Trademarks

The following are trademarks of the International Business Machines Corporation in the United States, other countries, or both.

Not all common law marks used by IBM are listed on this page. Failure of a mark to appear does not mean that IBM does not use the mark nor does it mean that the product is not actively marketed or is not significant within its relevant market.
Those trademarks followed by ® are registered trademarks of IBM in the United States; all others are trademarks or common law marks of IBM in the United States.

For a complete list of IBM Trademarks, see www.ibm.com/legal/copytrade.shtml:

*, AS/400®, e-business/logo®, DBE, ESCO, eServer, FICON, IBM®, IBM (logo)®, Series®, MVS, OS/390®, pSeries®, RS/6000®, S/30, VMESA®, VSE/ESA, WebSphere®, xSeries®, z/OS®, zSeries®, z/VM®, System i, System i5, System p, System p5, System x, System z, System z9®, BladeCenter®

The following are trademarks or registered trademarks of other companies.

Adobe, the Adobe logo, PostScript, and the PostScript logo are either registered trademarks or trademarks of Adobe Systems Incorporated in the United States, and/or other countries.
Cell Broadband Engine is a trademark of Sony Computer Entertainment, Inc. in the United States, other countries, or both and is used under license therefrom.
Java and all Java-based trademarks are trademarks of Sun Microsystems, Inc. in the United States, other countries, or both.
Microsoft, Windows, Windows NT, and the Windows logo are trademarks of Microsoft Corporation in the United States, other countries, or both.
Intel, Intel logo, Intel Inside, Intel Inside logo, Intel Centrino, Intel Centrino logo, Celeron, Intel Xeon, Intel SpeedStep, Itanium, and Pentium are trademarks or registered trademarks of Intel Corporation or its subsidiaries in the United States and other countries.
Linux is a registered trademark of The Open Group in the United States and other countries.
Linux is a registered trademark of Linux Torvalds in the United States, other countries, or both.
ITIL is a registered trademark, and a registered community trademark of the Office of Government Commerce, and is registered in the U.S. Patent and Trademark Office.
IT Infrastructure Library is a registered trademark of the Central Computer and Telecommunications Agency, which is now part of the Office of Government Commerce.

* All other products may be trademarks or registered trademarks of their respective companies.

Notes:
Performance is in Internal Throughput Rate (ITR) ratio based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput improvements equivalent to the performance ratios stated here.
IBM hardware products are manufactured from new parts, or new and serviceable used parts. Regardless, our warranty terms apply.
All customer examples cited or described in this presentation are presented as illustrations of the manner in which some customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics will vary depending on individual customer configurations and conditions.
This publication was produced in the United States. IBM may not offer the products, services or features discussed in this document in other countries, and the information may be subject to change without notice. Contact your local IBM Business Partner for information on the product or services available in your area.
All statements regarding IBM's future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only.
Information about non-IBM products is obtained from the manufacturers of those products or their published announcements. IBM has not tested those products and cannot confirm the performance, compatibility, or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.
Prices subject to change without notice. Contact your IBM representative or Business Partner for the most current pricing in your geography.

IBM

The big Data store

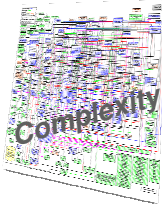

Data Integration – the Base for the future and BI

The diagram illustrates the architecture for data integration. On the left, 'Linux on System z' is shown with 'DB2 LUW' and 'DB2 UDB' components. On the right, the 'z/VSE Environment' includes 'TCP/IP', 'CICS', 'COBOL', 'VSAM', 'DB2', and 'DL/I'. A red double-headed arrow labeled 'Connection via WebSockets' connects the two environments. The entire setup is supported by 'z/VM or LPAR' and 'IFL Engine (s)' or 'Standard CP Engine (s)' on the 'IBM System z' hardware.

The road to information availability is filled with challenges

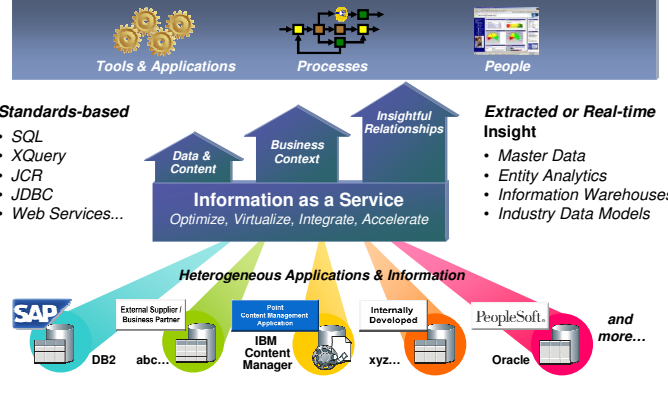

- What are the top business challenges?
 - Streamline and improve efficiency of business processes
 - Better understand and meet customer expectations
 - Increase employee productivity
- Key challenges to making information available:
 - Volume:** Data & content are doubling each year
 - Variety:** It's not just the transaction data, it's e-mails, document libraries, etc.
 - Velocity:** The pace of business and business users who need information *now*, in real time
 - Complexity:** The average \$1B company has 40 financial systems; 78% of all companies have 2 or more repositories, 25% have more than 15 repositories.

Information as a Service

From a project based approach to a Service Oriented Architecture based on business needs

© 2009 IBM Corporation

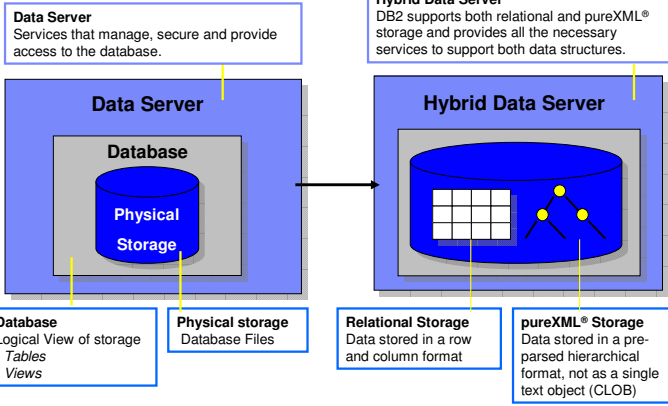

Ad-Hoc Information availability

- Flexible Architecture**
 - Service orientation provides base for responsive, flexible business and improved asset utilization
- Open Standards**
 - Use, Contribute, Lead, Support
- Shared Services & Metadata**
 - Simplify Infrastructure
 - Provide Consistency & Control
 - Speed Development and Deployment
- Comprehensive Capabilities**
 - Add Value to Information
 - Ease Integration
 - Enhance Manageability
 - Reduce Cost

A New Generation Data Server for a New Generation of Applications

Data Server

Services that manage, secure and provide access to the database.

Hybrid Data Server

DB2 supports both relational and pureXML® storage and provides all the necessary services to support both data structures.

Database

Logical View of storage

- Tables
- Views

Physical storage

Database Files

Relational Storage

Data stored in a row and column format

pureXML® Storage

Data stored in a pre-parsed hierarchical format, not as a single text object (CLOB)

© 2009 IBM Corporation

DB2 9 XML integration is seamless

Offers the Best to Both SQL and XML Worlds

SQL Person "I see a world class RDBMS that also supports XML"

XML Person... "I see a world class XML repository that also supports SQL"

DB2 with XML Support

New XML applications benefit from:

- Ability to seamlessly leverage relational investment
- Proven Infrastructure that provides enterprise-class capabilities

© 2009 IBM Corporation

Powering a Flexible Approach
XML and SOA are the Keys

Clients Systems, Corporate Portal, Private Portal, Private Sales system, Corporate Sales system, 3rd Party portal, Web Services, B2B, Customer, Life Insurance, YTP Pensions, ITP Pensions, Investments, Banking, Mortgage, Call Center, Process Management, Data Warehouse

© 2009 IBM Corporation

Top Scenario: Linux on System z as data hub

Consolidate, Integrate, Evaluate, Decide,
Base for Business Intelligence (BI)

Windows/Linux DB2, Cognos, Data Warehouse, DB2 LUW, DB2 UDB, z/VM or LPAR, IFL Engine (s), IBM System z, z/VSE V4.x Environment, + TCP/IP, + CICS, + DB2, + VSAM, + DL/I, + COBOL, LPAR or z/VM, Standard CP Engine (s)

© 2009 IBM Corporation

IBM InfoSphere Federation Server

- Integrating at the data layer – Federation of data
 - Read from and write to federated mainframe data sources using SQL
 - Standards-based access via JDBC, ODBC, or Call Level Interface
 - Including for VSAM
 - Multithreaded with native drivers for scalable performance
 - Metadata-driven means...
 - No mainframe programming required
 - Fast installation & configuration
 - Ease of maintenance
 - Works with existing and new...
 - Mainframe infrastructure
 - Application infrastructure
 - Toolsets

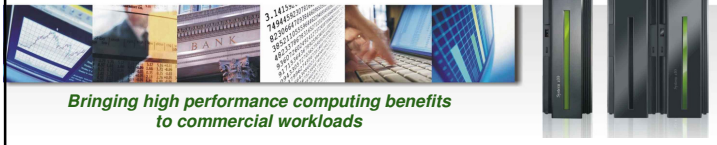

InfoSphere Federation Server, SQL, DB2 UDB for z/OS, VSAM* DL/I Data*, DB2 VM/VSE, Software AG Adabas, CA Datacom, CA IDMS

© 2009 IBM Corporation

**Focused performance boost
Hardware Decimal Floating Point**

*Up to 10X improvement
in decimal floating point
instructions**

- Decimal arithmetic widely used in commercial and financial applications
- Integrated on **every z10 core to deliver a performance boost** to execution of decimal arithmetic
- Growing industry support for hardware decimal floating point standardization
 - Java BigDecimal, C#, XML, C/C++, GCC, **DB2® V9**, Enterprise PL/1, Assembler
 - Open standard definition led by IBM

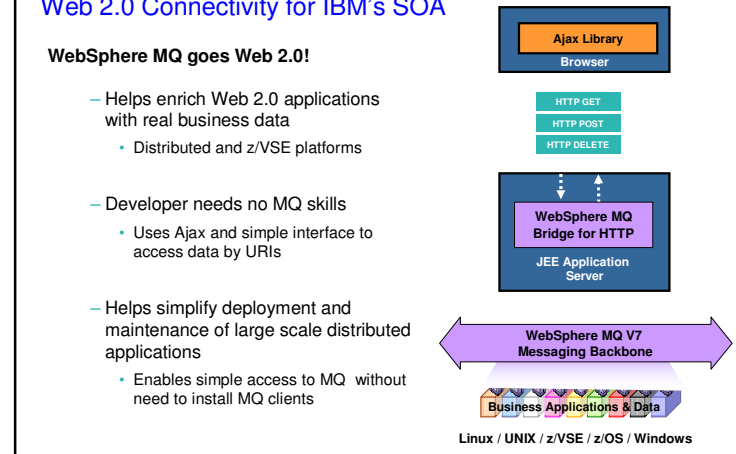

*Bringing high performance computing benefits
to commercial workloads*

Web 2.0 Connectivity for IBM's SOA

WebSphere MQ goes Web 2.0!

- Helps enrich Web 2.0 applications with real business data
 - Distributed and z/VSE platforms
- Developer needs no MQ skills
 - Uses Ajax and simple interface to access data by URIs
- Helps simplify deployment and maintenance of large scale distributed applications
 - Enables simple access to MQ without need to install MQ clients

New Redbook planned: YOUR Experience is important !

IBM
z/VSE using DB2 UDB
on Linux for System z

Redbooks

© 2009 IBM Corporation

- ### DB2 Redbook
- Overview-
 - Strategic Decision
 - Advantages (Business Requirements)
 - Possible architectures
 - Technical overview (DB2 VM&VSE)
 - Planning
 - Capacity Planning
 - Storage planning
 - Network
 - Database- DB2 Linux (LVM)- DB2 VM/VSE
 - The Transition phase
 - Setup and Customization
 - DB2 Linux on System z
 - DB2 VSE (AR, AS)
 - DRDA Communication
 - DBMS Migration
 - Data Migration
 - Packages Migration
 - Application considerations
 - Transition / Coexistence environment
 - Monitoring and tuning
 - DB Monitoring
 - AR VSE
 - Appl. Monitoring (DB)
 - Connections / Interfaces
 - Network monitoring
 - System monitoring/tuning
 - Tuning considerations
- © 2009 IBM Corporation

- ### DB2 Redbook
- Overview
 - Strategic Decisions
 - The decision for a modern Data Management System can enhance your business value substantially
 - Advantages (Business Requirements)
 - Business processes can be simplified a lot
 - Possible architectures
 - Data stores can be homogenous or heterogeneous, if pro's and con's are known
 - Technical overview
 - DB2 Server for VM&VSE (Server & Client)
 - DB2 Server for VM&VSE Client Edition
- © 2009 IBM Corporation

- ### DB2 Redbook
- Planning
 - Capacity Planning
 - CPU load depends on many factors
 - Storage planning
 - The most advanced possibilities of the System z Architecture
 - LVM / ECKD / SCSI
 - High Availability
 - Mirroring / Redundant Connections
 - Database Planning
 - Parallel I/O / Container Striping / Direct I/O / PAV
 - Network
 - Hipersockets the fast communications
 - Shared OSA the alternative Communication
 - Transition Phase
 - 'Big Bang' / 'Step by Step' / 'Fallback'
- © 2009 IBM Corporation

DB2 Redbook

▪ Setup and Customization

- DB2 Linux on System z
 - Database-Definitions need to be adopted for the workload
 - Codepage (SBCS / Unicode)
 - EBCDIC versus ASCII Sort order 'Collating Sequence'
 - Federation to implement complex requirements
- DB2 VSE (AR, AS)
 - Client Edition (AR only!) or Server & Client for VM/VSE ?
- DRDA Communication
 - DRDA Performance is dependant on the application
 - Connection Pooling / Buffered Insert
 - TCP/IP Setup

© 2009 IBM Corporation

DB2 Redbook

▪ DBMS Migration

- Data Migration
 - Data Migration: small effort / repeatable solution
 - Federation is very effective
- Package Migration
 - Bind Files build! (CICS or ,Batch Binder')
 - Export of DB2/VM&VSE Packages and Import in DB2 Linux possible
- Application Considerations
 - Applications may need adaption (HEX-Sort)
 - Dynamic SQL uses functionality of the server
- Transition / Coexistence Environment
 - with Replication or ,Federation', a coexistence is possible

© 2009 IBM Corporation

DB2 Redbook

▪ Monitoring and Tuning

- Monitoring is prerequisite for Tuning
- DB Monitoring
 - Status-quo of the DB2/VM or DB2/VSE Servers !!!
 - Monitor-Tools necessary
 - DB2/Linux - Snapshots
- Application Monitoring (DB)
 - CICS Monitor is recommendable
- Network Monitoring
 - Network monitors can help a lot
 - Troubleshooting / Debugging

© 2009 IBM Corporation

Aufruf

- Please help to finish this Redbook with your experience
- Contributions can be sent directly to me

mildw@de.ibm.com

- For an official work on the Redbook please notify me !
