How much coordination do you need between   your AS/400 and your printer?

Let's ask the question this way. How would you like your printer to print exactly what you tell it to print, reliably, without networking hassles? So everyone can get critical printed messages quickly. And act on them immediately. That's the advantage of using IBM printers with your AS/400. Every IBM printer is built and tested to ensure seamless integration with AS/400 requirements. Our server engineers are just as careful — every new AS/400 release is extensively tested on new and older IBM printer models. So if you upgrade, your printers won't be obsolete. How's that for teamwork? To see how IBM printers can help your team stay ahead, call 1 800 358-6661, select option 3 and ask for priority code 10838017R.
