

1. A company collected the attributes from various sources and implemented in MDM. The consolidated entities are centralized in the MDM database to represent the golden record for that person, organization and object. Thereafter business users change the data directly in the MDM database rather than in the source systems.

Which one represents the correct type of MDM implementation?

- A. Hybrid
- B. Virtual
- C. Physical
- D. Collaborative

2. Using MDM Workbench which category of code table can be created for custom address usage types?

- A. C1
- B. C2
- C. C3
- D. C4

3. What type of transaction can be used when creating a new custom transaction in the MDM Workbench?

- A. Txn Transaction
- B. Entity Transaction
- C. Proxy Transaction
- D. Custom Transaction

4. A company wants to configure a rule to validate addresses.

Which MDM components can be used? (Choose two.)

- A. Internal Framework
- B. External Framework
- C. Extension Framework
- D. Business Key Framework
- E. External Rules Framework

5. A company is planning to remove duplicates from the master data repository.

Which domain supports this by default?

- A. Party
- B. Account
- C. Location
- D. Grouping

6. A system administrator is required to abort batch job processes.

Which is the correct operation for this purpose?

- A. Send an updateTask transaction request to change a batch job status from 'In Progress' to 'Aborted'.

- B. Send an updateTask transaction request to change a batch job status from 'In Progress' to 'Stopped'.
- C. Send an updateTask transaction request to change a batch job status from 'In Progress' to 'Completed'.
- D. Send an updateTask transaction request to change a batch job status from 'In Progress' to 'Terminated'.

7. A company would like to use the Event Manager to validate the high risk customers terms and conditions each week at midnight.

What occurs after the first time the terms and conditions are validated for the customer that will ensure the event rule is executed each week?

- A. The Party Id and Next Processing Date are added to the PROCESSACTION table.
- B. The Party Id and Next Processing Date are added to the PROCESSCONTROL table.
- C. The Party Id is added to the PROCESSACTION and the Next Process Date is added to the PROCESSCONTROL table.
- D. The Party Id is added to the PROCESSCONTROL and the Next Process Date is added to the PROCESSACTION table.

8. A company is using the Adaptive Service Interface (ASI) to map industry standard messages to the MDM message formats. A requirement is to use the ASI mapping from the batch processor.

What properties in the batch_extension.properties must be configured to do this?

- A. ASI.Request and ASI.Repsonse
- B. Parse.ASI_Request and Parse.ASI_Response
- C. ParserConfiguration.ASI_Request and ParserConfigüreation.ASI_Response
- D. ParseAndExecConfiguration.ASI_Request and ParseAndExecConfiguration.ASI_Response

9. After completing an installation, it is determined that the installation was unsuccessful. Further assistance from support is required to find the root cause.

Which logs must be submitted to support?

- A. WebSphere logs, MDM logs and IVT logs
- B. WebSphere logs, SAM logs and MDM logs
- C. Installation Manager logs, WebSphere logs and IVT logs
- D. Installation Manager logs, WebSphere logs and MDM logs

Answer Key

1. C
2. C
3. A
4. CE
5. A
6. B
7. D
8. D
9. D
