## **Notices**

The following paragraph does not apply in any country where such provisions are inconsistent with local law.

INTERNATIONAL BUSINESS MACHINES CORPORATION PROVIDES THIS PUBLICATION "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

Some states do not allow disclaimer of express or implied warranties in certain transactions, therefore this statement may not apply to you.

References in this publication to IBM products, programs, or services do not imply that IBM intends to make these available in all countries in which IBM operates.

Any reference to an IBM licensed program or other IBM product in this publication is not intended to state or imply that only IBM's program or other product may be used. Any functionally equivalent program that does not infringe any of the intellectual property rights may be used instead of the IBM product.

Evaluation and verification of operation in conjunction with other products, except those expressly designated by IBM, is the user's responsibility.

IBM may have patents or pending patent applications covering subject matter in this document. The furnishing of this document does not give you any license to these patents. You can send license inquiries, in writing, to the IBM Director of Licensing, IBM Corporation, 500 Columbus Avenue, Thornwood, New York 10594, USA.

The information contained in this document has not been submitted to any formal IBM test and is distributed AS-IS. The use of the information or the implementation of any of these techniques is a customer responsibility and depends on the customer's ability to evaluate and integrate them into the customer's operational environment. While each item has been reviewed by IBM for accuracy in a specific situation, there is no guarantee that the same or similar results will be obtained elsewhere. Customers attempting to adapt these techniques to their own environments do so at their own risk.

## **Trademarks and service marks**

The following terms, used in this publication, are trademarks of the IBM Corporation in the United States or other countries or both:

## **Summary of Amendments**

<b>Date</b>	<b>Changes</b>
7 <sup>th</sup> January 2015	Support for MQ v7.1,v7.5 and v8.0.0.2 releases
25 September 2011	Support for Topic and Sub objects. Updated Queue objects.
27 February 2008	Support for using with WebSphere MQ Client installed introduced
21 January 2008	Support for browsing messages non-destructively introduced
15 January 2008	Improvements to reduce connections made to queue managers
6 January 2008	Support for remote queue managers (distributed-only) introduced
16 December 2007	Support for status objects (queue, channel, listener) introduced
2 December 2007	Initial release

---

## Preface

### Abstract

This SupportPac extends the ability of Windows PowerShell to allow for WebSphere MQ administration.

### Possible Uses

This SupportPac is designed for people who want to use Windows PowerShell for WebSphere MQ administration – such as system administrators already familiar with PowerShell who are new to WebSphere MQ, or WebSphere MQ administrators who have sys admin responsibilities for other products with PowerShell interfaces.

### Approach

Version 1.0 is an update to the earlier demonstration of the potential of PowerShell for WebSphere MQ. There is more work to do, and it is likely that updates will follow.

Remaining work includes:

- Completing support for z/OS administration
- Adding support for accessing runtime objects, such as connections

Feedback is welcome as development progresses. A shortcut to a forum where development will be discussed is included in the package. Any comments for new cmdlets, new features to the provided cmdlet set, or other improvements are very welcome.

---

## Chapter 1. Installation Instructions

### If you already use PowerShell

“PowerShell for WebSphere MQ” is available as a PowerShell snap-in. This is a DLL which can be added to your existing PowerShell profile.

This has the benefit that you can keep any existing preferences or customizations you have made to your console.

#### To add the WebSphere MQ snap-in to PowerShell:

Refer to the formal documentation on registering Cmdlets at MSDN:

<http://msdn2.microsoft.com/en-us/library/ms714644.aspx>

Unpack the mo74.zip package and put the contents of the “manual install” directory together in the same permanent location. The DLL files provide the PowerShell snap-in, and the XML file provides the online documentation.

In summary:

- 1) Use **installutil.exe** – part of the Microsoft .NET Framework SDK to register the provided DLL

This needs to be done for all of the shipped DLLs and only needs to be done once.

```
C:\>InstallUtil webspheremq.dll
Microsoft (R) .NET Framework Installation utility version 2.0.50727.832
Copyright (c) Microsoft Corporation. All rights reserved.

Running a transacted installation.

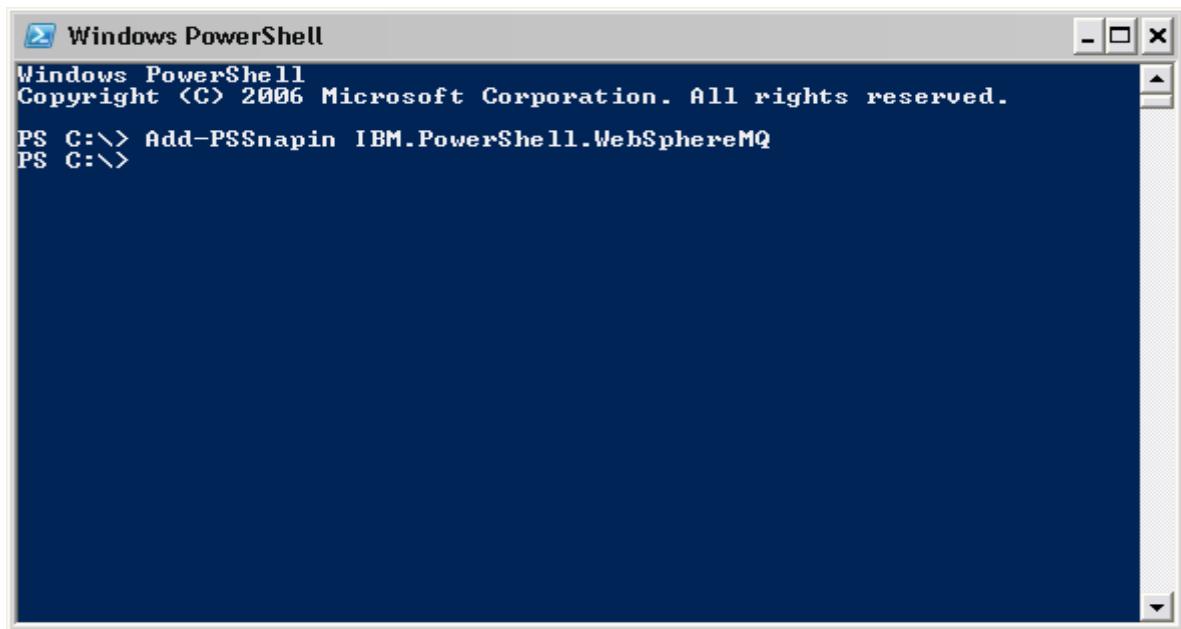

Beginning the Install phase of the installation.
See the contents of the log file for the C:\Documents and Settings\Administrator\My Documents\Visual Studio 2005\Projects\PowerShell\webspheremq\webspheremq\bin\Release\WebSphereMQ.dll assembly's progress.
The file is located at C:\Documents and Settings\Administrator\My Documents\Visual Studio 2005\Projects\PowerShell\webspheremq\webspheremq\bin\Release\WebSphereMQ.InstallLog.
Installing assembly 'C:\Documents and Settings\Administrator\My Documents\Visual Studio 2005\Projects\PowerShell\webspheremq\webspheremq\bin\Release\WebSphereMQ.dll'.
Affected parameters are:
    logtoconsole =
        assemblypath = C:\Documents and Settings\Administrator\My Documents\Visual Studio 2005\Projects\PowerShell\webspheremq\webspheremq\bin\Release\WebSphereMQ.dll
        logfile = C:\Documents and Settings\Administrator\My Documents\Visual Studio 2005\Projects\PowerShell\webspheremq\webspheremq\bin\Release\WebSphereMQ.InstallLog

The Install phase completed successfully, and the Commit phase is beginning.
See the contents of the log file for the C:\Documents and Settings\Administrator\My Documents\Visual Studio 2005\Projects\PowerShell\webspheremq\webspheremq\bin\Release\WebSphereMQ.dll assembly's progress.
The file is located at C:\Documents and Settings\Administrator\My Documents\Visual Studio 2005\Projects\PowerShell\webspheremq\webspheremq\bin\Release\WebSphereMQ.InstallLog.
Committing assembly 'C:\Documents and Settings\Administrator\My Documents\Visual Studio 2005\Projects\PowerShell\webspheremq\webspheremq\bin\Release\WebSphereMQ.dll'.
Affected parameters are:
    logtoconsole =
        assemblypath = C:\Documents and Settings\Administrator\My Documents\Visual Studio 2005\Projects\PowerShell\webspheremq\webspheremq\bin\Release\WebSphereMQ.dll
        logfile = C:\Documents and Settings\Administrator\My Documents\Visual Studio 2005\Projects\PowerShell\webspheremq\webspheremq\bin\Release\WebSphereMQ.InstallLog

The Commit phase completed successfully.
The transacted install has completed.

C:\>
```

- 2) In a PowerShell command window, use **Add-PSSnapin** to add the Cmdlets to your console. This needs to be done for every PowerShell window that you open.

A screenshot of a Windows PowerShell window titled "Windows PowerShell". The window shows the following text:  
Windows PowerShell  
Copyright (C) 2006 Microsoft Corporation. All rights reserved.  
PS C:\> Add-PSSnapin IBM.PowerShell.WebSphereMQ  
PS C:\>

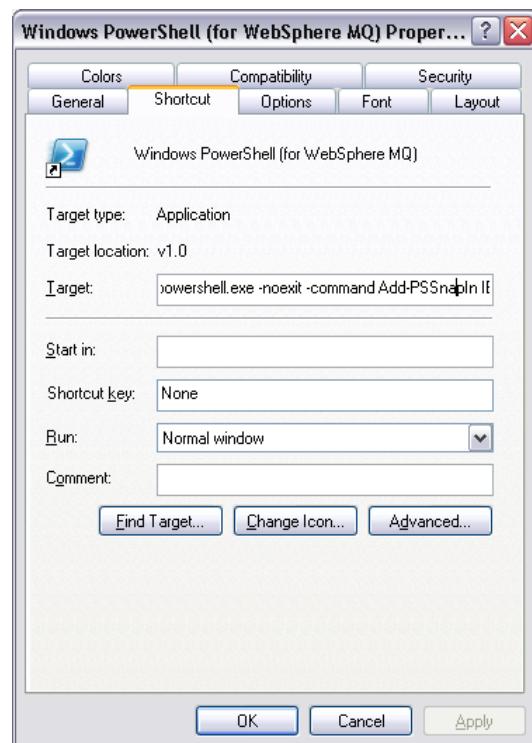

**Tip:**

To save typing this every time, you can create a shortcut to powershell.exe, modifying the target to:

```
%SystemRoot%\SysWOW64\WindowsPowerShell\v1.0\powershell.exe  
-noexit -command Add-PSSnapIn IBM.PowerShell.WebSphereMQ
```

If the Operating System is 32 bit then modify the target path as

```
%SystemRoot%\system32\WindowsPowerShell\v1.0\powershell.exe  
-noexit -command Add-PSSnapIn IBM.PowerShell.WebSphereMQ
```

## If you are new to PowerShell

If you do not have any existing PowerShell customization that you mind losing, you can use the provided installer which carries out the install for you.

*(This is also useful if you do not have the .NET Framework SDK).*

Run **setup.exe** and follow the provided instructions.

A shortcut will be added to the Start Menu for launching PowerShell with the WebSphere MQ snap-in enabled.

**Note:** You need to install Windows PowerShell before running setup.exe. If PowerShell is not installed, setup.exe will direct you to where you can download a copy of PowerShell for your system.

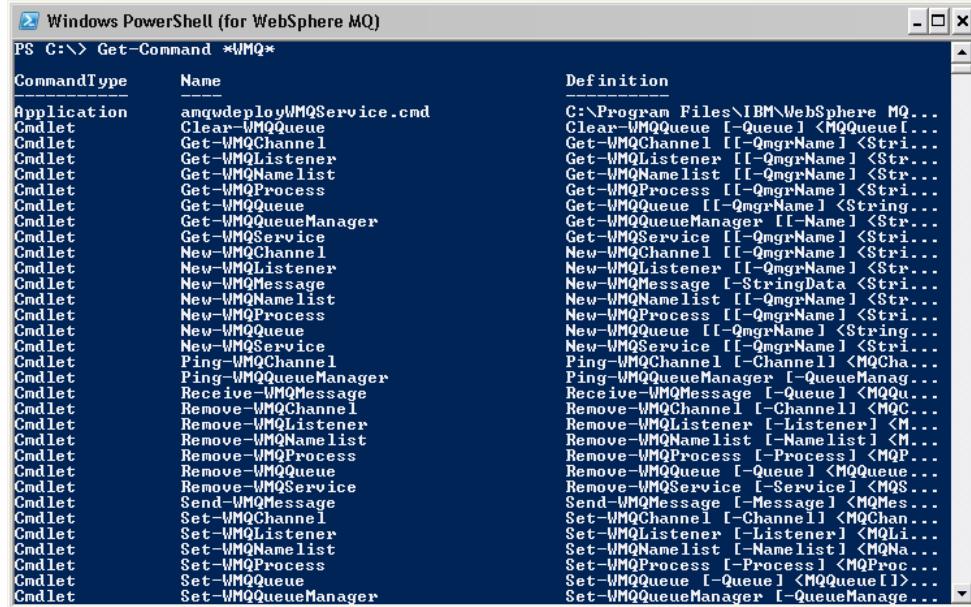

## Chapter 2. Getting started

### If you already use PowerShell

The WebSphere MQ cmdlets are documented in the standard PowerShell way. For example:

**Get-Command \*WMQ\***

to get a list of all commands added by the WebSphere MQ snap-in

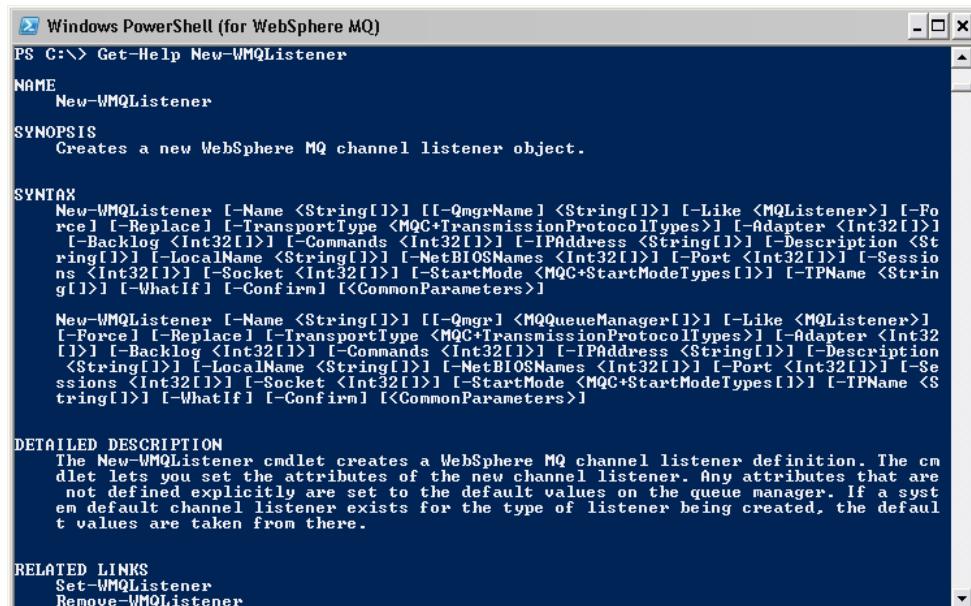

Windows PowerShell (for WebSphere MQ)  
PS C:\> Get-Command \*WMQ\*

CommandType	Name	Definition
Application	amqdeployWMQService.cmd	C:\Program Files\IBM\WebSphere MQ...
Cmdlet	Clear-WMQQueue	Clear-WMQQueue [-Queue] <Queue...
Cmdlet	Get-WMQChannel	Get-WMQChannel [-QmgrName] <Stri...
Cmdlet	Get-WMQListener	Get-WMQListener [-QmgrName] <Stri...
Cmdlet	Get-WMQNameList	Get-WMQNameList [-QmgrName] <Stri...
Cmdlet	Get-WMQProcess	Get-WMQProcess [-QmgrName] <Stri...
Cmdlet	Get-WMQQueue	Get-WMQQueue [-QmgrName] <String...
Cmdlet	Get-WMQQueueManager	Get-WMQQueueManager [-Name] <Stri...
Cmdlet	Get-WMQService	Get-WMQService [-QmgrName] <Stri...
Cmdlet	New-WMQChannel	New-WMQChannel [-QmgrName] <Stri...
Cmdlet	New-WMQListener	New-WMQListener [-QmgrName] <Stri...
Cmdlet	New-WMQNameList	New-WMQNameList [-QmgrName] <Stri...
Cmdlet	New-WMQProcess	New-WMQProcess [-QmgrName] <Stri...
Cmdlet	New-WMQQueue	New-WMQQueue [-QmgrName] <String...
Cmdlet	New-WMQService	New-WMQService [-QmgrName] <Stri...
Cmdlet	Ping-WMQChannel	Ping-WMQChannel [-Channel] <MOCha...
Cmdlet	Ping-WMQQueueManager	Ping-WMQQueueManager [-QueueManag...
Cmdlet	Receive-WMQMessage	Receive-WMQMessage [-Queue] <MQQu...
Cmdlet	Remove-WMQChannel	Remove-WMQChannel [-Channel] <MQC...
Cmdlet	Remove-WMQListener	Remove-WMQListener [-Listener] <M...
Cmdlet	Remove-WMQNameList	Remove-WMQNameList [-NameList] <M...
Cmdlet	Remove-WMQProcess	Remove-WMQProcess [-Process] <MQP...
Cmdlet	Remove-WMQQueue	Remove-WMQQueue [-Queue] <MQQueue...
Cmdlet	Remove-WMQService	Remove-WMQService [-Service] <MQS...
Cmdlet	Send-WMQMessage	Send-WMQMessage [-Message] <MQMes...
Cmdlet	Set-WMQChannel	Set-WMQChannel [-Channel] <MQChan...
Cmdlet	Set-WMQListener	Set-WMQListener [-Listener] <MQLi...
Cmdlet	Set-WMQNameList	Set-WMQNameList [-NameList] <MQNa...
Cmdlet	Set-WMQProcess	Set-WMQProcess [-Process] <MQProc...
Cmdlet	Set-WMQQueue	Set-WMQQueue [-Queue] <MQQueue[]...
Cmdlet	Set-WMQQueueManager	Set-WMQQueueManager [-QueueManage...

and then:

**Get-Help New-WMQListener**

to get a brief overview of help for any particular command

Windows PowerShell (for WebSphere MQ)  
PS C:\> Get-Help New-WMQListener

**NAME**  
New-WMQListener

**SYNOPSIS**  
Creates a new WebSphere MQ channel listener object.

**SYNTAX**  
New-WMQListener [-Name <String[]>] [-QmgrName <String[]>] [-Like <MQListener>] [-Force] [-Replace] [-TransportType <MQC+TransmissionProtocolTypes>] [-Adapter <Int32[]>] [-Backlog <Int32[]>] [-Commands <Int32[]>] [-IPAddress <String[]>] [-Description <String[]>] [-LocalName <String[]>] [-NetBIOSNames <Int32[]>] [-Port <Int32[]>] [-Sessions <Int32[]>] [-Socket <Int32[]>] [-StartMode <MQC+StartModeTypes[]>] [-TPName <String[]>] [-WhatIf] [-Confirm] [<CommonParameters>]

New-WMQListener [-Name <String[]>] [-Qmgr] <MQQueueManager[]> [-Like <MQListener>] [-Force] [-Replace] [-TransportType <MQC+TransmissionProtocolTypes>] [-Adapter <Int32[]>] [-Backlog <Int32[]>] [-Commands <Int32[]>] [-IPAddress <String[]>] [-Description <String[]>] [-LocalName <String[]>] [-NetBIOSNames <Int32[]>] [-Port <Int32[]>] [-Sessions <Int32[]>] [-Socket <Int32[]>] [-StartMode <MQC+StartModeTypes[]>] [-TPName <String[]>] [-WhatIf] [-Confirm] [<CommonParameters>]

**DETAILED DESCRIPTION**  
The New-WMQListener cmdlet creates a WebSphere MQ channel listener definition. The cmdlet lets you set the attributes of the new channel listener. Any attributes that are not defined explicitly are set to the default values on the queue manager. If a system default channel listener exists for the type of listener being created, the default values are taken from there.

**RELATED LINKS**  
Set-WMQListener  
Remove-WMQListener

**Get-Help New-WMQListener -detailed**

returns more in-depth help for any particular command

## If you are new to PowerShell

### Learning PowerShell

The WebSphere MQ cmdlets have been written to conform to PowerShell conventions, so any introductions or tutorials to PowerShell will be valuable when learning PowerShell for WebSphere MQ.

Some links to useful PowerShell resources are included below.

A **PowerShell for WebSphere MQ Cookbook** is also included with this package to help get new users started. The aim of this is to demonstrate the sort of commands that are possible.

## **Chapter 3. Uninstalling**

### **If you installed manually**

Refer to PowerShell documentation for full details.

In summary, you can use the commands:

```
Remove-PSSnapin IBM.PowerShell.WebSphereMQ
```

and

```
InstallUtil /u WebSphereMQ.dll
```

to undo the steps detailed in Chapter 1

### **If you installed using setup.exe**

The SupportPac can be fully removed using the Windows **Add/Remove Programs** feature.

### **Known Issues**

Ping command fails with an Parameter missing exception. This will be fixed in the future releases.
