Multi Instant Logic Analyzer4VSAM v1.1

✓ What is the **Multi Instant Logic Analyzer4VSAM** ?

- A collection of multiple tools to analyze VSAM data instantly
- Java based
- VSE Connector integration
- Available internally and to customers for free
- Helps identifying & solving potential problems early
- HTML / PDF output
- First Version released Oct. 2006

AGENDA

- ✓ LISTCAT Analyzer
- ✓ SNAP013 Analyzer
- ✓ INDEX Analyzer
- ✓ Features

Multi Instant Logic Analyzer4VSAM v1.1

LISTCAT Analysis

✓ EXTENT Analysis

- ✓ overlapping EXTENTs, invalid EXTENTs

✓ SPACE-MAP Analysis

- ✓ detect defective areas (blocks/cylinders/tracks) within a VSAM space-map

✓ Capacity-Analysis

- ✓ check if a cluster/AIX reaches the following cluster limitations:
 - ✓ Maximum file size of a cluster/AIX is **4 GB**
(except extented-addressed KSDS data comp XXL)
 - ✓ Maximum number of **extents** in the data/index component is **123**

EXTENT Analysis

Invalid EXTENT

- ✓ EXTENT inconsistencies inside of LISTCAT output

```

VOLSER-----BADVOL          PHYREC-SIZE-----4096          HALRBA-OR-CI-----8847362
DEVTYPE-----3390           PHYRECS/TRK-----12           HUSRBA-OR-CI-----8110080
VOLFLAG-----PRIME          TRACKS/CA-----15
EXTENTS:
LOW-CCHH-----X'00010000'    LOW-RBA-OR-CI-----0           TRACKS-----150
HIGH-CCHH----X'0007000E'     HI-RBA-OR-CI-----7372799
    
```

Overlapping EXTENTS

- ✓ One EXTENT overlaps another EXTENT on the same volume

```

LOW-CCHH-----X'00030000'    LOW-RBA-OR-CI----7372800        TRACKS-----30
HIGH-CCHH----X'04C0000E'     HI-RBA-OR-CI-----8847359
    
```

SPACE-MAP Analysis

Space marked as **free** in SPACE-Map but **occupied** by Cluster(s)

✓ EXTENT inconsistencies inside of LISTCAT output

```

DATASETS-----1          FORMAT-1-LABEL:          ATTRIBUTES:
EXTENTS-----2          CCHHR-----X'012D000003'    SUBALLOC
SEC-ALLOC-----0          TIMESTAMP                EXPLICIT
TYPE-----TRACK          2006.004    19:46:28
CLASS-----0            X'BE29DF4C9940F326'
EXTENT-DESCRIPTOR:
TRACKS-TOTAL-----4514    BEG-CCHH-----X'00000001'    SPACE-MAP-----006EFD02D0FD0EC4
TRACKS-USED-----720

LOW-CCHH-----X'00010000'    LOW-RBA-OR-CI-----7372800    TRACKS-----30
HIGH-CCHH-----X'0002000E'    HI-RBA-OR-CI-----8847359
    
```

Space marked as **occupied** in SPACE-Map but **not used** by any Cluster

Capacity Analysis

LISTCAT Analysis Output

Result of Space Map Analysis

Track(s) indicated as used but don't belong to a cluster	
Defect Start X'CCCCCHHH'	Defect End X'CCCCCHHH'
00010000	00010004

Note: The Track(s) in the table aren't an imminent danger. They're only marked as used, but no cluster is affected.

Track(s) indicated as free but in use by cluster(s)		
Defect Start X'CCCCCHHH'	Defect End X'CCCCCHHH'	Affected cluster(s)
00070000	0007000E	VSAM.COMPRESS.CONTROL

Note: Please consider rebuilding every affected cluster in the table.

Summary

2 defective space map(s) found.

LISTCAT Analysis Output

Result of Capacity Analysis

Cluster Name	Warning	Value
DLIUCAT	Data part extents reached the threshold (1%)	2 Extents (02%)
	Index part extents reached the threshold (1%)	134 Extents (109%)
VSAM.COMPRESS.CONTROL	Data part extents reached the threshold (1%)	1 Extents (01%)
	Index part extents reached the threshold (1%)	1 Extents (01%)

Summary

4 capacity warning(s) found.

Summary

Catalog Name	Status	Details
<u>DLIUCAT</u>	Error	did show critical error(s). 4 error(s) found during Extent Analysis. 2 defective space map(s) found. 2 defective space map(s) found. 4 HALRBA/HUSRBA error(s) found. 4 capacity warning(s) found.

Multi Instant Logic Analyzer4VSAM v1.1

SNAP013 Trace Analysis

- ✓ VSAM SNAP Traces produce a great amount of data to be analyzed
Exclusive Control Conflicts, Record Management problems and more

```
// EXEC IKQVEDA  
  ENABLE SNAP=013  
/*
```

- ✓ SNAP013 will analyze this data and provide [HTML](#) or [PDF](#) output
- ✓ The SNAP013 Analyzer tool also allows to [transform](#)
any „raw-Dump“ into a „printed hex-Dump“
- ✓ Input can be any DUMP from a PC as well as any Dump available in a VSE
(Dump)Library ([Online Instant access via VSE Connectors](#))

What is SNAP013 ?

✓ Incore Wrap-around Trace

- ✓ Enabling SNAP013 via IKQVEDA does not create external output, on either SYSLOG or SYSLST
- ✓ trace entries are written into an incore wrap-around trace table
- ✓ At open time a unique SNAP013 Trace Table is defined for each AMBL
- ✓ SNAP013 can be enabled for another partition. For instance, the job can be run in batch, enabling SNAP013 for on-lines files. (close and re-open of files required to enable S13)

ENABLE SNAP=013,PART=F2

- ✓ SNAP013 trace table defaults size is 2048 bytes, and can be adjusted (larger or smaller)

ENABLE SNAP=013,SIZE=8K,PART=F2

- ✓ Either all currently active SNAP traces (1-13) or only one specific can be disabled

DISABLE SNAP=013 -or- DISABLE SNAP=ALL

SNAP013

- ✓ SNAP013 can be enabled for a specific file or “ALL”

```
ENABLE SNAP=013,SIZE=2K,DDNAME=(KSDS,ESDS),PART=F2
```

- ✓ Following JOB will active file KSDS with a tracetable of 12K and for ALL other files with a trace table size of 512 bytes

```
// JOB ENABLE SNAP013
```

```
// EXEC IKQVEDA,PARM='SYSIPT'
```

```
ENABLE SNAP=013,DDNAME=KSDS,SIZE=12K
```

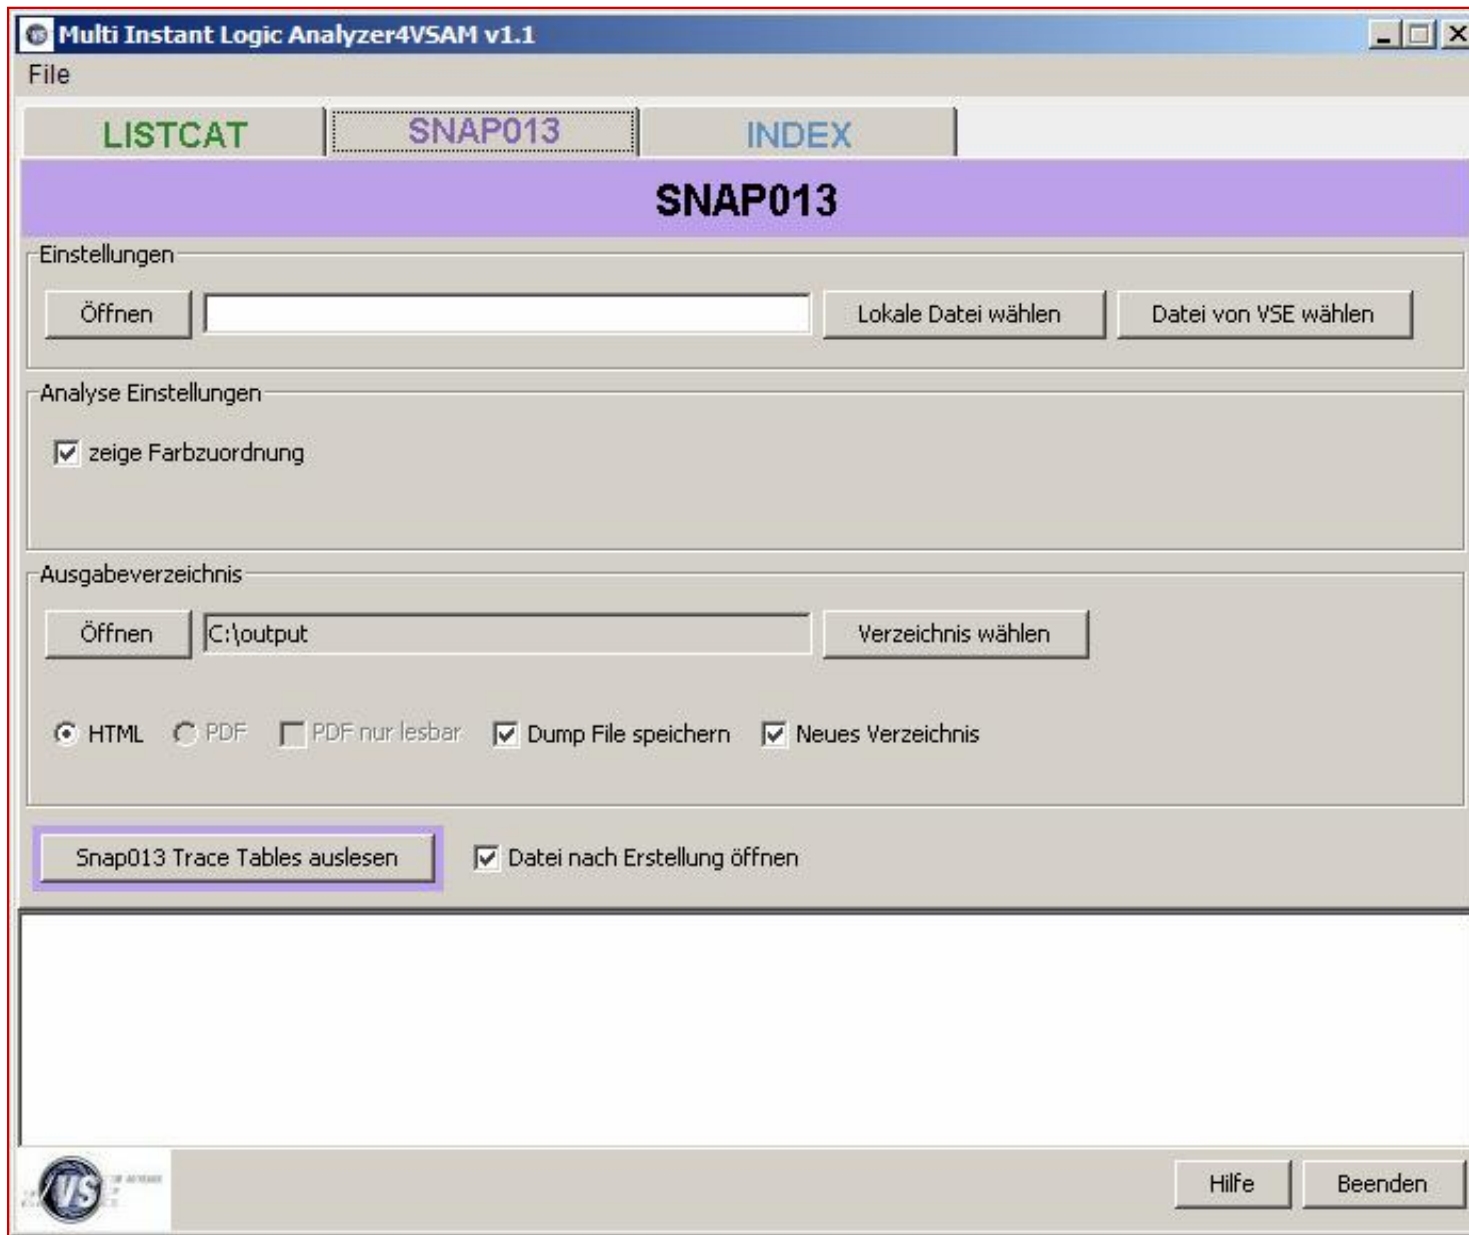

```
ENABLE SNAP=013,DDNAME=ALL,SIZE=512
```

```
/*
```

```
/&
```

- ✓ Trace entries for every of the following entry types:

**OPEN / INPUT (from User Application) / UPGRADE RESET /
RETURN / LOCK / UNLOCK / RSCB / Exclusive Control (SHR4) /
IKQBFC / EXCPAD Return from EXCPAD / Catalog Update**

**Multi
Instant
Logic
Analyzer

Multi Instant Logic Analyzer4VSAM v1.1

NEW**INDEX Analysis**

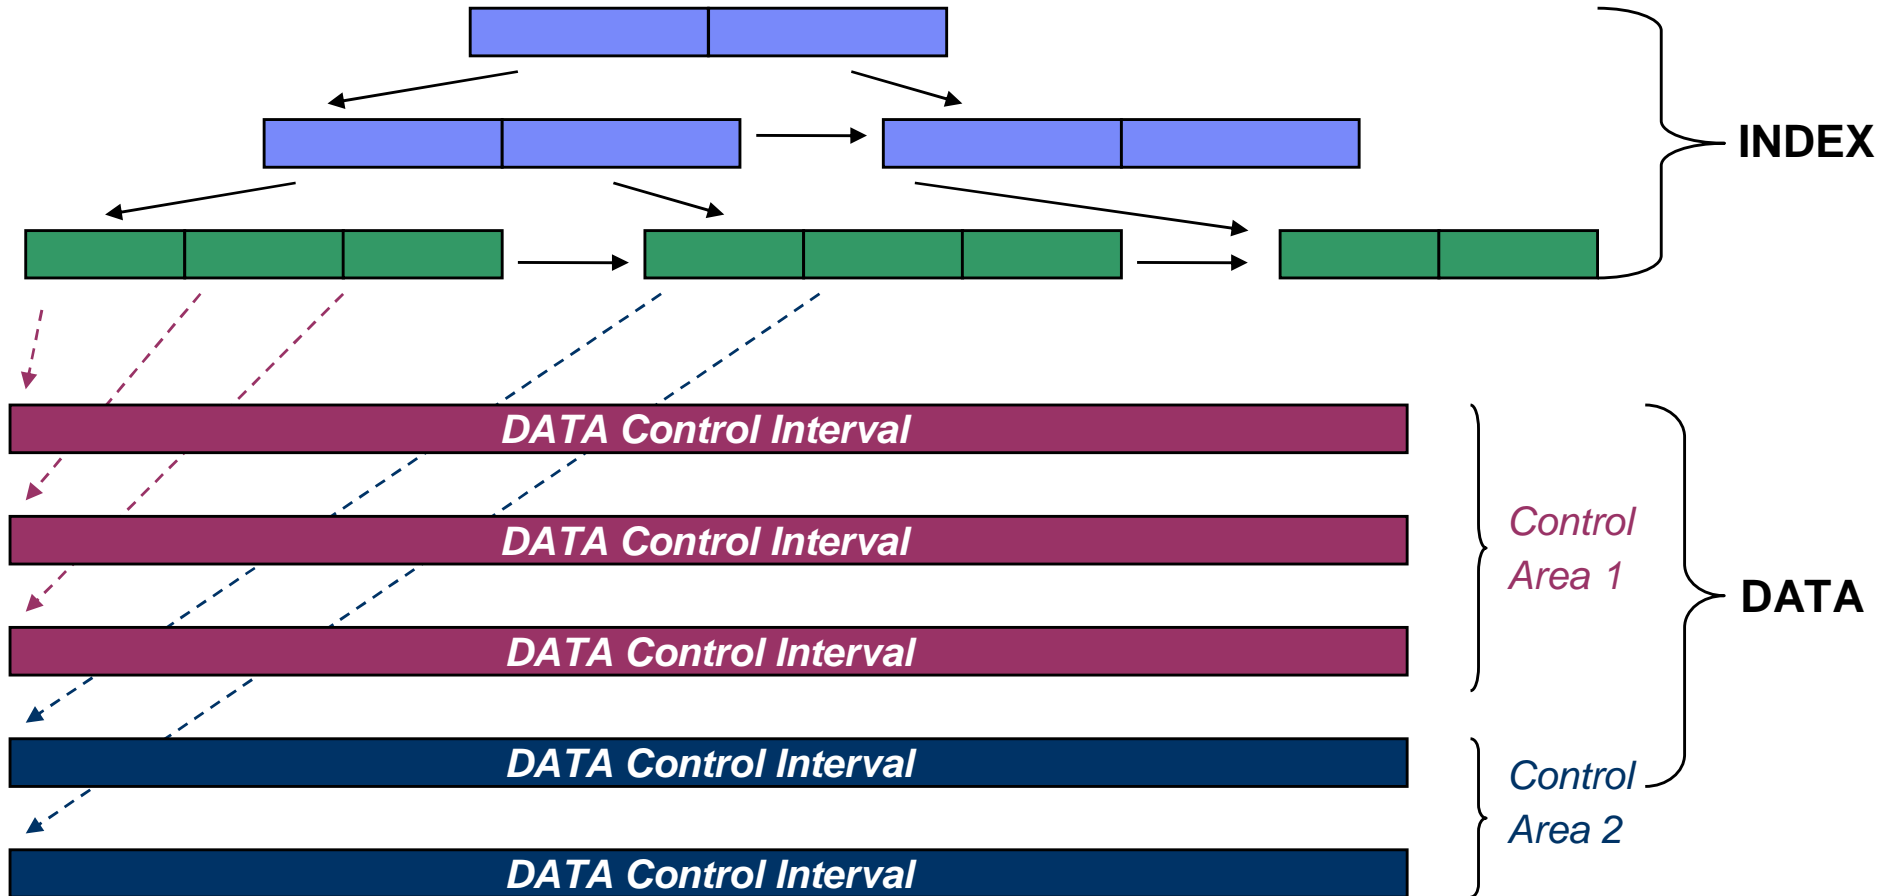

Analysis of **INDEX** component of a single VSAM CLUSTER.

✓ Error Analysis**✓ Check for logic errors in the index part of a cluster:**

- ✓ Duplicate CI pointer(s)**
- ✓ Invalid pointer(s) inside of Index Component**
- ✓ Invalid pointer(s) from Index to Data Component (RBA Error(s))**
- ✓ Invalid pointer(s) from Index to Data Component (CI Pointer Error(s))**

VSAM Index

High-level-index (1)
Intermediate-index (0-3)
Sequence-set (1)

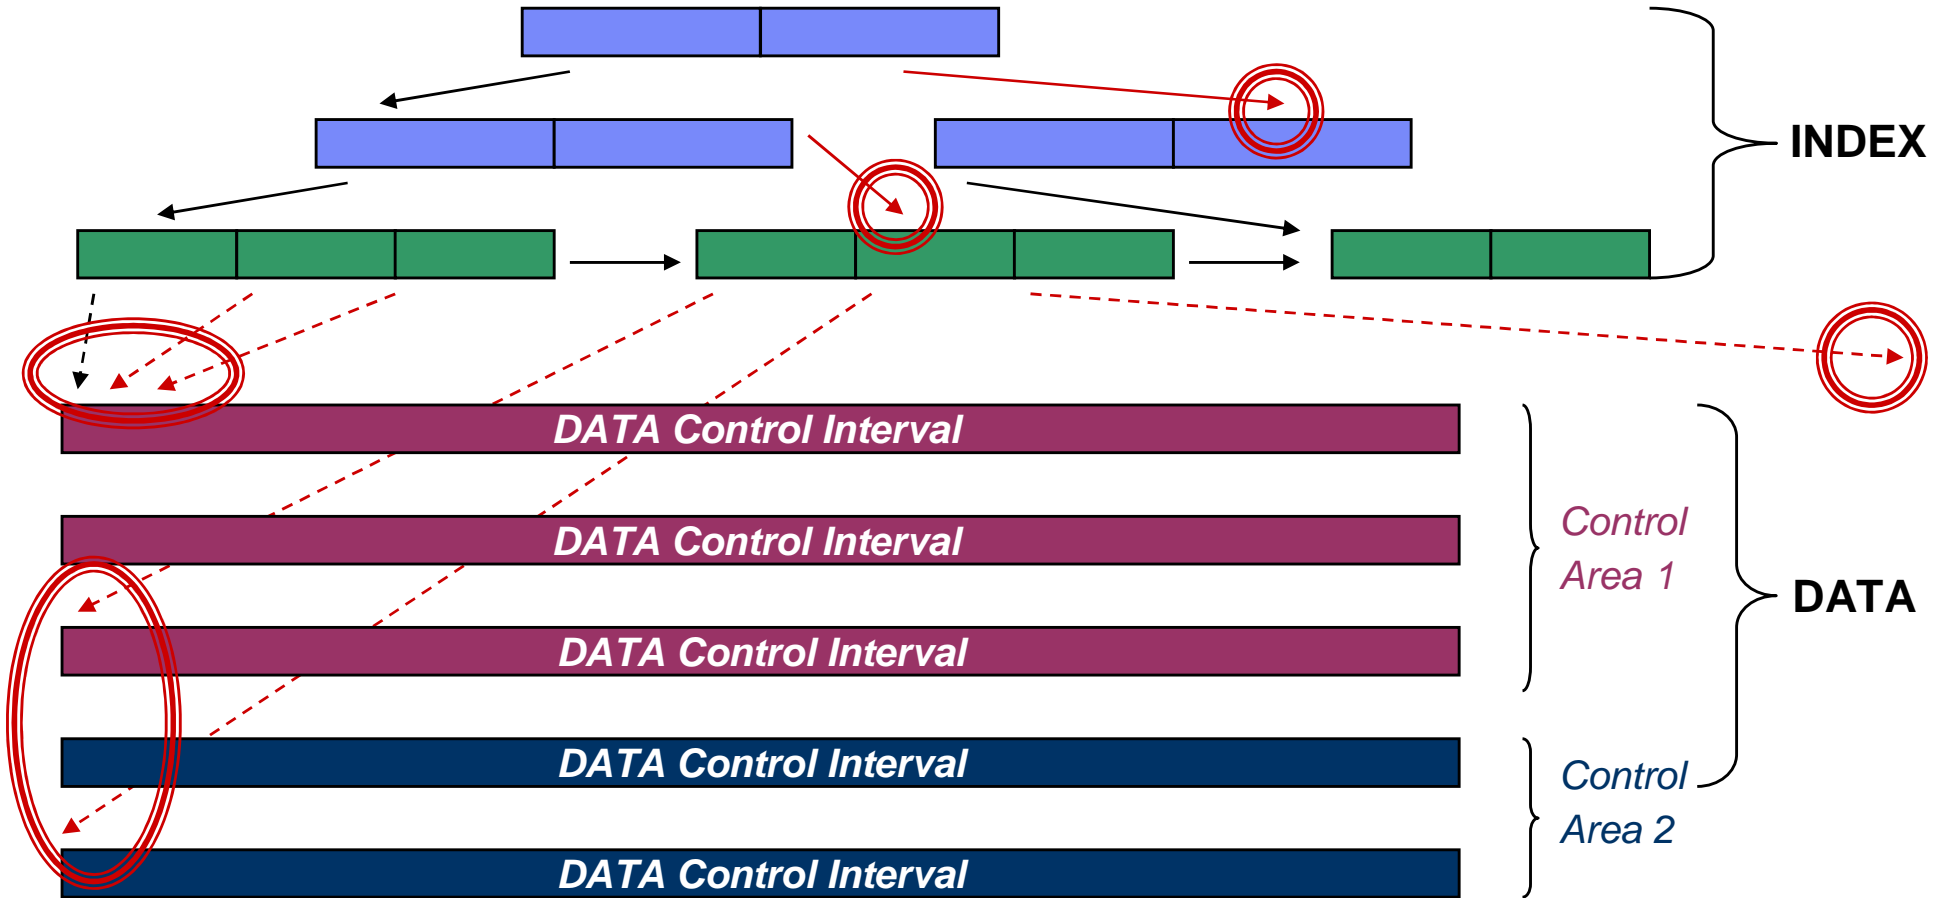

Index

- ✓ Max 5 index levels
- ✓ High- Intermediate-levels index records point to lower index records only
- ✓ Lowest-level index records point to data records (sequence set)
- ✓ 1 index sequence set **entry** points to 1 data CI
- ✓ 1 index sequence set **record** points to all data CIs of 1 data CA
- ✓ 1 index record per index CI
- ✓ Different index records point to different data Control Areas

Index Errors

High-level-index (1)
Intermediate-index (0-3)
Sequence-set (1)

NEW

INDEX Analysis

Capacity-Analysis (Reorganisation-Indicator)

During delete of data records only data component of cluster is updated but index component is unchanged

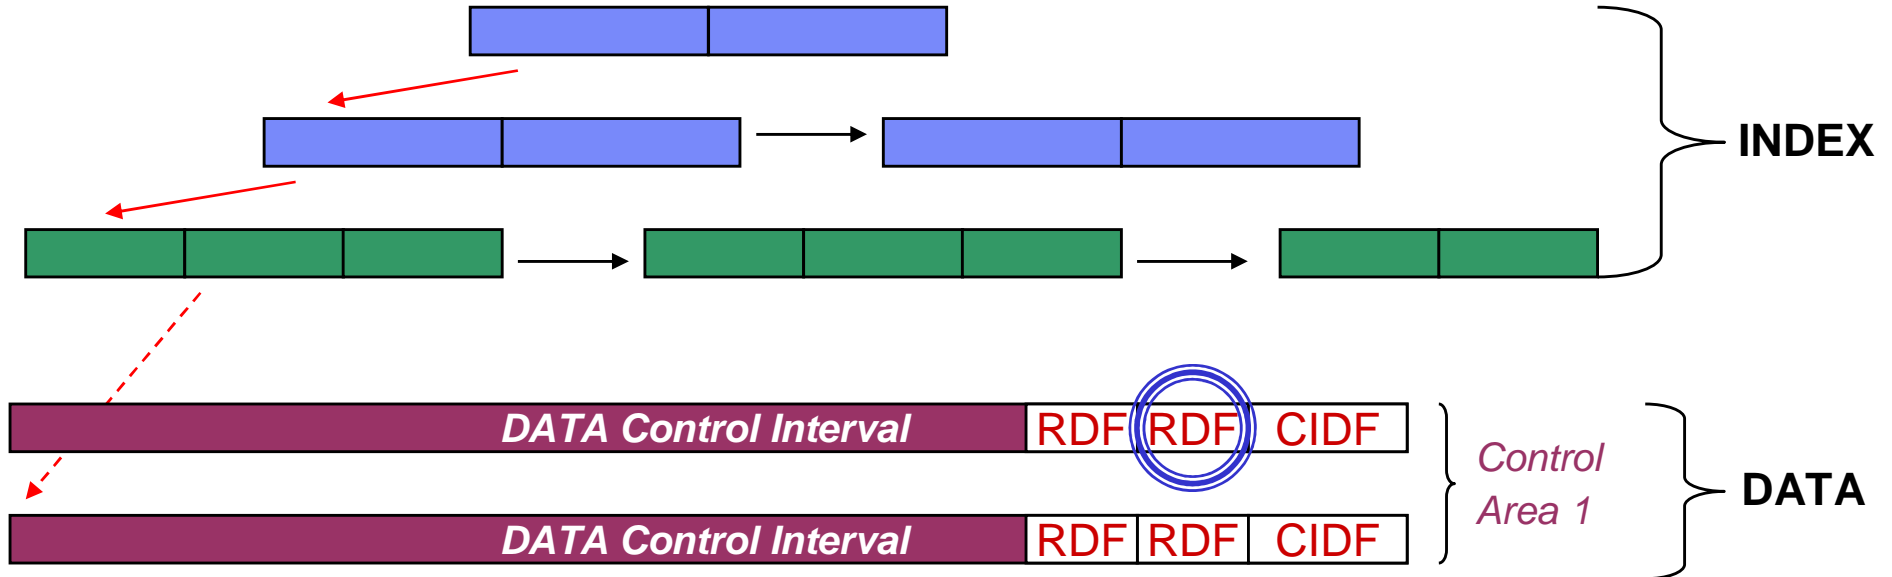

- ✓ **High performance** during record delete since index stays untouched
- ✓ **Overhead during read via index** (max 5 index levels)
- ✓ **Possible unnecessary I/Os** while reading a KSDS via index

SOLUTION:

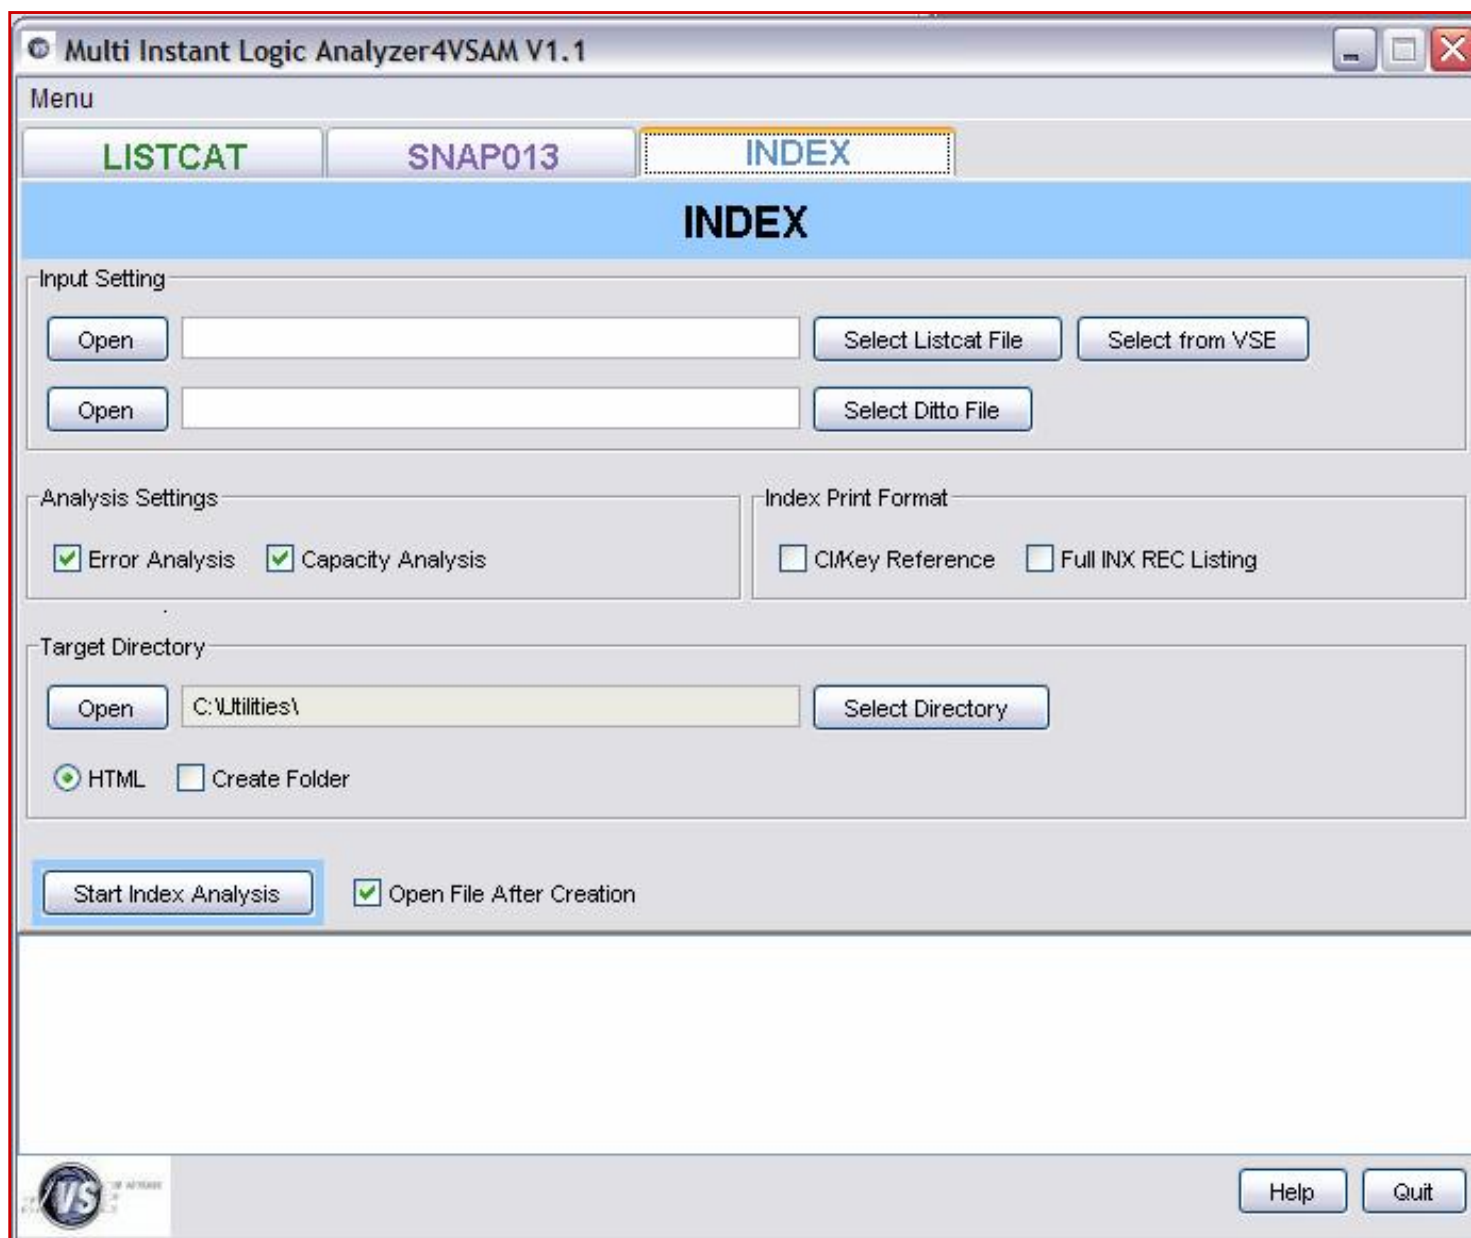

- ✓ **capacity-analysis will identify the real number of used index records and provide an „% used reorganisation indicator“**
- ✓ **check if reorganization is necessary or recommended for a cluster**

VSAM Index Processing

High-level-index (1)
 Intermediate-index (0-3)
 Sequence-set (1)

- ✓ RDF (Records Definition Field) keeps indicator if record is valid or invalid(deleted)
- ✓ Index records and record entries do NOT posses any indication about record validity
- ✓ ratio between High-Used-RBA & High-Allocated-RBA form a LISTCAT is **NO** *indicaton* about Index utilization
- ✓ Index will be not reduced in size even if all records in a VSAM file are deleted

**Multi
Instant
Logic
Analyzer
4 VSAM**

INDEX Analysis Output

Invalid pointer(s) inside of Index Component

CYL-HD-REC	points to RBA	Error Description
00257-02-001	==> 1433	Invalid horizontal point (1433 & 1536(CISIZE) ≠ 0)
00257-02-002	==> 4026536448	> 23040 (Index HUSRBA-OR-CI)

Summary

2 error(s) found.

Invalid pointer(s) from Index to Data Component (RBA Error(s))

CYL-HD-REC	Error IXKEY	points to RBA ((CI# * CISIZE) + I>BASRBA)	> (HUSRBA - 1)
00257-02-014	X'C5F4D5F4F1'	==> 8005632 ((X'2B' * 6144) + 7741440)	> (8000000 - 1)
	X'C5F4D5F4'	==> 8011776 ((X'2C' * 6144) + 7741440)	> (8000000 - 1)
	X'C5F4D5F5F8'	==> 8017920 ((X'2D' * 6144) + 7741440)	> (8000000 - 1)
	X'C5F4D5F6F7'	==> 8024064 ((X'2E' * 6144) + 7741440)	> (8000000 - 1)
	X'C5F4D5F7F8'	==> 8030208 ((X'2F' * 6144) + 7741440)	> (8000000 - 1)

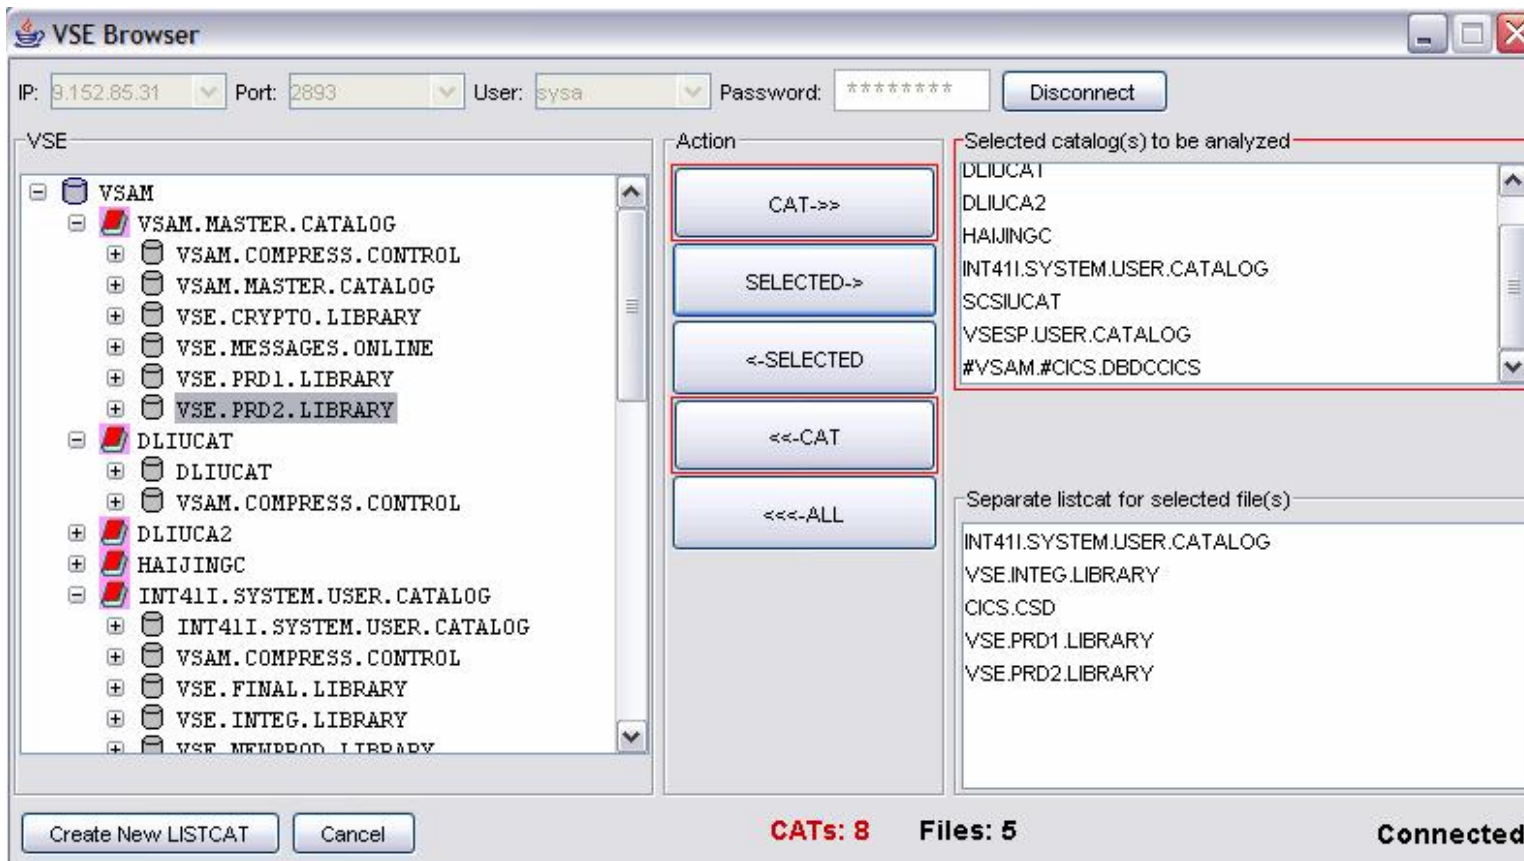

Result of Capacity Analysis

Based on our index calculations at least 47% of the file space is unused.

Note: our calculations are based on MAXLRECL. If most records in this particular file have a size smaller than MAXLRECL, the free % can even be higher.

Features

- ✓ All 3 tools have direct access to VSE systems using the VSE Connectors
- ✓ LISTCAT and/or DITTO JCL will be generated by the tools itself, transmitted to the selected VSE System executed and analyzed
- ✓ **Batch-processing** for LISTCAT- & INDEX Analysis via XML ***NEW***
- ✓ possibility to specify **password** for access protected VSAM catalogs ***NEW***
- ✓ **profile** to save user settings like TCPIP, PORT and USERID for multiple VSE Systems
- ✓ Analysis of multiple VSAM catalogs (LISTCAT) **in a single step**
- ✓ analysis **summary** for multiple catalogs
- ✓ MILA4VSAM does support German, English and Chinese language
- ✓ SCSI & **FAT-DASD Support** ***NEW***
