Archive Job for UD52824

During installation of the VSE generation feature under releases z/VSE 3.1.1 or z/VSE 3.1.2, the PTF UD52824 is accidentally being removed from the MSHP history file, but the corrected code by UD52824 remains applied and intact. However, any subsequent installation by PTF UD52908 or any other PTF with a PRE REQ requirement of UD52824 will fail.

Therefore, this archive job will provide the resolution to the above stated MSHP problem:
