Installing Infoprint 2000 Windows NT/2000/XP Drivers on Windows 2003 Server

[Rate this document](#)

Document Author: Shayne Friehauf

Document ID: **TD101304**

Doc. Organization: Printing Systems

Document Revised: 12/02/2003

Product(s) covered: Infoprint 2000

Abstract: Before installing Infoprint 2000 Windows NT, 2000, and/or XP Drivers on Windows 2003 Server you must first disable the Policy Object "Disallow installation of printers using kernel mode drivers" using Microsoft Management Console (MMC). Described are the steps to run up MMC and disable this setting.

Run up Microsoft Management Console (MMC):
Start --> Run, enter mmc and select OK

1. Run the Add/Remove Snap-in dialog:
File --> Add/Remove Snap-in
2. In the Add/Remove Snap-in dialog box, select Add and add a Group Policy Object Editor.
3. Now, back at the MMC Console you should have a choice of Local Computer Policy:
4. Under Local Computer Policy --> Administrative Templates --> Printers, find "Disallow installation of printers using kernel mode drivers". Right click on it and select Properties. Select the Disable Radio button and Apply your change. Save your changes (use the default file name of Console.mms) and Exit MMC.
5. The Infoprint 2000 Windows NT, 2000, and XP drivers will now install successfully under Windows 2003 Server and can be shared out to client PCs running Windows NT, 2000, or XP as normal.
