

Certified for  Cloud & Smarter Infrastructure software	IBM Tivoli Storage Manager V7.1 Implementation – Exam #C2010-511 Sample Test
---	--

Sample Test:

This sample test is designed to give the candidate an idea of the content and format of the questions that will be on the certification exam. Performance on the sample test is NOT an indicator of performance on the certification exam and this should not be considered an assessment tool.

(Answer Key at end)

1. Which backup method is used to increase the throughput of incremental backups?
 - A. image backup
 - B. file list backup
 - C. multi-session backup
 - D. memory efficient backup

2. {What does the command `dsmserv format` do?
 - A. It initializes the DB2 instance.
 - B. It prepares the database and log files for recovery.
 - C. It creates the IBM Tivoli Storage Manager (TSM) database.
 - D. It initializes the TSM server database and recovery log.

3. A newly installed tape library is the third library in a shared library environment. For a proper integration into the Tivoli Storage Manager (TSM) server environment a different path must be added to different TSM servers. Where are these definitions added?
 - A. TSM server
 - B. TSM library client
 - C. TSM managed server
 - D. TSM library manager

4. A customer is using a tape storage pool but wants to reduce the number of tapes they write each day. They also want to restore by mounting as few tapes as possible. What will satisfy both of these requirements?
 - A. backupsets
 - B. node replication
 - C. non-collocation
 - D. collocation by node groups

5. When using Configuration Manager to distribute administrative schedules, which task must be completed by the IBM Tivoli Storage Manager administrator?
- A. Each schedule must be validated on the managed server.
 - B. Both client and administrative schedules must be activated.
 - C. Each administrative schedule must be activated on the managed server.
 - D. A configuration refresh must be repeated for the schedules to be activated.
6. What is the minimum level of administrative authority for an administrator to define a storage pool?
- A. system
 - B. operator
 - C. restricted storage
 - D. unrestricted storage
7. Which option must be set in the client options file for the client acceptor daemon to manage the scheduler?
- A. autostart=yes
 - B. managedservices=yes
 - C. passwordaccess generate
 - D. managedservices webclient
8. What is the advantage of using the Group Backup function?
- A. It uses multiple backup streams in parallel.
 - B. It is faster because it works like a journaled backup.
 - C. It is faster because it is always incremental-by-date.
 - D. It creates a backup of a group of files that is managed as a single logical entity.
9. What is the purpose of the `move nodedata` command?
- A. Move the data of specific nodes offsite to the vault.
 - B. Move all data for the node or nodes to a set of tapes.
 - C. Move all data of the specified node or nodes to backupsets.
 - D. Move all data for the node or nodes specified to other volumes.
10. Which file contains the information required to recover a Tivoli Storage Manager (TSM) server to the point in time represented by the last database backup?
- A. Server Activity Log file
 - B. TSM Server Options file
 - C. Device Configuration file
 - D. Disaster Recovery Plan file
