✓ What it is:

- **Development Tool**

- ▶ Converts DSPFs to Web UI
- ▶ Application converted at development time, not at runtime

- **Runtime Intercept**

- ▶ *PGM data fed to Web UI

✓ What is not:

- **5250 datastream converter!**

- ▶ No 5250 datastream ever created

✓ Why:

- **For BPs/ISVs to quickly convert to Web**

- ▶ No limitation to customization of output
- ▶ No runtime cost, ubiquitous tool

▶ WebFacing Settings

● Conversion

- ▶ Conversion settings, specified in the project's properties page
- ▶ WebSettings specified using CODE Designer
 - ✓ *Annotates your DDS with comments interpreted as WebSettings specs by the conversion tool*

● Runtime

- ▶ Web application settings
- ▶ iSeries host settings
 - ✓ specified in the project's properties page
- ▶ WebFacing server settings
 - ✓ specified in the WebFacing server configuration area
 - ✓ *Coming soon, PTF to OS V5R1 and V5R2*

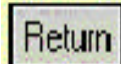

● Styles

- ▶ specified in the project's properties page

✓ Conversion

• Command key recognition patterns

- ▶ To detect and extract labels for web buttons that represent your DDS FN keys. You specify the pattern.
 - ✓ Pattern: *prefix* followed by *separator*
 - ✓ e.g. **F3 = Return** defined in your source will convert to 

• Command key button labels

- ▶ To force the display of cmd key buttons for function keys that are defined in your DDS but not shown on 5250

• MNUDDS options

- ▶ Convert menu options to Hyperlink - options number are shown as a hyperlinks
 - ✓ *Clicking on the link will submit the correct option number to the application*

✓ Runtime

● Web Application Settings

- ▶ To specify the IP address of the host where the native application runs
 - ✓ the web application communicates with the WebFacing server: you also need to specify the IP port for the WebFacing server
- ▶ To specify whether the user gets prompted for password
- ▶ Other settings: Web page height, Forced Deferred Write, Keyboard text entry mode: overwrite or insert

● Web Application Settings can be at project or link level

✓ Runtime

● Display File Mappings

- ▶ Map display file objects to the location of their generated JavaServer Pages
 - ✓ You can overwrite the defaults if you move the DSPF objects for production

● UIM Panel Mappings

- ▶ Map UIM panel objects to the location of their generated JavaServer Pages
 - ✓ You can overwrite the defaults if you move the UIM objects for production

✓ WebFacing server

● Support for multiple subsystems

- ▶ Configuration data area QQFCONFIG in QQFTEMP library
 - ✓ You specify the number of interactive subsystems dedicated to WebFacing interactive jobs
 - ✓ The WebFacing server starts QQF interactive jobs targetting the SBS
- ▶ How do I configure?
 - ✓ Create interactive SBS description - model after QINTER
 - ✓ Add WorkStation Entry ADDWSE for QQFx* jobs
 - ✓ x is zero-based, x max is F (all in hex)
 - ✓ Maximum number of SBS configured in data area is 16
 - ✓ Interactive jobs are QQF0* QQFn*

✓ Style

- **Customize DDS UI constructs for the web**
- **Cascading Style Sheets (CSS) based**
 - ▶ DDS field
 - ✓ color
 - ✓ display attributes
 - ▶ Window
 - ▶ Subfile
 - ▶ Command keys
 - ✓ roll-over and button-down effects
- **CSS classes**

The screenshot shows the IBM Code Designer WebSettings interface. The main editor area displays a screen layout for 'Parts Order Entry' with the following content:

```

1
2
3 Type choices, press Enter.
4 2=Change
5
6 Customer number ..... 8888 Order number ..... : 66666
7
8
9
10

```

The 'Web Settings' panel at the bottom right is active, showing the 'Selected DDS' list with 'CID' selected. The 'Web Settings' tab is selected, and the 'Specify HTML' checkbox is checked. The 'Insert field value' button is visible, and the field value is set to '&FieldValue'.

A yellow callout bubble contains the following text:

1. Select field
2. Set Web Settings

Show / Hide Field on Web

iSeries AD, IBM Toronto

Selected DDS | Web Settings | Comments | Error list

[-] A 'Custom... ..'

- Visibility
- Location
- Program defined HTML
- User defined HTML
- Appearance and Text
- Insert HTML
- Create graphic
- Create hyperlink

Hide field Show field

Change Field pos and size

iSeries AD, IBM Toronto

- ▶ Change span: to indicate the number of rows and columns that will be given to your field.
 - ✓ Use: using a graphic in place of the text values that the program originally used to populate the field.
- ▶ Change position: to indicate the row and column that will be the starting position for your field.

The screenshot shows a dialog box with the following structure:

- Tabbed interface: Selected DDS | Web Settings | Comments | Error list
- Left pane: Tree view under 'A' 'Custom...'. Items include: Visibility, Location (selected), Program defined HTML, User defined HTML, Appearance and Text, Insert HTML, Create graphic, and Create hyperlink.
- Right pane: Two sections, each with a checkbox and input fields:
 - Change span: Rows [input], Columns [input]
 - Change position: Row [input], Column [input]

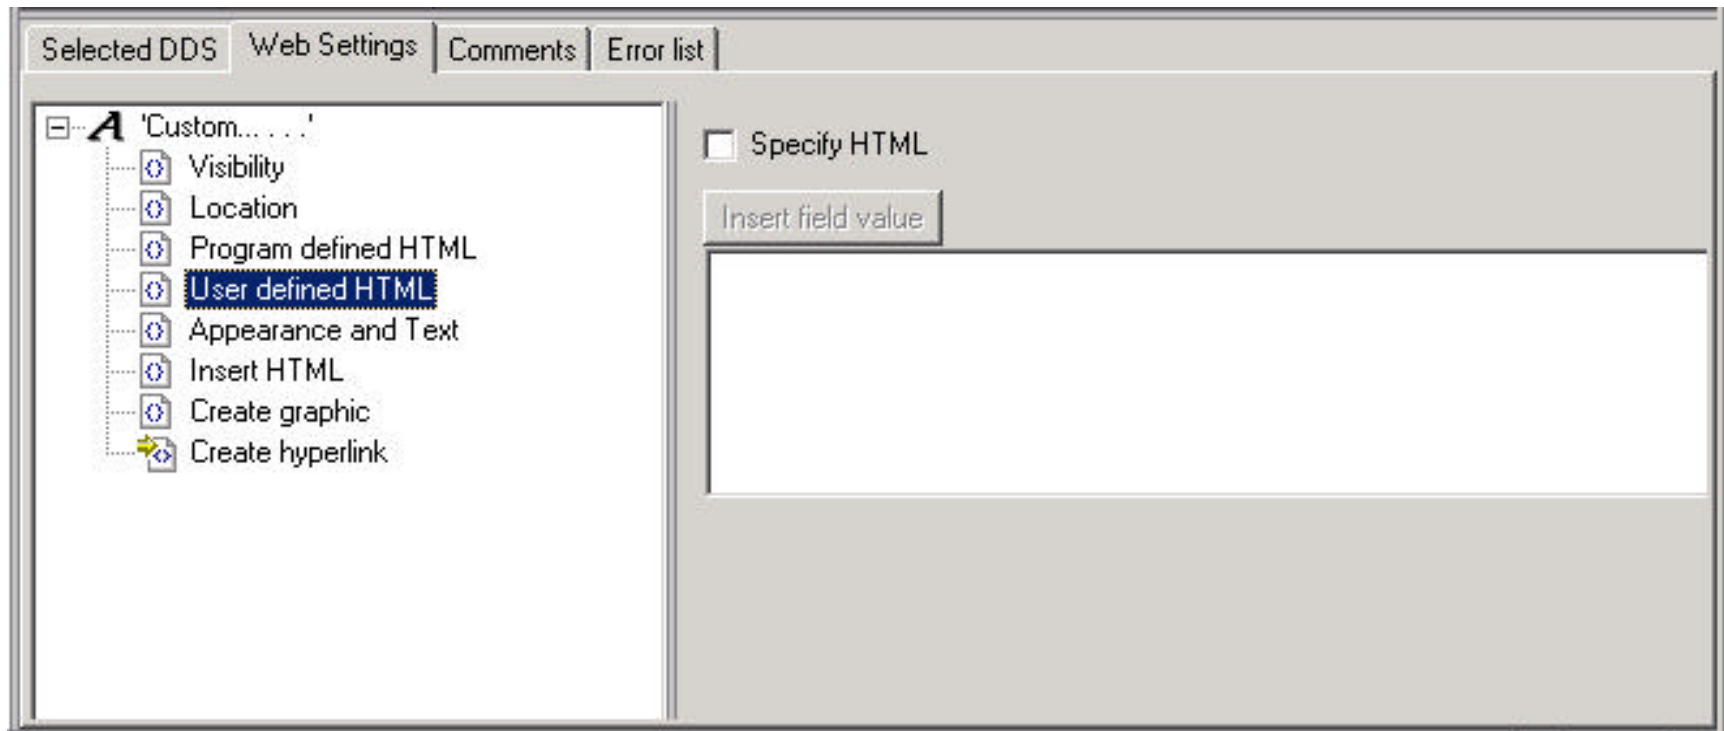

- ▶ Use field value returned by the field as HTML markup that you would like to use in your page

Replace field with HTML

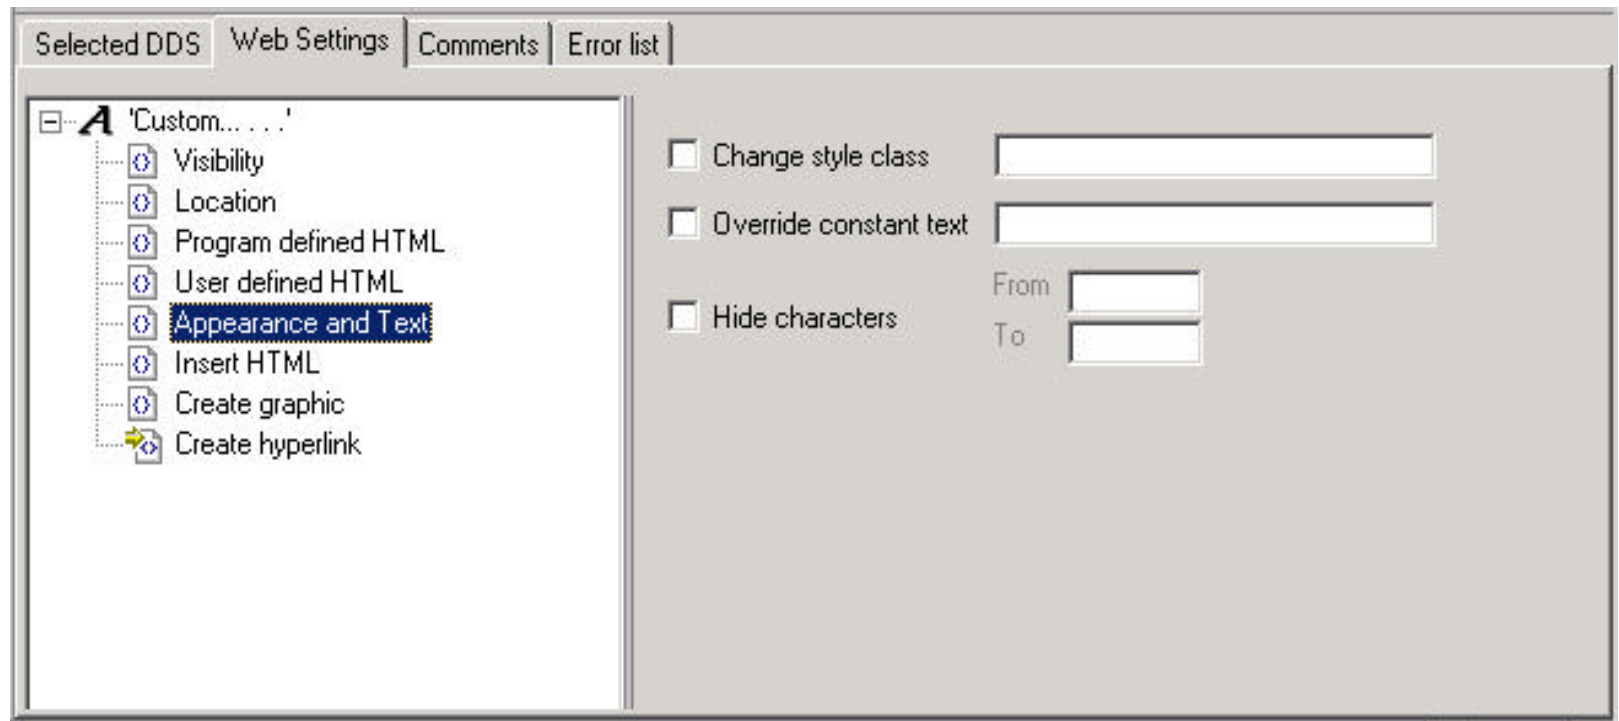

- ▶ Specify HTML text or tags that can be displayed with or in place of the value for your field.

Override Field on Web

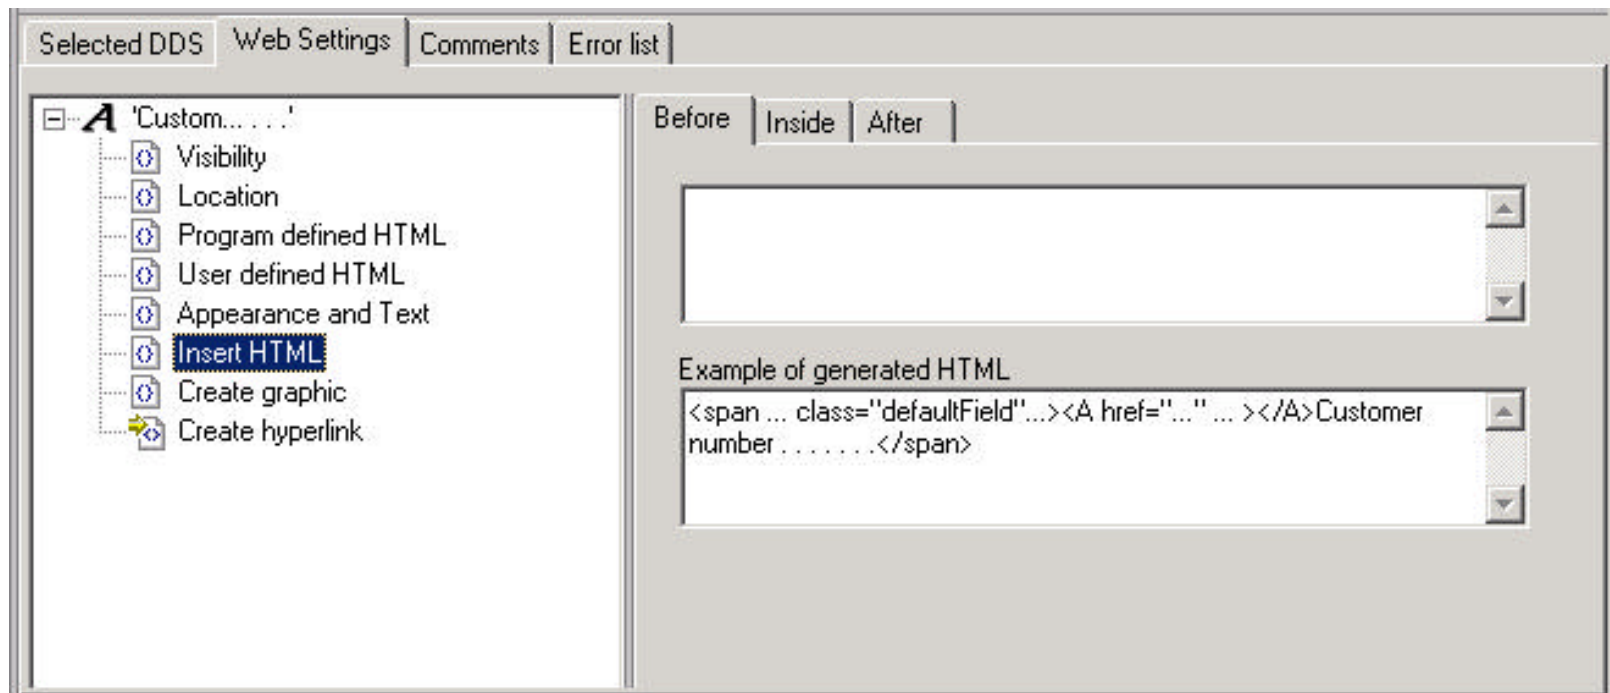

- ▶ Overrides constant text (e.g field description)
- ▶ Overrides field value
- ▶ Hides specified characters

- ▶ To customize your fields by adding additional HTML Before, Inside, and After the HTML tag that is automatically generated for the field.

Replace field with image

iSeries AD, IBM Toronto

- ▶ Populate the File name field with the complete URL to an image file (e.g. <http://www.ibm.com/image.gif>), or with a field value

Selected DDS | Web Settings | Comments | Error list

[-] A 'Custom... ..'

- [-] Visibility
- [-] Location
- [-] Program defined HTML
- [-] User defined HTML
- [-] Appearance and Text
- [-] Insert HTML
- [-] **Create graphic**
- [-] Create hyperlink

Create graphic

File name

Width in pixels

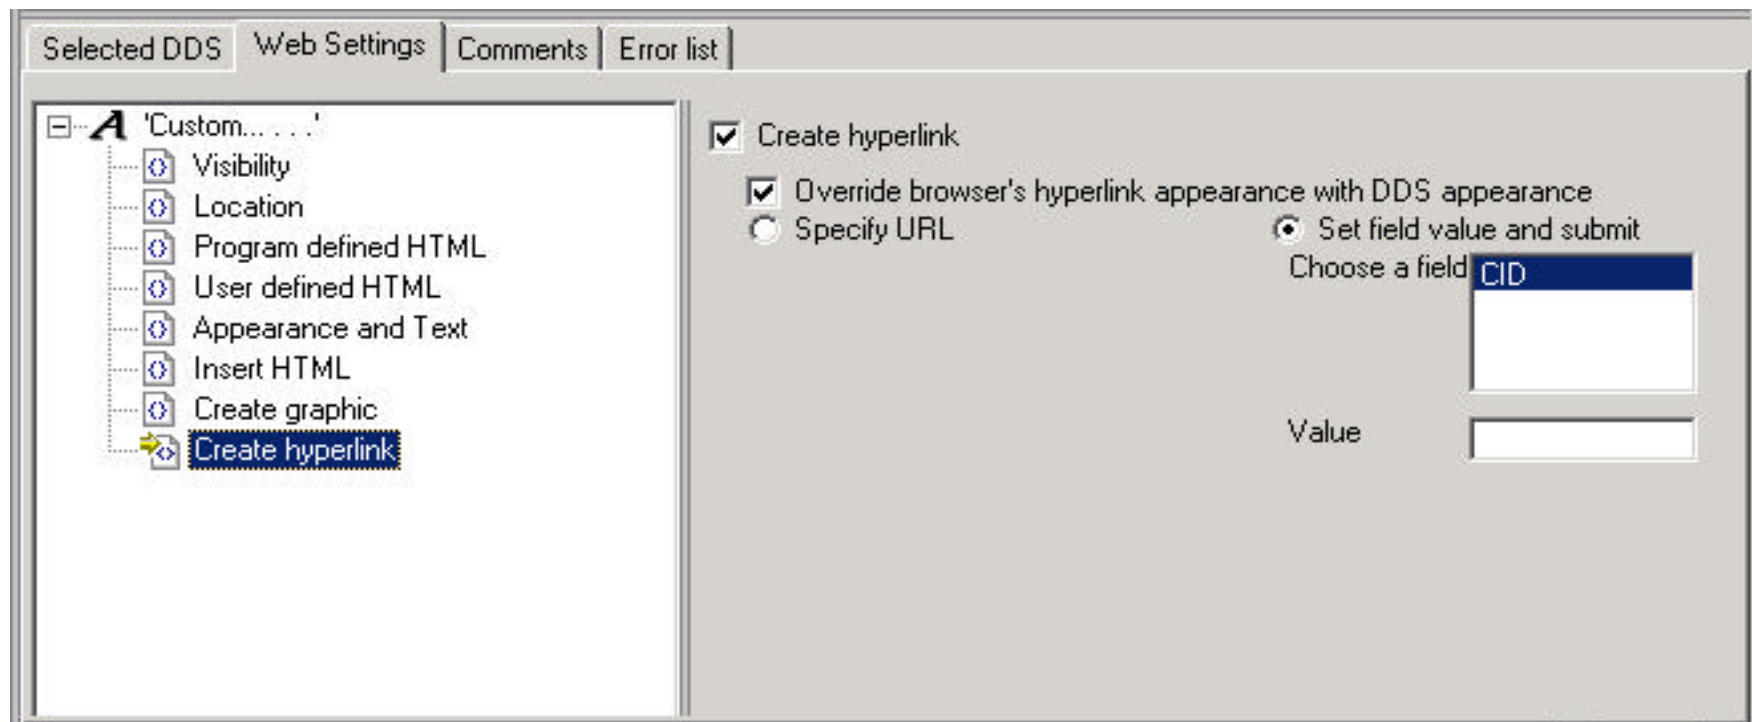

Height in pixels

Choose a field

- &{CID}
- &{ORDNBR}

- ▶ Applies to output fields only
- ▶ Maps link to a field
- ▶ On click, submits specified value

Information is provided "AS IS" without warranty of any kind.

All customer examples described are presented as illustrations of how those customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics may vary by customer.

Information in this presentation concerning non-IBM products was obtained from a supplier of these products, published announcement material, or other publicly available sources and does not constitute an endorsement of such products by IBM. Sources for non-IBM list prices and performance numbers are taken from publicly available information, including vendor announcements and vendor worldwide homepages. IBM has not tested these products and cannot confirm the accuracy of performance, capability, or any other claims related to non-IBM products. Questions on the capability of non-IBM products should be addressed to the supplier of those products.

All statements regarding IBM future direction and intent are subject to change or withdrawal without notice, and represent goals and objectives only. Contact your local IBM office or IBM authorized reseller for the full text of the specific Statement of Direction.

Some information in this presentation addresses anticipated future capabilities. Such information is not intended as a definitive statement of a commitment to specific levels of performance, function or delivery schedules with respect to any future products. Such commitments are only made in IBM product announcements. The information is presented here to communicate IBM's current investment and development activities as a good faith effort to help with our customers' future planning.

Performance is based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput or performance that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput or performance improvements equivalent to the ratios stated here.

Photographs shown are of engineering prototypes. Changes may be incorporated in production models.
