Trademarks

IBM, the IBM logo, and ibm.com are trademarks or registered trademarks of International Business Machines Corp., registered in many jurisdictions worldwide. Other product and service names might be trademarks of IBM or other companies. A current list of IBM trademarks is available on the Web at www.ibm.com/legal/copytrade.shtml.

Notes:

Performance is in Internal Throughput Rate (ITR) ratio based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput improvements equivalent to the performance ratios stated here. IBM hardware products are manufactured from new parts, or new and serviceable used parts. Regardless, our warranty terms apply. All customer examples cited or described in this presentation are presented as illustrations of the manner in which some customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics will vary depending on individual customer configurations and conditions. This publication was produced in the United States. IBM may not offer the products, services or features discussed in this document in other countries, and the information may be subject to change without notice. Consult your local IBM business contact for information on the product or services available in your area. All statements regarding IBM's future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only.

Information about non-IBM products is obtained from the manufacturers of those products or their published announcements. IBM has not tested those products and cannot confirm the performance, compatibility, or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

Prices subject to change without notice. Contact your IBM representative or Business Partner for the most current pricing in your geography.

Agenda

- Overview
- Basic Network Setup
- Advanced Network Setup
- Networking Tools
- Problem Determination / Debugging

Agenda

- Overview
- Basic Network Setup

Networking Options

- OSA
- HiperSockets
- Virtual NIC
 - Guest LAN
 - VSWITCH
- LCS
- CTC
- NETIUCV

Networking Drivers

- QETH
- LCS
- CTC (functionally stable)
- NETIUCV (functionally stable)

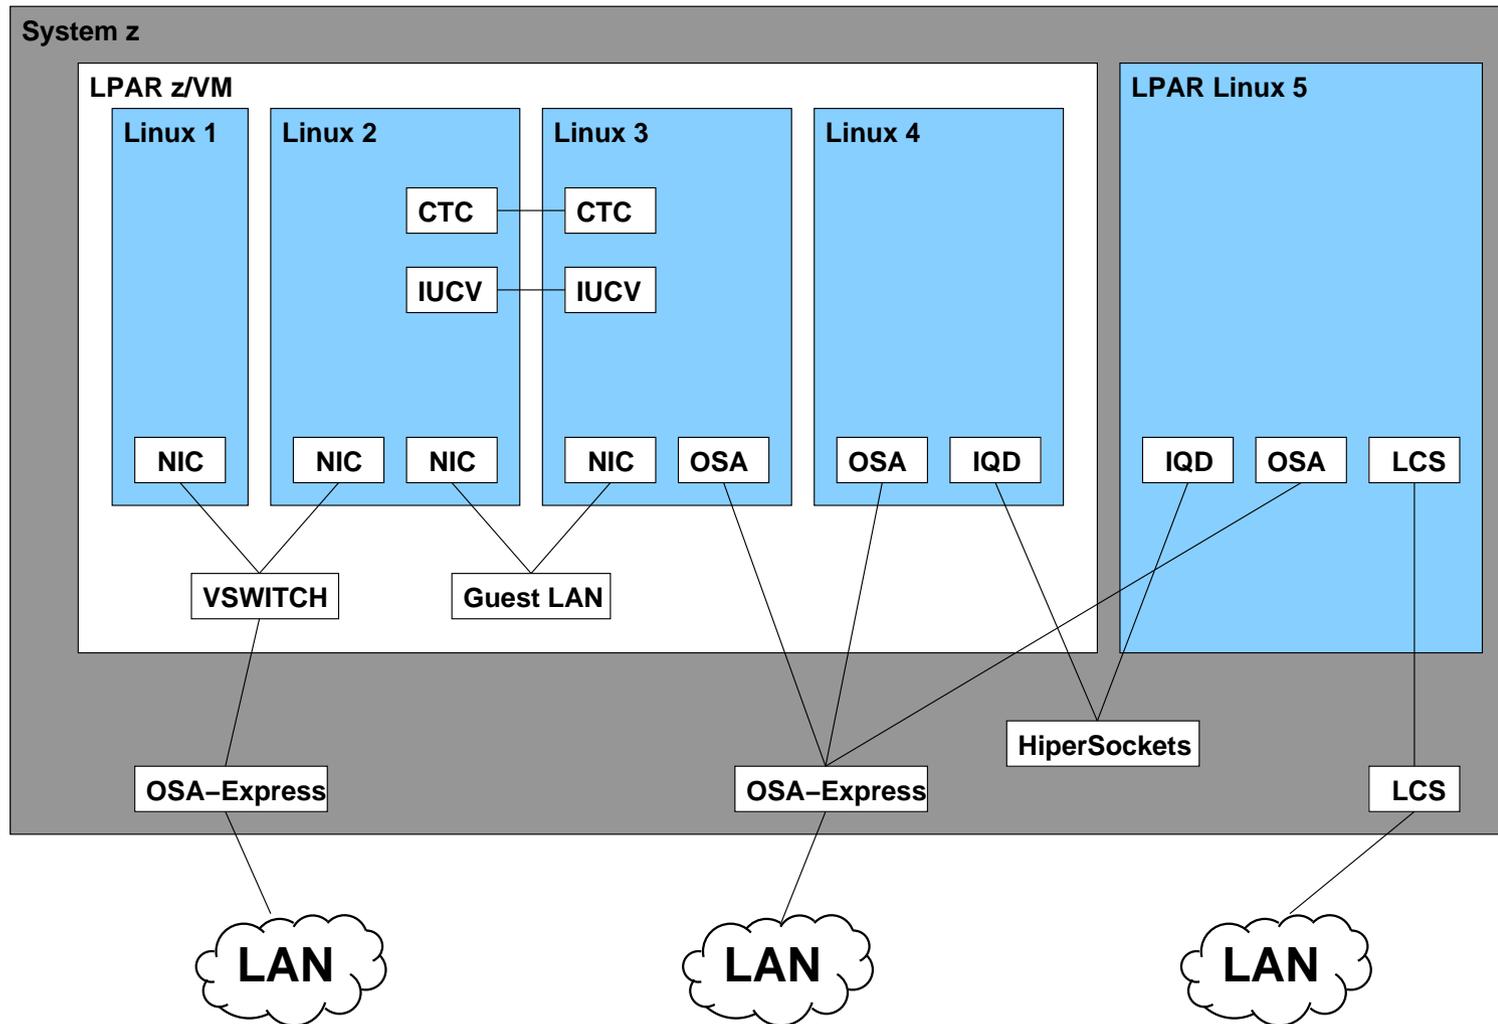

Networking Drivers

- CTC - Channel-To-Channel Connection
- IUCV - Inter User Communication Vehicle
- device driver deprecated (kernel 2.6)
- still available for backwards compatibility
- migration path
 - Virtual CTC and IUCV \Rightarrow Guest LAN
 - CTC in LPAR \Rightarrow HiperSockets
 - CTC \Rightarrow OSA-Express

QETH Device Driver

- supports
 - OSA-Express
 - HiperSockets
 - Guest LAN
 - VSWITCH
- primary network driver for Linux on System z

System z Network

OSA

- OSA Express (all adapters)
- 10 GbE, GbE, 1000BASE-T
- 640 TCP/IP stacks per CHPID
- jumbo frame support
- concurrent LIC update

OSA

- OSA Express2
 - 2 CHPIDs with 1 port per CHPID (10 GbE 1 CHPID)
- OSA Express3
 - multimode or single mode fiber or copper cable
 - 2 CHPIDs with 2 port per CHPID (10 GbE 1 port)
 - DMA
 - hardware data router
- OSA-Express4S
 - multimode or single mode fiber or copper cable
 - 1 CHPID shared by 2 ports
 - DMA
 - hardware data router
 - IEDN support
 - checksum offload for IPv4 and IPv6

HiperSockets

- up to 32 HiperSockets Networks
- shared by 30 LPARs
- communication through memory
- IPv4 and IPv6 support
- Layer 2 and Layer 3 support
- VLAN
- Sniffer support

Frame Size

- 4 different frame sizes

frame size	MTU size
16k	8k
24k	16k
40k	32k
64k	56k

- frame size for HiperSockets network specified

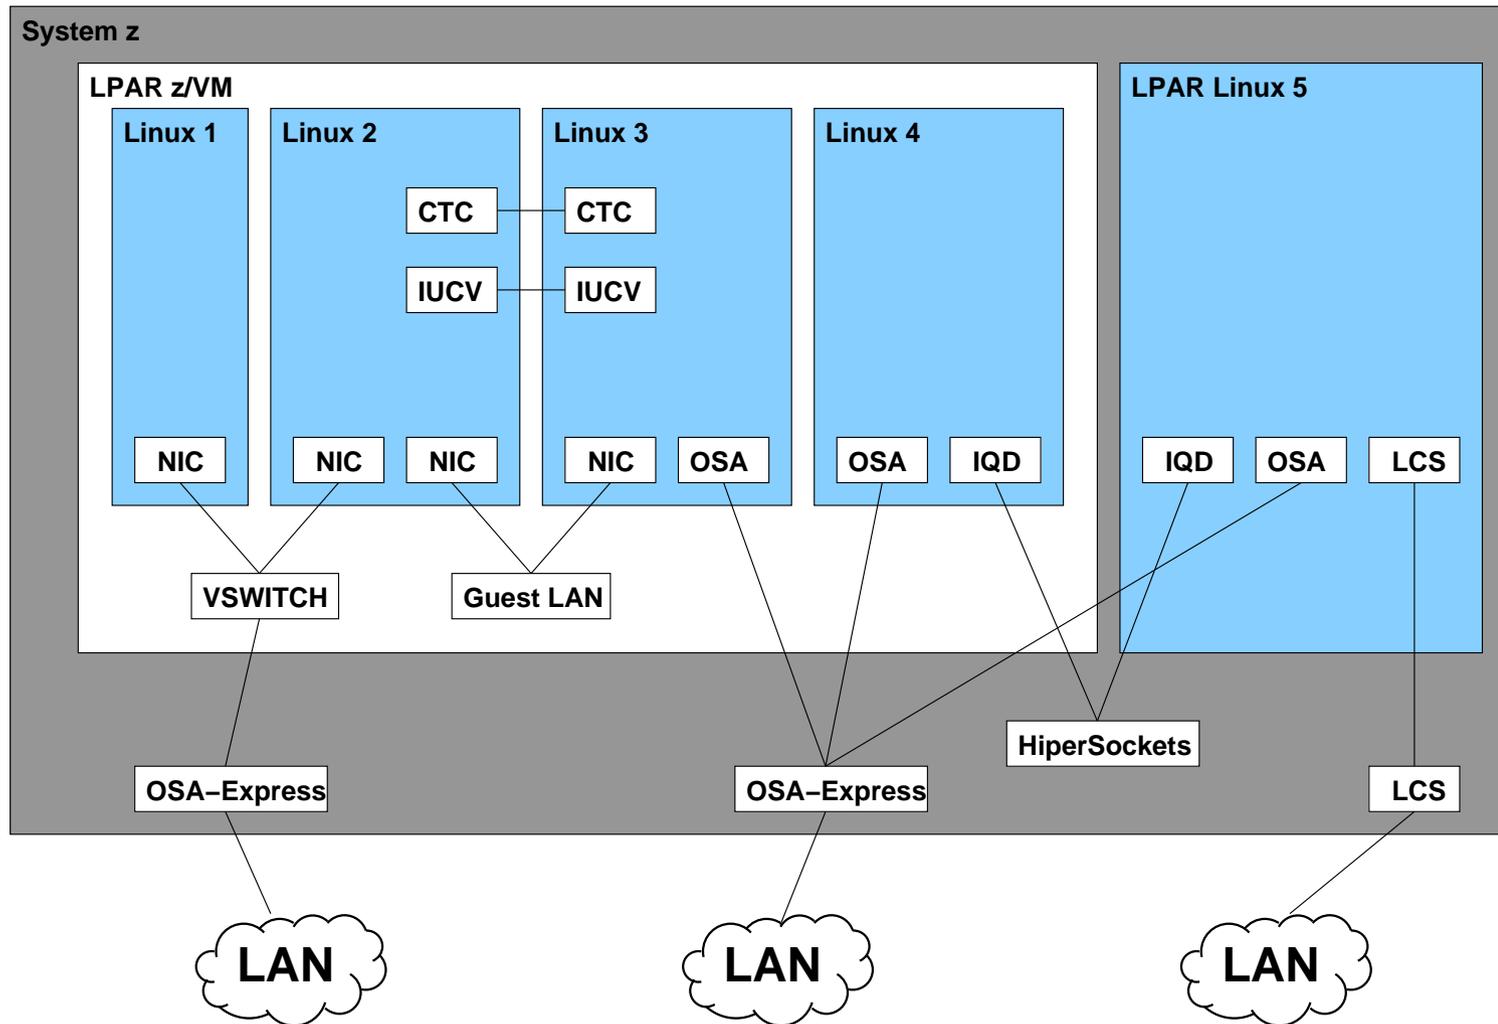

HiperSockets Sniffer

- enabled from Service Element or HMC
- 1 device receives all packets
- device filtering can be enabled

Guest LAN

- simulated LAN segment
- used with virtual Network Interface Card (NIC)
- Types
 - QDIO Layer3
 - HiperSockets Layer3
 - Ethernet Layer2
- no physical connection
- unrestricted / restricted
- supports IPv4 and IPv6

Guest LAN

Guest LAN

- create Guest LAN

```
# modprobe vmcp
# vmcp define lan mylan ownerid r3515038 type qdio
LAN R3515038 MYLAN is created
```

- create virtual Network Interface

```
# vmcp define nic 0700 qdio
NIC 0700 is created; devices 0700-0702 defined
```

- connect virtual Network Interface to Guest LAN

```
# vmcp couple 0700 to r3515038 mylan
RPIMGR031E RESOURCE R3515038.MYLAN SPECIFIED BY COUPLE COMMAND NOT FOUND
NIC 0700 is connected to LAN R3515038 MYLAN
```

Guest LAN

```
# vmcp query virtual osa
OSA 0700 ON NIC 0700 UNIT 000 SUBCHANNEL = 0018
      0700 DEVTYPE OSA          VIRTUAL CHPID 03 OSD
      0700 MAC 02-35-15-00-00-77 CURRENT
      0700 QDIO-ELIGIBLE        QIOASSIST-ELIGIBLE
OSA 0701 ON NIC 0700 UNIT 001 SUBCHANNEL = 0019
      0701 DEVTYPE OSA          VIRTUAL CHPID 03 OSD
      0701 QDIO-ELIGIBLE        QIOASSIST-ELIGIBLE
OSA 0702 ON NIC 0700 UNIT 002 SUBCHANNEL = 001A
      0702 DEVTYPE OSA          VIRTUAL CHPID 03 OSD
      0702 QDIO-ELIGIBLE        QIOASSIST-ELIGIBLE
```

Guest LAN

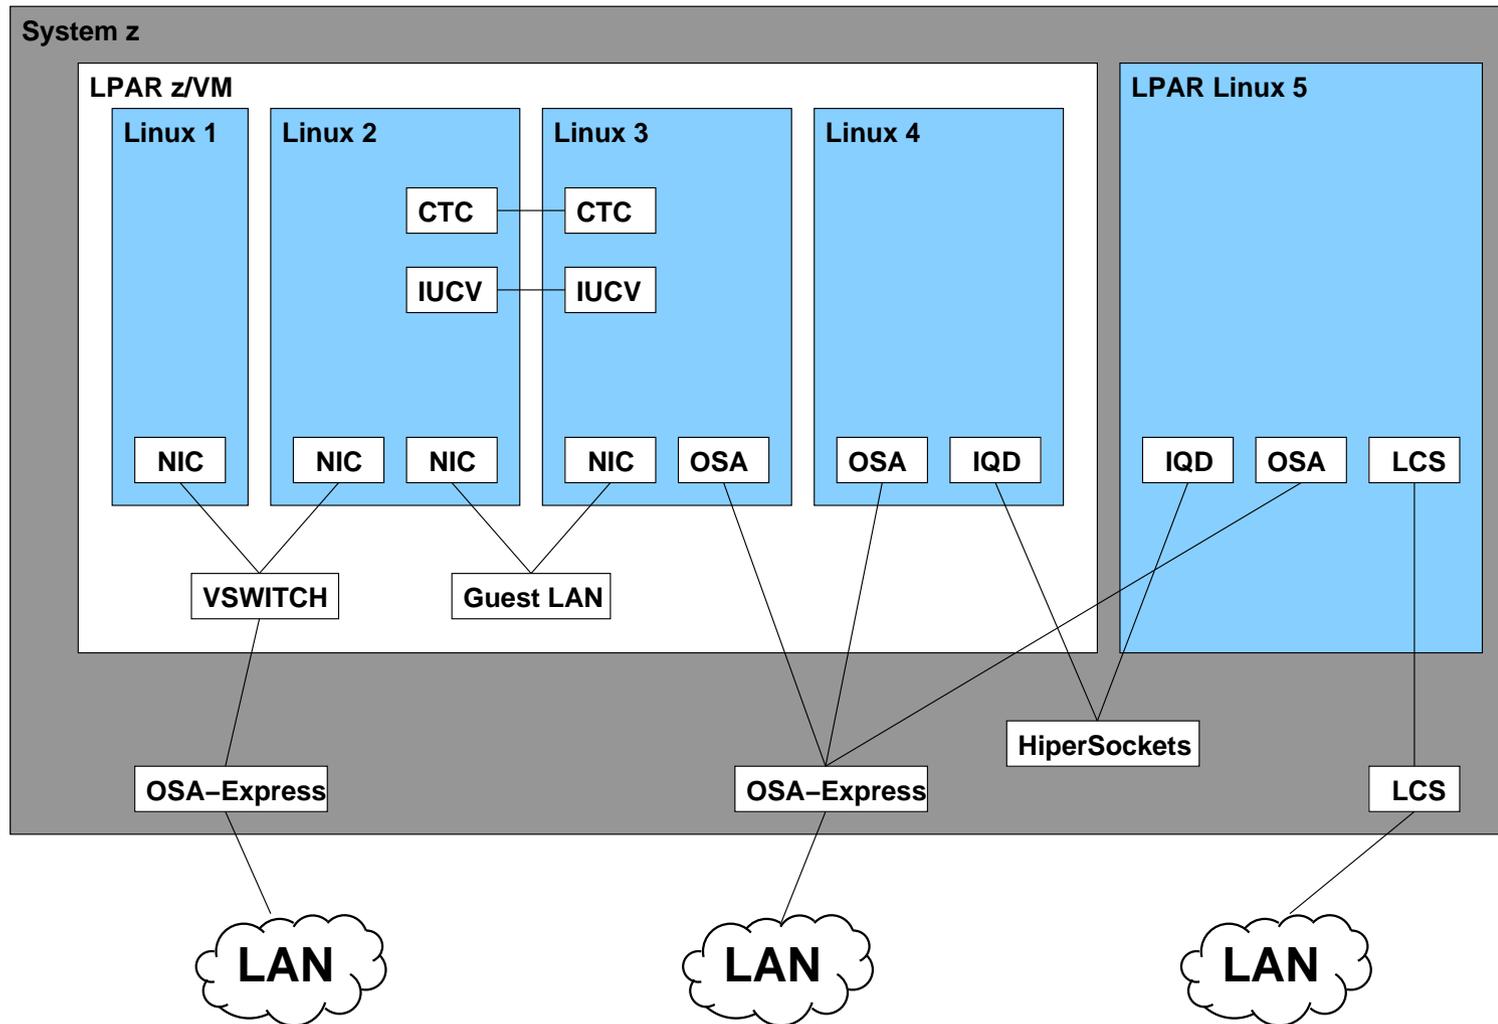

- remove Guest LAN

```
# vmcp uncouple 0700
NIC 0700 is disconnected from LAN R3515038 MYLAN

# vmcp detach nic 0700
NIC 0700 is destroyed; devices 0700-0702 detached

# vmcp detach lan mylan owner r3515038
LAN R3515038 MYLAN is destroyed
```

Virtual Switch - VSWITCH

Virtual Switch

- connects to Guest LAN
- up to 8 associated OSA connections
- connects to external network using OSA-EXPRESS
- redundant OSA-Express configuration
- single subnet for physical and virtual network
- no router necessary
- failover and Link Aggregation
- port isolation

LAN Channel Station - LCS

- OSA Express in non-QDIO mode
 - HighSpeed TokenRing
 - ATM running Ethernet LAN Emulation
- May be preferred instead of QETH for security reasons
 - administrator defines OSA Address Table \Rightarrow restricted access
 - for QETH each Linux registers its own IP address
- performance not as good as QETH

Basic Network Setup

- QETH manual setup
 - general
 - SLES11
 - SLES10
 - RHEL6
 - SLES5
- QETH YaST2 setup in SLES11

QDIO Device Manual

```
# modprobe vmcp
# vmcp 'attach 8027-8029 *h'

# vmcp q osa
OSA 8027 ATTACHED TO R3515038 8027 DEVTYPE HIPER          CHPID FB IQD
OSA 8028 ATTACHED TO R3515038 8028 DEVTYPE HIPER          CHPID FB IQD
OSA 8029 ATTACHED TO R3515038 8029 DEVTYPE HIPER          CHPID FB IQD
```

QDIO Device Manual

```
# modprobe qeth

```

QDIO Assist

- avoids interception to z/VM
- SQBS and EQBS are used to synchronize buffer states with z/VM storage
 - SQBS to write buffer state
 - EQBS to read buffer state
- big performance improvement because CPU always in guest level

Redbooks

OSA-Express Implementation Guide

- Product, planning, and quick start information
- Realistic examples and considerations
- Hardware and software

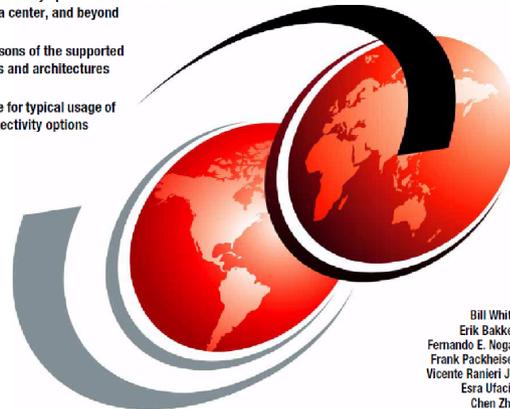

HiperSockets Implementation Guide

IBM System z Connectivity Handbook

- The connectivity options available for your data center, and beyond
- Comparisons of the supported protocols and architectures
- Guidance for typical usage of the connectivity options

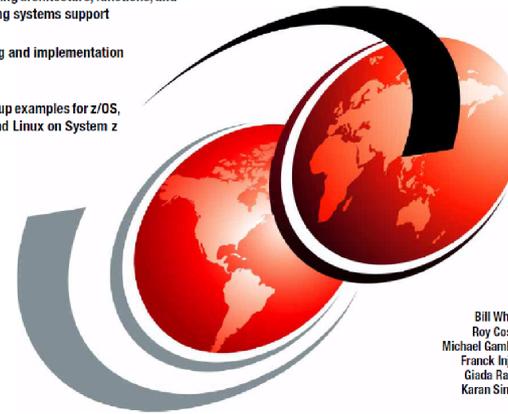

- Single architecture, functions, and existing systems support
- Configuration and implementation
- Setup examples for z/OS, and Linux on System z
