Product Overview

IBM® WebSphere® Multichannel Bank Transformation Toolkit is a component-based toolkit for developing enterprise e-business applications. Bank Transformation Toolkit enables the development of interfaces to the services that are provided by the information system of a financial institution. The services of the information system thus become ubiquitous through all delivery channels (such as the traditional branch, call center, banking kiosk, Internet banking, and mobile access). This minimizes the need for developing new code and reduces the time required to make new financial services available to all delivery channels.
