Business alignment, visibility and control

Security Requirements

Breaches of sensitive business data in past year:

Source: 2006 survey by the IT Policy Compliance Group

Known People (un) Intentionally Do Great Harm

87% of insider incidents are caused by privileged or technical users

Many are inadvertent violations of:

- Change management process
- Acceptable use policy

Others are deliberate, due to:

- Revenge (84%)
- "Negative events" (92%)

Regardless, too costly to ignore:

- Internal attacks cost 6% of gross annual revenue
- Costing \$400 billion in the US alone

Who Causes Internal Incidents?

Who Causes Internal Incidents?

Source: USSS/CERT Insider Threat Survey 2005

Who are they?

- Male
- 17-60 Years Old
- 87% technical positions
- About half married
- Variety of racial and ethnic backgrounds

Solutions In

Regulators & Auditors Make It Urgent

[ISO17799:2005]

10.10.1 Audit logging

Audit logs recording user activities, exceptions, and information security events should be produced and kept for an agreed period to assist in future investigations and access control monitoring.

The Problems We Help to Solve

“I need to provide reports to my auditors and regulators”

“I need to prove that I have effective IT security controls”

“My staff lacks the time, expertise, and desire to scan logs”

“I’m concerned about privileged actions”

“I need to store logs for forensics”

“I have no idea which logs to collect or how”

Agenda

Problems

Solution: TSIEM -- The 3 C's

1. Capture – Enterprise Log Management
2. Comprehend – Sophisticated Log Interpretation
3. Communicate – Full Audit and Compliance Reporting

Technology

Proven Results

I Need to Collect Logs but it's Too Hard

Your enterprise

How to collect the logs?

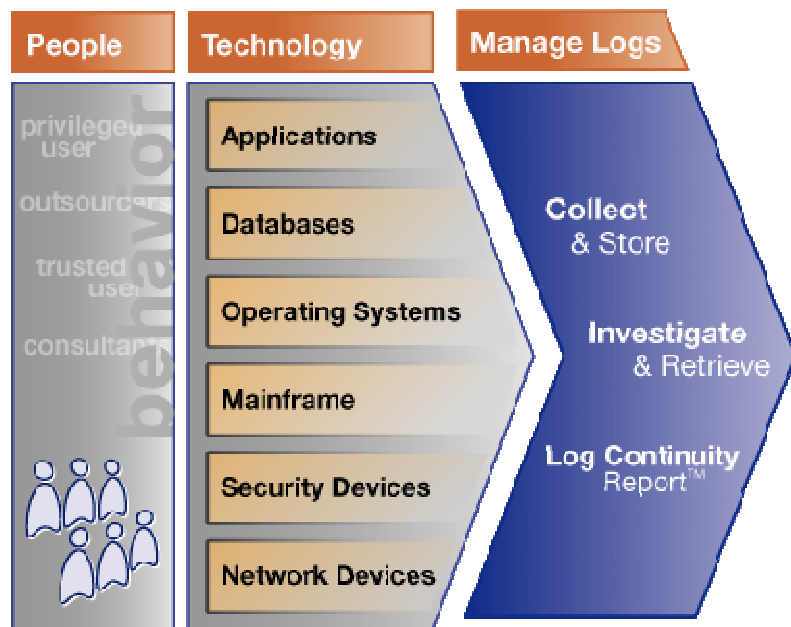

- Thousands of points across the enterprise generating event logs
- Regulators and auditors require you to capture and retain these log files
- Internal and external threats mean you need to investigate activities
- Time and cost constraints means it must be fast and affordable

Capture

Enterprise Log Management

Capabilities:

- Secure, reliable log capture from any platform
- Auto collection of syslogs
- Full support for native log collection
- Store in an efficient, compressed depot
- Access data when needed
- Search across all logs
- Reports to prove complete collection

Benefits:

- Reduce costs by automating and centralizing collection
- Be “audit ready” at any time!

Implementation time: plug and play.

Capture

Log Continuity Report
Instant proof to auditors and regulators that your log management program is complete and continuous.

What are People Doing on My Network?

Comprehend

87% of insider incidents are caused by privileged and technical users.

How do I make sense of all this?

Comprehend

The screenshot displays three windows from a Linux environment:

- Top Left Window:** A security audit log for system ID 2074 (APPLES). It shows a batch process login event at 00:02:09.84. The process name is BATCH_440, and the username is SYSTEM. The process owner is [SYSTEM].
- Top Right Window:** A security audit log for system ID 2073 (CYGNUS). It shows a network login event at 00:02:16.11. The process name is MQMTC_P2_BG164, and the username is MQM. The process owner is [MQM_SERVER].
- Bottom Window:** A system log showing authentication failures and session management. Key entries include:
 - Apr 5 17:20:30 syslog su(pam_unix)[10429]: authentication failure; logname= ruser= rhost= user=MQM
 - Apr 5 17:22:03 syslog sshd(pam_unix)[10351]: session closed for user acristal
 - Apr 5 18:01:01 syslog crond(pam_unix)[10436]: session closed for user MQM
 - Apr 5 19:01:01 syslog crond(pam_unix)[10438]: session closed for user MQM
 - Apr 5 20:01:01 syslog crond(pam_unix)[10440]: session closed for user MQM
 - Apr 5 21:01:01 syslog crond(pam_unix)[10442]: session closed for user MQM
 - Apr 5 22:01:01 syslog crond(pam_unix)[10444]: session closed for user MQM
 - Apr 5 23:01:01 syslog crond(pam_unix)[10446]: session closed for user MQM
 - Apr 6 00:01:01 syslog crond(pam_unix)[10448]: session closed for user MQM
 - Apr 6 01:01:01 syslog crond(pam_unix)[10450]: session closed for user MQM
 - Apr 6 02:01:01 syslog crond(pam_unix)[10452]: session closed for user MQM
 - Apr 6 03:01:01 syslog crond(pam_unix)[10477]: session closed for user MQM
 - Apr 6 03:33:29 syslog crond(pam_unix)[10479]: session closed for user MQM
 - Apr 6 04:01:02 syslog crond(pam_unix)[10509]: session closed for user MQM
 - Apr 6 04:03:46 syslog crond(pam_unix)[10511]: session closed for user MQM
 - Apr 6 04:30:02 syslog crond(pam_unix)[11012]: session closed for user MQM
 - Apr 6 05:01:01 syslog crond(pam_unix)[11031]: session closed for user MQM
 - Apr 6 06:01:01 syslog crond(pam_unix)[11033]: session closed for user MQM
 - Apr 6 07:01:01 syslog crond(pam_unix)[11035]: session closed for user MQM
 - Apr 6 08:01:01 syslog crond(pam_unix)[11037]: session closed for user MQM
 - Apr 6 08:42:11 syslog sshd(pam_unix)[11041]: session opened for user ebarrios by (uid=0)
 - Apr 6 08:42:43 syslog sshd(pam_unix)[11071]: authentication failure; logname= uid=0 euid=0 tty=ssh ruser= rhost=10.101.1.154 user=ebarrios
 - Apr 6 08:42:49 syslog sshd(pam_unix)[11077]: session opened for user ebarrios by (uid=0)

Red annotations connect the logs:

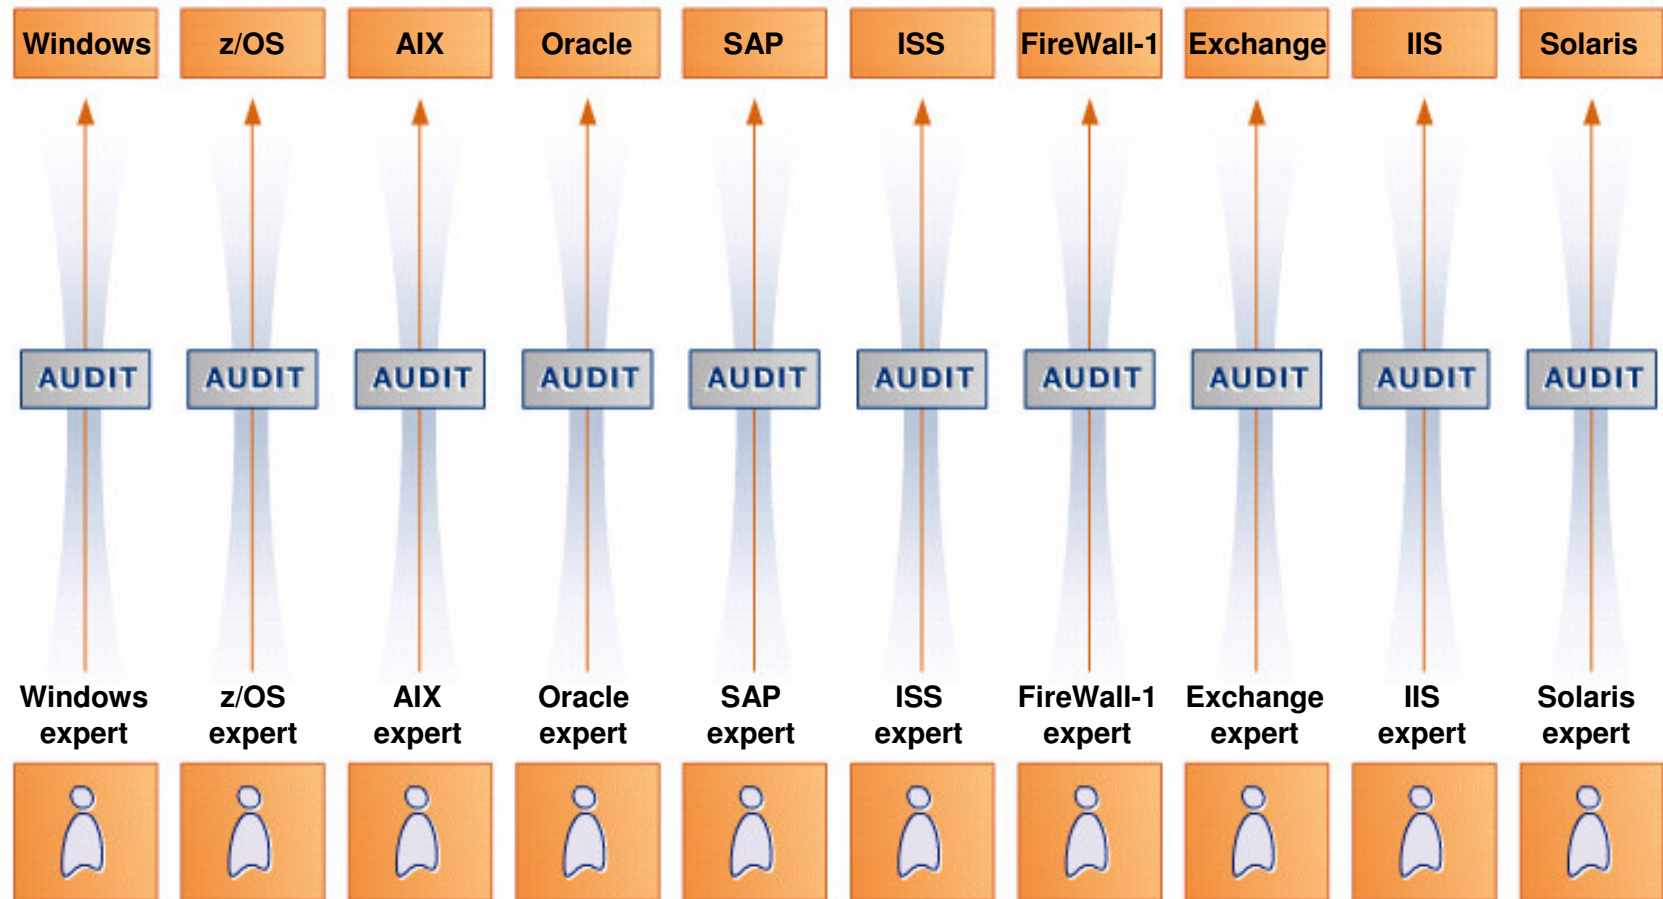

- A red box highlights the username `MQM` in the system log entry for the authentication failure.
- Red boxes highlight the process name `MQMTC_P2_BG164` and username `MQM` in the security audit log for system ID 2073.
- Red boxes highlight the remote node id `241859594` and remote node fullname `xyzz.bananajunior.com` in the security audit log for system ID 2073.
- Red arrows point from the `MQM` in the system log to the `MQM` in the security audit log, and from the `xyzz.bananajunior.com` in the security audit log to the `xyzz.bananajunior.com` in the system log.

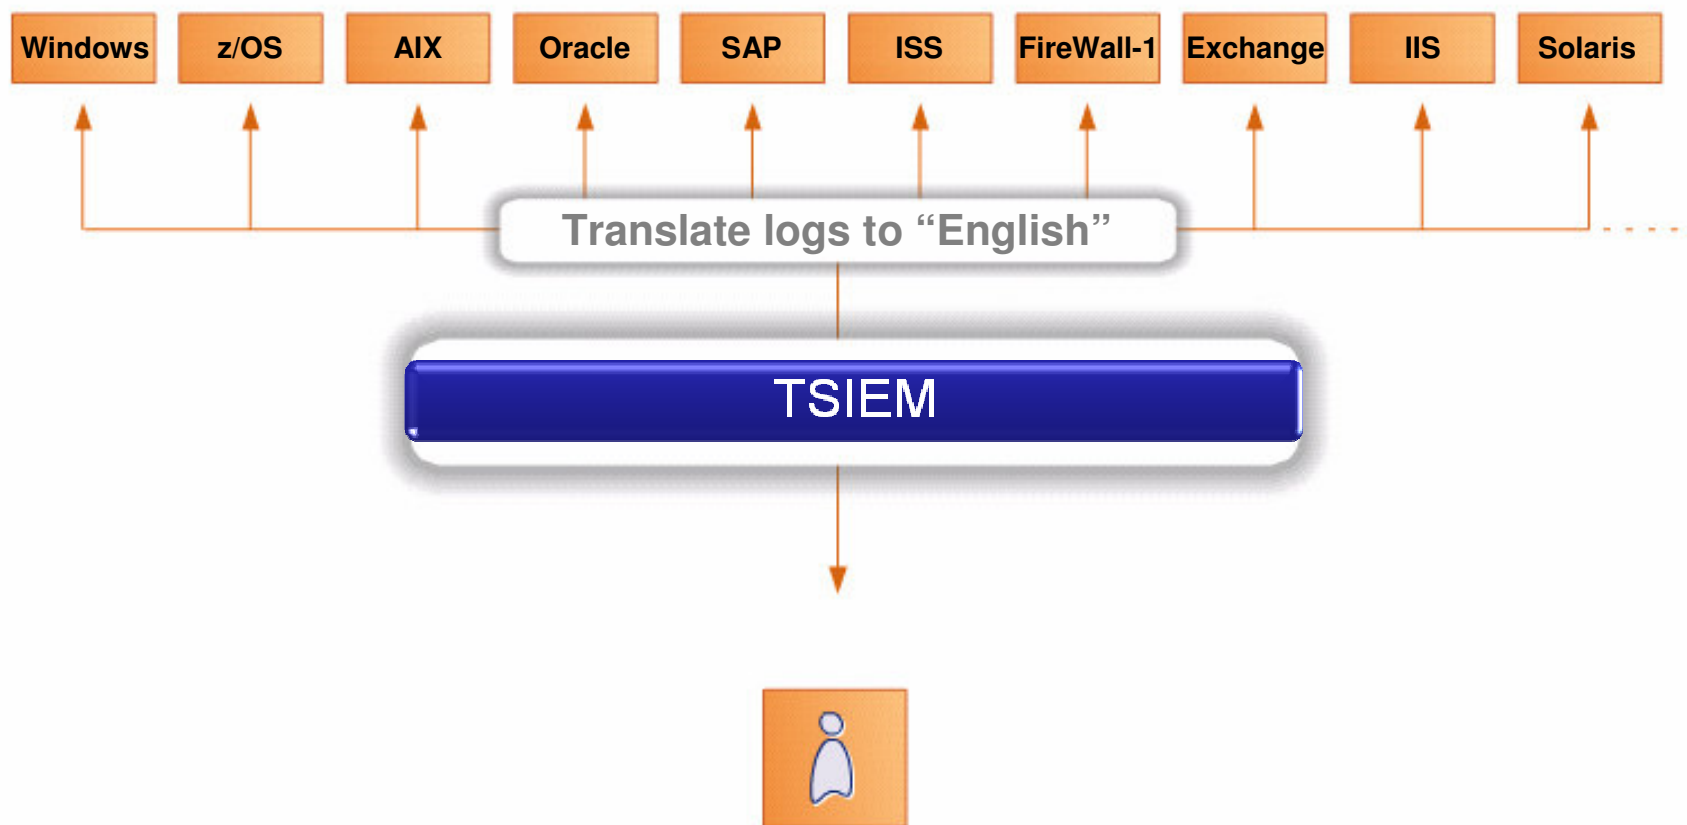

After Log Capture, Translation is Next

Comprehend

Now all Logs in Your Enterprise in a Single Language

Comprehend

TSIEM saves your information security and compliance staff time and money by automating monitoring across the enterprise.

Translate Logs into English IBM Tivoli's W7 Methodology

Comprehend

Who did **What** type of action **on What**?

When did he do it and **Where**, **From Where** and **Where To**?

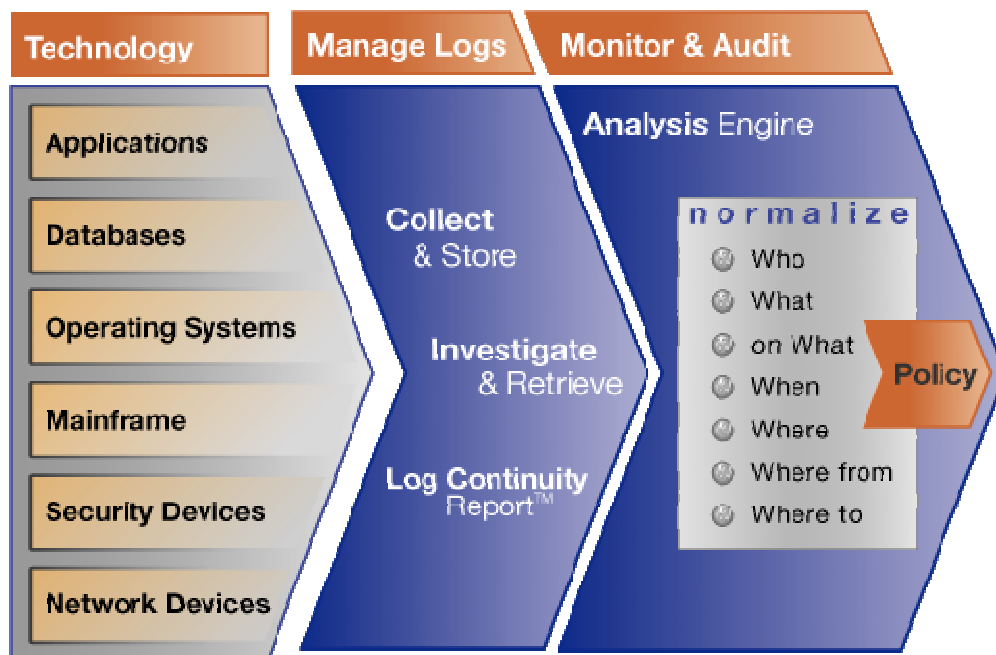

We do the hard work, so you don't have to!!

Sophisticated Log Interpretation and Correlation

Comprehend

Capabilities:

- W7 normalization
- Interpret EVERY log (Syslog and native logs) into English
- Compare billions of log entries to baseline policy

Benefits:

- Interpret and monitor all logs with fewer and less expensive resources
- More quickly detect and solve security problems

Out of the box log normalization!

Compliance Dashboard
Logs after W7 – Billions of log files summarized on one overview graphic!

IBM TSOM – Real-Time Correlation and Monitoring

IBM Tivoli Security Operations Manager (TSOM) is a real-time security information and event management (SIEM) platform designed to improve the effectiveness and efficiency of security operations and information risk management. TSOM centralizes and stores security data from throughout the heterogeneous technology infrastructure so that security analysts can:

Key Features

Log Management - automated aggregation of security events and audit logs

Correlation - Real-time, cross-device event correlation for incident management and investigation

Regulatory Compliance – reporting and policy monitoring to support regulatory compliance initiatives

Maximize and amplify security operations resources through automation

Integrates Security Operations with other IT Operations groups via Netcool and TEC

*“TSOM automates the aggregation and correlation process. It mitigates false positives and alerts my team to real threats in a timely manner. The product is more or less what I would have designed and built myself, given four years and a pool of developers.” ~
Communications User of TSOM*

Customers Turn to TSIEM

Multinational Insurance Company

To close compliance gaps for SOX; centralize collection, monitoring, and reporting of millions of log files; and provide transparency into the activities of privileged users across a heterogeneous network.

Major US Payment Processor

To prepare for federal regulations and to meet the requirements of the VISA CISP, this large payment processor brought Consul onboard to help audit enterprise IT.

Major Office Supplies Store

The Manager of Data Security began looking for a solution to audit their entire enterprise IT environment.

Large US Grocery Chain

Needed IT audit solution they could roll-out across the corporate network to audit AIX, mainframe, UNIX, Windows and OS/400, and then to 2,500 stores.

Industrial Cleaning Firm

In order to meet SOX requirements and IT Security best practices, the Director of IT Security began looking for a product that could help them manage their log data.

Major Office Equipment Manufacturer

Company received a mandate from their CEO to comply with federal regulatory requirements, specifically Sarbanes-Oxley

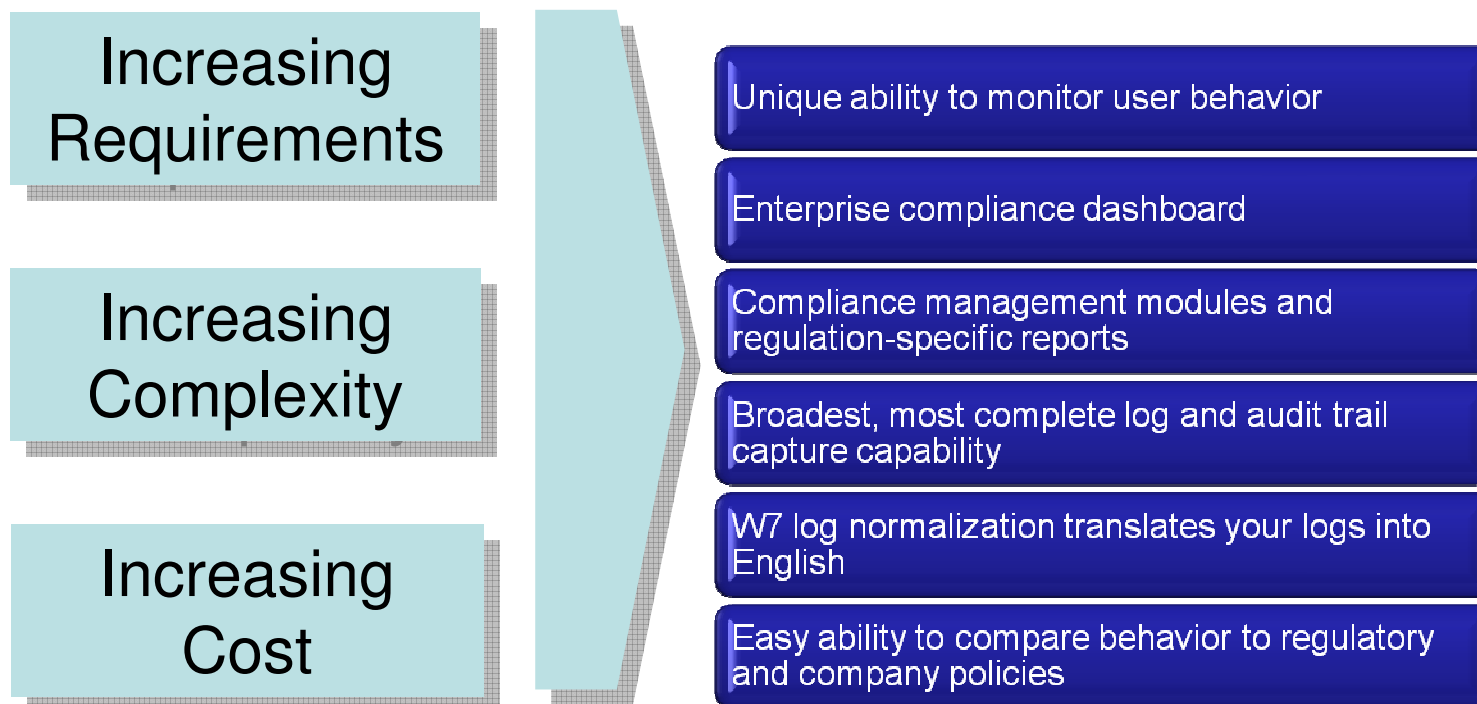

Global Food Manufacturer

IT Security team driven by requirements given to them by Internal Auditors to meet Sarbanes-Oxley requirements
