DB2 Connect	IMS	VM/ESA*
DB2 Universal	Intelligent	VSE/ESA
Database	Miner	VisualAge*
e-business logo*	Multiprise*	VTAM*
Enterprise Storage	MQSeries*	WebSphere*
Server	OS/390*	xSeries
HiperSockets	S/390*	z/Architecture
	SNAP/SHOT	z/VM
	*	z/VSE
		zSeries

\* Registered trademarks of IBM Corporation

The following are trademarks or registered trademarks of other companies.

LINUX is a registered trademark of Linus Torvalds

Tivoli is a trademark of Tivoli Systems Inc.

Java and all Java-related trademarks and logos are trademarks of Sun Microsystems, Inc., in the United States and other countries

UNIX is a registered trademark of The Open Group in the United States and other countries.

Microsoft, Windows and Windows NT are registered trademarks of Microsoft Corporation.

SET and Secure Electronic Transaction are trademarks owned by SET Secure Electronic Transaction LLC.

Intel is a registered trademark of Intel Corporation.

# VSE Health Checker

## § Why such a tool?

- VSE has a lot of parameters
- Some parameters are dependent on other parameters
- Only experienced VSE experts know all these parameters and their meanings
- Troubleshooting is often very time consuming
- Asking for all the parameter values via phone (L2 service) is very lengthy and painful
- VSE experts are often not on site

# The Idea

- § Diagnosis tool for displaying and analyzing VSE system parameters
- § Graphical display, diagrams, charts
- § Automatic system diagnosis
- § Captured data can be
  - saved to disk (XML format)
  - read from disk
  - sent via e-mail to an VSE expert (e.g. to IBM)
- § Java based tool running on a PC
- § Only base VSE system functions required
  - Java based Connector to access VSE
  - No additional vendor (priced) products

# Benefits

## § Find out about upcoming problems

- Before they occur

## § Increased stability and performance

- when system parameters are tuned correctly

## § Data from different parameters can be combined

## § Education about VSE parameters by using the tool

## § Note:

- It can take up to 5 minutes to collect all the data
- Manual collection would take much more time

# Procedure

## § 1. Step:

- Collection and user friendly display of the data

## § 2. Step:

- Analysis of the data
- Find and show dependencies

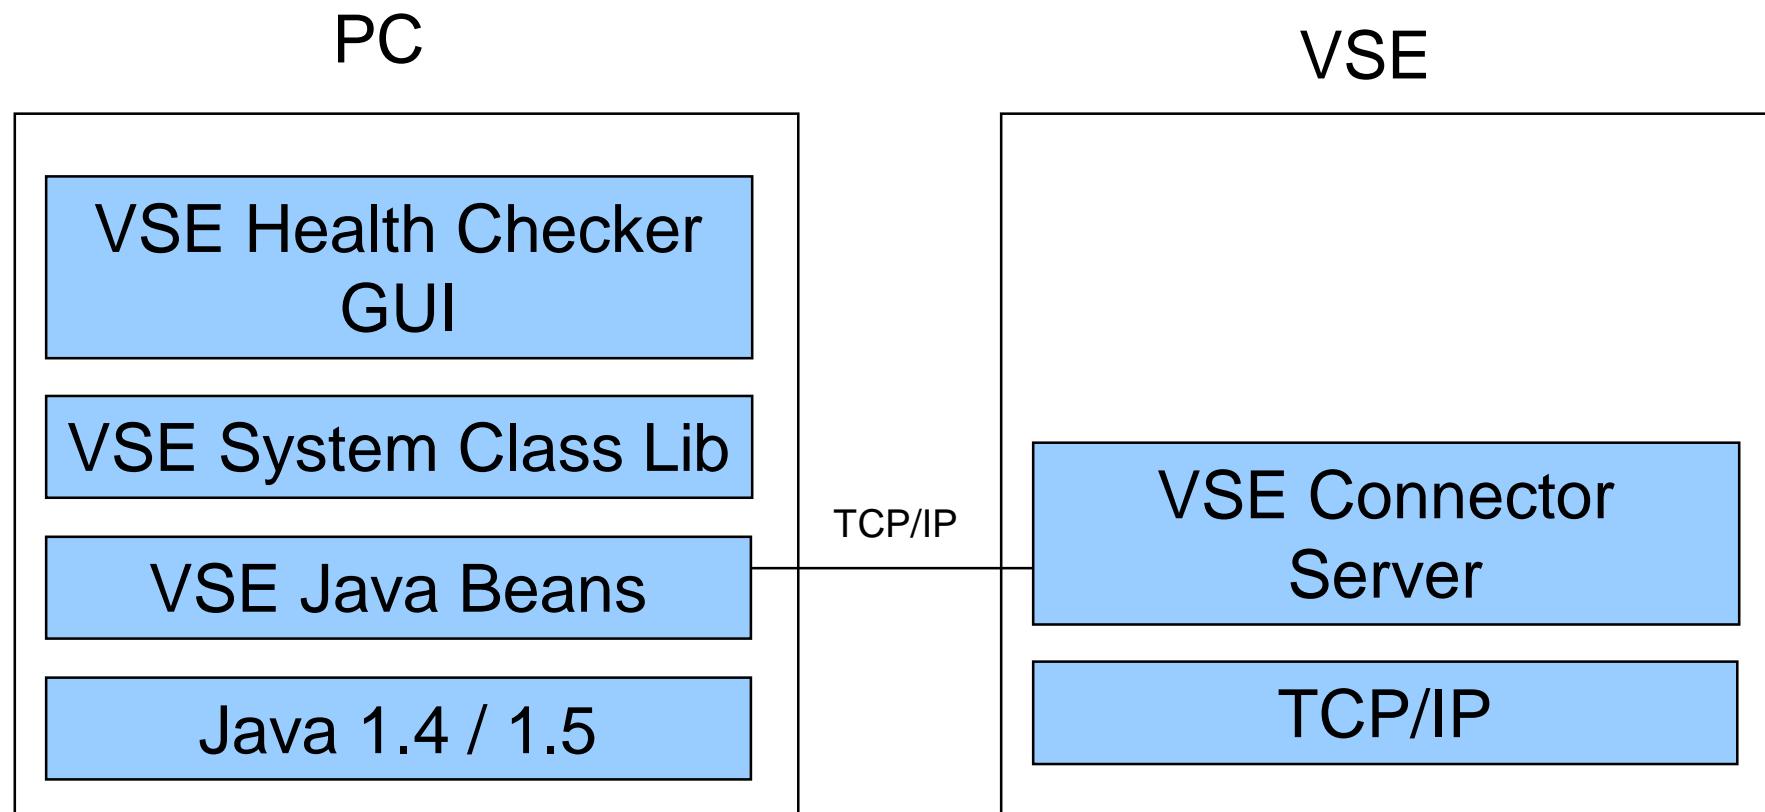

## § 3. Step:

- Modify parameters that may cause problems

## § Practical use:

- Preventive use, run about 4 times a year
- Comparison of parameters with previous run

# Overview

# Requirements

- § **VSE/ESA 2.6 (PQ88809 / UQ88864)**
- § **VSE/ESA 2.7 (PQ88809 / UQ88865)**
- § **z/VSE 3.1 GA System or higher**
- § **TCP/IP for VSE**
- § **VSE Connector Server must be running**
- § **VSE Connector Client installed on PC**
- § **Java Version 1.4 or higher on PC**
- § **No other (priced) products on VSE or PC**
- § **STAT transaction defined in order to get CICS TS statistics**
- § **CHKT transaction defined in order to get TS Queues list**

# Latest news

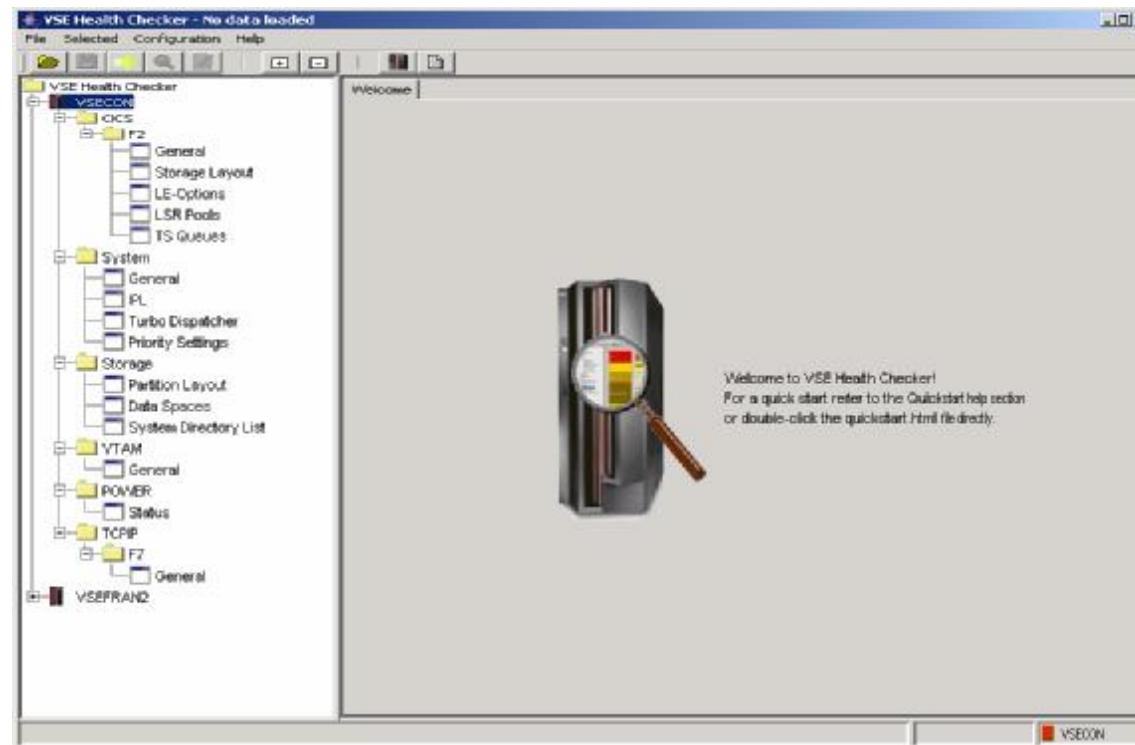

- § **List of CICS Transactions (from CICS Statistics)**
- § **Prefix and postfix for console commands**
  - E.g. to disable MLOG
- § **All submitted jobs can be adapted**
  - Jobs are created using skeletons
  - See skeletons directory
  - Variables in job skeletons are replaced with values when the job is submitted
  - Example:

```
* $$ JOB JNM=%JOBNAME(1,8,"LDSDL")%,CLASS=%JOBCLASS(1,1,"0")%,DISP=%JOBDISP(1,1,"D")%
* $$ LST LST=%LST(1,6,"SYSLST")%,CLASS=%LSTCLASS(1,1,"0")%,DISP=%LSTDISP(1,1,"H")%
// JOB %JOBNAME(1,8,"LDSDL")% - VSE HEALTH CHECK
// EXEC LIBR
  LD SDL,OUTPUT=%OUTPUT(,,,"ST")%
/*
/&
* $$ EOJ
```

# Live Demo – Part 1

## § Configure a host

## § Get the data (takes about 5 min)

Welcome

Welcome to VSE Health Checker!  
For a quick start refer to the Quickstart help section  
or double-click the quickstart.html file directly.

VSECON

# VSE Health Checker vs. native VSE commands

§ Data displayed can be combined from different commands

§ Example: Priority

Priority Settings			
Priority	Share	Partition	Application
20	0	F1	NN1POWER
19	100	R	
19	100	R1	
19	100	F3	
18	0	F2	
17	0	Z	
16	0	W	
16	0	W1	STARTVCS
15	0	X	
14	0	U	
13	0	F4	
12	0	F5	NN1CICF5
11	0	F6	

PRTY

D DYNC

MAP nn

# VSE Health Checker vs. native VSE commands

- § Data displayed can be calculated from different values
- § Example: POWER storage above

Partition Storage	
Total	18432 KB
Above	7168 KB

ESA270, Munich

Partition Storage	
Total	5120 KB
Above	0 KB

VSEDEMO, Boeblingen

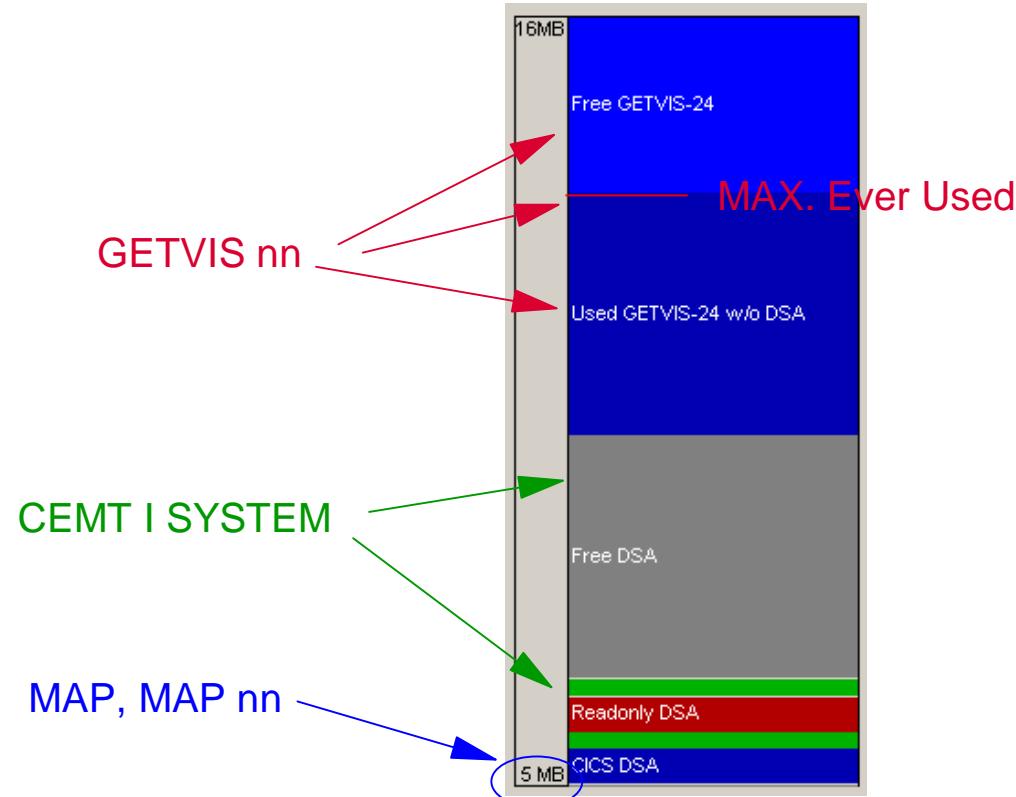

- § Formula:

- part\_size =  $16384 - (\text{VADDR} / 100000) * 1024$ ;
- stor\_above = ALLOC-VIRTUAL - part\_size

- § Important for POWER Queue File in memory

# VSE Health Checker vs. native VSE commands

- § Data can be displayed as charts or diagrams
- § Example: CICS Storage Layout

# VSE Health Checker vs. native VSE commands

## § Hide unimportant data

### § Example: VTAM Buffer Usage

SGA		SGA 24	
Limit	No Limit	Limit	No Limit
Current	736 KB	Current	94 KB
Max	737 KB	Max	94 KB
Max Used	753 KB	Max Used	95 KB

VTAM Private					
Current	4851 KB	Max	4866 KB		

VTAM Buffers					
Buffer	Size	Times Exp.	Curr. Total	Max. Total	Max. Used
SF	112	0	32	32	21
IO	359	0	70	70	16
SP	144	0	210	210	0
LP	2032	0	12	12	8

```

# VSE Health Checker vs. native VSE commands

## § Support of “undocumented” or “unknown” parameters

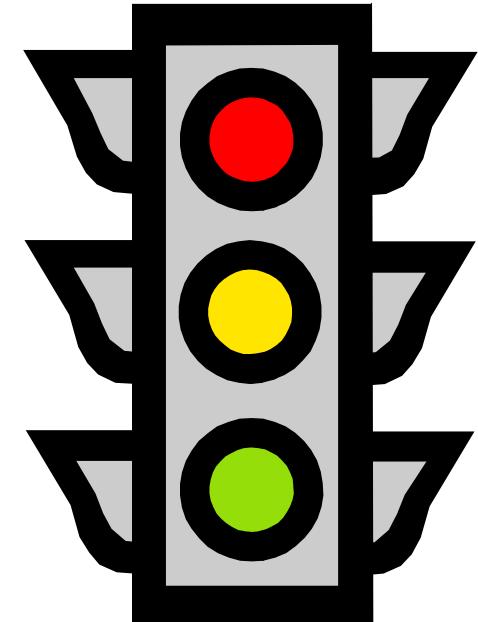

### § Example: TCP/IP:

- SET CLOSE\_DEPTH = { nn | 10 }  
Important when sending big files via FTP.  
See Q SET command: “Close Connection Depth”.
  
- SET CONNECT\_QUEUE = { ON | OFF }  
Solves “listen backlog” problem. When turned ON, up to 10 simultaneous connections can be accepted.  
See Q SET command: “Connection queuing”.

# Analysis

## § Analysis is based on a knowledgebase

- Stored in an XML file
- Contains rules (traffic-light analogy)
  - Green (OK):
    - E.g. \$TIMES\_AT\_MXT == 0
  - Yellow (Warning):
    - E.g. \$TIMES\_AT\_MXT > 0 && \$TIMES\_AT\_MXT < 9
  - Red (Severe):
    - E.g. \$TIMES\_AT\_MXT > 8
  - Description:
    - E.g. With CICS TS this value must not be equal to zero, but it should not be higher than 8.

## § Results are displayed in the GUI

- By marking the values with the appropriate color

## § Detailed report can be generated (HTML)

## Live Demo – Part 2

### § Data has been received

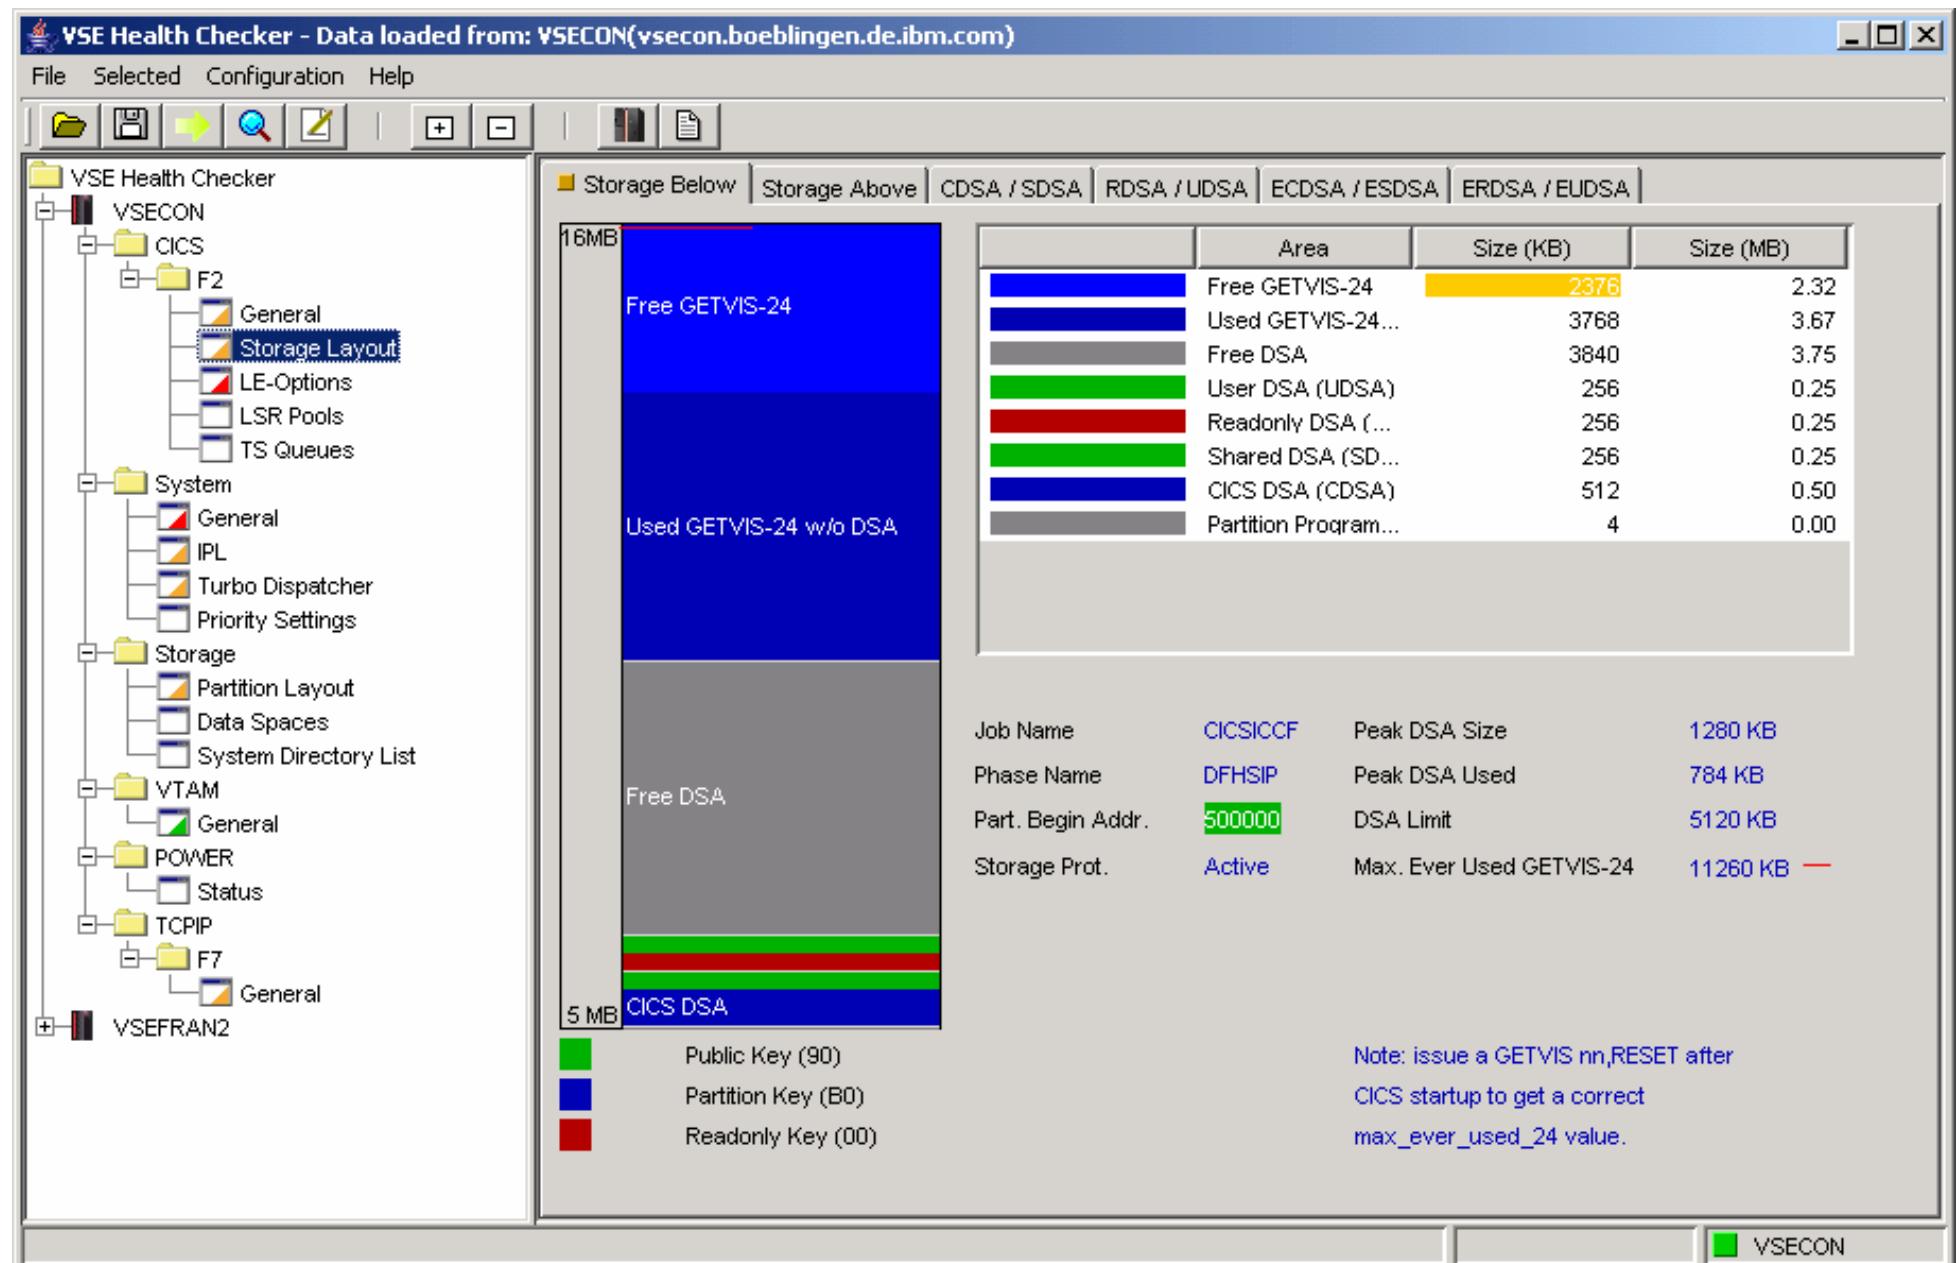

### § Analyze the data

- There are some values to check (red or yellow)
  - DEBUG=ON
  - CICS LE Runtime Options:
    - DEBUG=ON
    - ALL31=ON
  - TCP/IP:
    - CLOSE\_DEPTH = 10
    - CONNECT\_QUEUE = OFF

### § Generate report

### § Fix the problems

### § Get the data again (takes about 5 minutes)

# Analysis - extended

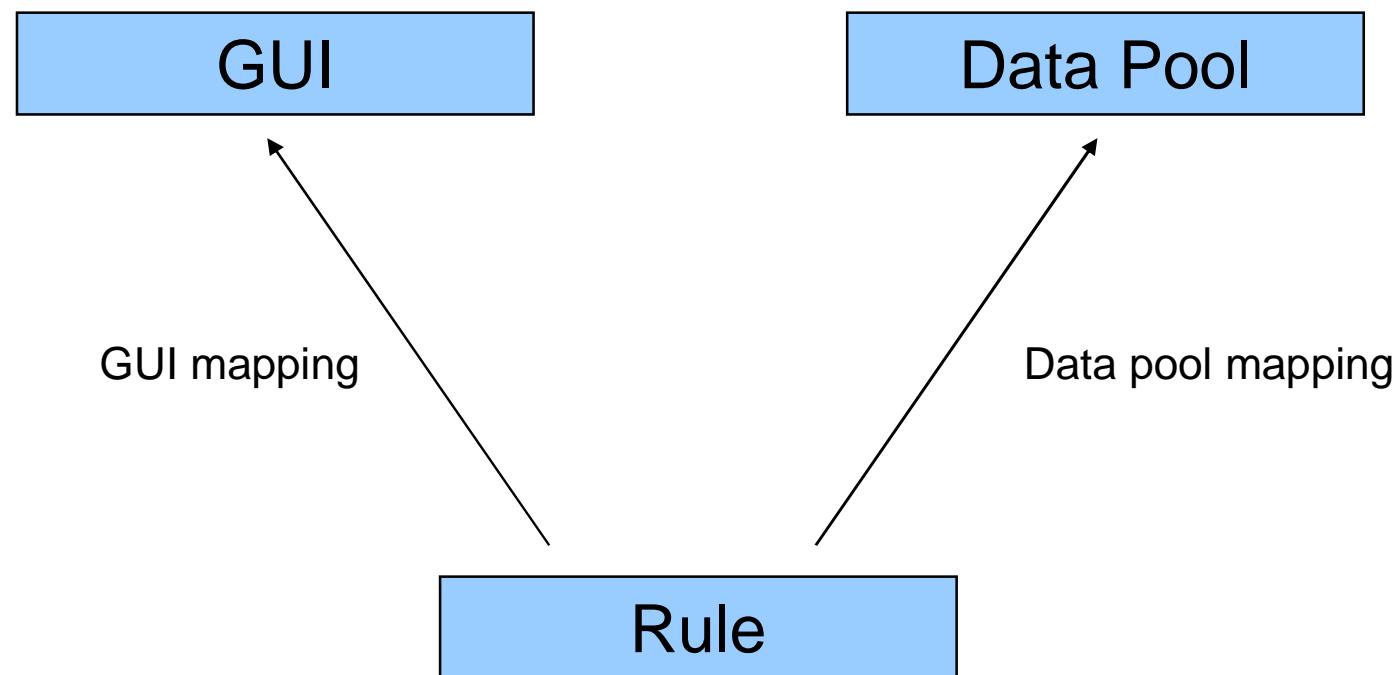

## § Rules can be valid for

- All partitions
- All dynamic partitions
- All static partitions
- Specific partitions
  - E.g. special applications
- Special applications
  - CICS
  - VTAM
  - TCP/IP

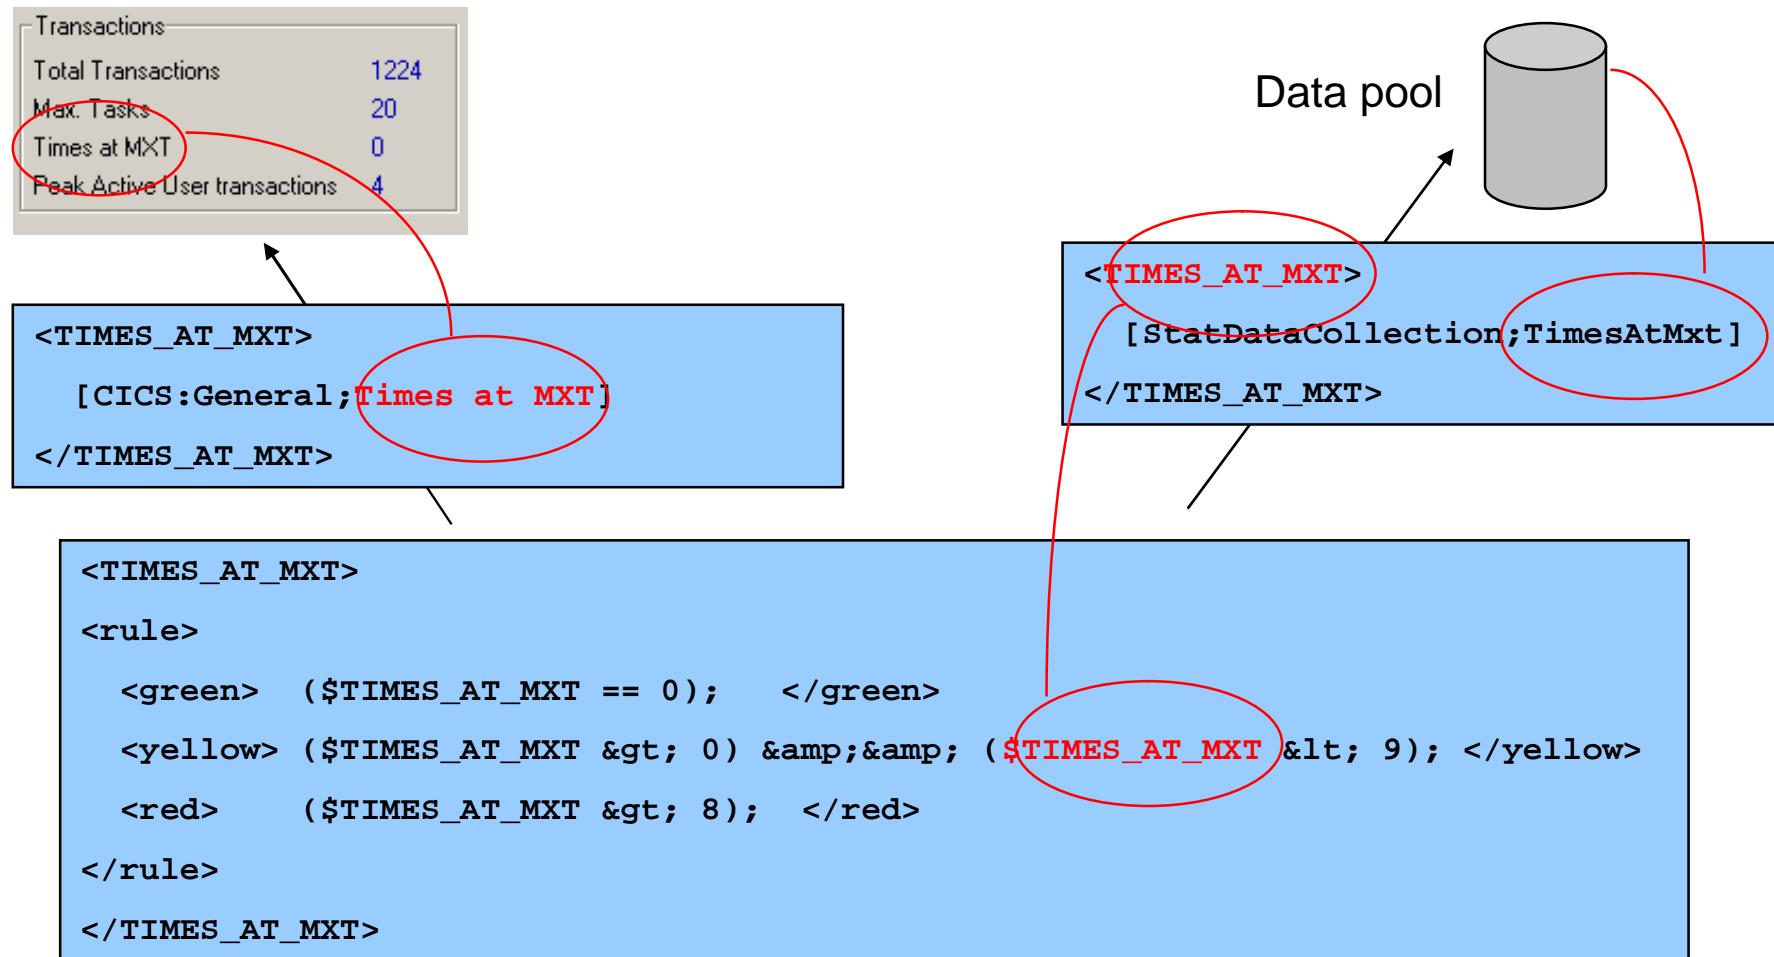

## § Some values may be dependent on the speed of the processor

- Machine group limits
  - slow, medium, fast
- e.g. PRTY aging

# Mappings

## Example – Times at MXT

# Known problems

## § Dependencies to OEM products, e.g. console managers, like MLOG

## § Parsing errors caused by

- Different console output
- Different contents of IPLPROC
- Prefix and postfix for commands may help
- Adapting the JCL of submitted jobs may help

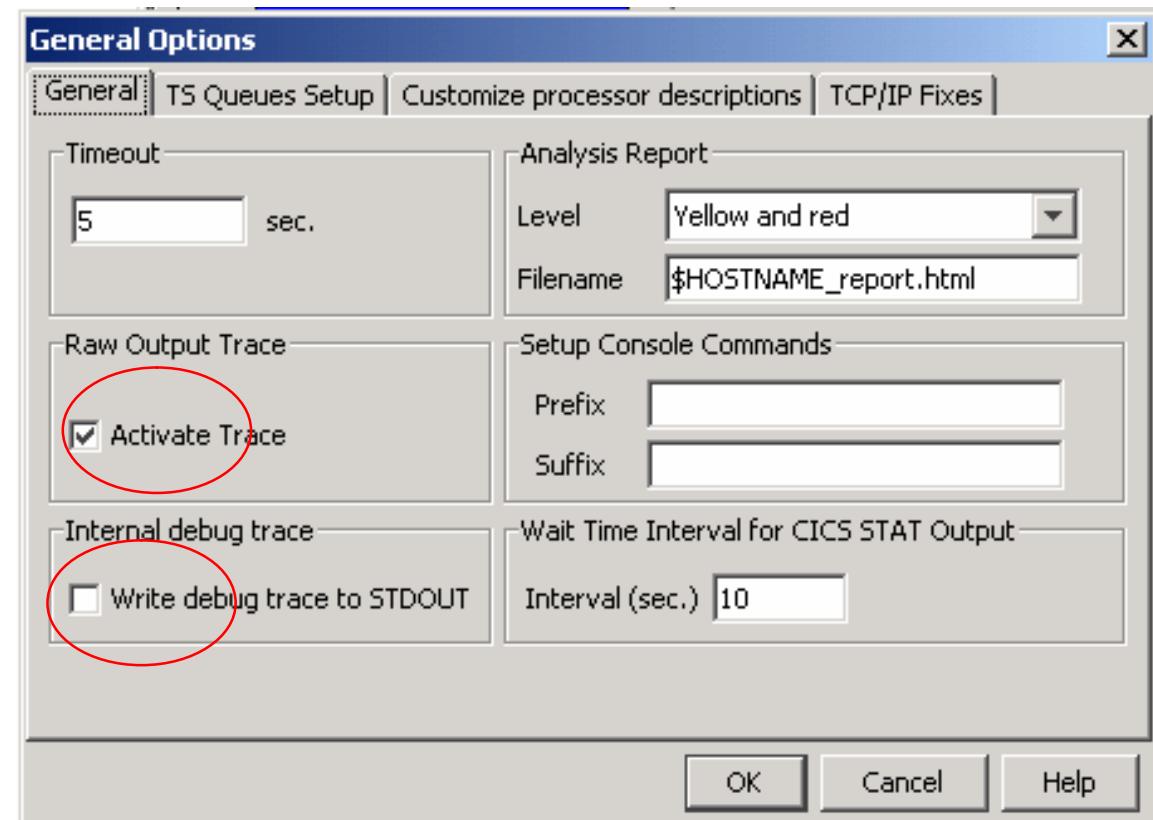

## § If you encounter a problem

- Contact [zvse@de.ibm.com](mailto:zvse@de.ibm.com)
- Send debug info (see next foil)

# Debugging

§ Write console output to local text file

§ Internal debug trace (mainly analysis)

## Live Demo – Part 3

§ Data has been received (second time)

§ Analyze the data once more

- The problems no longer exists

§ Save the data

- For archiving it
- For sending it to IBM support people
