DB2 OLAP Server Analyzer V8.1 -- Refreshed
FixPak 5 – instructions for the Analyzer 7.0.1.12 patch

This document describes how to apply the Analyzer 7.0.1.12 patch on top of FixPak 5 for DB2 OLAP Server Analyzer 8.1 (Refreshed). You must have FixPak 5 installed before applying this patch. This patch is cumulative; it combines all the fixes from Analyzer 7.0.1.1 through Analyzer 7.0.1.12.

Defects addressed in 7.0.1.12:

Calculations
The "Percent of Member" Calculation Definition dialog does not show correct opposite member for the calc. (CR 5-05-03-0230)

Charts
Combo Report with Report and Graph does not show values on graph when some values are N/A or missing. (CR 1-109535431)

Data Formatting
Calculation values are not displaying after saving, closing, and reopening a report. (CR 1-159603670)

Java Web Client
Null pointer exception when a combo box points to 2 spreadsheets but the selected member exists only in one of the spreadsheets. (CR 1-114129335)

Defects addressed in 7.0.1.9 through 7.0.1.11:

Admin Tools Client
CSS External Authentication require CSS groups to map to Analyzer groups. (CR 1-1168GJ)

Customer VPN / Firewall authentication issue. (CR 05-03-0095)

Java Web Client
Drill Up Performance Enhancement (CR 1-YZ739)

Drill-link fails after upgrade to 7.0.1.6 (CR 05-03-0088)

Analyzer not handling Essbase "Change Password at Next Logon" setting when accessing a database connection. (CR 1-116233)

"Selected member first" not working if using a dimension subset. (CR 04-08-0105)

Analyzer subset definition lost (and replaced by top level member) when subset definition is modified. (CR 05-02-0094)

Member description cannot be shown in Combo Box when datasource is HFM and member selection is 'Also Select Descendants'. (CR 04-09-0047)

Indent on subscription controls using statically selected members is not working in 7.0.1 on HFM Connection. (CR 05-03-0026)

When applying sort using the API Toolkit, overwrite the last Sort entry. (CR 05-03-0061)

Documentation Updates
In the Analyzer 7.0 Installation guide, under the "Configuring Websphere 5.0.1 Application Server" - page 64. Step 7 is where you add the CLASSPATH info. The doc is missing a jar file in the CLASSPATH.
Under what's already be stated in (Step 7) should include the following:
${HYPERION_HUB}/depoyments/others/commons-collections.jar.

To apply patch 7.0.1.12 to Fix Pack 5:
    1. Download the patch file for your operating system in BINARY mode to a temporary directory:
        • On Windows, download the following file:
ftp://service.software.ibm.com/ps/products/db2olap/fixes/analyzer/v81/fp5/patch_7.0.1.12/ana70112win.zip
        • On AIX, download the following file:
ftp://service.software.ibm.com/ps/products/db2olap/fixes/analyzer/v81/fp5/patch_7.0.1.12/ana70112aix.tar.gz
        • On Solaris, download the following file:
ftp://service.software.ibm.com/ps/products/db2olap/fixes/analyzer/v81/fp5/patch_7.0.1.12/ana70112sun.tar.gz
    2. Unpack the ZIP or TAR file to obtain the files that constitute the patch.
    3. Run the AnalyzerSetup executable file to begin the installation.
