

Web Enablement Workshop for iSeries

(Course Number ITC12)

Web applications are spreading like wildfire on the iSeries!

This exclusive 'hands-on' workshop is intended to introduce a set of application development tools to customers that are creating Java™-based applications for iSeries.

It is designed to assist application development architects or designers understand how to modernize their existing applications through the use of e-business technologies.

This workshop provides the perfect opportunity to develop skills and gain experience in using the internet technologies that are revolutionizing business!

Course Description

The 4 day workshop begins with an overview of the e-business application structures that are enabled for the iSeries platform. Next we provide a combination of information exchange, demos, and hands-on experience for a core set of e-business middleware and tools. Lastly, recommendations for follow-on e-business skills development courses are supplied.

Availability: February 2002

Enrollment Procedure:

Because seating is limited, the following guidelines must be followed:

- Enrollment is **by invitation** only (IBM Account Team or Business Partner)
- Maximum of two attendees per customer account
- Workshop enrollment confirmations will only be given to customer accounts with an ISA (Industry Solution Area) opportunity coded as "eBusiness" or "ECMM" or with a **Solution Code** of "EWEB" or "ECOM"

1. Enroll via IBM-TEACH (1-800-IBM-TEACH)
2. Use course code **ITC12**
3. Enroll up to two customers. IBMers name and telephone number must be in the *contact field*
4. After registering, e-mail **OMSYS#** along with student's e-mail address to itcebiz/Rochester (itcebiz@us.ibm.com)
5. Qualified customers will be removed from standby status and notified of acceptance

What you are taught:

- Understand the enhancements being delivered in the next version of the WebSphere® Application Server
- Gain an appreciation of what design, implementation, and deployment capabilities are available in VA/Java
- Experience the creation and serving of web pages and CGI BIN program output on the IBM HTTP Server powered by Apache
- Use a WebSphere Studio interaction wizard to create a web interface to an existing RPG program
- Convert an existing 5250 display file to a web interface using the WebSphere WebFacing Tool without altering the underlying application
- Leverage Host Publisher to provide a web interface to an existing 5250 application
- Explore the various security aspects and alternatives of Web enablement
- Learn how to take advantage of the strengths of both Domino™ and WebSphere through our Domino/WebSphere Integration module
- Understand how Connect for iSeries could fit into your B2B and B2C

Audience:

Qualified iSeries Customers planning to start a web-enablement project. iSeries application development architects or designers who want to understand the tools, middleware, and operating system enablement that is available on the iSeries platform.

Pre-requisite skills:

- General OS/400® skills including system operations, work management, IFS, DB2 UDB, NetServer, and application development
- Familiarization with e-business concepts
