## VSE Trends and Directions

VSE Technical Conference

November 10 - 12, 2003 | Hilton, Las Vegas, NV

© 2003 IBM Corporation

# Trademarks

The following are trademarks of the International Business Machines Corporation in the United States and/or other countries.

CICS*	Language Environment*	S/370
DB2*	MQSeries*	S/390*
DB2 Connect	Multiprise*	S/390 Parallel Enterprise Server
DB2 Universal Database	MVS	Virtual Image Facility
DFSMS/MVS*	NetRexx	VisualAge*
DFSMS/VM*	OpenEdition*	VisualGen*
e-business logo*	OpenExtensions	VM/ESA*
Enterprise Storage Server	OS/390*	VTAM*
ESCON	Parallel Sysplex*	VSE/ESA
FICON	PR/SM	WebSphere
GDDM	QMF	z/Architecture
HiperSockets	RACF*	z/OS
IBM*	RAMAC*	zSeries
 IBM	RISC	z/VM
Registered trademarks of the IBM Corporation	S/370	

The following are trademarks or registered trademarks of other companies.

Lotus, Notes, and Domino are trademarks or registered trademarks of Lotus Development Corporation.

Tivoli is a trademark of Tivoli Systems Inc.

LINUX is a registered trademark of Linus Torvalds.

Java and all Java-related trademarks and logos are trademarks of Sun Microsystems, Inc., in the United States and other countries

UNIX is a registered trademark of The Open Group in the United States and other countries.

Microsoft, Windows and Windows NT are registered trademarks of Microsoft Corporation.

Penguin (Tux) compliments of Larry Ewing

## Notes:

Performance is in Internal Throughput Rate (ITR) ratio based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput improvements equivalent to the performance ratios stated here.

IBM hardware products are manufactured from new parts, or new and serviceable used parts. Regardless, our warranty terms apply.

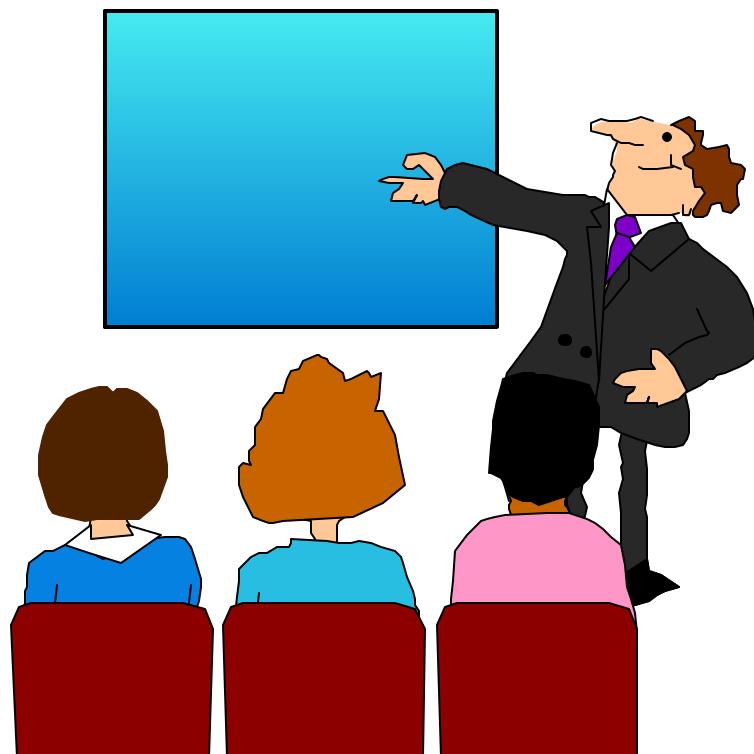

All customer examples cited or described in this presentation are presented as illustrations of the manner in which some customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics will vary depending on individual customer configurations and conditions.

This publication was produced in the United States. IBM may not offer the products, services or features discussed in this document in other countries, and the information may be subject to change without notice. Consult your local IBM business contact for information on the product or services available in your area.

IBM considers a product "Year 2000 ready" if the product, when used in accordance with its associated documentation, is capable of correctly processing, providing and/or receiving date data within and between the 20th and 21st centuries, provided that all products (for example, hardware, software and firmware) used with the product properly exchange accurate date data with it. Any statements concerning the Year 2000 readiness of any IBM products contained in this presentation are Year 2000 Readiness Disclosures, subject to the Year 2000 Information and Readiness Disclosure Act of 1998.

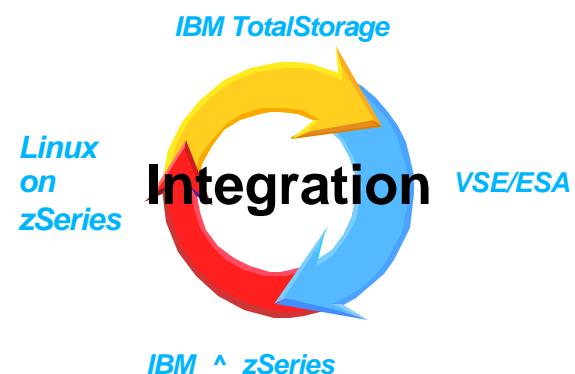

# Agenda

- **Summary**
- VSE Update
- e-business Roadmap
- Customer Scenarios
- VSE and Linux
- VSE Directions
- Conclusion

# Making the Most of VSE

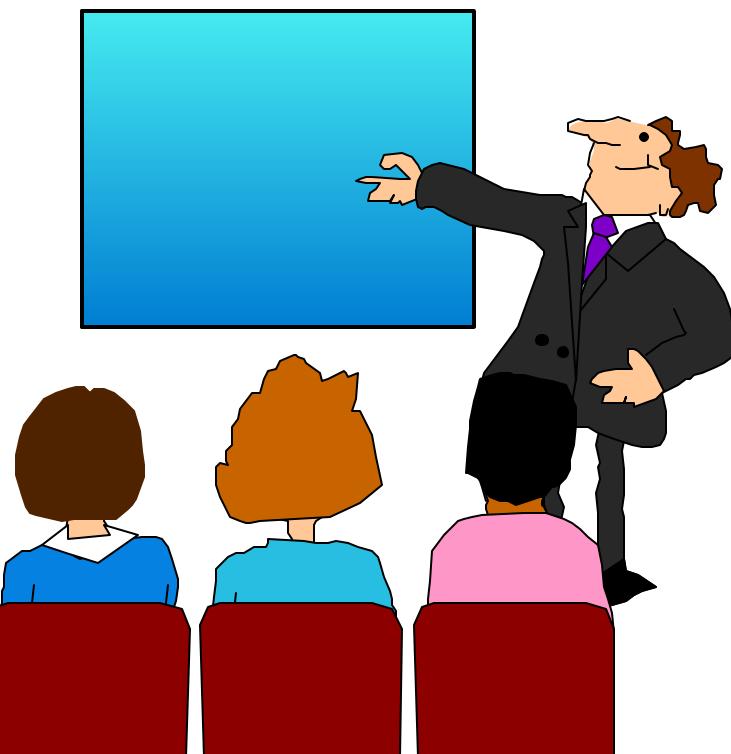

- **Protect** your extensive investments in VSE programs, data, equipment, and IT skills, plus business processes, end user training, etc.
  - ▶ extend core CICS TS VSE/ESA applications to the web
  - ▶ exploit current IBM servers, storage, and software
- **Integrate** VSE with the rest of your IT
  - ▶ interoperability based on open standards
    - IBM Middleware
    - VSE e-business connectors
  - ▶ utilize Linux on zSeries where appropriate
    - consolidate existing distributed servers
    - new infrastructure and/or line-of-business applications

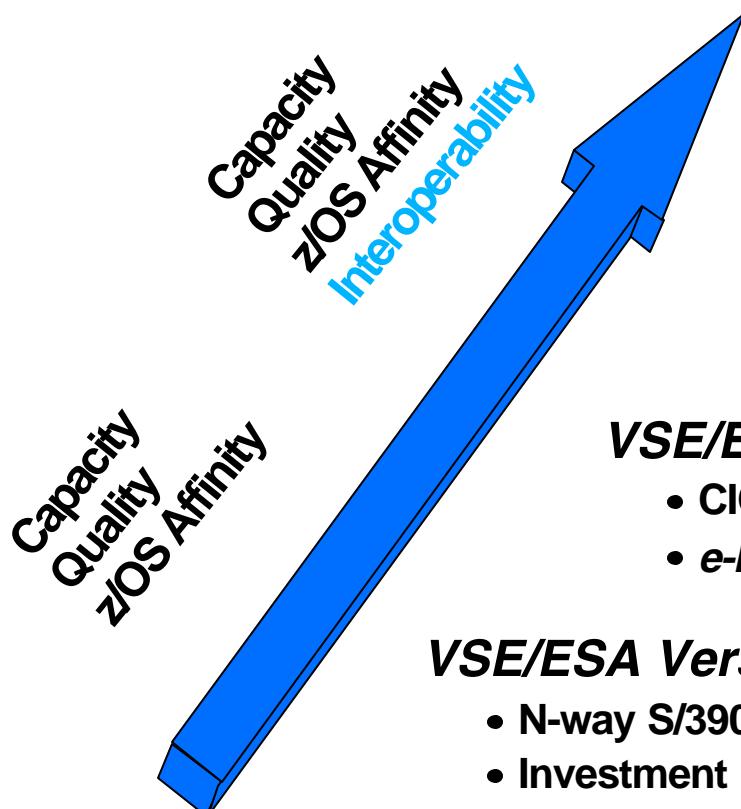

*leverage VSE - without being limited by VSE*

# Agenda

- Summary
- VSE Update
- e-business Roadmap
- Customer Scenarios
- VSE and Linux
- VSE Directions
- Conclusion

# Responding to Customer Needs

**VSE/ESA V2.7** 3/14/2003

- Enhanced Interoperability
- ALS2 servers only

**VSE/ESA V2.5** 9/2000

- Interoperability

Capacity  
Quality  
z/OS Affinity

**VSE/ESA V2.4** 1999

- CICS Transaction Server for VSE/ESA
- *e-business*

**VSE/ESA Version 2** 1994

- N-way S/390 Servers
- Investment Protection - Year 2000

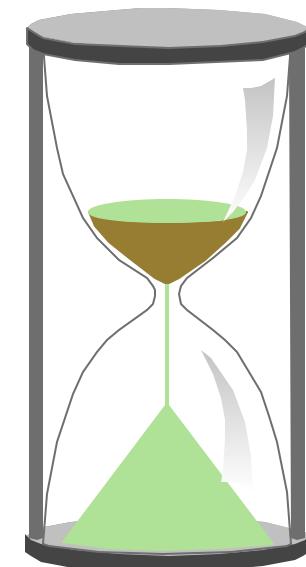

**VSE/ESA Version 1** 1990

- Constraint Relief
- ESA exploitation

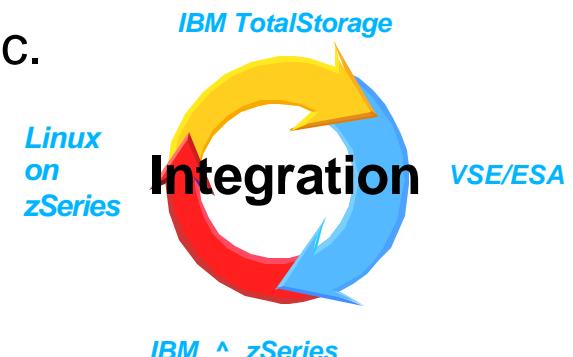

## What 's New?

- CA-Top Secret for VSE/ESA is no longer available from IBM
  - ▶ ann 6/4/2002, Withdrawal from Marketing 9/2002
- VSE/ESA V2.6
  - ▶ GA 12/14/2001
  - ▶ V2.6.3 available 9/12/2003
- VSE/ESA V2.7
  - ▶ GA 3/14/2003
  - ▶ **V2.7.1 available 9/12/2003**
- End of support for VSE/ESA V2.5
  - ▶ ann 8/6/2002, **effective 12/31/2003**
- DB2 Server for VSE and VM V7.3
  - ▶ ann 2/18/2003, GA 3/28/2003
  - ▶ included in VSE/ESA V2.7.1 and V2.6.3

# VSE/ESA Version 2 Release 7 - GA 3/14/2003

- Web services
  - ▶ SOAP and XML services
  - ▶ new DL/I connector
  - ▶ VSEScript interface to VSE e-business connectors
- CICS TS VSE/ESA CWS enhancements
  - ▶ client authentication
  - ▶ misc enhancements ported from z/OS
- Usability and availability
  - ▶ librarian 31-bit, more POWER queue entries, etc.
- +10 User Group requirements
- LE for VSE/ESA V1.4.3 (new mod level)
- IBM TCP/IP for VSE/ESA V1.5 (new release)
- MQSeries V2.1.2 (new mod level)

## VSE/ESA Version 2 Release 7 - GA 3/14/2003

- Hardware

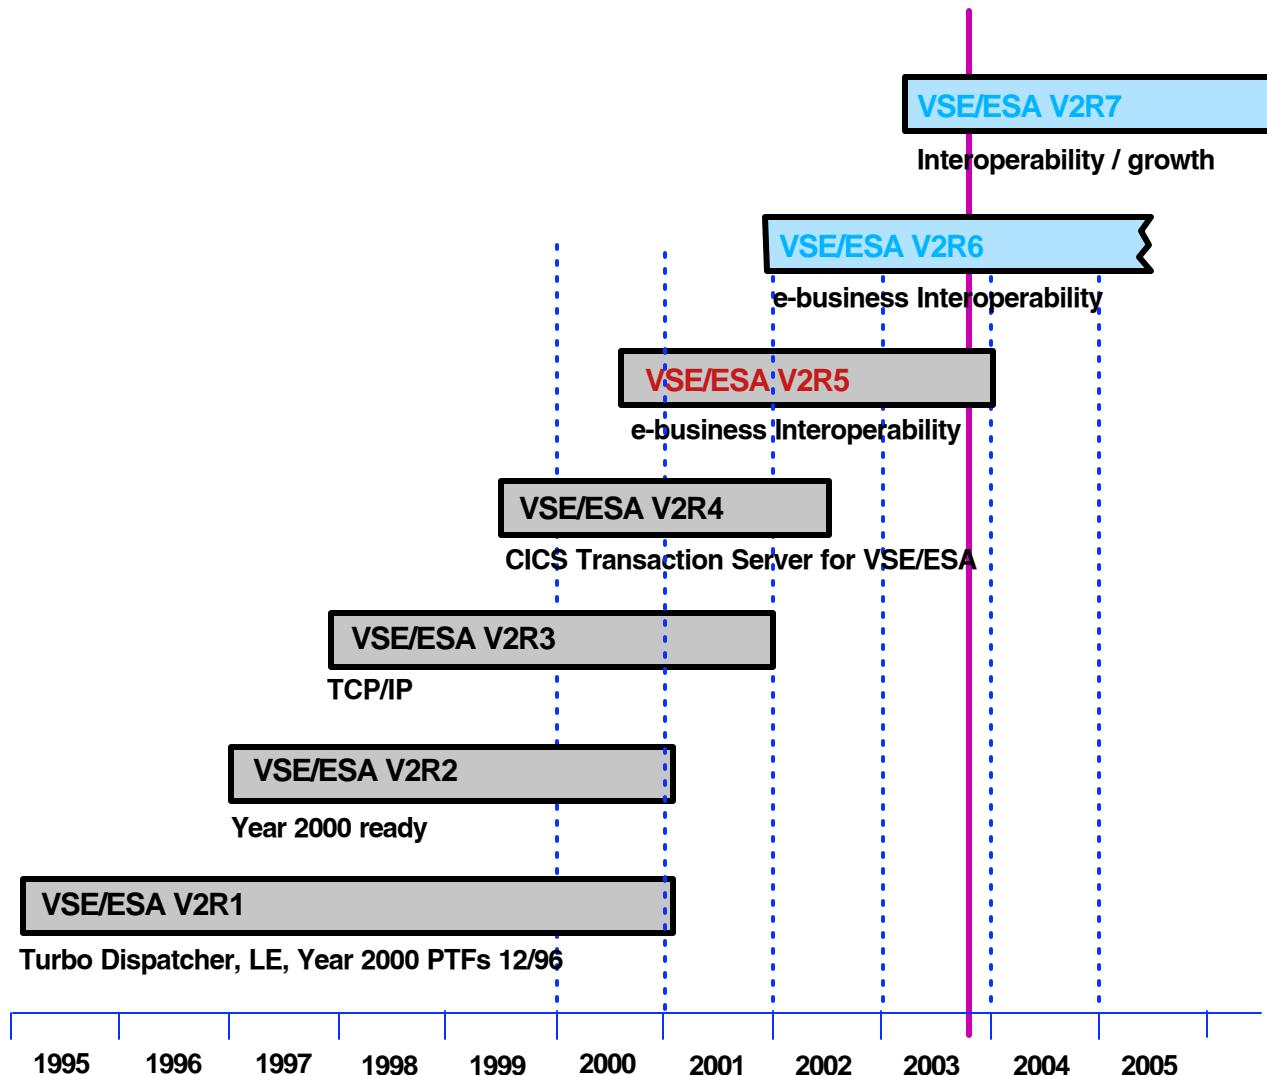

- ▶ HiperSockets (for *very fast* memory-to-memory communication)
  - VSE interoperability with Linux on zSeries
- ▶ PCICA hardware encryption assist enhances SSL
- ▶ Support for
  - zSeries 800, 900 and **990** (in 31-bit mode)
  - S/390 G5 and G6
  - S/390 Multiprise 3000
  - equivalent
- ▶ ESS Large Volume Support (1-32760 cylinders)
  - up to approximately 27GB/volume
  - VSAM limited to approximately 4.5GB/volume
- ▶ **IBM 3592 Tape**

## VSE/ESA V2.6.3 - 9/12/2003

- VSE/ESA V2.6 is the last VSE release to support
  - ▶ *ES/9000 - 9121, 9021*
  - ▶ *ES/9000 - 9221, IBM 9672-Rx1*
  - ▶ IBM 9672 G2, G3, G4
  - ▶ IBM Multiprise 2000
  - ▶ P390, R390, S/390 Integrated Server
- VSE/ESA V2.6 Marketing ended with GA of V2.7
  - ▶ How to order V2.6?
- *VSE/ESA V2.6.3 orderable as a feature of VSE/ESA V2.7.1*
  - ▶ *VSE Central Functions 'Service Option'*
    - *feature codes 5802 = 3480 format and 6119 = 3590 format*
  - ▶ *V2.6.3 base tapes shipped in addition to V2.7.1 tapes*

# VSE/ESA Version 2 Summary

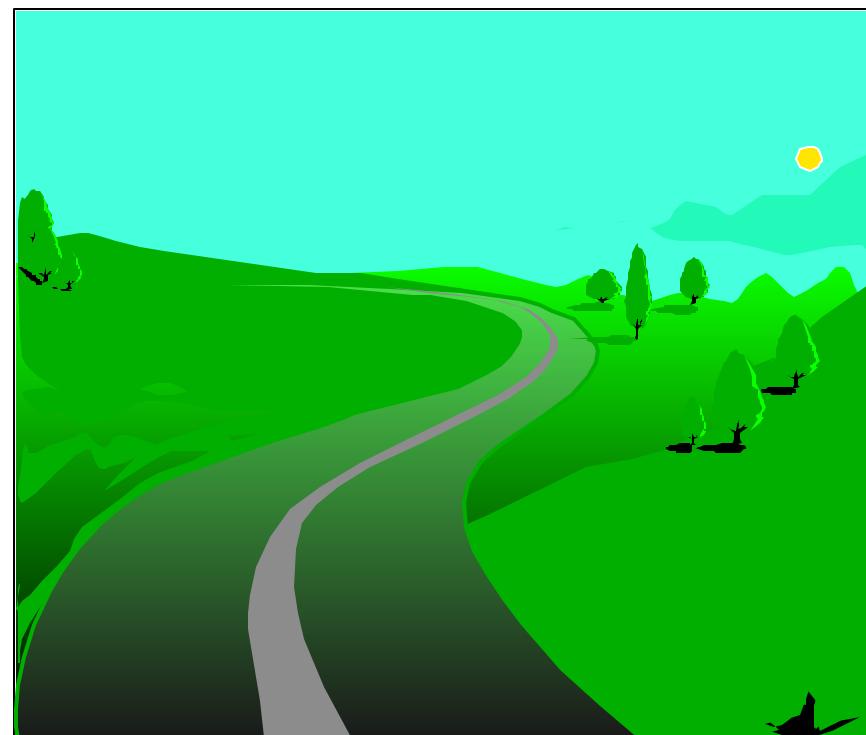

# Key Software and Hardware - End of Service

- VSE
  - ▶ VSE/ESA Version 2 Release 3 - **12/2001**
  - ▶ VSE/ESA Version 2 Release 4 - **06/2002**
  - ▶ VSE/ESA Version 2 Release 5 - **12/2003**
- VM
  - ▶ VM/ESA Version 2 Release 4 - **06/2003**
  - ▶ z/VM Version 4 Release 1 - **06/2003**
  - ▶ z/VM Version 4 Release 2 - **12/2003**
  - ▶ z/VM Version 4 Release 3 - **05/2005**
  - ▶ z/VM Version 4 Release 4 - **08/2006**
- S/390 Servers
  - ▶ ES/9021 and 9121 - **06/2003**
  - ▶ ES/9221 and IBM 9672-Rx1 ('CMOS G1') - **12/2003**

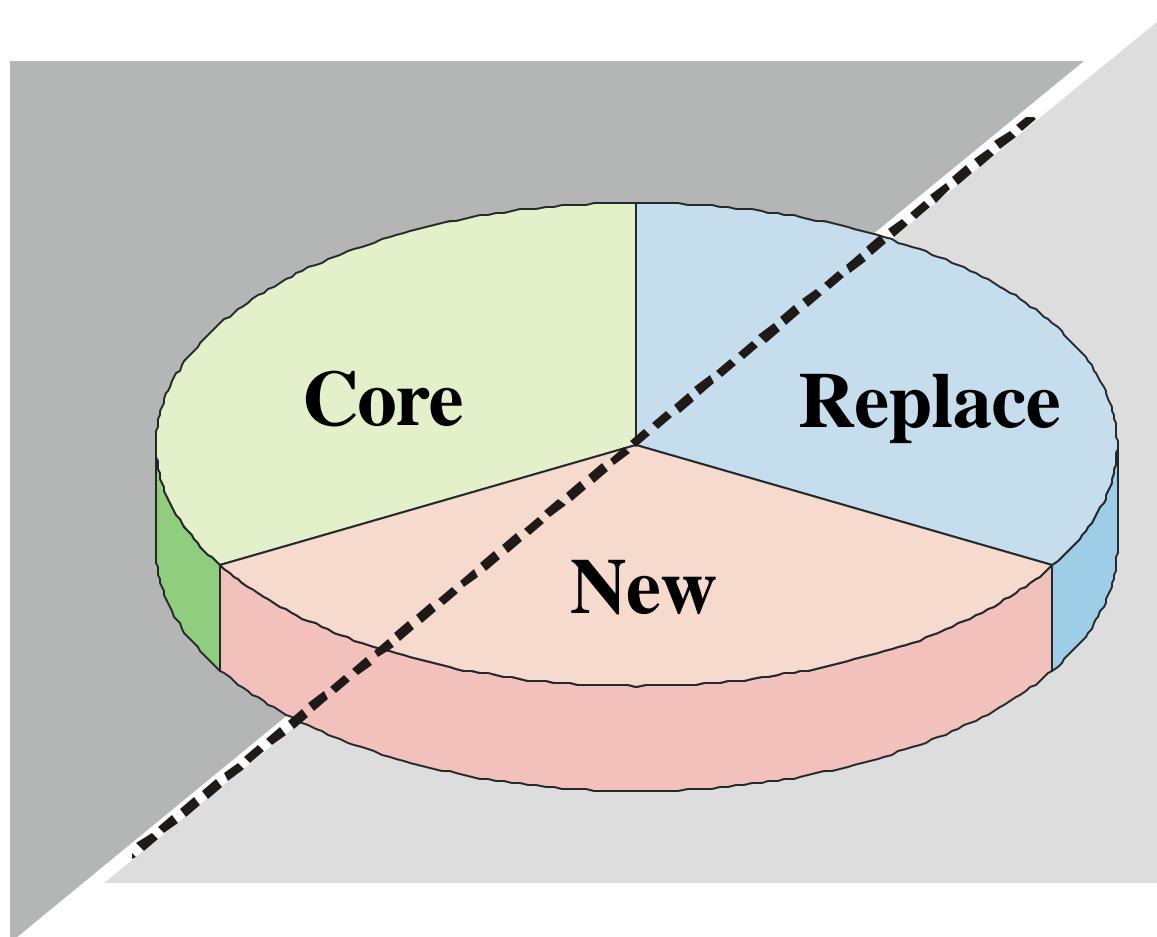

# Agenda

- Summary
- VSE and VM Update
- e-business Roadmap
  - ▶ applications
  - ▶ hybrid model
- VSE and Linux
- Customer Scenarios
- VSE Directions
- Conclusion

# Application Portfolio

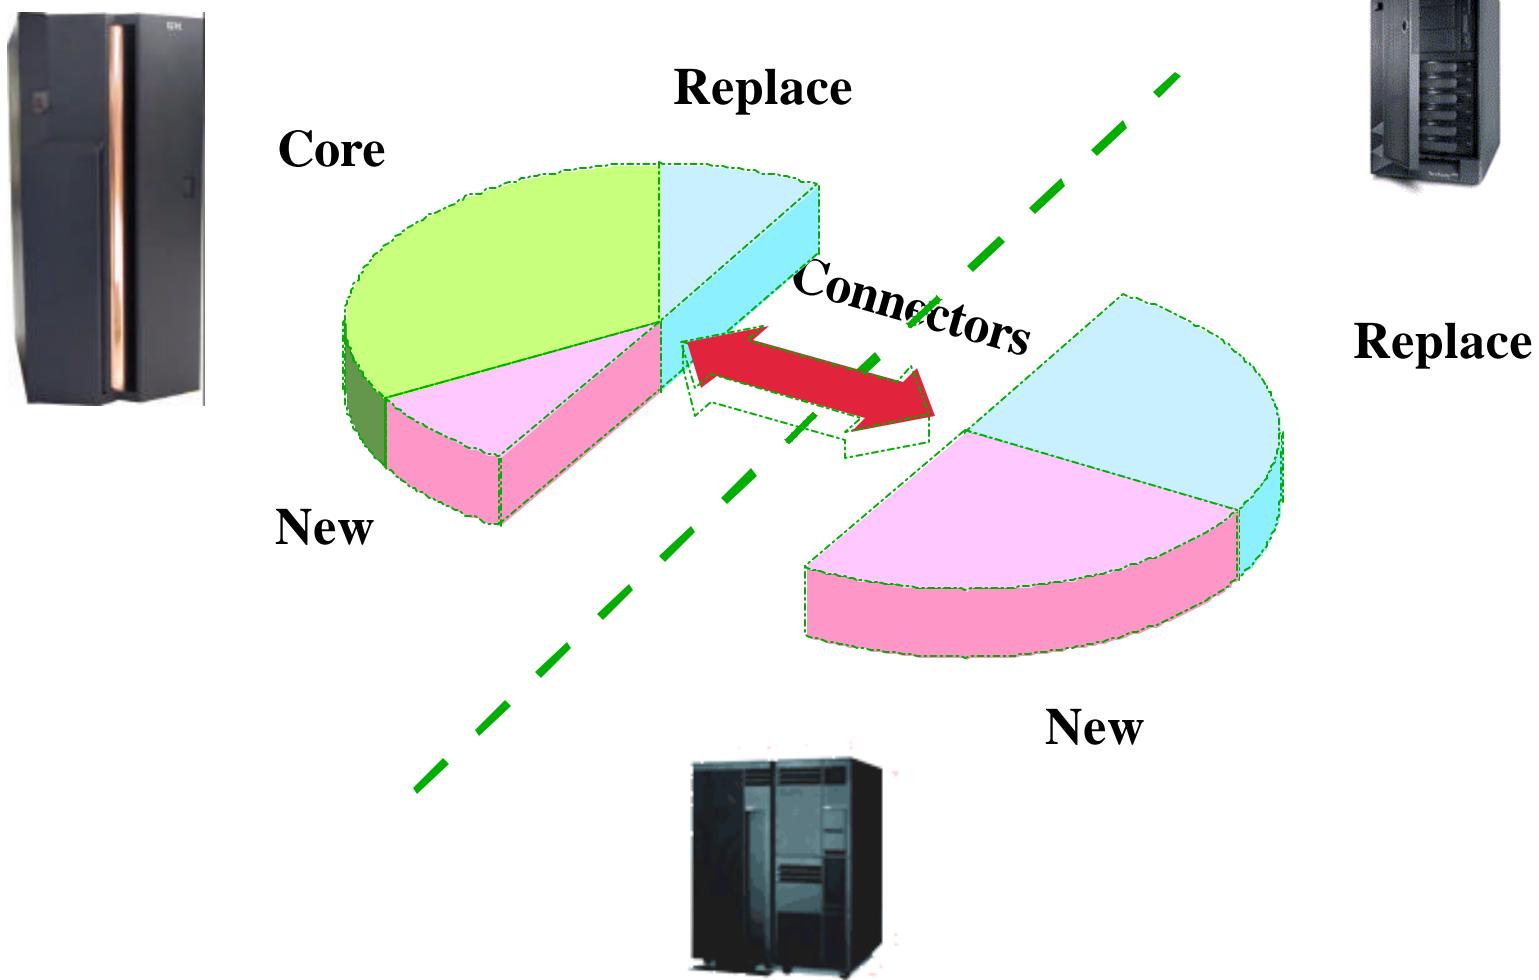

Note: Pie arbitrarily divided into thirds. Percent of applications in each category is unique to each customer

## 'Typical' Customer Environment

- It's a hybrid world
  - ▶ average 3.5 unique platforms incl Windows and Unix dialects
  - ▶ no single hardware/software platform is always best
- Core VSE applications
  - ▶ mostly alive, doing well, and growing
- Replacement applications
  - ▶ platform driven by application selection
  - ▶ often customers have growing core applications and replacement
- New infrastructure and e-business applications
  - ▶ other platforms (not VSE) are often a better choice
  - ▶ usage of Linux rapidly growing

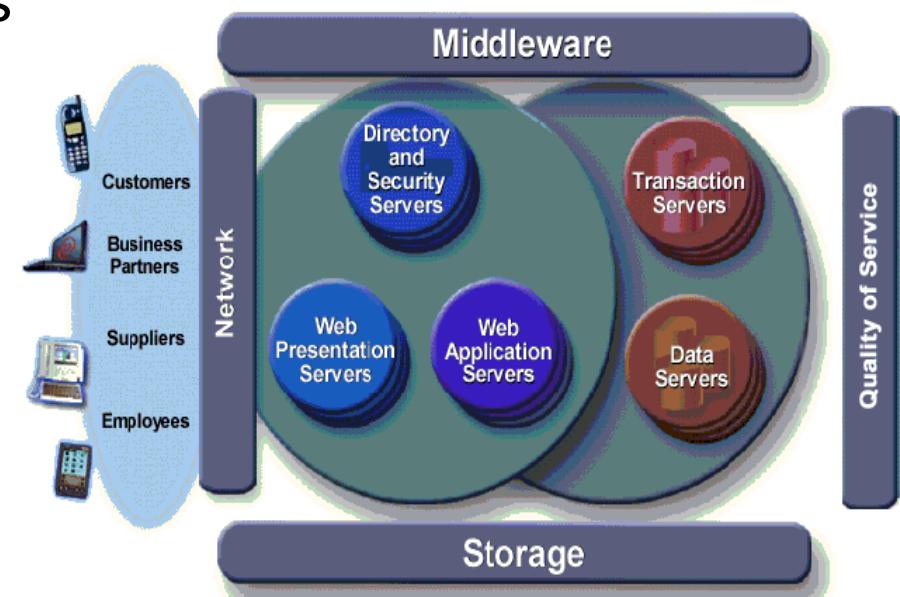

**Customers need an e-business model that's flexible and extendable, yet protects core investments**

# Integrating Hybrid Environments

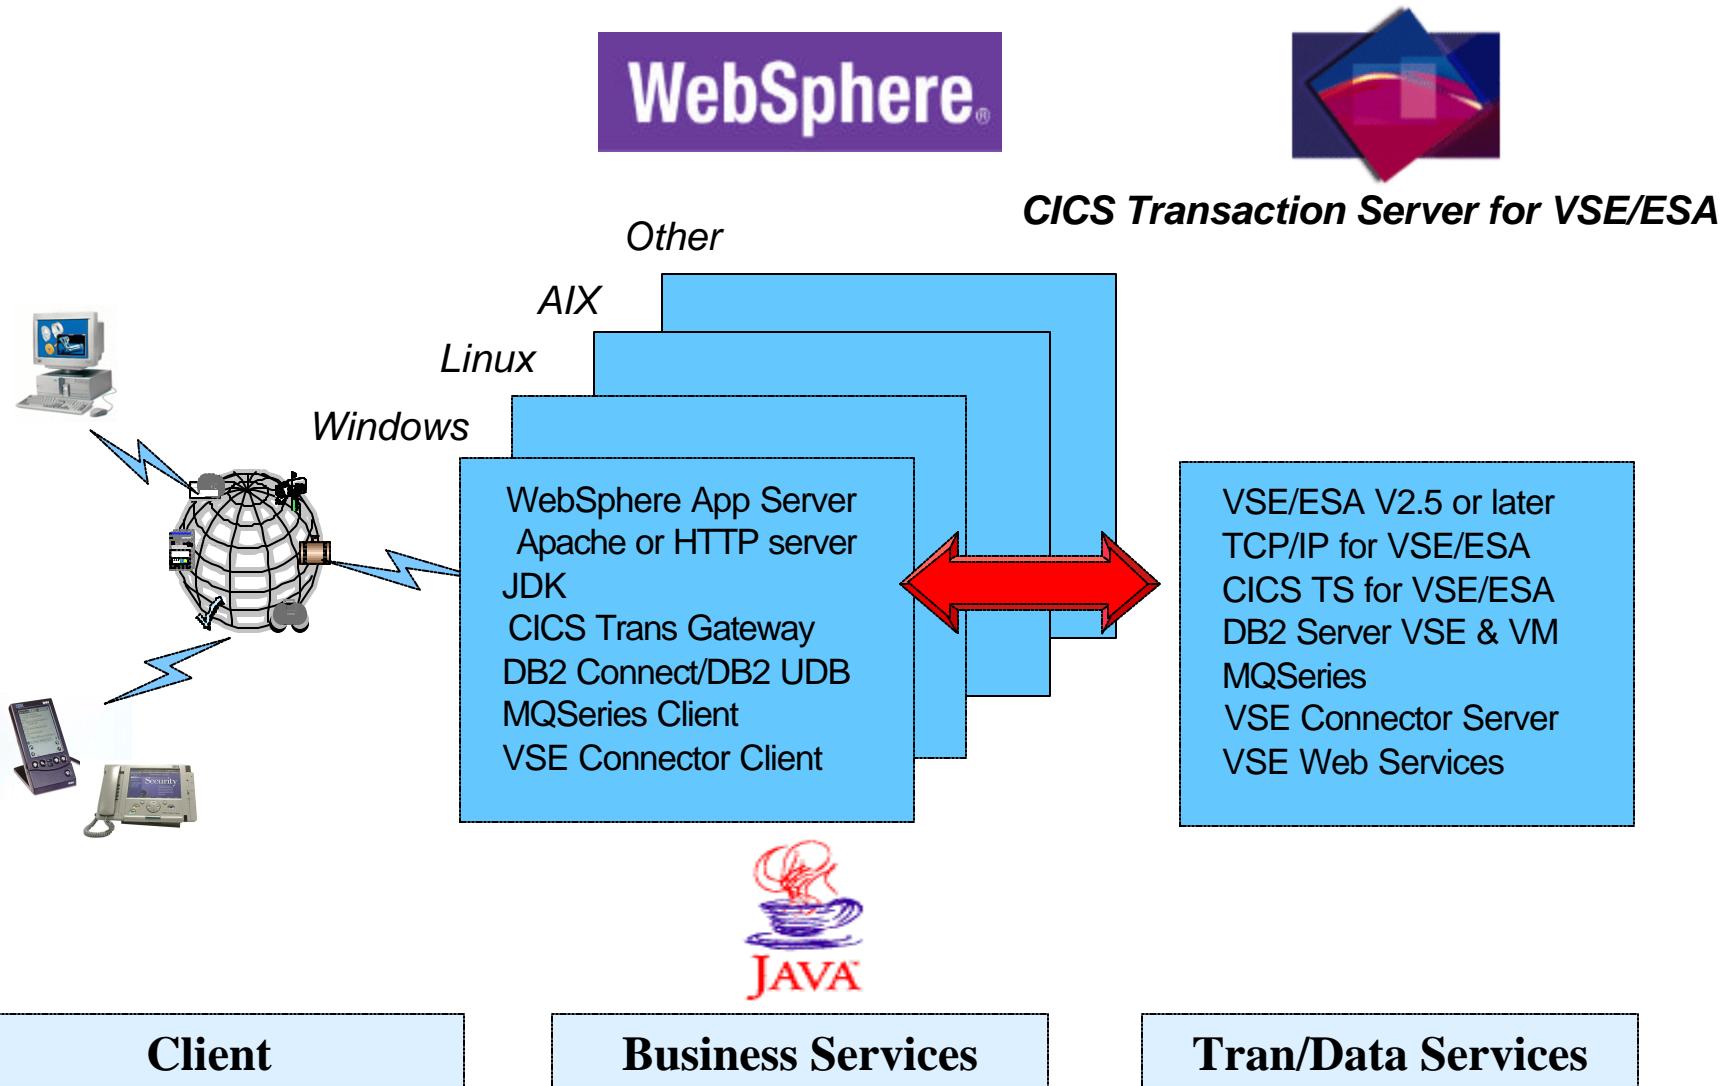

# How?

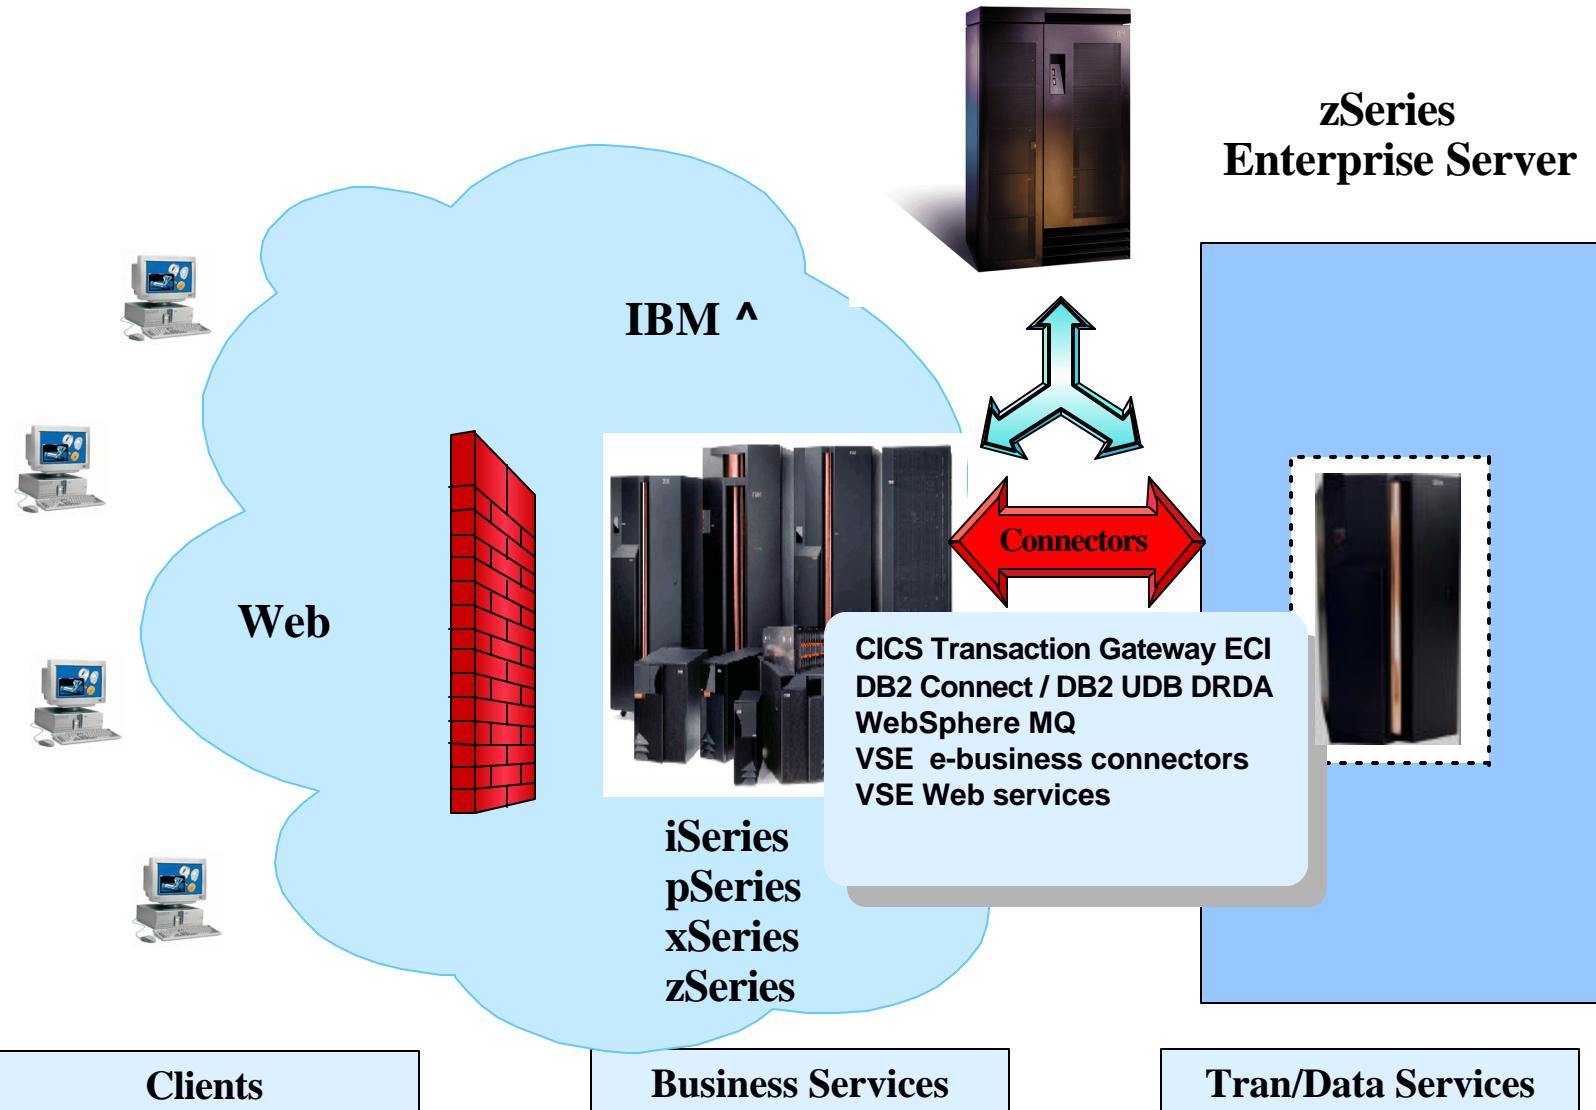

- A hybrid, 3-tier framework
  - ▶ a comprehensive, robust e-business model
  - ▶ based on open, industry standards
  - ▶ supports key platforms
  - ▶ leadership products
  - ▶ helps protect core investments

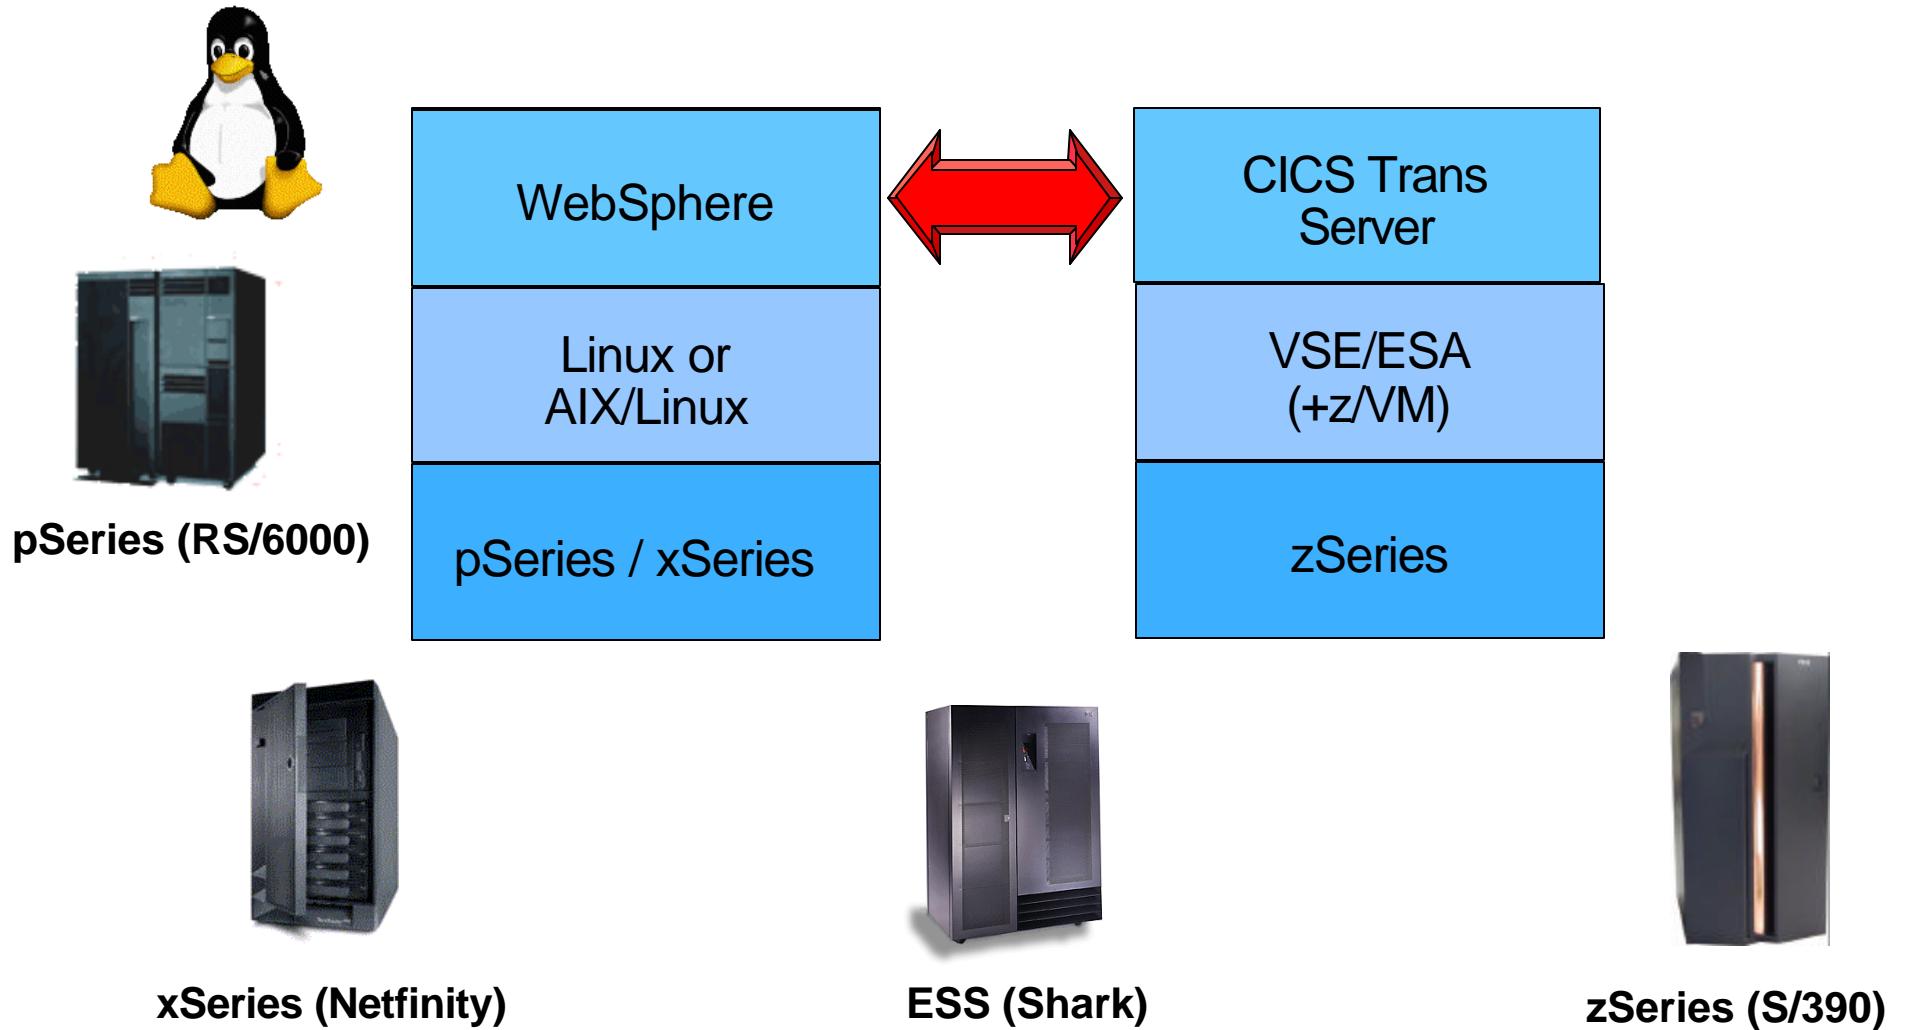

# Middleware for Hybrid (3 tier) Model

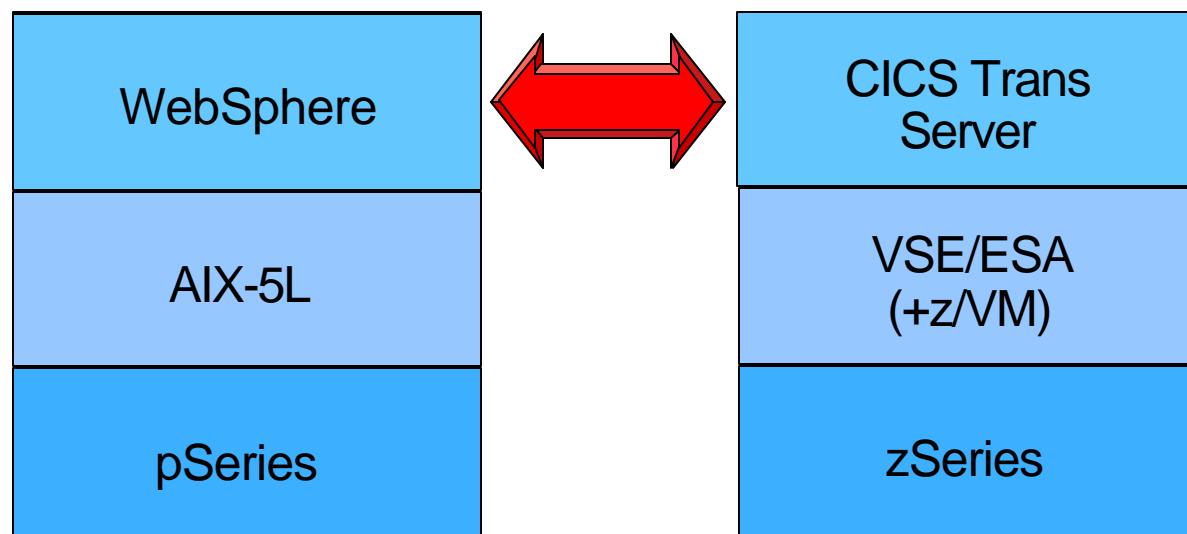

# Hybrid Model

# Alternate Environment 1: Linux (x and pSeries)

## Alternate Environment 2: AIX-5L

**pSeries**

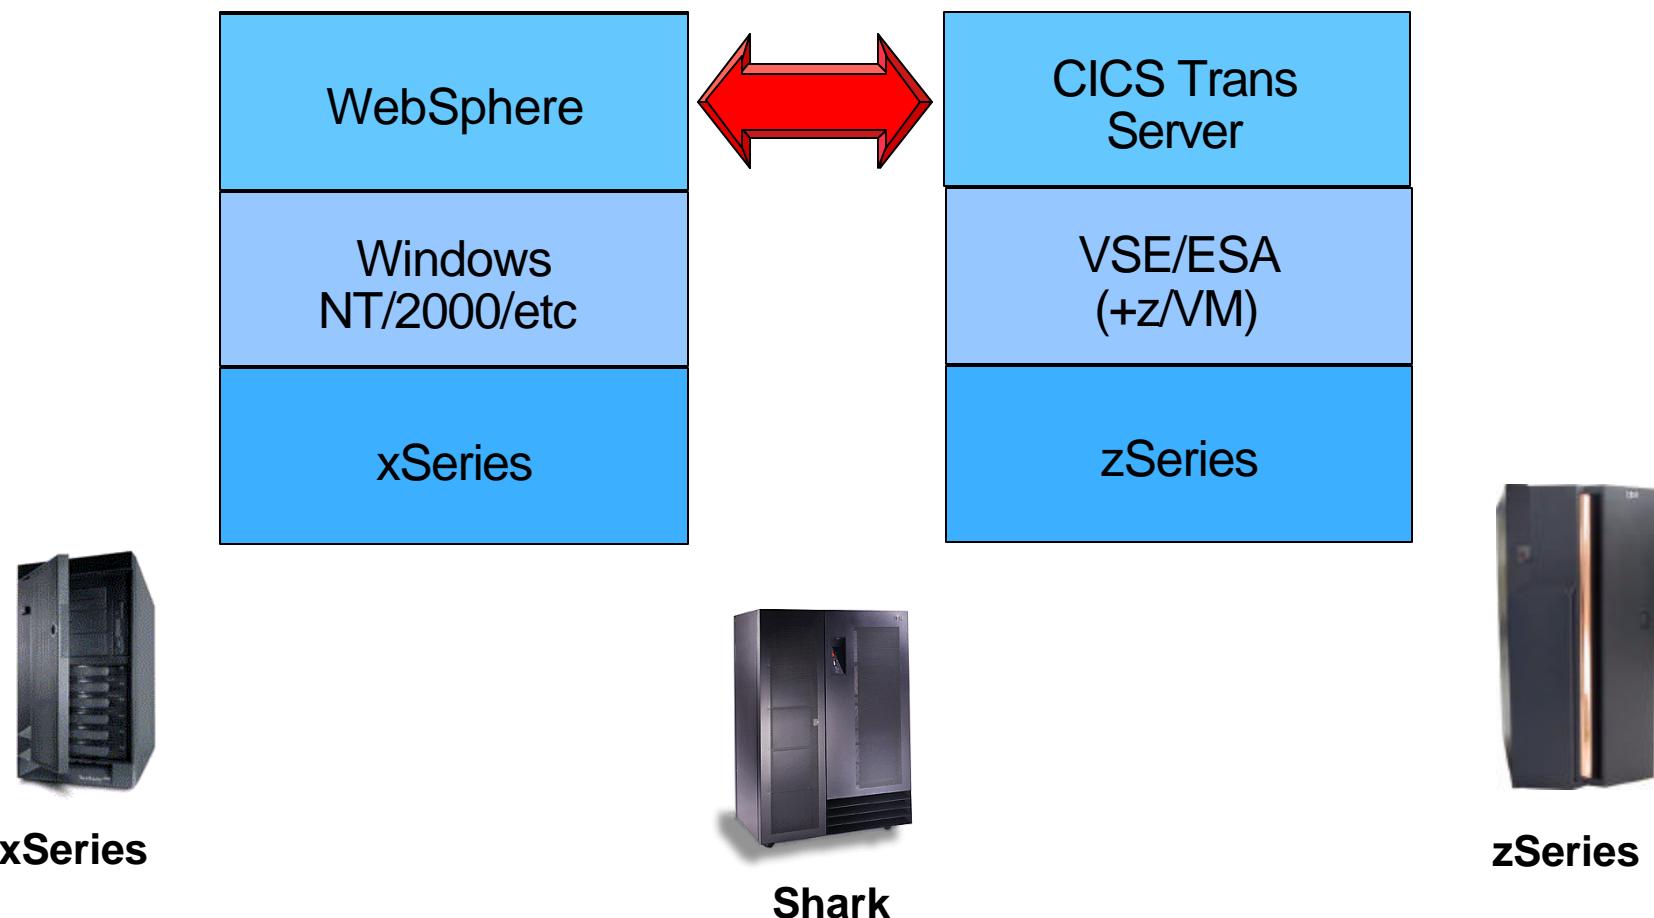

**Shark**

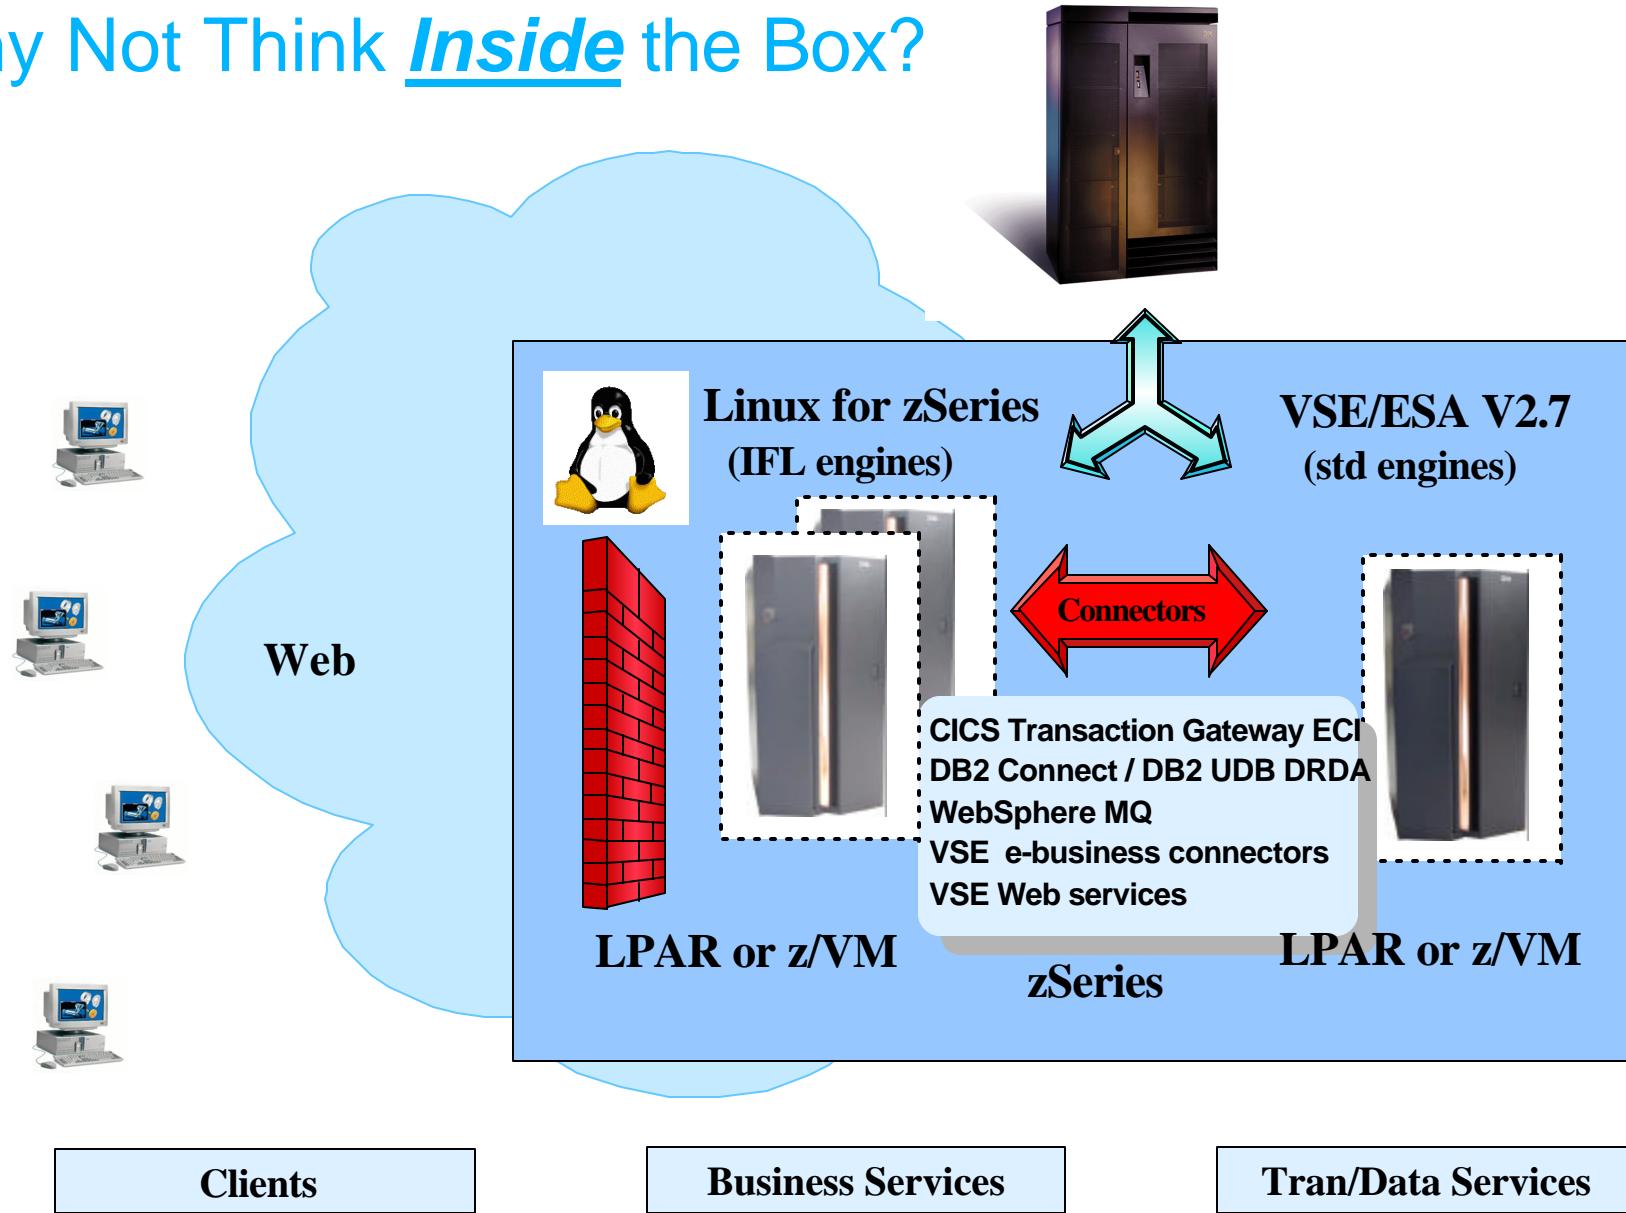

**zSeries**

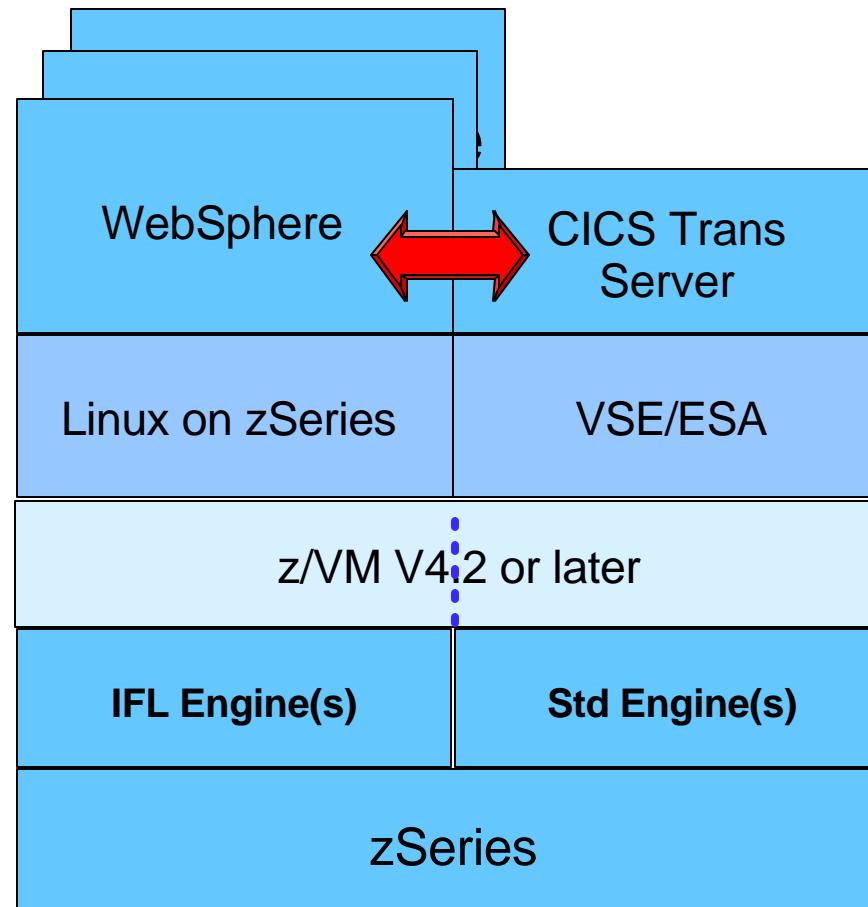

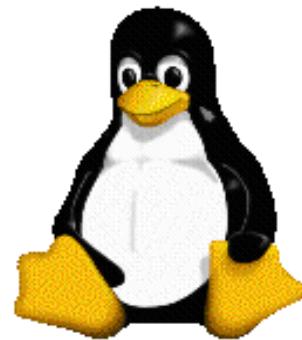

## Alternate Environment 3: Windows

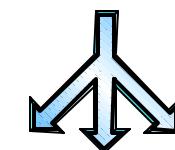

# Why Not Think Inside the Box?

## Alternate Environment 4: Linux on zSeries

**ESS (Shark)**

**zSeries**

# Agenda

- Summary
- VSE and VM Update
- e-business Roadmap
- [VSE and Linux](#)
- Customer Scenarios
- VSE Directions
- Conclusion

# IBM ^ Family supports Linux

## zSeries:

- zSeries 800 for Linux
- Many Linux servers on a single HW platform
- Unmatched scalability
- Large applications portfolio
- Simplified systems management
- Runs in an LPAR or under z/VM
- 31 & 64-bit
- Reduced total cost of ownership (TCO)

## xSeries

- xSeries 343 for Telco
- X-architecture innovation
- OS freedom of choice
- Affordable, scalable, reliable
- Appliances
- xSeries 335, 305 Xeon rack-optimized servers
- Clusters 1300, 1350:
  - ▶ Integration and testing of IBM & OEM
  - ▶ Speed to market
  - ▶ xSeries rack-optimized servers

## iSeries:

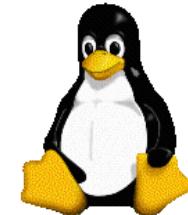

- iSeries Linux edition - 820
- Reliable and scalable
- Up to 31 Linux partitions
- Integration with OS/400
- Resource sharing and management
- I/O flexibility

## pSeries:

- Native Linux 32-bit & 64-bit
- Linux Virtual Servers on p670, p690
- Native Linux Server p630
- Linux affinity on AIX-5L
- I/O Bandwidth and RAS
- Multiplatform flexibility

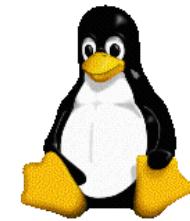

# Linux on zSeries TCO Advantages

- **Improve computing resource utilization**
  - ▶ resource sharing and workload balancing
- **Improve management of resources**
  - ▶ flexible & responsive (quickly add or reconfigure 'virtual' servers)
  - ▶ improve systems reliability and availability
  - ▶ improve and simplify disaster recovery
  - ▶ simplify application architecture and/or infrastructure (i.e. combine application tiers from multiple platforms onto one platform, reduce intersystem networking, etc.)
  - ▶ simplify system administration
- **Reduce operational costs** related to personnel, environment (power, heating and cooling), floor space, etc.
- **Reduce distributed software licensing costs**

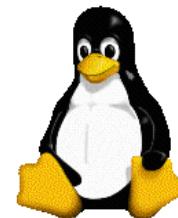

# zSeries Advantages

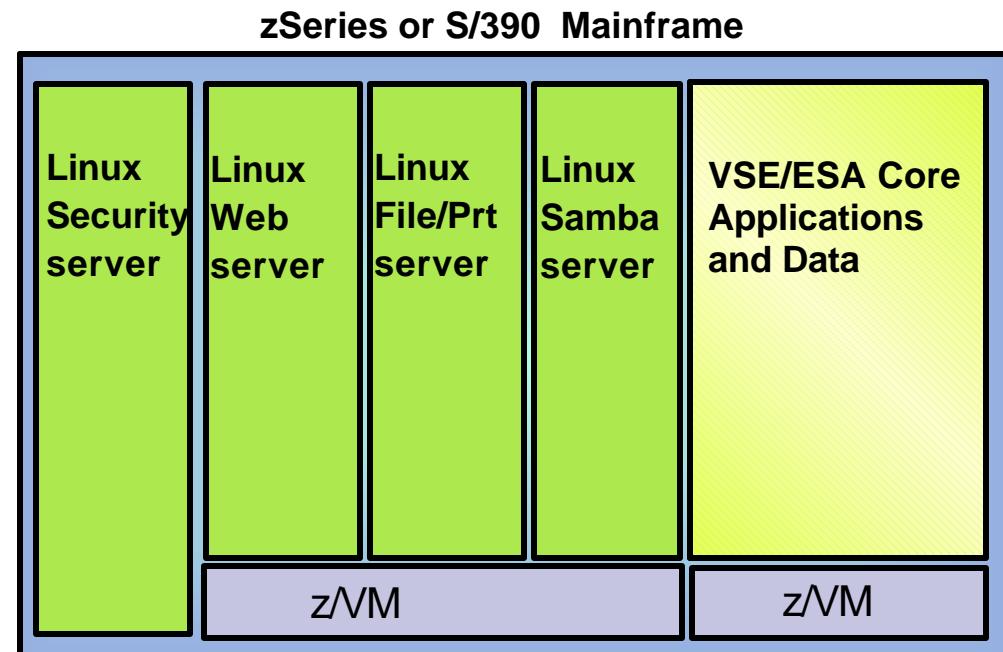

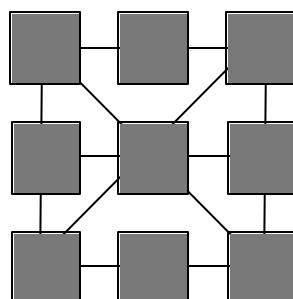

- **Integrated Facility for Linux (IFL)**
  - ▶ full engine capacity
  - ▶ no effect on 'traditional' z/OS, VSE, etc. software charges
  - ▶ runs standalone Linux and z/VM (with Linux guests only)
- **HiperSockets**
  - ▶ "Network in a Box"
- **z/VM**
  - ▶ great for consolidation of new and existing distributed workloads
    - flexible / responsive
    - operations / systems management / environmental savings
    - utilization of shared resources
  - ▶ disaster recovery
- **IBM Middleware / Open Source and ISV applications**
- **Integrated Platform for Linux**

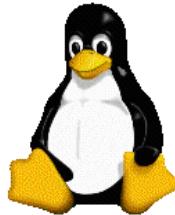

# *Independent* Linux on zSeries Solutions

infrastructure ...  
ie. file/print servers, etc.

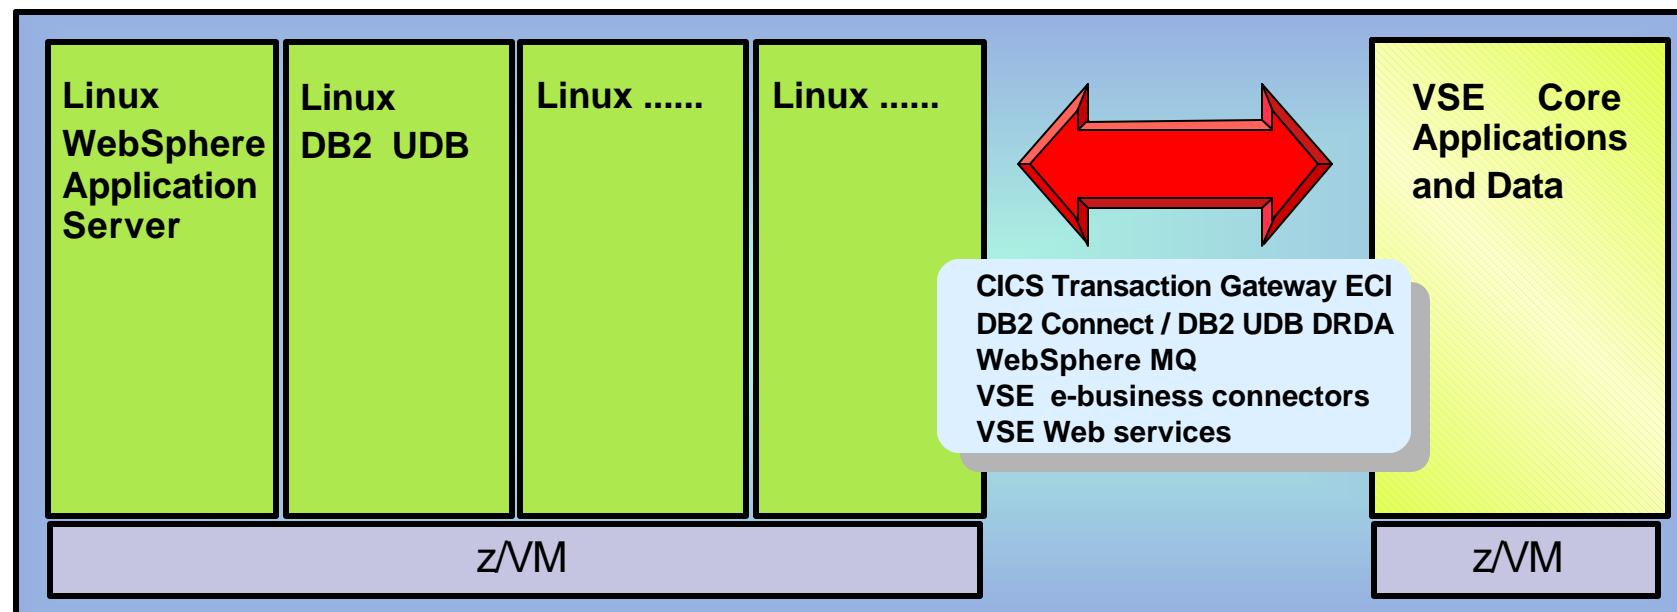

# *Integrated* Linux on zSeries Solutions

web application servers, etc.

**zSeries or S/390 Mainframe**

# Agenda

- Summary
- VSE and VM Update
- e-business Roadmap
- VSE and Linux
- Customer Scenarios
- VSE Directions
- Conclusion

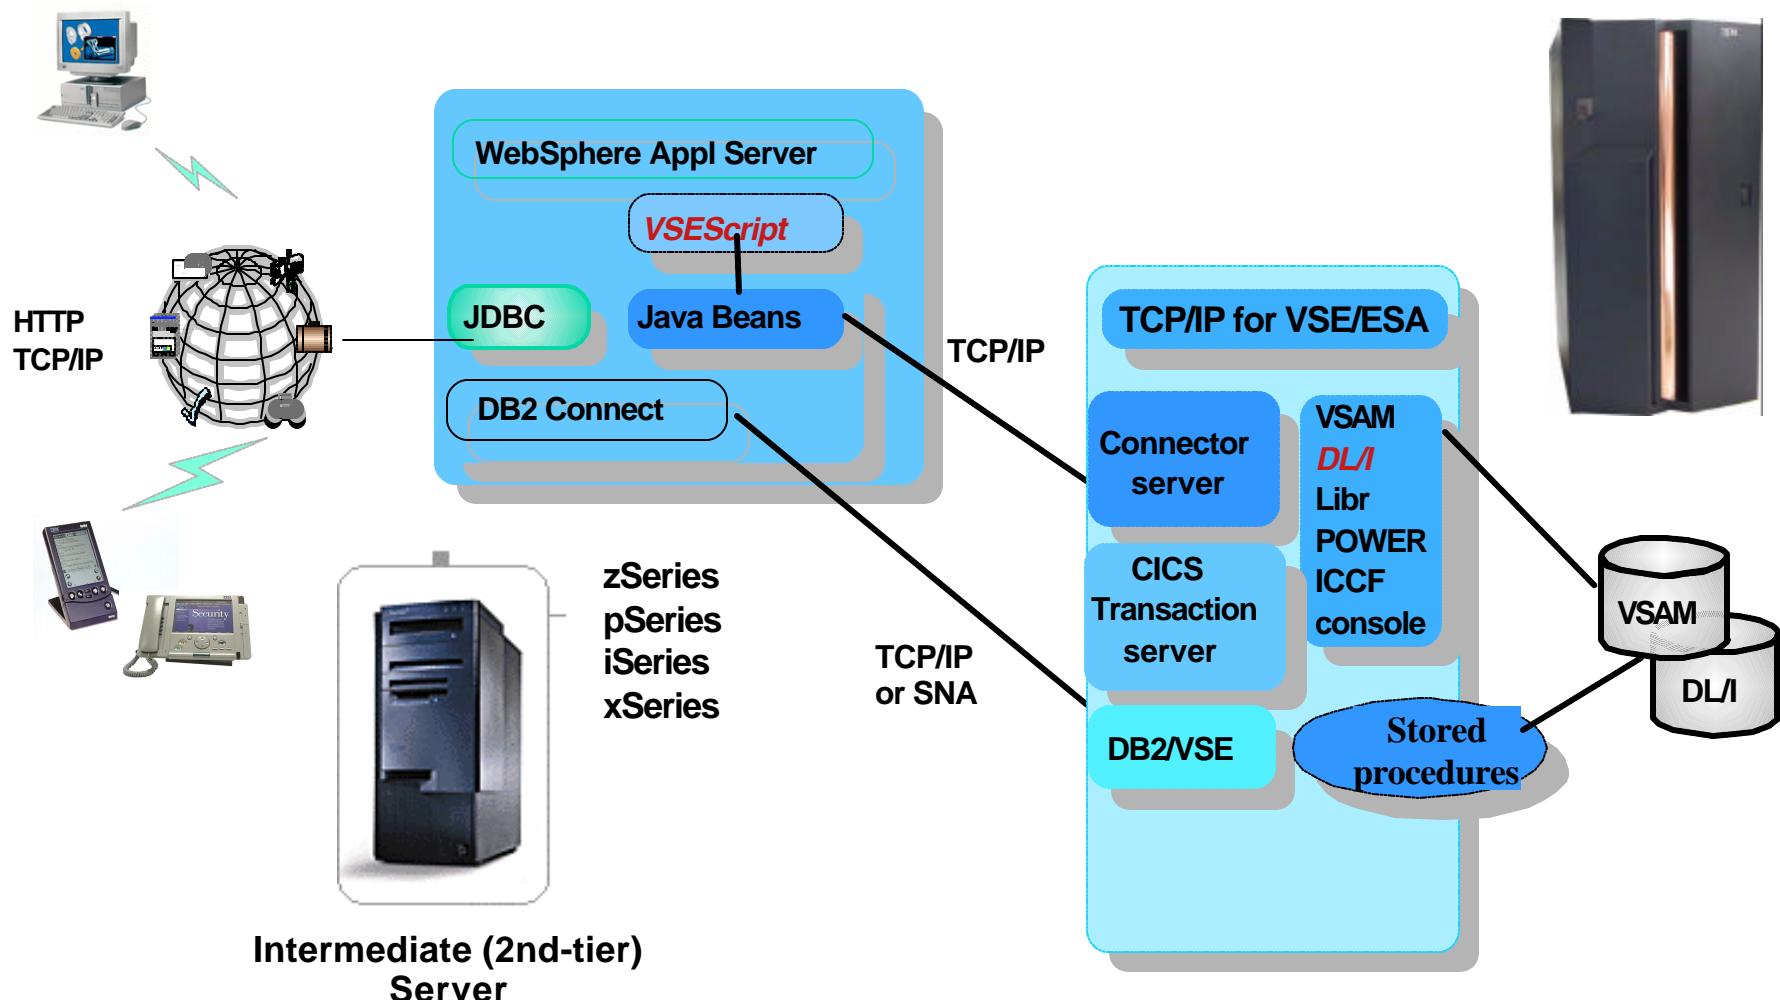

# VSE/ESA e-business connectors (V2.5/V2.6/V2.7)

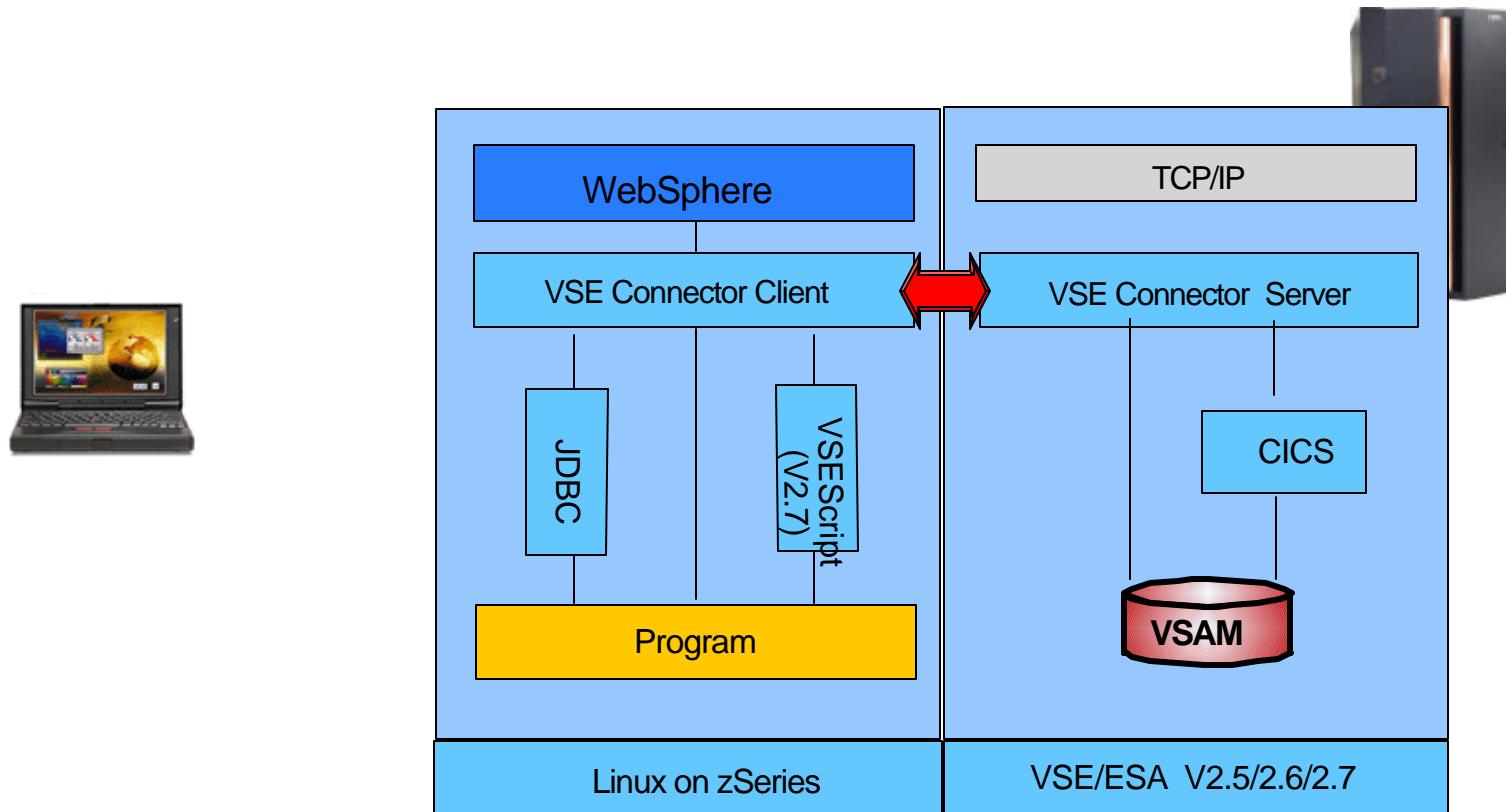

- VSE Connector (BSD sockets based)
  - ▶ connectivity via TCP/IP
  - ▶ implemented as long running server partition on VSE
  - ▶ Java beans on Web Application Server
    - *script language for access from non-Java programs*
  - ▶ access VSAM, *DL/I*, POWER, Librarian, ICCF, console
- DB2-based Connector (uses DRDA)
  - ▶ connectivity via TCP/IP or SNA
  - ▶ implemented as DB2 stored procedures on VSE
  - ▶ standard JDBC/ODBC calls on Web Application Server
    - using DB2 Connect or DB2 UDB
  - ▶ access to VSAM and DL/I (and DB2 of course)
- Complementary to existing IBM and ISV middleware

# VSE e-business connectors

**zSeries Enterprise Server**

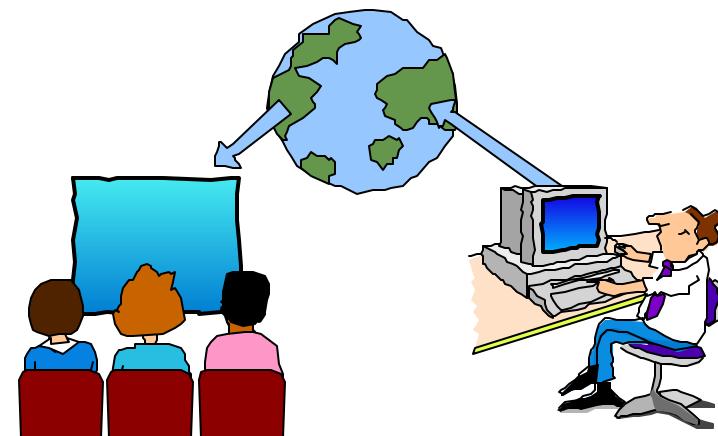

## Scenario 1 - 'Pull'

- Integrate VSE/VSAM data into new applications
- Synchronize data on Linux and VSE / Reduce FTPs

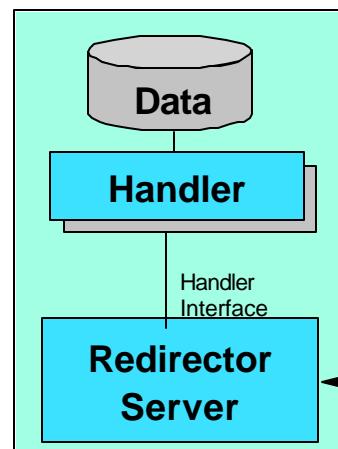

# VSE/VSAM Redirector (V2.6/V2.7)

- VSAM Redirector Client (runs on VSE)
  - ▶ based on generic VSAM exit
  - ▶ transparent (no changes) to VSE application
  - ▶ intercepts VSAM request and routes to Redirector Server
- VSAM Redirector Server (runs on any Java Platform)
  - ▶ implemented in Java
  - ▶ fields request from VSE client
  - ▶ calls file-specific handler
  - ▶ returns result to VSE

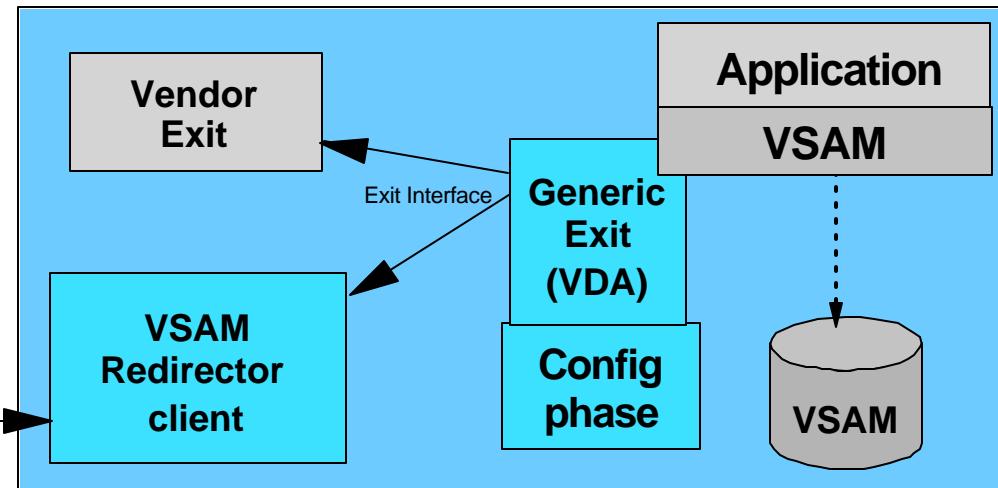

# VSE/VSAM Redirector

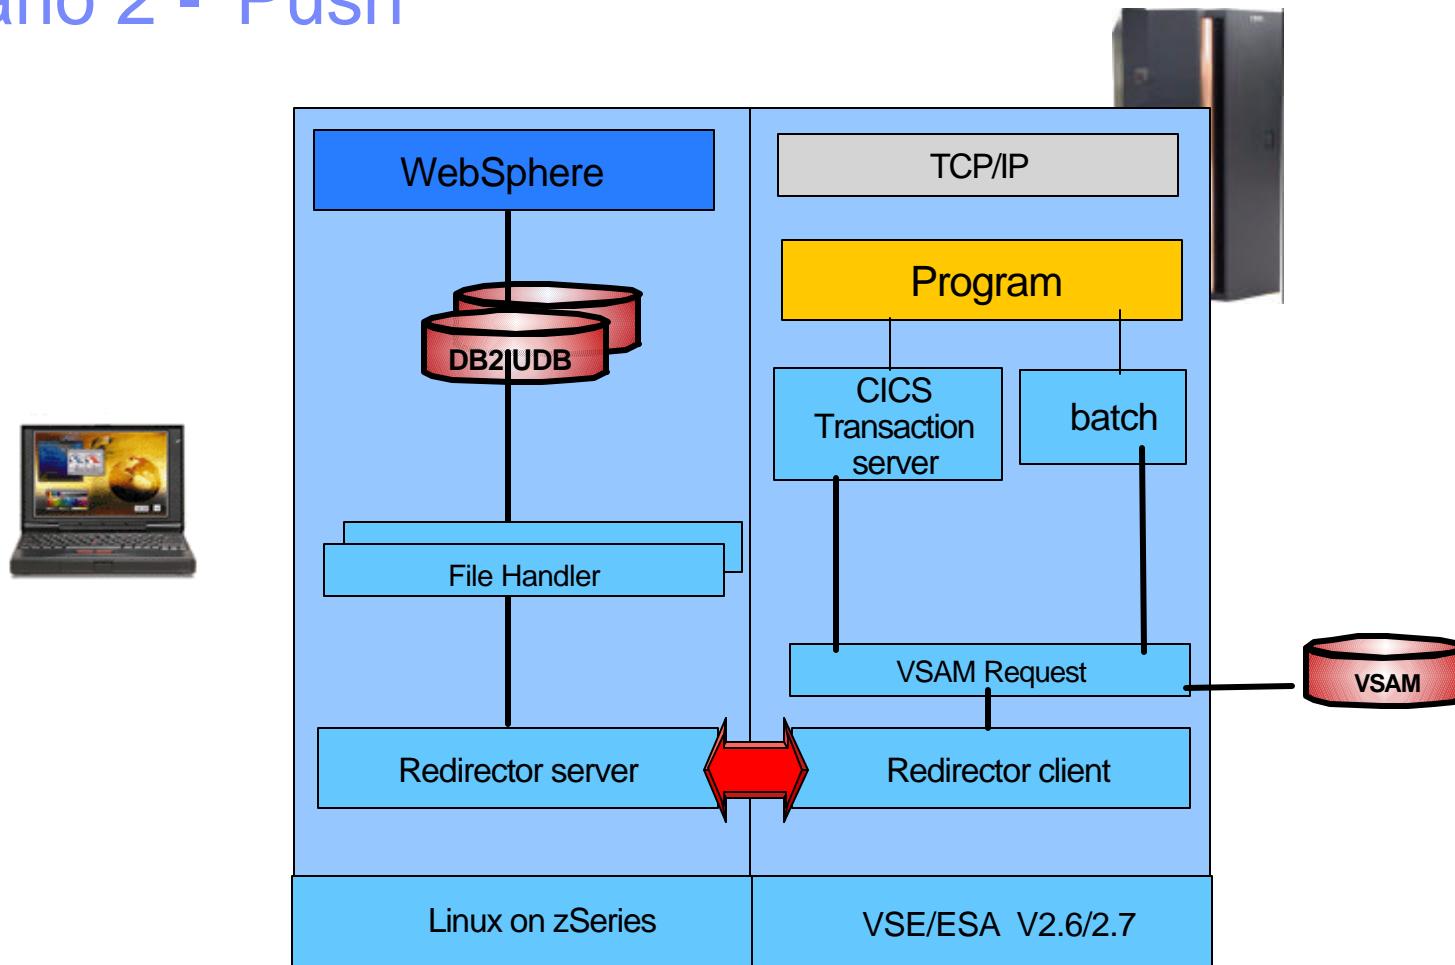

Java Platform

VSE/ESA V2.6/2.7

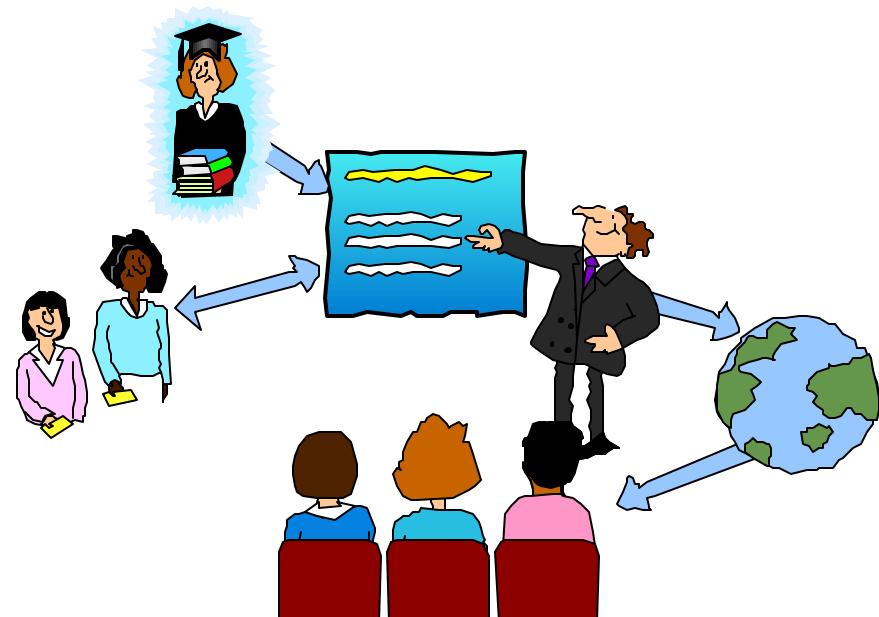

## Scenario 2 - 'Push'

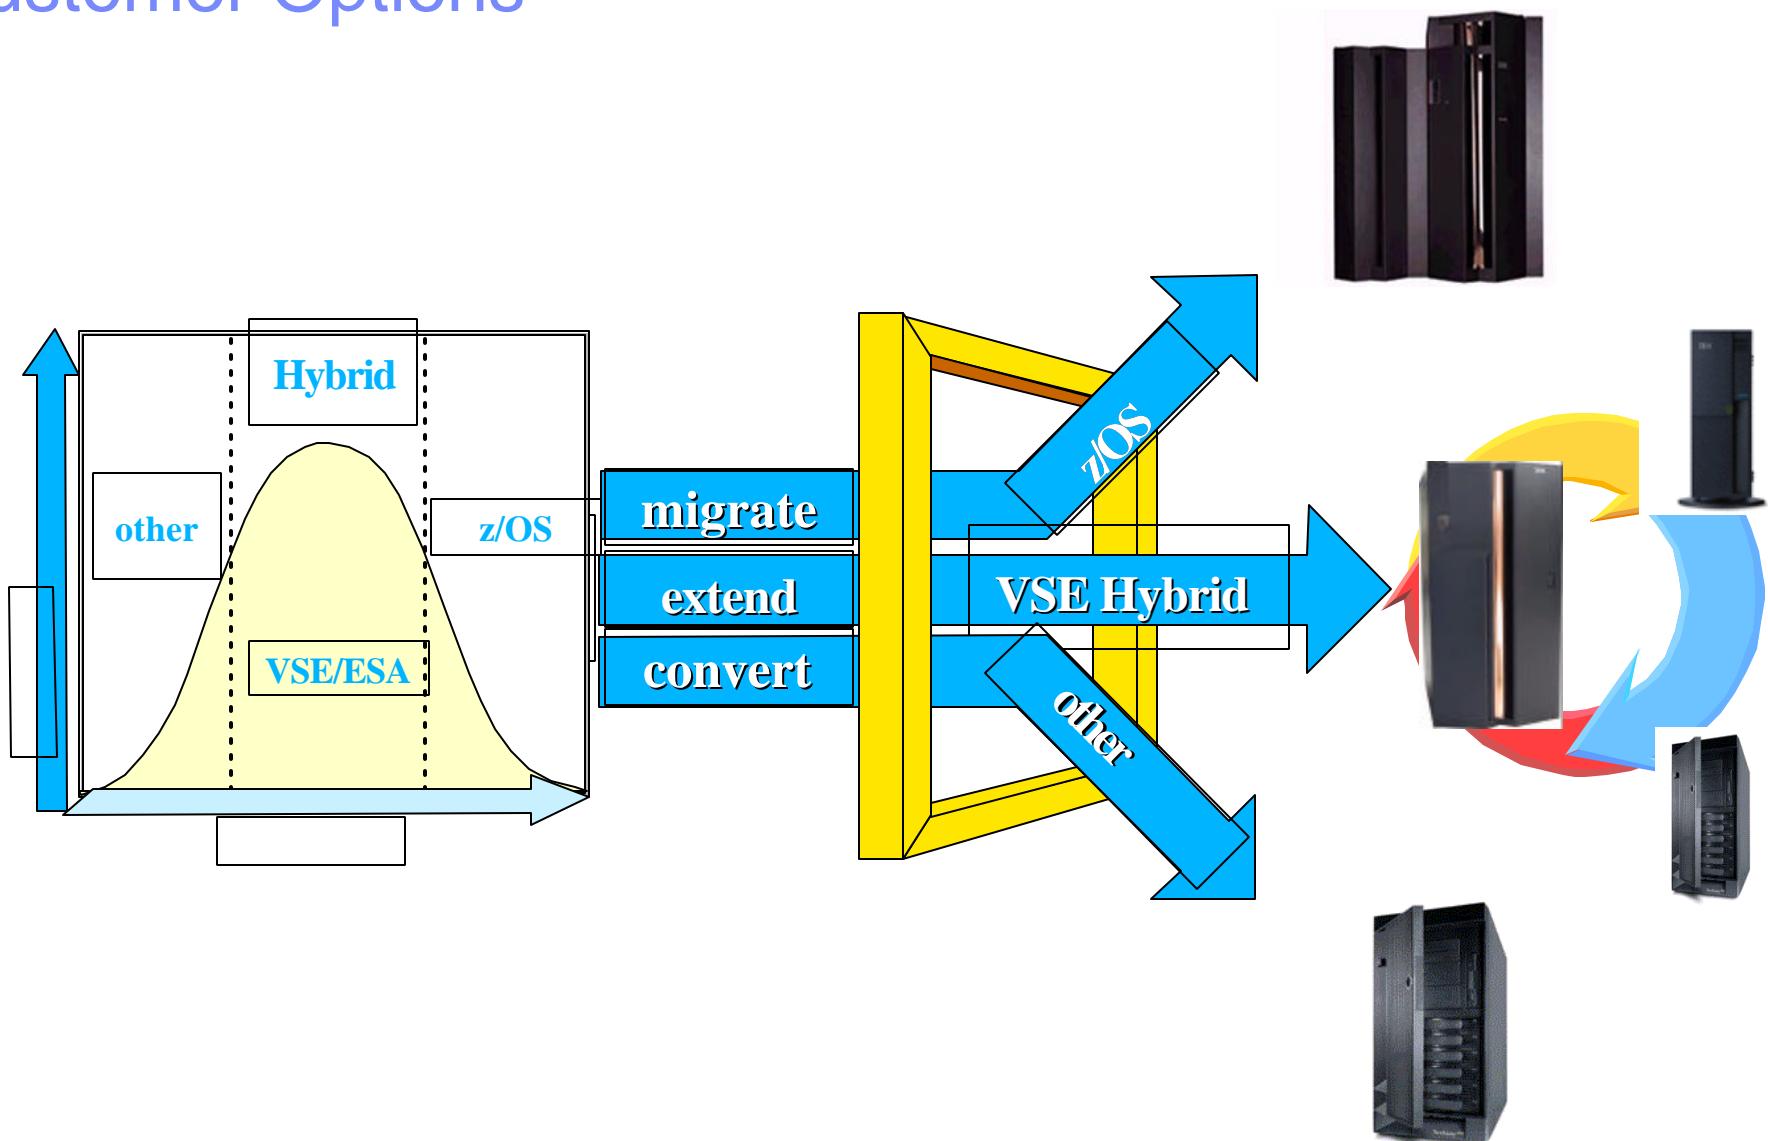

- VSE access to DB2 UDB (or other db and file systems) on Linux
- Synchronize DB2 UDB on Linux with VSAM on VSE / Reduce FTPs

# Agenda

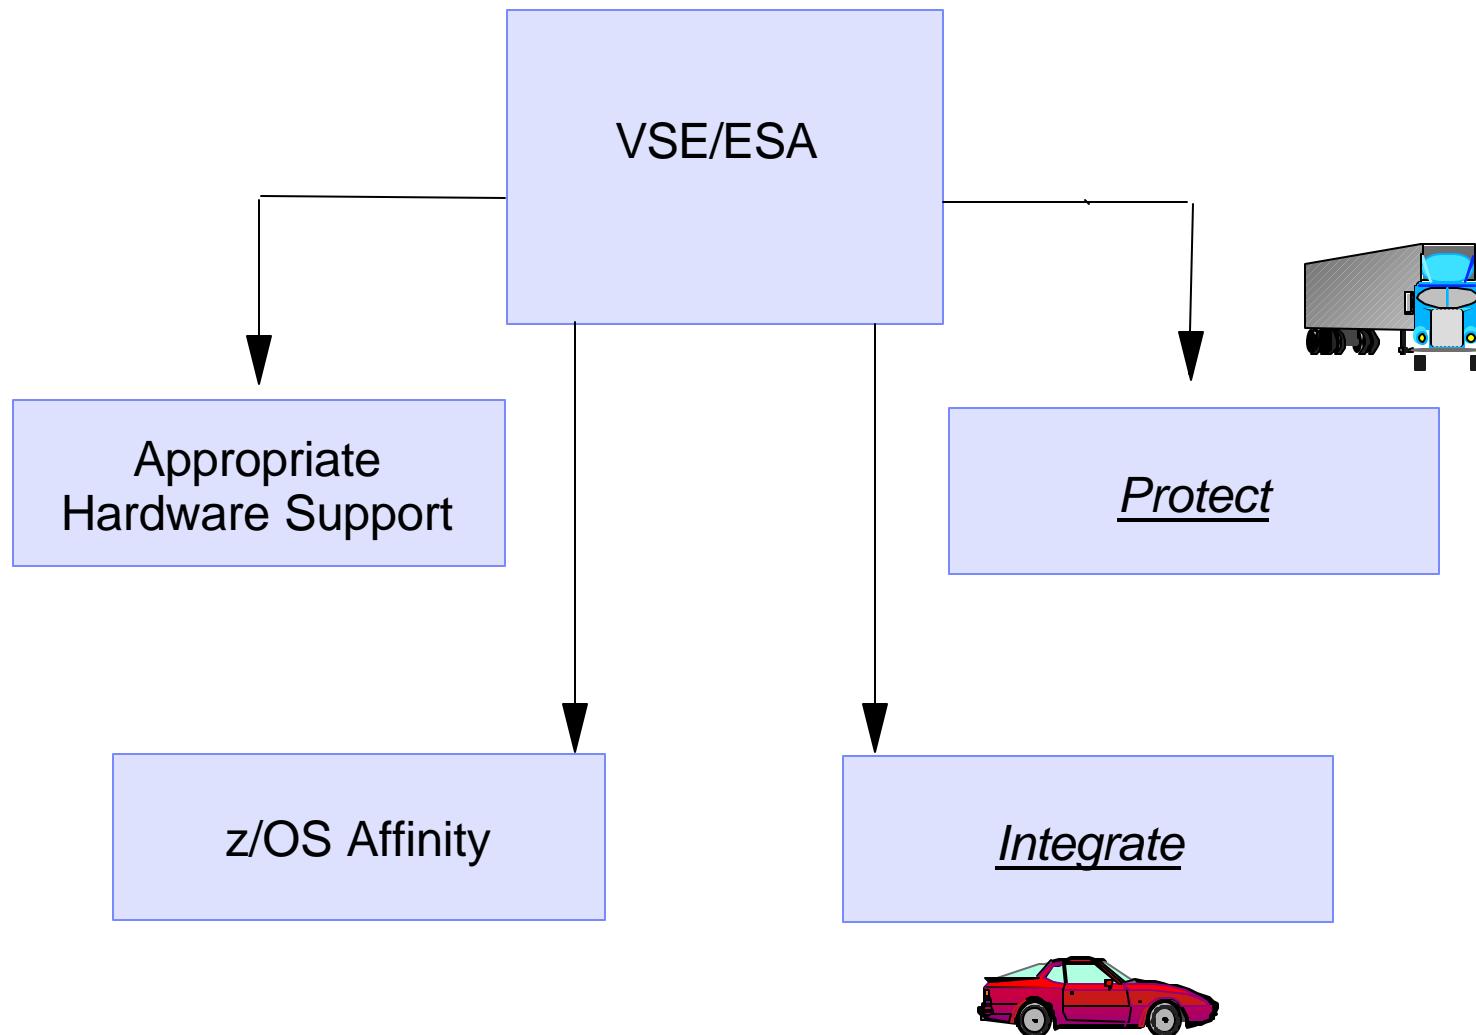

- Summary
- VSE and VM Update
- e-business Roadmap
- VSE and Linux
- Customer Scenarios
- **VSE Directions**
- Conclusion

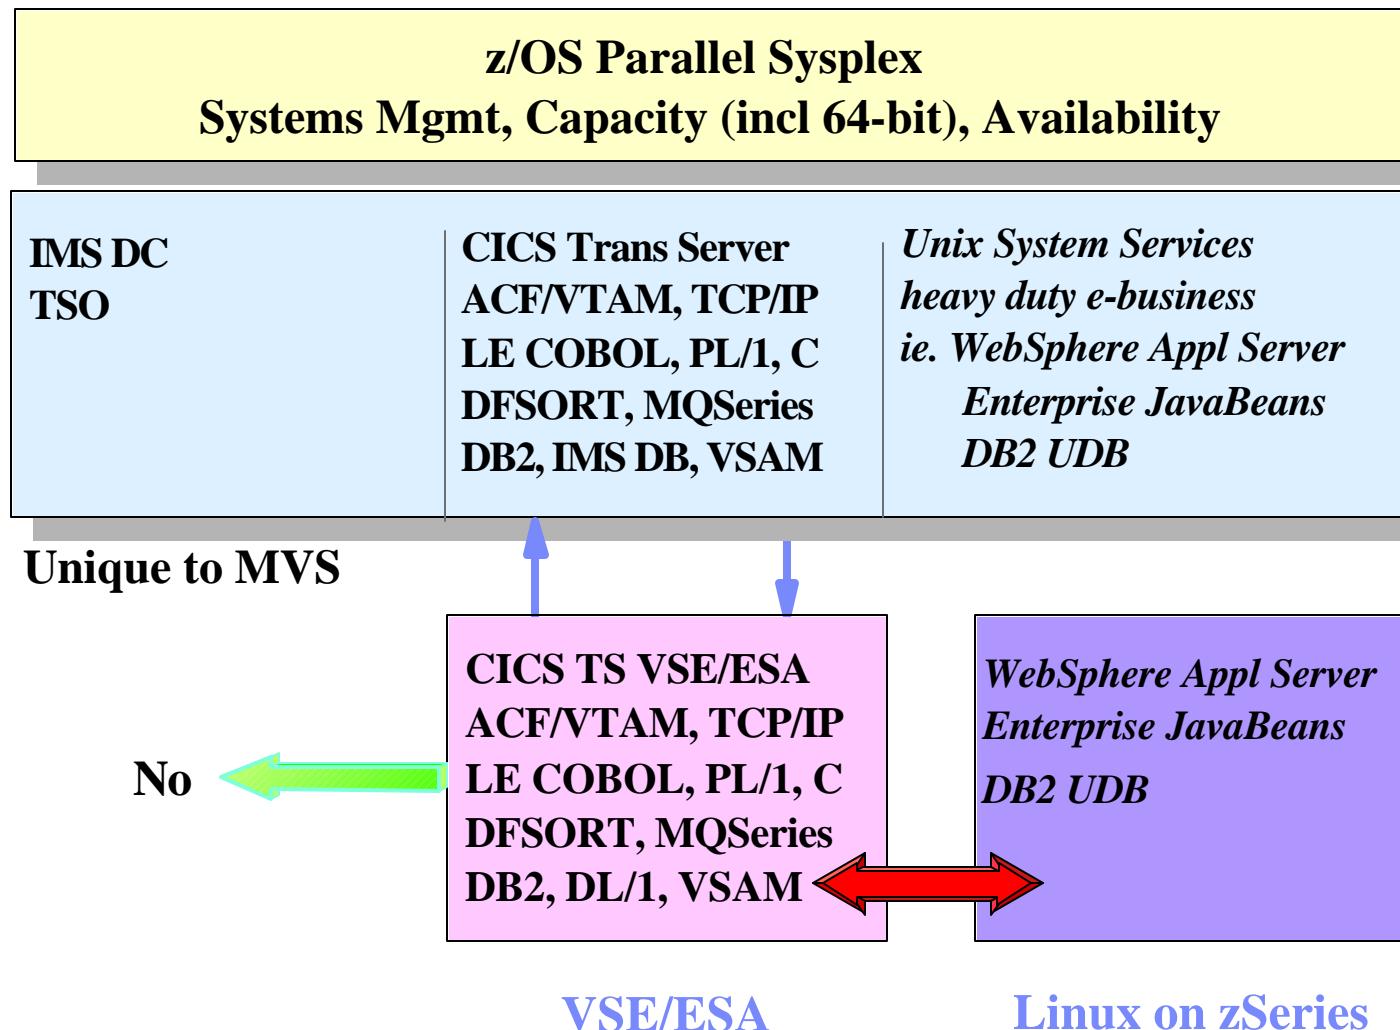

# Customer Options

# Areas of Ongoing Emphasis

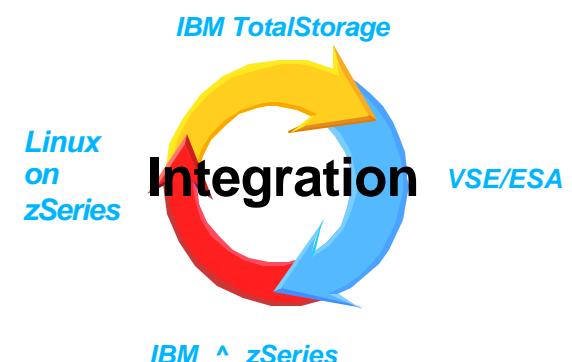

# The Best of Both Worlds

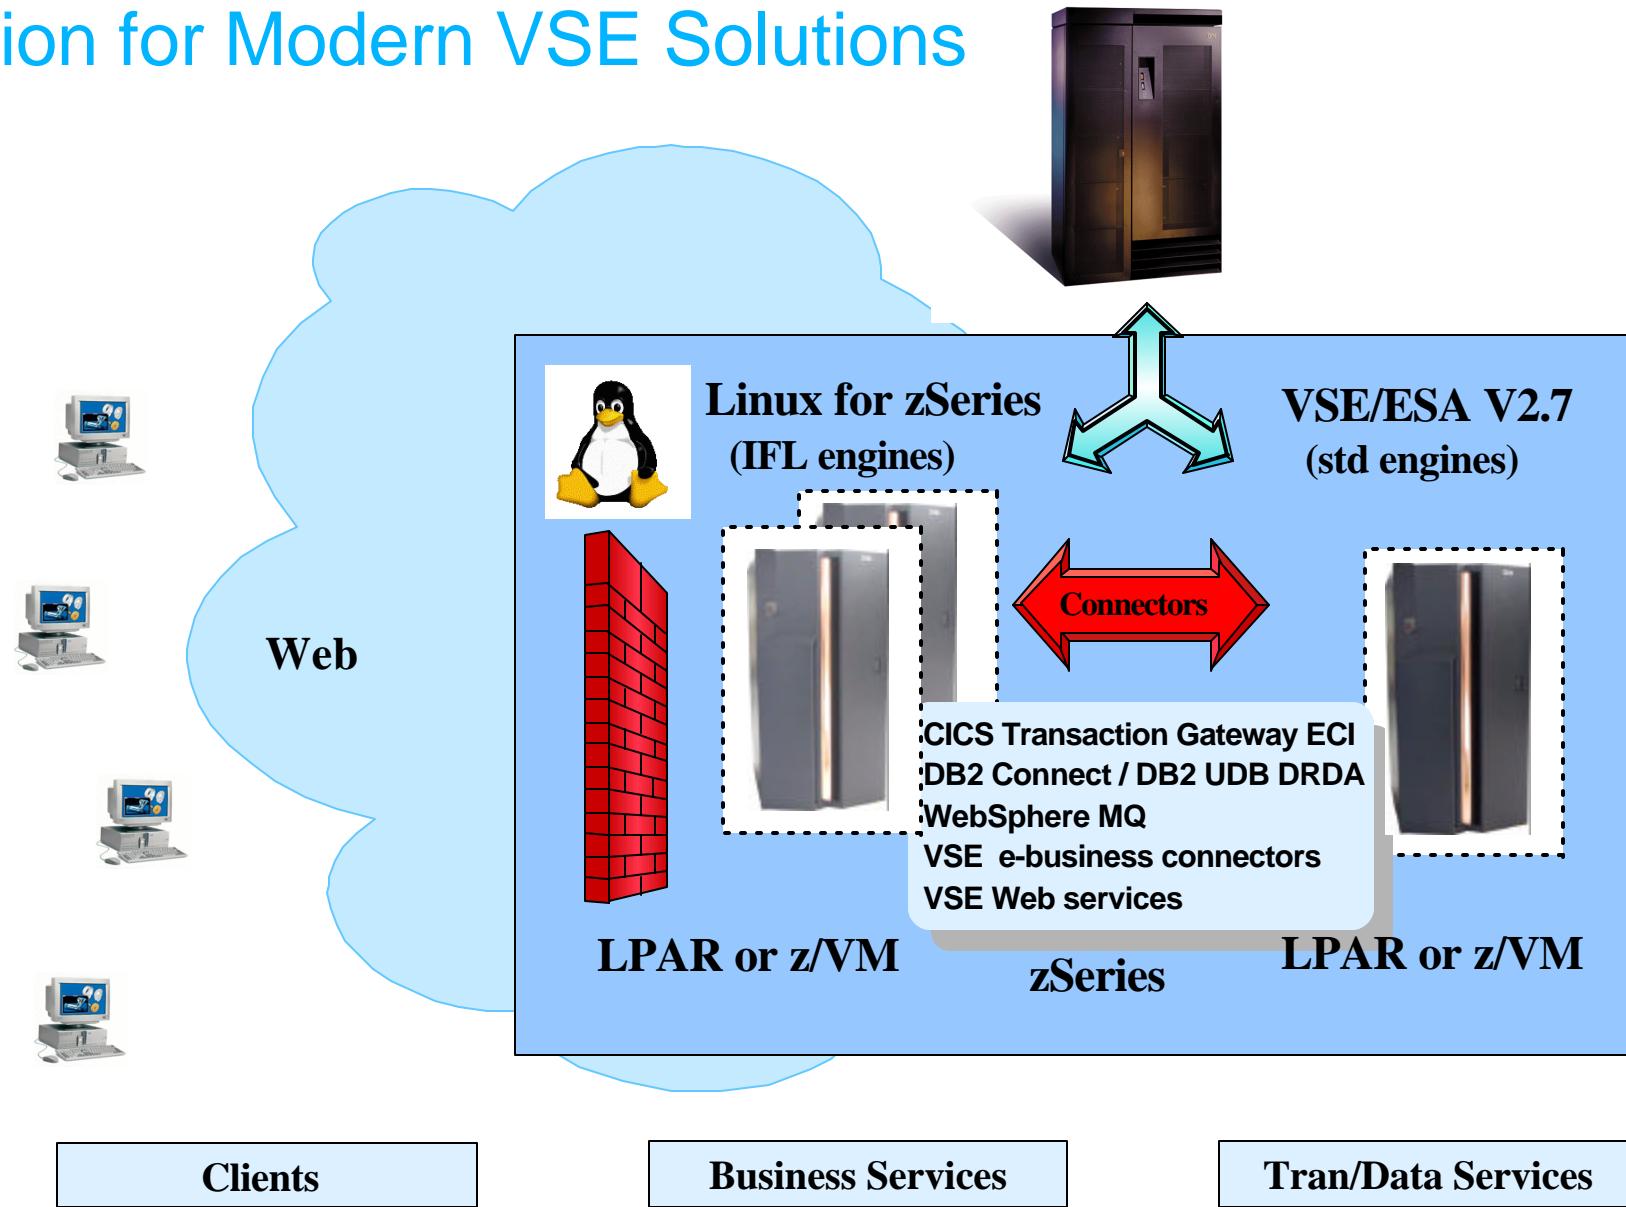

# Linux on zSeries Advantages for VSE Customers

- **Consolidate servers for low cost**
  - ▶ gain TCO benefits of Linux and zSeries
- **New Linux on zSeries applications based on IBM Middleware**
  - ▶ WebSphere Application Server
  - ▶ DB2 UDB
  - ▶ advanced application development tools
- **New Linux-based open source and/or ISV applications**
  - ▶ Linux *for* zSeries to exploit zSeries 64-bit capabilities
  - ▶ complement 31-bit core VSE applications
- **Integrate Linux and VSE solutions**
  - ▶ Linux access to VSE applications and data

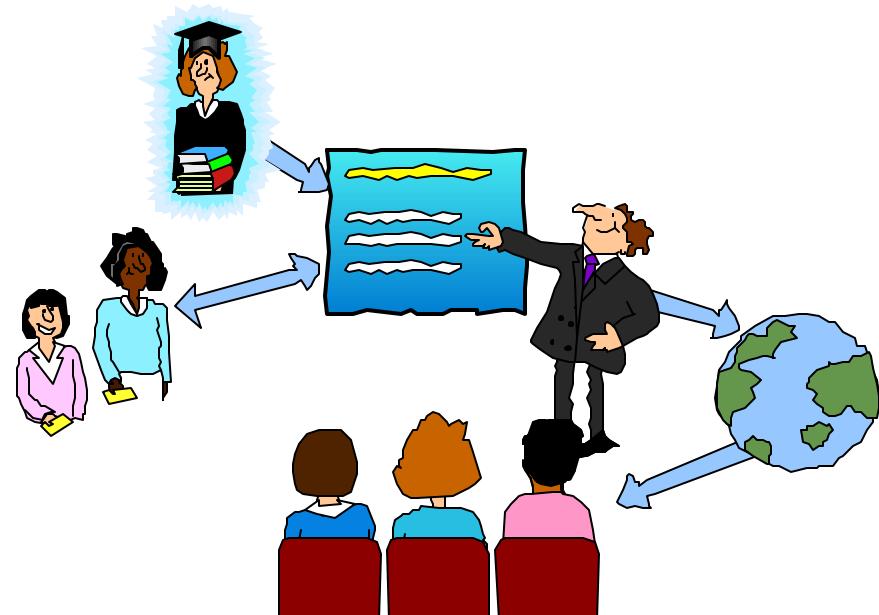

# Vision for Modern VSE Solutions

# Agenda

- Summary
- VSE and VM Update
- e-business Roadmap
- VSE and Linux
- Customer Scenarios
- VSE Directions
- Conclusion

# VSE Trends and Directions - easy as Pie!

- **Protect** your extensive investments in VSE programs, data, equipment, and IT skills, plus business processes, end user training, etc.
  - ▶ extend core CICS TS VSE/ESA applications to the web
  - ▶ exploit current IBM servers, storage, and software
- **Integrate** VSE with the rest of your IT
  - ▶ interoperability based on open standards
    - IBM Middleware
    - VSE **e-business** connectors and web services
  - ▶ utilize Linux on zSeries where appropriate
    - consolidate existing distributed servers
    - new infrastructure and/or line-of-business applications

# Past, Present, Future

- After more than 35 years providing cost effective solutions to IBM customers the world over, VSE doesn't get older - it gets better! Using the hybrid model, you can leverage your **VSE investment without being limited by it**
