## IBM Advanced Job Scheduler for iSeries

*A tool to help you automate your operations*

IBM @server iSeries

- Run jobs across your AS/400 and iSeries network
  - Time and date schedules
  - Job, event or object dependencies
  - Business calendars
- Notify operations personnel
  - Normal and/or abnormal job completion
  - Using messages or pagers
- Distribute reports
  - Users and organization units
  - Selection of output
  - Local or remote distribution
- Automate administration
  - Defining on-line run books
  - Application definition and control
  - Scheduler activity logs and job completion information
  - Group processing
- Special features
  - Console monitor for restricted state scheduling
  - Dynamic passing of parameters

**IBM @server. For the next generation of e-business.**

IBM Confidential Until Announced © 2001 IBM Corporation

## Interfaces

- Traditional 5250 Menus
  - Start with GO JS command
- Graphical Operations Navigator Plug-in
  - Located in Job / Work Management branch of navigation tree
  - Also in Management Central hierarchy
- OS/400 Command Language
  - 25+ Commands
  - User definable parameter
  - Local Data Area support

IBM @server. For the next generation of e-business.

IBM Confidential Until Announced 8 2001 IBM Corporation

### CL Commands

IBM @server iSeries

#### Job commands

1. Add job using Job Scheduler
2. Change job using Job Scheduler
3. Copy job using Job Scheduler
4. Display job using JS
5. Hold job using Job Scheduler
6. Release job using JS
7. Remove job using Job Scheduler
8. Rename job using Job Scheduler
9. Submit job using Job Scheduler
10. Work with jobs using JS

#### History commands

20. Display history using JS
21. Remove history using JS
22. Work with history using JS

#### Log commands

30. Display log for Job Scheduler
31. Remove log entries from JS

#### Other commands

40. Change job authority using JS
41. Change parameter data
42. Change pager command using JS
43. End Job Scheduler
44. Print schedule using JS
45. Submit console command
46. Set dependent job using JS
47. Send reports using JS
48. Start group using JS
49. Start Job Scheduler

IBM @server. For the next generation of e-business.

## Relationship with OS/400 JOBSUDE Commands

- XXXXJOBSUDE commands are part of OS/400
- IBM Advanced Job Scheduler is a separately installable product
  - Has more extensive scheduling and automation capabilities
  - Can migrate existing JOBSUDE jobs

```

CMDSCDE                               Schedule Entry Commands
Select one of the following commands:

Commands
1. Add Job Schedule Entry              Job name . . . . . > MYSAVE      Name, *JOBID
2. Change Active Job Schedule Entry    Command to run . . . . . > SAVLIB LIB(MYLIB) DEV(TAP01)
3. Change Expiration Date              Frequency . . . . . *WEEKLY      *ONCE, *WEEKLY, *MONTHLY

## The Basics

What = Jobs  
 When = Schedules & Dependencies  
 Where = System  
 How = Properties  
 So what = Notification

IBM Confidential Until Announced 8 2001 IBM Corporation

## Jobs

*What do I schedule?*

IBM @server iSeries

- Scheduled Job
  - Any function that can be submitted as an OS/400 job
    - One / multiple CL command
    - Can include defined pre and post command lists
  - Has a unique name
  - Can be passed parameters
  - Supported by commands: create, delete, modify, run, hold, work with, ...
  - Can be run on any AS/400 or iSeries system in the network
  - Default meaning of "Job" in this presentation
- Job Group
  - A series of jobs that run consecutively, each with a sequence number
  - Normal completion is required for each job for sequence to continue
  - First job of a group is scheduled, held, ...

IBM @server. For the next generation of e-business.

IBM Confidential Until Announced 8 2001 IBM Corporation

## Creating a New Job

## Event-based Scheduling

*Can scheduling depend on more than time?*

IBM @server iSeries

- Job Groups
  - A sequence of jobs with a single schedule
- Job Dependencies
  - A "directed graph" of predecessors and successors jobs
  - Specify \*ANY or \*ALL predecessors must be complete
  - Specify if normal completion is required
- Resource Dependencies
  - Existence or other properties of
    - ▶ System objects
    - ▶ Configuration status
    - ▶ Network files
    - ▶ Subsystems
- Active Dependencies
  - A list of jobs that cannot be active for the selected job to run
- Alternate Jobs
  - Jobs that run due to the abnormal end of a scheduled job
- Operator Action

IBM @server. For the next generation of e-business.

IBM Confidential Until Announced 8 2001 IBM Corporation

## Job Groups

How do I run a sequence of Jobs with a single control point?

IBM @server iSeries

- Schedule associated with Group
- Groups can be run, held, resequenced, ...
- Jobs can run on same or different systems

IBM @server. For the next generation of e-business.

IBM Confidential Until Announced 8 2001 IBM Corporation

## Job Groups

IBM @server iSeries

The screenshot shows the AS/400 Operations Navigator interface. The left pane displays a tree view of the system hierarchy, including Management Central, Production systems, Distribution, Basic Operations, Job Management, Jobs, Server Jobs, Advanced Job Scheduler, Scheduled Jobs, Job Groups, and Joblist. The right pane shows a table titled "Distribution: Joblist" with the following data:

Sequence	Name	Status	Description
1	FIRSTJOB	Ready to run	First Job in Group
2	SECONDJOB	Ready to run	
3	LASTONE	Ready to run	Third and last job in group

IBM @server. For the next generation of e-business.

IBM Confidential Until Announced 8 2001 IBM Corporation

## Group Job Properties

- Group name**

## Active Dependencies - V5R1

The screenshot shows two overlapping dialog boxes. The background dialog is titled "Active Dependencies (Distribution)" and has a "Job name:" field containing "DBBACKUP". The foreground dialog is titled "Edit Active Dependencies (Distribution)" and also has a "Job name:" field containing "DBBACKUP".

In the "Edit Active Dependencies" dialog, there are three main sections:

- Wait before resetting:** A text field.
- Dependencies:** A list box containing "DBRUN1" and "DBRUN2".
- Scheduled jobs:** A tree view containing a list of jobs:
  - FIRSTJOB - JOBLIST(01)
  - JOBLIST
  - FIRSTJOB - JOBLIST(01)
  - LASTONE - JOBLIST(03)
  - SECONDJOB - JOBLIST(02)
  - LASTONE - JOBLIST(03)
  - PAY01
  - PAY02
  - PAY3ANEW
  - PAY3BNEW
  - PAY3CNEW
  - SECONDJOB - JOBLIST(02)
  - STSRPT
  - TEST
  - TESTNTWK

Between the "Scheduled jobs" and "Dependencies" lists are two buttons: "Add->" and "<- Remove". At the bottom right of the dialog are "OK" and "Cancel" buttons.

IBM Confidential Until Announced 8 2001 IBM Corporation

## Alternate Job

- Job to run on failure**
- Could perform cleanup, recovery, or special notification**

The screenshot shows the "Scheduled Job Properties - Distribution" dialog box with the "General" tab selected. The "Maximum run time:" is set to "No maximum".

The "Use an alternate job if job fails" checkbox is checked. Below it, the "Job name:" field contains "CLEANUP". There is a "Group:" field with a "Browse" button and a "Sequence:" spinner set to "0".

Other options include:

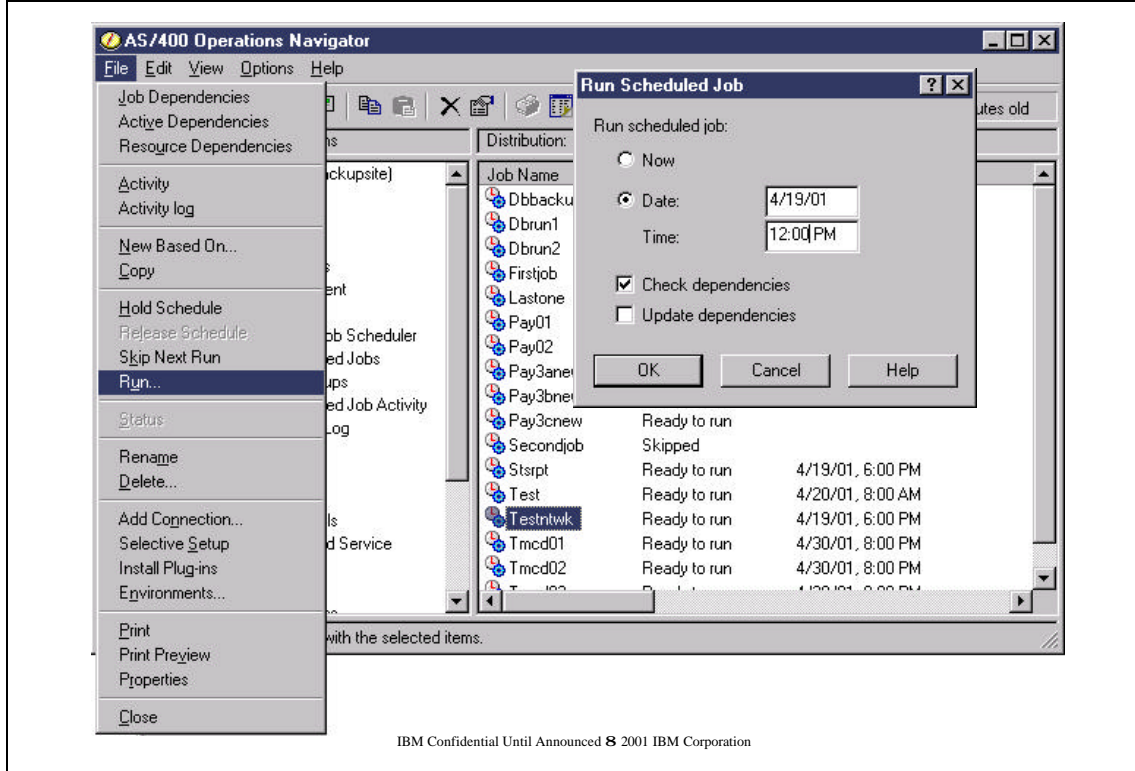

- Action if job cannot start when scheduled:** "Start and hold in job queue"
- Reply to inquiry message:** "Use default reply"
- Message logging:**
  - Level:** "Use user's job description"
  - Severity:** "Use job control value"
  - Text:** "Use message text and message help"

At the bottom right are "OK", "Cancel", and "Help" buttons.

IBM Confidential Until Announced 8 2001 IBM Corporation

## Notification...

*What Job information do you need to tell to whom and how?*

IBM @server iSeries

- Messages
  - Specify a message queue for sending a completion message
  - For either normal or abnormal completion
  - For abnormal completion, the help information for the message provides the possible causes.
- Paging
  - Pass parameters to a previously installed paging product
    - Pager name
    - Message text
  - Set options for normal and abnormal completion
- Reports
  - Specify a Report Distribution ID for output
    - Defines and groups user output
    - Maps application output to user

IBM @server. For the next generation of e-business.

## CL Summary of Basics

*What, When, and So What as a useful little Scheduled Job*

- Add a new Scheduled Job call TESTNTWK
  - Associated with SYSADMIN applications
  - Ping commands to two systems
    - ▶ Every 30 minutes
    - ▶ Weekdays
    - ▶ From 6:00 p.m. to 6:00 a.m.
  - Pages NETADMIN if job fails

```

ADDJOBJS JOB(TESTNTWK)
  CMD(ping mainsite msgmode(*QUIET *ESCAPE))
  ADLCMD('ping distribution msgmode(*QUIET *ESCAPE)')
  APP(SYSADMIN)
  SCDCDE(*MINUTES)
  ITVMIN(0030)
  DAY(*MON *TUE *WED *THU *FRI)
  RANGE((1800) (0600))
  PGRRCNBN(NETADMIN 'Auto-ping job failed')
    
```

## Job Scheduler Properties and Controls

*How do I define my workdays, pager software, ...*

IBM @server iSeries

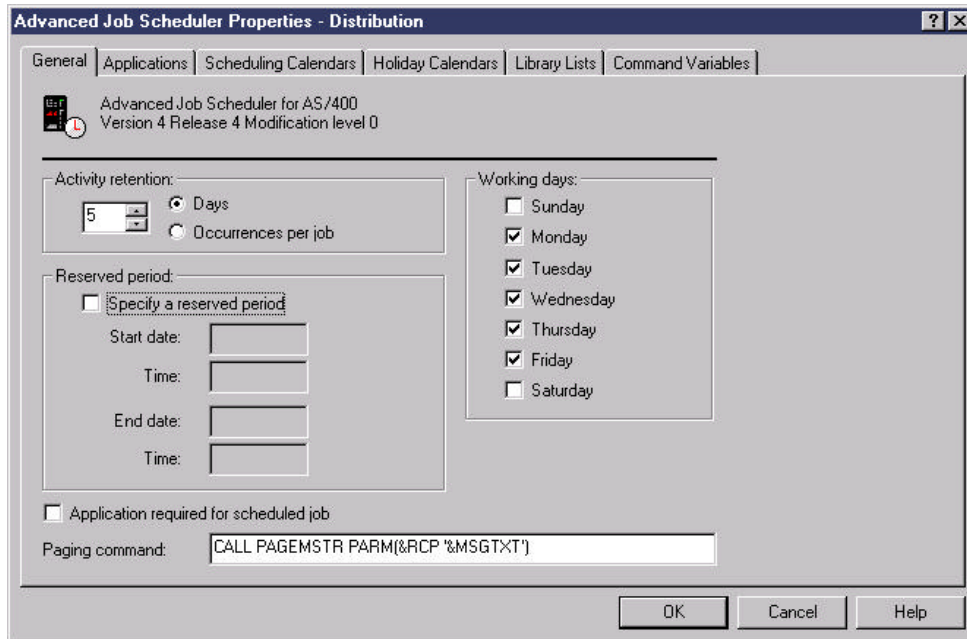

- From the Operations Navigator Interface
  - Click the "Advanced Job Scheduler" entry in the navigation pane with your alternate mouse button
  - Click on "Properties" on the pop up menu
  - Select the appropriate properties tab
- From the 5250 Interface
  - Type in the GO JS command
  - Select option 4 to work with
    - ▶ Job defaults
    - ▶ Calendars
    - ▶ Library lists
    - ▶ Applications
    - ▶ Parameters
  - Select option 5 to work with
    - ▶ Pager setup
    - ▶ System controls
      - Working days
      - Activity retention
      - Reserve period

## General properties

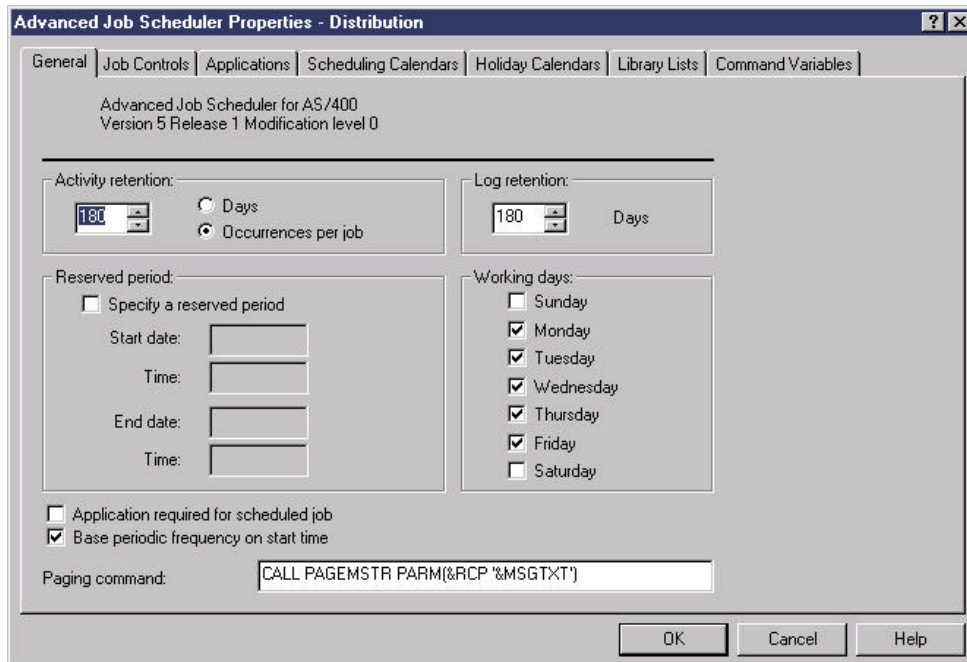

*Retention, reserved period, working days, & pager software*

IBM Confidential Until Announced 8 2001 IBM Corporation

## General properties - V5R1

*...added Base Periodic checkbox and Job Controls Tab*

IBM Confidential Until Announced 8 2001 IBM Corporation

## Calendars

*How can I handle holidays, financial periods, odd schedules ...*

- Calendar
  - User-defined set of dates of one year or all years
  - Can be used alone to specify run dates
  - Can be added to most schedules to specify additional run dates
- Holiday Calendar
  - Defines action for dates when you do not want jobs to run
    - ▶ Skip this run
    - ▶ Run on previous working day
    - ▶ Run on next working day
    - ▶ Run on a specific date
  - Additional dates and actions can be added using a "Reference Calendar"
- Fiscal Calendar
  - User-defined starting and ending dates for fiscal period entries
    - ▶ Also bimonthly, quarterly, semiannual, ...
  - Often used in accounting applications
  - When a fiscal calendar is used, all schedule codes base their scheduling on the starting and ending dates within the calendar
  - Only available via 5250 interface

## Parameters / Local Data Area

*How do I pass information to Scheduled Jobs?*

IBM @server iSeries

- Parameters
  - Variables such as the beginning of each month, a division number, ...
  - Can be passed to Job Scheduler from system, e.g. when user schedules jobs from a menu
  - Used in commands that are associated with jobs
  - Preceded by an ampersand (&) or pound (#) when specified in a command
  - Defined in a table with default values
- Parameter Data
  - Any character is valid for entry into the Parameter data
  - Special values can be used in the Parameter data field
    - Date calculations - \*QMDY(M+1,D=1) would
      - Start with the current system date
      - Add 1 to the month and set the day as the first of the month
      - Return the date in month, day, year format
    - Operator input - \*RQS will take the value returned from any inquiry message
    - Parameter Program - will call a program to calculate and return the parameter value
- Local Data Area
  - 1024 bytes of information shared among all programs in a Job
  - Can be set before Job is started
  - Better performance than user managed data areas

# Getting Started

Installation  
Migration  
Information

IBM @server. For the next generation of e-business.

IBM Confidential Until Announced 8 2001 IBM Corporation

## Installation

*How do I get started?*

IBM @server iSeries

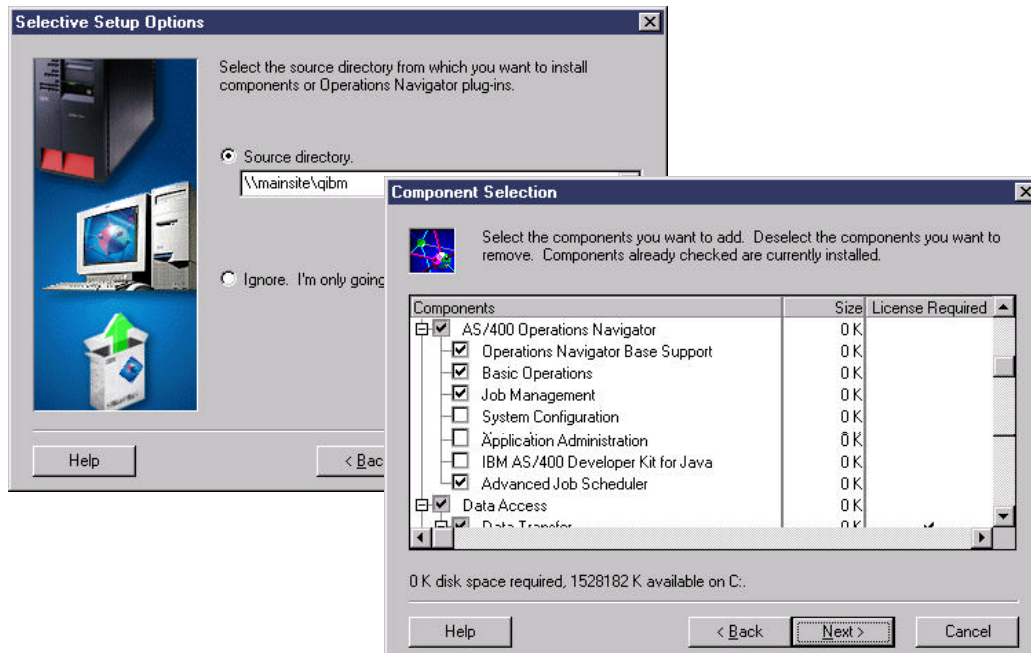

- The Advanced Job Scheduler product (57xx-JS1) is shipped on the iSeries stamped media set
- System code is Installed using GO LICPGM Option 11
- After installation of host code, GUI Plug-in can be installed using Client Access Selective Setup
  - Specify the source directory as **\\SYSTEM\qibm**, where **SYSTEM** is the NetServer name of the system where 57xx-JS1 product is install
  - Check the **Advanced Job Scheduler** box under the **Operations Navigator** component

IBM @server. For the next generation of e-business.
