Agenda

- CI CS 3270 Bridge
 - Overview
 - Components
- CI CS Web Support
 - What is CI CS Web Support?
 - Enabling CI CS Web Support
 - Writing CI CS Web Applications
 - Creating HTML templates from BMS definitions
- Summary

CI CS 3270 Bridge

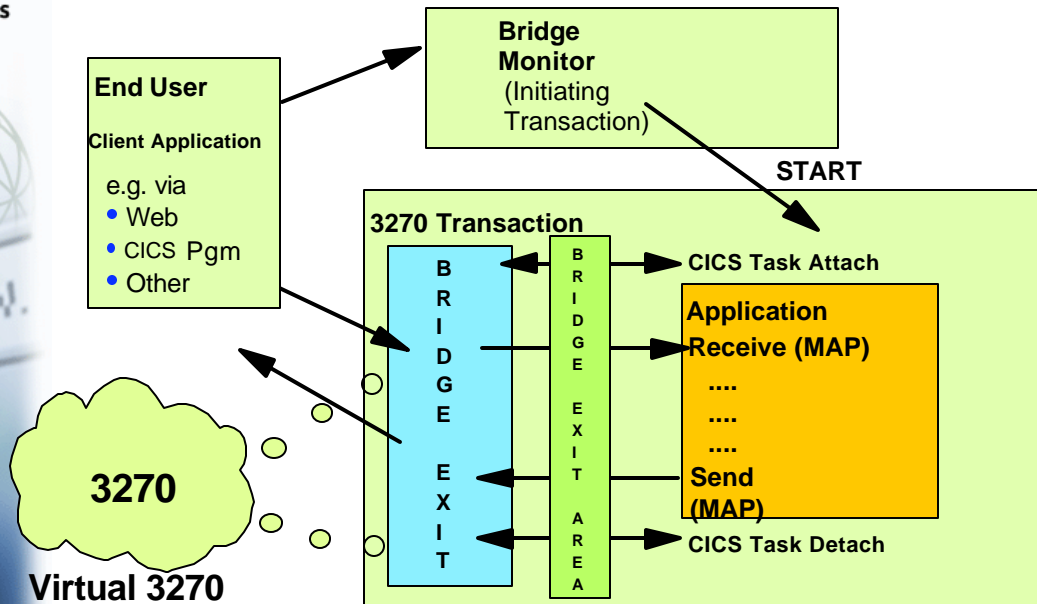

Overview

- provides the ability to run existing 3270 based transactions
 - Without a 3270 Terminal
 - Without changing application
- 3270 terminal I/O requests handled by a bridge exit program
- CICS supplied 3270 bridge exit programs
 - General purpose sample which uses TS or TD queues for I/O
 - Specific program for use with the CICS Web Interface

The 3270 Bridge Environment

Elements of the 3270 Bridge

- End User Client application
 - The initiating application that can reside on any platform
 - Issues a message to start the CICS Transaction via the TRANSPORT MECHANISM.
- Transport Mechanism
 - The means by which the messages containing the information is passed between the 3270 Bridge and the Client Application
 - TS or TD Queues
 - CICS Web

Elements of the 3270 Bridge (continued)

- Bridge Monitor
 - Optional module that monitors a TRANSPORT MECHANISM for a message to start the 3270 Bridge
 - May be a long running task
- Bridge Exit
 - The module that handles the sending and receiving of messages between the End User Client Application and the CICS Transaction
 - It can handle the formatting of messages for the End User Client and the interpretation of returned messages into 3270 format for CICS or it can call a FORMATTER to do this
 - It is a user replaceable module

Elements of the 3270 Bridge *(continued)*

■ FORMATTER

- Formats the messages to be sent to the End User Client and interprets received messages to create the 3270 data required by CICS
- It is called by the Bridge Exit if defined
- It is a user replaceable module

■ Bridge Exit Area

- A COMMAREA used between the Bridge Exit and CICS to process and retain information between calls

Elements of the 3270 Bridge *(continued)*

■ Bridge Facility

- the Virtual Terminal that is invisible to the rest of CICS but is visible to the User Transaction
- Does not appear in the results of a CEMT INQUIRE TERM or CEMT INQUIRE TASK
- A Real Terminal Definition can be used as a template by naming it in the FACILITYLIKE definition option

■ Bridge Environment

- Term used to describe the components used by the 3270 Bridge when used with a User Transaction
 - ▶ *Includes Bridge Exit, Bridge Exit Area, Formatter and Bridge Facility*

Elements of the 3270 Bridge *(continued)*

- User Transaction
 - A CICS Transaction or series of Transactions that perform 3270 operations
 - executed by the 3270 Bridge

Considerations for writing a Bridge Exit

- Supported Languages
 - Assembler, C, COBOL, PL/I
 - ▶ *Copybooks supplied for these*
- Uses the same Transaction Work Area (TWA) as the User Transaction
- User replaceable module
 - GETMAIN any storage for state data etc
- Commit and Backout are done at the same time as the User Transactions
- Should not attempt to share resources such as VSAM records or ENQ names with the User Transaction
- Do not use EXEC CICS ABEND
 - If abend required set the BRXA_USER_ABEND field

Considerations for writing a Bridge Exit CS 3270 Bridge and Web Support (continued)

- Bridge Exit Area
 - Interface between Bridge Exit and CICS
 - It is a CICS COMMAREA
 - Subdivided into sub-areas
 - ▶ Header
 - ▶ Transaction Area
 - ▶ Command Area
 - ▶ User Area
 - ▶ ADS Descriptor

3270 Bridge - Message format CICS 3270 Bridge and Web Support

- Default message exchanged between the 3270 Bridge Exit and the End User Application are based on MQ format
 - Copybooks are provided for supported languages
 - ▶ Assembler - DFHBRMQD
 - ▶ C - DFHBRMQH
 - ▶ PL/I - DFHBRMQL
 - ▶ Cobol - DFHBRMQO
 - For provided samples, ALL messages must start with a standard message header
 - Copybooks for both definition and constants are provided
 - ▶ Assembler Definition - DFHBRMHD Constants - DFHBRMCD
 - ▶ C Definition - DFHBRMHH Constants - DFHBRMCH
 - ▶ PL/I Definition - DFHBRMHL Constants - DFHBRMCL
 - ▶ Cobol Definition - DFHBRMHO Constants - DFHBRMCO

3270 Bridge - Samples

- CI CS Temporary Storage and Transient Data queues
 - Provided in Cobol
 - ▶ *Bridge Exit* - *DFHOCBRE*
 - ▶ *Formatter* - *DFHOCBRF*
 - ▶ *Bridge Exit Copybook* - *DFHOCBRD*
 - ▶ *Formatter Copybook* - *DFHOCBRU*
 - Uses TS or TD Queues for Transport Mechanism
 - ▶ *Messages must be in the MQ format*
- CI CS Web
 - Object code
 - ▶ *DFHWBLT*
 - Allows access via TCP/IP and the Web using a browser

3270 Bridge - BMS Map Utility

- Bridge supports BMS MAPS
 - with Application Data Structures (ADS) which is preferred
 - or without ADS
- To build BMS MAPS with ADS requires the Maps to be reassembled at CI CS Transaction Server for VSE/ESA Release 1.1.1 or above level.
- If you do not have the BMS source, there is a provided utility, DFHBMSUP, which will take an assembled Mapset and create a BMS MAP
 - Execute in a batch job giving the Mapset name as the input parameter
 - Result is written to Sequential Disk file addressed by BMSOUT DLBL

3270 Bridge - BMS Map Utility (continued)

■ Example:

— DLBL Statement

```
▶ // DLBL BMSOUT,'VSE9.BMSMAP.OUTPUT',0,SD
```

— Execute Statement

```
▶ // EXEC PGM=DFHBMSUP,SI ZE=DFHBMSUP,PARM='BRQMAPS'
```

3270 Bridge - BMS Map Utility (continued)

■ Example Output

```
* This is an unaligned mapset
*
      TITLE 'BRQMAPS Mapset MACRO Definition Listing'
@000001 DFHMDS TYPE=DSECT,LANG=ASM,TIOAPFX=YES,MODE=INOUT
*
BRQMAP DFHMDS SIZE=(24,80),CTRL=(FREEKB)
FLD00001 DFHMDF POS=0,LENGTH=4
FLD00002 DFHMDF POS=13,LENGTH=8,ATTRB=(ASKIP,BRT),INITIAL='          '
DFHMDF POS=22,LENGTH=45,ATTRB=(ASKIP,BRT),INITIAL='- CICS 3270 Bridge, Passthrough Transaction '
DFHMDF POS=160,LENGTH=33,INITIAL='Overtime to modify then press PF2'
DFHMDF POS=320,LENGTH=12,INITIAL='MQCIH values'
DFHMDF POS=361,LENGTH=37,INITIAL='Application Data Structure Descriptor'
FLD00003 DFHMDF POS=402,LENGTH=21,INITIAL='Transaction id ==>'
FLD00004 DFHMDF POS=424,LENGTH=4,ATTRB=(UNPROT)
DFHMDF POS=429,LENGTH=0
DFHMDF POS=443,LENGTH=19,INITIAL='On SEND ==>'
FLD00005 DFHMDF POS=463,LENGTH=1,ATTRB=(UNPROT)
DFHMDF POS=465,LENGTH=0
DFHMDF POS=482,LENGTH=21,INITIAL='Startcode ==>'
FLD00006 DFHMDF POS=504,LENGTH=2,ATTRB=(UNPROT)
DFHMDF POS=507,LENGTH=0
DFHMDF POS=523,LENGTH=19,INITIAL='On RECEIVE ==>'
FLD00007 DFHMDF POS=543,LENGTH=1,ATTRB=(UNPROT)
DFHMDF POS=545,LENGTH=0
```

3270 Bridge - BMS Map Utility (*continued*)

- Example (*continued*)
 - New name assigned to MAPSET so that it can be assembled without overwriting original
 - Name and labels can be edited to more reasonable names
 - POS is the offset from the start of the Map.

3270 Bridge - Support Pack

- Passthrough Utility Support Pack
 - Provides a means of evaluating a 3270 Application to see if it is suitable for use with the 3270 Bridge
 - Allows examination of the 3270 Data streams created by the bridge exit
 - Works with the supplied Temporary Storage and Transient Data sample Bridge Exit
 - ▶ *DFHOCRBE*
 - Can be used with other Bridge Exit
 - ▶ *must conform to the same Interfaces as the supplied Samples*
 - Support Pack number is CA21

CICS Web Support

Introduction

- Previously referred to as CICS Web Interface
- New functions to be provided to support direct connection from Web to CICS Transaction Server for VSE/ESA
 - CICS Web Support - this presentation
 - 3270 Bridge Support
- Run existing CICS Transactions from a Web Browser, with minimal changes required to existing transactions
- Write new applications for direct access from the Web
- Easy to configure and implement
- Complements CICS Transaction Gateway - see session on Monday at 9:15 for more details

What is CICS Web Support ?

Allows a standard Web Browser to invoke a CICS application

The standard HTTP protocol is used

Direct connection - no intermediate gateways or Servers

Invoking a CICS application from the Web

Via A Uniform Resource Locator (URL) of the general form :

http://machine.name:port/convertor/alias/program?optional-token
Example: http://cicstest.hur.ibm.com:1080/cics/cwba/webpgm1

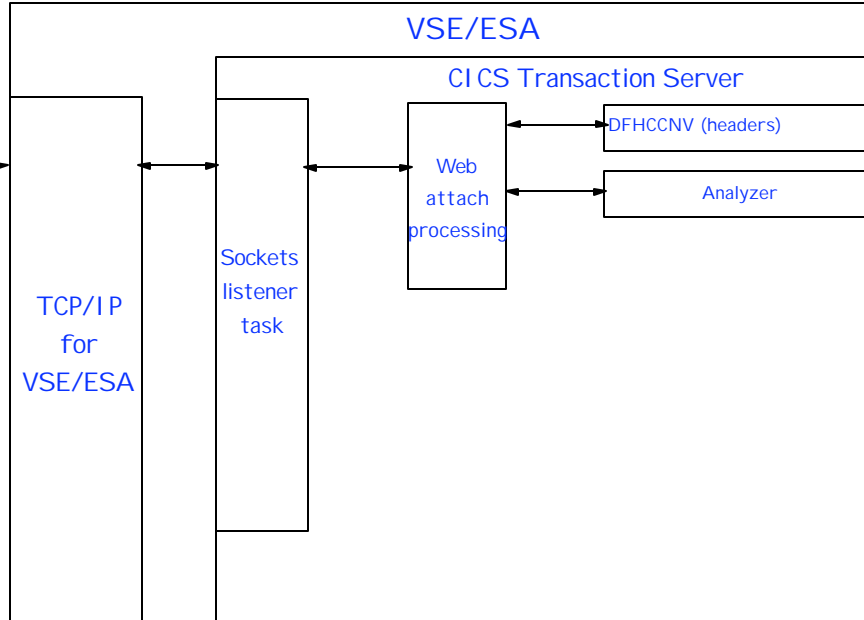

Where :

- machine.name** is the IP address or DNS name of the CICS region
- port** is the configured CICS Web Interface listening port number
- convertor** is the name of the program for Decode & Encode processing
 - use 'CICS' if a convertor is not required
- alias** is the transaction id of the alias transaction
 - CWBA is the supplied alias
- program** is the application program name
- optional-token** is optional data to be passed with the request

A "Web aware" application understands the HTTP protocol
 Accepts HTTP requests and returns HTTP responses

The CICS Web Support Architecture

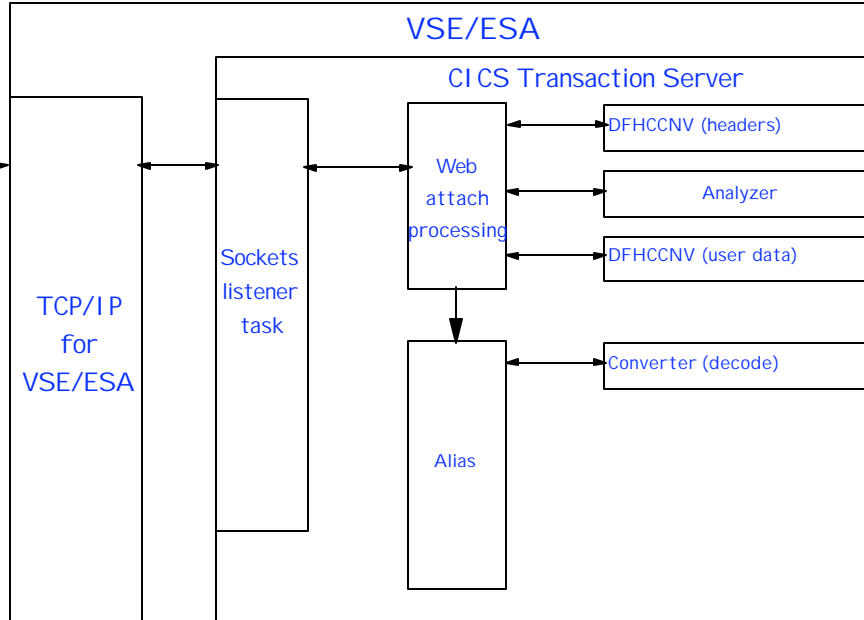

The CICS Web Support Architecture...

- The Analyzer:
 - User Replaceable Module
 - Parses the incoming request
 - Determines what to do next
 - An Analyzer Exit is mandatory as it defines the codepage conversion
 - The supplied default:
 - ▶ Supports the general CWI URL format
 - ▶ Optional token restricted to 8 bytes
 - ▶ Provides ISO-8859-01 codepage conversation.

The CICS Web Support Architecture...

The CICS Web Support Architecture...

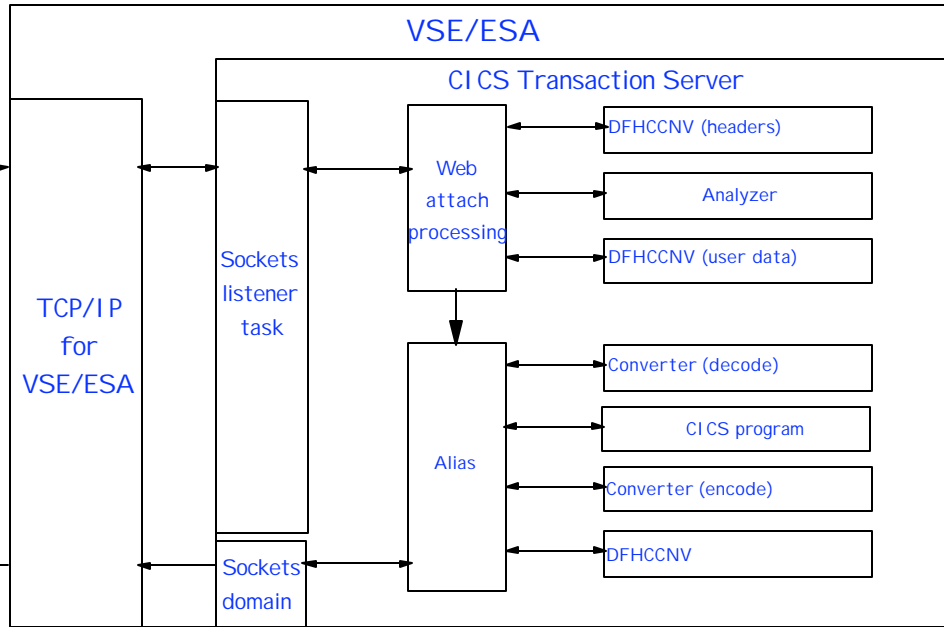

- The Converter:

Optional: provides decode and encode functions

- Decode is invoked before request passed to CICS application
 - ▶ provide COMMAREA in the format expected by the application
- Encode is invoked after CICS application has processed request
 - ▶ Build HTTP response and HTTP response headers

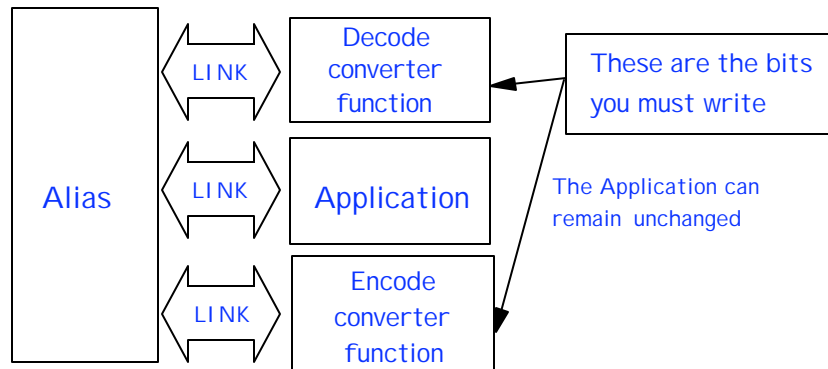

The CICS Web Support Architecture...

Accessing Existing CICS Applications

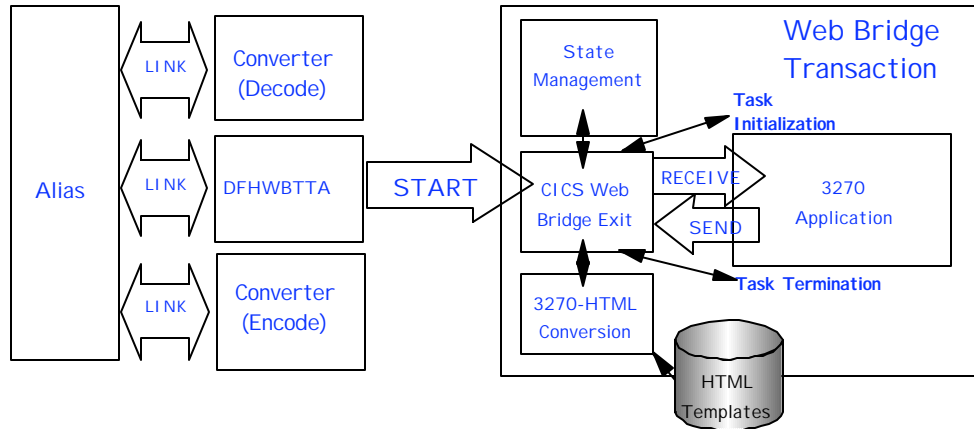

- COMMAREA applications via use of the Converter...
A Converter program can shield existing applications from HTML

Accessing Existing CI CS Applications...

- Via the supplied CI CS Web Bridge...
 - Uses 3270 Bridge support
 - ▶ Supports BMS Maps and Terminal Control 3270 datastreams
 - ▶ No changes to the existing CI CS 3270 application

And access to NEW applications

Using the new API s the picture becomes much simpler

Enabling CICS Web Support

DFHSDT requirements

- Specify that TCP/IP services are required
 - TCPIP=YES
- Specify Web 3270 bridge parameters
 - WEBDELAY=(n,m)
 - ▶ *n = the time in minutes, that a transaction started by the Web 3270 Bridge is to remain in terminal wait before CICS will terminate it*
 - ▶ *m = the time in minutes during which state data is kept for a CICS Web 3270 bridge transaction*
- Increase EDSA storage by at least 2M for TCPIP services + 1M per active WEB connection

Other requirements

- Define a Conversion table using DFHCNV macros
 - This allow CICS to convert the header pages and user data from ASCII to EBCDIC and EBCDIC to ASCII correctly
- Define a TCPIPSERVICE for each type of service you want
 - Each TCPIPSERVICE defines the port number that CICS is to listen on, the name of the analyzer to be used, the transaction to be attached by CICS when new work arrives, and an IP address on which CICS is to listen for incoming requests
- Define required DOCTEMPLATES
 - A DOCTEMPLATE allows you to perform variable substitution on documents in a similar manner to that done by BMS for 3270 screens

Define a Conversion Table

- Example definition, showing simple ASCII - EBCDIC conversions:

```
DFHCNV TYPE=INITIAL
DFHCNV TYPE=ENTRY,RTYPE=PC,RNAME=DFHQBHH,USREXIT=NO,
SRVERCP=037,CLINTCP=437
DFHCNV TYPE=SELECT
DFHCNV TYPE=FIELD,OFFSET=0,DATATYP=CHARACTER,DATALEN=32767,
LAST=YES
DFHCNV TYPE=ENTRY,RTYPE=PC,RNAME=DFHQBUD,USREXIT=NO,
SRVERCP=037,CLINTCP=437
DFHCNV TYPE=SELECT
DFHCNV TYPE=FIELD,OFFSET=0,DATATYP=CHARACTER,DATALEN=32767,
LAST=YES
DFHCNV TYPE=FINAL
END
```

Define TCP/IP services

```

Not required for transactions started via CICS Web 3270 Bridge

Writing CICS Web Applications

WAVV 2000 Colorado Springs, CO
October 6-10 2000

© Copyright 2000 IBM Corporation

IBM SOFTWARE

The new Web-related API 's

- For new and extended applications => Web aware
 - EXEC CICS WEB allows applications to...
 - ▶ Retrieve the various components of the inbound HTTP request
 - ▶ Construct HTTP headers to be returned in HTTP response
 - ▶ Select a document to be delivered as the body of the response
 - ▶ Symbol list can be passed for substitution

WAVV 2000 Colorado Springs, CO
October 6-10 2000

© Copyright 2000 IBM Corporation

IBM SOFTWARE

The new Web-related API 's...

- For new and extended applications => Web aware
 - EXEC CICS DOCUMENT allows creation of "Documents"....
 - ▶ Can be made up of text and binary elements
 - ▶ Can contain bookmarks and symbols
 - ▶ Bookmarks can be used to insert data at specific points
 - ▶ Documents can be imbedded
 - ▶ Codepage information is stored with the Document

The new Web-related API 's...

- For new and extended applications => Web aware
 - EXEC CICS EXTRACT TCPIP allows retrieval of TCP information
 - ▶ Client name and address
 - ▶ Server name and address
 - ▶ TCPIPService
 - ▶ Port number

Document Templates - symbols

- Document templates are defined via RDO

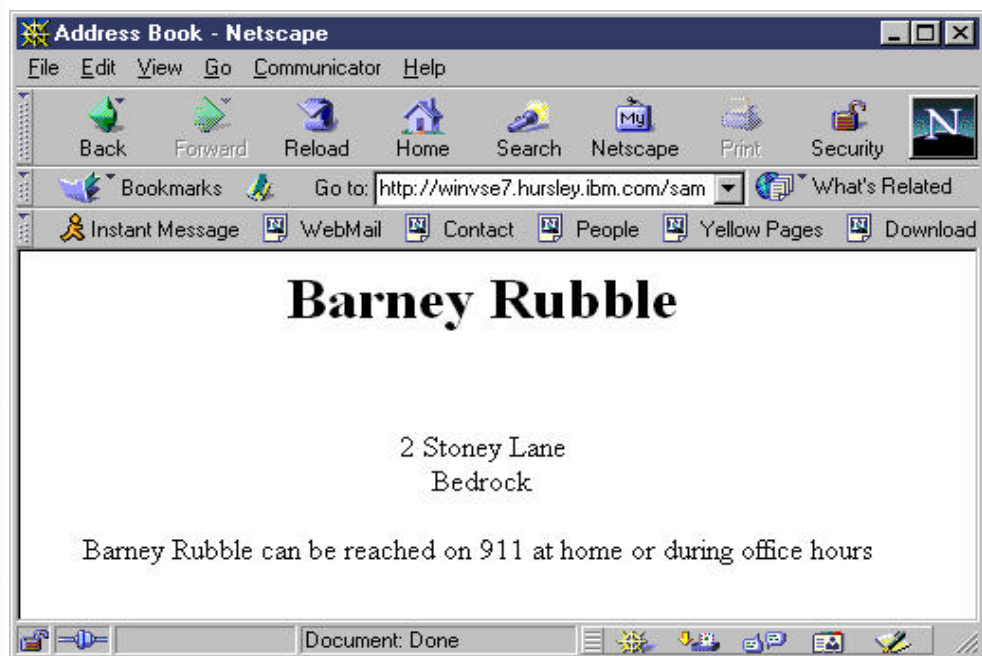

- HTML example:

```
<html>
<head>
<title>Address Book</title>
</head>
<body>
<center>
<h1>&person;</h1><br>
&house_number; &street;<br>
&town;<br>
&zip;<br>
&person; can be reached on&home_number; at home
or &work_number; during office hours <br></center>
</body>
</html>
```

- A symbol list for the previous example would be a single string:
"person=Barney Rubble&house_number=2&street=Stoney
Lane&town=Bedrock&zip= &home_number=911&work_number= "
Any editor can be used for templates

Example screen after substitution

Creating HTML templates from BMS definitions

HTML templates

- BMS macros have been enhanced to support creation of HTML templates that contain
 - Constants and input fields from the map
 - Buttons to represent
 - ▶ *ENTER key, PA1..PA3, PF1..PF24 HTML Reset*
 - 5 hidden fields DFH_NEXTTRANSI D.1 to DFH_NEXTTRANSI D.5
 - Hidden variable DFH_CURSOR
 - A JavaScript function dfhsetcursor
 - ▶ *sets the cursor position to the field named in DFH_CURSOR*
 - A JavaScript exception handler for the onLoad exception
 - ▶ *invokes dfhsetcursor*

HTML Generation

- Assemble existing BMS maps
 - Specify TYPE=TEMPLATE on the DFHMSD macro
 - Or SYSPARM=TEMPLATE in the Assembler parm statement
 - You must also reassemble the physical map (TYPE=MAP)
- Use LIBR to store the templates in a template library
 - CICS assumes Sublibrary called DFHHTML.DFHDOC
 - ▶ *Otherwise you need to define DOCTEMPLATES for them*
- There is one template generated for each DFHMDI macro
 - The name for the template is taken from DFHMSD macro
 - ▶ *Starts by appending 'A' for first map, 'B' for second and so on*

Customizing HTML templates

- HTML templates can be customized to:
 - Support applications' keys not generated in the standard output
 - Suppress the HTML Reset Button
 - Change the appearance of the keys, or text associated with them
 - Provide an HTML title page
 - Provide a masthead graphic for the page
 - Change the color of the background or specify a special background
 - Modify the BMS colors
 - Suppress parts of the BMS map
 - And more

Customizing macros

- DFHMDX
 - Define your own customization macro that can be used when creating the templates
 - Is invoked from DFHMSX
 - Add the name of your macro to the TYPE
- DFHWBOUT
 - Add invocations of DFHWBOUT to BMS source
 - Inserts text only if PARM=TEMPLATE
 - For example, add instructions for "web users" unfamiliar with 3270 screens, without affecting your in-house "3270 users"

Customizing examples - DFHMDX

Set default PF keys for all maps and mapsets

```
MACRO
DFHMSX
DFHMDX MAPSET=*,MAP=*,
        PF1='Help',PF3='Exit',PF4='Save',PF9='Messages'
```

Now change title and PF3 for all maps in mapset DFHWB0

```
DFHMDX MAPSET=DFHWB0,MAP=*,
        TITLE='CICS Web Interface',
        PF3='Messages'
```

Now change title and PF3 for just map DFHWB02

```
DFHMDX MAPSET=DFHWB0,MAP=DFHWB02,
        TITLE='CICS Web Interface Enable',
        PF3='Save'
```

```
MEND
```

Customization examples - DFHWBOUT

Add text that appears only on the HTML page

DFHWBOUT '<p>This text illustrates the use of the DFHWBOUT macro,'
 DFHWBOUT 'which can be used to output text that should only appear'
 DFHWBOUT ' in HTML templates, and will never appear in the'
 DFHWBOUT 'corresponding BMS map.'

Add HTML header information to the HTML page

DFHWBOUT '<meta name="author" content="E Phillips Oppenheim">'
 DFHWBOUT '<meta name="owner" content="epoppenheim@xxx.com">'
 DFHWBOUT '<meta name="review" content="20000314">'

DFHWBOUT and DFHMDX working together

Add Web Browser control functions

Cause an action when the page is loaded

DFHMDX MAP=AD001,ONLOAD='jset("CWS is wonderful", "Hello there!")'

And add the following before any DFHMDF macros

```
DFHWBOUT '<script language="JavaScript">'
DFHWBOUT 'function jset(msg,wng)'
DFHWBOUT '    {window.status=msg; alert(wng)}'
DFHWBOUT '</script>'
```

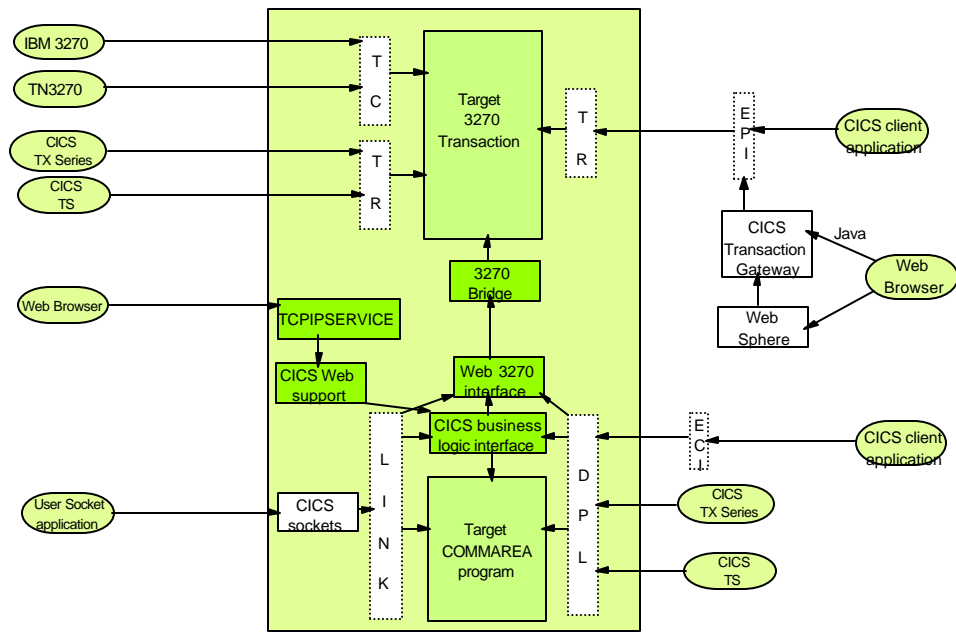

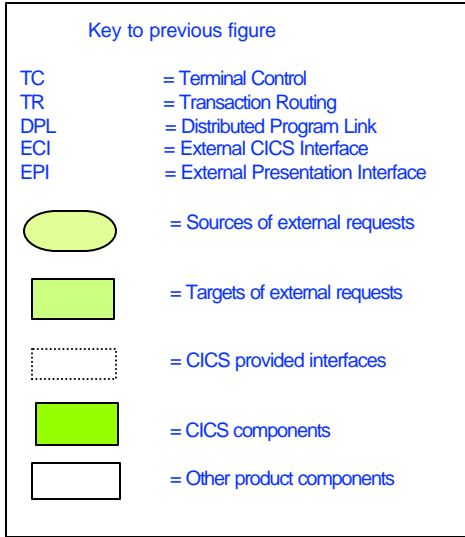

Summary

CICS Transaction Server Environment

CI CS Transaction Server Environment

Summary

- CI CS Web Support will allow you to open your CI CS Transaction Server applications up to the World Wide Web even more
- Its easy to configure and use
- Minimal effort needed for existing applications
- New API s to allow for creating dynamic new applications

Appendix

APPENDIX

New Tools

CICS Web Interface 3270 Transactions

HTML for Raw 3270 Applications

- Makes a reasonable effort to produce a page in fixed width font using the <pre> tag
- Standard header, row of PF buttons, and a footer
- Customizable by writing code in Decode / Encode routines
- E.g. To obtain consistent look with header and footer templates
- REXX available as an easier language to manipulate and parse the body
