

Situation: P8/P9/P10 not using SMT Context 8

ID: 19

Problem:

SMT context is not 8 on a P8/P9/P10 system.

Resolution:

Possible reasons are:

- a) Hardware compatibility mode set to support LPM
- b) system value QPRCMLTTSK is set to non-default
- c) The QWCCHGPR API was used to override it
- d) the default for P8 and R710 was SMT4 and SMT8 at 720.
