

Sample Test for C2070-991 IBM FileNet P8, Deployment Professional

1. In preparation for a new IBM FileNet P8 Content Platform Engine (CPE) installation, many operating system user accounts are needed. To accomplish the tasks below, one account is needed:

- **Create and configure the application server/domain/profile for CPE**
- **Start or stop application server instance when needed**
- **Modify the application server files or directories as needed for deploying CPE using the Configuration Manager tool**
- **Provide create, read and write permissions for directories on devices or drives that are used for external CPE file storage**

Which operating system user account will be responsible for the listed tasks?

- A. Content Platform Engine installer account (cpe_install_user)
- B. Content Platform Engine operating system user (cpe_os_user)
- C. Content Platform Engine Configuration Manager user (config_mgr_user)
- D. Content Platform Engine application server installation administrator (cpe_appserver_install_user)

2. The IBM FileNet Content Manager developers at a large banking institution are planning the implementation of a new FileNet CM V5.2.1 system. During one of their many meetings with their system administrator, they are told that V5.2.1 now supports sequential ids.

Which of the following is true about this new enhancement?

- A. The value of the new UseSequentialIds property is set to false by default.
- B. Sequential IDs are monotonic ordering applied by the underlying database.
- C. Though providing space savings, sequential IDs have not been noted to improve performance appreciatively.
- D. Sequential IDs might be stored more compactly but present no advantage in the efficiency of their management.

3. In preparation for a single-server installation with the Composite Platform Installation Tool (CPIT), which two of the following software components must be installed before running the CPIT on the server?

- A. IBM HTTP Server
- B. An IBM DB2 license must be installed on the server
- C. A Microsoft Active Directory license must be installed on the server
- D. Both IBM WebSphere Application Server and DB2 database must be installed on the server.
- E. CPIT uses a set of predetermined software installation packages and it does not require any existing IBM or third party software component installations

4. A healthcare company has asked the FileNet administrator to create an object store that will be used by a new department. The FileNet administrator is setting up a development environment where they will delete an old object store.

Which account should the FileNet administrator use to create and delete object stores?

- A. os_admin
- B. gcd_admin
- C. cpe_admin
- D. object_store_admin

5. A consultant for an airline needs to federate content from their IBM Content Manager OnDemand (CMOD) system into their IBM Content Platform Engine system.

Which of the following web based user interfaces only supports viewing the federated content from CMOD but not downloading it?

- A. IBM WEBi
- B. Workplace
- C. Workplace XT
- D. IBM Content Navigator

6. To verify that the Content Platform Engine server is up and running, access the Content Platform Engine Startup Context (Ping Page).

Which of the below URL's will display the CPE Ping Page?

- A. http://myserver:port/P8CE/Health
- B. http://myserver:port/P8CE/Engine
- C. http://myserver:port/FileNet/Engine
- D. http://myserver:port/FileNet/Health

7. The IBM FileNet Content Engine version was upgraded to Content Platform Engine (CPE) V5.2.1. Users now receive the "Error Message: Filter [AE PreprocessorFilter]: could not be initialized" error when logging into Workplace XT (WPXT). It is determined that the CPE client files do not match between the CPE and WPXT.

Where can compatible CPE client files for WPXT be obtained?

- A. In the CPE client fixpack.
- B. In the CPE server fixpack.
- C. In the WPXT client installation zip or tar file.
- D. Upgrade WPXT to the most current version and redeploy WPXT to obtain the newest CPE client files.

8. A business partner is reviewing the IBM FileNet Configuration Manager for Content Platform Engine tasks that need to be run.

What task must be run, prior to the "Configure Bootstrap and Text Extraction" so that the information is included in the Engine-xx.ear file?

- A. Choose Licenses
- B. Configure the LDAP
- C. Configure Login Modules
- D. Configure GCD JDBC Data Sources

9. What is the minimum operating system version level that is required when installing IBM FileNet Content Manager V5.2.1?

- A. RHEL V4
- B. AIX V7.1 TL1
- C. Windows 2003 Server
- D. AIX V7.1 TL1 Service Pack (SP) 2

Answer Key

1. D
2. B
3. BE
4. B
5. C
6. C
7. A
8. A
9. D
