

Situation: Jobs ineligible to run

ID: 6

Problem:

Jobs are ineligible to run, activity level may be set too low.

Resolution:

Check QPFRADJ and QMAXACTLVL system values. To resolve, ensure QPFRADJ is set to a 2 or 3 and set QMAXACTLVL to the default value of *NOMAX. For private pools or if you cannot use QPFRADJ, then use WRKSYSSTS - F11 to see which pools are experiencing Wait-> Inel or Active-> Inel; use the value you see in the Inel column and manually increase the Max Active by at least that much.
