Notes:

Performance is in Internal Throughput Rate (ITR) ratio based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput improvements equivalent to the performance ratios stated here.

IBM hardware products are manufactured from new parts, or new and serviceable used parts. Regardless, our warranty terms apply.

All customer examples cited or described in this presentation are presented as illustrations of the manner in which some customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics will vary depending on individual customer configurations and conditions.

This publication was produced in the United States. IBM may not offer the products, services or features discussed in this document in other countries, and the information may be subject to change without notice. Consult your local IBM business contact for information on the product or services available in your area.

All statements regarding IBM's future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only.

Information about non-IBM products is obtained from the manufacturers of those products or their published announcements. IBM has not tested those products and cannot confirm the performance, compatibility, or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

Prices subject to change without notice. Contact your IBM representative or Business Partner for the most current pricing in your geography.

AGENDA

- **What is FlashCopy ?**
 - Flashcopy basics behind the scene
 - HW considerations, usage, samples
- **What is FlashCopy SE ?**
 - difference to standard FlashCopy
 - HW considerations
 - FlashCopy SE specific commands
 - samples
- **FlashCopy exploiters in zVSE**
 - VSAM with IDCAMS SNAP
 - FCOPY
- Links, Redbooks and additional information

What is FlashCopy ?

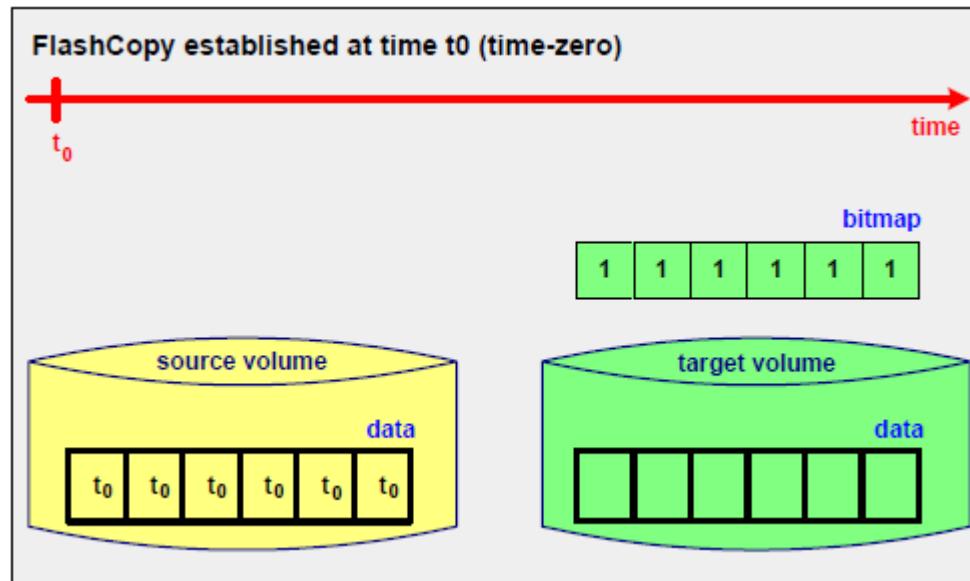

- FlashCopy creates an instant copy of a volume at a specific point-in-time, which is why it is often referred to as Point-in-Time Copy, instantaneous copy or time zero (t_0) copy.
- FlashCopy is a hardware (storage system based) function that the software invokes.
- By doing a FlashCopy, a relationship is established between a *source* and a *target*. Both are considered to form a FlashCopy *pair*.

FlashCopy Basics

1. The FlashCopy Relation

- When you start FlashCopy, the **relationship between source and target is established** by creating a pointer table, including a bitmap for the target.
- This process is **completed very quickly** and makes the copy appear to be instantaneous.
- While the FlashCopy relationship is being created, the DS8000 holds off I/O activity

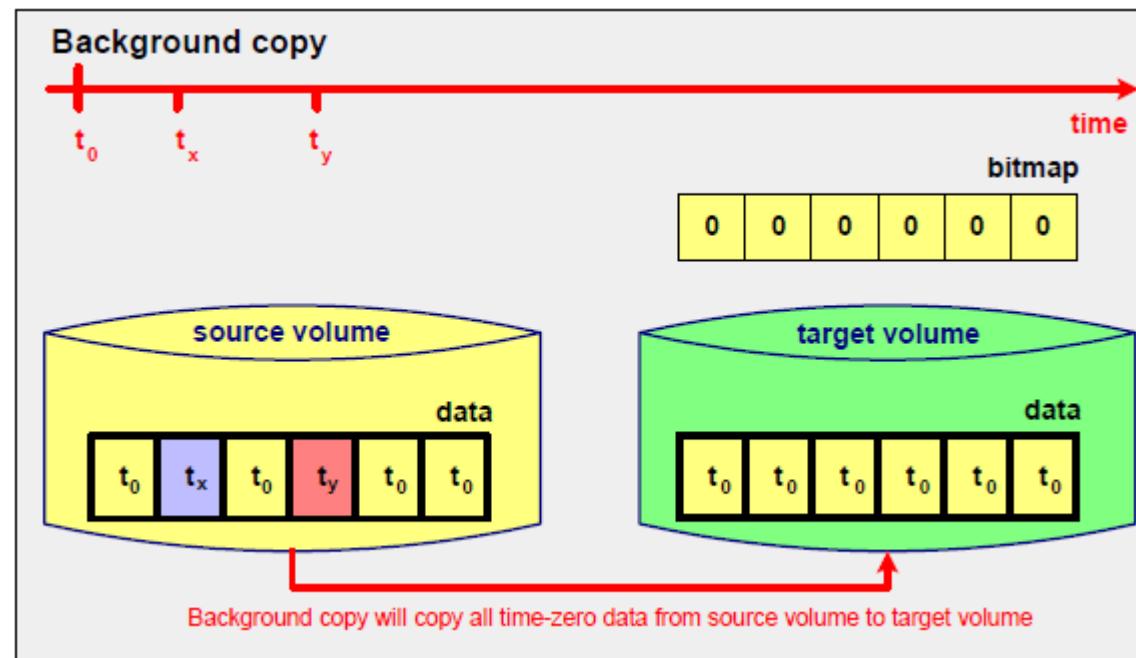

Flashcopy Basics Background Copy

2. The Copy Process (using Background Copy)

- The Copy option initiates the copy process of all data from the source to the target volume
- The FlashCopy relationship ends automatically as soon as all data is copied

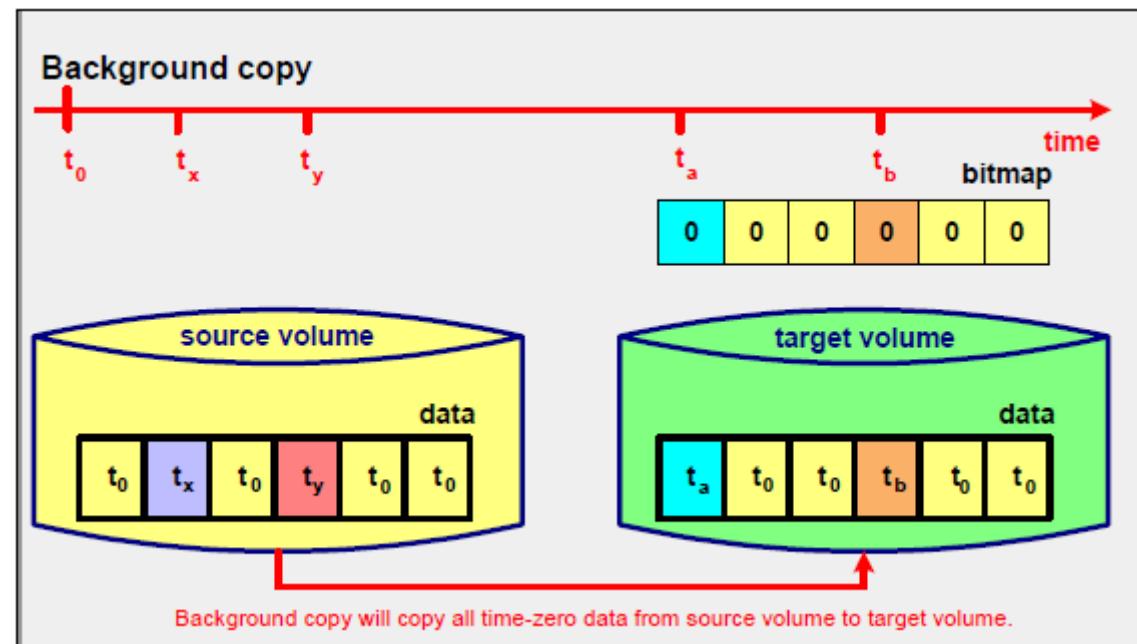

- no updates to the target volume

- Only the standard FlashCopy allows a full background copy

Flashcopy Basics Background Copy

Update to the source & target volumes

Flashcopy Basics

Nocopy standard Flashcopy

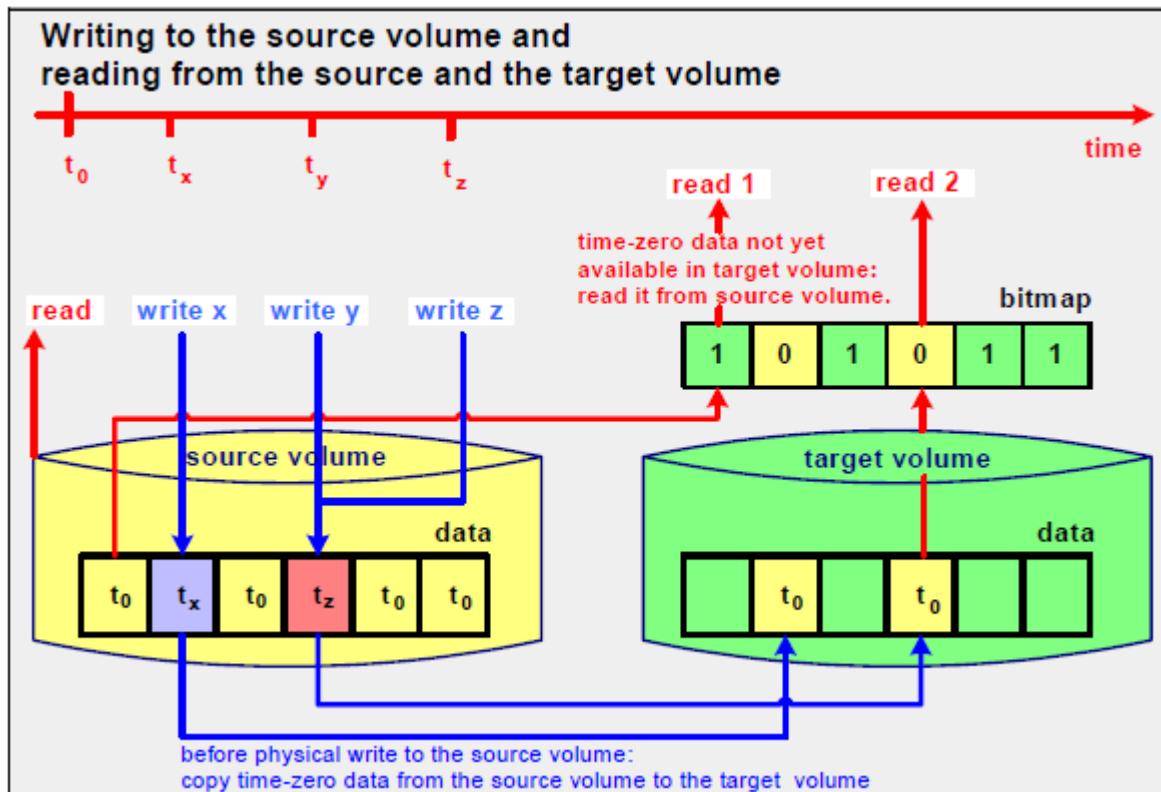

2. The Copy Process (using Nocopy option)

- The Nocopy option initiates **No** copy process of data from the source to the target volume
- For standard FlashCopy a real physical Target volumes needs to exist
- The FlashCopy **relationship lasts until it is explicitly withdrawn** (DDSR command)
- In z/VSE the target volumes needs to be **DVCDN** (device Down) in order to start a FlashCopy from **AR** (for **VSAM** IDCAMS SNAP the target needs to be **DVCUP** (Up))

Flashcopy Basics

Nocopy standard Flashcopy

2. The Copy Process (using Nocopy option)

- Whenever data is written to the source volume while FlashCopy relationship exists, then the time-zero-data is copied to the target volume prior to overwriting it in the source volume.
- If time-zero data is already on the target then no further action is needed
- Physical write to the target volume occurs only if source data is updated while the FlashCopy relationship exists
- After the Nocopy relation has been withdrawn, the target volume is in a undefined condition.

Flashcopy Basics

Nocopy standard Flashcopy

2. The Copy Process (using Nocopy option)

- No copying process of data from the source to the target volume
- physical Target volumes is needed
- The FlashCopy relationship lasts until it is explicitly withdrawn (DDSR command)
- Nocopy is the default for Flashcopy SE
- ONLY If data is written to the source volume while the FlashCopy relationship exists, the storage subsystem makes sure that the time-zero-data is copied to the target volume
- Target Volumes becomes unusable
- **Background Copy**
- Realy physical COPY from Source to Target Volume
- physical target volumes is needed
- Flashcopy relationship is withdrawn automatically when copy from source to target has finished
- Copy is not possible with FlashCopy SE
- All time-zero-data is copied to storage regardless of updates to the source volume
- Target Volume contains complete source copy if Background copy process was successfully completed

AR Command IXFP

- IXFP SNAP
 - To initiate the FlashCopy relation(s) between source and target volume(s)
 - To start the copy process
- IXFP DDSR
 - To terminate an existing FlashCopy relation after copy has finished or while copy is still ongoing
- IXFP STATUS
 - Present the status of all active FlashCopy relations

z/VSE FlashCopy SE

IBM FlashCopy® SE:

- Today, the DS8000 IBM FlashCopy requires space to be set aside equal to the size of the volumes that are to be copied. IBM FlashCopy SE (space efficient) is intended to use only the amount of storage required, which can help lower the amount of storage needed by many clients and help lower costs by significantly reducing disk capacity needed for copies.
- IBM FlashCopy SE can be managed and configured via the DS Storage Manager, DS GUI.

Difference between Standard and Space Efficient (SE)

Standard FlashCopy

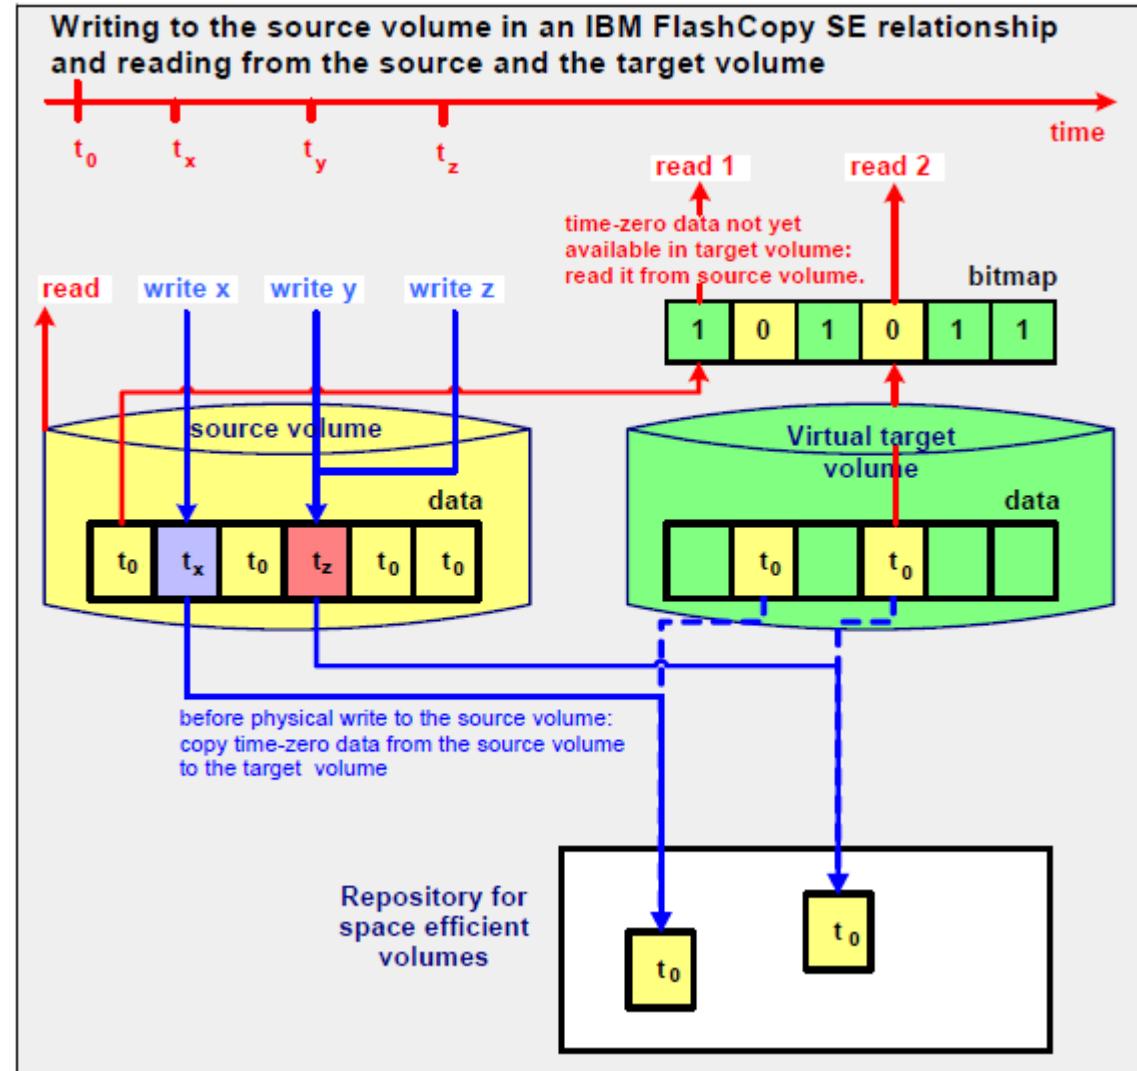

- Standard FlashCopy uses a normal volume as target volume. This target volume has to have the same size (or larger) as the source volume, and that space is allocated in the storage subsystem.

FlashCopy SE

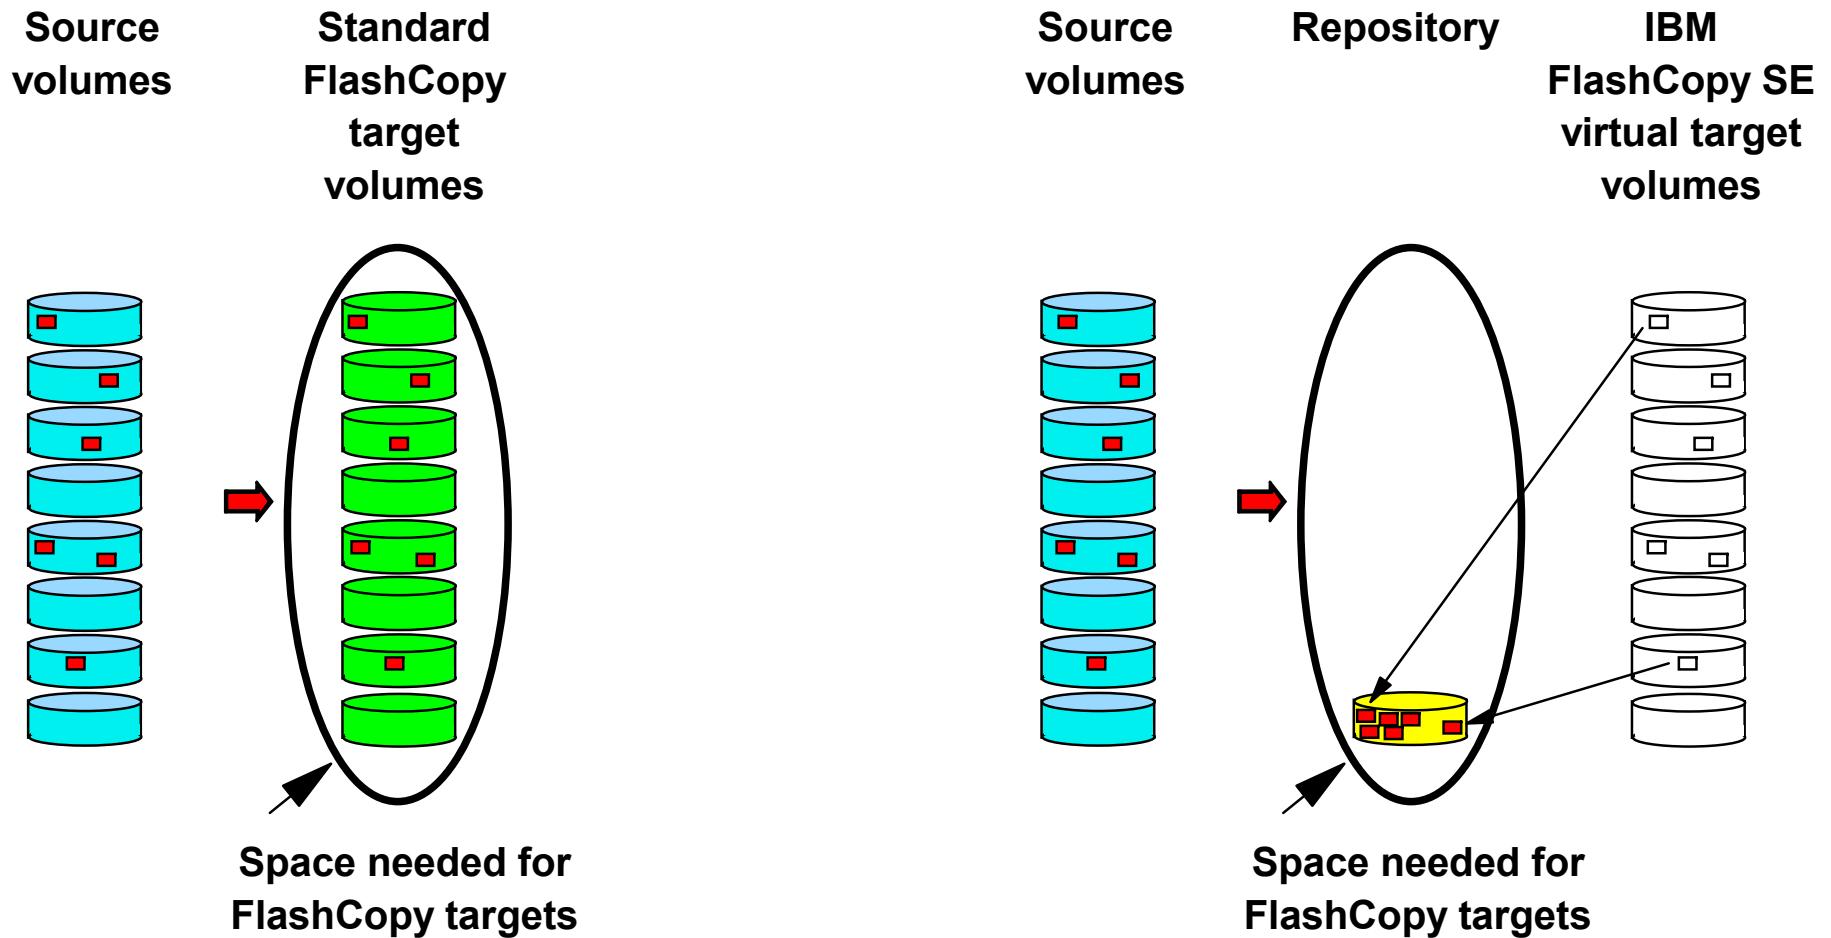

- IBM FlashCopy SE uses space efficient volumes as FlashCopy target volumes. A space efficient volume has a virtual size that is equal to the source volume size.
- Space is not allocated for this volume when the volume is created and the FlashCopy is initiated; instead,
- space is allocated in the repository when a first update is made to original tracks on the source volumes and those tracks are copied to the FlashCopy SE target volume.
- FlashCopy and FlashCopy SE are optional and distinct licensed features of the IBM DS8000

FlashCopy SE Basics

- when writing to the source volume, the time-zero data is copied from the source volume to the target volume prior to overwriting it in the source volume
- When reading from the target, the bitmap identifies if the data must be retrieved from the source or from the target.
- If the bitmap states that the time-zero data has not yet been copied to the target, then the physical read is directed to the source.
- If the time-zero data was already copied to the target, then the read is performed immediately against the target.
- Virtual target space is needed only for the time-zero data !

FlashCopy SE Repository

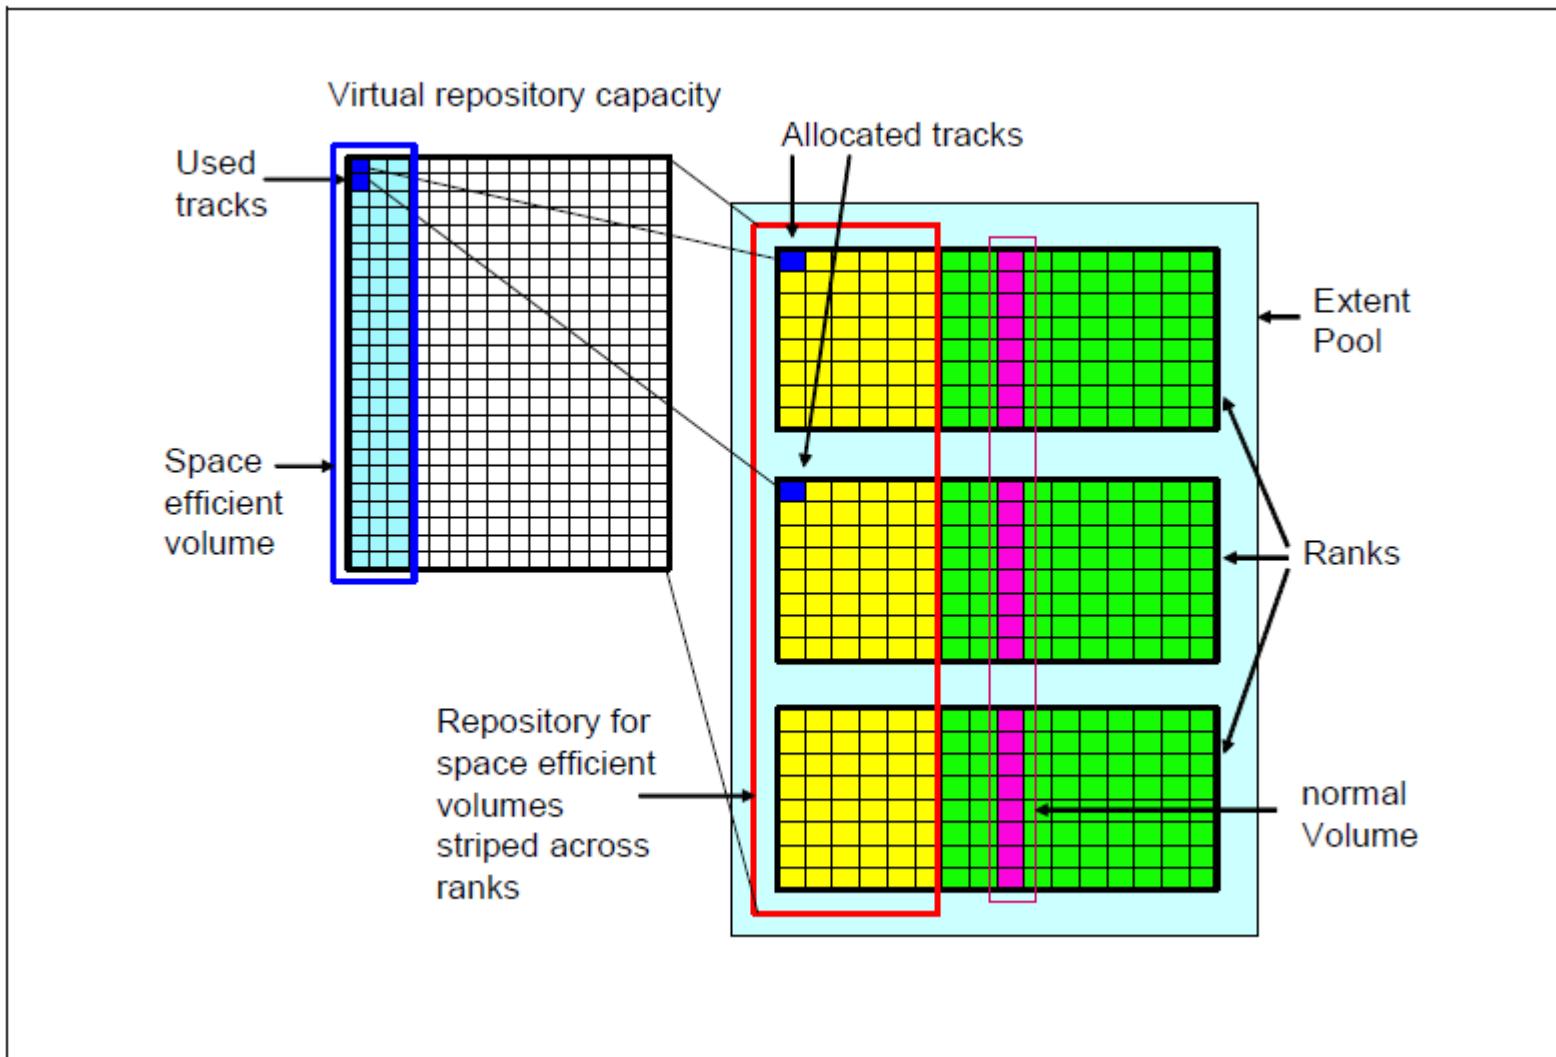

FlashCopy SE Virtual Target Volume

FlashCopy SE target volume : which is to be defined by the DS GUI

- The SE Target volume is a **virtual volume** but acts like a fully provisioned volume
- The actual **space is provided by a storage pool inside of a repository** and many SE target volumes have a physical storage pool in a common repository
- the physical size of the repository is the amount of space that is allocated in the extent pool
- **Space is only used as needed** for the updates on the source volume to the target disk and no need to have a full real target volume being available for a SNAP Nocopy
- Repository has a physical(amount of space allocated in the extent pool and a logical size (amount of space available for all SE volumes)
e.g. 20GB physical and 50GB logical space
- Repositories can not be expanded, so planning for the right size is important

SE Repository

AR 0015 IXFP71I F84 IS A TARGET VOLUME OF A NO-COPY RELATION
AR 0015 IXFP74I FL/SE QUERY CUU=F84 POOLID=000 ALLOCATED SPACE='0000' CYL
      POOL SIZE='4EF5' CYL
AR 0015 1I40I READY
```

FlashCopy SE restrictions and recommendations

- FlashCopy SE is supported for full volume copy only.
- FlashCopy SE is not supported with Background copy (NOCOPY option only)
- FlashCopy SE is designed for temporary copies. Copy duration should generally not last longer than 24 hours unless the source and target volumes have little write activity or where about 5 % of the source volume is updated during the relationship.
- FlashCopy SE volumes are not supported for production, only as FlashCopy target volumes.
- If the FlashCopy SE repository becomes full, the next write and read operation to the target will fail with an Intervention Required msg until the space gets released by the **IXFP DDSR** command , which withdraws the relationship

FlashCopy SE, DEBUG ON & z/VM

Messages :

running with DEBUG ON and having set a warning threshold

```
AOMOS01I POOL=001, SPACE EFFICIENT TARGET REPOSITORY HAS REACHED A WARNING WATERMARK
```

```
AOMOS02I POOL=001, SPACE EFFICIENT TARGET REPOSITORY HAS BEEN EXHAUSTED
```

Note:

z/VM is currently not supporting FlashCopy SE and does not propagate the attention messages (e.g. warning watermark) to the guest system .

The operator must check the repository level on the DS8K GUI level instead.

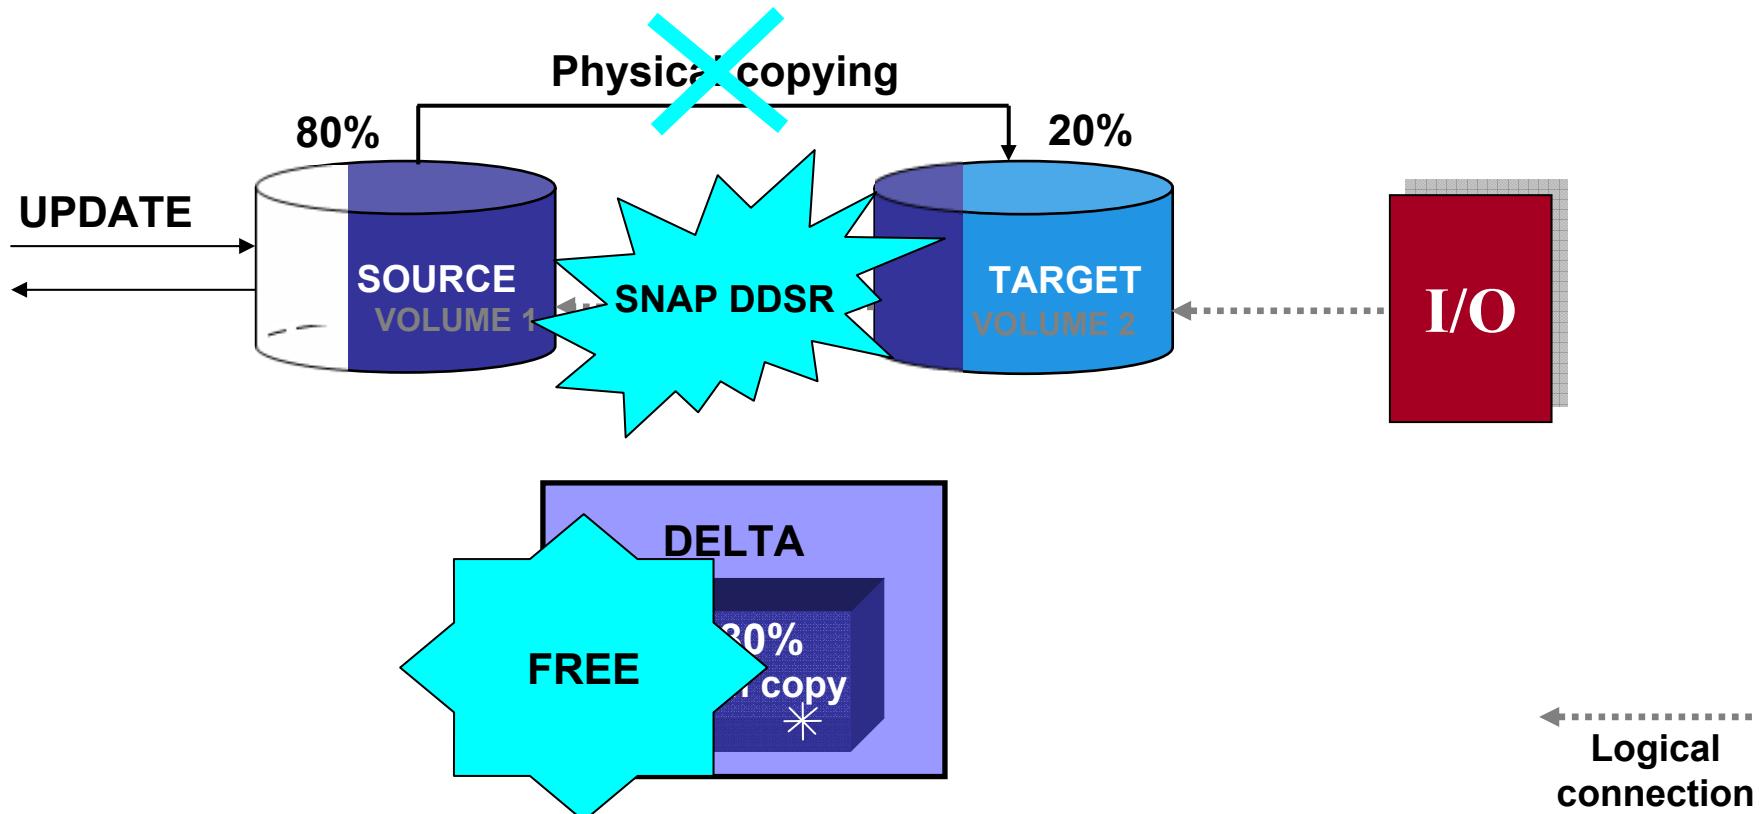

FlashCopy exploitation by VSAM

The IDCAMS SNAP command provides an interface to the FlashCopy feature.

- **NOCOPY** parameter of the IDCAMS SNAP command creates a FlashCopy relation. The physical copying of data to target volumes is not performed.
 - **DDSR** parameter of the IDCAMS SNAP command terminates the FlashCopy relation between the source and target volumes and frees the used resources.
 - **COPY** parameter of the IDCAMS SNAP command to initiate a background copy. This is the default.
 - Provides an opportunity to administrate user access rights to the IDCAMS SNAP command using the **Basic Security Manager (BSM)**.
-
- 
- See New Chapter 10, “Performing an IDCAMS SNAP (FlashCopy)”
“VSE/VSAM User’s Guide and Application Programming”.

IDCAMS SNAP DDSR parameter

The DDSR parameter of the IDCAMS SNAP command allows the user to delete FlashCopy relations and to stop unnecessary managing of a Delta File and to release internal resources as soon as they are no longer needed.

Sample of SNAP COPY, NOCOPY, DDSR

COPY

```

The FLASHCOPY VSAM CATALOG/FILES dialog

The „FLASHCOPY VSAM CATALOG / FILES“ dialog (fastpath 3719) is enhanced to allow user to choose the option to create a FlashCopy of the source volumes on the target volumes

DSF\$SNP2 **FLASHCOPY VSAM CATALOG / FILES**

Enter the required data and press ENTER.

Enter all entire Source Disk Volumes where the CATALOG and all its Datasets reside and the Target Volumes to which the FlashCopy has to be done.

SOURCE VOLUME 1..... ____ Enter the Volume-id where the CATALOG resides

TARGET VOLUME 1..... Enter the Volume-id to which Flash Copy has to be done

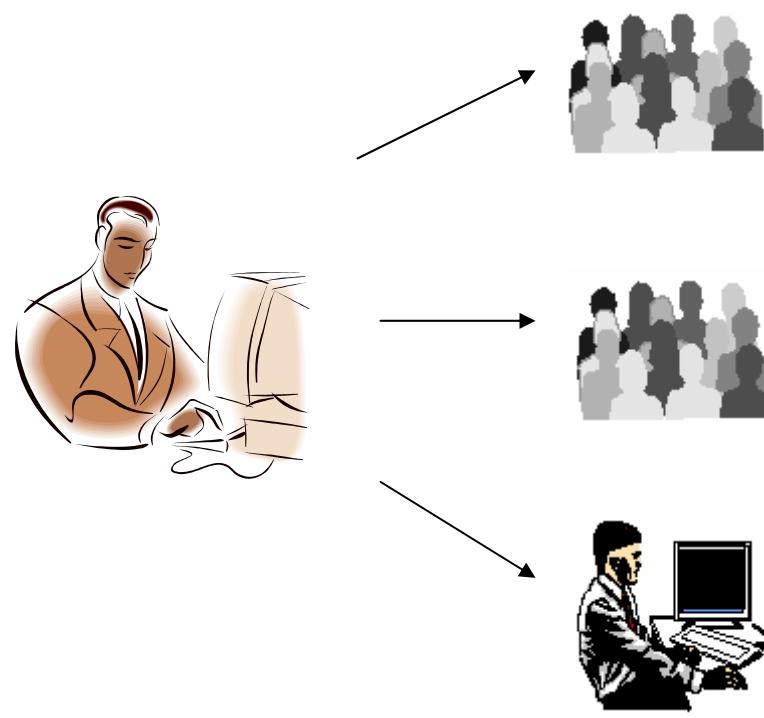

MORE VOLUMES..... 2 Enter 1 to add more volumes.
Otherwise, enter 2

COPY/NOCOPY..... 1 Enter 1 to initiate a FlashCopy relation and copy source to target volumes, otherwise, enter 2 to initiate a FlashCopy relation with option NOCOPY.

PF1=HELP 2=REDISPLAY 3=END

IDCAMS SNAP using the Basic Security Manager

z/VSE administrator enabled to control the usage of the IDCAMS SNAP command.

SAMPLE (z/VSE console):

```
r rdr,pausebg  
0 exec bstadmin  
BG 0000 1S54I PHASE BSTADMIN IS TO BE FETCHED FROM IJSYSRS.SYSLIB  
BG-0000 BST901A ENTER COMMAND OR END
```

everybody is allowed to use SNAP...COPY command

```
0 add facility vsam.snap.copy uacc(read)  
BG 0000 BST904I RETURN CODE OF ADD IS 00  
BG-0000 BST901A ENTER COMMAND OR END
```

everybody is allowed to use SNAP...DDSR command

```
0 add facility vsam.snap.ddsr uacc(read)  
BG 0000 BST904I RETURN CODE OF ADD IS 00  
BG-0000 BST901A ENTER COMMAND OR END
```

nobody is allowed to use SNAP...NOCOPY command

```
0 add facility vsam.snap.nocopy uacc(None)  
BG 0000 BST904I RETURN CODE OF ADD IS 00

0 end  
BG-0000  
0
```

IDCAMS SNAP using the Basic Security Manager

Administering the usage of the IDCAMS SNAP command can be done with the following Basic Security Manager Facilities:

VSAM.SNAP.COPY for IDCAMS SNAP COPY
VSAM.SNAP.NOCOPY for IDCAMS SNAP NOCOPY
VSAM.SNAP.DDSR for IDCAMS SNAP DDSR

If no BATCH security is enabled in the zVSE system (**SYS SEC=NO**) or it is enabled but no **VSAMSNAP.[COPY|NOCOPY|DDSR] RACROUTE** facility was defined using **BSTADMIN**, then the **IDCAMS SNAP [COPY|NOCOPY|DDSR]** statements are executed as requested but with a warning:

IDC32204I RACROUTE RESOURCE NOT PROTECTED OR BATCH SECURITY=OFF

If at least one of the following is true:

- ✓ the user has at least **READ** access for the corresponding VSAMSNAP Facility related to the issued **IDCAMS SNAP** command,
- ✓ the **VSAMSNAP** Facility is defined with universal access,
- ✓ the supplied user ID is an administrator ID and, therefore, the user has access to all the **BSTADMIN** resources,

then the **IDCAMS SNAP** function is executed as requested and is accompanied by the following message:

IDC32200I RACROUTE (AUTH) SUCCESSFUL

In all the other cases the requested IDCAMS SNAP function is suspended.

FlashCopy exploitation by FCOPY

VSE/Fast Copy supports the following FlashCopy related commands and parameters

- **COPY ALL** (IXFP SNAP – Background copy)
- **COPY VOLUME** (IXFP SNAP – Background copy)
- **COPY VOLUME NOCOPY** (IXFP SNAP – NOCOPY)
- **COPY ALL NOCOPY** (IXFP SNAP – NOCOPY)
- **DDSR** (withdraw FlashCopy relation, SYS005 required)

- **IV** (verify VOLSER of source volume)
- **OV** (verify VOLSER of target volume)
- **NV** (the equivalent to the VOL1 parm in IXFP FlashCopy)

**Note: Parameters that force FastCopy not to use Flashcopy
are EXCLUDE, NOVSAM and NOEXPIRED**

VSE/Fast Copy sample

NOCOPY:

```
// ASSGN SYS004,ANYDISK,VOL=DSKB8A,SHR
// ASSGN SYS005,ANYDISK,VOL=DSKB8B,SHR
// EXEC FCOPY
    COPY VOLUME NOCOPY NOVERIFY NV=DSKB8B
8F02I END OF PROCESSING. NOCOPY RELATION ESTABLISHED

Notes:

Performance is in Internal Throughput Rate (ITR) ratio based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput improvements equivalent to the performance ratios stated here.

IBM hardware products are manufactured from new parts, or new and serviceable used parts. Regardless, our warranty terms apply.

All customer examples cited or described in this presentation are presented as illustrations of the manner in which some customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics will vary depending on individual customer configurations and conditions.

This publication was produced in the United States. IBM may not offer the products, services or features discussed in this document in other countries, and the information may be subject to change without notice. Consult your local IBM business contact for information on the product or services available in your area.

All statements regarding IBM's future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only.

Information about non-IBM products is obtained from the manufacturers of those products or their published announcements. IBM has not tested those products and cannot confirm the performance, compatibility, or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

Prices subject to change without notice. Contact your IBM representative or Business Partner for the most current pricing in your geography.
