

# **ASF 3.3 with CICS Document Connect for ASF**

Installation on AIX Server  
Using WebSphere Application Server V5.1

Server-to-Host Connection using  
CICS Transaction Gateway

Edition: 1.1

31 March 2005

## 1 Prerequisites

1. WebSphere Application Server (WAS) V5.1 has been installed, is operational, and has been started

Note: The installation path is assumed to be  
/usr/WebSphere/AppServer51

2. IBM HTTP Server (Version 1.3.26, or later) has been installed, is operational, and has been started

Note: The installation path is assumed to be  
/usr/IBMHttpServer

3. The CICS Transaction Gateway (Version 5.1 or later) has been installed either on z/OS or on AIX and the connections to the host (CICS) are available. If it is installed on z/OS the gateway classes has to be installed on AIX.

Note: The CICS Transaction Gateway installation path is assumed to be  
/local/CTG510/ on z/OS or  
/usr/lpp/ctg on AIX

4. Document Connect for ASF (DC4ASF) has been installed in the following directory:

/usr/fsn/v3r3m0w5/**dc4ASF**

where /usr/fsn/v3r3m0w5/ is fix and **dc4ASF** can be specified after installation with SMIT/SMITTY with the docinstusr.sh script file.

## 2 Name Space Bindings

Two name space bindings must be created. To do this, open the WebSphere Administrative Console:

Open [Environment > Naming > Name Space Bindings](#)

Note: Ensure you are in the Server scope.

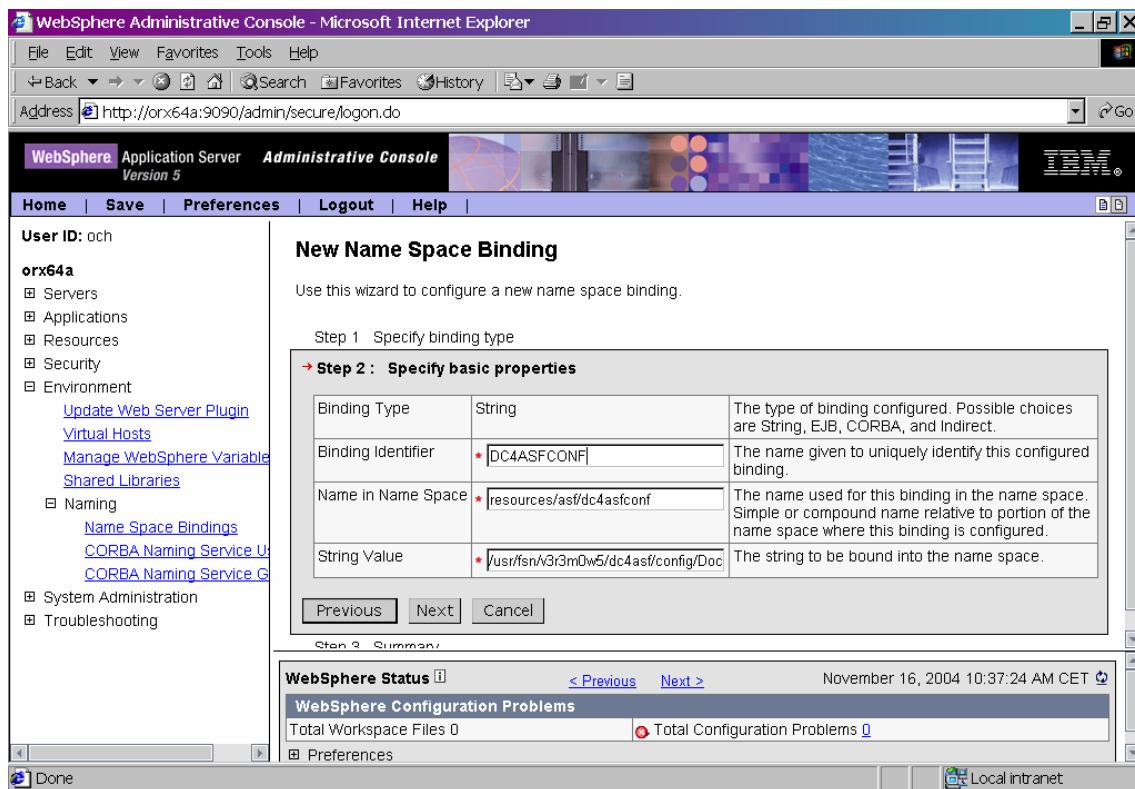

### 2.1 Define Name Space Binding for DC4ASFINST

- a) Press button [New](#) to create a new Binding
- b) Choose type **String** for the binding and press button [Next](#)
- c) Enter
  - the Binding Identifier  
(for example DC4ASFINST)
  - Name in Name Space  
(for example resources/asf/dc4asfinst)
  - and the path to your ASF installation directory  
(/usr//fsn/v3r3m0w5/dc4ASF)
- d) Press button [Next](#) to go to the Summary Panel
- e) On the Summary Panel press button [Finish](#) to complete the Name Space Binding.

The screenshot shows the WebSphere Administrative Console interface in Microsoft Internet Explorer. The title bar reads "WebSphere Administrative Console - Microsoft Internet Explorer". The main menu includes File, Edit, View, Favorites, Tools, Help, Back, Forward, Stop, Refresh, Search, Favorites, History, and Go. The address bar shows the URL <http://orx64a:9090/admin/secure/logon.do>. The header bar displays "WebSphere Application Server Administrative Console Version 5" and the IBM logo. The navigation bar at the top has links for Home, Save, Preferences, Logout, and Help. The left sidebar shows the user ID "och" and a tree view of the administrative console categories: Servers, Applications, Resources, Security, Environment, Naming (with sub-links for Name Space Bindings, CORBA Naming Service Under Development, and CORBA Naming Service GUI), System Administration, and Troubleshooting. A link to "Update Web Server Plugin" is also present. The main content area is titled "New Name Space Binding" and contains a wizard step titled "Step 2 : Specify basic properties". It includes four input fields: "Binding Type" (String), "Binding Identifier" (\*DC4ASFINST), "Name in Name Space" (\*resources/asf/dc4asfinst), and "String Value" (\*/usr/fsn/v3r3m0w5/dc4ASF). Below these fields are "Previous", "Next", and "Cancel" buttons. At the bottom of the main content area is a "Step 3 : Summary" link. The bottom of the page features a "WebSphere Status" section with links for "WebSphere Runtime Messages", "Total All Messages: 513", "1 new, 1 total", "8 new, 8 total", "504 new, 504 total", and "Clear All". There is also a "Preferences" link and a "Local intranet" icon. The footer of the browser window shows "November 16, 2004 10:38:24 AM CET".

## 2.2 Define Name Space Binding for DC4ASFCONF

- a) Press button **New** to create a new Binding
- b) Choose type **String** for the binding and press button **Next**
- c) Enter
  - the Binding Identifier  
(for example DC4ASFCONF),
  - Name in Name Space  
(for example resources/asf/dc4asfconf)
  - and the path to your ASF configuration file  
(/usr/fsn/v3r3m0w5/dc4ASF/config/DocConfiguration.xml)
- d) Press button **Next** to go to the Summary Panel
- e) On the Summary Panel press button **Finish** to complete the Name Space Binding.

**Save** the two name space bindings created in the master configuration.

### 3 Installation of the application

#### ***Preparing for the application installation***

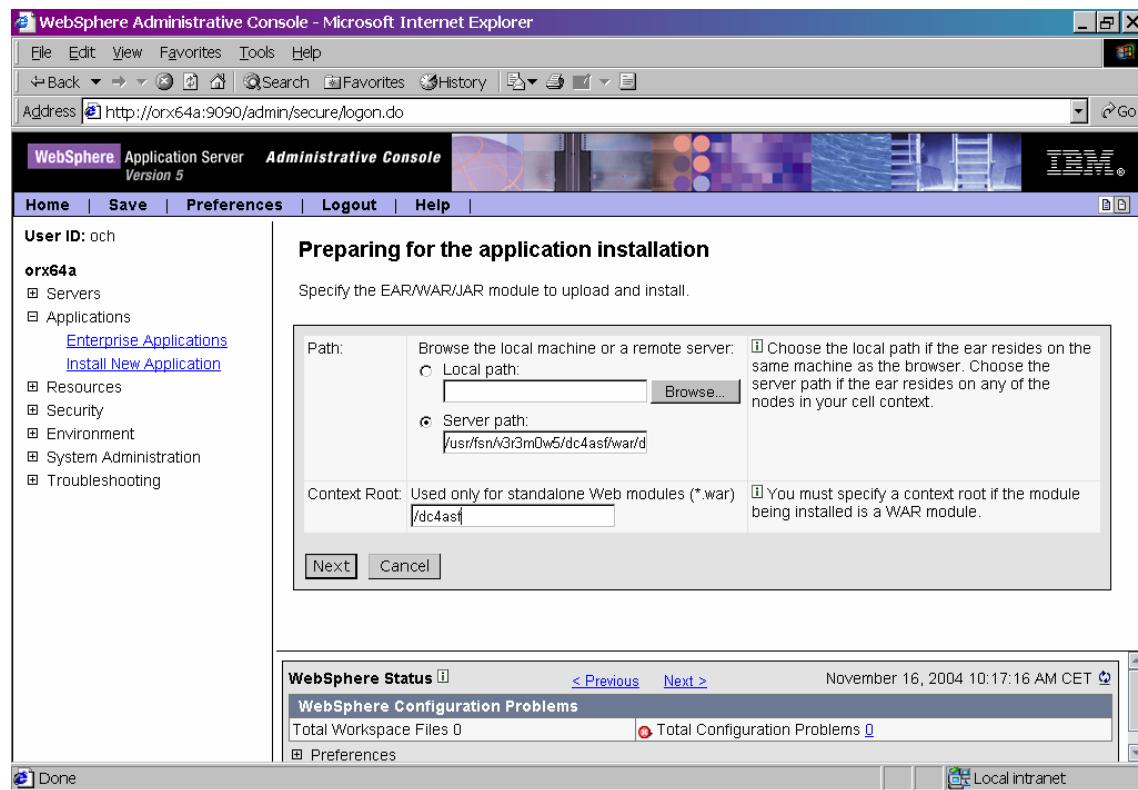

Open [Application](#) > [Install New Application](#)

Enter the path (local path or server path) where the DC4ASF war file is located:

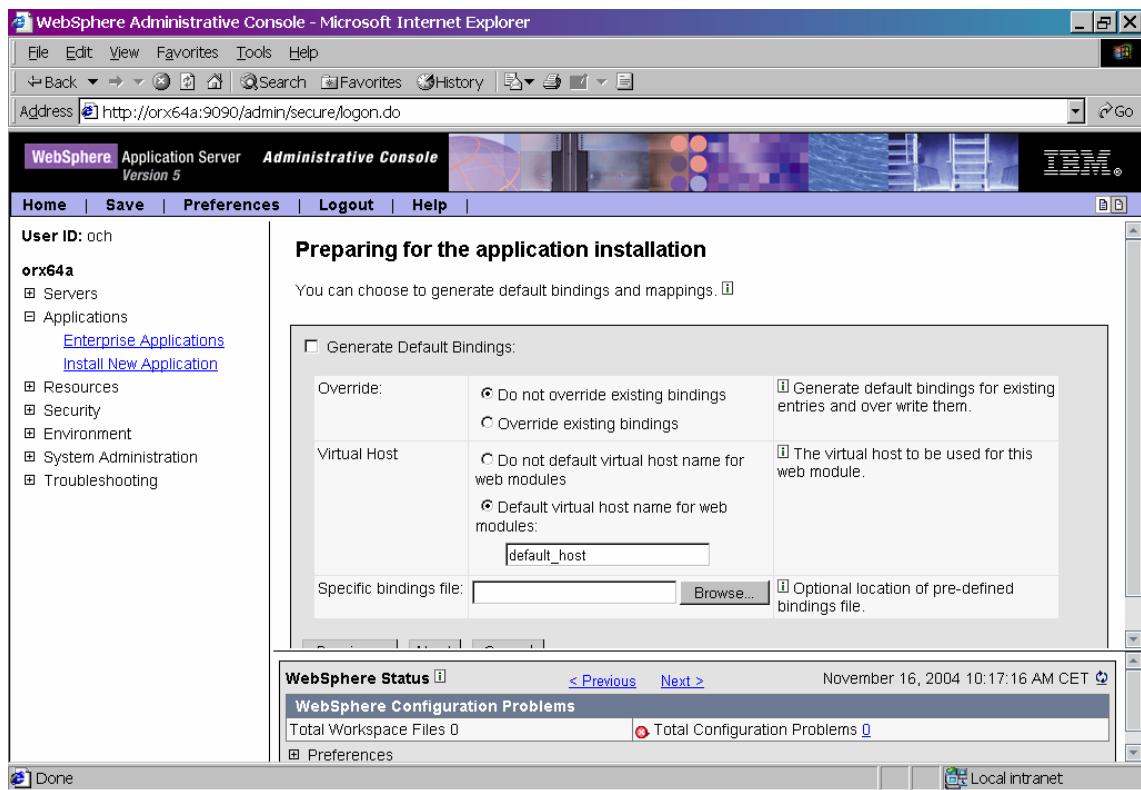

/usr/fsn/v3r3m0w5/dc4ASF/war/dc4ASF.war

Enter the context root, for example /dc4ASF

Press button [Next](#). The file dc4ASF.war is now loaded on the server.

Press button [Next](#).

Press button [Next](#).

## **Install new application (Step 1)**

Fill in the required fields (installation directory, application name, class reloading).

### **Installation directory:**

If you do not enter an installation directory, WAS will install the application under the default directory:

APP\_INSTALL\_ROOT/xxxxx/dc4ASF.ear

where

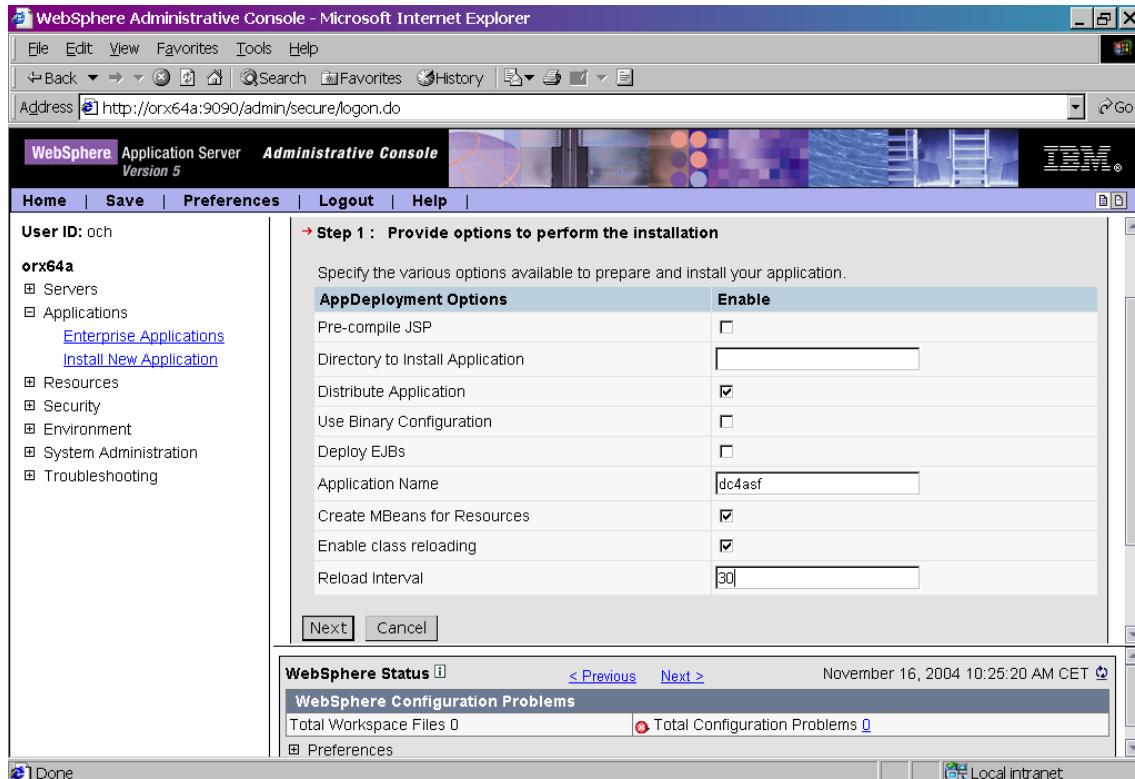

- APP\_INSTALL\_ROOT is a path map variable which by default is set to  
`/usr/WebSphere/AppServer51/installedApps/`
- 'xxxxx' is the cell name and
- 'dc4ASF' is the application name.

### **Application Name:**

Specify a unique name, for example 'dc4ASF'.

### **Class Reloading:**

Specify a value in seconds, for example '30'.

The screenshot shows the WebSphere Administrative Console interface in Microsoft Internet Explorer. The title bar reads "WebSphere Administrative Console - Microsoft Internet Explorer". The left sidebar shows a navigation tree with "User ID: och" and "orx64a" selected. Under "orx64a", "Applications" is expanded, showing "Enterprise Applications" and "Install New Application". Other collapsed categories include "Servers", "Resources", "Security", "Environment", "System Administration", and "Troubleshooting". The main content area is titled "Step 1 : Provide options to perform the installation". It contains a table with the following configuration:

AppDeployment Options	Enable
Pre-compile JSP	<input type="checkbox"/>
Directory to Install Application	<input type="text"/>
Distribute Application	<input checked="" type="checkbox"/>
Use Binary Configuration	<input type="checkbox"/>
Deploy EJBs	<input type="checkbox"/>
Application Name	<input type="text" value="dc4ASF"/>
Create MBeans for Resources	<input checked="" type="checkbox"/>
Enable class reloading	<input checked="" type="checkbox"/>
Reload Interval	<input type="text" value="30"/>

At the bottom of the main panel are "Next" and "Cancel" buttons. Below the main panel is a status bar with "WebSphere Status" and "WebSphere Configuration Problems" sections, and a timestamp "November 16, 2004 10:25:20 AM CET". The status bar also includes links for "Previous" and "Next >". At the very bottom of the window is a "Done" button and a "Local intranet" link.

Press button [Next](#) to finish Step 1 and go to Step 2.

## Install new application (Step 2)

Enter **resources/asf/dc4asfinst** for the InstallPath Reference Binding (JNDI Name) and **resources/asf/dc4asfconf** for the ConfigPath Reference Binding (see "Name Space Bindings").

The screenshot shows the WebSphere Administrative Console interface. On the left, a sidebar menu lists 'User ID: och' and 'orx64a' under 'Applications'. Under 'Applications', 'Enterprise Applications' is selected, and 'Install New Application' is highlighted. The main panel displays the 'Install New Application' wizard, specifically Step 2: Map resource references to resources. A table lists two entries for 'java.lang.String':

Module	EJB	URI	Reference Binding	JNDI Name
dc4ASF		dc4ASF.war,WEB-INF/web.xml	InstallPath	resources/asf/dc4asfinst
dc4ASF		dc4ASF.war,WEB-INF/web.xml	ConfigPath	resources/asf/dc4asfconf

Below the table are buttons for 'Previous', 'Next', and 'Cancel'. At the bottom of the main panel, there is a status bar showing 'WebSphere Status' and 'February 4, 2005 9:44:37 AM CET'. A separate window titled 'WebSphere Configuration Problems' shows 'Total Configuration Problems 0'.

Press button [Next](#) to finish Step 2 and go to Step 3.

## Install new application (Step 3)

The screenshot shows the WebSphere Administrative Console interface in Microsoft Internet Explorer. The title bar reads "WebSphere Administrative Console - Microsoft Internet Explorer". The address bar shows "http://orx64a:9090/admin/secure/logon.do". The main menu includes Home, Save, Preferences, Logout, and Help. On the left, a navigation tree shows "User ID: och" and "orx64a" selected, with options like Servers, Applications (Enterprise Applications, Install New Application), Resources, Security, Environment, System Administration, and Troubleshooting. The central panel is titled "Install New Application" and describes the process for installing Enterprise Applications and Modules. It lists "Step 1" (Provide options to perform the installation) and "Step 2" (Map resource references to resources). A callout box highlights "Step 3 : Map virtual hosts for web modules". This step allows specifying the virtual host where web modules will be installed. A table shows a mapping from "dc4ASF" to "default\_host". Buttons for Previous, Next, and Cancel are at the bottom. Below the main panel, a status bar shows "WebSphere Status" and "November 16, 2004 10:31:22 AM CET". A "WebSphere Configuration Problems" section indicates "Total Workspace Files 0" and "Total Configuration Problems 0". The bottom right corner shows "Local intranet".

No updates are required for Step 3. Press button [Next](#) to go to Step 4.

## Install new application (Step 4)

The screenshot shows the WebSphere Administrative Console interface in Microsoft Internet Explorer. The title bar reads "WebSphere Administrative Console - Microsoft Internet Explorer". The address bar shows "http://orx64a:9090/admin/secure/login.do". The main header says "WebSphere Application Server Administrative Console Version 5". The left sidebar shows a navigation tree with "User ID: och" and "orx64a" selected. Under "orx64a", the "Applications" section is expanded, showing "Enterprise Applications" and "Install New Application". Other sections like "Resources", "Security", "Environment", "System Administration", and "Troubleshooting" are also listed. The main content area is titled "Install New Application" and describes the process of allowing installation of Enterprise Applications and Modules. It lists three steps: Step 1 (Provide options to perform the installation), Step 2 (Map resource references to resources), Step 3 (Map virtual hosts for web modules), and Step 4 (Map modules to application servers). Step 4 is currently active, with a sub-section titled "Specify the application server where you want to install modules contained in your application. Modules can be installed on the same server or dispersed among several servers." A table shows a single entry: "Module" dc4asf, "URI" dc4asf.war, "Server" WebSphere:cell=orx64a,node=orx64a,server=server1. Below the table is a "WebSphere Status" section showing "Total All Messages: 505" with 1 new message, 0 total warnings, and 504 new, 504 total errors. There is also a "WebSphere Runtime Messages" section. At the bottom of the page is a "Done" button and a "Local intranet" link.

No updates are required for Step 4. Press button [Next](#) to go to Step 5.

## **Install new application (Step 5)**

The screenshot shows the WebSphere Administrative Console interface in Microsoft Internet Explorer. The title bar reads "WebSphere Administrative Console - Microsoft Internet Explorer". The address bar shows "http://orx64a:9090/admin/secure/logon.do". The main menu includes File, Edit, View, Favorites, Tools, Help, Back, Forward, Stop, Search, Favorites, History, Home, Save, Preferences, Logout, and Help.

The left sidebar shows the user ID "och" and the server "orx64a". Under "Applications", the "Enterprise Applications" link is highlighted, and "Install New Application" is selected. Other sections include Servers, Resources, Security, Environment, System Administration, and Troubleshooting.

The central content area is titled "Install New Application" and describes the process as "Allows installation of Enterprise Applications and Module". It lists four steps: Step 1 (Provide options to perform the installation), Step 2 (Map resource references to resources), Step 3 (Map virtual hosts for web modules), and Step 4 (Map modules to application servers). A box highlights "Step 5 : Summary".

The "Summary of Install Options" table has two columns: "Options" and "Values". The rows are:

Options	Values
Distribute Application	Yes
Use Binary Configuration	No
Cell/Node/Server	<a href="#">Click here</a>
Create MBeans for Dependencies	Yes

At the bottom, the "WebSphere Status" section shows "November 16, 2004 10:33:22 AM CET" and "WebSphere Configuration Problems" with "Total Workspace Files 0" and "Total Configuration Problems 0". The "Preferences" link is also visible.

Check the settings on this page and press button [Finish](#) to start the installation of your application. When the installation of the application has been completed it must be [saved](#) in the master configuration.

## **Start the application**

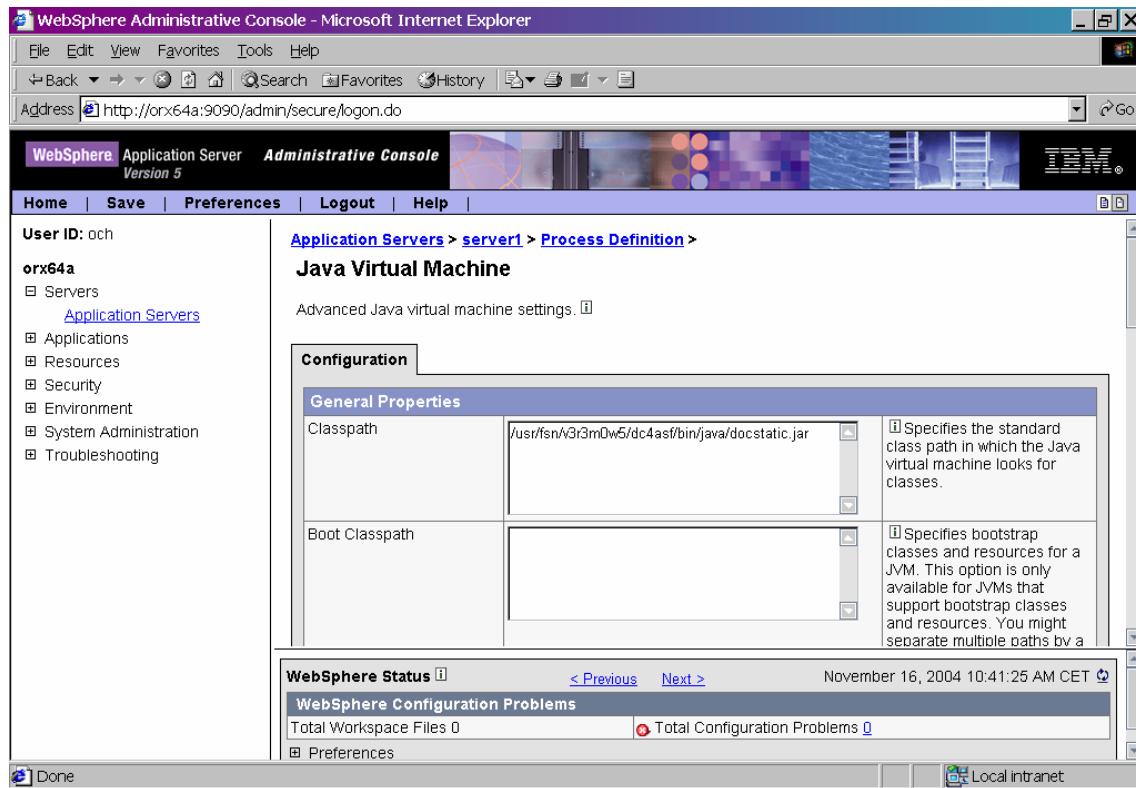

Open [Applications](#) > [Enterprise Application](#), select your dc4asf application, and select [Start](#) to start the application.

## 4 Spellcheck Installation

To activate spell check you must set the Classpath variable and define a LIBPATH variable to the WAS environment.

Open [Servers > Application Servers > server name > Process Definition > Java Virtual Machine](#)

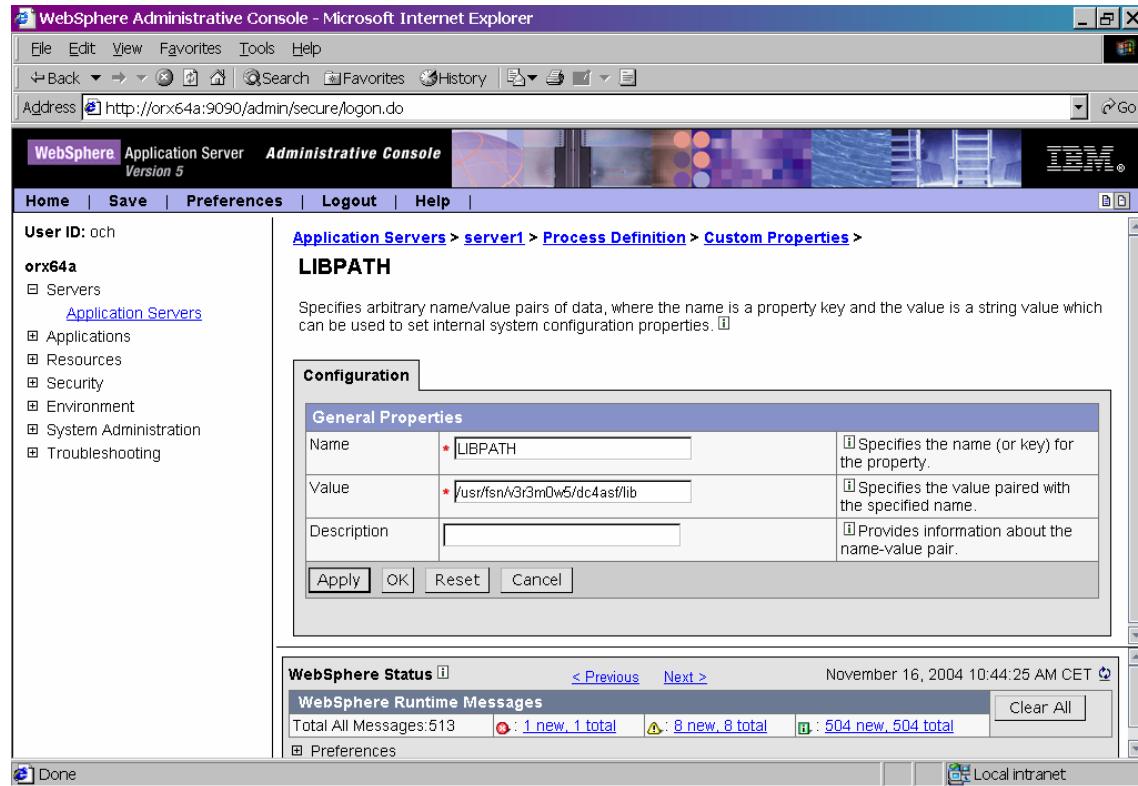

Add the file [docstatic.jar](#) delivered with DC4ASF to the Classpath  
(/usr/fsn/v3r3m0w5/bin/java/docstatic.jar).

Press button [Apply](#) first and then press button [OK](#).

Open [Servers](#) > [Application Servers](#) > *server name* > [Process Definition](#) > [Environment Entries](#)

Create the variable **LIBPATH**. Set its value to the Document Connect for ASF shared library path (/usr/fsn/v3r3m0w5/dc4ASF/bin).

Press button [Apply](#) first and then press button [OK](#).

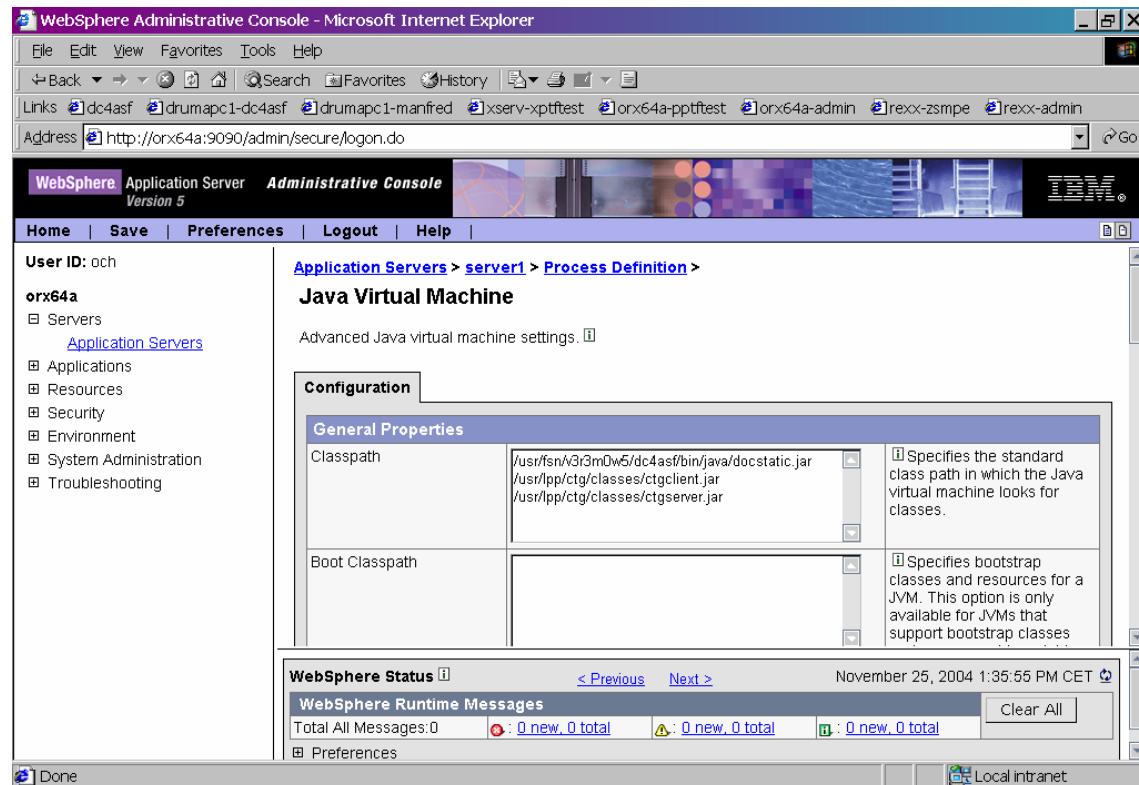

[Save](#) the changes to the master configuration.

## 5 Enable CICS Transaction Gateway Connection

To enable the CICS Transaction Gateway connection between server and host you must change the Classpath and the LIBPATH variable in the WAS environment.

Open [Servers > Application Servers > \*server name\* > Process Definition > Java Virtual Machine](#)

Add the files *ctgclient.jar* and *ctgserver.jar* delivered with the CICS Transaction Gateway to the Classpath (e.g. /usr/lpp/ctg/classes/ctgclient.jar)

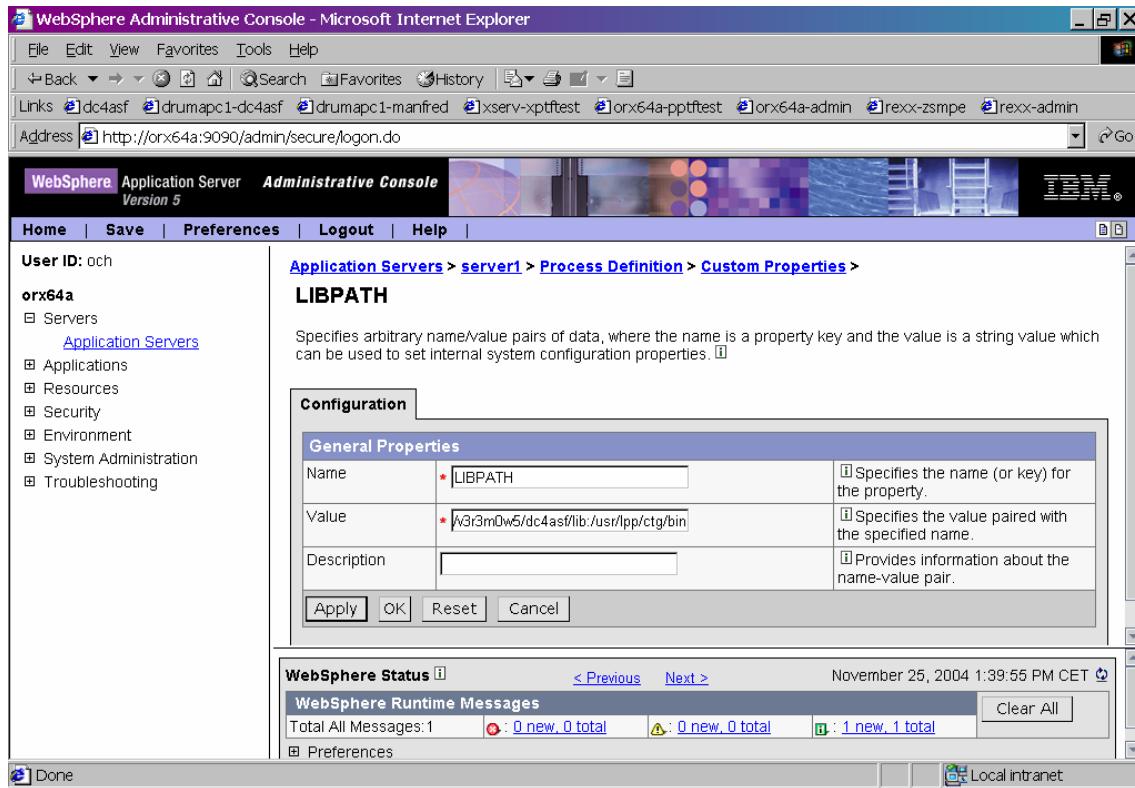

Press button [Apply](#) first and then press button [OK](#).

Open [Servers](#) > [Application Servers](#) > *server name* > [Process Definition](#) > [Environment Entries](#)

Add the CICS Transaction Gateway shared library path (/usr/lpp/ctg/bin) to the value for the variable **LIBPATH**.

Note: Separate the path values with a colon.

Press button [Apply](#) first and then press button [OK](#).

[Save](#) the changes to the master configuration.

After modifying the variables LIBPATH and Classpath, you must stop and restart WebSphere Application Server.

## 6 HTTP Server Changes

### **Configure the WebSphere PLUGIN**

#### **Using Shared Object library "mod\_ibm\_app\_server\_http.so"**

Make sure you have installed the Shared Object (SO) library [mod\\_ibm\\_app\\_server\\_http.so](#). This SO is usually installed with WAS by selecting the HTTP server installation. It resides in the bin directory of the WAS installation.

#### **Modify the configuration file "plugin-cfg.xml"**

Generate the plugin configuration file "plugin-cfg.xml" using the WebSphere Administrative Console:

Open [Environment > Update Web Server Plugin](#)

Press button [OK](#) to generate the file [plugin-cfg.xml](#).

Note: Usually the xml file is placed in the config/cells directory of the IBM WebSphere Application Server installation.

Copy the file "plugin-cfg.xml" into the "conf" directory of the IBM HTTP Server. Open the copy with an editor and modify it as follows:

a) Locate the following string (which may be customized with your installation values):

```
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/*"/>
```

Note:

dc4ASF is the context root as described in "Preparing for the application installation".

b) Insert the text string "servlet/" before the asterisk:

```
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/servlet/*"/>
```

c) Add the following lines after the line specified in b) above:

```
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/html/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/xsl/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/javascript/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/java/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/css/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/preview/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/DocASFServerConfigServlet/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/DocASFNNetworkConfigServlet/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/DocASFNNetworkConfigProcessServlet/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/DocASFFileServlet/*"/>
```

Note:

You will find these lines in the file plugin-cfg.xml.add delivered with DC4ASF in the /install directory.

d) Save the file

## **Configure the IBM HTTP Server**

To configure your IBM HTTP Server to run properly with DC4ASF, follow these steps:

- a) Open the HTTP server configuration file "httpd.conf". Usually it is located in the conf directory of the HTTP server installation.
- b) Add the following lines:

```
Alias /dc4ASF/          "/usr/fsn/v3r3m0w5/dc4ASF/www/"  
Alias /dc4ASF/transfer/ "/usr/fsn/v3r3m0w5/dc4ASF/www/transfer/"  
Alias /dc4ASF/help/     "/usr/fsn/v3r3m0w5/dc4ASF/www/help/"  
Alias /dc4ASF/helpconfig/ "/usr/fsn/v3r3m0w5/dc4ASF/www/helpconfig/"  
Alias /dc4ASF/images/   "/usr/fsn/v3r3m0w5/dc4ASF/www/images/"  
Alias /dc4ASF/custom/  "/usr/fsn/v3r3m0w5/dc4ASF/www/custom/"  
Alias /dc4ASF/samples/ "/usr/fsn/v3r3m0w5/dc4ASF/www/samples/"
```

Note:

You will find these lines in the file http.conf.add delivered with DC4ASF in the /install directory.

- c) Restart the HTTP server to activate the changes.

## 7 Configure the Connections

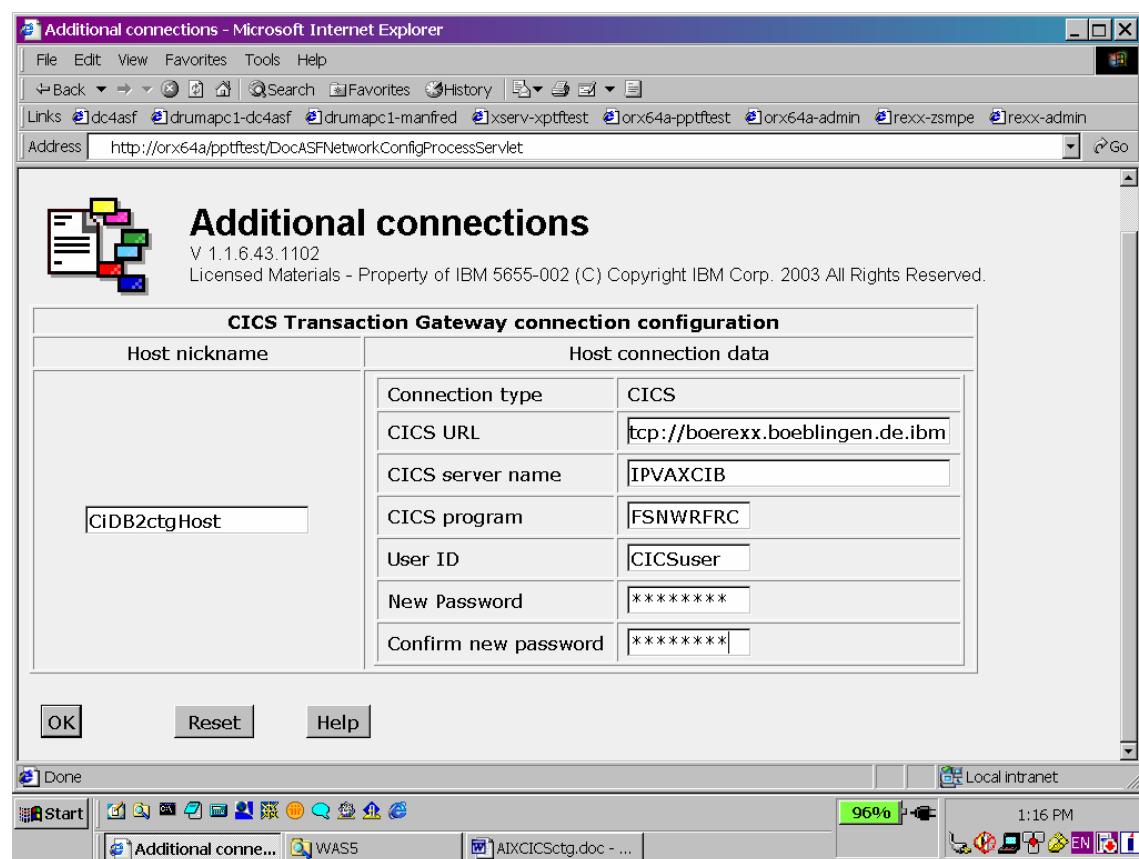

To define the server-host connections in DocNetworkConfiguration.xml invoke the servlet application "DocASFNetworkConfigServlet" in Internet Explorer.

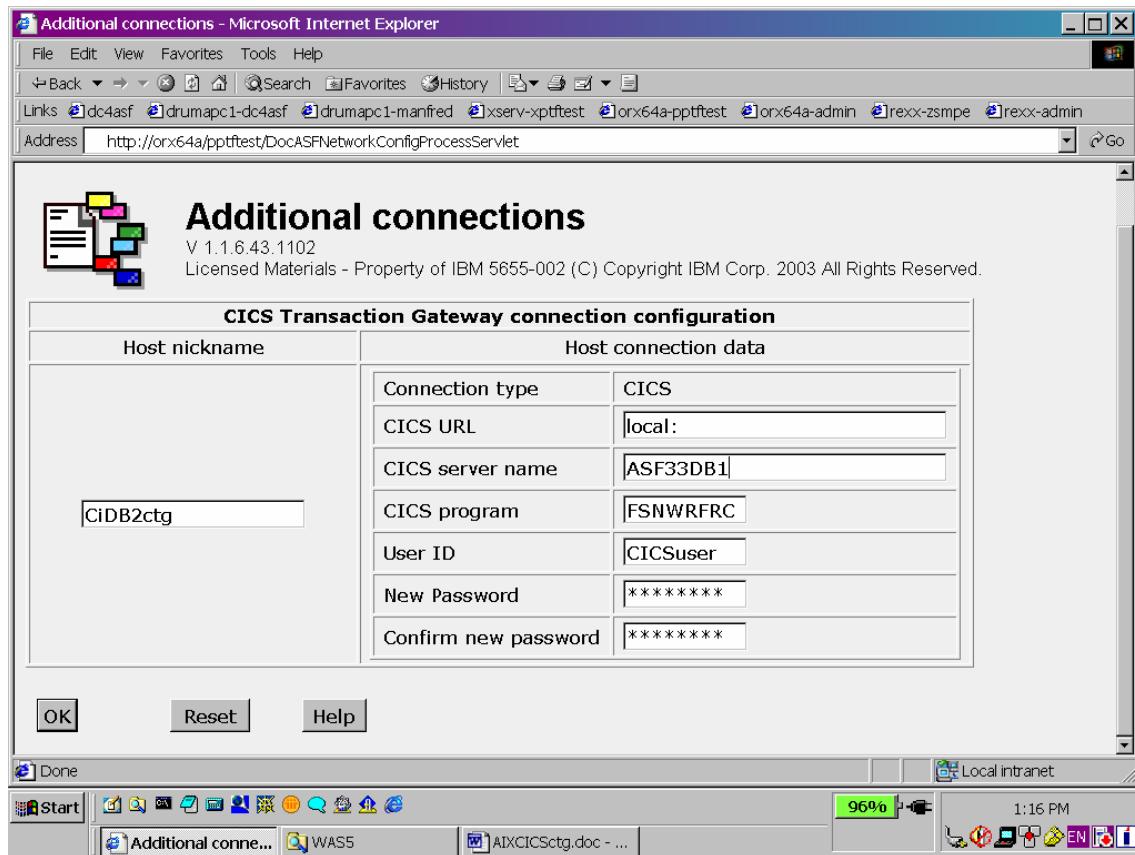

Specify the URL where the CICS Transaction Gateway resides (**local**: if it is running on AIX otherwise the TCP/IP address and the port where the CICS Transaction Gateway resides, for example **tcp://boerexx.boeblingen.de.ibm.com:2006**), the CICS server name as defined in the CICS Transaction Gateway, the CICS program name (must be FSNWRFRC), the defined User ID used for CICS logon and the corresponding password.

Press button **OK** to save your changes.

**Note:**

The password specified will be encrypted and stored in file "hnp.txt" in the /config subdirectory.

[Stop](#) and [Start](#) your application using the WebSphere Administrative Console.

## 8 Installing a second Application

The steps above describe how to install the application dc4asftest in WebSphere Application Server.

**IBM recommends to generate a second application instance of Document Connect for ASF for use by administrators, for example “dc4asftest”.**

To create a second instance, execute the script file “docinstusr.sh” available in directory  
`/usr/lpp/fsn_v3r3m0w5/IBM`

When being prompted specify an alternate installation path, for example

`dc4asftest`

After successful completion perform the following steps using the WebSphere Administrative Console:

1. Add two name space bindings as described in “Name Space Bindings” with different values, for example:

Binding Identifier	DC4ASFINSTTEST
Name in Name Space	resources/asf/dc4asfinsttest
Path	/usr/fsn/v3r3m0w5/ <a href="#">dc4asftest</a>

Binding Identifier	DC4ASFCONFTEST
Name in Name Space	resources/asf/dc4asfconftest
Path	/usr/fsn/v3r3m0w5/ <a href="#">dc4asftest</a> /config/DocConfiguration.xml

2. Perform the steps described in “Installation of the application” with the following changes:

In paragraph “Preparing for the application installation”, specify the following path for the location of the war file:

`/usr/fsn/v3r3m0w5/dc4asftest/war/dcf4ASF.war`

and specify the following path for context root:

`/dc4asftest`

In paragraph “Install new application (Step 1)”, use “[dc4asftest](#)” as the application name

In paragraph “Install new application (Step 2)”, use the following new name space bindings:

`resources/asf/dc4asfinsttest`

`resources/asf/dc4asfconftest`

Then perform the steps described in “HTTP Server Changes” using the context root [/dc4asftest](#).

The file plugin-cfg.xml will then contain the following lines:

```
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/html/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/xsl/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/javascript/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/java/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/css/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/preview/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/DocASFServerConfigServlet/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/DocASFNetworkConfigServlet/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/DocASFNetworkConfigProcessServlet/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4ASF/DocASFFileServlet/*"/>

<Uri AffinityCookie="JSESSIONID" Name="/dc4asftest/servlet/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4asftest/html/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4asftest/xsl/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4asftest/javascript/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4asftest/java/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4asftest/css/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4asftest/preview/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4asftest/DocASFServerConfigServlet/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4asftest/DocASFNetworkConfigServlet/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4asftest/DocASFNetworkConfigProcessServlet/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4asftest/DocASFFileServlet/*"/>
```

The file http.conf will then contain the following lines:

Alias /dc4ASF/	"/usr/fsn/v3r3m0w5/dc4ASF/www/"
Alias /dc4ASF/transfer/	"/usr/fsn/v3r3m0w5/dc4ASF/www/transfer/"
Alias /dc4ASF/help/	"/usr/fsn/v3r3m0w5/dc4ASF/www/help/"
Alias /dc4ASF/helpconfig/	"/usr/fsn/v3r3m0w5/dc4ASF/www/helpconfig/"
Alias /dc4ASF/images/	"/usr/fsn/v3r3m0w5/dc4ASF/www/images/"
Alias /dc4ASF/custom/	"/usr/fsn/v3r3m0w5/dc4ASF/www/custom/"
Alias /dc4ASF/samples/	"/usr/fsn/v3r3m0w5/dc4ASF/www/samples/"
Alias /dc4asftest/	"/usr/fsn/v3r3m0w5/dc4asftest/www/"
Alias /dc4asftest/transfer/	"/usr/fsn/v3r3m0w5/dc4asftest/www/transfer/"
Alias /dc4asftest/help/	"/usr/fsn/v3r3m0w5/dc4asftest/www/help/"
Alias /dc4asftest/helpconfig/	"/usr/fsn/v3r3m0w5/dc4asftest/www/helpconfig/"
Alias /dc4asftest/images/	"/usr/fsn/v3r3m0w5/dc4asftest/www/images/"
Alias /dc4asftest/custom/	"/usr/fsn/v3r3m0w5/dc4asftest/www/custom/"
Alias /dc4asftest/samples/	"/usr/fsn/v3r3m0w5/dc4asftest/www/samples/"

## 9 Applying Maintenance

Use SMIT or SMITTY to apply the PTF containing new tar file(s). SMIT/SMITTY will copy the tar file(s) into directory

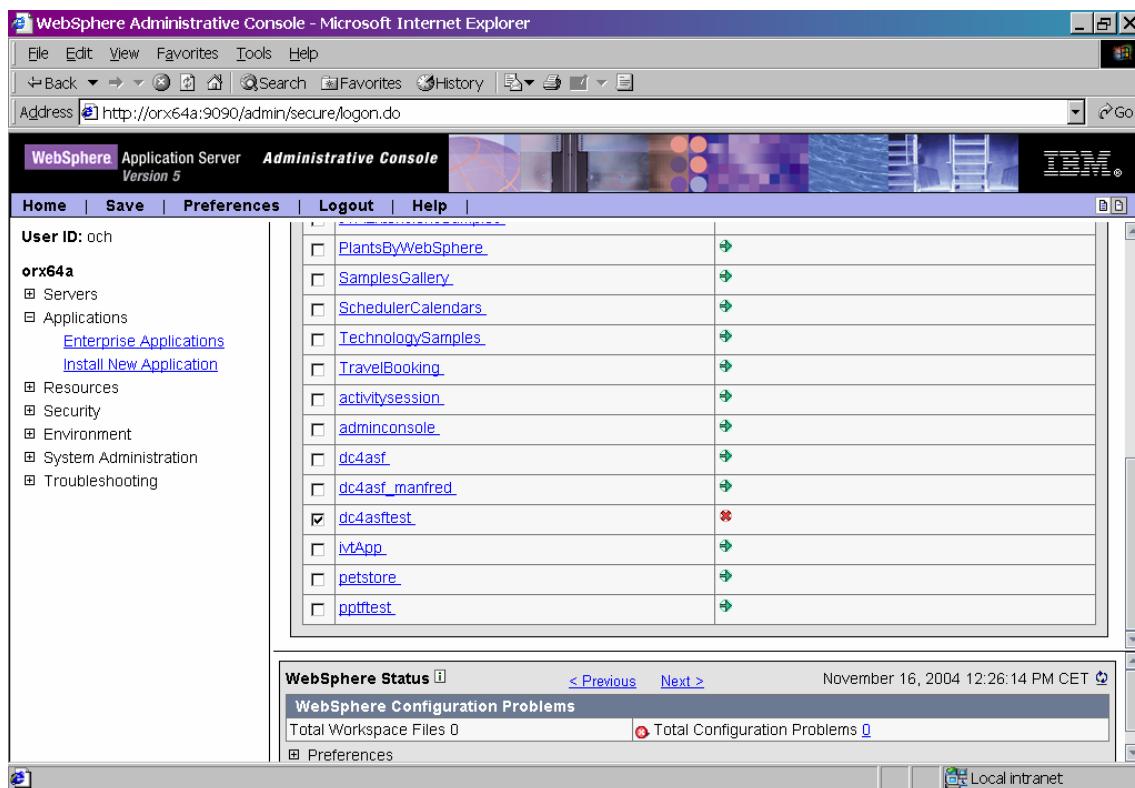

/usr/lpp/fsn\_v3r3m0w5/IBM

Use the script file “docinstusr.sh” available in directory /usr/lpp/fsn\_v3r3m0w5/IBM to apply the tar file(s) to the appropriate application, for example dc4asftest

Open the WebSphere Administrative Console:

[Open Application > Enterprise Application](#)

Select application “dc4asftest” and select [Update](#).

Enter the path (local path or server path) where the new DC4ASF war file is located:

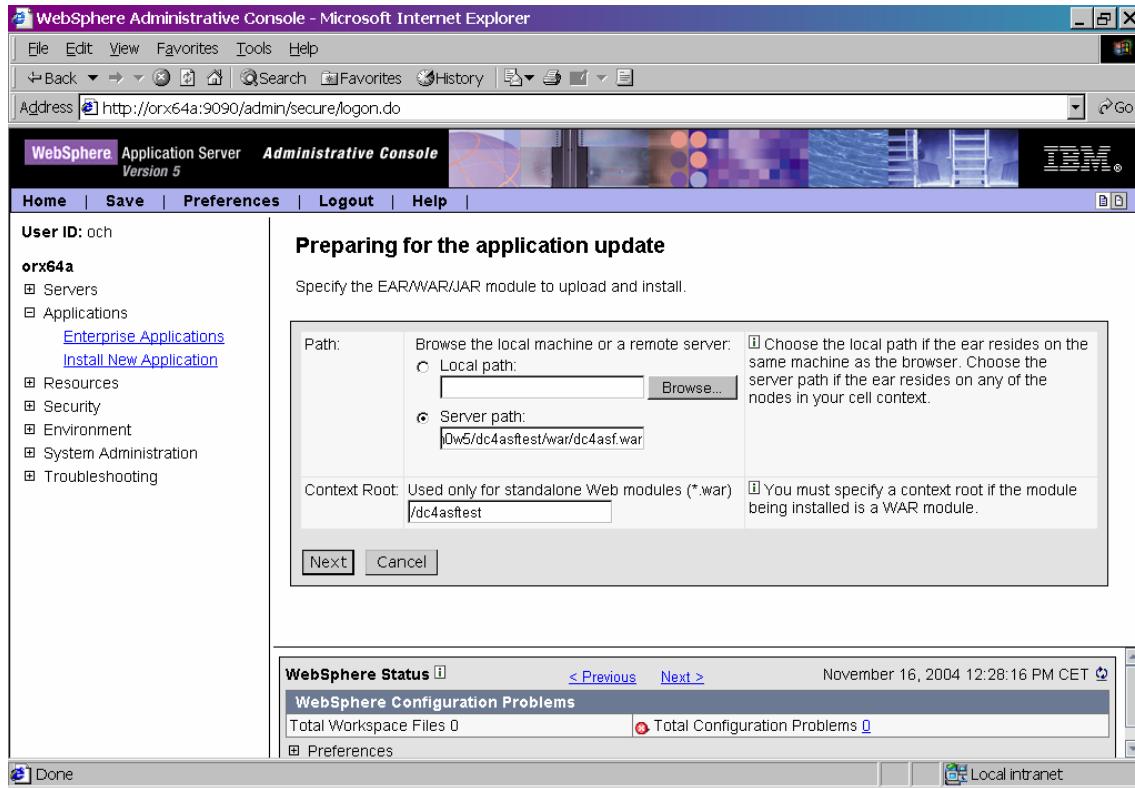

/usr/fsn/v3r3m0w5/dc4asftest/war/dc4asf.war

Enter the context root: /dc4asftest

Note:

The context root must be the same as the context root specified during installation (see “Preparing for the application installation”). If you do not remember the context root of your installation, check the file plugin-cfg.xml:

```
...
<Uri AffinityCookie="JSESSIONID" Name="/dc4asftest/servlet/*"/>
<Uri AffinityCookie="JSESSIONID" Name="/dc4asftest/html/*"/>
...
```

On each of the next panels press button [Next](#) and finally press button [Finish](#). After the update of the application has been completed save the master configuration.

Open [Applications > Enterprise Application](#) and select your application dc4asftest. Select [Stop](#) and then select [Start](#) to restart the application.
