

E36

The z/VSE Solutions that Exploit DB2 UDB on Linux

Wilhelm Mild

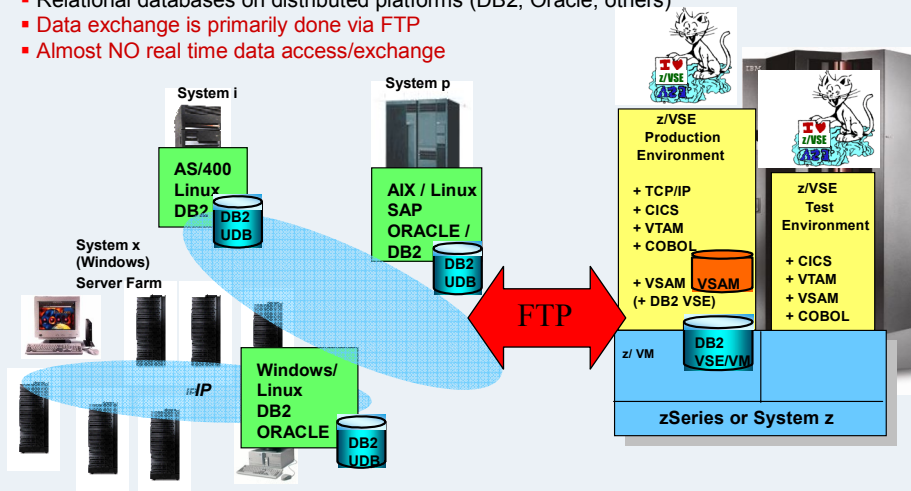

IBM System z Expo

September 17-21, 2007
San Antonio, TX

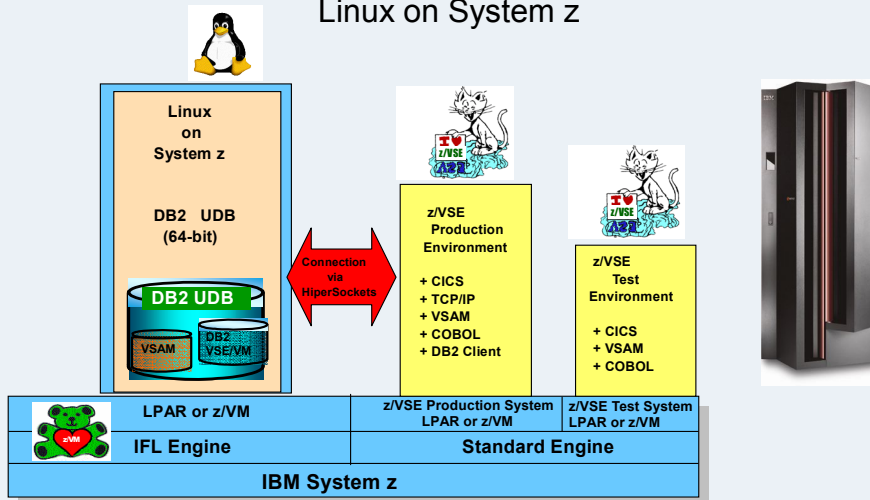

A typical VSE environment today

- Various different servers (System z, System p, System i, System x, and others)
- VSAM data on VSE (some DB2 environments, some other databases)
- Relational databases on distributed platforms (DB2, Oracle, others)
- Data exchange is primarily done via FTP
- Almost NO real time data access/exchange

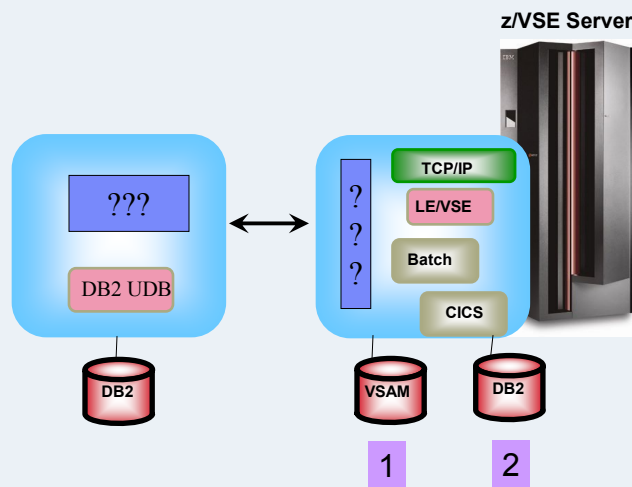

Common data Store

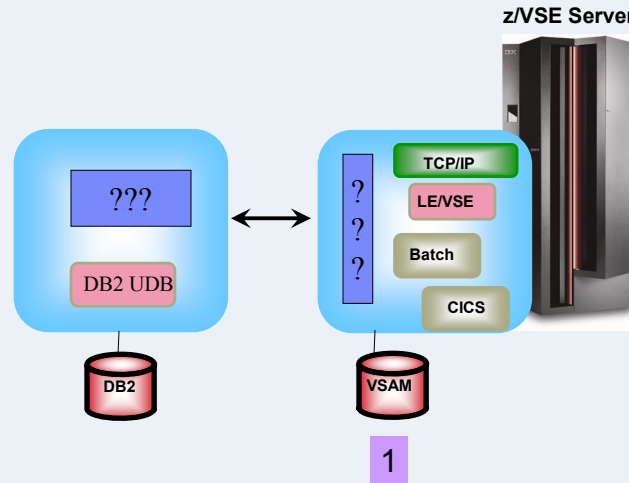

Leverage VSE/VSAM or DB2 data using shared DB2 UDB on Linux on System z

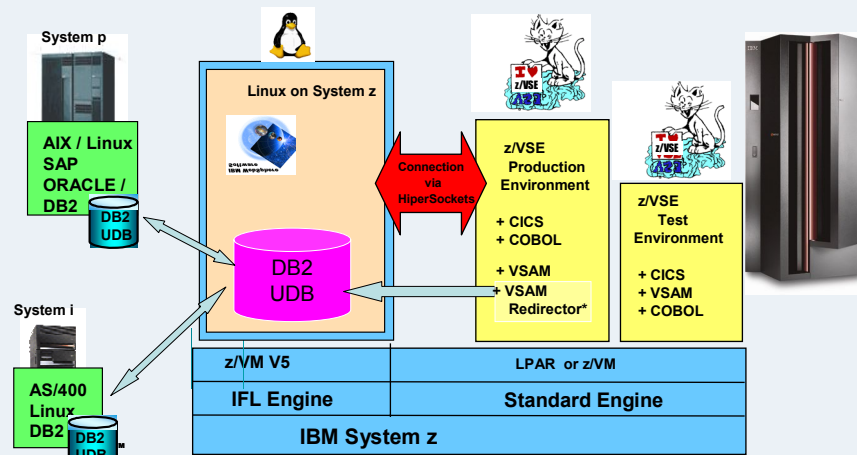

VSE applications and DB2 UDB on Linux on zSeries

(1) VSE VSAM applications and DB2 UDB on Linux

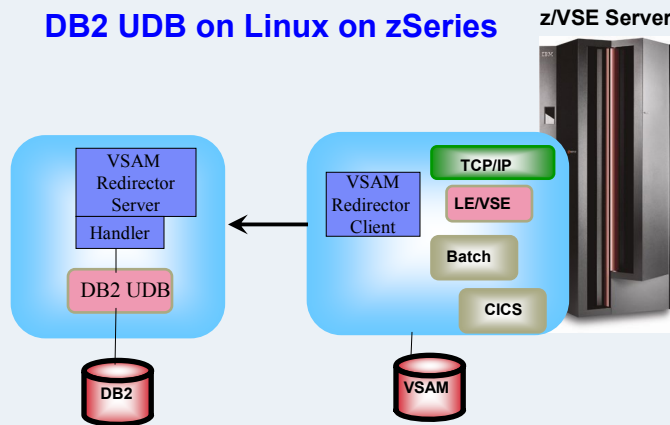

Common Data Store – Transparent Work of VSAM Programs with DB2 UDB on Linux on zSeries

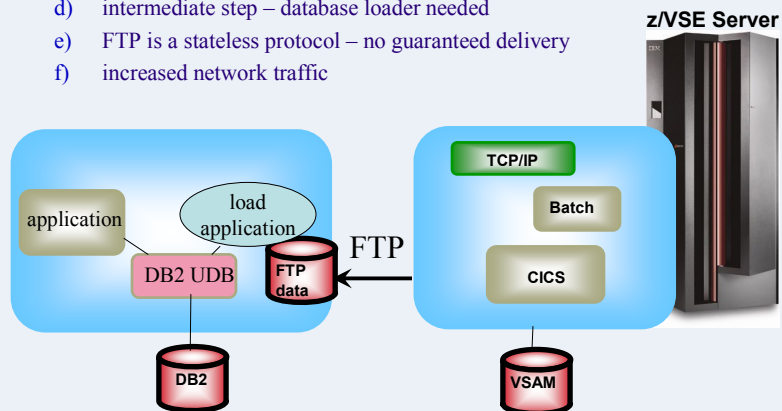

(*) VSAM Redirector – Common data store solution – with DB2 on Linux on System z Solutions without changes to VSAM programs

VSE/VSAM applications access to DB2 UDB on Linux on zSeries

VSE/VSAM applications and FTP data transfer today

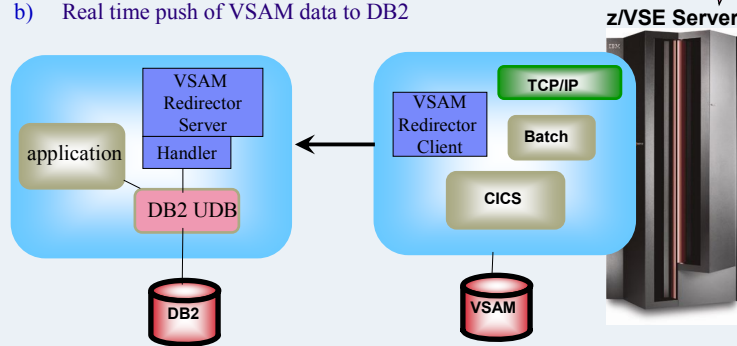

- (1) disadvantages of FTP
 - a) NO real-time access/synchronization
 - b) data immediate out of sync, till next FTP
 - c) always the whole file is transferred
 - d) intermediate step – database loader needed
 - e) FTP is a stateless protocol – no guaranteed delivery
 - f) increased network traffic

VSE/VSAM applications (without any change), access remote relational databases

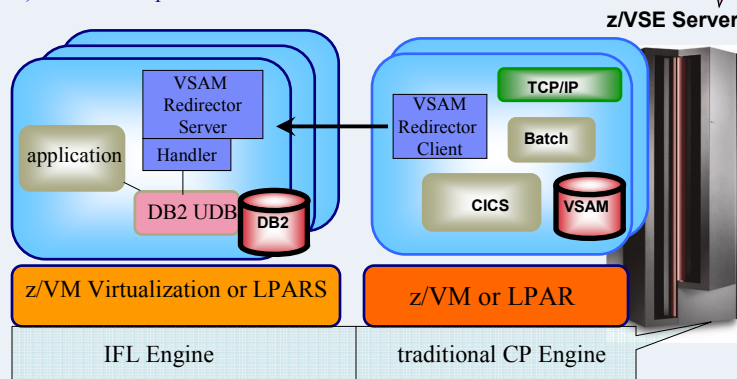

- (1) Real time access VSAM to DB2
 - a) synchronization (two phase commit of VSAM and DB2)
 - b) Real time push of VSAM data to DB2

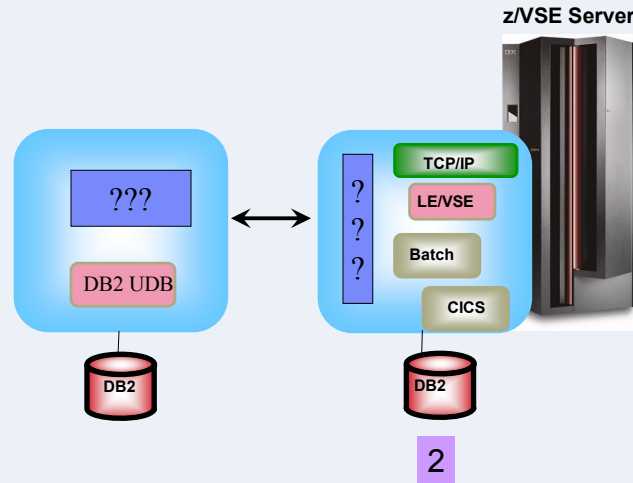

VSE/VSAM applications (without any change), access remote relational databases

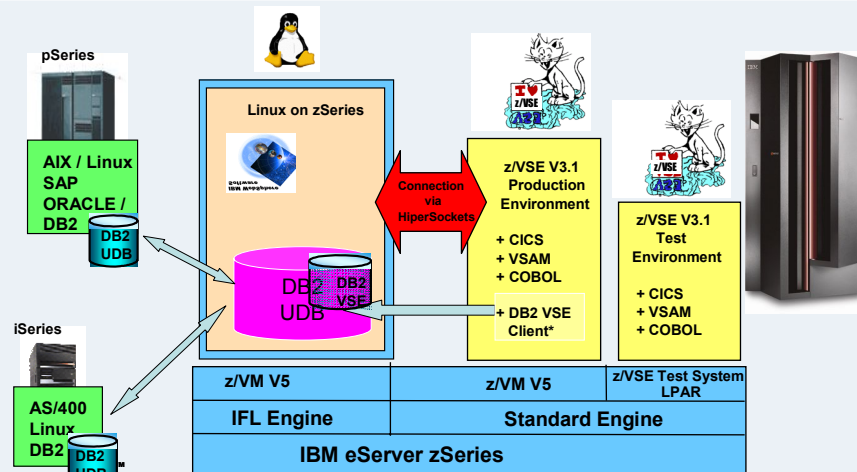

- (1) Real time access VSAM to DB2
 - a) synchronization (two phase commit of VSAM and DB2)
 - b) Real time push of VSAM data to DB2

(2) DB2 VSE applications and DB2 UDB on Linux

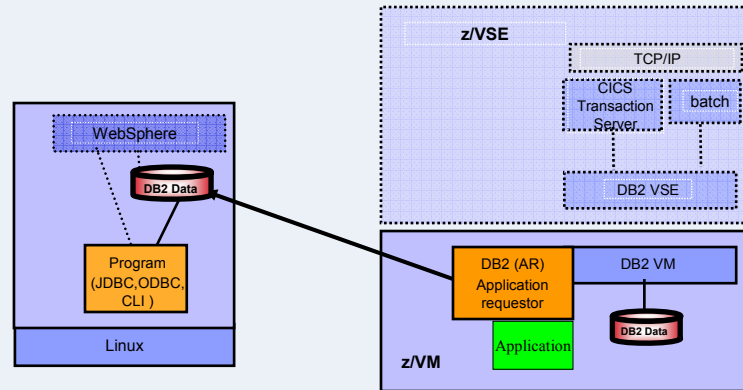

DB2 Scenarios – with DB2 UDB on Linux

(*) DB2 VSE Client – the client functionality only, can be obtained with PRPQ P10154

DB2 VM applications to access, remote DB2 UDB on Linux

f VM application accesses DB2 UDB on Linux

DB2 VSE applications to access, remote DB2 UDB on Linux on zSeries - Special OFFERING

f Original Price Model: License for DB2 VM/VSE AND DB2 UDB for Linux

f PRPQ: P10154 (Ordering Nr: 5799-HAQ)

f Reduced License for DB2 VSE Client only - if NO data on VSE

f Full Price for DB2 UDB on Linux on zSeries

f Special Price for DB2 UDB for Linux on zSeries

f Note:

f Both Products are needed because of the Programming interface and precompiler

f On VSE the SQL language that can be used is the DB2 VSE SQL Language – because of precompiler

DB2 VSE and DB2 UDB on Linux on zSeries

Why use DB2 UDB on Linux on zSeries with VSE Core applications

- Modern environment in DB2 UDB on Linux on zSeries
- Existence of lots of tools for:
 - database management
 - Optimization and Tuning
 - Data analysis (Warehouse, Mining, OLAP)
- ASCII environment – easy integration with distributed DB2 UDBs
- Consolidation of DB2 UDB databases from distributed platforms
- **Note: DB2 CONNECT is not needed on Linux on zSeries**

DB2 VSE and DB2 UDB on Linux on zSeries

Why use DB2 UDB on Linux on zSeries with VSE Core applications

- VSE applications access to DB2 UDB on Linux via HiperSockets
 - reliable network – no wires
 - fast network (memory copy speed)
 - transparent
- Core applications on VSE (CICS and batch):
 - can be used unchanged with considerations of EBCDIC – ASCII code pages (i.e. sorts with low values)
 - can show performance degradations if mass single row processing is done – these applications might need adaptations
- **Note: DB2 CONNECT is not needed on Linux on zSeries**

Environment and Database design

Configuration for CICS applications and remote DB2 UDB database

▪ VSE environment

- configure DB2 VSE database directory
 - configure ARISDIRD (IP, port, DBname of remote database)
- enable DRDA code (batch and online)
 - configure ARIS74LD (batch), ARIS745D (AR)
 - new transaction in CICS to bind packages (CBND) to remote AS (done during program preparation)

▪ zLinux environment

- configure database manager on DB2 UDB zLinux
 - change some DBM parameters to allow implicit connect from within CICS
- configure VSE batch and ISQL options (create remote packages)
 - ARIISQL for ISQL and ARIDSQL for Batch

▪ **Note: DB2 CONNECT is not needed on Linux on zSeries**

Environment and Database design

Configuration for CICS applications and remote DB2 UDB database

Application considerations:

- migrate tables from DB2 VSE to DB2 UDB zLinux
 - UDB export/import options
 - use of federated DB2 UDB options and a cursor application
- existing CICS/DB2 VSE applications
 - no changes to the source code required (except Code page issues)
 - the SQL precompile creates new packages on the remote DB2 UDB)
- existing VSE batch DB2 VSE applications
 - no changes to source code required
 - adapt CONNECT statements to access remote DB2 UDB

**DB2 UDB on Linux on System z
logical integrates
DB2 VSE
via Federated option in DB2 UDB**

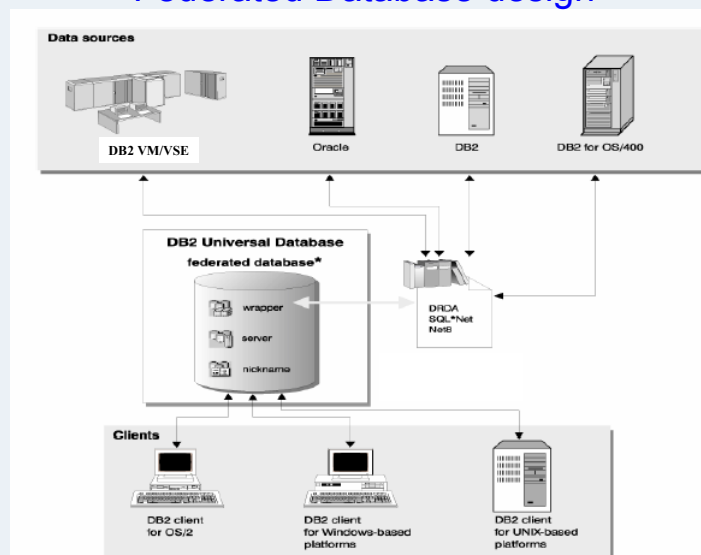

f Minimum changes – maximum combination

f DB2 UDB for Linux on System z with Federated Option – includes DB2 VSE logically

f DB2 UDB Applications have transparent access to DB2/VSE

Federated Database design

Summary

Solutions with DB2 UDB with Linux on zSeries enable modern possibilities with VSE:

- easy to configure environment
- easy migration from DB2 VSE to DB2 UDB zLinux
- in general, no source code change for existing VSE applications
- faster IBM development for DB2 UDB
- advanced SQL on DB2 UDB than DB2 VSE
- more option for DB2 UDB integration to other distributed environments and Development tools (Rational, WebSphere, ...)
