

Essbase® XTD Administration Services

Release 6.5.3

Installation Checklist

For detailed installation procedures, see the *Essbase XTD Administration Services Installation Guide* or the *Hyperion Essbase Installation Guide*.

✓	Installation Tasks
	1. Install a supported release of Essbase OLAP Server.
	2. Verify that you have all the necessary software and documentation.
	3. Decide how you want to deploy Administration Services. You can install Administration Services on a different computer or platform from OLAP Server.
	4. Ensure that you have met the installation prerequisites so that Administration Services works properly.
	5. Confirm that your platform is supported by Administration Services and that system requirements are met for the computer on which you are installing.
	6. Install Administration Services.
	7. Migrate users from a previous release of Administration Services (optional).
	8. Start Administration Services.
	9. Set up the Administration Services users.
	10. Make a backup copy of the database used to store user information for Administration Services.
	11. Specify an outgoing mail (SMTP) server on the Administration Server computer.
