on System i Access for Web Functions**

Control User Access to functions

1. How do I keep my users from using all these functions?
2. How do I set up the environment for my users?
3. Should I let my users set have some individual screen settings for some functions?

You need ***SECADM** authority to customize profiles

Access for Web uses i5/OS User Profiles

***PUBLIC profile is a set of default policy settings shipped with Access for Web**

- The defaults allow most functions to be available to all users

When a user attempts to access any System i Access for Web function, the following sequence of checks are made to authenticate user access:

- User profile
- Group profile(s)
- *PUBLIC profile

The settings in these policies indicate what functions within System i Access for Web, a user can **attempt to use**.

For example, let's say:

- You give users full access to the 'Database' tab.
- You have Object Level authority set up on your System i data
- When user attempts to use the System i Access for Web Database function to get at database information, the user may get an i5/OS message indicating they are not authorized to access the table

Customize → Policies

- Policies are used to control access to System i Access for Web functions
- Policies are saved and associated with the appropriate i5/OS user or group profile
- Each 'Category' expands for granular control

Action	Category	Description	Access
5250	5250	5250 user interface custom settings.	Allowed
Command	Command	Run batch command custom settings.	Allowed
Customize	Customize	Preferences and policy administration custom settings.	Allowed
Database	Database	Database tables, requests, and run SQL custom settings.	Allowed
Database connections	Database connections	Create and edit database connection definitions.	Allowed
Download	Download	Download packages custom settings.	Allowed
Files	Files	Integrated file system and file share custom settings.	Allowed
General	General	Page layout, language and character set custom settings.	Allowed
Jobs	Jobs	Work with jobs custom settings.	Allowed
Mail	Mail	Send mail custom settings.	Allowed
Messages	Messages	Display messages, send messages, and message queue custom settings.	Allowed
My Folder	My Folder	My Folder custom settings.	Allowed
Print	Print	Printer output, printers, printer shares and output queue custom settings.	Allowed
Sametime	Sametime	Lotus Sametime custom settings.	Allowed
Other	Other	Change password and other miscellaneous custom settings.	Allowed

Customize → Policies

For example:

A Files access policy can be set to Deny or restrict a user or group from accessing the file function.

Policy	Derived From	Action	Setting
Files access	Shipped default	Use current setting	Allow
Files tab	Shipped default	Use current setting	Show
Display directory contents in new window	Shipped default	Use current setting	Yes
Enable sort links for directory contents	Shipped default	Use current setting	Yes
Display directory contents statistics	Shipped default	Use current setting	Yes
Browse files	Shipped default	Use current setting	Allow
Copy files to server	Shipped default	Use current setting	Allow
Copy files from server	Shipped default	Use current setting	Allow
Default directory	Profile setting	Use current setting	/
Display subdirectory contents	Shipped default	Use current setting	Allow
Display parent	Shipped default	Use current setting	Allow

Policies - customize a group of users at once

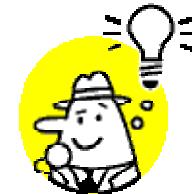

Another Alternative...

Set up a group profile and add users to that group. Then set policies for that group

- 'Deny' functions for all users in the group in a single step

Problem:

If you create too many groups, you need to keep track of what policies were set for who.

iSeries Access for Web			
User: cmiller System: RCHLAND.IBM.COM			
Policies			
Profile: SALES			
Action	Category	Description	Access
	5250	5250 user interface custom settings.	Allowed
	Command	Run batch command custom settings.	Allowed
	Customize	Preferences and policy administration custom settings.	Allowed
	Database	Database tables, requests, and run SQL custom settings.	Allowed
	Database connections	Create and edit database connection definitions.	Allowed
	Download	Download packages custom settings.	Allowed
	Files	Integrated file system and file share custom settings.	Allowed
	General	Page layout, language and character set custom settings.	Allowed
	Jobs	Work with jobs custom settings.	Allowed
	Mail	Send mail custom settings.	Allowed
	Messages	Display messages, send messages, and message queue custom settings.	Allowed
	My Folder	My Folder custom settings.	Allowed
	Print	Printer output, printers, printer shares and output queue custom settings.	Allowed
	Sametime	Lotus Sametime custom settings.	Allowed
	Other	Change password and other miscellaneous custom settings.	Allowed

Recommendations for Setting Up Policies

Do as much customization as you can using *PUBLIC

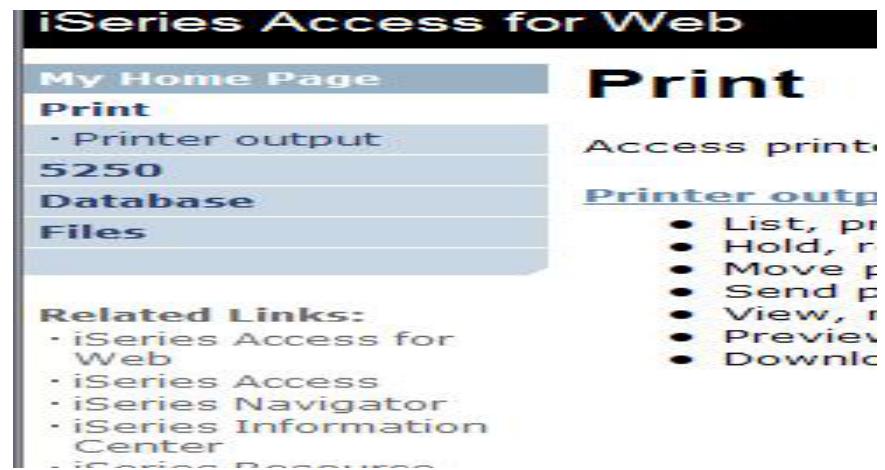

Examples:

- Setting up **Printer Output** view
- Setting up **Mail Server** SMTP address
- Creating look and feel of **5250** sessions
- Creating **Database Connections**
- General Page Layouts

Create some ‘Groups’ of users and apply more specific customization

Example: Create “Office” group

- Take away all tabs and functions except (for example) Printer Output, 5250, Database, IFS

Set Policy to Default to Specific Directory in IFS

Set a 'Default Directory' for:

***PUBLIC**

Groups of users

Specific user

The screenshot shows the 'Edit Policies - Files' interface for profile 'CMINER1'. The left sidebar lists various navigation options. A red arrow points from the 'Specific user' text to the 'Default directory' row in the main table, which is highlighted in grey. The table columns are 'Policy', 'Derived From', 'Action', and 'Setting'. The 'Setting' column for the 'Default directory' row contains the value '/cminer1'.

Policy	Derived From	Action	Setting
Files access	Shipped default	Use current setting	Allow
Files tab	Shipped default	Use current setting	Show
Display directory contents in new window	Shipped default	Use current setting	No
Enable sort links for directory contents	Shipped default	Use current setting	Yes
Display directory contents statistics	Shipped default	Use current setting	Yes
Browse files	Profile setting	Use current setting	Allow
Copy files to server	Shipped default	Use current setting	Allow
Copy files from server	Shipped default	Use current setting	Allow
Default directory	Profile setting	Use current setting	/cminer1
Display subdirectory contents	Shipped default	Use current setting	Allow
Display parent directory contents	Shipped default	Use current setting	Allow
Display default	Shipped default	Use current setting	Deny

In this example, I went into CMINER1 profile, and set policy to show only the 'CMINER1' directory to this user...

Preferences

Preferences are used to control how functions operate

- For example, a user can select which columns to display when viewing a the My Folder list
- By default, all users can configure their own preferences
- Preferences are saved and associated with the user's i5/OS user profile

Edit Preferences - My Folder

Maximum folder items allowed: No maximum
Maximum folder size allowed: No maximum

Preference	Derived From ?	Action ?	Setting
My Folder tab	Shipped default	Use current setting	Show
Mark folder items opened/unopened	Shipped default	Use current setting	Yes
My Folder notification	Shipped default	Use current setting	E-mail and Sametime
Notify on new folder items	Shipped default	Use current setting	Yes
Notify on folder items threshold	Shipped default	Use current setting	Yes
Folder items threshold	Shipped default	Use current setting	100 %
Notify on folder size threshold	Shipped default	Use current setting	Yes
Folder size threshold	Shipped default	Use current setting	100 %
E-mail address to notify	E-mail address	Use current setting	cminer@us.ibm.com
Sametime user to notify	Shipped default	Use current setting	
My Folder columns	Shipped default	Use current setting	Columns...
My Folder sort columns	Shipped default	Use current setting	Date/Time

Customization – ‘Copy Policies’ between profiles

- The Copy Policies function enables policy settings to be copied from one profile to any number of other specified profiles.
- This enables System i Access for Web administrators to edit policy settings for one profile and replicate the settings to other profiles.

iSeries Access for Web

Policies - User Profiles

Profile filter: cminer Filter List

Filter by: Profile Description

Profile	Description	Action
CMINER	Carole Miner/Rochester/IBM@IBMUS	

Profile Filter Details

- Specify a filter to control the profiles displayed in the list. The asterisk (*) is used as the wildcard character.
- To list profiles that start with B, specify B* and select filter by profile.
- To list profiles containing ABC in the description, specify *ABC* and select filter by description.
- If no profile filter is specified, all profiles you have authority to are displayed.

Copy Profile Settings from one System i to another

To copy customized profile settings from one System i to another System i

1. Use the Export function to put them in a PC file
2. Then use the Import function to put the profile settings on another System i

This is useful if you wish to create user group profiles (such as SALES, SECRETARY, etc) and set them up similarly on a variety of systems.

The screenshot shows the 'My Home Page' menu on the left with 'Customize' expanded, showing 'Preferences', 'Policies', 'Settings', and 'Transfer configuration'. The main panel is titled 'Export Policies' with the sub-instruction 'Specify one or more profiles to export policies for, separated by commas.' A text input field labeled 'Profiles:' contains a placeholder 'User:牟利' and a 'Browse...' button. Below is a 'Policies help' link and a note 'View help for exporting policies.'

The screenshot shows the same 'My Home Page' menu. The main panel is titled 'Import Policies' with the sub-instruction 'Specify the file containing policies you want to import.' A text input field labeled 'File:' contains a placeholder 'User:牟利' and a 'Browse...' button. Below is a 'Policies help' link and a note 'View help for importing policies.'

Transfer Configuration Data function (new in V5R4)

The Transfer Configuration Data function enables administrators to move configuration items between user profiles.

Configuration items supported are:

- 5250 sessions
- 5250 macros
- Commands
- Database requests
- Folder items
- Policies

Configuration items can be:

- Replicated via the *Copy* action
- Ownership transferred via the *Move* action

Tips on using System i as your File and Print Server

- IFS
- NetServer

IFS – Use as a File Server

A. Full access to IFS

- Files tab has many link options beneath it
- Connected to ‘Root’ directory
 - Can see all directories in IFS
 - No access restrictions

B. Limited (controlled) access to IFS

- Files tab has only one option
 - Browse Files
- Connected to CMINER1 directory
 - Cannot get out of this view and work with other directories in IFS
 - No access restrictions for CMINER1 directory
- Can view information on SALESINFO directory
 - Was given a symbolic link to this directory

A

Name	Size (bytes)	Type	Modified	Action
\$BEACH		Directory	4/27/05 6:09:32 PM	...
\$BLDJAVA		Directory	3/9/05 10:50:31 AM	...
\$BLDSHIP		Directory	4/22/05 2:02:46 PM	...
\$BLTEST		Directory	3/4/05 3:47:43 PM	...
aliciam		Directory	11/29/05 12:31:33 PM	...
ASFTomcat		Directory	1/28/05 5:55:08 AM	...
bin		Directory	10/21/03 7:24:28 PM	...
boats		Directory	10/23/03 11:45:53 AM	...
BTTFolder		Directory	11/3/05 3:07:25 PM	...
CUSTINFO		Directory	1/11/06 4:59:57 PM	...

B

Name	Size (bytes)	Type	Modified	Action
salesinfo		Directory	1/11/06 5:06:02 PM	...
QCUST_CustomerNumber.xls	2017	File	1/11/06 5:42:49 PM	...
QIWS_QCUST.xls	14848	File	1/11/06 5:42:35 PM	...

Copy Files to Server

Specify the file to copy to directory /home/cminer1 on LP016AB.RCHLAND.IBM.COM. Data is copied in binary format.

File:

Can perform many tasks without going to 5250 or iNAV

Create Directories

- Can create directories under the Root, can open a directory and create directories under another directory

Can ‘Work With’ directories

- ‘Edit Authorities’ (as shown)
 - Note that when a directory is created *PUBLIC have full access to it
- ‘Change Owner’ of the directory
 - Default is the one who created it
- ‘Change Primary Owner’
- ‘Change Authorization List’
- Zip / Unzip

The image displays three separate windows of the iSeries Access for Web interface:

- Top Window:** Shows the "Directory Contents" page with a list of files and directories under the current path. It includes links for "Copy Files to Server", "Create Directory", and "Delete".
- Middle Window:** Shows the "Work With Directory" page for the directory "/home/BROWN". It displays details like owner (CMINER), modified date (1/11/06 6:53:03 PM), and primary group (*NONE). It also lists actions such as "Edit authority", "Change owner of this object", "Change primary group for this object", and "Change authorization list for this object".
- Bottom Window:** Shows the "Edit Authority" page for the same directory. It allows changing the owner to CMINER and modifying the authorization list. The "Authorization List" table shows permissions for *PUBLIC, BROWN, and CMINER across various file operations.

Set Default Directories for Your Users

Customize → Policies → User ID

- Put path to directory in ‘Default Directory’
- Good idea to put directories in the /home path of IFS as that is the default used by many programs

You want users to work with one shared directory as well as their personal directory

- Again, create user directories in /home path
- Shared directory can be in root or any other path
- Set up a **symbolic link** to the shared directory from each user’s directory
 - /home/user directory/shared directory

Policy	Derived From	Action	Setting
Files access	Shipped default	Use current setting

System i NetServer

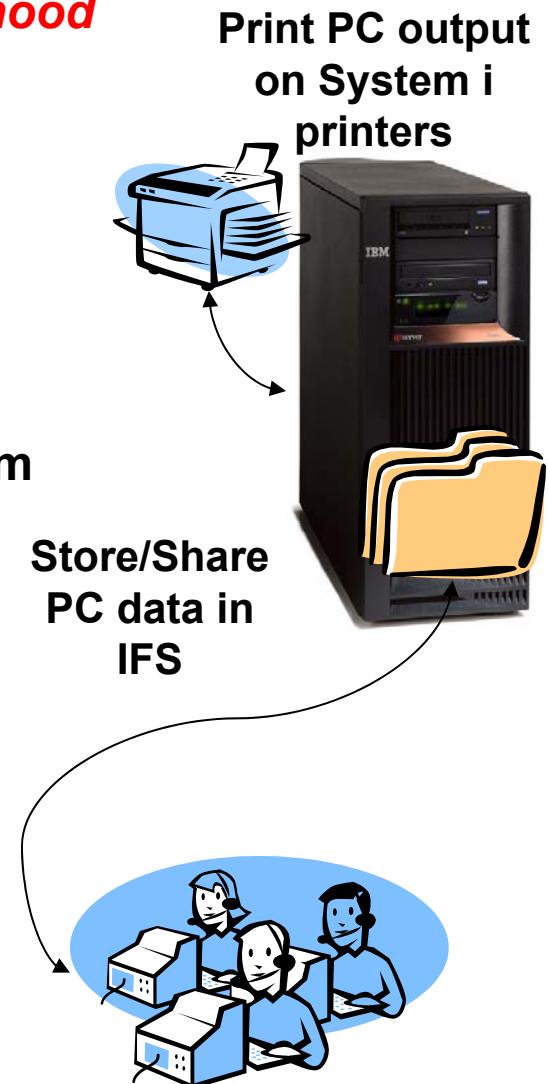

System i Support for Windows Network Neighborhood

What is it?

- File and print serving for CIFS clients
- Compatible with Microsoft Networking and SAMBA
- Part of the base IBM i5/OS™ Operating System

Why Use it?

- Network Neighborhood (My Network Places)
- Search for computers
- Connect to a share
- Work with output queues
- Use Network DOS commands
- Encrypted password

Files Shares

'NetServer view of IFS

- Directories set to Read or Read/Write
- Determined through 'shares' (similar to PC servers)
- iSeries Navigator used to set up 'shares'

File Shares

- Shows all directories that have been set up with 'File Sharing'
- If user clicks on a directory that no 'share' was set for user, the user will get a 'not authorized' message from i5/OS

iSeries Access for Web

User: cminer System: RCHLAND.IBM.COM

iSeries NetServer File Shares

Related Links:

User sees only 'share names' of directories, not actual path or directory names

Browse Files Share (new in V5R4)

Browse File Share link

- Displays directory that is identified in the user's Policy settings

- Shipped Default for *PUBLIC is the QIBM folder

– QIBM is one directory that automatically ships with a 'share' assigned

The screenshot shows the 'Directory Contents' page for the 'QIBM' share. The left sidebar has a 'Files' section selected, which includes links for 'Browse files', 'Browse file share', and 'File shares'. The main content area displays a table of directory contents:

Name	Type	Modified	Action
include	Directory	1/11/06 8:16:30 PM	[Delete] [Edit] [...]
locales	Directory	1/11/06 8:13:53 PM	[Delete] [Edit] [...]
ProdData	Directory	1/12/06 12:17:58 PM	[Delete] [Edit] [...]
tempo	Directory	4/19/05 12:26:59 AM	[Delete] [Edit] [...]
UserData	Directory	11/2/05 6:28:06 PM	[Delete] [Edit] [...]
XML	Directory	8/17/04 11:45:11 PM	[Delete] [Edit] [...]

Below the table, there is a 'Related Links' section with links to iSeries Access for Web, iSeries Access, iSeries Navigator, iSeries Information Center, and iSeries Documentation. There is also a 'Copy Files to Server' section with instructions for specifying the file to copy to the QIBM share.

Browse File Share with Policy setting

Customize → Policies → Files

- **Scroll down to ‘Browse File Shares’**
- **Change directory from QIBM to another directory previously set up as a ‘shared’ directory**
 - Note: Put in sharename not directory name or path

More on Printer Output

Printer Output

Printer output displayed is for the signed-on user id.

If you want to see a different spool file, you can do it by adding a parameter to the System i Access for Web path.

Example...

- I am signed on as user 'cminer1'. By default I can see all 'cminer1' spool files.
- If I enter a new url path as <http://<iseries name>/webaccess/iWASpool?user=warrena>
- Then I would be able to see all 'warrena' spool files -->

HATS Tutorials

Sample HATS 5250 print support application

The sample presented here is a step-by-step tutorial for creating a HATS 5250 Print support application.

Prerequisites

The applications and examples produced in this tutorial require the following software:

 - Adobe Acrobat Reader Version 5.0 or later
 - iSeries Access for Web Version 5.3
 - IBM Infoprint Server (5722IP1) must be installed on the iSeries server.

Note: To verify the installation of iSeries Access for Web and Infoprint Server, type go licpgm from the command line on your iSeries host. Page down the listings and ensure that (5722IP1) IBM Infoprint Server and (5722XH2) iSeries Access for Web are listed.

Create the 5250 print application

Verify that iSeries Access for Web Version 5.3 is installed and available. From a Web browser, access your iSeries server printer output at <http://<your iSeries server>/webaccess/iWASpool>, where <your iSeries server> is your local iSeries server. A screen similar to [Figure 1](#) should be displayed.

Tip: Take Advantage of Printer Views

Basic (default)

- Hides the System i printer concept
- Simplified actions to control printers

IBM InfoPrint Server

http://www.printers.ibm.com/internet/wwsites.nsf/vwwebpublished/ipservrhome_i_ww

Use System i Access for Web to create a PDF printer

Use InfoPrint Server to convert AFP and SCS printer output to PDF

- Direct 5250 application output to PDF printer
- All printer output sent to PDF printer is converted to PDF

The screenshot displays the official IBM website page for the InfoPrint Server for iSeries. The main content area features a large image of a server tower with a document icon above it, labeled 'IBM InfoPrint Server for iSeries'. To the left is a vertical sidebar with links to various business needs categories: Industries, Printers, Software, Professional services, Supplies and paper, How to buy, Support and maintenance, News and events, and Literature. The 'Literature' link is currently selected and highlighted in red. The main content area has tabs for 'Product details', 'Specifications', and 'User resources', with 'Product details' being the active tab. Below these tabs is a 'Complementary offerings' section. The central text discusses the product's ability to manage and present business information electronically to reduce hardcopy costs. It also highlights the value received from an iSeries investment, mentioning core output capabilities that enable re-engineering of business processes to improve service levels and reduce transaction costs. Another section explains how InfoPrint Server can transform standard iSeries output formats like AFP and PDF into electronic formats for distribution via email or web printing. The 'Learn more' section lists details, options, feature codes, literature, redpaper, online support, and webcasts. At the bottom of the page, there are 'Related information' links for printing and e-business solutions and output management.

Use System i Access for Web to access generated PDF documents

- Use PDF printer output to access your PDF printer output
- Use PDF printers to access PDF printer output by printer

downloads and for
controlling access to
them**

The screenshot shows the 'Downloads' section of the iSeries Access for Web interface. On the left is a sidebar menu with links like 'My Home Page', 'My Folder', 'Print', 'Messages', 'Jobs', '5250', 'Database', 'Files', 'Command', 'Download' (which is selected), 'Customize', and 'Other'. The main content area has a title 'Downloads' and a table showing three items:

Name	Description	File	Size	Action
Down1cg	iSeries Access for Linux contains a full 5250 emulator and an enhanced ODBC driver. For more information see: http://www.ibm.com/eserver/iseries/access/linux/ .	file.txt	20	
iSeries Access for Linux (PPC)	iSeries Access for Linux contains a full 5250 emulator and an enhanced ODBC driver. For more information see: http://www.ibm.com/eserver/iseries/access/linux/ .	iSeriesAccess-5.2.0-1.6.ppc.rpm	4,291,646	
Windows AFP Viewer Plug-in	The AFP Viewer plug-in lets you view AFP documents from a Web browser.	gnsp32dm.exe	9,997,972	

Example of how you might use this function

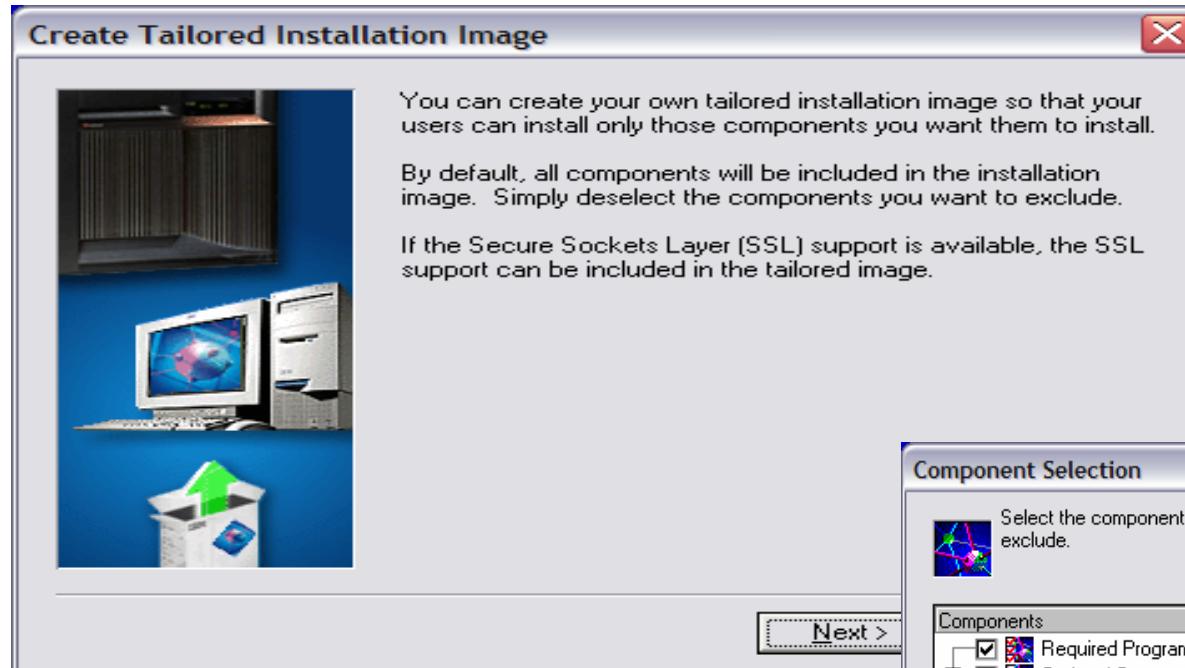

Scenario

- I have some users who need the ODBC driver from System i Access for Windows.
- What would be an easy way to make this available?

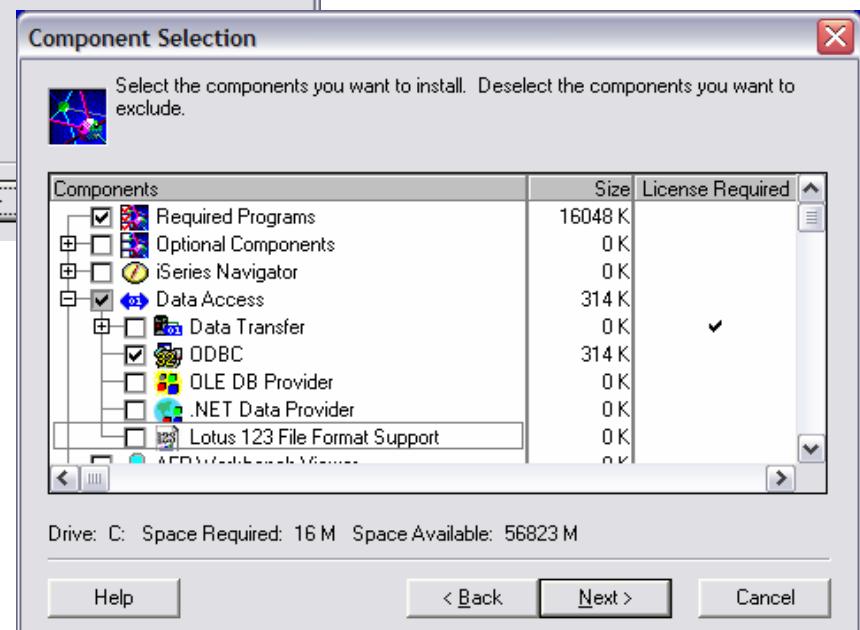

Solution

- Use System i Access for Windows to build an install image that contains only the ODBC drive
- Use System i Access for Web to enable users to install it on their PCs

Create Tailored Install Image of ODBC driver

Use System i Access for Windows Tailored Install wizard to capture only the Windows ODBC driver

Run CWBINIMG.BAT

- This program is in
:**mysystemi**\qibm\ProdData
CA400\Express\Install\Image

Then zip up the directory that gets created

Use the 'Create Download' feature

Use Create Download to make a file available for distribution

The file is copied to the server on which System i Access for Web is running

After the download is created, it is added to the Downloads list.

The screenshot shows the 'Create Download' interface in iSeries Access for Web. On the left is a vertical menu bar with options: My Home Page, My Folder, Print, Messages, Jobs, 5250, Database, Files (which is selected), Command, Download (which is also selected), · Downloads, · Create download, Customize, and Other. The main area has a title 'Create Download'. It contains three input fields: 'Name:' with 'ODBC Driver V5R4', 'Description:' with 'ODBC Driver', and 'File:' with 'Y:\ODBC V5R3.zip' and a 'Browse...' button. Below these is a large blue 'Create Download' button. To the right, under 'Create Download Details', there is a bulleted list:

- Use Create Download to make a file available for distribution. The file is copied to the server on which iSeries Access for Web is running. After the download is created, it is added to the Downloads list.
- When a download is created, it can only be accessed by the user who created it and by users with *SECADM authority. Use the Work with action from the Downloads list and select the Manage Access link to make the download available to other users.

ODBC now added to Download List

When a download is created, it can only be accessed by the user who created it and by users with ***SECADM authority**

Use the **Work with action** from the Downloads list and select the **Manage Access** link to make the download available to other users

Tips & Goodies in ‘Other Tab’

iSeries Access fo

My Home Page

- 📁 My Folder
- Print
- Messages
- Jobs
- 5250
- Database
- Files
- Command
- Download
- Customize

Other

- Bookmarks
- Change password
- Connection pool status
- Trace
- About

Tip: Export Navigation as Bookmarks

Most System i Access for Web pages are bookmarkable

- **Use bookmarks/favorites to access frequently access functions directly**

Export System i Access for Web navigation as bookmarks

- **Bookmarks can be imported by:**
 - Internet Explorer
 - Netscape Navigator
 - Mozilla
 - Opera...

The screenshot shows the iSeries Access for Web interface. At the top, it displays "User: cminer System: RCHLAND.IBM.COM". The main menu bar includes "File", "Edit", "View", "Help", and "Logout". On the left, there's a vertical navigation menu with items like "My Home Page", "My Folder", "Print", "Messages", "Jobs", "5250", "Database", "Files", "Command", "Download", "Customize", and "Other". The "Other" menu is expanded, showing sub-options: "Bookmarks", "Change password", "Connection pool status", "Trace", and "About". Each of these sub-options has a corresponding bullet point describing its function.

Other	Description
Bookmarks	Export bookmarks for iSeries Access for Web.
Change password	Change your password on your iSeries server.
Connection pool status	Display summary of iSeries Access for Web connections to the iSeries Access servers.
Trace	Change trace settings for iSeries Access for Web.
About	Display information about iSeries Access for Web.
