

Program Directory for VSE/ESA Version 2

Version 2 Release 6.1

Program Number 5690-VSE

Document Date: June 2002

GI10-9765-01

Note!

Before using this information and the product it supports, be sure to read the general information under "Notices" on page vii.

This program directory, dated June 2002, applies to VSE/Enterprise Systems Architecture Version 2 (VSE/ESA 2.6.1) Release 6.1 , Program Number 5690-VSE for the following:

Feature Numbers	Content	System Name
2201	VSE/ESA V2 English Base on 3480 Cartridge	VSE/ESA V2
2202	VSE/ESA V2 English Base on 4MM DAT (2GB uncompressed)	VSE/ESA V2
2199	VSE/ESA V2 English Base on 3590 Cartridge	VSE/ESA V2
2402,2601	VSE/ESA V2 German/Spanish Base on 3480 Cartridge	VSE/ESA V2
2403,2602	VSE/ESA V2 German/Spanish Base on 4MM DAT (2GB uncompressed)	VSE/ESA V2
2404,2599	VSE/ESA V2 German/Spanish Base on 3590 Cartridge	VSE/ESA V2
2087	VSE/ESA V2 Japanese Base on 3480 Cartridge	VSE/ESA V2
2088	VSE/ESA V2 Japanese Base on 4MM DAT (2GB uncompressed)	VSE/ESA V2
2089	VSE/ESA V2 Japanese Base on 3590 Cartridge	VSE/ESA V2

A form for reader's comments appears at the back of this publication. When you send information to IBM, you grant IBM a nonexclusive right to use or distribute the information in any way it believes appropriate without incurring any obligation to you.

Summary of Changes

The following list summarizes VSE/ESA 2.6.1 content changes compared to VSE/ESA 2.6.0

Starting with this modification level, VSE/ESA will be provided as well on 3590 Cartridge.

VSE/ESA BASE PROGRAMs: CA-Top Secret 5686-A05 was announced to be withdrawn from marketing by September 4, 2002. Until then, CA-Top Secret will be orderable within this VSE/ESA modification.

VSE/ESA OPTIONAL PROGRAMs:

- 5697-F42 DB2 Server for VSE/ESA - QMF for VSE 7.2 new release
- 5697-F42 DB2 Server for VSE/ESA - QMF for Windows 7.2 new release

Updated is the Base and the various national language versions (NLV). Added as new NLV feature is QMF for Windows **HEBREW**

The following programs are updated with a new level of the Debug Tool.

- 5686-068 COBOL for VSE/ESA - Full Function
- 5686-069 PL/I for VSE/ESA - Full Function
- 5686-A01 C for VSE/ESA - Full Function

For functional enhancements of VSE/ESA 2.6.1, please see the updated

- VSE/ESA Release Guide, SC33-6718 (hardcopy)

and - online available on the VSE/ESA home page: <http://www.ibm.com/servers/eserver/zseries/os/vse>

- VSE/ESA e-business Connectors User's Guide, SC33-6719
- TCP/IP IBM Program Setup and Supplementary Information, SC33-6601

1.0 Introduction

This program directory is intended for the system programmer responsible for program installation and maintenance. It contains information concerning the material and procedures associated with the installation of VSE/ESA 2.6.1. You should read all of this program directory before installing the program and then keep it for future reference.

The program directory contains the following sections:

- 2.0, "Program Materials" on page 2 identifies the basic and optional program materials and documentation for VSE/ESA 2.6.1.
- 3.0, "Program Support" on page 30 describes the IBM support available for VSE/ESA 2.6.1.
- 4.0, "Program and Service Level Information" on page 31 lists the APARs (program level) and PTFs (service level) incorporated into VSE/ESA 2.6.0
- 5.0, "Installation Requirements and Considerations" on page 35 identifies the resources and considerations for installing and using VSE/ESA 2.6.1.
- 7.0, "Installation Instructions" on page 59 provides detailed installation instructions for VSE/ESA 2.6.1.
- 8.0, "VSE/ESA 2.6.1 Install Logic" on page 60 provides the install logic for VSE/ESA 2.6.1.

Before installing VSE/ESA 2.6.1, read 3.1, "Preventive Service Planning" on page 30. This section tells you how to find any updates to the information and procedures in this program directory.

2.0 Program Materials

An IBM program is identified by a program number and a feature code. The program number for VSE/ESA 2.6.1 is 5690-VSE.

The program announcement material describes the features supported by VSE/ESA 2.6.1. Ask your IBM marketing representative for this information if you have not already received a copy.

The following sections identify:

- The basic and optional program materials available with this program
- Program Source Materials

Microfiche program listings are not provided with VSE/ESA 2.6.1. Customers with access to View Program Listings (VPL), such as through SoftwareXcel Extended, can access program listings formerly provided through microfiche.

Those customers without access to VPL can contact their IBM representative.

The VPL facility provides online viewing of program listings that are available to customers.

2.1 For Users who have NOT ordered a I I VSE/ESA Base Products

Customers, who have not ordered ALL VSE/ESA Products are requested to delete those products, for which they are not licensed.

2.1.1 General Description

In order to ensure successful installation, all base products are delivered with the VSE/ESA Version 2 system, but if you have specified only some of them to use and to get licensed for, you are requested to delete the others from the system.

2.1.2 Jobstreams included for deleting VSE/ESA Base components

VSE/ESA 2.6.1 provides ready-to-run jobs to delete base products which were not intentionally ordered.

Following is a list of these jobs, stored in ICCF library 59:

- DELCICS to delete CICS TS 1.1.1
- DELDB2 to delete DB2 Server V7.1 and DB2 Data Propagator
- DELDB272 to delete DB2 Server V7.2
- DELDIT to delete DITTO/ESA
- DELLECOB to delete the LE/VSE COBOL parts *)
- DELLEPLI to delete the LE/VSE PL/I parts *)
- DELTCPIP to delete TCP/IP for VSE/ESA
- DELVTM to delete ACF/VTAM 4.2

Note: *)The VSE C Run-Time support will remain in the VSE/ESA BASE.

To delete one of these Base Products, access ICCF library 59 and submit the job named in above list.

Note: Since the VSE/ESA System Package is tested and delivered as a full-function, pre-packaged system, any modifications to the system become the user's responsibility. If you are deleting a base component, you should be aware of the consequences of the loss of product function.

1. Since the deletion of a component is treated as altered code, solving problems may cause additional billing, if the alteration is determined to be the cause of a problem.
2. You should be aware that maintenance procedures, including the application of PTFs, may be affected in the event one or more components are deleted.
3. Deleting parts of LE requires updates of the CICS CSD file. Please refer to skeleton SKLE370 in ICCF library 59 for more details.
4. Do not delete the VSE C Run-Time support - without which CICS TS will not come up.

2.1.3 Special considerations when deleting CICS Transaction Server

- ICCF cannot be used - also not with CICS/VSE
- The Interactive User Interface cannot be used - also not with CICS/VSE
- DL/I 1.10.0 does not run with the CICS Transaction Server, it requires CICS/VSE Version 2.3
- DL/I 1.11.0 requires CICS Transaction Server 1.1

2.2 VSE/ESA BASE - BASIC Machine Readable Material (MRM)

The **VSE/ESA BASE** is distributed on 3 volumes of either 3480 Cartridges, 3590 Cartridges or 4MM DAT. Additionally, the DB2 V7 Help Text is distributed on a separate volume.

Figure 1 describes the **MEDIA and VOLUMES** of the VSE/ESA BASE. These volumes contain all the programs and data needed for installation. VSE/ESA 2.6.1 is installed using the Maintain System History Program (MSHP).

Figure 2 on page 6 describes the **BASE PRODUCTS and COMPONENTS** of the VSE/ESA BASE.

Figure 3 on page 8 and Figure 4 on page 9 describe the **FILES** of the VSE/ESA BASE on cartridge.

See 7.0, "Installation Instructions" on page 59 for more information about how to install the program.

2.2.1 VSE/ESA BASE - MEDIA and VOLUMES

Figure 1. Basic Material - VSE/ESA - MEDIA and VOLUMES

Medium	Feature Numbers	Physical Volume	External Label Identification
3480 Cartridge	2201,2402,2601,2087	1	VSE/ESA2.6.1-xx
		2	VSE/ESA2.6.1-xx2
		3	VSE/ESA2.6.1XBASE
4MM DAT (2GB uncompressed)	2202,2403,2602,2088	1	VSE/ESA2.6.1-xx
		2	VSE/ESA2.6.1-xx2
		3	VSE/ESA2.6.1XBASE
3590 Cartridge	2199,2404,2599,2089	1	VSE/ESA2.6.1-xx
		2	VSE/ESA2.6.1-xx2
		3	VSE/ESA2.6.1XBASE

Notes:

1. **xx** defines the LANGUAGE of the VSE/ESA Base, in which the system was ordered:
 - xx = EN English
 - xx = GE German
 - xx = SP Spanish
 - xx = KA Kanji (Japanese)
2. The **XBASE** (Extended Base) contains further VSE/ESA Base Programs. **DO NOT IPL the Extended Base**
3. The 4MM DAT (2GB uncompressed) is delivered for a 3480 Cartridge device driver on a PC Server System /390 and or RS/6000 System/390 Server on Board.

2.2.2 VSE/ESA BASE - PRODUCTS / COMPONENTS

Figure 2 describes the contents of the VSE/ESA 2.6.1 Base.

Notes:

1. TCP/IP for VSE/ESA consists of several functional features, which are pre installed with the base product. Each feature is key-protected. They have to be activated by entering an activation key together with the customer number, which is provided when TCP/IP for VSE/ESA was ordered.
2. ACF/VTAM V4R2 for VSE/ESA consists of three functional levels which are shipped in the base product. They are activated by entering your customer number and valid password, which is added to your order according to the ordered feature.

2.2.3 VSE/ESA BASE - MRM FILE Contents

The layout of the base tapes changed. Initial Installation will reflect the new layout. FSU will also handle the new layout, provided the prepare step is executed first. The downlevel check should not be done prior to the prepare step, but **after the prepare**.

Figure 3 describes the files of the **first volume** of the VSE/ESA Base (labelled: VSE/ESA2.6.1-xx)

Please note that the 4MM DAT must be defined as 3480 Cartridge in the Configuration (Device Map)

CA-Top Secret for VSE/ESA 2)	5686-A05	5686A0501	1LM
LE DBCS Locales	5686-066	568606634	65M
DB2 V7.2 Server f.VSE/ESA 3)	5697-F42	5697F4201	2NN
DB2 V7.1 DPROPR	5697-F42	5697F4201	1NO

Notes:

1. This feature is only needed if CICS/VSE 2.3 is to be re-generated
2. CA-Top Secret 5686-A05 can be installed from the Extended Base Tape and is usable in "Demo mode". To use the production version of CA-Top Secret, you need an activation key, which is provided with the CA-Top Secret license when ordered. Note, that CA90 is always required. See 6.5, "Hints and Tips to CA-Top Secret" on page 54 for more information.
3. For an improved installability of DB2 Server for VSE Version 7.2 (5697-F42), this product is partially packaged and delivered as a key-enabled component of the VSE/ESA 2.6.1 Base. First time DB2 users can take advantage of a free-of-charge 90-day trial period to evaluate the product. An activation key, provided with the DB2 Server for VSE V7 license, is required to use the product beyond the 90-day trial period. Packaging info: The DB2 V7 components packaged onto and always distributed with the VSE/ESA Extended Base Tape are DB2 Server for VSE and Data Propagator Capture for VSE. The DB2 Server for VSE Help Tape is always distributed on a separate tape. The DB2 optional features are packaged as optional products and distributed on the VSE/ESA optional product 'stacked tape' if they were ordered. Please note, that the DB2 Optional features will remain on release 1.

2.3 VSE/ESA BASE - OPTIONAL Machine-Readable Material

There is Optional Source available for VSE Central Functions 6.6.0.

The distribution media for optional machine-readable material are IBM 3480 cartridge or 4MM DAT.

A separate memorandum is distributed with the Optional Material. It contains a description on how to install the Optional Source Code of VSE Central Functions.

Figure 6 describes the media.

Figure 6. Optional Material: 5686-066 VSE Central Functions 6.6

Feature Number	Medium	Product Name	Product No.	External Tape Label
5237	3480 Cartridge	VSE Central Functions	5686-066	VSE CF 6.6.0 SOURCE
5238	4MM DAT	VSE Central Functions	5686-066	VSE CF 6.6.0 SOURCE
6099	3590 Cartridge	VSE Central Functions	5686-066	VSE CF 6.6.0 SOURCE

2.4 VSE/ESA BASE - Program Publications

The following sections identify the basic and optional publications for VSE/ESA 2.6.1, that are available as hardcopy publications. The VSE Softcopy Collection Kit SK2T-0060, which is distributed with every VSE/ESA order, provides further documentation to all available VSE/ESA base and optional programs. Those publications, which have been added or updated with VSE/ESA 2.6.1 are either marked with **(N)** for NEW publications, or **(U)** for updated documentation. Your shipment contains ONE copy of all those publications, which were updated since your last shipment. Therefore, your shipment may NOT CONTAIN ALL publications shown in the the following lists. For additional copies, contact your IBM representative.

2.4.1 VSE/ESA Base - Basic Publications

Figure 7. VSE/ESA Basic Publications

2.5 VSE/ESA OPTIONAL PROGRAMS

Optional Programs are independent products, that can be ordered additionally and together with VSE/ESA and which run under the operating system VSE/ESA. They should not be mixed up with the optional material (source code), which is available for both the VSE/ESA BASE and some Optional Programs.

The distribution medium for these Optional Programs are the same as for the VSE/ESA Base. The tapes or cartridges contain all of the programs and data needed for installation using the Maintain System History Program (MSHP). They are on the media in stacked format and can be installed by using the VSE/ESA dialogs.

2.5.1 Optional Programs - Available with VSE/ESA V2

(sorted by Product Number)

Prod.No.	Product Name	V.R.M	remarks
-----	-----	-----	-----
5648-063	ACF/NCP 3745	7.8.1	3746-900 incl. NCP
5648-099	DITTO/ESA for VM feature	1.3.0	VM format
5648-B02	VA Generator Server	1.2.0	NLS available
5648-B33	AFP Font Collection	2.1.1	VSE fonts / NLS
5668-719	X.25 NPSI	2.1.0	
5668-723	GDDM-IVU	1.1.3	
5668-738	ACF/NCP 3745/3720	5.4.0

Notes:

1. 5686-057 Netview 2.3 consists of
NetView Central System Feature
NetView Distributed System Feature,
and is delivered on 2 tapes: either in English or Japanese.
2. The program number of EP/3725 (5735-XXB) differs from the COMPONENT-ID.
3. These components define the debugging functions (DEBUG Tool), which are part of the Full Function orders of C for VSE, PL/I for VSE and COBOL for VSE.
4. The AFP Fonts will NOT be stacked. You will get them on separate volumes.

2.5.3 Optional Programs - Program Tapes/Program Cartridges

All ordered Optional Programs will be delivered on stacked tape or cartridge. There will be multiple volumes, if the ordered products will physically not fit onto one volume.

You will get Program Directories of the individual Optional programs ordered with VSE/ESA 2.6.1 for additional information on the particular programs. Please ignore the **ordering information** in these directories, as this part does not apply to these products when ordered within the VSE/ESA package.

The external tape label of the stacked tape/cartridge is:

VSE/ESA 2.6.1 OPT x OF y

2.5.4 Optional Programs - File Content

Figure 14 describes the file content of the Optional Program Tape

Figure 14. Program Tape - 'VSE/ESA 2.6.1 OPT x OF y' File Content

File	Name
1	Null File
2	Start of Stacked Tape Indicator
3	Null File
4	1st Optional Program ordered
5	2nd Optional Program ordered
6	3rd Optional Program ordered
7	nth Optional Program ordered
8	Null File
9	End of Stacked Tape Indicator
10	Null File
11	Null File

Refer to the individual program directories on specific information to the ordered product.

2.5.5 Optional Programs - Basic Publications

2.5.6 Optional Programs - Licensed Publications and Microfiche

Optionally available publications and microfiches are orderable under the individual Optional program product numbers. Please see the Program Directories of these products for available publications and microfiches.

3.0 Program Support

This section describes the IBM support available for VSE/ESA 2.6.1.

3.1 Preventive Service Planning

Before installing VSE/ESA 2.6.1, check with your IBM Support Center or use either Information/Access or SoftwareXcel Extended to see whether there is additional Preventive Service Planning (PSP) information that you should know. To obtain this information, specify the following UPGRADE and SUBSET value:

VSEESA2rm

where rm is the current Release/Modification level.

With this upgrade value you will see lists of subset values, one sorted by VSE/ESA BASE programs, and one sorted per VSE/ESA OPTIONAL programs. The subset identifies are derived from the product names, to where the subset identifiers belong.

In addition, there are the following subset values:

BASESERVICE and **OPTPSERVICE**

Using these values, you find the list of APARs and related PTFs per BASE program (BASESERVICE) and OPTIONAL program (OPTPSERVICE). These lists are identified by the products component identifier, which you may find in Chapter 'Optional Programs - List of Product Identifiers.

If you have received VSE/ESA 2.6.1 only from IBM Software Distribution, then before installing VSE/ESA 2.6.1, you should also check with your IBM Support Center or use either Information/Access or SoftwareXcel Extended to see if there is additional PSP information that you should know.

3.2 Statement of Support Procedures

Report any difficulties you have using this program to your IBM Support Center. If an APAR is required, the Support Center will provide the address to which any needed documentation can be sent. Please refer to Figure 2 on page 6 for component IDs (COMPID) for VSE/ESA 2.6.1

4.0 Program and Service Level Information

This section identifies the program and any relevant service levels of VSE/ESA 2.6.0. The program level refers to the APAR fixes incorporated into the program. The service level refers to the PTFs integrated. Information about the cumulative service tape is also provided.

4.1 Program Level Information

The following is a list of APARs fixed and integrated since VSE/ESA 2.5, which are NOT visible in the MSHP history file.

4.2 Service Level Information

There is no information for VSE/ESA 2.6.1 at this time.

4.3 Cumulative Service Tape

There is no cumulative service tape for VSE/ESA 2.6.1.

5.0 Installation Requirements and Considerations

The following sections identify the system requirements for installing and activating VSE/ESA 2.6.1.

5.1 System Requirements

5.1.1 Operating System Requirements

VSE/ESA 2.6.1 is an operating system itself and does not require another operating system to run under. Anyway, VSE/ESA 2.6.1 can run as a guest system under the following VM/ESA systems:

- VM/ESA Version 2, Release 4.0 (or later)
- z/VM Version 3 (or later), where VSE/ESA runs in 31-bit mode.

Note that VSE/ESA 2.6.1 runs with supervisor mode ESA only. If you are migrating from a pre VSE/ESA V2 system and running a supervisor with MODE-VM or MODE=VMESA, please see *VSE/ESA Planning*, SC33-6703, Chapter: Planning for Migration.

Additional information is available in

- *VM/ESA Version 2 Release 3, Running Guest Operating Systems*, SC24-5755,
- *z/VM Version 3 Release 1, Running Guest Operating Systems*, SC24-5950,
- *z/VM Version 4 Release 1, Running Guest Operating Systems*, SC24-5997
- *VSE/ESA Installation*, SC33-6704.

5.1.2 VSE/ESA Processor Support

VSE/ESA 2.6.1 supports ESA/390 **uniprocessors** and **multiprocessors** of the following IBM System/390 processor series:

- IBM eServer zSeries 800
- IBM eServer zSeries 900
- IBM S/390 Multiprise 2000
- IBM S/390 Multiprise 3000
- IBM S/390 Integrated Server
- IBM S/390 Parallel Enterprise Server - Generation 3
- IBM S/390 Parallel Enterprise Server - Generation 4
- IBM S/390 Parallel Enterprise Server - Generation 5
- IBM S/390 Parallel Enterprise Server - Generation 6
- IBM S/390 9672 Parallel Enterprise Server
- IBM ES/9000

VSE/ESA 2.6.1 provides "n-way" support for the multiprocessor models of these processor series through the VSE/ESA Turbo Dispatcher.

VSE/ESA is also able to run on the following System/390 uniprocessors: IBM PC Server 500 System/390 and IBM RS/6000 with S/390 Server-on-Board feature.

Note that VSE/ESA can run as a guest system under VM/ESA or z/VM on all processors supported by VM/ESA or z/VM.

5.1.3 Processor Details

Please refer to *VSE/ESA Planning SC33-6703* for an actual list of the processors supported by VSE/ESA.

5.1.4 Minimum System Configuration

VSE/ESA 2.6.1 requires the following minimum system configuration:

- 16MB of processor (real) storage.
Since the processor storage available is usually much higher, this value is mainly of interest if VSE/ESA is running in LPAR mode or under VM/ESA.
- About 916MB (environment A) or about 1030MB (environment B) of disk device space on two volumes, DOSRES and SYSWK1, as outlined in *VSE/ESA Planning, SC33-6703*.
- A tape or cartridge unit supporting the distribution medium.
- A system printer. This may be a channel-attached or adapter-attached printer controlled by VSE/POWER or a local terminal printer controlled by CICS. A terminal printer should have a minimum speed of 300 lines per minute.
- A display station. This can be a terminal or programmable workstation of any supported type.
- The system console. This can be an integrated console or any display station supported as system console.

5.1.5 DASD Storage Requirements

Please see: *VSE/ESA Planning, SC33-6703* for storage requirements.

6.0 Special Considerations

Information on VSE/ESA base and optional programs

6.1 Tips and Hints for VSE/ESA Base Programs

6.1.1 VSE/ESA Fast Service Upgrade (FSU)

There will be no Fast Service Upgrade provided from releases prior to VSE/ESA 2.4.0. For an FSU from VSE/ESA 2.4.x, be aware of the changed tape layout. In any case, first run the prepare step, afterwards you may run the FSU installation. **Do not run a downlevel check** in any case of a release upgrade. For preparation tasks and additional space requirements, refer to the *System Upgrade and Service* manual.

After FSU is finished, you should update the CICS TS transaction security settings using the merge key (PF6) on the 'Dialog Definition Transaction Security' (fastpath 28). For additional post-FSU tasks refer to the *System Upgrade and Service* manual.

With VSE/ESA 2.6.1 the system default FCT settings are migrated into the CICS CSD file. After the FSU from VSE/ESA 2.4 message 'DFHAM4803F applid Install failed because an existing definition for file 'FILE' could not be deleted' is displayed. This is due to the fact that the SIT refers to FCT=SP and therefore the FCT definition is used instead of the CICS RDO definition. You should change the SIT to FCT=NO to avoid the message. CICS will use the CSD base file definition.

In case of a release upgrade, also carefully check the space requirements as outlined in the System Upgrade and Service manual. There are new applications and selection panels. After the FSU, upgrade the application profiles and selection panels as described in the manual.

6.1.2 SSL Client Authentication

With VSE/ESA 2.6.1 it is possible to assign a VSE user ID to a client certificate and use the access rights of this user ID for the client. Therefore the service BSSDCERT was introduced. Details about BSSDCERT can be found at 'VSE/ESA e-business Connectors User's Guide' via the VSE home page.

For CWS/SSL see also 'CICS TS for VSE/ESA: Enhancements Guide'.

6.1.3 Unattended Node Support - Environment C

Environment C is only supported if an FSU is performed from a VSE/ESA 2.4 Unattended Node system. Be aware of the fact that VSE/DSNX and VSE/OCCF are not delivered any longer as optional products. Both products are part of the Unattended Node support and need to be re-installed from VSE/ESA 2.4.

6.1.4 OS/390 Library - API

This library contains members for the OS/390 emulation environment. The members contained in this library are not intended for general use by VSE/ESA customers but may be required by vendor products. Vendors who have a need for these interfaces should contact VSE/ESA development by sending a note to VSE@de.ibm.com

6.1.5 Restriction of the MSHP TAILOR Function

The MSHP TAILOR function together with one of the following control statements

```
EXECute ASSEMBLY  
EXECute ASSEMBLY,LNKEDT  
EXECute ASSEMBLY,LIBR
```

for generating library members is no longer supported with VSE/ESA Version 2.

Message

```
0S05I PHASE ASSEMBLY NOT FOUND
```

will be issued if it is attempted to use this function. Starting with VSE/ESA 2.1, the DOS/VSE Assembler (ASSEMBLY) has been replaced by the High Level Assembler for VSE (ASMA90). The MSHP TAILOR function does not work with the High Level Assembler for VSE.

6.1.6 Implementation of LCDD for the 3494 Tape Library Dataserver

The LCDD (Library Device Control Driver for VSE/ESA) source is included in VSE/ESA 2.6.

For LCDD commands please review GC35-0176, but be aware that LCDD is installed into IJSYSRS.SYSLIB and the sample startup JCL to tailor is in ICCF LIB 59.

6.1.7 Device Support Facilities (ICKDSF 1.16)

Note that the INIT command of the ICKDSF program 1.16 (included since VSE/ESA 2.1.0) no longer supports the MIMIC parameter. For details refer to the manual *Device Support Facilities, User's Guide and Reference, GC35-0033*.

6.1.8 HLASM Support with ACF/SSP Version 7, Release 7 and 8

With ACF/SSP 4.7 and later, ACF uses the High Level Assembler for NCP and EP compiles. There are a couple of macros with the same name as for VSE Central Functions causing assembly errors. It is recommended to change the search chain for source members and put PRD1.MACLIB ahead of PRD2.COMM, the target library for ACF/SSP.

6.1.9 CICS/TS

IMPORTANT: Do not specify SEC=NO in the SIT, SEC=NO means no security checking in CICS/TS at all, that is no signon security and also no transaction security. SEC=YES by default will use the basic security manager (BSM) as external security manager.

CICS/TS SIT setting SVA=NO changed to SVA=YES. To allow CICS coexistence, exclude list DFH\$SVEX is used.

6.1.10 SVA Setup

With VSE/ESA 2.6.1 LE Base and C-Runtime routines are loaded into the SVA. For details see *VSE/ESA Planning* SC33-6703. In order to make sure the related programs can also be used in CICS/TS, default setting of SVA in the SIT was changed from NO to YES.

6.2 Language Environment for VSE/ESA (LE/VSE 1.4.2)

6.2.1 LE/VSE 1.4.2

Except for the DBCS local component, all LE/VSE components are shipped as part of the VSE/ESA 2.6.1 base system.

The following table lists the new component identifiers (COMP IDs) and component level codes (CLCs).

Component-ID	CLC	Description
5686-066-32	65K	LE Common base, containing information written in: - Uppercase and mixed-case US English - Japanese NLF
5686-066-33	65L	LE C-specific base, containing information written in: - Uppercase and mixed-case US English - Japanese NLF
5686-066-34	65M	Optional LE DBCS Locale Component (see note below)
5686-094-03	6EW	LE COBOL-specific base and CICS, containing information written in: - Uppercase and mixed-case US English - Japanese NLF
5686-094-06	6EX	LE PL/I-specific base, containing information written in: - Uppercase and mixed-case US English - Japanese NLF

Notes:

1. The LE Base (\$SVACEE) and C Runtime (\$SVAEDCM) are pre loaded in the SVA. Please also see the *VSE/ESA Planning Guide*, SC33-6703.

Please notice that option modules (e.g.) CEECOPT.PHASE and CEEDOPT.PHASE are included in \$SVACEE. Changing run-time options for batch and CICS environment therefore requires a SVA re-load via SET SDL command from BG partition. Supplied skeletons CEEWCOPT and CEEWDOPT in ICCF library 62 will take this into consideration.

2. The optional LE/VSE 1.4.2 DBCS locale component is shipped on the VSE/ESA 2.6.1 Extended Base tape.

For more information, please see the *VSE/ESA Release Guide* SC33-6718 which is also available on the *VSE/ESA Softcopy Collection Kit* SK2T-0060.

6.2.1.1 Modifying the Behavior of the COBOL Reusable Environment (optional):

The COBOL reusable environment behavior can be modified to control how program checks are handled that occur in a non-Language Environment conforming driver. The COBOL reusable environment is established with the RTEREUS run-time option or a call to IGZERRE INIT.

Use the IGZWARRE sample job to change the behavior of COBOL's reusable environment. You must modify the IGZRREOP macro invocation, depending on the function that you want.

To run with VS COBOL II and DOS/VS COBOL run-time compatibility mode (i.e., the user has control of program checks that occur when the COBOL reusable environment is dormant, resulting in an additional performance cost), use:

- IGZRREOP REUSENV=COMPAT

To run with optimum performance (i.e., Language Environment intercepts all program checks that occur when the COBOL reusable environment is dormant and converts them to CEE3321C/CEE3320C, resulting in improved performance), use:

- IGZRREOP REUSENV=OPT

See *LE/VSE Customization Guide* for related information.

6.2.2 Mixed Language Applications under LE/VSE (involving Assembler)

When creating or maintaining mixed language applications in an LE/VSE environment various supported techniques are available. In general the following macros and services can assist to ensure operating LE/VSE-conform.

- LE/VSE assembler macros (CEEENTRY/CEETERM)
- LE/VSE preinitialization service (CEEPIPI)
- LE/VSE C-specific macros (EDCPRLG/EDCEPIL)

Examples and further details not covered here are available on LE/VSE Home Page via "<http://www.ibm.com/servers/eserver/zseries/os/vse/le/samples.htm>"

6.2.3 Summary of LE/VSE Customization and IVP-Jobs in IUI

This is a list of LE/VSE related jobs, pre-installed in ICCF library 62. These members can assist you in various verification and customization tasks.

Figure 51 (Page 1 of 4). LE/VSE 1.4 Jobs in ICCF lib 62

ICCF Member	Purpose and Function
CEECCSD	LE/VSE base program definitions (CICS)

Figure 51 (Page 2 of 4). LE/VSE 1.4 Jobs in ICCF lib 62

ICCF Member	Purpose and Function
CEEWCCSD	Skeleton for enabling LE/VSE program definitions (CICS)
CEEWCEXT	Identify abnormal termination exit to LE/VSE (CICS)
CEEWCOPT	Installation-wide default LE/CICS run-time options
CEEWCXIT	Installation-wide assembler user exit
CEEWDCCD0	Card-device run-time LIOCS phase
CEEWDDU0	Diskette-device run-time LIOCS phase
CEEWDEXT	Identify abnormal termination exit to LE/VSE (batch)
CEEWDOPT	Installation-wide default LE/batch run-time options
CEEWDPRO	Printer device run-time LIOCS phase
CEEWDXIT	Installation-wide assembler user exit (batch)
CEEWHLLX	High level language user exit
CEEWINFG	Collect system status information related to LE/VSE
CEEWINFR	Summarize/condense information generated via CEEWINFG
CEEWIVP1	Verification of Assembler program interface
CEEWIVP2	Verification of LE/VSE COBOL Component
CEEWIVP3	Verification of LE/VSE PL/I Component
CEEWIVP4	Verification of LE/VSE C Component
CEEWIVP5	Verify the LE/VSE C Prelink Utility
CEEWMSVA	LE/VSE base routines eligible for putting into the SVA
CEEWUOPT	Application specific run-time options
CEEWUXIT	Application specific assembler user exit
EDCCCSD	LE/VSE C-specific program definitions (CICS)
EDCLLOCL	Changing the C locale time information
EDCUCSD	Optional codeset converters (CICS)
EDCWMSV1	LE/VSE C-specific routines eligible for SVA
IBMCCSD	LE/VSE PL/I-specific program definitions (CICS)
IBMSVA1	LE/VSE PL/I-specific routines eligible for SVA
IGZCCSD	LE/VSE COBOL-specific program definitions (CICS)
IGZWARRE	Customize behavior of COBOL reusable environment

Figure 51 (Page 3 of 4). LE/VSE 1.4 Jobs in ICCF lib 62

ICCF Member	Purpose and Function
IGZWE PAC	COBOL COBPACK tailoring
IGZWE PCC	COBOL COBPACK tailoring
IGZWE PCO	COBOL COBPACK tailoring
IGZWE SV1	LE/VSE COBOL-specific routines eligible for SVA
SKLE370	LE/VSE CICS CSD entries in GROUP(CEE)
CEETSCSD (*)	Sample code for USESVACOPY(YES) alteration, LE Base under CICS TS (pre-customized for VSE/ESA 2.6.1)
EDCTSCSD (*)	Sample code for USESVACOPY(YES) alteration, LE C under CICS TS (pre-customized for VSE/ESA 2.6.1)
IGZTSCSD (*)	Sample code for USESVACOPY(YES) alteration, LE COBOL under CICS TS (optional !)
IBMTSCSD (*)	Sample code for USESVACOPY(YES) alteration, LE PL/I under CICS TS (optional !)
EDCXDYDLY (#)	Sample C/VSE code exploiting new LE/VSE Callable Service CEE5DLY (introduced with LE 1.4.2)
IGZTDLY (#)	Sample COBOL/VSE code exploiting new LE/VSE Callable Service CEE5DLY (introduced with LE 1.4.2)

Notes:

- Members marked (#) provide sample code for new LE/VSE Callable Service CEE5DLY. Please refer to the LE/VSE 1.4.2 overview section in the *VSE/ESA Release Guide* for further details.
- Skeleton SKLE370 is located in ICCF lib 59. It reflects a pre-customized status of the shipped CICS region (for VSE/ESA 2.4 (and later) this is a CICS TS based DBDCCICS). Hence there is no need to run SKLE370 unless LE/VSE definitions are modified or reestablished. For example this may apply when a second CICS region is built. Be aware that you need LE/VSE C-specific support in order to start CICS TS, respectively make use of Debug Tool for VSE/ESA (orderable feature of LE/VSE enabled compilers).
- All members marked (*) are sample code containing LE/VSE 1.4.2 component specific DFHCSDUP ALTER commands for USESVACOPY(YES) enablement under CICS Transaction Server. Please be aware that this change has to go along with a CICS SIT parameter setting of SIT SVA=YES as well as load of corresponding \$SVAxxxx loadlists. For details and possible impacts in a CICS coexistence environment please refer to CICS TS documentation and VSE/ESA Planning Guide.

For VSE/ESA 2.6.1 the delivered system is pre-customized with SIT SVA=YES:

- Making use of SVA loadlists \$SVACEE (LE/VSE 1.4.2 Base) and \$SVAEDCM (LE/VSE 1.4.2 C).

- b. Shipping USESVACOPY(YES) enabled CICS CSD definitions - via GROUP(CEE) - for LE/VSE 1.4.2 modules contained in these loadlists. Therefore do NOT run CEETSCSD and EDCTSCSD on this level. All is present !

Additional information:

- a. A set of new Z-books (allowing direct DFHCSDUP input) was provided to support the preload issue. Actually members CEETICSD.Z and EDCTICSD.Z which are integrated in common base install and service upgrade procedures. The LE COBOL and LE PL/I specific Z-books (IGZTICSD and IBMTICSD) complement this set (but aren't preloaded).
- b. All Z-books under a.) correspond to *TSCSD members outlined in Figure 51.

6.2.4 Languages and CICS Transaction Server

CICS Transaction Server for VSE/ESA supports:

- All LE/VSE conforming compilers (C/VSE, COBOL/VSE, PLI/VSE)
- High Level Assembler with LE/VSE
- DOS/VS COBOL and VS COBOL-II (if relinked / using LE run-time)

CICS Transaction Server does not support:

- DOS PL/1 and C/370 applications (recompilation with LE-conforming compiler is required)
- RPG-II (not supported by LE, either)

6.2.5 Generating Applications Capable of Running Under LE/VSE

Be aware of the Interactive Interface support (Primary Library, OPTION 8, translate and compile ...) in order to build your applications.

This will ensure usage of language independent stubs such as CICS DFHELII, related options etc.

Note: Be aware that every CICS TS related transaction needs to be "security-enabled" prior to its first execution. The Interactive Interface provides associated support via dialog 'Define Transaction Security' fastpath 28.

6.2.6 AMODE 24 Applications in a LE/VSE-initialized CICS Environment

Under CICS, the supplied default LE/VSE run-time options ALL31(ON) and STACK(4K,4K,ANYWHERE,KEEP) are present.

These settings improve performance and storage utilization for a CICS region running AMODE31 programs or applications that use CICS services to invoke AMODE24 programs from AMODE31 applications. This is applicable unless AMODE31 programs dynamically call AMODE24 programs (which are not automatically enabled for AMODE switching). In such cases a setting off ALL31(OFF) and STACK(4K,4K,BELOW,KEEP) is recommended/required. You may wish to implement it by use of an appropriate CEEUOPT.OBJ linked with an application.

Note: LE/VSE Customization Guide, Chapter 2 shows an example on how to build a CEEUOPT (application specific run-tune option module).

Detailed information about run-time option changes are available in *IBM LE/VSE R4 Customization Guide*, SC33-6682.

6.2.7 Run-Time Options to Use with Caution

You may find these tips valuable in your environment:

- Use LE/VSE run-time option **TERMTHDACT(UADUMP)** for diagnosis in a batch environment. It generates a VSE partition dump and a corresponding LE/VSE dump. For problem determination under both CICS/VSE and CICS TS it is recommended to specify TERMTHDACT(DUMP).

Please also be aware that use of TERMTHDACT (UADUMP) with database managers will bypass backout processing that may be required after application failure. Any files still open at point of failure will not be closed. Additional reference will be available via Info APAR II 11817.

- The default run-time option **HEAP(...ANYWHERE,...)** is important because of the correlation to COBOL compile options DATA(24/31), RMODE and RENT. Be aware that there is a 64k limit for CICS/VSE GETMAIN storage requests below the 16MB line. Avoid HEAP(BELOW) it ignores the COBOL DATA(xx) compile setting for location of dynamic data areas (such as working storage) !
- Setting **TRAP(ON,MAX)** ensures LE/VSE's integrity when handling abnormal conditions. TRAP(OFF) should only be activated on request of IBM service personal.
- The **3rd parameter** of the **STORAGE** run-time option can be of importance in PL/I migration environments. It deals with PL/I automatic variable storage and provides an initialization service in case the programming style did not consider start values for variables. However the associated performance impact can be significant (dependent on how the application is coded). Since it deals with the LE/VSE stack it can degrade overall run-time performance for all languages ! Therefore a setting of STORAGE(00,NONE,00,xk) should be used very strictly, respectively application specific (e.g. via tailored CEEUOPT.OBJ or JCL PARM override).

6.2.8 CICS/VSE Table Parameter Settings (optional environment)

Please ensure that you update the following CICS table(s) if you intend to run COBOL/VSE, VS COBOL II, DOS/COBOL or PLI/VSE programs under control of LE/VSE:

CICS/VSE System Definition Table (SIT):

- **COBOL2=NO**

LE/VSE will automatically provide you with the necessary run-time support for VS COBOL II.

- **PL1=NO**

This is the recommended setting in order to indicate to CICS/VSE that LE/VSE is going to provide related run-time support. In case of LE/VSE this must be a PLI/VSE compiled program unit. On the contrary PL1=YES assumes involving the obsolete DOS PL/I 1.6.0 run-time library which went out-of-service 06/30/1997.

CICS/VSE Processing Program Table (PPT): (VS COBOL II only)

If there are VS COBOL II run-time PPT entries

- Do **not** include copy-book **IGZ9PPT.A** in your PPT

- Recompile your CICS PPT in order to update control information
- Recycle CICS via **cold-start**. This should be done once in conjunction with topic "Member SKLE370 provides LE/VSE support for CICS/VSE".
- If there are CICS CSD entries for VS COBOL II modules IGZCPAC & IGZCPCC (instead of macro definitions) - ensure they are removed

If you plan to use VS COBOL II with the LE/VSE run-time under CICS/VSE, you should observe the following when modifying your CICS/VSE PPT:

- Do **not** include the VS COBOL II copy-book, **IGZ9PPT.A** in your PPT. Instead include the copy-book, **IGZCPPT.A**, supplied in PRD2.SCEECICS.
- Recompile your CICS PPT
- Recycle CICS via **cold-start**

6.2.9 CICS Translator Options Required for COBOL Applications

For COBOL/VSE or VS COBOL II online programs (VS COBOL II must at least be relinked to involve LE/VSE run-time) one of the following CICS/VSE or CICS TS translator options must be used. This will apply to mainline programs as well as to COPY-books that may be translated separately.

- XOPTS(**COBOL2**) was a minimum setting for VS COBOL II type programs, preferable matching the ANSI74 standard. It may also be used in a COBOL/VSE context.
- XOPTS(**ANSI85**) implies COBOL2 and can also be applicable for COBOL/VSE or VS COBOL II compiled program units. However these settings are appropriate in case the application exploits ANSI85 functionality such as nested programs.
- XOPTS(**COBOL3**) is a CICS TS only translator option which you may wish to use as an indicator for a COBOL/VSE or SAA AD/Cycle COBOL/370 cross compile program unit. It implies ANSI85 and COBOL2. By the way CICS TS doesn't support the SIT COBOL2 parameter since the run-time must be LE/VSE. Please refer to CICS Transaction Server documentation for more details.

Note: Sometimes VS COBOL II programs, translated without either of these CICS translator options, executed without error with the former VS COBOL II run-time. However such programs will not execute successfully under LE/VSE and are likely to use the old and obsolete COBOL specific CICS stub DFHECI.

6.2.10 LE/VSE Related Service via Ordering PSP Bucket

Please use VSE/ESA specific PSP buckets for upgrading LE/VSE. This package is named "VSEESA26x" (where x is the modification level). It can be ordered via IBM service teams. The related subset for LE/VSE 1.4.2 is named "IBMLANG/65K". Of further interest can be CICS subsets ensuring synchronization with LE/VSE.

Further general service assist will be available via the Service Update Facility (SUF):
<http://www.ibm.com/servers/eserver/zseries/zos/suf/> or <http://techsupport.services.ibm.com> .

6.2.11 LE/VSE Documentation Links

- <http://www.ibm.com/servers/eserver/zseries/os/vse/le/books.htm>

The link also provides a 'doc sorted by LE/VSE release' view.

- *LE/VSE V1R4 Programming Reference* has been updated for the March 2002 Softcopy Collection Kit SK2T-0060 and placed into the VSE/ESA 2.6 bookshelf.

6.3 TCP/IP for VSE/ESA

With VSE/ESA 2.6.1 APAR PQ55591 (aka SERV140D) was installed as the current service level for TCP/IP for VSE/ESA.

On top of this APAR, the following ZAP's are applied:

```
***** ZP14D101 for VSE/ESA 2.6 (CLC 10Q) *****
*
* $$ JOB JNM=ZAP60559,CLASS=0,DISP=D

```

The functional update of the TCP/IP for VSE/ESA 1.3 program (IBM program number 5686-A04) to release level 1.4 was introduced with APAR PQ29053. This APAR is also included in VSE/ESA 2.6.1 and represents the initial code level for CLC 10Q of TCP/IP for VSE/ESA in VSE/ESA 2.6.1.

The documentation for TCP/IP 1.4 for VSE/ESA is available on the VSE/ESA 2.6.1 Softcopy Collection CD-ROM SK2T-0060.

On the CD-ROM you will find 7 books with the original program description from Connectivity Systems Incorporated, the provider of the TCP/IP for VSE 1.4 program, plus one manual describing the setup of the TCP/IP for VSE/ESA program IBM is providing. The books are as follows:

- TCP/IP for VSE/ESA - IBM Program Setup and Supplementary Information
- TCP/IP for VSE 1.4 Installation Guide
- TCP/IP for VSE 1.4 User's Guide
- TCP/IP for VSE 1.4 Commands
- TCP/IP for VSE 1.4 Programmer's Reference
- TCP/IP for VSE 1.4 Messages and Codes
- TCP/IP for VSE 1.4 Optional Products
- TCP/IP for VSE 1.4 SSL for VSE User's Guide

The manual 'TCP/IP for VSE/ESA - IBM Program Setup and Supplementary Information' (SC33-6601) replaces the former 'TCP/IP for VSE/ESA User's Guide'. All the available documentation for the TCP/IP for VSE/ESA 1.4 program is described in that manual in Chapter 1.

All the documentation on the CD-ROM is available in PDF format only. You can use the Adobe Acrobat Reader to view and print the documentation. If you do not already have an Acrobat Reader installed, or if you need information on installing and using an Acrobat Reader, see the Adobe Web site at

<http://www.adobe.com>

You will find the documentation for this new release of TCP/IP for VSE/ESA also on the VSE Home Page at

<http://www-1.ibm.com/servers/eserver/zseries/os/vse/>

For a detailed description of

- How to install TCP/IP Keys
- The TCP/IP demo mode
- Dependencies when you are using a license from Connectivity Systems.

please see the manual *TCP/IP for VSE/ESA IBM Program Setup and Supplementary Information* SC33-6601.

6.3.1 Installation of VSE Connector Client

The installation of the VSE Connector Client has been changed with VSE/ESA 2.6.1. The W-book IESINCON.W, which is shipped in PRD1.BASE, is now a ZIP-file that contains the following files:

- install.class, the VSE Connector Client code
- install.sh, an install script for Unix/Linux
- install.bat, an install batch-file for Windows
- install.cmd, an install batch-file for OS/2

To install the VSE Connector Client on your workstation:

- make sure, a Java Development Kit (JDK) 1.3 or Java Runtime Environment (JRE) 1.3 or higher is installed on your workstation. You can download IBM JDKs and JREs for various platforms from <http://www.ibm.com/java/jdk/download/>
- Download the W-book to a new empty directory on your workstation
- Rename the W-book to iesincon.zip
- Extract the ZIP-file using any ZIP-tool, like pkzip, winzip, etc.
- Run the install batch file or shell script related to your platform
- An install wizard will prompt you for further installation options

Also check the latest news on our VSE/ESA e-business Connectors and Utilities web page on <http://www.ibm.com/servers/eserver/zseries/os/vse/support/vseconn/conmain.htm>

6.3.2 Installation of the Java-Based TCP/IP for VSE/ESA Configuration Dialog

With VSE/ESA 2.6 there is a new Java-based version of this dialog. The former platform dependent C-version (Windows and OS/2 only) is no longer supported. The dialog is shipped as W-book IPNCFGE.W in PRD1.BASE. There are NLS-versions for English, German, Japanese, and Spanish. All NLS-versions are contained in IPNCFGE.W.

The W-book is a ZIP-file, which contains the following files:

- install.class, the dialog code
- install.sh, an install script for Unix/Linux
- install.bat, an install batch-file for Windows
- install.cmd, an install batch-file for OS/2

To install the dialog on your workstation:

- make sure, a Java Development Kit (JDK) 1.3 or Java Runtime Environment (JRE) 1.3 or higher is installed on your workstation. You can download IBM JDKs and JREs for various platforms from <http://www.ibm.com/java/jdk/download/>
- Download the W-book to a new empty directory on your workstation
- Rename the W-book to ipncfge.zip
- Extract the ZIP-file using any ZIP-tool like pkzip, winzip, etc.
- Run the install batch file or shell script related to your platform
- An install wizard will prompt you for further installation options

Also check the latest news on our VSE/ESA e-business Connectors and Utilities web page on <http://www.ibm.com/servers/eserver/zseries/os/vse/support/vseconn/conmain.htm>

6.3.3 CWS Client Authentication

With VSE/ESA 2.6.1 the CICS Web Support (CWS) supports SSL Client Authentication. The Interactive Interface now includes a new dialog and various service functions that can be used with CWS to implement client authentication and manage client certificates.

For more information, check the following books:

- *CICS Transaction Server for VSE/ESA V1R1 Enhancements Guide*, GC34-5763.
- *VSE/ESA e-business Connectors User's Guide*, SC33-6719

and the VSE/ESA Internet page at <http://www.ibm.com/servers/eserver/zseries/os/vse/>

6.4 Known Impact on Vendor Software

If you are using products from Computer Associates - FAQS or EPIC, please make sure that you apply the following PTFs:

LO05042 for FAQS/PCS
EP51270 for EPIC

6.5 Hints and Tips to CA-Top Secret

6.5.1 CA-Top Secret for VSE/ESA

CA-Top Secret for VSE/ESA (Version 1 Release 3), is always shipped with your VSE/ESA 2.6.1 order. It is key protected and requires a unique user access key. However, the user access key is only generated and delivered automatically from IBM as well as the entitled product publications, when CA-Top Secret for VSE/ESA is explicitly ordered. The license order for CA-Top Secret for VSE/ESA can be placed together with any other product with the VSE/ESA 2.6.1 product set or alone at a later point in time.

6.5.1.1 CA-Top Secret for VSE/ESA - Prerequisite CA90s

CA90s renamed to CA-CIS

CAI Inc. has renamed "CA90s Services for VSE" to "CA Common Infrastructure Services for VSE" or "CA-CIS". This name change does not affect the contents nor Version/Release nor the described handling of the deliverable.
In the following, please read "CA90s" as "CA-CIS".

CA-Top Secret for VSE/ESA, V1R3, requires CA90s Services for VSE (CA90s), Version 1 Release 4, or higher as prerequisite.

Ordering CA90s from CAI Inc. can be performed by providing:

- customer name,
- shipping address (no Post Office Boxes),
- customer contact,
- phone number,
- preferred medium,
- request statement "CA90s Services to support CA-Top Secret VSE, including ENF"

via one of the following alternatives:

- Visit the URL provided by CAI Inc. for this purpose at:
http://www.cai.com/solutions/os390/vse/ca90_service_form.htm
- Send an e-mail to:
danda01@mail.cai.com
- If not e-Mail/Web-enabled:
Phone: USA (516)342-2181
Fax: USA (516)342-4873

The customer will receive CA90s Services for VSE, Version 1 Release 4, (CA90s) with the required documentation and a License Agreement form directly from CAI Inc.. The customer must return the signed License Agreement form directly to CAI Inc..

The customer will be registered and licensed for CA90s by CAI Inc. who will also provide service for CA90s. CA90s is a Computer Associates International, Inc. product, not an IBM product. IBM does not assume any responsibility for CA90s either expressed or implied.

CA90s is provided at no additional charge.

6.5.1.2 CA-Top Secret for VSE/ESA - Demo Mode: CA-Top Secret for VSE/ESA can run in “demo mode” without user access keys but still requiring CA90s. “Demo mode” means all functions in CA-Top Secret for VSE/ESA can be used, however, resources are not protected. If a security violation occurs, it will be reported with console messages only.

6.6 Publication Updates

6.6.1 Accessing VSE/ESA Performance Documentation

You can receive up-to-date performance information for VSE/ESA from the Internet or from the VSE CD-ROM Collection SK2T-0060.

From the internet, access and get these documents via the VSE/ESA homepage
<http://www-1.ibm.com/servers/eserver/zseries/os/vse/library/vseperf.htm>

On the CD-ROM Collection, all the performance documents are on disc 3.

The following files or documents are available, all of them are in PDF format (ADOBE Acrobat Reader):

FILE	DOCUMENT TITLE
VE13PERF.PDF	IBM VSE/ESA 1.3/1.4 Performance Considerations
VEVMPERF.PDF	IBM VSE/ESA VM Guest Performance Considerations
VE21PERF.PDF	IBM VSE/ESA V2 Performance Considerations
VE21TDP.PDF	IBM VSE/ESA Turbo Dispatcher Performance
VEIOPERF.PDF	IBM VSE/ESA I/O Subsystem Performance Considerations
VEPERACT.PDF	IBM VSE/ESA Hints for Performance Activities
VETCPPER.PDF	VSE/ESA TCP/IP Performance Considerations
VESORTP.PDF	IBM DFSORT/VSE Performance Considerations
VECICSTS.PDF	IBM VSE/ESA CICS Transaction Server Performance Considerations
VE25PERF.PDF	IBM VSE/ESA 2.5 Performance Considerations

6.7 Tips and Hints for VSE/ESA Optional Programs

6.7.1 VisualAge Generator Server runtime

The documentation delivered with Visual Age Generator Server 1.1.0 for VSE/ESA describes the setup for a VSE/ESA 2.4 system. So here are the changes that are necessary to run the Generator Server for VSE/ESA on a VSE/ESA 2.6 system with CICS TS 1.1.1:

EZEPRIN needs to be a standard system label, because CICS TS 1.1.1 doesn't work with temporary labels (DLBL statements) in the JCL

Description: The label EZEPRIN is defined in member ELAVCICS.A and usually you have to add the label to the CICS startup job, but the temporary 'DLBL EZEPRIN' statement doesn't work and the CICS startup fails. If you insert the label into the standard system label area (see job ADDLAB below), then the CICS startup will run successfully. The ASSGN statement is the only one which needs to be placed in CICS startup job.

FCT entries are now online

Description: The FCT entries are migrated to CSD and now online, they should now be defined via RDO. To migrate the old FCT entry in ELAFCT, assemble DFHFCTSP (with inserted ELAFCT) and change the job SKCSDFIL (library 59), simply add the line 'MIGRATE TABLE(DFHFCTSP)' at the end of the DFHCSDUP part after the ADD GROUP statement (see the following sample for 3380 or CKD devices below).

Run the job and the table will be updated and migrated to the new format.

Job ADDLAB:

```
* $$ JOB JNM=ADDLAB,CLASS=0,DISP=L,PRI=3
// JOB ADDLAB
// OPTION STDLABEL=ADD
// DLBL ELACFIL,'ELA110.ELACFIL',,VSAM,CAT=IJSYSCT
// DLBL EZEPRIN,'USER.EZEPRINT.FILE',0,SD
// EXTENT SYS025,SYSWK3,1,0,5910,75
/*
/&
* $$ EOJ
```

Part of job SKCSDFIL

```
// EXEC DFHCSDUP,SIZE=600K      UPDATE CICS CSD VSAM FILE
DELETE GROUP(ELAGRP)
* $$ SLI MEM=ELAGRP.A,S=(PRD2.DBASE)
* $$ SLI MEM=ELAGENU.A,S=(PRD2.DBASE)
ADD GROUP(ELAGRP) LIST(VSELIST)
MIGRATE TABLE(DFHFCTSP)
```

6.7.2 DOS/VS COBOL withdrawal

DOS/VS COBOL is no longer available as individual product. DOS/VS COBOL customers who wish to run it under VSE/ESA 2.3 (with CICS/VSE 2.3) and later may refer to APARs PQ00970 and PQ00971. These APARs provide assistance in migrating the DOS/VS COBOL product (members+ MSHP service information) from an existing operating environment to VSE/ESA 2.3 and later.

7.0 Installation Instructions

There is no further information for VSE/ESA 2.6.1

8.0 VSE/ESA 2.6.1 Install Logic

There is no further information for VSE/ESA 2.6.1

9.0 Reader's Comments

Program Directory for VSE/Enterprise Systems Architecture Version 2 Release 6.1

You may use this form to comment about this document, its organization, or subject matter with the understanding that IBM may use or distribute whatever information you supply in any way it believes appropriate without incurring any obligation to you.

For each of the topics below please indicate your satisfaction level by circling your choice from the rating scale. If a statement does not apply, please circle N.

RATING SCALE

very satisfied	<=====>	very dissatisfied	not applicable
1	2 3 4	5	N

	Satisfaction					
	1	2	3	4	5	N
Ease of product installation						
Contents of program directory						
Installation Verification Programs						
Time to install the product						
Readability and organization of program directory tasks						
Necessity of all installation tasks						
Accuracy of the definition of the installation tasks						
Technical level of the installation tasks						
Ease of getting the system into production after installation						

Did you order this product as an independent product or as part of a package?

- Independent
- Package

If this product was ordered as part of a package, what type of package was ordered?

- CustomPac
 - FunctionPac
 - SystemPac
- System Delivery Offering (SDO)
- Other - Please specify type:

Is this the first time your organization has installed this product?

- Yes
- No

Were the people who did the installation experienced with the installation of these products?

- Yes
- No

If yes, how many years? ___

If you have any comments to make about your ratings above, or any other aspect of the product installation, please list them below:

Please provide the following contact information:

Name and Job Title

Organization

Address

Telephone

Thank you for your participation.
