

Creating Virtual Disks

Introduction

Another important task required to maintain the IBM TotalStorage SAN Volume Controller is to upgrade the SVC software when updates are released. The customer must download the upgrade file from the web to the system running the SVC application. IBM notifies the customer when an upgrade becomes available.

In this lab, you learn how to upgrade the SVC software to the most current release.

Instructions

To upgrade the software, begin by clicking on the **Upgrade Software** link from the Service and Maintenance submenu.

1. Click '[Upgrade Software](#)' from the Service and Maintenance submenu.

IBM will periodically post a file on IBM website with the latest SVC software release. IBM will notify the customer when an upgrade becomes available. The customer must first download the upgrade file from the web prior to upgrading the SVC software. Click Upload to browse for the downloaded SVC software upgrade file.

2. Click the '[Upload](#)' button.

Browse for the upgrade file .

3. Click the '[Browse](#)' button.

Select and Open the upgrade file.

4. Click the file name '[IBM 145_INSTALL_1.1.0.1](#)'.

5. Click the '[Open](#)' button.

Now that the upgrade file has been selected, click **Upload** to install the latest SVC software upgrade.

6. Click the '[Upload](#)' button to install the SVC software upgrade.

Congratulations! You have completed this lab.
