3567 IBM Adobe Customer Reference Video Power Systems Shutdown – As Produced Transcript

Paulette Scheffer
Senior Director of Core Infrastructure and Service Management, Adobe

Ashraf Omar
Manager, SAP Basis Team, Adobe

Atul Gupta
Senior Manager, Core Infrastructure Services, Adobe

Atul Gupta: When we started using Power Systems, we were able to do lot more with less. We were using less compute resources and we were delivering higher availability and performance regardless of SAP or non-SAP environment and that itself was a lot of value in terms of cost savings due to our business.

Paulette Scheffer: We actually carry some additional capacity on our SAP systems that through capacity on demand we can dial-up literally within minutes. It actually enables us to take all of our business critical databases and ensure that they are operating with maximum performance, maximum reliability, maximum agility, and do it in a cost effective way.

Ashraf Omar: IBM's Power Systems helped Adobe IT provide faster services to our customers. We are able to start projects quicker and we help our customers finish the project sooner. In the past we always had to worry about the future. We don't have that issue now.
