xSeries posts new TPC-W result

September 16, 2002 ... IBM® today announced a new performance result for the TPC-W e-commerce benchmark. The IBM φserver xSeries™ 440 captured first place in the Top Ten TPC-W Results by Performance for a 10,000-item database.

The x440 server, together with xSeries 330 systems (functioning as application, image and Web cache servers), outperformed the nearest competitor by a wide margin with 21,139.7 WIPS@10,000; $32.62/WIPS@10,000; and availability of December 31, 2002 for the priced configuration.

The x440 database server was configured with eight Intel® Xeon™ Processor MP 1.6GHz/1MB L3 cache processors and 8GB of memory, and ran Microsoft® SQL Server 2000 and Microsoft .NET Enterprise Server.
