This publication may refer to products that are not currently available in your country. IBM makes no commitment to make available any products referred to herein.

# Agenda

- System i Access for Web Overview
- Test Drive System i Access for Web
- How does System i Access for Web allow you to build a home page to i5/OS system
  - Home page
  - Template
  - Cascading Style Sheet (CSS)
- Why build a home page to your i5/OS system
- Home/Template/CSS page structure and flow
- How to build a home page to your i5/OS system
- Where to find additional information
- Detailed example of building a home page through System i Access for Web
  - Take home and try it for yourself
  - Based on HTML/Template/CSS provided by System i Access for Web

# System i Access for Web Overview

System i Access for Web is software that runs on i5/OS. It provides access to various i5/OS resources through a browser and provides a user-centric, web-based view of i5/OS applications and information. No software is required to be installed on the client, other than a web browser.

System i Access for Web functions include:

- *Print* - printer output viewing, printers, shared printers, and output queues
- *Messages* - user messages, message queues, send messages
- *Jobs* - work with jobs and server jobs
- *5250* user interface
- *Database* - run SQL statements, work with tables, upload data, manage frequently run requests, extract server object information
- *Files* - work with files in the i5/OS integrated file system or within NetServer file shares, upload files to the integrated file system or a NetServer share.
- *Command* - run iSeries commands from the browser.
- *Download* – manage file/software distribution
- ***Customize*** – configure settings and restrict usage of the functions of the product.

# Try out System i Access for Web for yourself!

Start your browser and connect to the following web site:

<http://iseriesd.dfw.ibm.com/webaccess/iWAHome> (case sensitive)

<b>User ID = WUSER</b>  <b>Password = DEMO2PWD</b>	<b>This shows the basic look of System i Access for Web as we ship it. You can try various functions -- including working with printer output, creating database requests, etc. Click on the 5250 tab, sign onto i5/OS, then start an RPG application called BOATS and run it.</b>
<b>User ID = BOATADMIN</b>  <b>Password = DEMO2PWD</b>	<b>This is an example of how a customer might design a web page for their use. You will see that an end user could start the same BOATS application by clicking on the 5250 session -- or they could have used WebFacing to run the application. You will also see other links that would let a user work with spoolfile information, work with IFS, run database requests, etc..</b>

# How to build a home page to i5/OS

- A default HTML home page is displayed when the iWAHome servlet is invoked.
  - `http://<mySystem.myCompany.com>/webaccess/iWAHome`
  - It's a starting point to highlight functions.
  - It's an example of how to build your own home page or pages that access System i Access for Web functionality.
- A default HTML template is used to display functional pages of System i Access for Web
- To build a home page to i5/OS...
  - Override the default home page HTML
  - Override the default template HTML
  - Override the default CSS
  - For a specific user, group of users, or all users of the i5/OS system
  - Use the System i Access for Web Customization interface to override

# Home Page

The screenshot shows a web browser window titled "Homepage" with the address bar displaying "http://myiSeries.myCompany.com/webaccess/iWAHome". The page content includes a navigation menu on the left, a main heading "Welcome to iSeries Access for Web", and several informational sections.

**What is iSeries Access for Web**

A new generation of software that enables you to access your iSeries server information and resources through a web browser!

**Browser Access to iSeries Server Information**

The Internet movement has taken over, and businesses are quickly moving to embrace new technologies through e-business. Since most desktop operating systems come with web browsers, users want an easy way to work with their business-critical i5/OS information and resources through the simple browser user interface that has been designed to be Internet-friendly. Users also are looking for hassle-free access through firewalls. They want access from a variety of platforms, and want no special client code that has to be installed and maintained on their desktop.

**Easy Administration**

i5/OS administrators are looking for ways to streamline management of user access to information in the enterprise through centrally controlled administration built around i5/OS user profiles. Additionally, administrators want to customize a user's view of the iSeries server, so those not familiar with i5/OS

# Template file customization

- System i Access for Web has a default look for its functional pages.
  - This look is controlled by a template file and cascading style sheet.
- The template file has sections to specify
  - Header/footer areas of functional pages.
  - Where System i Access for Web content is placed in the page.
- Default template file replacement can be done for all users (\*PUBLIC), or can be changed only for certain users and/or groups of users.

# Special tags

- Within the home page and template .html files, special tags are used.
  - When these tags are encountered by the System i Access for Web code, they are replaced with the appropriate content.

- **Special tags...**

- %%CONTENT%%
- %%include section=file%%
- %%MENU%%
- %%STYLESHEET%%
- %%STYLESHEET\_CLASSIC\_COLORS%%
- %%TITLE%%
- %%SYSTEM%%
- %%USER%%
- %%VERSION%%

- **Replaced with...**

- functional content for the page, separates the header/footer
- HTML section/fragment to include navigation bar
- default style sheet
- default style sheet prior to V5R4
- title of the page
- name of i5/OS system being accessed
- i5/OS user profile used to access the server
- version of System i Access for Web

- For detailed information on these special tags

- V5R4 System i Access for Web Info Center
  - Connecting to iSeries->iSeries Access->iSeries Access for Web->iSeries Access for Web in a web application sever environment->Customize iSeries Access for Web->Default page content->Home page
- System i Access for Web Open Lab has an exercise on customizing the home page.
- Detailed information later in this presentation.

# Customization settings

- The Customize function allows you to replace the default home page and template.
- Default home page replacement can be done for all users (\*PUBLIC), or can be changed for only certain users and/or groups of users
- The Customize function allows you to override the...
  - **Home page**
  - **Template**
  - Main page
  - Allow/Deny access to Home page, and Template
  - Allow/Deny/Show/Hide the navigation bar
  - Display images vs. text links
  - Default rows per page
  - Preferred language
  - etc.

# Customization settings (continued)

### What is iSeries Access for Web

A new generation of software that enables you to access your iSeries server information and resources through a web browser!

#### Browser Access to iSeries Server Information

The Internet movement has taken over, and businesses are quickly moving to embrace new technologies through e-business. Since most desktop operating systems come with web browsers, users want an easy way to work with their business-critical i5/OS information and resources through the simple browser user interface that has been designed to be Internet-friendly. Users also are looking for hassle-free access through firewalls. They want access from a variety of platforms, and want no special client code that has to be installed and maintained on their desktop.

#### Easy Administration

i5/OS administrators are looking for ways to streamline management of user access to information in the enterprise through centrally controlled administration built around i5/OS user profiles. Additionally, administrators want to customize a user's view of the iSeries server, so those not familiar with i5/OS operating environment can easily and productively work with its database and other resources.

#### Key Capabilities

iSeries Access for Web, a new member of the iSeries Access family of products, provides software that runs in a browser and provides a user-centric, web-based view of iSeries server information and resources. It provides key capabilities, such as:

- Browser access to existing 5250 applications without requiring code changes
- Easy access to DB2(R) Universal Database(TM) (UDB) for iSeries information through stored SQL requests
- A simple interface to work with information in the Integrated File System, including file download and view

Done Internet

# Why build a home page to i5/OS

- Allows you to provide an integrated look/feel for your company
  - Internal
  - External
- Controls how your users access your i5/OS system(s)
- Controls what i5/OS resources your users access
- Allows you to group user access by the type of user and/or their job category
  - Providing unique look and feel vs. other users/groups of users
  - Tailor what functions are presented to a specific user/group of users
  - Predefine view to i5/OS resource so end users don't have to learn new interfaces when all they want is the data

# iWAHome - structure

<http://<system>/webaccess/iWASpool>

The screenshot shows a web browser window with the address bar containing `http://mySeries.myCompany.com/webaccess/iWASpool?page=1`. The page title is "Printer Output for commonuser". The main content area displays a table of printer jobs:

File Name	User	Creation Date/Time	Pages Per Copy	Copies	Status	Action	User	Job Name	Job Number	File Number	Output Queue
QPDSPAJB	COMMONUSER	2/13/06 12:42 PM	7	1	Ready	[Icons]	COMMONUSER	QPADEV000G	576522	1	QUSRSYS/PRTO
QPDSPSTS	COMMONUSER	2/13/06 12:42 PM	1	1	Ready	[Icons]	COMMONUSER	QPADEV000G	576522	2	QUSRSYS/PRTO

Below the table, there is an "Action Details" section with the following actions:

- Work With**: Use the Work With action to hold, release or print the specified spooled file next. There are also links available that will allow you to perform spooled file:
  - Move printer output to another printer
  - Move printer output to another output queue
  - Send printer output to another server (SNDTCPSPLF)
  - Change printer output attributes (CHGSPPLFA)
  - Copy printer output to database file (CPYSPLF)
- View**: Use the View action to view the printer output.

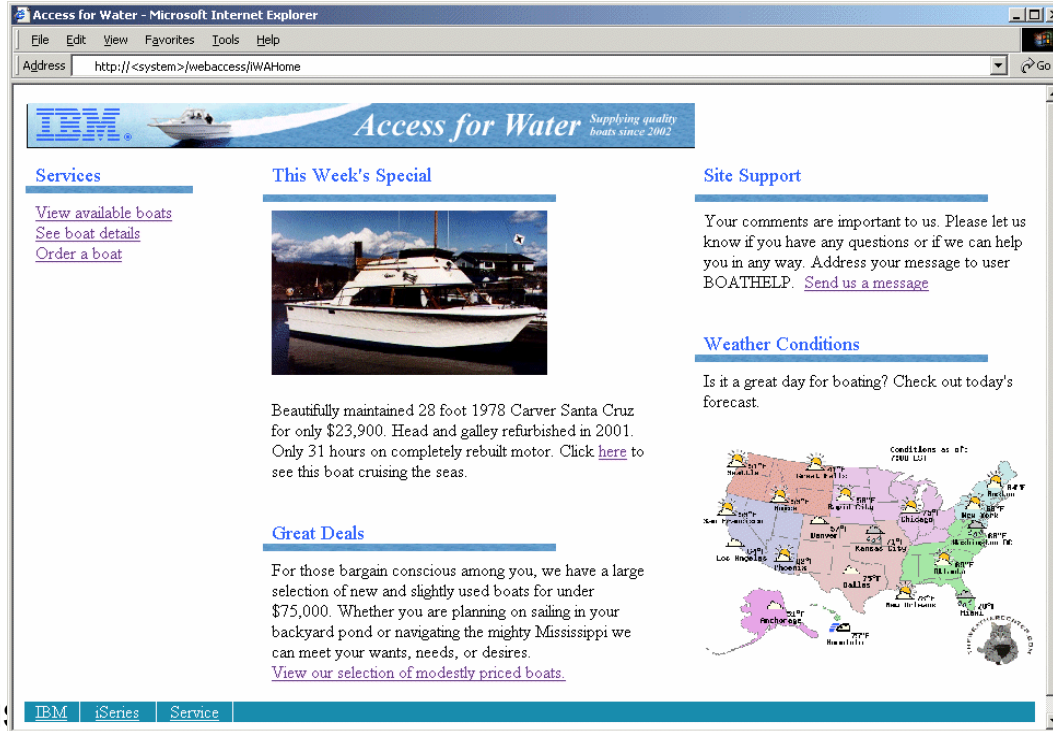

# Let's demonstrate how to build a home page to your i5/OS

# The formula for building a homepage to your i5/OS

1. Create a Home web page (an HTML document)
2. Setup System i Access for Web functions
3. Configure System i Access for Web homepage
4. Create/configure System i Access for Web template (an HTML document)

# Create a Home web page

- We are going to use Microsoft Word to create a web page (HTML document)
  - Header image, three columns, internal/external links

- Specifics

- Targeting user
- Use tables to define where content is placed
- Content = text, hyperlinks, images, etc.
- Save the web page as “filtered” HTML = boat.htm

# Setup System i Access for Web functions

- Define System i Access for Web functions...tasks available from the web page
  - Query database inventory, results as HTML to browser
  - Setup access to invoices, spool file as PDF
  - i5/OS command line, use browser credentials
- Give THE\_BOSS user profile access to the actions above
- Setup hyperlinks on the home web page

# Configure System i Access for Web home page

- We are going to use Microsoft Word to create a home page (HTML document)
  - Header image, columns, multimedia, internal/external links
- Copy web page and associated files to i5/OS integrated file system
  - Use System i Access for Web Browse files
  - Create directory for HTML source file and images
  - Copy files from workstation to i5/OS
- Grant web app. server user profile authority to the directories/files
  - WebSphere App Server QEJBSVR \*RX
  - ASF Tomcat QTMHTTP \*RX
- Configure System i Access for Web to use web page files
  - Set policy for user THE\_BOSS to use the new Home web page
  - Policies -> General -> Home page HTML file = /boatdemo/boat.htm
  - Open new browser to [http://<sys\\_name>:<port>/webaccess/iWAHome](http://<sys_name>:<port>/webaccess/iWAHome)
    - User = THE\_BOSS

# iWAHome - structure

<http://<system>/webaccess/iWAHome>

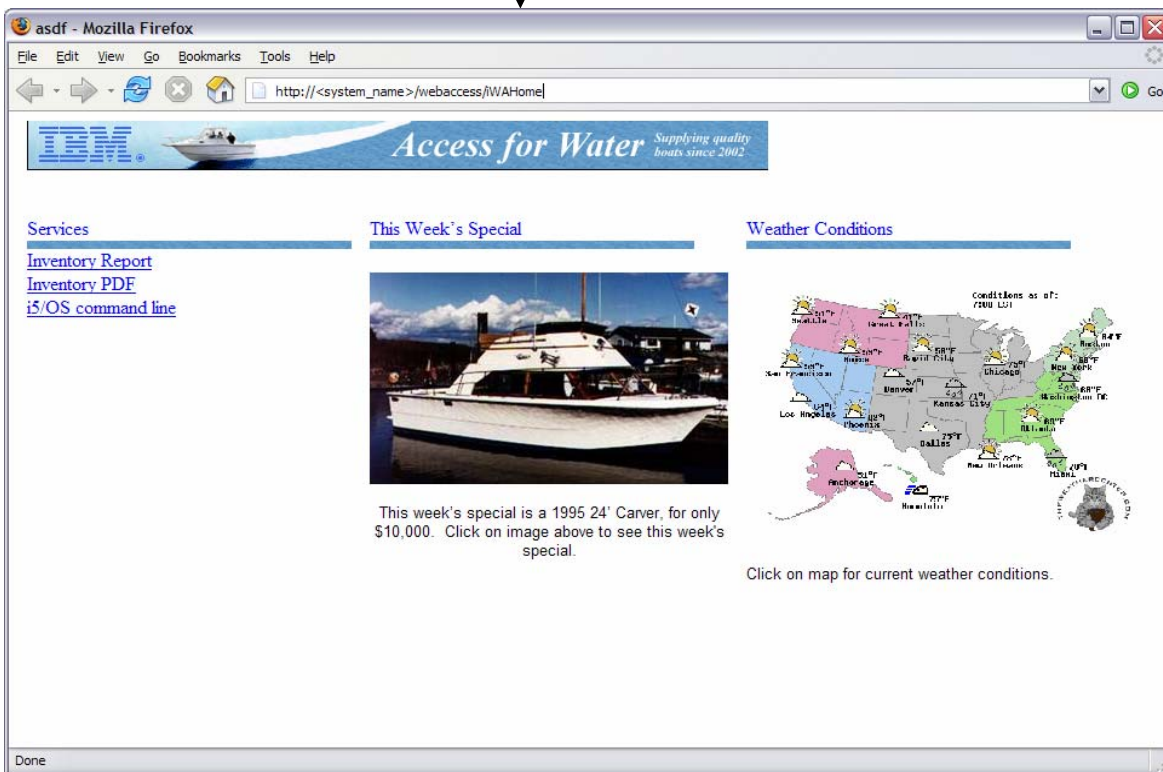

## Homepage file

/boatdemo/boat.htm

Defines content, layout, images, links to be displayed when the iWAHome servlet is invoked in the browser.

## Image files

/boatdemo/boat\_files/\*.gif  
/boatdemo/boat\_files/\*.jpg  
/boatdemo/boat\_files/\*.mpg

# Create/configure iSeries Access for Web template

- We are going to use Microsoft Word to create a web page template (HTML document)
  - Header image, content area, link back to Home page
- Specifics
  - Targeting user profile “THE\_BOSS” as the user of the web page template
  - Use a table to define where System i Access for Web content is placed
  - Special Tags
    - Content placed where special tag %%CONTENT%% is place.
    - Content formatted based on the default System i Access for Web cascading style sheet using special tag %%STYLESHEET%%
    - When these tags are encountered by the iSeries Access for Web code, they are replaced with the appropriate content
  - Save the web page as “filtered” HTML = boat\_template.htm
- For detailed information on these special tags, refer to the V5R4 System i Access for Web Info Center
  - Connecting to iSeries->iSeries Access->iSeries Access for Web->iSeries Access for Web in a web application sever environment->Customize iSeries Access for Web->Default page content->Home page

# iWA servlet Template - structure

<http://<system>/webaccess/iWADbView>

## Homepage file

/boatdemo/boat.htm

Defines content, layout, images, links to be displayed when the iWAHome servlet is invoked in the browser.

## Template file

/boatdemo/boat\_template.htm

Defines the header, content, footer on all other servlet pages.

## Image files

/boatdemo/boat\_template\_files/\*.gif

## Cascading Style Sheet file

/QIBM/ProdData/Access/Web2/html/iwa\_styles.css

Defines the colors, fonts, font sizes for the various elements in the .html files.

### SQL Output

# The formula for building a homepage to your i5/OS

- Demonstration summary
  1. Create a Home web page (an HTML document)
  2. Setup System i Access for Web functions
  3. Configure System i Access for Web home page
  4. Create/configure System i Access for Web template (an HTML document)
  
- What is the value of this?
  - Quickly integrate your own look/feel into web pages using System i Access for Web
  - Quickly integrate both i5/OS access and other intranet/internet links
  - Control how users access i5/OS resources
  - Control what i5/OS resources users can access
  - Administrate access to your i5/OS from a single point of entry

# Home Page Customization

- Great article - example
  - "Build a quick and easy Web site with iSeries Access for Web" - Janet Weber
  - [http://www.ibm.com/servers/eserver/series/access/pdf/build\\_website\\_article.pdf](http://www.ibm.com/servers/eserver/series/access/pdf/build_website_article.pdf)

# Additional Information – Detailed Example

- The following pages detail the steps to enable the use of a customized Home page through System i Access for Web
- Refer to the structure/flow diagrams shown earlier in this presentation
- The details include...
  - Use the shipped System i Access for Web files as a starting point...
    - Home HTML page, Template HTML page, Cascading Style Sheet (CSS)
  - Setting authorities to the files
  - Where to place image files
  - How/where to set System i Access for Web policies to use the modified files
  - What to modify in the source files
  - How to verify the modifications

# iWAHome – Steps to customize

- To customize the pages:
  1. Copy System i Access for Web .html/.css files.
  2. Copy image files.
  3. Customize policies to use .html files.
  4. Update .html files.
  5. Update cascading style sheet.
  6. Verify with a browser.

# Step 1 - Copy System i Access for Web .html/.css files

- System i Access for Web provides the source for the default pages
  - Home page for iWAHome servlet
  - Template for all other servlets
  - Cascading Style Sheet to control the styling of HTML elements
- These source files can be used as a starting point for customization.
- Copy the default file(s) supplied to a new location in the integrated file system so they can be modified.
  
- Steps to copy the files:
  1. MKDIR DIR('/common\_homepage')
  2. CPY OBJ('/qibm/proddata/access/web2/html/en/homepage.html')  
TOOBJ('/common\_homepage/common\_homepage.html')
  3. CPY OBJ('/qibm/proddata/access/web2/html/en/webaccess.html')  
TOOBJ('/common\_homepage/common\_template.html')
  4. CPY OBJ('/qibm/proddata/access/web2/html/en/iwa\_styles.css')  
TOOBJ('/common\_homepage/common\_styles.css')
  5. WRKLNK OBJ('/common\_homepage')
  6. Option #9 to work with authorities
    - Grant \*PUBLIC \*RWX
    - Repeat for all subdirectories and files

# iWAHome – Steps to customize

- To customize the pages:
  1. Copy System i Access for Web .html/.css files.
  2. **Locate and copy image files.**
  3. Customize policies to use .html files.
  4. Update .html files.
  5. Update cascading style sheet.
  6. Verify with a browser.

## Step 2 - Locate and copy image files

- Within the HTML source, images can be specified.
- Locate an image (i.e. your company logo/banner) you can use.
- The image file will need to reside in the same directory, or a directory below, as the .html files that refer to them.
  - Locating the image files in some other location will require HTTP server configuration updates.
- Copy the file(s) to an images subdirectory in the integrated file system, below the location of the .html source.
  
- Steps to copy the files:
  1. MKDIR DIR('/common\_homepage/images')
  2. Copy your image files to the /common\_homepage/images directory.
    - We are using common\_banner.gif, iwa\_navCorner.gif
  3. WRKLNK OBJ('/common\_homepage/images')
  4. Option #9 to work with authorities
    - Grant \*PUBLIC \*RWX
    - Repeat for all subdirectories and files

# iWAHome – Steps to customize

- To customize the pages:
  1. Copy System i Access for Web .html/.css files.
  2. Locate and copy image files.
  3. **Customize policies to use .html files.**
  4. Update .html files.
  5. Update cascading style sheet.
  6. Verify with a browser.

## Step 3 - Customize policies to use .html files

- System i Access for Web policies need to be changed to use the .html files.
- This will allow you to verify the incremental changes to the .html source in the following steps.
- Customize policies for a test user profile to use the modified .html files.
  
- Steps to set policies:
  1. Identify a test i5/OS user profile you can use, or  
CRTUSRPRF USRPRF(COMMONUSER) PASSWORD() USRCLS(\*USER)
  2. Open a browser to <http://<system>/webaccess/iWAMain>
  3. Signon using an administrator level user profile.
  4. Click the Customize tab.
  5. Click the Policies link.
  6. Specify your test user profile, we are using COMMONUSER.
  7. Click Edit Policies.
  8. Click the Action icon for the General category.
  9. Type in the Home page HTML file:     /`common_homepage/common_homepage.html`
  10. Type in the Template HTML file:     /`common_homepage/common_template.html`
  11. Scroll down click Save.

# Step 3 - Customize policies to use .html files

The screenshot shows a web browser window titled "Policies" with the URL `http://myiSeries.myCompany.com/webaccess/iWACustomizeList?action=select`. The page content is titled "Policies" and includes a "Profile:" field with the value "COMMONUSER" and a "Browse..." button. Below this is an "Edit Policies" button. The left sidebar contains a "Customize" section with sub-items: "Preferences", "Policies", "Settings", and "Transfer configuration". The "Policies" sub-item is highlighted. At the bottom of the page, there is a footer with "IBM | iSeries | Service" and the version number "5.4.0.05-191.SI22130".

Numbered arrows indicate the following steps:

- 3: Points to the address bar.
- 4: Points to the "Customize" link in the left sidebar.
- 5: Points to the "Policies" sub-link in the left sidebar.
- 6: Points to the "Profile:" field.
- 7: Points to the "Edit Policies" button.

# Step 3 - Customize policies to use .html files

**Policies**

Profile: **COMMONUSER**

Action	Category	Description	Access
	5250	5250 user interface custom settings.	Allowed
	Command	Run batch command custom settings.	Allowed
	Customize	Preferences and policy administration custom settings.	Allowed
	Database	Database tables, requests, and run SQL custom settings.	Allowed
	Database connections	Create and edit database connection definitions.	Allowed
	Download	Download packages custom settings.	Allowed
	Files	Integrated file system and file share custom settings.	Allowed
	General	Page layout, language and character set custom settings.	Allowed
	Jobs	Work with jobs custom settings.	Allowed
	Mail	Send mail custom settings.	Allowed
	Messages	Display messages, send messages, and message queue custom settings.	Allowed
	My Folder	My Folder custom settings.	Allowed
	Print	Printer output, printers, printer shares and output queue custom settings.	Allowed
	Sametime	Lotus Sametime custom settings.	Allowed
	Other	Change password and other miscellaneous custom settings.	Allowed

[View all policies](#)  
View current policy settings for all categories.

[View group membership](#)  
View current group membership for this user profile.

[Copy policies](#)

# Step 3 - Customize policies to use .html files

**Edit Policies - General**  
Profile: COMMONUSER

Policy	Derived From	Action	Setting
Home page HTML file	Profile setting	Use current setting	/common_homepage/common_homepage.html <b>Browse...</b>
Template HTML file	Profile setting	Use current setting	/common_homepage/common_template.html <b>Browse...</b>

Default pages per set	Shipped default	Use current setting	10
Preferred language	Shipped default	Use current setting	None
Preferred character set	Shipped default	Use current setting	None
PDF font directories	Shipped default	Use current setting	
Additional PDF font	Shipped default	Use current setting	

# iWAHome – Steps to customize

- To customize the pages:
  1. Copy System i Access for Web .html/.css files.
  2. Locate and copy image files.
  3. Customize policies to use .html files.
  4. **Update .html files.**
  5. Update cascading style sheet.
  6. Verify with a browser.

## Step 4 – Update .html files – add .css reference

- To override the default cascading style sheet, the .html files must be updated to link to our copy (see Step 1).
  - The cascading style sheet will be modified in a later step.
  - Add the reference to the cascading style sheet file to both .html files
- 
- Steps to add the reference:
    1. Open a browser to <http://<system>/webaccess/iWAHome>
    2. Signon using your test user profile, we are using COMMONUSER.
    3. Open the following files with Wordpad
      - /common\_homepage/common\_homepage.html
      - /common\_homepage/common\_template.html
    4. At the top of the file, add the following below **%%STYLESHEET%%**
      - `<LINK rel="stylesheet" type="text/css" href="common_styles.css">`
    5. Save the changes to the .html files.
    6. Refresh the browser session. No visual changes should be occur.

# Step 4 – Update .html files – add .css reference

```
common_homepage.html - WordPad
File Edit View Insert Format Help
<!doctype html public "-//w3c//dtd html 4.0 transitional//en">

<TD class="iwa-userinfo-corner" rowspan="2" width="17"><A href="#main"><IMG src="%%CONTEXT%%iWAImage
```

## Step 4 – Update .html files – add header image

- To display your company's logo/image, the .html files must be updated to link in a different image file.
- The default masthead (header) reference needs to be removed.
- The new logo/image reference needs to be added.
- Steps to add the reference:
  1. Open the following files with Wordpad
    - /common\_homepage/common\_homepage.html
    - /common\_homepage/common\_template.html
  2. Near the top of the file, locate the following lines:
    - <!-- BEGIN HEADER -->
    - <TABLE width="100%" border="0" cellpadding="0" cellspacing="0">
    - <TR class="iwa-bbg">
    - <TD class="iwa-masthead" width="100%">iSeries Access for Web</TD>
  3. Remove this line
    - <TD class="iwa-masthead" width="100%">iSeries Access for Web</TD>
  4. Add these or similar lines to replace the masthead (header)
    - <TD class="iwa-masthead" width="100%"><IMG src="images/common\_banner.gif" alt="COMMON Spring 2006 Conference & Expo, March 26-30, 2006, Minneapolis, Minnesota" border="0" width="468" height="60"></TD>
    - <TD><A href="#main"><IMG src="%%CONTEXT%%iWAImages/en/images/iwa\_c.gif" alt="Skip to main content" border="0" width="17" height="1"></A></TD>
  5. Save the changes.
  6. Refresh the browser. The image in the header should have changed.

# Step 4 – Update .html files – add header image

**What is iSeries Access for Web**

A new generation of software that enables you to access your iSeries server information and resources through a web browser!

**Browser Access to iSeries Server Information**

The Internet movement has taken over, and businesses are quickly moving to embrace new technologies through e-business. Since most desktop operating systems come with web browsers, users want an easy way to work with their business-critical i5/OS information and resources through the simple browser user interface that has been designed to be Internet-friendly. Users also are looking for hassle-free access through firewalls. They want access from a variety of platforms, and want no special client code that has to be installed and maintained on their desktop.

**Easy Administration**

i5/OS administrators are looking for ways to streamline management of user access to information in the enterprise through centrally controlled administration built around i5/OS user profiles. Additionally, administrators want to customize a user's view of the iSeries server, so those not familiar with i5/OS operating environment can easily and productively work with its database and other resources.

**Key Capabilities**

**Rochester information**

- City information
- Movies
- Mayo Clinic

**Rochester weather**

SkyCam

**Rochester news**

**Telephone directory**

- Find a person
- Find a business

Internet

## Step 4 – Update .html files – remove footer

- A footer exists at the bottom of the web page.
  - We are going to remove that footer to simplify the look of the page.
  - Locate the comments BEGIN FOOTER – END FOOTER and remove the lines between them.
- 
- Steps to remove the footer:
    1. Open the following files with Wordpad
      - /common\_homepage/common\_homepage.html
      - /common\_homepage/common\_template.html
    2. At the bottom of the file, locate the following lines:
      - <!-- BEGIN FOOTER -->
      - <!-- END FOOTER -->
    3. Remove all lines between the BEGIN-END comments.
    4. Save the changes.
    5. Close the Wordpad windows.
    6. Refresh the browser. Scroll down, the footer not be displayed.

# Step 4 – Update .html files – remove footer

The screenshot shows two windows of a text editor (WordPad) displaying HTML code. The main window, titled 'common\_template.html - WordPad', shows the following code:

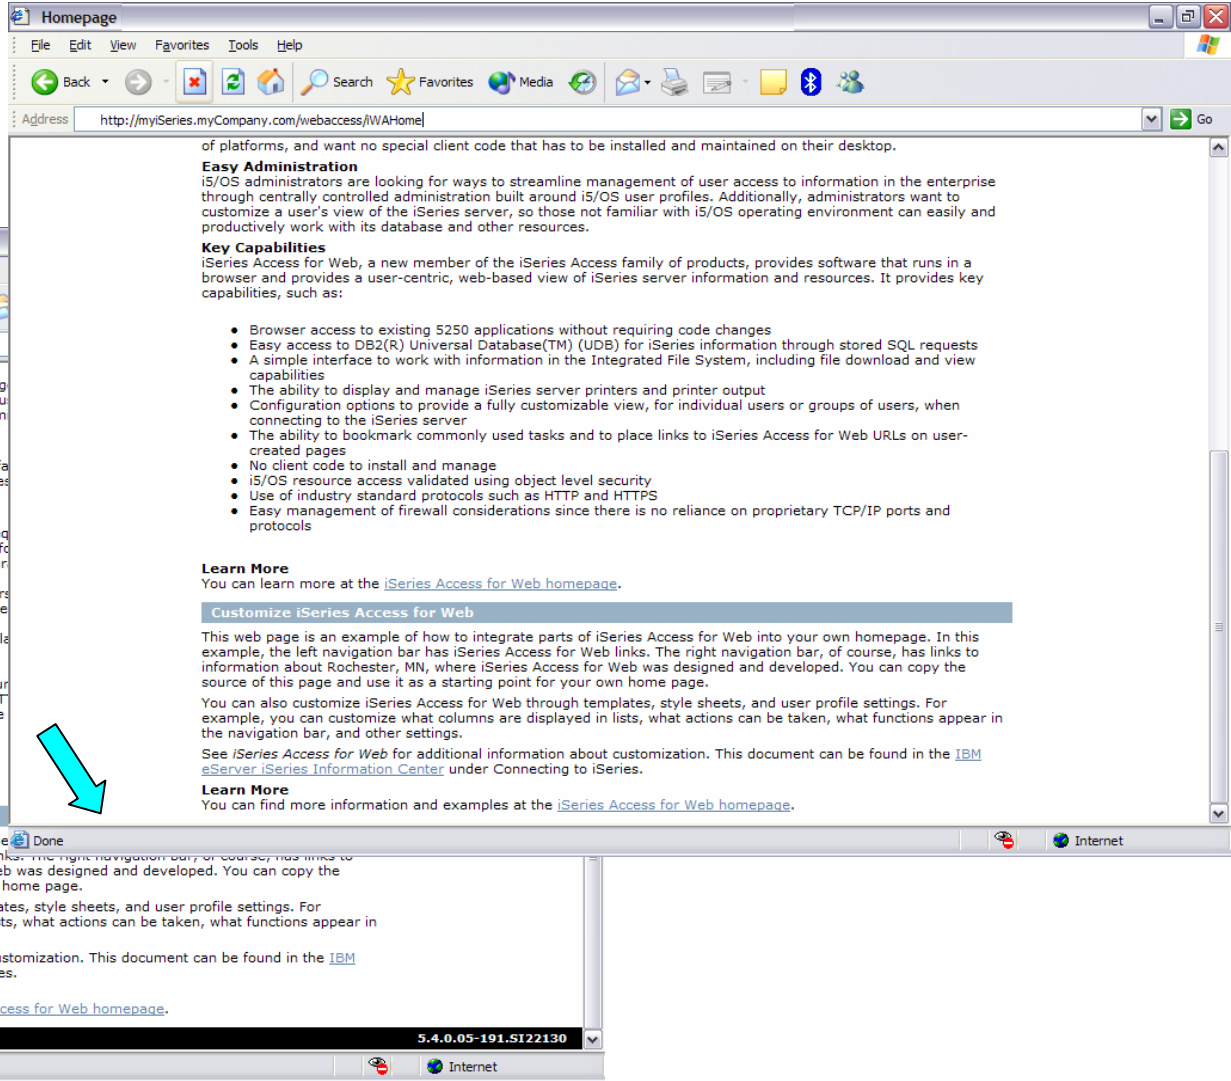

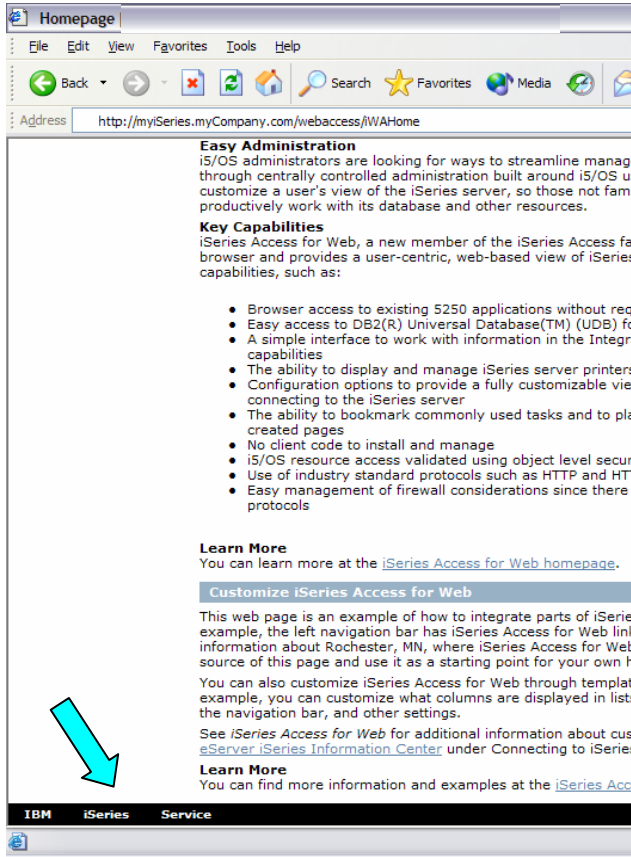

```
<!-- BEGIN FOOTER -->
<!--
<TABLE border="0" cellpadding="0" cellspacing="0" width="100%">
  <TR class="iwa-bbg">
    <TD width="560" height="19">
      <TABLE border="0" cellpadding="0" cellspacing="0">
        <TR>
          <TD class="iwa-footer-spacer" width="13">&nbsp;&nbsp;&nbsp;</TD>
          <TD class="iwa-footer-text">&A class="iwa-mainlink" href="http://www.ibm.com/">IBM</A></TD>
          <TD class="iwa-footer-divider" width="27">&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;&nbsp;</TD>
          <TD class="iwa-footer-text">&A class="iwa-mainlink" href="http://www.ibm.com/eserver/series/">iSeries</A></TD>

  </TR>
</TABLE>
-->
<!-- END FOOTER -->
```

The secondary window, titled 'common\_homepage.html - WordPad', shows the same code with the footer section removed. A red arrow points to the 'BEGIN FOOTER' comment in the main window, and another red arrow points to the 'END FOOTER' comment in the main window, indicating the section to be removed. The secondary window shows the code up to the 'END FOOTER' comment, which has been removed.

# Step 4 – Update .html files – remove footer

After

Before

# iWAHome – Steps to customize

- To customize the pages:
  1. Copy System i Access for Web .html/.css files.
  2. Locate and copy image files.
  3. Customize policies to use .html files.
  4. Update .html files.
  5. **Update cascading style sheet.**
  6. Verify with a browser.

## Step 5 – Update cascading style sheet

- System i Access for Web uses cascading style sheets (CSS) to control certain aspects of the appearance of web page content.
- For CSS information:
  - [www.w3.org/Style/CSS/](http://www.w3.org/Style/CSS/)
  - [www.w3.org/Style/LieBos2e/enter/](http://www.w3.org/Style/LieBos2e/enter/)
- The default style sheet controls the look of the page header, footer, navigation bar, and page content.
- Style sheets can be used to customize the home page and page template.
- Step 1 copied the shipped style sheet to  
**/common\_homepage/common\_styles.css**
- Step 1 updated the .html files to use our copy  
**/common\_homepage/common\_styles.css**
- Steps to update the .css:
  1. Open the following file with Wordpad
    - **/common\_homepage/common\_styles.css**
  2. Update various styles.
  3. Save the changes.
  4. Refresh the browser. Verify various areas of the screen were updated.

# Step 5 – Update cascading style sheet

**What is iSeries Access for Web**

A new generation of software that enables you to access your iSeries server information and resources through a web browser!

**Browser Access to iSeries Server Information**

The Internet movement has taken over, and businesses are quickly moving to embrace new technologies through e-business. Since most desktop operating systems come with web browsers, users want an easy way to work with their business-critical i5/OS information and resources through the simple browser user interface that has been designed to be Internet-friendly. Users also are looking for hassle-free access through firewalls. They want access from a variety of platforms, and want no special client code that has to be installed and maintained on their desktop.

**Easy Administration**

i5/OS administrators are looking for ways to streamline management of user access to information in the enterprise through centrally controlled administration built around i5/OS user profiles. Additionally, administrators want to customize a user's view of the iSeries server, so those not familiar with i5/OS operating environment can easily and productively work with its database and other resources.

**Key Capabilities**

iSeries Access for Web, a new member of the iSeries Access family of products, provides software that runs in a browser and provides a user-centric, web-based view of iSeries server information and resources. It provides key capabilities, such as:

- Browser access to existing 5250 applications without requiring code changes
- Easy access to DB2(R) Universal Database(TM) (UDB) for iSeries information through stored SQL requests
- A simple interface to work with information in the Integrated File System, including file download and view capabilities

# Trademarks and Disclaimers

© IBM Corporation 1994-2006. All rights reserved.

References in this document to IBM products or services do not imply that IBM intends to make them available in every country.

Trademarks of International Business Machines Corporation in the United States, other countries, or both can be found on the World Wide Web at <http://www.ibm.com/legal/copytrade.shtml>.

Intel, Intel logo, Intel Inside, Intel Inside logo, Intel Centrino, Intel Centrino logo, Celeron, Intel Xeon, Intel SpeedStep, Itanium, and Pentium are trademarks or registered trademarks of Intel Corporation or its subsidiaries in the United States and other countries.

Linux is a registered trademark of Linus Torvalds in the United States, other countries, or both.

Microsoft, Windows, Windows NT, and the Windows logo are trademarks of Microsoft Corporation in the United States, other countries, or both.

UNIX is a registered trademark of The Open Group in the United States and other countries.

Java and all Java-based trademarks are trademarks of Sun Microsystems, Inc. in the United States, other countries, or both.

Other company, product, or service names may be trademarks or service marks of others.

Information is provided "AS IS" without warranty of any kind.

The customer examples described are presented as illustrations of how those customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics may vary by customer.

Information concerning non-IBM products was obtained from a supplier of these products, published announcement material, or other publicly available sources and does not constitute an endorsement of such products by IBM. Sources for non-IBM list prices and performance numbers are taken from publicly available information, including vendor announcements and vendor worldwide homepages. IBM has not tested these products and cannot confirm the accuracy of performance, capability, or any other claims related to non-IBM products. Questions on the capability of non-IBM products should be addressed to the supplier of those products.

All statements regarding IBM future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only.

Some information addresses anticipated future capabilities. Such information is not intended as a definitive statement of a commitment to specific levels of performance, function or delivery schedules with respect to any future products. Such commitments are only made in IBM product announcements. The information is presented here to communicate IBM's current investment and development activities as a good faith effort to help with our customers' future planning.

Performance is based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput or performance that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput or performance improvements equivalent to the ratios stated here.

Photographs shown may be engineering prototypes. Changes may be incorporated in production models.
