STERLING COMMERCE SOFTWARE

TRADE SECRET NOTICE

THE STERLING COMMERCE SOFTWARE DESCRIBED BY THIS DOCUMENTATION ("STERLING COMMERCE SOFTWARE") IS THE CONFIDENTIAL AND TRADE SECRET PROPERTY OF STERLING COMMERCE, INC., ITS AFFILIATED COMPANIES OR ITS OR THEIR LICENSORS, AND IS PROVIDED UNDER THE TERMS OF A LICENSE AGREEMENT. NO DUPLICATION OR DISCLOSURE WITHOUT PRIOR WRITTEN PERMISSION. RESTRICTED RIGHTS.

This documentation, the Sterling Commerce Software it describes, and the information and know-how they contain constitute the proprietary, confidential and valuable trade secret information of Sterling Commerce, Inc., its affiliated companies or its or their licensors, and may not be used for any unauthorized purpose, or disclosed to others without the prior written permission of the applicable Sterling Commerce entity. This documentation and the Sterling Commerce Software that it describes have been provided pursuant to a license agreement that contains prohibitions against and/or restrictions on their copying, modification and use. Duplication, in whole or in part, if and when permitted, shall bear this notice and the Sterling Commerce, Inc. copyright notice.

U.S. GOVERNMENT RESTRICTED RIGHTS. This documentation and the Sterling Commerce Software it describes are "commercial items" as defined in 48 C.F.R. 2.101. As and when provided to any agency or instrumentality of the U.S. Government or to a U.S. Government prime contractor or a subcontractor at any tier ("Government Licensee"), the terms and conditions of the customary Sterling Commerce commercial license agreement are imposed on Government Licensees per 48 C.F.R. 12.212 or 227.7202 through 227.7202-4, as applicable, or through 48 C.F.R. 52.244-6.

These terms of use shall be governed by the laws of the State of Ohio, USA, without regard to its conflict of laws provisions. If you are accessing the Sterling Commerce Software under an executed agreement, then nothing in these terms and conditions supersedes or modifies the executed agreement

Sterling Commerce, Inc.
4600 Lakehurst Court
Dublin, Ohio 43016-2000

THIRD PARTY SOFTWARE AND OTHER MATERIAL

Portions of the Sterling Commerce Software may include products, or may be distributed on the same storage media with products, ("Third Party Software") offered by third parties ("Third Party Licensors"). Sterling Commerce Software may include Third Party Software covered by the following copyrights: Copyright © 1999-2005 The Apache Software Foundation. Copyright 1999-2007 Erik Arvidson and Emil A. Eklund. Copyright (C) 2000-2004 Jason Hunter & Brett McLaughlin. Copyright © 2003 Infragistics, Inc. Copyright © 2001 LOOX Software, Inc. Copyright 2002-2004 © MetaStuff, Ltd. Copyright (C) Microsoft Corp. 1981-1998. Copyright © 1999-2005 Northwoods Software Corporation. Copyright © 2001 Peter Belesis. Copyright © 1995 - 1998 Purple Technology, Inc. Copyright © 2005 Sabre Airline Solutions. Copyright (c) 2006-2007 Sam Stephenson. Copyright © 2004 SoftComplex, Inc. Copyright © 2000-2004 Sun Microsystems, Inc. Copyright © 2001 VisualSoft Technologies Limited. Copyright © 1994 - 2007 World Wide Web Consortium (Massachusetts Institute of Technology, European Research Consortium for Informatics and Mathematics, Keio University). Copyright © 1998-2000 World Wide Web Consortium (Massachusetts Institute of Technology, Institut National de Recherche en Informatique et en Automatique, Keio University). Copyright © 2001 Zero G Software, Inc. All rights reserved by all listed parties.

The Sterling Commerce Software is distributed on the same storage media as certain Third Party Software covered by the following copyrights: Copyright © 1999-2006 The Apache Software Foundation. Copyright (c) 2001-2003 Ant-Contrib project. Copyright © 1998-2007 Bela Ban. Copyright © 2005 Eclipse Foundation. Copyright © 2002-2006 Julian Hyde and others. Copyright © 1997 ICE Engineering, Inc./Timothy Gerard Endres. Copyright © 1987-2006 ILOG, Inc. Copyright © 2000-2006 Infragistics. Copyright © 2002-2005 JBoss, Inc. Copyright LuMriX.net GmbH, Switzerland. Copyright © 1995-2002 MySQL AB. Copyright © 1999-2002 JBoss.org. Copyright Raghu K, 2003. Copyright © 2004 David Schweinsberg. Copyright © 2005-2006 Darren L. Spurgeon. Copyright © S.E. Morris (FISH) 2003-04. Copyright © 2006 VisualSoft Technologies. All rights reserved by all listed parties.

The Sterling Commerce Software is designed to be compatible with or implement a variety of standards issued by Third Party Licensors. The Sterling Commerce Software and related documentation may include copyrightable material of such Third Party Licensors, such as: Copyright © 2006 APCA [Australian Payments Clearing Association Limited]. Copyright © European Central Bank, Frankfurt am Main, Germany. Copyright © 2006 Fix Protocol Limited. Copyright Year 2002-2006 IFX Forum, Inc. The Licensor of the FpML Specifications is the International Swaps and Derivatives Association. Copyright © 2006 National Automated Clearinghouse Association. Open Financial Exchange Specification © 2006 by its publishers: CheckFree Corp., Intuit Inc., and Microsoft Corporation. Copyright © SAP AG 2006, Copyright © S.W.I.F.T. SCRL, Avenue Adele, 1, B-1310 La Hulpe, Belgium 2005. The Licensor of the TWIST Standards Specifications is the to be formed TWIST Standards Foundation. All rights reserved by all listed parties.

The FpML Specifications Version 2.0 referenced in the Sterling Commerce Software or related documentation are subject to the FpML Public License; you may not use the FpML Specifications except in compliance with the FpML Public License. You may obtain a copy of the FpML Public License at <http://www.FpML.org>. The FpML Specifications distributed under the FpML Public License are distributed on an "AS IS" basis, WITHOUT WARRANTY OF ANY KIND, either express or implied. See the FpML Public License for the specific language governing rights and limitations under the FpML Public License. The Licensor of the FpML Specifications is the International Swaps and Derivatives Association, Inc. All rights reserved.

The Target2 Standards are available from the European Central Bank through its website, <http://www.ecb.int/paym/target/target2/html/index.en.html>. Additionally, the Target2 Standards may be obtained online at <http://www.dnb.nl/dnb/pagina.jsp?pid=tcm:13-46726-64>.

The TWIST Standards Specifications referenced in the Sterling Commerce Software or related documentation are subject to the TWIST Standards Public License; you may not use the TWIST Standards Specifications except in compliance with the TWIST Standards Public License. The TWIST Specifications distributed under the TWIST Public License are distributed on an "AS IS" basis, WITHOUT WARRANTY OF ANY KIND, either express or implied. See the TWIST Standards Public License for the specific language governing rights and limitations under the TWIST Standards Public License. The Licensor of the TWIST Standards Specifications is the, to be formed, TWIST Standards Foundation, all rights reserved.

Third Party Software which is included, or are distributed on the same storage media with, the Sterling Commerce Software where use, duplication, or disclosure by the United States government or a government contractor or subcontractor, are provided with RESTRICTED RIGHTS under Title 48 CFR 2.101, 12.212, 52.227-19, 227.7201 through 227.7202-4, DFAR 252.227-7013(c) (1) (ii) and (2), DFAR 252.227-7015(b)(6/95), DFAR 227.7202-3(a), FAR 52.227-14(g)(2)(6/87), and FAR 52.227-19(c)(2) and (6/87) as applicable.

Additional information regarding certain Third Party Software is located at <install_dir>/Readme.html.

Some Third Party Licensors also provide license information and/or source code for their software via their respective links set forth below.

<http://www.sun.com/software/xml/developers/xsdlb2>

<http://java.sun.com/products/jsse/index-103.html>

<http://danadler.com/jacob/>

<http://www.dom4j.org>

This product includes software developed by the Apache Software Foundation (<http://www.apache.org>). This product includes software developed by the Ant-Contrib project (<http://sourceforge.net/projects/ant-contrib>). This product includes software developed by the JDOM Project (<http://www.jdom.org/>). This product includes code licensed from RSA Data Security (via Sun Microsystems, Inc.). Sun, Sun Microsystems, the Sun Logo, Java, JDK, the Java Coffee Cup logo, JavaBeans, JDBC, JMX and all JMX based trademarks and logos are trademarks or registered trademarks of Sun Microsystems, Inc. All other trademarks and logos are trademarks of their respective owners.

JBoss Software

The Sterling Commerce Software is distributed on the same storage media as the JBoss Software (Copyright © 1999-2002 JBoss.org) ("JBoss Software"). The JBoss Software is independent from and not linked or compiled with the Sterling Commerce Software. The JBoss Software is a free software product which can be distributed and/or modified under the terms of the GNU Lesser General Public License as published by the Free Software Foundation; either version 2.1 of the License or any later version.

A copy of the GNU Lesser General Public License is provided at:
<install_dir>\jar\jboss\4_2_0\LICENSE.html

This license only applies to the JBoss Software and does not apply to the Sterling Commerce Software, or any other Third Party Software.

The JBoss Software was modified slightly in order to allow the ClientSocketFactory to return a socket connected to a particular host in order to control the host interfaces, regardless of whether the ClientSocket Factory specified was custom or note. Changes were made to org.jnp.server.Main. Details concerning this change can be found at
http://sourceforge.net/tracker/?func=detail&aid=1008902&group_id=22866&atid=376687.

Source code for the modifications completed by Sterling Commerce on August 13, 2004 is located at: http://sourceforge.net/tracker/?func=detail&aid=1008902&group_id=22866&atid=376687. Source code for all other components of the JBoss Software is located at <http://www.jboss.org>.

The Eclipse Software Foundation

The Sterling Commerce Software is also distributed with or on the same storage media as the following software:

com.ibm.icu.nl1_3.4.4.v200606220026.jar, org.eclipse.ant.core.nl1_3.1.100.v200606220026.jar,

runtime_registry_compatibility.jar, eclipse.exe, eclipse.ini, and startup.jar
(collectively, "Eclipse Software").

All Eclipse Software is distributed under the terms and conditions of the Eclipse Foundation Software User Agreement (EFSUA) and/or terms and conditions of the Eclipse Public License Version 1.0 (EPL) or other license agreements, notices or terms and conditions referenced for the individual pieces of the Eclipse Software, including without limitation "Abouts", "Feature Licenses", and "Feature Update Licenses" as defined in the EFSUA .

A copy of the Eclipse Foundation Software User Agreement is found at
<install_dir>/rcpdependencies/windows/eclipse/notice.html,
<install_dir>/rcpdependencies/windows/eclipse/plugins/notice.html,
<install_dir>/rcpdependencies/gtk.linux.x86/eclipse/notice.html, and
<install_dir>/rcpdependencies/gtk.linux.x86/eclipse/plugins/notice.html.

A copy of the EPL is found at
<install_dir>/rcpdependencies/windows/eclipse/plugins/epl-v10.htm,
<install_dir>/rcpdependencies/windows/eclipse/epl-v10.htm,
<install_dir>/rcpdependencies/gtk.linux.x86/eclipse/plugins/epl-v10.html, and
<install_dir>/rcpdependencies/gtk.linux.x86/eclipse/epl-v10.html.

The reference to the license agreements, notices or terms and conditions governing each individual piece of the Eclipse Software is found in the directory files for the individual pieces of the Eclipse Software as described in the file identified as installdir/SCI_License.txt.

These licenses only apply to the Eclipse Software and do not apply to the Sterling Commerce Software, or any other Third Party Software.

The Language Pack (NL Pack) piece of the Eclipse Software, is distributed in object code form. Source code is available at
http://download.eclipse.org/eclipse/downloads/drops/L-3.2_Language_Packs-200607121700/index.php.
In the event the source code is no longer available from the website referenced above, contact Sterling Commerce at 978-513-6000 and ask for the Release Manager. A copy of this license is located at
<install_dir>/rcpdependencies/windows/eclipse/plugins/epl-v10.htm and
<install_dir>/rcpdependencies/gtk.linux.x86/eclipse/plugins/epl-v10.html.

The org.eclipse.core.runtime_3.2.0.v20060603.jar piece of the Eclipse Software was modified slightly in order to remove classes containing encryption items. The org.eclipse.core.runtime_3.2.0.v20060603.jar was modified to remove the Cipher, CipherInputStream and CipherOutputStream classes and rebuild the org.eclipse.core.runtime_3.2.0.v20060603.jar.

ICE SOFTWARE and TEE UTILITY SOFTWARE

The Sterling Commerce Software is distributed on the same storage media as the ICE Software (Copyright © 1997 ICE Engineering, Inc./Timothy Gerard Endres.) ("ICE Software") and the Tee Utility Software (Copyright © 2002 Karl M. Syring) ("Tee Utility Software"). The ICE Software and the Tee Utility Software are independent from and not linked or compiled with the Sterling Commerce Software.

The ICE Software and Tee Utility Software are free software products which can be distributed and/or modified under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License or any later version.

A copy of the GNU General Public License is provided at <install_dir>/jar/jniregistry/1_2/ICE_License.txt and at <install_dir>/Tee_Utility.txt. This license only applies to the ICE Software and the Tee Utility Software and does not apply to the Sterling Commerce Software, or any other Third Party Software.

The ICE Software was modified slightly in order to fix a problem discovered by Sterling Commerce involving the RegistryKey class in the RegistryKey.java in the JNIRegistry.jar. The class was modified to comment out the finalize () method and rebuild of the JNIRegistry.jar file.

Source code for the bug fix completed by Sterling Commerce on January 8, 2003 is located at: install_dir/jar/jniregistry/1_2/RegistryKey.java. Source code for all other components of the ICE Software is located at <http://www.trustice.com/java/jnireg/index.shtml>.

The ICE Software and Tee Utility Software are distributed WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE.

IEEMU.JS

The Sterling Commerce Software is distributed with or on the same storage media as the IEEMU.js (Copyright (c) 1999-2007 Erik Arvidsson and Emil A. Eklund.) ("IEEMU Software"). Created by Erik Arvidsson and Emil A. Eklund <http://webfx.eae.net/contact.html#erik> for WebFX (<http://webfx.eae.net/>). The IEEMU Software is distributed under the terms of the MOZILLA PUBLIC LICENSE Version 1.1. A copy of this license is located at <install_dir>/3rdParty/ieemu license.doc. The IEEMU.js code is distributed in source form and is located at <install_dir>/repository/eardata/platform/war/yfcscripsts/ieemu.js. Neither the Sterling Commerce Software nor any other Third Party Code is a Modification or Contribution subject to the Mozilla Public License. Pursuant to the terms of the Mozilla Public License, the following notice applies only to the IEEMU.js code (and not to the Sterling Commerce Software or any other Third Party Software):

"The contents of the file located at <install_dir>/3rdParty/ieemu license.doc are subject to the Mozilla Public License Version 1.1 (the "License"); you may not use this file except in compliance with the License. You may obtain a copy of the License at <http://www.mozilla.org/MPL/>

Software distributed under the License is distributed on an "AS IS" basis, WITHOUT WARRANTY OF ANY KIND, either express or implied. See the License for the specific language governing rights and limitations under the License.

The Original Code is ieemu.js. The Initial Developer is Erik Arvidsson and Emil A. Eklund. Portions created by _____None Listed_____ and the Initial Developer are Copyright © 1999-2007. All Rights Reserved. Contributor(s): _____none listed_____.

Alternatively, the contents of this file may be used under the terms of the _____ license (the "[_____] License"), in which case the provisions of [_____] License are applicable instead of those above. If you wish to allow use of your version of this file only under the terms of the [_____] License and not allow others to use your version of this file under the MPL, indicate your decision by deleting the provisions above and replace them with the notice and other provisions required by the [_____] License. If you do not delete the provisions above, a recipient may use your version of this file under either the MPL or the [_____] License."

The preceding license only applies to the IEEMU Software and does not apply to the Sterling Commerce Software, or any other Third Party Software.

JGO SOFTWARE

The Sterling Commerce Software is distributed with, or on the same storage media, as certain redistributable portions of the JGo Software provided by Northwoods Software Corporation under a commercial license agreement (the "JGo Software"). The JGo Software is provided subject to the disclaimers set forth above and the following notice:

U.S. Government Restricted Rights

The JGo Software and documentation are provided with RESTRICTED RIGHTS. Use, duplication, or disclosure by the Government is subject to restrictions as set forth in subparagraph (C)(1)(ii) of the

Rights in Technical Data and Computer Software clause at DFARS 252.227-7013 or subparagraphs (C)(1) and (2) of the Commercial Computer Software - Restricted Rights at 48 CFR 52.227-19, as applicable. Contractor / manufacturer of the JGo Software is Northwoods Software Corporation, 142 Main St., Nashua, NH 03060.

MYSQL SOFTWARE

The Sterling Commerce Software is distributed on the same storage media as the MySQL Software (Copyright © 1995-2002 MySQL AB) ("MySQL Software"). Before installing the MySQL Software, the terms and conditions of the MySQL license must be accepted.

A copy of the MySQL license is provided at <install_dir>/mysql/MySQL_License.txt. This license only applies to the MySQL Software and does not apply to the Sterling Commerce Software, or any other Third Party Licensor Software.

THE APACHE SOFTWARE FOUNDATION SOFTWARE

The Sterling Commerce Software is also distributed with or on the same storage media

as the following software products (or components thereof): Ant, Antinstaller, Axis, Apache Commons Lang, Apache Jakarta Commons Collections, Apache Jakarta Commons Pool, Apache Jakarta ORO, Xerces version 2.7, Apache Log4J, Apache SOAP, and Apache Xalan 2.7.0 (collectively, "Apache 2.0 Software"). Apache 2.0 Software is free software which is distributed under the terms of the Apache License Version 2.0. A copy of License Version 2.0 is found in the following directory files for the individual pieces of the Apache 2.0 Software:

```
<install_dir>/ant/Ant_License.txt,  
<install_dir>/jar/antInstaller/0_8/antinstaller_License.txt  
<install_dir>/jar/commons_pool/1_2/Commons_License.txt  
<install_dir>/jar/jakarta_oro/2_0_8/JakartaOro_License.txt  
<install_dir>/jar/log4j/1_2_11/LOG4J_License.txt  
<install_dir>/Xalan_License.txt  
<install_dir>/jar/soap/2_3_1/Apache_SOAP_License.txt  
<install_dir>/jar/commons_collections/2_1/Commons_License.txt  
<install_dir>/jar/commons_lang/2_1/Commons_Lang_License.txt
```

Unless otherwise stated in a specific directory, the Apache 2.0 Software was not modified. Neither the Sterling Commerce Software, modifications, if any, to Apache 2.0 Software, nor other Third Party Code is a Derivative Work or a Contribution as defined in License Version 2.0. License Version 2.0 applies only to the Apache 2.0 Software which is the subject of the specific directory file and does not apply to the Sterling Commerce Software or to any other Third Party Software.

Rico Software

The Sterling Commerce Software is also distributed with or on the same storage media as the Rico.js software (Copyright © 2005 Sabre Airline Solutions) ("Rico Software"). Rico Software is free software which is distributed under the terms of the Apache License Version 2.0. A copy of License Version 2.0 is found <install_dir>/3rdParty/rico license.doc.

The Rico Software was not modified. Neither the Sterling Commerce Software, modifications, if any, to the Rico Software, nor other Third Party Code is a Derivative Work or a Contribution as defined in License Version 2.0. License Version 2.0 applies only to the Rico Software which is the subject of the specific directory file and does not apply to the Sterling Commerce Software or to any other Third Party Software. License Version 2.0 includes the following provision:

"Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License."

SUN MICROSYSTEMS

The Sterling Commerce Software is distributed with or on the same storage media as the following software products (or components thereof): Sun Activation Framework, Sun JSSE, Sun JNet, and Sun JavaMail (collectively, "Sun Software"). Sun Software is free software which is distributed under the terms of the Sun Microsystems, Inc. Binary Code License Agreement ("BCLA"). A copy of the specific BCLA is found in the following directory files for the individual pieces of the Sun Software:

SUN JSSE and JNET JARS - <install_dir>/noapp/lib
SUN JavaMail - <install_dir>/jar/javamail/1_3_2

The licenses relating to the following Sun products are included in the directory files located at:

SUN COMM JAR - <install_dir>/repository/eardata/platform/war/yfscommon
SUN ACTIVATION JAR - <install_dir>/jar/jaf/1_0_2

The Sterling Commerce Software is also distributed with or on the same storage media as the Web-app_2_3.dtd software (Copyright © 2007 Sun Microsystems, Inc.) ("Web-App Software"). Web-App Software is free software which is distributed under the terms of the Common Development and Distribution License ("CDDL"). A copy of the CDDL is found in
<install_dir>/repository/eardata/platform/war/WEB-INF/web_app_licence.txt

The source code for the Web-App Software may be found at:
<install_dir>/repository/eardata/platform/war/WEB-INF/web-app+2_3.dtd.

Such licenses only apply to the Sun product which is the subject of such directory and does not apply to the Sterling Commerce Software or to any other Third Party Software.

W3C Software

The Sterling Commerce Software is distributed on the same storage media as the W3C Software to which the following notice applies:

W3C XML Schema

The Third Party Software is provided "AS IS" WITHOUT ANY WARRANTY AND ANY EXPRESSED OR IMPLIED WARRANTIES, INCLUDING BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY, AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. FURTHER, IF YOU ARE LOCATED OR ACCESSING THIS SOFTWARE IN THE UNITED STATES, ANY EXPRESS OR IMPLIED WARRANTY REGARDING TITLE OR NON-INFRINGEMENT ARE DISCLAIMED.

Without limiting the foregoing, the ICE Software, IEEMU Software, and JBoss Software, are all distributed WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE.

Contents

Preface

Intended Audience	xxix
Structure	xxix
Sterling Multi-Channel Fulfillment Solution Documentation	xxxii
Conventions	xxxiv

1 Introduction

1.1 Business Models	2
1.1.1 Multi-Divisional Corporation	2
1.1.2 Third-Party Logistics	2
1.1.3 Marketplace	3
1.2 Sterling Distributed Order Management Configuration	3
1.2.1 Sourcing Setup	4
1.2.2 Logistics	5
1.2.3 Financials	5
1.2.4 Customer	5
1.2.5 Order Attributes	5
1.2.6 Order Validation	6
1.2.7 Instruction Types	6
1.2.8 Modification Reasons	6
1.2.9 Backorder Reasons	6
1.2.10 Process Type Configuration	6
1.2.11 Purge Criteria	7

2 Navigating in the Configurator

2.1	Starting the Sterling Multi-Channel Fulfillment Solution Configurator	9
2.2	The Sterling Multi-Channel Fulfillment Solution Configurator Layout	10
2.2.1	Application Rules Side Panel	12
2.2.1.1	Accessing Configuration Screens.....	13
2.2.1.2	Determining Inheritance.....	14
2.2.1.3	Loading Another Organization's Rules.....	20
2.2.2	Work Area	22
2.2.2.1	Search Window	22
2.2.2.2	List Window	23
2.2.2.3	Details Window	24
2.2.2.4	Drag and Drop Window	25
2.3	Actions Available in the Sterling Multi-Channel Fulfillment Solution Configurator	27
2.3.1	Using Configurator's Lookup Functionality	27
2.3.2	Viewing the Document Types Associated with an Application	28
2.3.2.1	Adding a Document Type to an Application	29
2.3.3	Viewing the User Logged into the Configurator	30
2.3.4	Using Lists and List Filtering.....	30
2.3.5	Date and Time Entry	32
2.3.6	Using On-Line Help	33
2.3.7	Troubleshooting Errors	33
2.3.8	Using Special Characters	33

3 Configuring Cross Application Order Promising Components

3.1	Configuring the Fulfillment Network Model	36
3.1.1	Navigating in the Fulfillment Network Model	36
3.1.1.1	Using Filter Criteria	40
3.1.2	Defining Distribution Groups	41
3.1.2.1	Creating a Distribution Group.....	42
3.1.2.2	Modifying a Distribution Group	43
3.1.2.3	Deleting a Distribution Group	43
3.1.3	Defining Node Types	44
3.1.3.1	Creating a Node Type	44

3.1.3.2	Modifying a Node Type	44
3.1.3.3	Deleting a Node Type	45
3.1.4	Defining Nodes	45
3.1.4.1	Creating a Node	45
3.1.4.2	Modifying a Node	48
3.1.5	Defining Relationship Types	48
3.1.5.1	Creating a Relationship Type	49
3.1.5.2	Modifying a Relationship Type	50
3.1.5.3	Deleting a Relationship Type	50
3.1.6	Defining Relationships	50
3.1.6.1	Creating a Relationship	51
3.1.6.2	Modifying a Relationship	52
3.1.6.3	Deleting a Relationship	54
3.2	Defining Item Level Controls	54
3.3	Defining Node Level Controls	55
3.3.1	Defining a Node's Primary Order Promising Information	55
3.3.2	Defining a Node's Relationships	59
3.3.2.1	Creating a Node Relationship	59
3.3.2.2	Modifying a Node Relationship	61
3.3.2.3	Deleting a Node Relationship	61
3.4	Defining Sourcing and Scheduling Rules	62
3.4.1	Defining Fulfillment Types	62
3.4.1.1	Creating a Fulfillment Type	63
3.4.1.2	Modifying a Fulfillment Type	64
3.4.1.3	Deleting a Fulfillment Type	64
3.4.2	Defining Basic Sourcing Configuration	64
3.4.3	Defining Order Sourcing Classifications	67
3.4.3.1	Creating an Order Sourcing Classification	67
3.4.3.2	Modifying an Order Sourcing Classification	68
3.4.3.3	Deleting an Order Sourcing Classification	68
3.4.4	Defining Sourcing Region Selection	69
3.4.5	Defining Scheduling Rules	70
3.4.5.1	Creating a Scheduling Rule	71
3.4.5.2	Modifying a Scheduling Rule	78
3.4.5.3	Deleting a Scheduling Rule	78

3.4.6	Configuring Landed Cost Optimization	78
3.4.6.1	Currency Details.....	82
3.4.6.2	Defining Enterprise Node Type Rules	83
3.4.7	Defining Forwarding/Transfer Rules	86
3.4.8	Defining Distribution Groups for Product Items	88
3.4.8.1	Creating a Distribution Group.....	88
3.4.8.2	Adding Advanced Distribution Details to a Distribution Group (For Backward Compatibility Only)	91
3.4.8.3	Deleting Advanced Distribution Details	93
3.4.8.4	Deleting a Distribution Group	94
3.4.9	Defining Sourcing Rules for Product Items	94
3.4.9.1	Creating a Product Item Sourcing Rule	95
3.4.9.2	Modifying a Product Item Sourcing Rule.....	98
3.4.9.3	Deleting a Product Item Sourcing Rule	99
3.4.10	Defining Sourcing Rules for Delivery Service Items	99
3.4.10.1	Creating a Delivery Service Item Sourcing Rule	99
3.4.10.2	Modifying a Delivery Service Sourcing Rule	102
3.4.10.3	Deleting a Delivery Service Sourcing Rule	103
3.4.11	Defining Distribution Groups for Provided Service Items	103
3.4.11.1	Creating a Distribution Group.....	103
3.4.11.2	Deleting a Distribution Group	106
3.4.12	Defining Sourcing Rules for Provided Service Items.....	106
3.4.12.1	Creating a Provided Service Item Sourcing Rule.....	107
3.4.12.2	Modifying a Provided Service Sourcing Rule	110
3.4.12.3	Deleting a Provided Service Sourcing Rule	110
3.4.13	Defining Procurement Rules	110
3.4.13.1	Creating a Sourcing Rule for Procurement.....	111
3.4.13.2	Modifying a Sourcing Rule for Procurement	113
3.4.13.3	Deleting a Product Procurement Rule	114
3.4.13.4	Creating a Procurement Distribution Group	114
3.4.13.5	Modifying a Procurement Distribution Group.....	115
3.4.13.6	Deleting a Procurement Distribution Group	115
3.4.14	Defining Sourcing Template Details.....	116
3.4.14.1	Applying a Sourcing Template to a Sourcing Rule.....	116
3.4.14.2	Modifying a Sourcing Template for a Sourcing Rule	118

3.4.14.3	Removing a Sourcing Template from a Sourcing Rule	119
----------	---	-----

4 Configuring Cross Application Service Execution Components

4.1	Configuring Service Supervisors	121
4.1.1	Defining a Service Supervisor for a Node	122
4.1.2	Modifying a Service Supervisor for a Node	123
4.1.3	Deleting a Service Supervisor for a Node	123
4.2	Configuring Questions	124
4.2.1	Defining Address Question Groups	124
4.2.2	Modifying Address Question Groups	126
4.2.3	Deleting Address Question Groups	126
4.2.4	Defining Address Questions	126
4.2.5	Modifying Address Questions	128
4.2.6	Deleting Address Questions	128
4.2.7	Defining Capacity Impact	128
4.2.8	Modifying Capacity Impact	130
4.2.9	Deleting Capacity Impact	130
4.2.10	Rearranging Address Question Entities	131
4.2.11	Defining Permit Question Groups	131
4.2.12	Modifying Permit Question Groups	133
4.2.13	Deleting Permit Question Groups	133
4.2.14	Defining Permit Questions	133
4.2.15	Modifying Permit Questions	135
4.2.16	Deleting Permit Questions	135
4.2.17	Rearranging Permit Questionnaire Entities	135

5 Configuring Cross Application Logistics Components

5.1	Defining Logistics Attributes	137
5.1.1	Defining Freight Terms	137
5.1.1.1	Creating a Freight Term	138
5.1.1.2	Modifying a Freight Term	140
5.1.1.3	Deleting a Freight Term	140
5.1.2	Defining Carrier Modification Reasons	140
5.1.2.1	Creating a Carrier Modification Reason	141
5.1.2.2	Modifying a Carrier Modification Reason	142

5.1.2.3	Deleting a Carrier Modification Reason	142
5.1.3	Defining Additional Logistic Rules.....	142
5.2	Defining Delivery Codes	144
5.2.1	Creating a Delivery Code	145
5.2.2	Modifying a Delivery Code	146
5.2.3	Deleting a Delivery Code	146
5.3	Defining Shipment Modes	146
5.3.1	Creating a Shipment Mode.....	147
5.3.2	Modifying a Shipment Mode	147
5.3.3	Deleting a Shipment Mode	148
5.4	Defining Outbound Constraints.....	148
5.4.1	Creating a Routing Guide.....	151
5.4.2	Modifying a Routing Guide	153
5.4.2.1	Creating a Routing Guide Line	153
5.4.2.2	Modifying a Routing Guide Line	160
5.4.2.3	Deleting a Routing Guide Line	161
5.4.3	Deleting a Routing Guide.....	161

6 Configuring Cross Application Pricing Components

6.1	Defining Pricing by Region	163
6.2	Defining Price Programs and Price Lists	164
6.2.1	Creating a Price List.....	166
6.2.1.1	Adding Items to a Price List	168
6.2.1.2	Modifying an Item Price List	170
6.2.1.3	Deleting an Item Price List.....	171
6.2.2	Modifying a Price List	171
6.2.3	Deleting a Price List	171
6.2.4	Creating a Price Program.....	172
6.2.4.1	Adding a New Price List to a Price Program	173
6.2.4.2	Deleting a Price List in a Price Program.....	173
6.2.5	Modifying a Price Program	174
6.2.6	Deleting a Price Program	174

7 Configuring Cross Application Payment Components

7.1	Payment Processing Rules Determination	175
7.2	Defining Payment Types.....	176
7.2.1	Creating a Payment Type	176
7.2.2	Modifying a Payment Type.....	181
7.2.3	Deleting a Payment Type.....	181
7.3	Defining Payment Rules	181
7.3.1	Creating a Payment Rule	182
7.3.2	Modifying a Payment Rule	183
7.3.3	Deleting a Payment Rule	184

8 Configuring Cross Application Customer Components

8.1	Defining Customer Rules	185
8.1.1	Defining Customer Classifications	185
8.1.1.1	Creating a Customer Classification.....	186
8.1.1.2	Modifying a Customer Classification	186
8.1.1.3	Deleting a Customer Classification	187
8.1.2	Defining Additional Customer Rules	187
8.2	Defining Customer Definitions	188
8.2.1	Creating a Customer Definition.....	188
8.2.2	Modifying a Customer Definition	191
8.2.2.1	Defining the Customer's Primary Information	191
8.2.2.2	Defining the Customer's Service Preferences.....	193
8.2.2.3	Answering a Customer's Address Questions	195
8.2.2.4	Defining a Customer's Scheduling Preferences.....	195
8.2.2.5	Defining Customer Contacts.....	196
8.2.2.6	Defining Additional Addresses	201
8.2.3	Deleting a Customer Definition.....	203
8.3	Defining Contact Types	203
8.3.1	Creating a Contact Type.....	203
8.3.2	Modifying a Contact Type	204
8.3.3	Deleting a Contact Type	204

9 Configuring a Document's Attributes

9.1	Defining Order Types	207
9.1.1	Creating an Order Type	208
9.1.2	Modifying an Order Type	208
9.1.3	Deleting an Order Type	209
9.2	Defining Order Sources	209
9.2.1	Creating an Order Source	209
9.2.2	Modifying an Order Source	210
9.2.3	Deleting an Order Source	210
9.3	Defining External References for the Order Level	211
9.3.1	Creating an External Reference for the Order Header Level	211
9.3.2	Modifying an External Reference for the Order Header Level	212
9.3.3	Deleting an External Reference for the Order Header Level	213
9.4	Defining External References for the Order Line Level	213
9.4.1	Creating an External Reference for the Order Line Level	213
9.4.2	Modifying an External Reference for the Order Line Level	214
9.4.3	Deleting an External Reference for the Order Line Level	215
9.5	Defining Order Address Types	215
9.5.1	Creating an Order Address Type	215
9.5.2	Modifying an Order Address Type	216
9.5.3	Deleting an Order Address Type	217
9.6	Defining Line Types	217
9.6.1	Creating a Line Type	217
9.6.2	Modifying a Line Type	218
9.6.3	Deleting a Line Type	218
9.7	Defining Other Attributes	218
9.7.1	Generating a Prime Line Number for a New Line from a Pre-Configured Number	219

10 Configuring a Document's Order Validation

11 Configuring a Document's Instruction Types

11.1	Creating an Instruction Type	225
11.2	Modifying an Instruction Type	226

11.3	Deleting an Instruction Type	227
12	Configuring a Document's Modification Reasons	
12.1	Creating a Modification Reason	229
12.2	Modifying a Modification Reason	231
12.3	Deleting a Modification Reason	231
13	Configuring a Document's Backorder Reasons	
13.1	Creating a Backorder Reason	233
13.2	Modifying a Backorder Reason	234
13.3	Deleting a Backorder Reason	235
14	Configuring a Document's Note Reasons	
14.1	Creating a Note Reason	237
14.2	Modifying a Note Reason	238
14.3	Creating a New Note Reason Based on an Existing One	239
14.4	Deleting a Note Reason	239
15	Configuring a Document's Line Relationship Type	
15.1	Defining a Line Relationship Type	241
15.2	Modifying a Line Relationship Type	242
15.3	Creating a New Line Relationship Type Based on an Existing One	242
15.3.1	Deleting a Line Relationship Type	243
16	Configuring a Document's Modification Components	
16.1	Defining Modification Rules	246
16.1.1	Changing Modification Rules	248
16.2	Defining Custom Modification Types	249
16.2.1	Creating a Custom Modification Type	250
16.2.2	Modifying a Custom Modification Type	252
16.2.3	Deleting a Custom Modification Type	252
16.3	Defining Modifications Impacting Pricing	253

16.3.1	Adding/Removing a Modification Type for Modifications Impacting Pricing	253
16.4	Defining Modifications Requiring Auditing.....	253

17 Configuring an Order Document's Fulfillment Specific Components

17.1	Defining Hold Types.....	256
17.1.1	Creating a Hold Type	256
17.1.1.1	Creating an Order Level Hold Type.....	257
17.1.1.2	Creating an Order Line Level Hold Type	264
17.1.2	Modifying a Hold Type.....	270
17.1.3	Deleting a Hold Type.....	271
17.2	Defining Fulfillment Rules	271
17.3	Defining Process Type Details	274
17.4	Process Type Pipeline Configuration	275
17.4.1	Defining Pipeline Determination.....	275
17.4.1.1	Condition Variables for Pipeline Determination.....	276
17.4.2	Pipelines	276
17.4.3	Transactions	278
17.4.4	Statuses	282
17.4.5	Conditions	285
17.4.6	Actions	287
17.5	Defining Transaction Rules	287
17.6	Defining Status Inventory Types.....	292
17.6.1	Creating a Status Inventory Type	295
17.6.2	Modifying a Status Inventory Type.....	296
17.6.3	Deleting a Status Inventory Type	296
17.7	Defining Monitoring Components	296
17.7.1	Defining Date Types	297
17.7.1.1	Creating a Date Type	297
17.7.1.2	Modifying a Date Type	298
17.7.1.3	Deleting a Date Type	299
17.7.2	Defining Milestones.....	299
17.7.2.1	Creating a Milestone	300
17.7.2.2	Modifying a Milestone.....	302

17.7.2.3	Deleting a Milestone	302
17.8	Defining Monitoring Events	303
17.8.1	Creating an Event Rule	303
17.8.2	Modifying an Event	306
17.8.3	Deleting an Event.....	307
17.9	Defining Transaction Dependencies.....	307
17.9.1	Defining a Default Dependency Group	308
17.9.2	Creating a Transaction Dependency Group.....	309
17.9.2.1	Creating a Transaction Dependency Rule	311
17.9.2.2	Modifying a Transaction Dependency Rule	314
17.9.2.3	Deleting a Transaction Dependency Rule	314
17.9.3	Modifying a Transaction Dependency Group	314
17.9.4	Deleting a Transaction Dependency Group	315

18 Configuring an Order Document's Shipment Specific Components

18.1	Defining Hold Types.....	318
18.2	Defining Process Type Details	318
18.3	Process Type Pipeline Configuration	318
18.3.1	Defining Pipeline Determination.....	319
18.3.2	Pipelines	320
18.3.3	Transactions.....	322
18.3.4	Statuses	325
18.3.5	Conditions.....	328
18.3.6	Actions	329
18.4	Defining Monitoring Components	330
18.4.1	Defining Date Types	330
18.4.1.1	Creating a Date Type	331
18.4.1.2	Modifying a Date Type	332
18.4.1.3	Deleting a Date Type	332
18.4.2	Defining Milestones	332
18.4.2.1	Creating a Milestone	333
18.4.2.2	Modifying a Milestone	335
18.4.2.3	Deleting a Milestone	335
18.5	Defining Monitoring Events	336

18.5.1	Creating an Event Rule	336
18.5.2	Modifying an Event	338
18.5.3	Deleting an Event	339
18.6	Defining Shipment Preferences	339
18.6.1	Over Shipping Preferences	339
18.6.1.1	Creating a Shipment Preference	340
18.6.1.2	Modifying a Shipment Preference	341
18.6.1.3	Deleting a Shipment Preference	342
18.6.2	Transaction Rules	342

19 Configuring a Document's Financial Components

19.1	Defining Payment Terms	345
19.1.1	Creating a Payment Term	345
19.1.2	Modifying a Payment Term	346
19.1.3	Deleting a Payment Term	346
19.2	Defining Charge Definitions	347
19.2.1	Creating a Charge Category	348
19.2.1.1	Adding a Charge Name Associated with a Charge Category	349
19.2.1.2	Modifying a Charge Name Associated with a Charge Category	350
19.2.1.3	Deleting a Charge Name Associated with a Charge Category	350
19.2.2	Modifying a Charge Category	351
19.2.3	Deleting a Charge Category	351
19.3	Defining Tax Names	351

Index

Preface

This manual describes how to use the Distributed Order Management business application module in the Sterling Multi-Channel Fulfillment Solution Configurator.

Intended Audience

This manual is intended for use by system administrators and managers who need to configure the Sterling Multi-Channel Fulfillment Solution rules and business processes as they pertain to their distributed order management business practices.

Structure

This manual contains the following sections:

Chapter 1, "Introduction"

This chapter briefly describes the contents of this guide.

Chapter 2, "Navigating in the Configurator"

This chapter explains the layout of the Sterling Multi-Channel Fulfillment Solution Configurator, the actions you can perform throughout the solution, and the important concepts you should be aware of before using the solution.

Chapter 3, "Configuring Cross Application Order Promising Components"

This chapter explains how you can define the rules and components necessary to determine the appropriate node and suppliers used to source items.

Chapter 4, "Configuring Cross Application Service Execution Components"

This chapter explains how you can define the components utilized during service execution.

Chapter 5, "Configuring Cross Application Logistics Components"

This chapter explains the configuration of components used by different logistics related functionality throughout the business application module.

Chapter 6, "Configuring Cross Application Pricing Components"

This chapter explains how you can configure the components used for pricing by the Sterling Multi-Channel Fulfillment Solution financial engine throughout the Distributed Order Management business application module.

Chapter 7, "Configuring Cross Application Payment Components"

This chapter explains the configuration of components used in the Sterling Multi-Channel Fulfillment Solution to define the types of payment the system accepts and the rules surrounding payment collection.

Chapter 8, "Configuring Cross Application Customer Components"

This chapter explains how you can configure customer classifications and customer definitions.

Chapter 9, "Configuring a Document's Attributes"

This chapter explains how you can configure common codes as they pertain to order documents viewed in the Application Consoles.

Chapter 10, "Configuring a Document's Order Validation"

This chapter explains how you can define configuration for defaulting Seller and Buyer validation during order creation for a particular Enterprise and document type.

Chapter 11, "Configuring a Document's Instruction Types"

This chapter explains how you can define the common codes used when adding special instructions to an order document.

Chapter 12, "Configuring a Document's Modification Reasons"

This chapter explains how you can define common codes for modification reasons.

Chapter 13, "Configuring a Document's Backorder Reasons"

This chapter explains how you can define common codes for backorder reasons.

Chapter 14, "Configuring a Document's Note Reasons"

This chapter explains how you can configure common codes for note reasons used when modifying an order.

Chapter 15, "Configuring a Document's Line Relationship Type"

This chapter explains how you can configure line relationship types used for linking similar items.

Chapter 16, "Configuring a Document's Modification Components"

This chapter explains how you can configure the modification rules and types of a document when it is in a specific status.

Chapter 17, "Configuring an Order Document's Fulfillment Specific Components"

This chapter explains how you can configure the fulfillment specific process types used by each order document.

Chapter 18, "Configuring an Order Document's Shipment Specific Components"

This chapter explains how you can configure the shipment specific process types used by each order document.

Chapter 19, "Configuring a Document's Financial Components"

This chapter explains how you can define rules and common codes as they pertain to payments and charges given for a given order document.

Chapter 20, "Configuring a Document's Purge Criteria"

This chapter explains the purge criteria business rules that are used to define qualifications around each type of purge. Purges are the process by which old data is removed from the system database.

Chapter 21, "Configuring Value-Added Services"

This chapter explains how you can configure value-added services in the Sterling Multi-Channel Fulfillment Solution.

Appendix A, "Time-Triggered Transaction Reference"

This chapter explains time-triggered transactions that are utilities that perform a variety of individual functions, automatically and at specific time intervals.

Appendix B, "Order Modification Types"

This chapter explains the default order modification types and their associated modification levels.

Appendix C, "Condition Builder Attributes"

This chapter explains the attributes used in the condition builder to build statements for each process type.

Conventions

The following conventions may be used in this manual:

Convention	Meaning
. . .	Ellipsis represents information that has been omitted.
< >	Angle brackets indicate user-supplied input.
mono-spaced text	Mono-spaced text indicates a file name, directory path, attribute name, or an inline code example or command.
/ or \	Slashes and backslashes are file separators for Windows, UNIX, and Linux operating systems. The file separator for the Windows operating system is "\" and the file separator for UNIX and Linux systems is "/". The UNIX convention is used unless otherwise mentioned.
<INSTALL_DIR>	User-supplied location of the Sterling Multi-Channel Fulfillment Solution installation directory. This is only applicable for Release 8.0 or above.
<INSTALL_DIR_OLD>	User-supplied location of the Sterling Multi-Channel Fulfillment Solution installation directory for previously installed releases. This is only applicable for Release 8.0 or above.
<YANTRA_HOME>	User-supplied location of the Sterling Supply Chain Applications installation directory. This is only applicable for Release 7.7, 7.9, and 7.11.
<YANTRA_HOME_OLD>	User-supplied location of the Sterling Supply Chain Applications installation directory for previously installed releases. This is only applicable for Releases 7.7, 7.9, and 7.11.

Convention	Meaning
<YFS_HOME>	<p>For releases 7.3, 7.5, and 7.5 SP1, this is the user-supplied location of the Sterling Supply Chain Applications installation directory.</p> <p>For releases 7.7, 7.9, and 7.11, this is the user-supplied location of the <YANTRA_HOME>/Runtime directory.</p> <p>For release 8.0, the <YANTRA_HOME>/Runtime directory is no longer used and this is the same location as <INSTALL_DIR>.</p>
<YFS_HOME_OLD>	This is the <YANTRA_HOME>/Runtime directory of previously installed releases. This is only applicable for Releases 7.7, 7.9, and 7.11.
<ANALYTICS_HOME>	<p>User-supplied location of the Sterling Multi-Channel Fulfillment Solution Analytics installation directory.</p> <p>Note: This convention is used only in the <i>Sterling Multi-Channel Fulfillment Solution Analytics Guide</i>.</p>
<COGNOS_HOME>	<p>User-supplied location of the Cognos installation directory.</p> <p>Note: This convention is used only in the <i>Sterling Multi-Channel Fulfillment Solution Analytics Guide</i>.</p>
<MQ_JAVA_INSTALL_PATH>	<p>User-supplied location of the IBM WebSphere MQ Java components installation directory.</p> <p>Note: This convention is used only in the <i>Sterling Multi-Channel Fulfillment Solution System Management Guide</i>.</p>
<DB>	Refers to the Oracle, DB2, or MSSQL depending on the database server.
<DB_TYPE>	Depending on the database used, considers the value oracle, db2, or sqlserver.

Introduction

This book concentrates on the rules and setup configurations that make up the Distributed Order Management business application in the Sterling Multi-Channel Fulfillment Solution Configurator. This book is intended for both Hub and Enterprise administrators using the Sterling Multi-Channel Fulfillment Solution Configurator to set up the Sterling Multi-Channel Fulfillment Solution environment. Business analysts should also use this book to plan appropriate business practices as they pertain to the Sterling Multi-Channel Fulfillment Solution. Programmers and System Integrators should refer to the *Sterling Multi-Channel Fulfillment Solution Customization Guide* and the *Sterling Multi-Channel Fulfillment Solution Integration Guide* for information about extending or integrating external applications with the Sterling Multi-Channel Fulfillment Solution.

Important: This book assumes that you have read and are familiar with the concepts and business functionality detailed in the *Sterling Multi-Channel Fulfillment Solution Product Concepts*.

The Sterling Multi-Channel Fulfillment Solution Configurator is a collection of all the rules and setup configurations necessary to implement the Sterling Multi-Channel Fulfillment Solution organized so that configuration can be done for each business application separately. The following business applications can be configured within the Sterling Multi-Channel Fulfillment Solution Configurator:

- Distributed Order Management
- Inventory Synchronization
- Product Management

- Logistics Management
- Supply Collaboration
- Reverse Logistics
- Platform

1.1 Business Models

There is no single business model that encompasses the environment in which the entire Sterling Multi-Channel Fulfillment Solution can be used. Therefore, there is no single way to configure your Sterling Multi-Channel Fulfillment Solution environment.

For example, your company might be considered a multi-divisional corporation, a third-party logistics company, or a marketplace business. Each of these business models require a different conceptual approach to the Sterling Multi-Channel Fulfillment Solution configuration.

1.1.1 Multi-Divisional Corporation

The **multi-divisional corporation model** is a business corporation whose primary focus is managing purchase and sales activities. A typical multi-divisional corporation can be a buyer, a seller, or both. It could also be a retailer, a manufacturer, or both. Whatever form the multi-divisional corporation takes, it normally has multiple channels with different types of customers, such as, consumers, retailers, dealers, and original equipment manufacturers.

In the multi-divisional corporation model, each division might be set up as an Enterprise in the Sterling Multi-Channel Fulfillment Solution. This setup allows both segregation of transactions by division and global visibility at the corporate level. Each Enterprise configures their own business rules, workflow, and transaction processing.

1.1.2 Third-Party Logistics

Traditional **third-party logistics** companies provide a range of out sourced services such as warehousing, transportation, and contract manufacturing.

Large companies can gain the competitive advantage through the real-time management of their supply chains. These advantages include

lower costs and improved customer service. Additionally, new sales channels such as web stores, hand-held devices, and in-store kiosks provide companies new methods of reaching their customers. All of these issues have increased the complexity of the fulfillment process.

The Sterling Multi-Channel Fulfillment Solution provides the engine needed to run the operations of a contract fulfillment provider as well as a centralized system for real-time order execution and event driven problem solving for an entire fulfillment network. It enables fulfillment providers to configure the fulfillment process to meet the needs of their clients.

In the third-party logistics model, each client might be set up as an Enterprise. This setup allows the third-party logistics Hub to have visibility of all transactions in the Hub environment, while the clients that are set up as Enterprises only have visibility to their own transactions. This allows the third-party logistics business to provide unique transaction processing to its clients.

1.1.3 Marketplace

A **marketplace** is an online intermediary that connects Buyers and Sellers. Marketplaces eliminate inefficiencies by aggregating offerings from many Sellers or by matching Buyers and Sellers in an exchange or auction. For Buyers, they lower purchasing costs and help them reach new Sellers. For Sellers, they lower sales costs and give them access to new customers. It is a central location, or Hub, where a trusted intermediary integrates both procedures and technology to lower the costs and enhance the effectiveness of Buyer and Seller transactions.

In the marketplace model, each market might be set up as an Enterprise. This setup allows each market to be unique with their own product or service handling.

1.2 Sterling Distributed Order Management Configuration

Sterling Distributed Order Management provides configurable business rules and workflow used to automate the manual processes associated with managing fulfillment in an extended supply chain. Sterling Distributed Order Management addresses the entire order process from order creation to settlement. Each order line can easily follow a unique

process based upon any order-related attribute or business rule. It automatically creates and tracks any processes that result from, or depend upon, the original customer order.

In the Sterling Multi-Channel Fulfillment Solution Configurator, you can use Sterling Distributed Order Management configuration grouping to establish both cross-application and order document specific rules and attributes. Cross-application rules and attributes can impact other applications, such as Supply Collaboration or Reverse Logistics. Order document specific rules and attributes pertain only to the order document type you are configuring, such as Sales Order or Transfer Order. You can define different configurations for individual order document types without impacting other applications or order document types.

You can use the Distributed Order Management configuration grouping to configure the following aspects of the Sterling Multi-Channel Fulfillment Solution for your business application modules:

- [Sourcing Setup](#)
- [Logistics](#)
- [Financials](#)
- [Customer](#)
- [Order Attributes](#)
- [Order Validation](#)
- [Instruction Types](#)
- [Modification Reasons](#)
- [Backorder Reasons](#)
- [Process Type Configuration](#)
- [Purge Criteria](#)

1.2.1 Sourcing Setup

Sourcing is the process of determining what node should be used to ship or provide product, delivery service, and provided service items.

You can define the rules and components necessary to determine the appropriate node and suppliers used to source items. These rules and

components are used when there are multiple nodes and suppliers from which you can source items and services.

For more information about Sourcing Setup, see [Chapter 3, "Configuring Cross Application Order Promising Components"](#).

1.2.2 Logistics

You can configure the components used by different logistics related functionality throughout the Distributed Order Management business application module.

For more information about Logistics, see [Chapter 5, "Configuring Cross Application Logistics Components"](#).

1.2.3 Financials

You can configure the components used by the Sterling Multi-Channel Fulfillment Solution financial engine throughout the Distributed Order Management business application module.

For more information about Financials, see [Chapter 6, "Configuring Cross Application Pricing Components"](#) and [Chapter 19, "Configuring a Document's Financial Components"](#).

1.2.4 Customer

You can define the customers that buy from an organization in the Distributed Order Management module.

For more information about Customer, see [Chapter 8, "Configuring Cross Application Customer Components"](#).

1.2.5 Order Attributes

You can define common codes as they pertain to order documents viewed in the Application Consoles.

For more information about Order Attributes, see [Chapter 9, "Configuring a Document's Attributes"](#).

1.2.6 Order Validation

You can define configuration for validating certain aspects of an order during order document creation.

For more information about Order Validation, see [Chapter 10, "Configuring a Document's Order Validation"](#).

1.2.7 Instruction Types

You can define the common codes used when adding special instructions to an order document.

For more information about instruction types, see [Chapter 11, "Configuring a Document's Instruction Types"](#).

1.2.8 Modification Reasons

You can define common codes for **modification reasons**. These codes define why a modification was made by a user.

For more information about Modification Reasons, see [Chapter 12, "Configuring a Document's Modification Reasons"](#).

1.2.9 Backorder Reasons

You can define common codes for **backorder reasons**. These codes describe why an order document was backordered.

For more information about Backorder Reasons, see [Chapter 13, "Configuring a Document's Backorder Reasons"](#).

1.2.10 Process Type Configuration

To complete an order document's lifecycle, each document has a set of different processes that it can go through. These processes are called process types. Every order document has a defined set of process types in the Sterling Multi-Channel Fulfillment Solution.

The following process types are defined in the Sterling Multi-Channel Fulfillment Solution for the order document types:

- Fulfillment
- Negotiation

- Shipment
- Receipt

You can configure the rules and components that define an order document's process types.

For more about Process Type Configuration, see [Chapter 17, "Configuring an Order Document's Fulfillment Specific Components"](#) and [Chapter 18, "Configuring an Order Document's Shipment Specific Components"](#).

1.2.11 Purge Criteria

You can define the parameters used when purging order document related records from the system.

For more information about Purge Criteria, see [Chapter 20, "Configuring a Document's Purge Criteria"](#).

Navigating in the Configurator

This chapter discusses the layout of the Sterling Multi-Channel Fulfillment Solution Configurator, actions you can perform throughout the application, and important concepts you should be aware of before using the application.

2.1 Starting the Sterling Multi-Channel Fulfillment Solution Configurator

To access the Sterling Multi-Channel Fulfillment Solution Configurator:

1. Point your browser to
`http://<hostname>:<portname>/yantra/console/start.jsp`
where,
 - `hostname` is the computer name or IP address of the computer where the Sterling Multi-Channel Fulfillment Solution is installed.
 - `portnumber` is the listening port of the computer where the Sterling Multi-Channel Fulfillment Solution is installed.

The browser displays the Sign In window.

2. Enter your login ID and password and choose the Sign In button. The Sterling Multi-Channel Fulfillment Solution Consoles Home Page displays.
3. From the menu bar, choose Configuration > Launch Configurator. The Sterling Multi-Channel Fulfillment Solution Configurator opens in a new window.

Note: Additionally, enterprise users who maintain an enterprise can access the Sterling Multi-Channel Fulfillment Solution Configurator by means of `http://<Sterling Multi-Channel Fulfillment Solution installation server>/yantra/console/login.jsp`.

Note: If both the Sterling Multi-Channel Fulfillment Solution Configurator and the monitor in the Sterling Multi-Channel Fulfillment Solution System Management Console are opened at the same time, and if a dialogue window is opened in either application, the other stops responding to user input until that dialogue window is closed. This is due to a bug in the Java platform.

2.2 The Sterling Multi-Channel Fulfillment Solution Configurator Layout

The Sterling Multi-Channel Fulfillment Solution Configurator is a graphical user interface that can be used to configure different aspects of the Sterling Multi-Channel Fulfillment Solution. The different configurations are defined by logical groupings called applications that can be accessed from the Configurator's menu bar.

Figure 2–1 Applications Menu

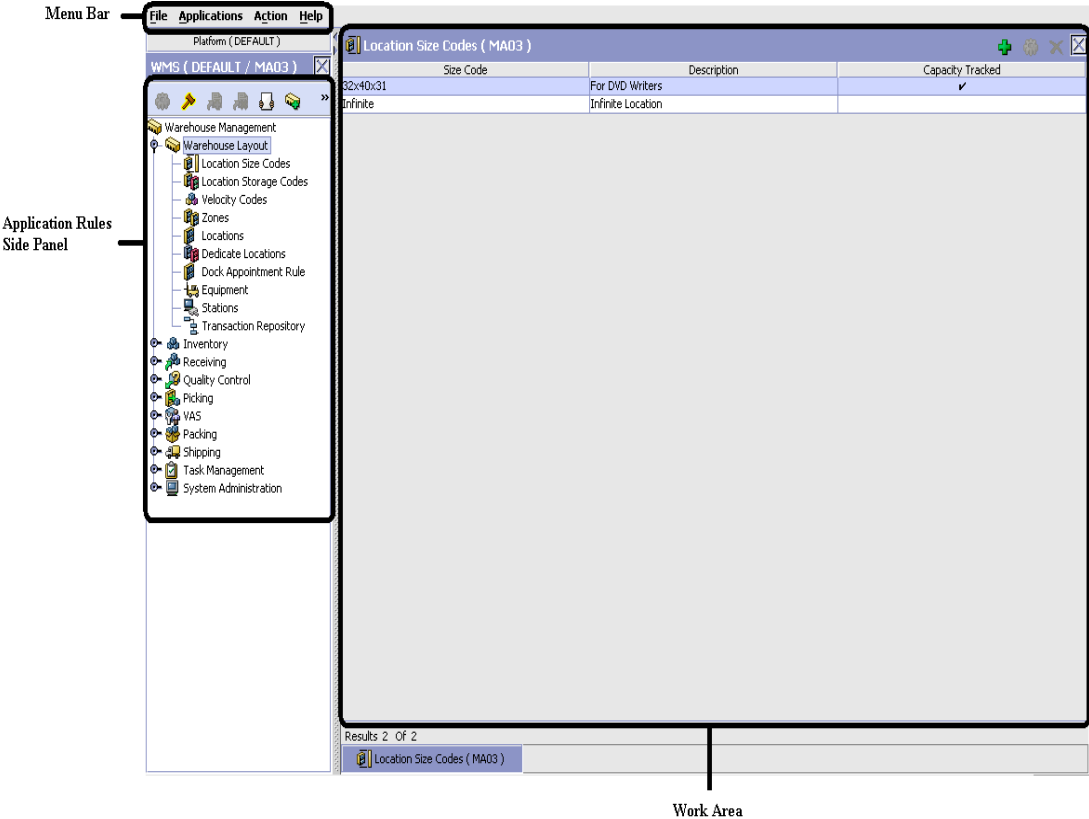

Each application focuses on a particular aspect of the Sterling Multi-Channel Fulfillment Solution and contains all of the rules, common codes, and settings necessary for the Sterling Multi-Channel Fulfillment Solution to work in a real-world business setting.

The following applications can be configured in this version of the Sterling Multi-Channel Fulfillment Solution:

- Distributed Order Management
- Global Inventory Visibility
- Product Management
- Logistics Management
- Supply Collaboration
- Reverse Logistics
- Warehouse Management
- Platform

When you select the application that you want to configure, the Configurator displays a side panel containing all of the available configuration rules for the selected application and a work area in which these rules can be configured.

Figure 2–2 The Standard Configurator Application Interface

2.2.1 Application Rules Side Panel

The application rules side panel displays a hierarchical tree of elements specific to processes used with in the application.

**Figure 2–3 Example of Application Rules Side Panel
Organization You Are Defining Rules For**

The application rules side panel also identifies the organization you are configuring rules for and what, if any, rules are inherited from another organization.

You can use the application rules side panel for:

- [Accessing Configuration Screens](#)
- [Determining Inheritance](#)
- [Loading Another Organization's Rules](#)

2.2.1.1 Accessing Configuration Screens

The main purpose of the application rules side panel is to provide an interface to access the application's individual configuration screens. To access a configuration screen, browse through the application tree and double-click on the applicable configuration element, the element's configuration screen displays in the work area.

2.2.1.2 Determining Inheritance

In the Sterling Multi-Channel Fulfillment Solution, when an Enterprise is created it can inherit all or part of an existing Enterprise's configuration rules. This inheritance is done at the configuration group level. A configuration group is a classification of similar configuration elements. For example, all of the rules and configurations dealing with items are grouped together into one configuration group and all of the rules and configurations dealing with organizations are grouped into another.

An administrator organization is set for every organization defined within the system. Only the administrator organization can modify the rules defined for a particular organization. If a particular organization administers multiple organizations, then they can load the rules of organization that it administers within the application tree. For more information about loading another organization's rules, see [Section 2.2.1.3, "Loading Another Organization's Rules"](#).

Configuration groups are associated with organization levels. Organization levels determine how configuration groups are inherited and which organizations can maintain them. The organization levels defined in the Sterling Multi-Channel Fulfillment Solution are:

- Hub Level - Configuration groups that are associated with the Hub organization
- Enterprise Level - Configuration groups that are associated with the individual Enterprise organizations within the Hub environment
- Catalog Organization - Configuration groups that are associated with the organization(s) that maintains the catalog(s) within the Hub environment
- Inventory Organization - Configuration groups that are associated with the organization(s) that maintains the inventory within the Hub environment
- Organization - Configuration groups that are associated with any organization within the Hub environment.

Enhanced Inheritance for Process Models

An Enterprise can inherit the configurations of the following entities from other Enterprises:

- Pipelines

- User Exits
- Services
- Actions
- Conditions
- Statuses
- Transactions
- Events

When an Enterprise inherits these entities from some other Enterprise, the current Enterprise can view the configurations that are inherited from all other Enterprises (including the Hub) in the inheritance hierarchy. In addition, the current Enterprise can view the configurations that are defined for the Hub. For example, consider the following inheritance hierarchy:

In this hierarchy, Enterprise E1 is inheriting from Enterprise E2, which in turn is inheriting from Enterprise E3. Enterprise E1 can view the configurations that are defined for Enterprise E2 and Enterprise E3. In addition, Enterprise E1 can view the configurations that are defined for the Hub.

The following table details the rules used to determine which organizations can maintain a configuration group as defined by the organization level. The table also describes the rules that determine how configuration groups are inherited when an organization is created.

Table 2–1 Organization Level Rules

Organization Level	Organizations That Can Modify at this Level...	Inheritance Details
Hub Level	Only the Hub organization can modify configuration groups at the Hub level. All other organizations have read-only access.	All organizations share this information.
Enterprise Level	Only Enterprise organizations can modify configuration groups at the Enterprise level. Any business transaction requiring Enterprise configuration is picked up from the Enterprise established by the transactional context. For example, order documents have a specific Enterprise.	An Enterprise can inherit this configuration from another Enterprise. Additionally, this configuration can be overridden at a configuration group level.
Catalog Organization	Organizations that are designated as catalog organizations can modify configuration groups at the catalog organization level.	None.
Inventory Organization	Organizations that are designated as inventory organizations can modify configuration groups at the inventory organization level.	None.
Organization	Any organization assigned a role (Seller, Buyer, etc.) can modify configuration groups at the organization level.	None.

Important: You cannot inherit from an Enterprise that does not have the same inventory, capacity, and catalog organizations as the organization you are configuring.

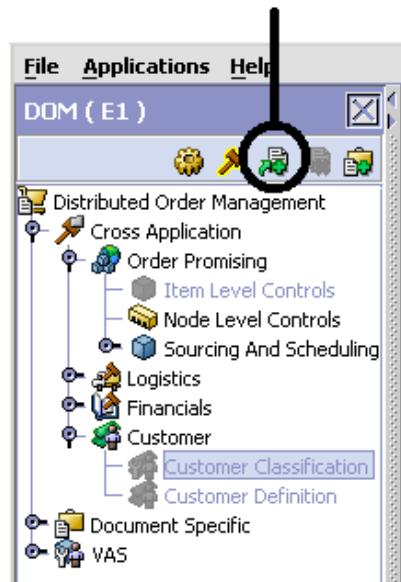

The application rules side panel displays rules that have been inherited as grayed out.

Figure 2–4 *Inherited Rules in the Application Rules Side Panel*

As stated in the table above, depending on the organization you are logged in as, you may be able to override some inherited rules. If a rule can be overridden, the Override Configuration icon becomes available in the application rule side panel when you highlight the rule.

Figure 2–5 Override Configuration Icon
Override Configuration Icon is Available

When you choose to override a rule you also override any other rules in the configuration group the rule you are overriding is associated with. When you choose the Override Configuration icon the Configuration Override Details pop-up window displays. This window provides the list of rules that are overridden.

Figure 2–6 Example of Configuration Override Details Pop-Up Window

If you override a configuration group and then decide to "re-inherit" the original rules, you can choose the Give Back Configuration Ownership icon. This icon becomes available in the application rules side panel for rules that have been overridden.

Figure 2–7 Give Back Configuration Ownership Icon
Give Back Configuration Ownership Icon is Available

When you select the Give Back Configuration Ownership Icon, the Configuration Override Details pop-up window displays. This window provides the list of rules that are re-inherited.

Important: If you select the Delete Rules field on the Configuration Override Details pop-up window, you give back rule ownership to the organization you originally inherited from, however you do not retain any of the rules that you inherited from them.

If you do not select this field, you give back rule ownership to the organization you originally inherited from, but you retain the rules that you inherited from them.

2.2.1.3 Loading Another Organization's Rules

An administrator organization is set for every organization defined within the system. Only the administrator organization can modify the rules defined for a particular organization. If a particular organization administers multiple organizations, then they can load the rules of

organization that it administers within the application tree. See [Table 2–1](#) for the rules that determine which organizations you can administer.

Note: The rules that are available from the tree in the application rules side panel may vary depending on the type of organization you select and the roles it has been assigned.

To load another organization's rules:

1. From the applicable application rules side panel, choose . The Load Organizations for Configuration pop-up window displays.

2. From Organization, select the organization that you want to work with.
3. Choose OK. The organization's rules display in the application rules side panel.

Note: The application rules side panel displays the organization you are working with in parentheses.

2.2.2 Work Area

The work area is the main area in which different configuration screens appear. The following are the main types of screens that you can be seen in the work area:

- [Search Window](#)
- [List Window](#)
- [Details Window](#)
- [Drag and Drop Window](#)

2.2.2.1 Search Window

A search window provides you with a means to perform a filtered search. The upper panel of a search window offers criteria applicable to the entity you are searching through which you can narrow your search. The lower panel lists the results of a search once it has been performed.

Figure 2–8 Search Window Example

Organization Search

Search Criteria

Organization Code Roles

Organization Name

Enterprise Max Records 1,000

Search Results

Organization Code	Name	City
DEFAULT	Hub Organization	
UPSN	United Parcel Service	
USPS	United States Postal Service	
FEDX	FEDX	
AIRB	AIRB	
UPSC	UPS Canada	
UPSA	UPS Asia Pacific	
UPSE	UPS Europe	
UPSL	UPS Latin America	
E1	E1	Dallas

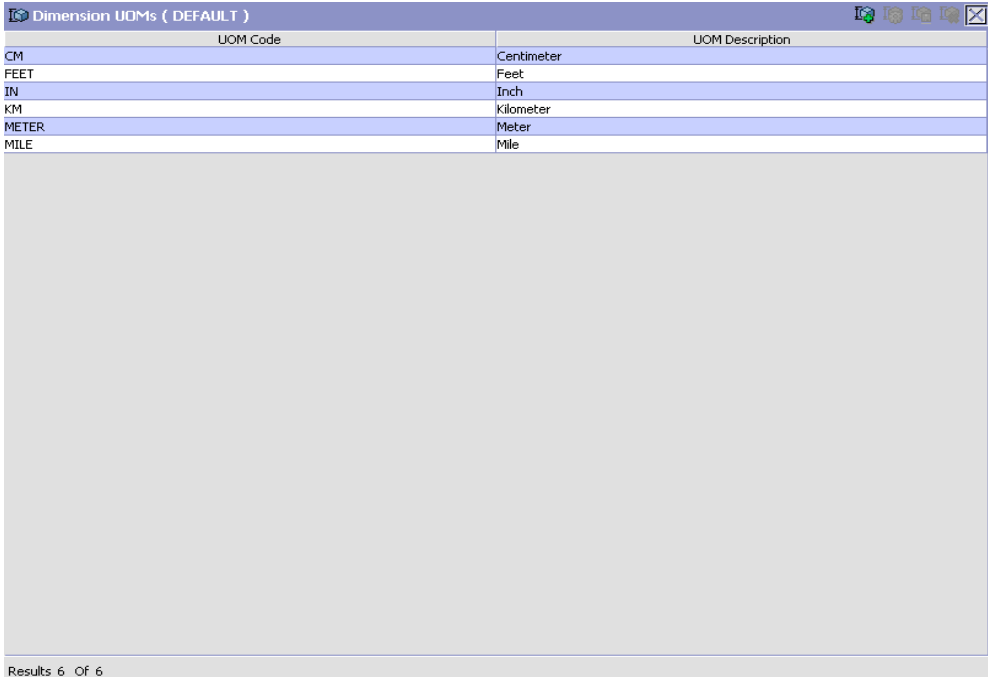

Results 10

Search Results

2.2.2.2 List Window

When you choose to configure a specific rule or code that does not require a search, the Configurator may display a basic list window of the rules and codes that have previously been configured.

Figure 2–9 List Window Example

The screenshot shows a software window titled "Dimension UOMs (DEFAULT)" with a standard toolbar. It contains a table with two columns: "UOM Code" and "UOM Description". The table lists six units of measure: Centimeter, Feet, Inch, kilometer, Meter, and Mile. The status bar at the bottom indicates "Results 6 OF 6".

UOM Code	UOM Description
CM	Centimeter
FEET	Feet
IN	Inch
KM	kilometer
METER	Meter
MILE	Mile

2.2.2.3 Details Window

A details window is the main interface through which a bulk of the configuration is done. A details window can contain editable fields and tables, tabs to configure different aspects of an entity, and additional actions that can be performed on an entity.

Figure 2–10 Details Window Example

2.2.2.4 Drag and Drop Window

You can use a graphical drag and drop window to ease the construction of pipelines, pipeline determination, event handlers, status monitoring rules, and services. A drag and drop window consists of a pallet and a graphical work area.

Figure 2–11 Drag and Drop Window Example

To begin building any of these entities, choose a component, such as a transaction, from the pallet. Drag the component into the graphical work area. The transaction is now displays as a graphical representation of itself.

To connect one component to another, you must drag the mouse from the outgoing port of a component until it forms a connecting line with the incoming port of another component. The links between components can be set up either horizontally or vertically.

To delete components or links, right-click on the component and choose Delete. Once components and links have been established you can move them around by dragging them, the links redraw themselves according to the new position. If you press and hold the CTRL key while dragging a component, the component is copied within the graphical work area.

2.3 Actions Available in the Sterling Multi-Channel Fulfillment Solution Configurator

The following actions can be performed throughout the Sterling Multi-Channel Fulfillment Solution Configurator:

- [Using Configurator's Lookup Functionality](#)
- [Viewing the User Logged into the Configurator](#)
- [Using Lists and List Filtering](#)
- [Using On-Line Help](#)
- [Troubleshooting Errors](#)
- [Using Special Characters](#)

2.3.1 Using Configurator's Lookup Functionality

Throughout the Sterling Multi-Channel Fulfillment Solution Configurator there are many fields that have a lookup functionality to find or create additional records as they pertain to that field. For example, on the Primary Info tab of the Organization Details screen, the Locale field has a lookup functionality to create a new locale from that screen. When you choose the Create New lookup button the Locale Details information displays in a pop-up screen for you to modify.

Figure 2–12 *Lookup Icon Example*

The information that displays in a lookup field varies depending on how many records you have pertaining to that particular field. When there are 20 or less records, the lookup displays as a drop-down list with a Create New button. When there are between 21 and 75 records, the lookup displays as a drop-down list with a Search button.

When there are more than 75 records, the lookup displays as a text box with a Search button. You can type the value in the text box or search for the value using the Search button. If you enter a value, it is validated when it is saved. You should always type the value as it would appear if it was displayed as a drop-down list. For example, for a currency lookup, you should type the currency description in the text box even though the

currency code is saved in the table. An error displays on save if the user has entered an invalid value.

When you use a lookup for a particular field in the Configurator, you should refer to the corresponding section in this guide to set up the particular information.

2.3.2 Viewing the Document Types Associated with an Application

In the Distributed Order Management, Supply Collaboration, Reverse Logistics, and Logistic Management configuration applications, you can view all of the document types associated with the application. Sales Order, Transfer Order, and Purchase Order are all examples of document types.

To view an application's associated document types, open the applicable application from the menu and choose  from the application rules side panel. The Associated Document Types window displays displaying a list of all of the document types associated with the application you are working in.

Figure 2-13 Associated Document Types Window

Associated Document Types	
Document Type	Description
0001	Sales Order
0004	Template Order
0006	Transfer Order

2.3.2.1 Adding a Document Type to an Application

You can add a document type that is associated with another application to the application you are currently working in.

Important: An added document type's associated screens may be irrelevant to the application you are associating it with.

To add a document type to an application:

1. From the Associated Document Types window, choose . The Associated Document Type pop-up window displays.

2. From Document Type, select the document type that you want to associate with the application.
3. Select Enable Access To This Document Through This Applications Console.
4. Choose .

2.3.3 Viewing the User Logged into the Configurator

You can view the user logged into the Configurator and their locale at any time. To view this information, move your mouse over the User icon and Locale icons in the bottom right-hand corner of the application to display the tool tips.

2.3.4 Using Lists and List Filtering

When viewing any list in the Configurator, it is possible to filter the contents of the list based in criteria that you define. Filtering is accomplished by right-clicking anywhere on the list's column headings and using the Table Filter Editor associated with the list.

Figure 2–14 Column Headings in a List

Figure 2–15 Table Filter Editor Window Example

Table 2–2 Table Filter Editor Window

Field	Description
Apply To Existing Records	Checking this box applies a new filter set of results that have been previously filtered instead of the whole set.

Table 2–2 Table Filter Editor Window

Field	Description
Max Records	Specify the maximum number of records that are to be returned from a filter. The default number is 100
Dynamic Fields	Fields such as "Hold Type" and "Hold Type Description" in Figure 2–15 are dynamically populated based on the list you are currently viewing. These fields can be searched using text strings combined with criteria such as Is , Starts With , or Contains .

Important: Search strings are case sensitive. For example, "Item" does not return the same values as "item".

2.3.5 Date and Time Entry

Date fields through the Configurator have a calendar icon that can be used to find dates as it pertains to that field. When you click on this icon, a small calendar displays. You can navigate through this calendar to determine the appropriate date. For example, on the Create Calendar window, the Default Effective To field has a calendar icon that you can use to verify the appropriate ship by date to populate the field.

Figure 2–16 Calendar Icon example

You can also enter time of day information throughout the Configurator. To do this, double click on the time field, and enter the time of day.

Figure 2–17 Time Field example

Shift Name	Start Time	End Time
	<input type="text"/>	

Time should be entered in a 24 hour time format everywhere throughout the Configurator.

2.3.6 Using On-Line Help

You can access the Sterling Multi-Channel Fulfillment Solution Online Help through Help > Online Help.

2.3.7 Troubleshooting Errors

You can view the description and cause of any error raised in the Sterling Multi-Channel Fulfillment Solution, as well as the actions to troubleshoot it.

To view the Sterling Multi-Channel Fulfillment Solution system error descriptions:

1. From the menu bar, choose Help > Troubleshooting. The Error Search window displays.
2. Enter the applicable search criteria and choose . A list of error codes and their descriptions display.
3. Choose  to view the cause of the error and action to troubleshoot it.

2.3.8 Using Special Characters

Throughout the Sterling Multi-Channel Fulfillment Solution Configurator there may be instances where you need to use special characters in data entry. For information about the use of special characters in the Sterling Multi-Channel Fulfillment Solution, see the *Sterling Multi-Channel Fulfillment Solution Customization Guide*.

Configuring Cross Application Order Promising Components

Order promising is the process of determining what node should be used to ship or provide product, delivery service, and provided service items.

You can define the rules and components necessary to determine the appropriate node and suppliers used to source items. These rules and components are used when there are multiple nodes and suppliers from which you can source items and services.

The configurations detailed in this chapter can be used to determine sourcing based on:

- Where the items are being shipped from
- Ship to location
- Availability at different locations
- Total number of shipments required to complete the request
- Node priority
- Delivery region

You can use the Sourcing Setup branch for:

- [Configuring the Fulfillment Network Model](#)
- [Defining Item Level Controls](#)
- [Defining Node Level Controls](#)
- [Defining Sourcing and Scheduling Rules](#)

3.1 Configuring the Fulfillment Network Model

The Fulfillment Network Model is a geographical representation of your configured nodes and their relationships. It also provides a variety of navigation tools and filtering options that enable you to view only pertinent information.

For more information about navigating in the Fulfillment Network Model, see [Section 3.1.1, "Navigating in the Fulfillment Network Model"](#).

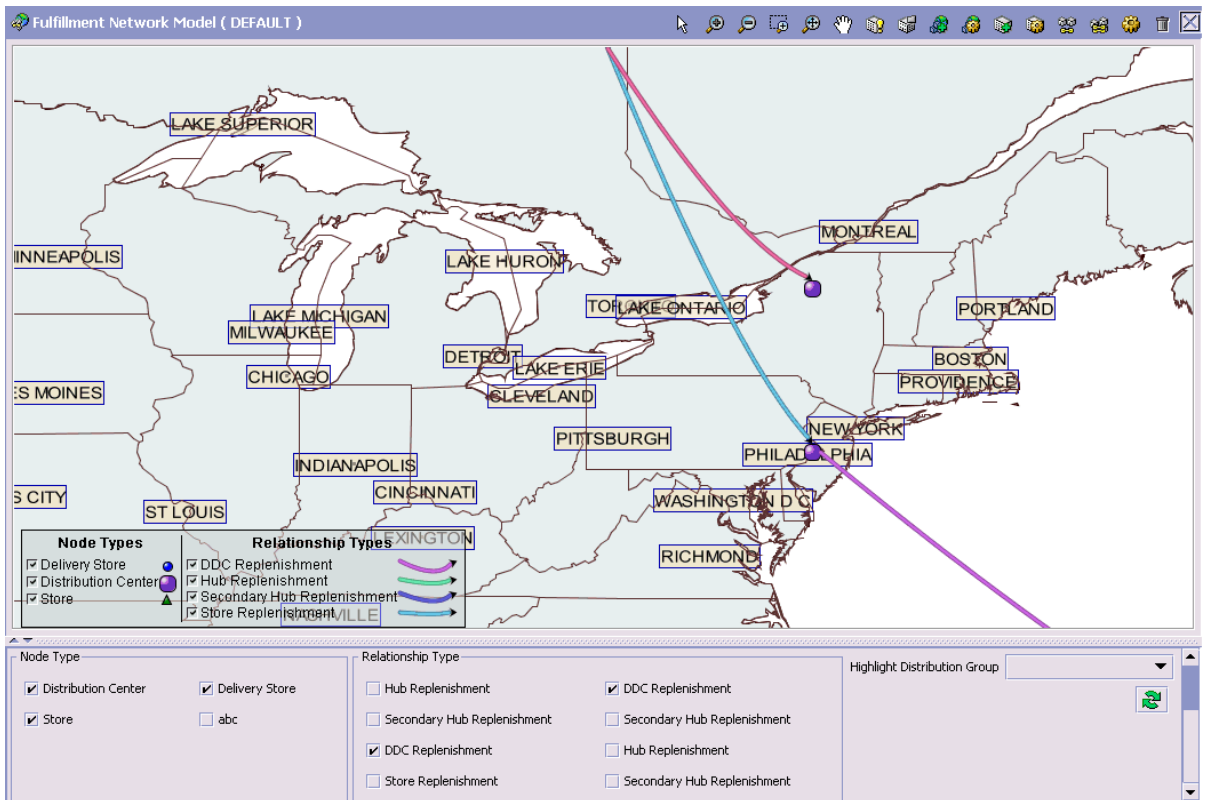

You can use the Fulfillment Network Model branch for:

- [Defining Distribution Groups](#)
- [Defining Node Types](#)
- [Defining Nodes](#)
- [Defining Relationship Types](#)
- [Defining Relationships](#)

Note: Depending on the amount of data that needs to be processed, the fulfillment network model may take up to a few minutes to load.

3.1.1 Navigating in the Fulfillment Network Model

This section describes the Fulfillment Network Model work area. There are three main components, as indicated in the screen shot below:

Map View

The Map View displays a geographical map. Depending on the filter criteria and map legend options, the nodes and relationships in your fulfillment network appear on this map. Nodes are represented as symbols of different shape, color, and size. Relationships are represented as arrows of different color. The direction of the arrow indicates the To Location and From Location for the relationship.

The Map Legend indicates what each symbol or arrow displayed on the Map represents. Furthermore, unchecking the box next to a symbol or arrow on the Map Legend hides corresponding entities in the Map View. The Map Legend can be dragged to any location within the Map View.

Note: The map could become unusable if your fulfillment network contains 4000 nodes and 3000 relationships.

Action Icons

The action icons allow you to navigate within the Map View, and perform various tasks such as view node details or create relationships. Refer to [Table 3–1](#) for descriptions of each action icon available.

Table 3–1 Action Icons

Action Icon	Description
	<p>Select Tool - With the Select tool, you can click on nodes or relationships to select them. A selected node or relationship becomes highlighted to distinguish it from other elements on the map.</p> <p>Double-clicking a node displays the node's details.</p> <p>Double-clicking a relationship displays the relationship's details.</p> <p>You can click and drag to select multiple nodes and relationships.</p>
	Zoom In - Click this action to zoom in on the current display area.
	Zoom Out - Click on this action to zoom out from the current display area.
	Zoom Selection Tool- With the Zoom Selection tool selected, you can click and drag over the area of the map you want to enlarge.
	Zoom To Fit - Click this action to return the map to its default magnification.
	Pan Tool - With the Pan Tool selected, you can click and drag within the display area to move the map.
	View Node Types - Click this action to display the Node Type List screen, where you can create, modify or delete node types. For more information about configuring node types, see Section 3.1.3, "Defining Node Types" .

Table 3–1 Action Icons

Action Icon	Description
	View Relationship Types - Click this action to display the Relationship Type List screen, where you can create, modify or delete relationship types. For more information about configuring relationship types, see Section 3.1.5, "Defining Relationship Types" .
	Create Distribution Group - With one or more nodes selected on the map, clicking this action displays the Create Distribution Group screen. For more information about creating a distribution group, see Section 3.1.2.1, "Creating a Distribution Group" .
	View Distribution Groups - Click this action to display the Product Sourcing Distribution Group screen, where you can create, modify, or delete distribution groups. For more information about defining distribution groups, see Section 3.1.2, "Defining Distribution Groups" .
	Create Node - Click this action to display the Create Node screen, where you can create a node organization. For more information about defining nodes, see Section 3.1.4, "Defining Nodes" .
	View Node Details - With a node selected on the map, clicking this action displays the Node Details screen. For more information about viewing and modifying node details, see Section 3.1.4.2, "Modifying a Node" .
	Create Single Relationship - With two nodes selected on the map, clicking this action displays the Relationship Details screen, where you can create a relationship between the nodes. For more information about defining relationships, see Section 3.1.6, "Defining Relationships" .
	Create Relationships - With two or more nodes selected on the map, clicking this action displays the Create Relationships screen when you can create multiple relationships at once. For more information about defining relationships, see Section 3.1.6, "Defining Relationships" .

Table 3–1 Action Icons

Action Icon	Description
	View Relationship Details - With a relationship selected, clicking this action displays the Relationship Details screen, where you can view or modify relationships. For more information about viewing or modifying relationships, see Section 3.1.6.2, "Modifying a Relationship" .
	Remove Relationships - With one or more relationships selected, clicking this action deletes the selected relationship(s). For more information about deleting relationships, see Section 3.1.6.3, "Deleting a Relationship" .

Filter Criteria

The Filter Criteria enables a user to specify what entities display on the map. Users can select or deselect what displays from a list of node types, relationship types and distribution groups.

3.1.1.1 Using Filter Criteria

To use filter criteria:

- 1. If the Filter Criteria panel is hidden, it can be made visible by clicking on the UP arrow in the bottom-left corner of the work area.
- 2. Enter information into the applicable fields. Refer to [Table 3–2](#) for field value descriptions.
- 3. Once you have specified your filter criteria, select . The Map View is updated with your filter criteria.

Upon clicking , your filter criteria is saved as a search. When revisiting the Fulfillment Network Model, the most recently saved filter criteria and view is used.

Table 3–2 Filter Criteria Panel

Field	Description
Node Type	<p>The node type panel is dynamically populated with the node types you have defined. Check the node types you want to view, and uncheck the node types you want to hide.</p> <p>For more information about defining node types, see Section 3.1.3, "Defining Node Types".</p>
Relationship Type	<p>The relationship type panel is dynamically populated with the relationship types you have defined. Check the relationship types you want to view, and uncheck the relationship types you want to hide.</p> <p>Note: Relationships only appear on the map if its To and From nodes belong to a node type that has been selected in the node type panel.</p> <p>For more information about defining relationship types, see Section 3.1.5, "Defining Relationship Types".</p>
Highlight Distribution Group	<p>Select a distribution group from the drop-down list to be highlighted on the map.</p> <p>Note: Highlighted nodes only appear on the map if the nodes belong to a node type that has been selected in the node type panel.</p> <p>For more information about defining distribution groups, see Section 3.1.2, "Defining Distribution Groups".</p>

3.1.2 Defining Distribution Groups

You can create a set of nodes that can be used when determining sourcing. You can define distribution groups that establish the ship node determination process based on priority.

Select one of the following tasks:

- [Creating a Distribution Group](#)
- [Modifying a Distribution Group](#)
- [Deleting a Distribution Group](#)

3.1.2.1 Creating a Distribution Group

To create a distribution group from the Fulfillment Network Model screen:

- 1. Using the Select tool, select the nodes on the map that you want to include in the distribution group.
- 2. Select the Create Distribution Group action icon. The Create Distribution Group screen displays.
- 3. Enter information into the applicable fields. Refer to [Table 3–3](#) for field value descriptions.
- 4. Click .

Create Distribution Group

Distribution Group

Description

Node List

Node	Description
Append	Append
newnode	newnode

Table 3–3 Create Distribution Group Screen

Field	Description
Distribution Group	Enter the name of the distribution group.
Description	Enter a description for the distribution group.
Node List	
The node list displays the nodes that were selected in the Fulfillment Network Model. These nodes are added to this distribution group.	
Node	The name of the node.
Description	The description for the node.

Note: You can also create distribution groups without using the Fulfillment Network Model. For more information about creating distribution groups by selecting nodes from a list of nodes, see [Section 3.4.8.1, "Creating a Distribution Group"](#).

3.1.2.2 Modifying a Distribution Group

To modify a distribution group from the Fulfillment Network Model screen:

- 1. Select the View Distribution Groups action icon. The Product Sourcing Distribution Group screen displays.
- 2. Select the applicable distribution group from the list and choose . The Distribution Group Details screen displays.
- 3. Enter information into the applicable fields. Refer to [Table 3–18](#) for field value descriptions.
- 4. Click .

Product Sourcing Distribution Groups   	
Group ID	Description
DG1-E	DG1-E
DGroup	DGroup
Distr1	Distr1
d1	d1
di	di2
grp	grp

3.1.2.3 Deleting a Distribution Group

To delete a distribution group from the Fulfillment Network model screen:

- 1. Select the Distribution Group List action icon. The Product Sourcing Distribution Group screen displays.
- 2. Select the applicable distribution group from the list and choose .

3.1.3 Defining Node Types

You can define node types to classify nodes. You can use node types to define node relationships, and set inventory rules. For more information about defining inventory node type rules, see the *Sterling Global Inventory Visibility Configuration Guide*.

Select one of the following tasks:

- [Creating a Node Type](#)
- [Modifying a Node Type](#)
- [Deleting a Node Type](#)

3.1.3.1 Creating a Node Type

To create a node type from the Fulfillment Network Model screen:

1. Select the View Node Types action icon. The Node Type List screen displays.
2. Choose . The Node Type Detail screen displays.
3. Enter information into the applicable fields. Refer to [Table 3–4](#) for field value descriptions.
4. Click .

Table 3–4 Node Type Details

Field	Description
Node Type	Enter a name for the node type.
Description	Enter a description for the node type.

3.1.3.2 Modifying a Node Type

To modify a node type from the Fulfillment Network Model screen:

1. Select the View Node Types action icon. The Node Type List screen displays.
2. Select the applicable node type from the list and choose . The Node Type Detail screen displays.
3. Enter information into the applicable fields. Refer to [Table 3–4](#) for field value descriptions.
4. Click .

3.1.3.3 Deleting a Node Type

To delete a node type from the Fulfillment Network Model screen:

1. Select the View Node Types action icon. The Node Type List screen displays.
2. Select the applicable node type from the list and choose .

3.1.4 Defining Nodes

You can use the Fulfillment Network Model to define node organizations. For more information about participant modeling, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

Note: Nodes created through the Fulfillment Network Model screen are automatically defined as child organizations of the Enterprise that the fulfillment network model belongs to.

Select one of the following tasks:

- [Creating a Node](#)
- [Modifying a Node](#)

3.1.4.1 Creating a Node

To create a node from the Fulfillment Network Model screen:

1. Select the Create Node action icon. The Create Node screen displays.
2. Enter information into the applicable fields. Refer to [Table 3–5](#) for field value descriptions.

3. Click .

Table 3–5 Create Node Screen

Field	Description
Organization Code	Enter a unique code that identifies the node.
Organization Name	Enter the name of the node.
DUNS Number	Enter a unique nine-digit identification sequence, which provides unique identifiers of single business entities. The Sterling Multi-Channel Fulfillment Solution does not associate any logic with the DUNS number.

Table 3–5 Create Node Screen

Field	Description
Account Number With Hub	If the node is not the Hub, enter the account number that the node has with the Hub.
Locale	Select the node's geographic location.
Parent Organization	Select the node's parent organization.
Primary Enterprise	<p>If the node is not an Enterprise, select the applicable primary Enterprise. The primary enterprise is defaulted on the entry point order console screens (for example, on search screens and create screens).</p> <p>On the organization details screen, when creating or modifying a node organization, the actions that appear on the primary info tab of the node attributes tab are the actions created for that enterprise. Whenever any enterprise level configuration is retrieved in the back-end business logic for a specific organization, the rules are always retrieved for the primary enterprise of that organization. For more information, refer to the <i>Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide</i>.</p>

Table 3–5 Create Node Screen

Field	Description
Node Type	Select the node type for this node.
Address and Contact Info	<p>The address and contact information for this node organization.</p> <p>Choose  to enter an address.</p> <p>Choose the Contact tab to view additional contact information.</p> <p>You can also specify latitude and longitude coordinates for this address. If specified for a node, these coordinates are used to plot the node on the Fulfillment Network Model.</p> <p>Latitude and longitude need to be entered using decimal format with a range of -90 to +90 for latitude and -180 to +180 for longitude.</p> <p>Note: When latitude and longitude coordinates have not been specified, the Sterling Multi-Channel Fulfillment Solution plots the node using the zip code specified in the address details.</p> <p>Specifying latitude and longitude coordinates overrides the plotting of a node by zip code location.</p>

3.1.4.2 Modifying a Node

To modify a node’s details from the Fulfillment Network Model screen:

- 1. Double-click on the applicable node in the map view, or select the applicable node in the map view and select the Node Details action icon. The Organization Details screen displays.

For more information about defining node attributes, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.
- 2. Enter information into the applicable fields.
- 3. Click .

3.1.5 Defining Relationship Types

You can define relationship types to classify relationships.

Select one of the following tasks:

- [Creating a Relationship Type](#)
- [Modifying a Relationship Type](#)
- [Deleting a Relationship Type](#)

3.1.5.1 Creating a Relationship Type

To create a relationship type:

1. Select the View Relationship Types action icon. The Relationship Type List screen displays.
2. Choose . The Relationship Type Detail screen displays.
3. Enter information into the applicable fields. Refer to [Table 3–6](#) for field value descriptions.
4. Click .

Table 3–6 Relationship Type Detail Screen

Field	Description
Relationship Type	Enter the name of the relationship type.
Description	Enter a description for the relationship type.

Table 3–6 Relationship Type Detail Screen

Field	Description
From Name	Enter a From Name. The From Name is used to identify the From Location for this relationship type. For example, in a "Store Replenishment" relationship type, the From Name could be "Distribution Center".
To Name	Enter a To Name. The To Name is used to identify the To Location for this relationship type. For example, in a "Store Replenishment" relationship type, the To Name could be "Store".

3.1.5.2 Modifying a Relationship Type

To modify a relationship type:

1. Select the View Relationship Types action icon. The Relationship Type List screen displays.
2. Select the applicable relationship type from the list and choose . The Relationship Type Detail screen displays.
3. Enter information into the applicable fields. Refer to [Table 3–6](#) for field value descriptions.
4. Choose .

3.1.5.3 Deleting a Relationship Type

To delete a relationship type from the Fulfillment Network model screen:

1. Select the View Relationship Types action icon. The Relationship Type List screen displays.
2. Select the applicable relationship type from the list and choose .

3.1.6 Defining Relationships

You can define relationships between two nodes.

Select one of the following tasks:

- [Creating a Relationship](#)
- [Modifying a Relationship](#)

- [Deleting a Relationship](#)

3.1.6.1 Creating a Relationship

You can create a single relationship between two nodes.

To create a single relationship between two nodes:

1. Select the Add Single Relationship action icon.
2. On the map, click on the From Node. A line is extended from that node.
3. Click on the To Node to connect the From Node to the To Node. The Relationship Type List displays.
4. From the Relationship Type List, select the relationship type for this relationship and choose Select.

You can also create multiple relationships of the same type from one node to several other nodes, or from several nodes to one node.

To create multiple relationships of the same relationship type.

1. Using the Select tool, select the From Node(s) and To Node(s) between which you want to create the same relationship.
2. Select the Add Relationships action icon. The Relationships Creation Criteria Details window displays.
3. Enter information into the applicable fields. Refer to [Table 3–7](#) for field value descriptions.
4. Choose OK.

Relationships Creation Criteria Details

Node Selection Criteria

Node

Selected Node Is ☒ From Node ☐ To Node

Relationship Type

OK Cancel

Table 3–7 Relationships Creation Criteria Details Screen

Field	Description
Node	<p>If you are creating relationships from one node to many nodes, select the single From Node from the dropdown list.</p> <p>If you are creating relationships from many nodes to one node, select the single To Node from the dropdown list.</p>
Selected Node Is	<p>From Node - choose this option if the node selected in the "Node" field is the From Node for the relationships.</p> <p>To Node - choose this option if the node selected in the "Node" field is the To Node for the relationships.</p>
Relationship Type	Select the relationship type for the relationships.

3.1.6.2 Modifying a Relationship

To modify a relationship:

1. On the map, double-click the relationship you want to modify. The relationship details screen displays.
2. Enter information into the applicable fields. Refer to [Table 3–8](#) for field value descriptions.
3. Choose .

The screenshot shows a software window titled "Relationship Details". At the top, there is a "Relationship Type" dropdown menu set to "Transfer" and a "+" icon. Below this are "From Node" and "To Node" dropdown menus, with "TP - 3PL" and "RP - a Warehouse" selected respectively. A "Transfer Schedules" section is visible below, featuring a table with columns for "Effective From", "Effective To", and days of the week (Sun, Mon, Tue, Wed, Thu, Fri, Sat). The table is currently empty. At the bottom left of the window, it says "Results 0 of 0".

Table 3–8 Relationship Details Window

Field	Description
Relationship Type	Select a relationship type for this relationship from the drop-down list.
From Node	Select the node from which items are sent. For the Relationship To Node tab, this option is defaulted to the node you are configuring and disabled.
To Node	Select the node at which transfer order items are received. For the Relationship From Node tab, this option is defaulted to the node you are configuring and disabled.
Transfer Schedules	
Effective From	Indicates the date on which the schedule takes effect.
Effective To	Indicates the date on which the specified transfer schedule stops being effective.
<i>Days of the Week</i>	Indicates which days are eligible for items to ship on during the transfer schedule.

3.1.6.3 Deleting a Relationship

To delete a relationship:

1. On the map, select the relationship you want to delete. The relationship displays highlighted.
2. Select the Remove Relationship action icon.
3. Click OK to confirm the deletion.

3.2 Defining Item Level Controls

You can define the notification and promising rules for a particular item. These rules are used to determine node scheduling. For more information about scheduling and scheduling rules, see [Section 3.4.5, "Defining Scheduling Rules"](#).

To define item level controls:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Item Level Controls. The Product Item Search window displays in the work area.
2. Enter the applicable search criteria and choose . A list of product items displays.
3. Select the applicable item and choose . The Item Level Control pop-up window displays.
4. Enter information into the applicable fields. Refer to [Table 3–9](#) for field value descriptions.
5. Choose .

Release an order for this item days before expected time of shipment

Minimum notification time required at node is hours prior to expected time of shipment

ATP Rule

Table 3–9 Item Level Control Pop-Up Window

Field	Description
Release an order for this item n days before expected time of shipment	Enter how many days before an order's expected ship date a node needs to receive communication to ship the item.
Minimum notification time required at this node is n hours prior to expected time of shipment	Enter the minimum business hours it takes to ship the item once an order has been released to the node.
ATP Rule	Select the default available-to-promise rule to use to determine availability for the item. For more information about configuring ATP rules, see the <i>Sterling Global Inventory Visibility Configuration Guide</i> .

3.3 Defining Node Level Controls

You can define the notification and promising rules for individual nodes that belong to the organization. These rules are used to determine node scheduling. You can also define the procurement transfer orders for the node, as well as view the transfer schedules of the other nodes it participates with. For more information about scheduling and scheduling rules, see [Section 3.4.5, "Defining Scheduling Rules"](#).

You can use the Node Level Controls branch for:

- [Defining a Node's Primary Order Promising Information](#)
- [Defining a Node's Relationships](#)

3.3.1 Defining a Node's Primary Order Promising Information

To define a node's primary order promising information:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Node Level Controls. The Ship Node Search window displays in the work area.
2. Enter the applicable search criteria and choose . A list of node displays.

3. Select the applicable node and choose . The Node Details pop-up window displays.
4. Enter information into the applicable fields. Refer to [Table 3–10](#) for field value descriptions.

Important: Any information entered in this window overrides any information previously defined for the node in Platform's Participant Modeling configuration. For more information about configuring a node organization, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

5. Choose .

Figure 3–1 Node Details

The **Node Details** dialog box is shown with the **Primary Information** tab selected. It contains the following fields and options:

- Node needs to be notified at least hours prior to expected time of shipment
- Do not schedule an order to this node more than days before expected time of shipment
- Release an order to this node days before expected time of shipment
- Receiving Calendar Shipping Calendar
- Receipt Processing Time (Hours) Receipt Processing Time For Forwarding (Hours)
- ☒ Track Inventory ☐ Use End Of Shift Time
- ☐ Work Order Creation Is Allowed ☒ Substitution Is Allowed
- ☐ Procure/Transfer to this Node when inventory is not available
- Node Can Ship To
 - ☒ Any Address
 - ☒ All Nodes ☐ Specific Nodes Of Type
 - ☐ Distribution Center ☐ Store

Table 3–10 Node Details Pop-Up Window, Primary Information Tab

Field	Description
Node needs to be notified at least <i>n</i> hours prior to expected time of shipment	Enter the minimum number of business hours it takes to ship an order once it has been released to the node.
Do not schedule an order to this node more than <i>n</i> days before expected time of shipment	Enter the maximum number of business days that a schedule can be sent to a node for it to be fulfilled. This number is used when performing earliest schedule date calculations. Note: This parameter is only considered if the node is pre-specified on the order line.
Release an order to this node <i>n</i> days before expected time of shipment	Enter the number of business days by which communication to ship an order from a node must be made before the expected shipment date.
Receiving Calendar	Select the calendar to use to determine the available shifts for receiving deliveries at the node. The calendars of the node as well as the calendars of the primary enterprise of the node display in this drop-down list.
Shipping Calendar	Select the calendar to use to determine the available shifts during which the node can ship orders. The calendars of the node as well as the calendars of the primary enterprise of the node display in this drop-down list.
Receipt Processing Time (Hours)	Enter the receipt processing time for this node in hours.
Receipt Processing Time For Forwarding(Hours)	Enter the receipt processing time for forwarding in hours.
Track Inventory	Select Track Inventory if you want the ship node to track minimum and maximum inventory levels for an item.

Table 3–10 Node Details Pop-Up Window, Primary Information Tab

Field	Description
Use End Of Shift Time	<p>Check this box if you want the node to base shipment time by the end of the next feasible shift.</p> <p>Uncheck this field if you want the node to base shipment time by any given node parameters, such as Minimum Notification Time, and the time a shipment can actually be shipped.</p> <p>For example, a node works five days a week, with two shifts, 8AM - 4PM and 4PM - 8PM.</p> <p>The node's Minimum Notification Time is set to 2 hours.</p> <p>If an order is sent to a node on Friday at 1PM, the order is scheduled to ship on same day at 4PM if Use End Of Shift Time box is checked. The order is scheduled to ship on the same day at 3PM if Use End Of Shift Time box is unchecked.</p> <p>If an order is sent to a node on Friday at 3PM, the order scheduled to ship on the same day at 8PM if Use End Of Shift Time box is checked. The order is scheduled to ship on the same day at 5PM if Use End Of Shift Time box is unchecked.</p> <p>Note: Use End Of Shift Time is only applicable to nodes that use a shipping calendar that has shift times defined.</p> <p>Note: Use End Of Shift Time is only applicable for product lines.</p>
Work Order Creation Is Allowed	Choose this box if you want to use Work Orders to support compliance services at this node. Work Orders describe the service activities to customize items based on a buyer's requests.
Substitution Is Allowed	Choose this if substitution of product items within an order is allowed.
Procure/Transfer to this Node when Inventory is not available	Check this box if the node can accept procurement/transfer orders. For more information about procurement orders, see Section 3.4.13, "Defining Procurement Rules" .
Node Can Ship To	
Any Address	Check this box if this node can ship to any address.

Table 3–10 Node Details Pop-Up Window, Primary Information Tab

Field	Description
All Nodes	Select this option if this node can ship to all nodes.
Specific Nodes of Type	If this node can only ship to nodes with a specific node type, select this option, and check the applicable node types available. For more information about creating node types, see the <i>Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide</i> .

3.3.2 Defining a Node's Relationships

A transfer order is a type of chained order that is created when a node that belongs to the organization you are configuring needs to replenish their stock from another node within the organization to fulfill an order. A chained order is an order that is linked to a parent order in which the lifecycle of one effects the other.

You can define a relationship between the node you are defining and another node. Within this relationship you can define a transfer schedule, including the transit time to procure items from a node, on a day-of-week basis. The schedule is used for calculating expected dates.

You can define a transfer schedule that determines when items can be shipped from one node to another, including the transit time to procure items from a node, on a day-of-week basis. The schedule is used for calculating expected dates.

You can create, modify, and delete relationships.

3.3.2.1 Creating a Node Relationship

To create a node relationship:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Node Level Controls. The Ship Node Search window displays in the work area.
2. Enter the applicable search criteria and choose . A list of nodes displays.
3. Select the applicable node and choose . The Node Details pop-up window displays.

4. To create a node relationship from the node to another node, choose the Relationship To Node tab. To create a node relationship to the node from another node, choose the Relationship To Node tab.
5. Choose . The Relationship Details pop-up window displays.
6. Enter information into the applicable fields. Refer to [Table 3–11](#) for field value descriptions.
7. Choose .

Table 3–11 Relationship Details Pop-Up Window

Field	Description
Relationship Type	Select a relationship type for this relationship from the drop-down list.
From Node	Select the node from which items can be procured. For the Relationship To Node tab, this option is defaulted to the node you are configuring and disabled.
To Node	Select the node to which transfer order items are sent. For the Relationship From Node tab, this option is defaulted to the node you are configuring and disabled.

Table 3–11 Relationship Details Pop-Up Window

Field	Description
Transfer Schedules	
Effective From	Indicates the date on which the schedule takes effect.
Effective To	Indicates the date on which the specified transfer schedule stops being effective.
Days of the Week	Indicates on which days during the transfer schedule items are eligible for items to ship.

3.3.2.2 Modifying a Node Relationship

To modify a node relationship:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Node Level Controls. The Ship Node Search window displays in the work area.
2. Enter the applicable search criteria and choose . A list of nodes displays.
3. Select the applicable node and choose . The Node Details pop-up window displays.
4. To modify a node relationship from the node to another node, choose the Relationship To Node tab. To modify a node relationship to the node from another node, choose the Relationship To Node tab.
5. From the table, locate the applicable relationship and choose . The Relationship Details pop-up window displays.
6. Enter information into the applicable fields. Refer to [Table 3–11](#) for field value descriptions.
7. Choose .

3.3.2.3 Deleting a Node Relationship

To delete a node relationship:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Node Level Controls. The Ship Node Search window displays in the work area.
2. Enter the applicable search criteria and choose . A list of nodes displays.

3. Select the applicable node and choose . The Node Details pop-up window displays.
4. To delete a node relationship from the node to another node, choose the Relationship To Node tab. To modify a node relationship to the node from another node, choose the Relationship To Node tab.
5. From the table, locate the applicable relationship choose .

3.4 Defining Sourcing and Scheduling Rules

You can define the sourcing and scheduling rules for product items, delivery services, and provided services.

You can use the Sourcing and Scheduling branch for:

- [Defining Fulfillment Types](#)
- [Defining Basic Sourcing Configuration](#)
- [Creating an Order Sourcing Classification](#)
- [Defining Sourcing Region Selection](#)
- [Defining Scheduling Rules](#)
- [Configuring Landed Cost Optimization](#)
- [Defining Forwarding/Transfer Rules](#)
- [Defining Distribution Groups for Product Items](#)
- [Defining Sourcing Rules for Product Items](#)
- [Defining Sourcing Rules for Delivery Service Items](#)
- [Defining Distribution Groups for Provided Service Items](#)
- [Defining Sourcing Rules for Provided Service Items](#)
- [Defining Procurement Rules](#)

3.4.1 Defining Fulfillment Types

You must associate fulfillment types with sourcing and procurement rules. Fulfillment types are used to define custom requirements that allow you to determine sourcing and procurement locations based on parameters that the Sterling Multi-Channel Fulfillment Solution does not provide logic for, such as, customers and order type. For example, you

want to source or procure orders for a special promotion from a particular node. You can create a fulfillment type called Promotion that you can associate with a sourcing or procurement rule that sources from the node.

Important: The sourcing rules for product sourcing and procurement must have the same fulfillment type for sourcing setup to work properly.

You can use the Fulfillment Types branch for:

- [Creating a Fulfillment Type](#)
- [Modifying a Fulfillment Type](#)
- [Deleting a Fulfillment Type](#)

3.4.1.1 Creating a Fulfillment Type

To create a fulfillment type:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Fulfillment Types. The Fulfillment Types window displays in the work area.
2. Choose . The Fulfillment Types Details pop-up window displays.

The screenshot shows a light gray dialog box titled 'Fulfillment Types Details'. Inside the dialog, there is a white rectangular area containing three text input fields. The first field is labeled 'Fulfillment Type', the second is labeled 'Short Description', and the third is labeled 'Long Description'. Each label is to the left of its corresponding text box.

3. In Fulfillment Type, enter the name of the fulfillment type.

4. In Short Description, enter a brief description of the fulfillment type.
5. In Long Description, enter a more detailed description of the fulfillment type.
6. Choose .

3.4.1.2 Modifying a Fulfillment Type

To modify a fulfillment type:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Fulfillment Types. The Fulfillment Types window displays in the work area.
2. Select the applicable fulfillment type and choose . The Fulfillment Types Details pop-up window displays.
3. In Short Description, enter a brief description of the fulfillment type.
4. In Long Description, enter a more detailed description of the fulfillment type.
5. Choose .

3.4.1.3 Deleting a Fulfillment Type

To delete a fulfillment type:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Fulfillment Types. The Fulfillment Types window displays in the work area.
2. Select the applicable fulfillment type and choose .

3.4.2 Defining Basic Sourcing Configuration

You can determine whether or not the organization you are configuring uses sourcing rules. When an organization only has one or two nodes from which they source all of their products and services, you may not need to define complex sourcing configurations. However, when an organization has many nodes and suppliers with whom they interact, you would want to define sourcing rules to ensure that the optimal nodes are used to handle shipping and service fulfillment.

Note: In cases when you do not define sourcing rules for an organization but may have more than one node, the system still uses optimization logic, such as distance to ship to location, to determine the appropriate node to use.

To configure basic sourcing rules:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Basic Configuration. The Sourcing Basic Configuration window displays in the work area.
2. Enter information into the applicable fields. Refer to [Table 3–12](#) for field value descriptions.
3. Choose .

Default Fulfillment Type to be used when not specified on the order ▼

Products being shipped

☐ Use any of my nodes for shipping the product

☒ Find node based on sourcing rule setup

Default Distribution Rule to be used when no sourcing rule found ▼

Products being delivered

☐ Use any node for delivering the product

☒ Find node based on sourcing rule setup

Provided Services

☐ Use any node that can provide the service

☒ Find node based on sourcing rule setup

Table 3–12 Sourcing Basic Configuration Window

Field	Description
Default Fulfillment Type to be used when not specified on the order	Select the fulfillment type you want to be use by default for sourcing when no fulfillment type is specified on the order. For more information about configuring fulfillment types, see Section 3.4.1, "Defining Fulfillment Types" .
Products being shipped	
Use any of my nodes for shipping the product	Select this option if you do not want to define product item sourcing rules for the organization you are configuring. If you select this option, the system optimizes product sourcing based on the node(s) you have defined for the organization. Important: If an Enterprise inherits sourcing rules from another organization, they inherit the parent Enterprise's nodes when they select this option.
Find node based on sourcing rule setup	Select this option if you want to use configured product item sourcing rules with the organization you are configuring. For more information about configuring product item sourcing rules, see Section 3.4.9, "Defining Sourcing Rules for Product Items" .
Default Distribution Rule to be used when no sourcing rule found	Select the default distribution group you want to use to source product items when the system cannot determine an appropriate sourcing rule to use for an order. A distribution group is a defined set of nodes and source organizations. Note: Sterling Commerce recommends you to configure a default Distribution Rule for each demand owner. The default Distribution Rule is used to map unassigned demands to supply. If you do not configure the default Distribution Rule, the APIs may return results as AVAILABLE, causing orders to get accepted even though they cannot be actually sourced. For more information about configuring distribution groups for product items, see Section 3.4.8, "Defining Distribution Groups for Product Items" .
Products being delivered	
Use any node for delivering the product	Select this option if you want the system to select any delivery location that services a given delivery region.

Table 3–12 Sourcing Basic Configuration Window

Field	Description
Find nodes based on sourcing rule setup	Select this option if you want to use configured delivery service item sourcing rules with the organization you are configuring. For more information about configuring delivery service item sourcing rules, see Section 3.4.9, "Defining Sourcing Rules for Product Items" .
Provided Services	
Use any node that can provide the service	Select this option if you want the system to select any provided service location that services a given shipping region.
Find node based on sourcing rule setup	Select this option if you want to use configured provided service item sourcing rules with the organization you are configuring. For more information about configuring provided service item sourcing rules, see Section 3.4.9, "Defining Sourcing Rules for Product Items" .

3.4.3 Defining Order Sourcing Classifications

An order sourcing classification represents a customizable sourcing criteria used to determine which ship node to ship a product from, at scheduling time. For more information about order sourcing classifications, see the *Sterling Multi-Channel Fulfillment Solution Product Concepts*.

You can use the Order Sourcing Classifications branch for:

- [Creating an Order Sourcing Classification](#)
- [Modifying an Order Sourcing Classification](#)
- [Deleting an Order Sourcing Classification](#)

3.4.3.1 Creating an Order Sourcing Classification

To create or modify an order sourcing classification:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Order Sourcing Classifications. The Sourcing Classifications window displays in the work area.

2. Click . The Order Sourcing Classification Details pop-up window displays.

The image shows a pop-up window titled "Order Sourcing Classification Details". It has a light blue header bar with a save icon in the top right corner. The main area is white and contains three text input fields. The first field is labeled "Order Sourcing Classification", the second is labeled "Short Description", and the third is labeled "Long Description". Each label is to the left of its corresponding input field.

3. In Order Sourcing Classification, enter the name of the sourcing classification.
4. In Short Description, enter the name of the short description.
5. In Long Description, enter the name of the long description.
6. Click .

3.4.3.2 Modifying an Order Sourcing Classification

To modify an order sourcing classification:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Order Sourcing Classifications. The Sourcing Classifications window displays in the work area.
2. Select the applicable sourcing classification and click . The Order Sourcing Classification Details pop-up window displays.
3. In Short Description, enter the name of the short description.
4. In Long Description, enter the name of the long description.
5. Click .

3.4.3.3 Deleting an Order Sourcing Classification

To delete an order sourcing classification:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Order Sourcing Classifications. The Order Sourcing Classifications window displays in the work area.
2. Select the applicable order sourcing classification and click .

3.4.4 Defining Sourcing Region Selection

A region schema represents the complete set of regions defining a given geography. You can use Sourcing Region Selection to associate pre-existing region schemas for use within sourcing configuration. For more information about configuring region schemas, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

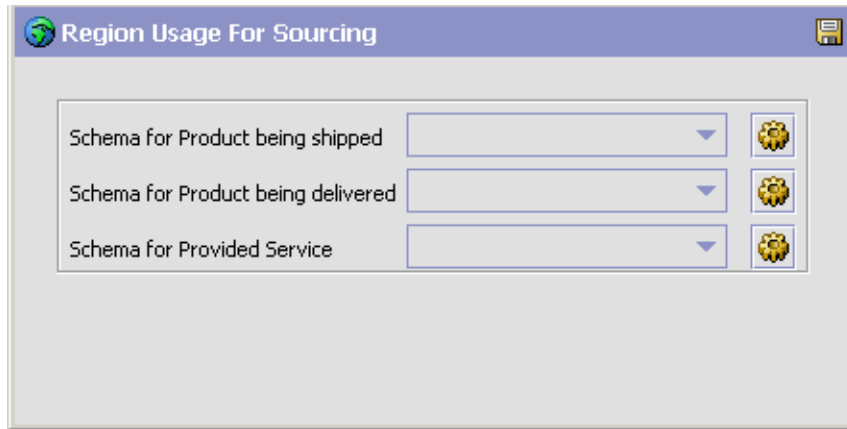

You can associate region schemas with the following:

- Shipped Product Region Schema - You can select a region schema that to be used when configuring the product specific sourcing rules. The regions within the selected region schema can then be associated with nodes or groups of nodes from which product items can be shipped to a destination.
- Delivery Region Schema - You can select a region schema to be used when configuring delivery service specific sourcing rules. The regions within the selected region schema can then be associated with nodes or groups of nodes that provide a given delivery service when a delivery is requested to the specific region.
- Provided Service Region Schema – You can select a region schema to be used when configuring provided service specific sourcing rules. The regions within the selected region schema be associated with nodes or groups of nodes that can provide a requested service when the service location is within the specific region.

Note: You can select the same region schema for product, delivery, and provided service sourcing configuration or you can select a different region schema for each if you would like to define a more granular region definition for any of the three.

To define sourcing region selection:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Sourcing Region Selection. The Region Usage For Sourcing pop-up window displays in the work area.

2. From Schema for Product being shipped, select the region schema you want to use for product item sourcing.
3. From Schema for Product being delivered, select the region schema you want to use for delivery service item sourcing.
4. From Schema for Provided Service, select the region schema you want to use for provided service item sourcing.

3.4.5 Defining Scheduling Rules

Scheduling rules determine shipping, inventory scheduling, and node preferences. When the Schedule time-triggered transaction schedules inventory, scheduling rules are used. You can have one scheduling rule for all orders or you can associate a specific scheduling rule with an order. This allows different scheduling rules to be used based on your business requirements.

There are three ways to assign a scheduling rule to an order:

- The scheduling rule is passed as part of the order data when creating an order.

- A customer service representative selects a scheduling rule from the Application Consoles.
- If a scheduling rule is not assigned by other means, the Sterling Multi-Channel Fulfillment Solution uses the default SYSTEM scheduling rule.

Important: When creating scheduling rules for Enterprises, there must always be one scheduling rule named SYSTEM to be used as a default throughout the system.

The scheduling rule can be passed as input to APIs that read inventory (AllocationRuleID), for example FindInventory. If not passed, the system searches for a scheduling rule named SYSTEM for the calling organization's primary enterprise. If a scheduling rule with the name SYSTEM is not found, the SYSTEM rule for the DEFAULT organization is used.

Therefore, while creating scheduling rules, a rule named SYSTEM should be created if the scheduling rule is not always passed as API input.

Note: The scheduling algorithm is based only on ship node priority and geography.

You can use the Scheduling Rules branch for:

- [Creating a Scheduling Rule](#)
- [Modifying a Scheduling Rule](#)
- [Deleting a Scheduling Rule](#)

3.4.5.1 Creating a Scheduling Rule

To create a scheduling rule:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling >

Scheduling Rules. The Scheduling Rules screen displays in the work area.

2. Choose . The Scheduling Rule Details screen displays.

 Scheduling Rule Details 

Primary Information

Scheduling Rule Scheduling Rule Description

Retry Intervals

If Product is Backordered, retry scheduling after this time (Hours)
If scheduling fails for any other reason retry scheduling:
For products, after this time (Hours)
For delivery/provided services, after this time (Hours)

Constraints

☐ Ship Complete
☐ Line Ship Complete
☐ Ship from Single Node
☐ Line Ship from Single Node

Inventory Controls

Consider Unplanned inventory after exhausting all sourcing options:
☒ Always
☐ Only during inquiry
☒ Apply On Hand Safety Factor To On Hand Inventory Availability
☒ Apply Future Safety Factor To Future Inventory Availability
☐ Cancel Order For Inventory Shortage

Lead Times

Maximum no. of days order can be shipped/delivered beyond its requested date
Maximum no. of days order can be scheduled before its ship date
Maximum no. of days to search service availability for

Reservations

☐ Allow Reservation During Scheduling
☒ Reserve Bundle Out Of Ratio
☒ Ignore Fill Quantity (Ship Complete)

Priority

☐ Consider distance between ship-to and ship-from locations for prioritization
Weightage given of Distance
Weightage given to Node

Optimize On

☒ Date
☐ Priority
☐ Cost, Number of Shipments

Additional Optimization Criteria

☐ When Optimizing On Cost, Combine Shipments In Day Intervals. This May Avoid Shipment Delay, But May Lead To Extra Cost
☒ Delay Shipment Against Current Inventory To Be Consolidated With Shipments Against Future Inventory
☒ Delay Procurements To Be Consolidated With Shipments Against Future Inventory

Backward Compatibility Controls

☐ Assume Infinite Inventory Availability Beyond Lead Time

3. Enter information into the applicable fields. Refer to [Table 3–13](#) for field value descriptions.
4. Choose .

Table 3–13 Scheduling Rule Details Screen

Field	Description
Primary Information	
Scheduling Rule	Enter the name of the scheduling rule.
Scheduling Rule Description	Enter a brief description of the scheduling rule.
Retry Intervals	
If Product is Backordered, retry scheduling after this time (Hours)	<p>Enter how many hours after an order has been backordered that the system should try to reprocess the order.</p> <p>Note: The minimum wait period for retrying to schedule an order is 30 minutes, even if the value specified is less than that. For instance, if the wait period is set to 0.2, the business logic of the Sterling Multi-Channel Fulfillment Solution still treats it as if it were 0.5.</p>
If scheduling fails for any other reason retry scheduling:	<p>For products, after this time (Hours) - Enter how many hours after which the Schedule time-triggered transaction should try to schedule a product item order line if the order line is not ready to schedule when it is initially picked up.</p> <p>For delivery or provided services, after this time (Hours) - Enter how many hours after which the Schedule time-triggered transaction should try to schedule a service item order line if the order line is not ready to schedule when it is initially picked up.</p>
Constraints	
Ship Complete	Check this box to ensure that all product lines in the promising inquiry request are either completely scheduled or not scheduled at all. However, lines could be sourced from different shipping locations.
Line Ship Complete	<p>Check this box to ensure that every product line on an individual line basis is either completely sourced or not sourced at all. However, lines could be sourced from different shipping locations.</p> <p>Note: The difference between this and the Ship Complete constraint is that this rule does not enforce that all lines of the request are completely sourced. A particular line can be sourced while another line of the same request could be backordered.</p>

Table 3–13 Scheduling Rule Details Screen

Field	Description
Ship from Single Node	Check this box to ensure that the request is sourced from a single node on a single date.
Line Ship from Single Node	Check this box to ensure that each individual line is sourced from a single node on the same date. Note: This rule does not enforce that all lines are shipped from the same node. A particular line may be completely shipped from node 1 while another line could be completely shipped from node 2.
Inventory Controls	
Always	Select this option to consider using unplanned inventory at both the inquiring and scheduling stages when other sourcing options have been exhausted. Note: In order to use unplanned inventory, the "Use Unplanned Inventory" flag must be set to "Yes" at the Item level.
Only During Inquiry	Select this option to consider using unplanned inventory only during the inquiring stage when other sourcing options have been exhausted. Note: In order to use unplanned inventory, the "Use Unplanned Inventory" flag must be set to "Yes" at the Item level.
Cancel Order for Inventory Shortage	Check this box if you want the system to cancel an order when there is an inventory shortage. When unchecked, the item is backordered.
Apply On Hand Safety Factor To On Hand Inventory Availability	Check this box to apply the on hand safety factor to on hand inventory availability. Note: For safety factors to apply, this control must also be checked for the supply type and node type. For more information on Safety Factors, refer to the <i>Sterling Global Inventory Visibility Configuration Guide</i> .

Table 3–13 Scheduling Rule Details Screen

Field	Description
Apply Future Safety Factor To Future Inventory Availability	<p>Check this box to apply the future safety factor to future inventory availability.</p> <p>Note: For safety factors to apply, this control must also be checked for the supply type and node type. For more information on Safety Factors, refer to the <i>Sterling Global Inventory Visibility Configuration Guide</i>.</p>
Lead Times	
Maximum no. of days order can be scheduled before its ship date	Enter a lead time for orders to be picked up by the Schedule agent.
Maximum no. of days order can be shipped/delivered beyond its requested date	<p>Enter the number of days after the requested ship date that an order can be released.</p> <p>Note: For tag controlled items, if demands are being matched against future inventory (purchase orders), during an existing supply and demand reallocation, the “Maximum no. of days order can be shipped/delivered beyond its requested date” rule is not considered. This may cause an existing order which was previously scheduled, to be backordered during release. To avoid this, if possible, set the ForwardConsumptionDays in the ATP rule equal to the value defined in the “Maximum no. of days order can be shipped/delivered beyond its requested date” rule.</p> <p>For more information, see that note in Table 3-5 “ATP Rules Details Pop-Up Window” for the Forward Consumption (Days) field, in the <i>Sterling Global Inventory Visibility Configuration Guide</i>.</p>
Maximum no. of days order can be scheduled before its ship date	Enter the maximum number of days before the ship date that an order can be scheduled.
Maximum no. of days to search service availability for	Enter the maximum number of days through which you want to look up service and slot availability.
Reservations	
Allow Reservation During Scheduling	Check this box to allow the items to be reserved while scheduling.

Table 3–13 Scheduling Rule Details Screen

Field	Description
Reserve Bundle Out of Ratio	Check this box to reserve components that are out of ratio for a bundle. This is applicable only when the bundle fulfillment mode is ShipTogether.
Ignore Fill Quantity (Ship Complete)	Check this box to allow the reservation of partial quantity of a line that has a ship complete constraint or to reserve the quantity that is less than the fill quantity.
Priority	
Consider distance between ship-to and ship-from locations for prioritization	Check this box to enable the geography-based distance calculations for choosing a ship node. Important: If you select this field, ensure Optimize On is set to Priority.
Weightage given of distance	Enter the weighting factor for distance. Once the distance between the ship-location and the ship node address is calculated using longitude and latitude, it is multiplied by this weighting factor. Enter any fractional number greater than, or equal to, zero. A value of 0 nullifies any distance considerations in the calculation.
Weightage given to Node	Enter the weighting factor for node priority. The ship node priority specified in the distribution group is multiplied by this weighting factor. Enter any fractional number greater than, or equal to, zero. A value of 0 nullifies any node priority considerations in the calculation. Important: For this weighting factor to be applied, distribution groups must be used to determine the set of possible ship nodes from which a product can be shipped.
Optimize On	
Date	Select this option for inventory scheduling to be optimized by date.
Priority	Select this option for inventory scheduling to be optimized by node priority.

Table 3–13 Scheduling Rule Details Screen

Field	Description
Cost, Number of Shipments	<p>Select this option for inventory scheduling to be optimized by number of shipments.</p> <p>Note: When landed cost optimization is enabled, it takes precedence over optimization by the number of shipments. When landed cost optimization is disabled, optimization by the number of shipments is used. For more information, refer to Section 3.4.6, "Configuring Landed Cost Optimization" on page 78.</p>
Additional Optimization Criteria	
When Optimizing On Cost, Combine Shipments In <number of days> Day Intervals. This May Avoid Shipment Delay, But May Lead To Extra Cost	<p>Check this box to combine the optimization based on both cost and specified number of days.</p> <p>In this case, enter the number of days up to which the optimization should be considered.</p>
Delay Shipment Against Current Inventory To Be Consolidated With Shipments Against Future Inventory.	<p>Check this box to delay shipments against the onhand inventory to be consolidated with the future inventory.</p> <p>This option can be chosen only when the "When Optimizing On Cost, Combine Shipments" box is checked.</p> <p>When this option is selected, the onhand inventory is kept on hold for the specified number of days to combine with shipments that include future inventory.</p> <p>If the future inventory is not received on or before the specified number of days, the onhand inventory is shipped individually.</p>
Delay Procurements To Be Consolidated With Shipments Against Future Inventory.	<p>Check this box to delay shipments when the inventory through transfers are available.</p> <p>This option can be chosen only when the "When Optimizing On Cost, Combine Shipments" is checked.</p> <p>When this option is selected, the inventory through transfers is kept on hold for the specified number of days to combine with shipments that include future inventory.</p> <p>If the future inventory is not received on or before the specified days, the inventory is shipped individually.</p>

Table 3–13 Scheduling Rule Details Screen

Field	Description
Backward Compatibility Controls	
Assume Infinite Inventory Availability Beyond Lead Time	<p>Check this box if you want the system to consider any inventory beyond the lead time + processing time frame to be infinite.</p> <p>Note: This flag should only be used for backward compatibility purposes. New customers should not use this flag.</p>

3.4.5.2 Modifying a Scheduling Rule

To modify a scheduling rule:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Scheduling Rules. The Scheduling Rules screen displays in the work area.
2. Select the applicable scheduling rule and choose . The Scheduling Rule Details screen displays.
3. Modify information into the applicable fields. Refer to [Table 3–13](#) for field value descriptions.
4. Choose .

3.4.5.3 Deleting a Scheduling Rule

To delete a scheduling rule:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Scheduling Rules. The Scheduling Rules screen displays in the work area.
2. Select the applicable scheduling rule and choose .

3.4.6 Configuring Landed Cost Optimization

The Sterling Multi-Channel Fulfillment Solution enables you to specify landed cost parameters to be considered for evaluation during order promising, if the "Cost, Number of Shipments" optimization type has been selected in your scheduling rule. For more information about

optimization types, see [Section 3.4.5, "Defining Scheduling Rules"](#), or the *Sterling Multi-Channel Fulfillment Solution Product Concepts*.

Promising selects the sourcing option with the least landed cost. Landed cost is comprised of item cost, handling cost, and transportation cost, which can be configured separately.

Note: When landed cost optimization is enabled, it takes precedence over optimization by the number of shipments. When landed cost optimization is disabled, optimization by the number of shipments is used.

To configure landed cost optimization:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Landed Cost. The Landed Cost window displays in the work area.
2. Enter information into the applicable fields. Refer to [Table 3–14](#) for field value descriptions.
3. Choose .

Figure 3–2 Landed Cost

☒ Convert Node Priority Into Cost

Node Priority Cost Factor Rupees

Table 3–14 Landed Cost Window

Field	Description
Use Landed Cost	Check this box to enable the use of landed cost optimization. Uncheck this box to disable all options in this window.
Use Item Cost	Check this box to indicate that item cost should be used when computing landed cost.
Use Transportation Cost	Check this box to indicate that transportation cost criteria should be used when computing landed cost.
Transfers	

Table 3–14 Landed Cost Window

Field	Description
Transfer Cost Factor Currency	Select the currency used for the transfer cost factor from the drop-down list.
Transfer Cost Factor ____ Per ____ Per ____ for Internal Transfers	Enter the transfer cost factor and select the correct UOMs for internal transfers. The internal transfer cost factor is used to calculate transfer cost when there is a transfer schedule between two nodes.
Transfer Cost Factor ____ Per ____ Per ____ for External Transfers	Enter the transfer cost factor and select the correct UOMs for external transfers. The external transfer cost factor is used when a transfer schedule does not exist between two nodes.
Last Leg Transportation	
Outbound Constraints	Choose  to open the Outbound Constraints window, where you can configure outbound constraints and define routing guides. For more information about outbound constraints, see Section 5.4, "Defining Outbound Constraints" .
For Transportation Cost Based On Number Of Cartons, Assume Volume Per Carton To Be ____	Enter a volume and volume UOM to be used when transportation cost is based on the number of cartons.
Use Handling Cost	Check this box to indicate that handling cost should be used when computing landed cost. Unchecking this box disables the Enterprise Node Type Rules inner panel. For more information about defining enterprise node type rules, see Section 3.4.6.2, "Defining Enterprise Node Type Rules" .

Table 3–14 Landed Cost Window

Field	Description
Convert Node Priority into Cost	Check this box to use the priority of the node to be converted into cost. When this box is checked, the node with a lower priority is considered when optimizing on cost.
Node Priority Cost Factor	Enter the cost factor for the node. You can enter values to this field only when the "Convert Node Priority into Cost" is enabled. Choose the currency for the cost from the drop-down list. To create a new currency, choose  and enter information to the applicable fields. For more information about defining the currency for the node priority cost factor, see Currency Details .

3.4.6.1 Currency Details

You can define the currency for the node priority cost factor in the currency details pop-up window.

Figure 3–3 Currency Details

 Currency Details 

Currency

Description

Prefix Symbol

Expiration Date

Table 3–15 Currency Details

Field	Description
Currency	Enter the currency in which you want to define the cost factor.
Description	Enter a description for the currency.
Prefix Symbol	Enter the prefix symbol for the currency defined.
Postfix Symbol	Enter the postfix symbol for the currency defined.
Euro Member	Check this box if you have defined the currency as a Euro currency member.
Expiration Date	Enter the date on which the Euro membership expires.

Note: The  icon is available only at the hub level.

3.4.6.2 Defining Enterprise Node Type Rules

You can define Enterprise Node Type Rules to specify the handling costs of various node types at the Enterprise level.

- [Creating an Enterprise Node Type Rule](#)
- [Modifying an Enterprise Node Type Rule](#)
- [Deleting an Enterprise Node Type Rule](#)

Creating an Enterprise Node Type Rule

To create an Enterprise node type rule:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Landed Cost. The Landed Cost window displays in the work area.
2. In the Enterprise Node Type Rules panel, choose . The Enterprise Node Type Rule window displays.

Note: The "Use Handling Cost" checkbox must be selected to enable Enterprise Node Type Rules.

- 3. Enter information into the applicable fields. Refer to [Table 3–16](#) for field value descriptions.
- 4. Choose .

Enterprise Node Type Rule

Node Type

Table 3–16 Enterprise Node Type Rule Pop-up Window

Field	Description
Node Type	Select the node type from the drop-down list.
Currency	Select the currency to use for this rule from the drop-down list.
Inbound Handling Cost	
Per Shipment	Enter the handling cost for each shipment, in the currency selected above.
Per Line	Enter the handling cost for each line, in the currency selected above.

Table 3–16 Enterprise Node Type Rule Pop-up Window

Field	Description
Per Unit	Choose this option to enter the handling cost for each unit. Choosing this option disables the "Per Unit Weight" option.
Per Unit Weight	Choose this option to enter the handling cost for each unit weight. Choosing this option disables the "Per Unit" option.
Outbound Handling Cost	
Per Shipment	Enter the handling cost for each shipment, in the currency selected above.
Per Line	Enter the handling cost for each line, in the currency selected above.
Per Unit	Choose this option to enter the handling cost for each unit. Choosing this option disables the "Per Unit Weight" option.
Per Unit Weight	Choose this option to enter the handling cost for each unit weight. Choosing this option disables the "Per Unit" option.

Modifying an Enterprise Node Type Rule

To modify an Enterprise node type rule:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Landed Cost. The Landed Cost window displays in the work area.
2. In the Enterprise Node Type Rules panel, select the applicable rule and choose . The Enterprise Node Type Rule window displays.

Note: The "Use Handling Cost" checkbox must be selected to enable Enterprise Node Type Rules.

3. Enter information into the applicable fields. Refer to [Table 3–16](#) for field value descriptions.
4. Choose .

Deleting an Enterprise Node Type Rule

To delete an Enterprise node type rule:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Landed Cost. The Landed Cost window displays in the work area.
2. In the Enterprise Node Type Rules panel, select the applicable rule and choose .

3.4.7 Defining Forwarding/Transfer Rules

Forwarding rules enable you to minimize transportation costs by allowing you to specify a default carrier service to move shipments from one node to another before shipping to a customer, otherwise known as zone skipping.

When evaluating options, the Sterling Multi-Channel Fulfillment Solution identifies ship nodes that can fulfill the request, then utilizes routing guides to determine the best possible drop location and carrier that meets any item constraints.

Forwarding is not applied in the following scenarios:

- If forwarding is not enabled at the Enterprise level.
- If forwarding is not enabled at the line level.
- If forwarding is not enabled at the item level.
- If a shipment is being delivered.
- If a shipment has shipping and receiving nodes with a transfer schedule between them.
- If the shipment is not a final shipment to the customer (procurements cannot be forwarded).
- If a carrier service code is not specified at the line or header level.
- If the document type classification is not "Sales Order" or "Other".

Transfer rules enable you to minimize the number of shipments to a customer by determining a merge node, where shipments can be consolidated before shipping to a customer.

To define forwarding/transfer rules:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Forwarding/Transfer Rules. The Forwarding/Transfer Rules window displays in the work area.
2. Enter information into the applicable fields. Refer to [Table 3–17](#) for field value descriptions.
3. Choose .

Forwarding/Transfer Rules (DEFAULT)

Forwarding Rules

☒ Use Forwarding

Default Carrier Service For Forwarding: 2 Day

For Transportation Considerations Based On Number Of Cartons:

Assume Average Volume Per Carton To Be: 0.00 Cubic Inches

Link To Outbound Constraints: 

Transfer Rules

☒ Minimize Number Of Shipments To Customer Through Transfers Between Shipping Nodes

Consider Transfers Only When Following Relationship Exists Between Two Shipping Nodes: 

Table 3–17 Forwarding/Transfer Rules Window

Field	Description
Forwarding Rules	
Use Forwarding	Select this checkbox if you want use forwarding. Deselecting this checkbox disables all other forwarding options.
Default Carrier Service For Forwarding	Select a default carrier service to use during forwarding from the drop-down list.
For Transportation Considerations Based On Number Of Cartons:	
Assume Average Volume Per Carton To Be ____	Enter a volume and volume UOM to be used as the assumed average volume per carton.

Table 3–17 Forwarding/Transfer Rules Window

Field	Description
Link To Outbound Constraints	<p>Choosing  opens the Outbound Constraints window, where you can configure outbound constraints and define routing guides.</p> <p>For more information about outbound constraints, see Section 5.4, "Defining Outbound Constraints".</p>
Transfer Rules	
Minimize Number Of Shipments To Consider Through Transfers Between Shipping Nodes	Select this checkbox to minimize the number of shipments the Sterling Multi-Channel Fulfillment Solution considers through transfers between shipping nodes.
Consider Transfers Only When Following Relationship Exists Between Two Shipping Nodes	<p>Select a relationship type from the drop-down list. Transfers are considered only when this relationship exists between two shipping nodes.</p> <p>This field is disabled if the "Minimize Number of Shipments To Consider Through Transfers Between Shipping Nodes" checkbox is not selected.</p>

3.4.8 Defining Distribution Groups for Product Items

You can create a set of nodes/external organizations that can be used when determining sourcing. You can define distribution groups that establish the ship node determination process based on priority.

Note: For backward compatibility purposes, you can also create rules for individual items at a source node or for the entire source node.

You can use the Distribution Rules branch for:

- [Creating a Distribution Group](#)
- [Deleting a Distribution Group](#)

3.4.8.1 Creating a Distribution Group

To create a distribution group:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Product Being Shipped > Distribution Rules. The Distribution Rules window displays in the work area.
2. Choose . The Distribution Group Detail window displays.

Distribution Group Details

Distribution Group Description

Distribution Detail **Advanced**

Distribution Group List

Ship Node	Source Organization	Priority
Results: 0 Of 0		

3. In Distribution Group, enter the name of the distribution rule.
4. In Description, enter a brief description of the distribution rule.
5. Choose .

You can use the Distribution Group Details window for:

- [Adding Nodes/External Organizations to a Distribution Group](#)
- [Modifying a Distribution Group's Node/External Organization](#)
- [Deleting a Distribution Group's Node/External Organization](#)

3.4.8.1.1 Adding Nodes/External Organizations to a Distribution Group

To add a node/external organization to a distribution group:

1. In the Distribution Group Details window, choose the Distribution Detail tab.
2. Choose . The Distribution Details pop-up window displays.
3. Enter information into the applicable fields. Refer to [Table 3–18](#) for field value descriptions.
4. Choose .

Table 3–18 *Distribution Details Window*

Field	Description
Source	
Source Ship Node	Select Source Ship Node and select the applicable node if you want to add a node within your organization to the distribution group.
Source Organization	Select Source Organization and select the applicable organization if you want to add an external organization to the distribution group.
Priority	Enter the node/external organization's priority within the distribution group. Note: Priority is not unique to a distribution group, therefore more than one distribution group can have the same priority.

Note: If you adding nodes or external organizations to a distribution group, do not use the advanced tab. Use sourcing rules instead. For more information about configuring sourcing rules, see [Section 3.4, "Defining Sourcing and Scheduling Rules"](#).

3.4.8.1.2 Modifying a Distribution Group's Node/External Organization

To modify a distribution group's node/external organization:

1. In the Distribution Group Details window, choose the Distribution Detail tab.
2. Select the applicable distribution detail and choose . The Distribution Details pop-up window displays.
3. Enter information into the applicable fields. Refer to [Table 3–18](#) for field value descriptions.
4. Choose .

3.4.8.1.3 Deleting a Distribution Group's Node/External Organization

To delete a distribution group's node/external organization:

1. In the Distribution Group Details window, choose the Distribution Detail tab.
2. Select the applicable distribution detail and choose .

3.4.8.2 Adding Advanced Distribution Details to a Distribution Group (For Backward Compatibility Only)

You can add specific details, such as sourcing information, and assign them a date range through which they are effective.

Important: Sterling Commerce strongly recommends the use of sourcing rules instead of advanced distribution groups. This feature is provided for backward compatibility purposes only.

Note: If setting up advanced distribution rules, do not use the base distribution rules under the distribution detail tab.

To add advanced distribution details to a distribution rule:

1. In the Distribution Group Details window, choose the Advanced tab.
2. From the Distribution table, choose . The Distribution Details pop-up window displays.
3. Enter information in the applicable fields. Refer to [Table 3-7](#) for field value descriptions.
4. Choose .

The screenshot shows the "Distribution Details" window. It has a title bar with a gear icon and a save icon. The window is divided into three main sections: "Setup Selection", "Primary Info", and "Source".

- Setup Selection:** Contains two radio buttons: "All Items" (unselected) and "Apply To A Specific Item At This Source" (selected).
- Primary Info:** Contains several fields:
 - "Item ID" with a text input field and a small icon.
 - "Item Name at Ship Node" with a text input field.
 - "Effective Start Date" with a text input field.
 - "Active" checkbox (checked).
 - "Priority" with a text input field.
 - "Effective End Date" with a text input field.
- Source:** Contains two radio buttons: "Source Ship Node" (selected) and "Source Organization" (unselected). Each has a corresponding dropdown menu. A green plus icon is next to the "Source Ship Node" dropdown.

Table 3–19 Advanced Distribution Details window

Field	Description
All Items	Select this option to apply the distribution rule to all of the items in the node you are setting the rule up for.
Apply To Specific Item At This Source	Select this option to apply the distribution rule to a specific item in the node or organization you are setting the rule up for.
Primary Info	
Item ID	If you selected Apply To Specific Item At This Source, enter the item ID for which you are creating the Distribution Rule.
Active	Check Active if the distribution rules are active.
Item Name at Node	If you selected Apply To Specific Item At This Source, enter the node's name for the item. The distribution record created for the inventory consolidator displays in the Inventory Console.
Priority	Enter a priority number for the node for this item and inventory scheduling, with 1 being the highest priority.
Effective Start Date	The date the distribution details take effect.
Effective End Date	The date after which the distribution details are no longer applied.
Source	
Source Ship Node	Choose Source Ship Node and select the applicable node if you are setting up the distribution details to be sourced from a particular ship node.
Source Organization	Choose Source Organization and select the applicable organization if you are setting up the distribution details to be sourced from a particular organization.

3.4.8.3 Deleting Advanced Distribution Details

To delete a advanced distribution details:

1. In the Distribution Group Details window, choose the Advanced tab.
2. From the Distribution table, select the applicable distribution details and choose .

3.4.8.4 Deleting a Distribution Group

To delete a distribution group:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose Cross Application > Order Promising > Sourcing And Scheduling > Product Being Shipped > Distribution Rules. The Distribution Group window displays in the work area.
3. Select the applicable distribution group and choose .

3.4.9 Defining Sourcing Rules for Product Items

You can define sourcing rules to control what node, external organization, or group of nodes should be considered for sourcing a product based on the following parameters (in order of priority):

- Fulfillment Type
- Order Sourcing Classification
- Seller organization
- Item ID
- Primary Item Classification
- Secondary Item Classification
- Tertiary Item Classification
- Geographical region of the ship to location

Note: When a node is passed on an order line, the system uses that node regardless of the sourcing rules you may have configured.

You can use the Sourcing Rules branch for:

- [Creating a Product Item Sourcing Rule](#)
- [Modifying a Product Item Sourcing Rule](#)
- [Deleting a Product Item Sourcing Rule](#)

3.4.9.1 Creating a Product Item Sourcing Rule

To create a sourcing rule:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Product Being Shipped > Sourcing Rules. The Product Sourcing Rules Search window displays in the work area.
2. Choose . The Sourcing Rule for Product Being Shipped window displays.
3. Enter information into the applicable fields. Refer to [Table 3–20](#) for field value descriptions.
4. Choose .

Table 3–20 Sourcing Rule for Product Being Shipped Window

Field	Description
Fulfillment Type	Select the applicable fulfillment type to associate with the sourcing rule. For more information about configuring fulfillment types, see Section 3.4.1, "Defining Fulfillment Types" .
Order Sourcing Classification	Select the applicable order sourcing classification if you want to associate this sourcing rule with a particular order sourcing classification. For more information about configuring order sourcing classifications, see Section 3.4.3, "Defining Order Sourcing Classifications" .
When Seller organization is	
This Organization	Select this option and select the applicable Seller organization if you want to associate this sourcing rule with a particular Seller.
All Sellers	Select All Sellers if this sourcing rule can be associated with any Seller organization.
And Product characteristics are	
Item ID	Select Item ID and enter the applicable item if you want to associate the sourcing rule with a particular item.
Item Classification	Select Item Classification and enter the applicable classification if you want to associate the sourcing rule with a particular classification.
All Items	Select Apply To All Items At This Source if you want to associate the sourcing rule with all of the items maintained at the source node.
And Product is being shipped to	
This Region	Select Region and enter the applicable region if you want this sourcing rule to be used when products are shipped to a specific region. Important: The region you identify must belong to the region schema associated with product item sourcing for the organization you are working with. For more information about setting an organization's region schema for product items, see Section 3.4.4, "Defining Sourcing Region Selection" .

Table 3–20 Sourcing Rule for Product Being Shipped Window

Field	Description
This Node	Select Node and select the applicable node if you want this sourcing rule to be used when products are shipped to this node.
Nodes of Type	Select Nodes of Type and select the applicable node types available if you want this sourcing rule to be used when products are shipped to a specific node type.
Any Address	Select Any Address and if this sourcing rule can be used when products are shipped to any node.
<p>Sourced From List</p> <p>The system tries to source the product from the node/distribution group with the highest sequence (lowest number). If the sourcing template contains a distribution group or a set of nodes, the final node selection is optimized based on the parameters configured in your scheduling rule associated with a given order. For more information about scheduling rules, see Section 3.4.5, "Defining Scheduling Rules".</p> <p>If there is no product availability for a node/distribution group specified in a given sequence, the system tries to source from the next node/distribution group in the sequence.</p>	
Sequence No	The sequence priority of the sourcing template.
Sourcing Template	A list of the node/distribution group sequences used for sourcing. The sequence is determined by priority. For more information about sourcing templates, see Section 3.4.14, "Defining Sourcing Template Details" .

3.4.9.2 Modifying a Product Item Sourcing Rule

To modify a sourcing rule:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Product Being Shipped > Sourcing Rules. The Sourcing Rule for Product Being Shipped Search window displays in the work area.
2. Select the applicable sourcing rule and choose . The Product Sourcing Rules Search window displays.
3. Enter information into the applicable fields. Refer to [Table 3–20](#) for field value descriptions.

4. Choose .

3.4.9.3 Deleting a Product Item Sourcing Rule

To delete a sourcing rule:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Product Being Shipped > Sourcing Rules. The Product Sourcing Rules Search window displays in the work area.
2. Select the applicable sourcing rule and choose .

3.4.10 Defining Sourcing Rules for Delivery Service Items

You can define sourcing rules to control what node should be considered for sourcing a delivery service based on the fulfillment type, order sourcing classification, delivery region, or deliver to node.

Note: When a node is passed on an order line, the system uses that node regardless of the sourcing rules you may have configured.

You can use the Sourcing Rules branch for:

- [Creating a Delivery Service Item Sourcing Rule](#)
- [Modifying a Delivery Service Sourcing Rule](#)
- [Deleting a Delivery Service Sourcing Rule](#)

3.4.10.1 Creating a Delivery Service Item Sourcing Rule

To create a sourcing rule:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Product Being Delivered > Sourcing Rules. The Delivery Service Sourcing Rules Search window displays in the work area.
2. Choose . The Sourcing Rule for Product Being Delivered window displays.
3. Enter information into the applicable fields. Refer to [Table 3–21](#) for field value descriptions.

4. Choose .

Table 3–21 Sourcing Rule for Product Being Delivered Window

Field	Description
Fulfillment Type	Select the applicable fulfillment type to associate with the sourcing rule. For more information about configuring fulfillment types, see Section 3.4.1, "Defining Fulfillment Types" .
Order Sourcing Classification	Select the applicable order sourcing classification if you want to associate this sourcing rule with a particular order sourcing classification. For more information about configuring order sourcing classifications, see Section 3.4.3, "Defining Order Sourcing Classifications" .
When Seller organization is	
This Organization	Select this option and select the applicable Seller organization if you want to associate this sourcing rule with a particular Seller.
All Sellers	Select All Sellers if this sourcing rule can be associated with any Seller organization.
And Product is being delivered to	
This Region	Select This Region and enter the applicable region if you want the sourcing rule to be used when deliveries are made to a specific region. Important: The region you identify must belong to the region schema associated with delivery service item sourcing for the organization you are working with. For more information about setting an organization's region schema for delivery service items, see Section 3.4.4, "Defining Sourcing Region Selection" .
This Node	Select This Node and select the applicable node if you want the sourcing rule to be used when deliveries are made to a specific node.
Any Address	Select Any Address if this sourcing rule can be used when deliveries are made to any node
Use the following Node	
Node	Select the node the delivery service is sourced from. Note: Delivery service items can only be sourced from one node per sourcing rule.

Table 3–21 Sourcing Rule for Product Being Delivered Window

Field	Description
Procure/Transfer to this Node when inventory is not available.	Check this box if the node handles transfer orders and/or procurement purchase orders. For more information about transfer orders and procurement purchase orders, see Section 3.3.2, "Defining a Node's Relationships" and Section 3.4.13, "Defining Procurement Rules" .
<p>Sourced From List</p> <p>The system tries to source the product from the node/distribution group with the highest sequence (lowest number). If the sourcing template contains a distribution group or a set of nodes, the final node selection is optimized based on the parameters configured in your scheduling rule associated with a given order. For more information about scheduling rules, see Section 3.4.5, "Defining Scheduling Rules".</p> <p>If there is no product availability for a node/distribution group specified in a given sequence, the system tries to source from the next node/distribution group in the sequence.</p>	
Sequence No	The sequence priority of the sourcing template.
Sourcing Template	A list of the node/distribution group sequences used for sourcing. The sequence is determined by priority. For more information about sourcing templates, see Section 3.4.14, "Defining Sourcing Template Details" .

3.4.10.2 Modifying a Delivery Service Sourcing Rule

To modify a sourcing rule:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Product Being Delivered > Sourcing Rules. The Delivery Service Sourcing Rules Search window displays in the work area.
2. Select the applicable sourcing rule and choose . The Sourcing Rule for Product Being Delivered window displays.
3. Enter information into the applicable fields. Refer to [Table 3–21](#) for field value descriptions.
4. Choose .

3.4.10.3 Deleting a Delivery Service Sourcing Rule

To delete a sourcing rule:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Product Being Delivered > Sourcing Rules. The Delivery Service Sourcing Rules Search window displays in the work area.
2. Select the applicable sourcing rule and choose .

3.4.11 Defining Distribution Groups for Provided Service Items

You can create a set of nodes/external organizations that can be used when determining sourcing. You can define distribution groups that establish the ship node determination process based on priority.

You can use the Distribution Rules branch for:

- [Creating a Distribution Group](#)
- [Deleting a Distribution Group](#)

3.4.11.1 Creating a Distribution Group

To create a distribution group:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Provided Services > Distribution Rules. The Distribution Rules window displays in the work area.
2. Choose . The Distribution Group Detail window displays.

The screenshot shows a software window titled "Distribution Group Details". It contains two input fields at the top: "Distribution Group" and "Description". Below these are two tabs: "Distribution Detail" (which is active) and "Advanced". Under the "Distribution Detail" tab is a table titled "Distribution Group List". The table has three columns: "Ship Node", "Source Organization", and "Priority". The table is currently empty. At the bottom left of the table area, it displays "Results: 0 Of 0".

3. In Distribution Group, enter the name of the distribution rule.
4. In Description, enter a brief description of the distribution rule.
5. Choose .

You can use the Distribution Group Details window for:

- [Adding Nodes/External Organizations to a Distribution Group](#)
- [Modifying a Distribution Group's Node/External Organization](#)
- [Deleting a Distribution Group's Node/External Organization](#)

3.4.11.1.1 Adding Nodes/External Organizations to a Distribution Group

To add a node/external organization to a distribution group:

1. In the Distribution Group Details window, choose the Distribution Detail tab.
2. Choose . The Distribution Details pop-up window displays.

3. Enter information into the applicable fields. Refer to [Table 3–22](#) for field value descriptions.
4. Choose .

Table 3–22 Distribution Details Window

Field	Description
Source	
Source Ship Node	Select Source Ship Node and select the applicable node if you want to add a node within your organization to the distribution group.
Source Organization	Select Source Organization and select the applicable organization if you want to add an external organization to the distribution group.
Priority	Enter the node/external organization's priority within the distribution group.

3.4.11.1.2 Modifying a Distribution Group's Node/External Organization

To modify a distribution group's node/external organization:

1. In the Distribution Group Details window, choose the Distribution Detail tab.
2. Select the applicable distribution detail and choose . The Distribution Details pop-up window displays.

3. Enter information into the applicable fields. Refer to [Table 3–22](#) for field value descriptions.
4. Choose .

3.4.11.1.3 Deleting a Distribution Group's Node/External Organization

To delete a distribution group's node/external organization:

1. In the Distribution Group Details window, choose the Distribution Detail tab.
2. Select the applicable distribution detail and choose .

3.4.11.2 Deleting a Distribution Group

To delete a distribution group:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Provided Services > Distribution Rules. The Distribution Group window displays in the work area.
2. Select the applicable distribution group and choose .

3.4.12 Defining Sourcing Rules for Provided Service Items

You can define sourcing rules to control what node, external organization, or group of nodes should be considered for sourcing provided service items based on the following parameters:

- Fulfillment type
- Order sourcing classification
- Seller organization
- Item ID
- Geographical region of the location where the service is to be provided
- Node where the service is to be provided

Note: When a node is passed on an order line, the system uses that node regardless of the sourcing rules you may have configured.

You can use the Sourcing Rules branch for:

- [Creating a Provided Service Item Sourcing Rule](#)
- [Modifying a Provided Service Sourcing Rule](#)
- [Deleting a Provided Service Sourcing Rule](#)

3.4.12.1 Creating a Provided Service Item Sourcing Rule

To create a sourcing rule:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Provided Services > Sourcing Rules. The Provided Service Sourcing Rules Search window displays in the work area.
2. Choose . The Sourcing Rule for Provided Service window displays.
3. Enter information into the applicable fields. Refer to [Table 3–23](#) for field value descriptions.
4. Choose .

Sourcing Rule for Provided Service (DEFAULT)

Fulfillment Type: 

Order Sourcing Classification: 

When Seller organization is:

☐ This Organization

☒ All Sellers

And Provided Service characteristics are:

Item ID: 

And Service Location Is:

☐ This Region 

☐ This Node

☒ Any Address

Use following sourcing templates in the sequence specified

Sourced From List	
Sequence No	Sourcing Template

Results 0 Of 0

Table 3–23 Sourcing Rule for Provided Service

Field	Description
Fulfillment Type	Select the applicable fulfillment type to associate with the sourcing rule. For more information about configuring fulfillment types, see Section 3.4.1, "Defining Fulfillment Types" .
Order Sourcing Classification	Select the applicable order sourcing rule with a particular order sourcing classification. For more information about configuring order sourcing classifications, see Section 3.4.3, "Defining Order Sourcing Classifications" .
When Seller organization is	

Table 3–23 Sourcing Rule for Provided Service

Field	Description
This Organization	Choose This Organization and select the applicable Seller organization if you want to associate this sourcing rule with a particular Seller.
All Sellers	Select All Sellers if this sourcing rule can be associated with any Seller organization.
And Product characteristics are	
Item ID	Enter the provided service item you want to associate the sourcing rule with.
And Service Location Is	
This Region	<p>Select This Region and enter the applicable region if you want the sourcing rule to be used when a service request is to be provided within a specific region.</p> <p>Important: The region you identify must belong to the region schema associated with provided service item sourcing for the organization you are working with. For more information about setting an organization's region schema for provided service items, see Section 3.4.4, "Defining Sourcing Region Selection".</p>
This Node	Select This Node and select the applicable node if you want the sourcing rule to be used when a service request is to be provided to a specific node.
Any Address	Select Any Address if the sourcing rule can be used when a service request is to be provided for any node.
<p>Sourced From List</p> <p>The system tries to source the product from the node/distribution group with the highest sequence (lowest number). If the sourcing template contains a distribution group or a set of nodes, the final node selection is optimized based on the parameters configured in your scheduling rule associated with a given order. For more information about scheduling rules, see Section 3.4.5, "Defining Scheduling Rules".</p> <p>If there is no product availability for a node/distribution group specified in a given sequence, the system tries to source from the next node/distribution group in the sequence.</p>	

Table 3–23 Sourcing Rule for Provided Service

Field	Description
Sequence No	The sequence priority of the sourcing template.
Sourcing Template	A list of the node/distribution group sequences used for sourcing. The sequence is determined by priority. For more information about sourcing templates, see Section 3.4.14, "Defining Sourcing Template Details" .

3.4.12.2 Modifying a Provided Service Sourcing Rule

To modify a sourcing rule:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Provided Services > Sourcing Rules. The Provided Service Sourcing Rules Search window displays in the work area.
2. Select the applicable sourcing rule and choose . The Sourcing Rule for Provided Service window displays.
3. Enter information into the applicable fields. Refer to [Table 3–23](#) for field value descriptions.
4. Choose .

3.4.12.3 Deleting a Provided Service Sourcing Rule

To delete a sourcing rule:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Provided Services > Sourcing Rules. The Provided Service Sourcing Rules Search window displays in the work area.
2. Select the applicable sourcing rule and choose .

3.4.13 Defining Procurement Rules

You can define the nodes that handle procurement transfer and purchase orders for a specified item or item classification. A chained order is an order that is linked to a parent order in which the lifecycle of one effects the other.

A transfer order is a type of chained order that is created when a node that belongs to the organization you are configuring needs to replenish their stock from another node within the organization to fulfill an order. For information about configuring transfer schedules, see [Section 3.3.2, "Defining a Node's Relationships"](#).

A procurement purchase order is a type of chained order that is created when a node that belongs to the organization you are configuring needs to replenish their stock from another node that belongs to a different legal entity organization to fulfill an order.

You can use the Procurement branch for:

- [Creating a Sourcing Rule for Procurement](#)
- [Modifying a Sourcing Rule for Procurement](#)
- [Deleting a Product Procurement Rule](#)
- [Creating a Procurement Distribution Group](#)
- [Modifying a Procurement Distribution Group](#)
- [Deleting a Procurement Distribution Group](#)

3.4.13.1 Creating a Sourcing Rule for Procurement

To create product procurement sourcing rules:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Procurement > Sourcing Rules. The Procurement - Sourcing Rule Search window displays in the work area.
2. Choose . The Sourcing Rules for Procurement window displays.
3. Enter information into the applicable fields. Refer to [Table 3–24](#) for field value descriptions.

Sourcing Rules for Procurement (DEFAULT)

Fulfillment Type: Fulfillment Type for Product Sourcing 

Order Sourcing Classification: 

And Product characteristics are

☐ Item ID 

☒ All Items

And Procuring To

☐ This Node

☒ The Nodes of Type Distribution Center

☐ Any Node

Use following sourcing templates in the sequence specified

Sequence No	Sourcing Template
2	All Nodes Of Type(s) Distribution Center That Have A Transfer Relationship With The Ship Node's From Node(Transfer)

Table 3–24 Sourcing Rules for Procurement Window

Field	Description
Fulfillment Type	Select the applicable fulfillment type to associate with the product procurement rule. For more information about configuring fulfillment types, see Section 3.4.1, "Defining Fulfillment Types" .
Order Sourcing Classification	Select the applicable order sourcing classification if you want to associate this sourcing rule with a particular order sourcing classification. For more information about configuring order sourcing classifications, see Section 3.4.3, "Defining Order Sourcing Classifications" .
And Product characteristics are	
Item ID	Select Item ID and enter the item you want the node to be able to procure.

Table 3–24 Sourcing Rules for Procurement Window

Field	Description
All Items	Select All Items if you want the node to be able to procure any item.
And Procuring To	
This Node	Select Node and select the applicable node if you want this sourcing rule to be used when products are shipped to this node.
The Nodes of Type	Select Nodes of Type and select the applicable node types available if you want this sourcing rule to be used when products are shipped to a specific node type.
Any Node	Select Any Node and if this sourcing rule can be used when products are shipped to any node.
Sourced From List	
<p>The system tries to source the product from the node/distribution group with the highest sequence (lowest number). If the sourcing template contains a distribution group or a set of nodes, the final node selection is optimized based on the parameters configured in your scheduling rule associated with a given order. For more information about scheduling rules, see Section 3.4.5, "Defining Scheduling Rules".</p> <p>If there is no product availability for a node/distribution group specified in a given sequence, the system tries to source from the next node/distribution group in the sequence.</p>	
Sequence No	The sequence priority of the sourcing template.
Sourcing Template	A list of the node/distribution group sequences used for sourcing. The sequence is determined by priority. For more information about sourcing templates, see Section 3.4.14, "Defining Sourcing Template Details" .

4. Choose .

3.4.13.2 Modifying a Sourcing Rule for Procurement

To modify a sourcing rule for procurement:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Procurement > Sourcing Rules. The Procurement - Sourcing Rule Search window displays in the work area.

2. Select the applicable sourcing rule and choose . The Sourcing Rules for Procurement window displays.
3. Enter information into the applicable fields. Refer to [Table 3–24](#) for field value descriptions.
4. Choose .

3.4.13.3 Deleting a Product Procurement Rule

To delete a sourcing rule for procurement:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Procurement > Sourcing Rules. The Procurement - Sourcing Rule Search window displays in the work area.
2. Select the applicable sourcing rule and choose .

3.4.13.4 Creating a Procurement Distribution Group

To create a distribution group:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Procurement > Distribution Group. The Procurement Distribution Groups window displays in the work area.
2. Choose . The Distribution Group Detail window displays.
3. Enter information into the applicable fields. Refer to [Table 3–25](#) for field value descriptions.

Ship Node
ChildL1

Results 1 Of 1

Table 3–25 Procurement Distribution Group Details Window

Field	Description
Distribution Group	Enter a name for the distribution group.
Description	Enter a description for the distribution group.
Distribution Group List	
Note: The Distribution Group needs to be saved before adding ship nodes.	
Ship Node	The identifier for the ship node

4. Choose .

3.4.13.5 Modifying a Procurement Distribution Group

To modify a distribution group:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Procurement > Distribution Group. The Procurement Distribution Groups window displays in the work area.
2. Select the applicable distribution group and choose . The Distribution Group Details window displays.
3. Enter information into the applicable fields. Refer to [Table 3–25](#) for field value descriptions.
4. Choose .

3.4.13.6 Deleting a Procurement Distribution Group

To delete a distribution group:

1. From the tree in the application rules side panel, choose Cross Application > Order Promising > Sourcing And Scheduling > Procurement > Distribution Group. The Procurement Distribution Groups window displays in the work area.
2. Select the applicable distribution group and choose .

3.4.14 Defining Sourcing Template Details

Sourcing templates enables you to specify a node, a set of nodes, or distribution groups to be used in sourcing rules. For more information about the available sourcing templates, see the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

From the Sourcing Rule window, you can:

- [Applying a Sourcing Template to a Sourcing Rule](#)
- [Modifying a Sourcing Template for a Sourcing Rule](#)
- [Removing a Sourcing Template from a Sourcing Rule](#)

3.4.14.1 Applying a Sourcing Template to a Sourcing Rule

To apply a sourcing template to a sourcing rule:

1. From the Sourcing Rule Window, choose  from the Sourced From List panel. The Sourced From Details pop-up window displays.
2. Enter information into the applicable fields. Refer to [Table 3–26](#) for field value descriptions.
3. Choose .

Figure 3–4 Sourced From Details Window

Sourced From Details

Sequence No: 1

Template Type: Receiving Node's <...>

☐ Procure/Transfer to this Node when inventory is not available ☐ Substitution Is Allowed

☐ Work Order Creation Is Allowed

Consider the following inventory during sourcing:

☒ All Inventory

☐ Inventory that will be available in the next 0 day(s)

☐ Only Onhand Inventory

Source From: Receiving Node's [Click To Select A Relative Location/Relationship Type](#)

Table 3–26 Sourced From Details Pop-Up Window

Field	Description
Sequence No	Enter the sequence priority.
Template Type	Select a sourcing template from the drop-down list. After choosing a template, it displays dynamically in the lower panel. If applicable, populate the template by clicking as indicated. The search window displays, where you can select the correct entities.

Table 3–26 Sourced From Details Pop-Up Window

Field	Description
Procure/Transfer to this Node when inventory is not available	Check this box if the node handles transfer orders or procurement purchase orders. For more information about transfer orders and procurement purchase orders, see Section 3.3.2, "Defining a Node's Relationships" and Section 3.4.13, "Defining Procurement Rules" .
Substitution Is Allowed	Check this box if substitution of product items within an order is allowed.
Work Order Creation Is Allowed	Check this box if you want to use Work Orders to support compliance services at the node(s). Work Orders describe the service activities to customize items based on a buyer's requests.
Consider the following inventory during sourcing	
All Inventory	Select this option to consider both the onhand and future inventory.
Inventory that will be available in the next <number of days> day(s)	Select this option to consider inventory that will be made available in the specified number of days. Enter the number of day(s) in the text box indicating how far in the future from the requested ship date that the inventory should be considered.
Only Onhand Inventory	Select this option to consider only onhand inventory.

Note: The Sourced From Details window is applicable for Product Sourcing only.

3.4.14.2 Modifying a Sourcing Template for a Sourcing Rule

To modify a sourcing template for a sourcing rule:

1. From the Sourcing Rule Window, select the sourcing template you want to modify from the Sourced From List and choose . The Sourced From Details pop-up window displays.
2. Enter information into the applicable fields. Refer to [Table 3–26](#) for field value descriptions.
3. Choose .

3.4.14.3 Removing a Sourcing Template from a Sourcing Rule

To remove a sourcing template from a sourcing rule, from the Sourcing Rule Window, select the Sourced From Detail you want to remove from the Sourced From List and choose .

Configuring Cross Application Service Execution Components

You can use the Service Execution branch for:

- [Configuring Service Supervisors](#)
- [Configuring Questions](#)

4.1 Configuring Service Supervisors

You can specify the supervisor associated with a node for a given seller organization. You can also assign a default supervisor to a node for all seller organizations.

The system allows you assign only one supervisor for a given node and seller organization combination. The default supervisor can only be a supervisor of a node, if no other supervisor is defined for that node and seller organization combination. If both are defined, the supervisor specified for a node and seller organization combination takes precedence over the default supervisor.

Note: The supervisor must be a user defined in the context of the node that is being configured. For more information about configuring users, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

You can use the Service Supervisors branch for:

- [Defining a Service Supervisor for a Node](#)

- [Modifying a Service Supervisor for a Node](#)
- [Deleting a Service Supervisor for a Node](#)

4.1.1 Defining a Service Supervisor for a Node

To define a service supervisor for a node:

1. From the tree in the application rules side panel, choose Cross Application > Service Execution > Service Supervisors. The Node Supervisor Search window displays.
2. Enter the applicable search criteria and choose . A list of node displays. Select the node to which you want to assign the supervisor and choose . The Supervisor Setup pop-up window displays.

The image shows a software window titled "Supervisor Setup (MA03)". At the top, there is a "Default Supervisor" dropdown menu. Below this is a table with two columns: "Seller Organization" and "Supervisor ID". The first row of the table is marked with an asterisk (*) in the left margin. The table is currently empty. At the bottom of the window, it says "Results 0 of 0".

	Seller Organization	Supervisor ID
*		

3. Enter information in the applicable fields. See [Table 4–1](#) for field value descriptions.
4. Choose .

Table 4–1 Supervisor Setup pop-up window

Field	Description
Default Supervisor	Select the default supervisor from the drop-down list. If a supervisor is not defined for a given seller organization for this node, the user specified becomes that supervisor of the node for all non-specified seller organizations.
Supervisor Setup	
Seller Organization	Select the seller organization from the drop-down list. If you define a seller organization, you must select a supervisor identifier in the Supervisor ID field.
Supervisor ID	Select the supervisor identifier from the drop-down list. If you define a supervisor, you must select a seller organization in the Seller Organization field.

4.1.2 Modifying a Service Supervisor for a Node

To modify a service supervisor for a node:

1. From the tree in the application rules side panel, choose Cross Application > Service Execution > Service Supervisors. The Node Supervisor Search window displays.
2. Enter the applicable search criteria and choose . The Nodes list displays. Select the node for which you want to assign a supervisor and choose . The Supervisor Setup pop-up window displays.
3. Enter information in the applicable fields. See [Table 4–1](#) for field value descriptions.
4. Choose .

4.1.3 Deleting a Service Supervisor for a Node

To delete a service supervisor for a node:

1. From the tree in the application rules side panel, choose Cross Application > Service Execution > Service Supervisors. The Node Supervisor Search window displays.
2. Enter the applicable search criteria and choose . A list of node displays. Select the node to which you want to assign a supervisor and choose . The Supervisor Setup pop-up window displays.

3. Select the row which contains the seller organization and supervisor ID that you want to delete and choose .
4. Choose .

4.2 Configuring Questions

You can define a set of questions that the customer can be asked when it is determined that additional address or permit information is required.

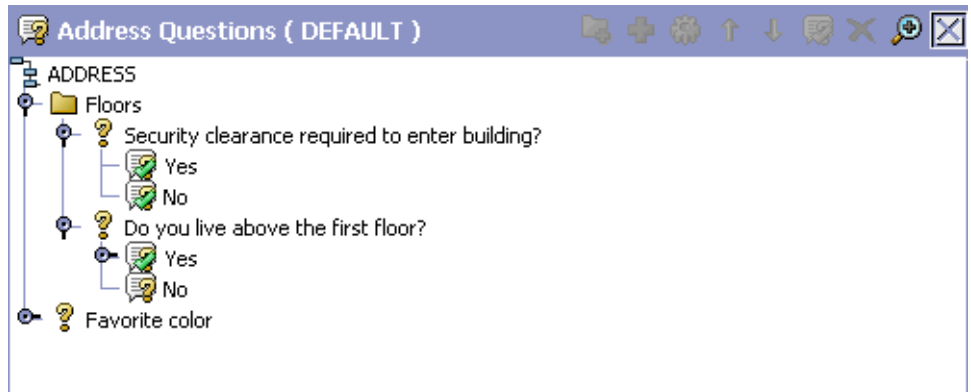

You can use the Questions branch for:

- [Defining Address Question Groups](#)
- [Modifying Address Question Groups](#)
- [Deleting Address Question Groups](#)
- [Defining Address Questions](#)
- [Modifying Address Questions](#)
- [Deleting Address Questions](#)
- [Defining Capacity Impact](#)
- [Modifying Capacity Impact](#)
- [Deleting Capacity Impact](#)
- [Rearranging Address Question Entities](#)
- [Defining Permit Question Groups](#)
- [Modifying Permit Question Groups](#)
- [Deleting Permit Question Groups](#)
- [Defining Permit Questions](#)
- [Modifying Permit Questions](#)
- [Deleting Permit Questions](#)
- [Rearranging Permit Questionnaire Entities](#)

4.2.1 Defining Address Question Groups

1. From the tree in the application rules side panel, choose Cross Application > Service Execution > Questions. The Questions window

displays in the work area. The Address Questions tab displays by default.

2. Choose . The Question Group Details pop-up window displays.

Table 4–2 Question Group Details

Fields	
Question Group ID	Enter the unique question group ID.
Question Group Text	Enter the question group text as you want it to appear in the UI.

3. Enter information in the applicable fields. See [Table 4–5](#) for field value descriptions.
4. Choose .

Note: Identifiers are unique across Question IDs and Question Group IDs.

4.2.2 Modifying Address Question Groups

1. From the tree in the application rules side panel, choose Cross Application > Service Execution > Questions. The Questions window displays in the work area. The Address Questions tab displays by default.
2. Select the question group you want to modify and choose . The Question Group Details pop-up window displays.
3. Enter information in the applicable fields. See [Table 4–5](#) for field value descriptions.
4. Choose .

4.2.3 Deleting Address Question Groups

1. From the tree in the application rules side panel, choose Cross Application > Service Execution > Questions. The Questions window displays in the work area. The Address Questions tab displays by default.
2. Select the Question Group you want to delete, and choose .

4.2.4 Defining Address Questions

1. From the tree in the application rules side panel, choose Cross Application > Service Execution > Questions. The Questions window displays in the work area. The Address Questions tab displays by default.
2. Questions can be defined from the root level, a question group, or an answer option. If a question derives from an answer option, in the console it appears on the questionnaire only when the corresponding answer option has been selected. Follow-up questions cannot be added to answer options for other follow-up questions, however several follow-up questions can be added to the same answer option for a question. Furthermore, follow-up questions can only be defined

off of the 'Yes' Answer Option from a checkbox, or Answer Options whose display control type is Dropdown or Radio Button.

Select the desired location for the question and choose . The Question Details pop-up window displays.

Table 4–3 Question Details

Fields	
Question ID	Enter the question identifier.
Question Text	Enter the question text as you want the question to appear in the UI.
Data Type	<p>Select the data type for the answers. The data type you select governs the possible display control type options:</p> <p>Text - Textbox, Text Area, Dropdown, Radio Button</p> <p>Integer - Textbox</p> <p>Decimal - Textbox</p> <p>Boolean - Checkbox</p>
Display Control Type	Select how you want the answer options to appear in the UI. The Display Control Types available depend on the Data Type you have selected.
Answer Options - the following fields appear when you have chosen Dropdown or Radio Button as the desired display control type.	
Value	Enter the value for the answer option.
Display Text	Enter the answer option text as you want the answer to appear in the UI.

3. Enter information in the applicable fields. See [Table 4–6](#) for field value descriptions.
4. Choose .

4.2.5 Modifying Address Questions

1. From the tree in the application rules side panel, choose Cross Application > Service Execution > Questions. The Questions window displays in the work area. The Address Questions tab displays by default.
2. Select the question you want to modify, and choose . The Question Details pop-up window displays.
3. Enter information in the applicable fields. See [Table 4–6](#) for field value descriptions.
4. Choose .

4.2.6 Deleting Address Questions

1. From the tree in the application rules side panel, choose Cross Application > Service Execution > Questions. The Questions window displays in the work area. The Address Questions tab displays by default.
2. Select the question you want to delete, and choose .

4.2.7 Defining Capacity Impact

You can define capacity impact for an answer option which is added to the capacity demand on the order, based on service type. You can add different capacity impact values for different service types. There are two types of capacity impact:

Fixed Capacity Impact - a fixed capacity value can be added to a 'Yes' Answer Option from a checkbox, or Answer Options whose display control type is Dropdown or Radio Button.

Capacity Impact Multiplier - a capacity multiplier value can be added to a Answer Option whose display control type is Integer or Decimal. The value is multiplied by the numeric answer given to determine the amount of capacity to add.

1. From the tree in the application rules side panel, choose Cross Application > Service Execution > Questions. The Questions window displays in the work area. The Address Questions tab displays by default.
2. Select the Answer Option to which you want to add Capacity Impact and click . The Answer Option Details pop-up window displays.

Answer Option Details

Question ID Question2

Question Text Question2

Answer Option Value

	Service Type	Fixed Capacity Impact	Capacity Impact Multiplier	UOM
*				

Results 0 Of 0

Table 4–4 Answer Option Details

Fields	
Question ID	The identifier for the question this answer option is for.
Question Text	The text for the question this answer option is for.
Answer Option Value	The value of the answer option.
Answer Option Text	The text for the answer option.
Answer Capacity Impact	
Service Type	Select the Service Type for which capacity is added.
Fixed Capacity Impact	If available, enter the amount of capacity you want to add if this answer option is selected.

Table 4–4 Answer Option Details

Capacity Impact Multiplier	If available, enter the value you want to multiply the answer by, which determines the amount of capacity to add for this answer option.
UOM	The unit of measure for the selected Service Type. This field is not modifiable.

3. Enter information in the applicable fields. Refer to [Table 4–4](#) for field value descriptions.
4. Choose .

4.2.8 Modifying Capacity Impact

1. From the tree in the application rules side panel, choose Cross Application > Service Execution > Questions. The Questions window displays in the work area. The Address Questions tab displays by default.
2. Select the Answer Option for which you want to modify Capacity Impact and click . The Answer Option Details pop-up window displays.
3. Enter information in the applicable fields. See [Table 4–4](#) for field value descriptions.
4. Choose .

4.2.9 Deleting Capacity Impact

1. From the tree in the application rules side panel, choose Cross Application > Service Execution > Questions. The Questions window displays in the work area. The Address Questions tab displays by default.
2. Select the Answer Option for which you want to remove Capacity Impact and click . The Answer Option Details pop-up window displays.
3. Select the Capacity Impact you want to delete and choose .

4.2.10 Rearranging Address Question Entities

The questionnaire tree represents how the questionnaire appears in the console. By arranging question groups, questions, and answer options, and you modify how you want the questionnaire to appear in the console.

There are two methods you can use to move question groups, questions, and answer options, depending on how you want to move.

Using the  and  icons, you can move question groups, questions and answer options up and down the questionnaire tree, within the entity it is currently contained in:

- **Questions Groups** - these can be arranged on the questionnaire tree at the root level.
- **Questions** - these can be arranged within a question group, in and out of question groups, and up and down levels.
- **Answer Options** - these can be arranged within a question.

Using the drag and drop functionality, you can:

- Move questions in and out of question groups
- Change a follow-up question into a stand-alone question by dropping onto a question group or the root of the tree
- Change a question into a follow-up question by dropping onto an answer option that allows follow-up questions.

The questionnaire tree represents how the questions appear in the Questionnaire in the console. By arranging question groups, questions, and answer options, and you modify how you want the questionnaire to appear in the console.

4.2.11 Defining Permit Question Groups

1. From the tree in the application rules side panel, choose Cross Application > Service Execution > Questions. The Questions window displays in the work area. Select the Permit Questions tab to view the Permit Questions window.

2. Choose  . The Question Group Details pop-up window displays.

A screenshot of a "Question Group Details" pop-up window. The window has a title bar with a folder icon and the text "Question Group Details". Inside the window, there are two text input fields. The first field is labeled "Question Group ID" in red text. The second field is labeled "Question Group Text" in black text. Both fields are currently empty.

Table 4–5 *Question Group Details*

Fields	
Question Group ID	Enter the unique question group ID.
Question Group Text	Enter the question group text as you want it to appear in the UI.

3. Enter information in the applicable fields. Refer to [Table 4–5](#) for field value descriptions.

4. Click .

Note: Identifiers are unique across Question IDs and Question Group IDs.

4.2.12 Modifying Permit Question Groups

1. From the tree in the application rules side panel, choose Cross Application > Service Execution > Questions. The Questions window displays in the work area. Select the Permit Questions tab to view the Permit Questions window.
2. Select the question group you want to modify and click . The Question Group Details pop-up window displays.
3. Enter information in the applicable fields. See [Table 4–5](#) for field value descriptions.
4. Choose .

4.2.13 Deleting Permit Question Groups

1. From the tree in the application rules side panel, choose Cross Application > Service Execution > Questions. The Questions window displays in the work area. Select the Permit Questions tab to view the Permit Questions window.
2. Select the Question Group you want to delete, and choose .

4.2.14 Defining Permit Questions

1. From the tree in the application rules side panel, choose Cross Application > Service Execution > Questions. The Questions window displays in the work area. Select the Permit Questions tab to view the Permit Questions window.
2. Questions can be defined from the root level, a question group, or an answer option. Questions that are derived from an answer option appear on the questionnaire only when the corresponding answer option has been selected. Follow-up questions cannot be added to answer options for other follow-up questions, however several follow-up questions can be added to the same answer option for a question. Furthermore, follow-up questions can only be defined off of

the 'Yes' Answer Option from a checkbox, or Answer Options whose display control type is Dropdown or Radio Button.

Select the desired location for the question and choose  . The Question Details pop-up window displays.

?

Question Details

Question ID

Question Text

Data Type

Display Control Type

Table 4–6 Question Details

Fields	
Question ID	Enter the unique question ID.
Question Text	Enter the question text as you want the question to appear in the UI.
Data Type	Select the data type for the answers. The data type you select governs the possible display control type options: Text - Textbox, Text Area, Dropdown, Radio Button Integer - Textbox Decimal - Textbox Boolean - Checkbox
Display Control Type	Select how you want the answer options to appear in the UI. The display control types available depend on the Data Type you have selected.
Answer Options - the following fields appear when you have chosen Dropdown or Radio Button as the desired display control type.	
Value	Enter the value for the answer option.
Display Text	Enter the answer option text as you want the answer to appear in the UI.

3. Enter information in the applicable fields. Refer to [Table 4–6](#) for field value descriptions.
4. Choose .

4.2.15 Modifying Permit Questions

1. From the tree in the application rules side panel, choose Cross Application > Service Execution > Questions. The Questions window displays in the work area. Select the Permit Questions tab to view the Permit Questions window.
2. Select the question you want to modify, and choose . The Question Details pop-up window displays.
3. Enter information in the applicable fields. Refer to [Table 4–6](#) for field value descriptions.
4. Choose .

4.2.16 Deleting Permit Questions

1. From the tree in the application rules side panel, choose Cross Application > Service Execution > Questions. The Questions window displays in the work area. Select the Permit Questions tab to view the Permit Questions window.
2. Select the question you want to delete, and choose .

4.2.17 Rearranging Permit Questionnaire Entities

The questionnaire tree represents how the questionnaire appears in the console. By arranging question groups, questions, and answer options, and you modify how you want the questionnaire to appear in the console.

There are two methods you can use to move question groups, questions, and answer options, depending on how you want to move.

Using the  and  icons, you can move question groups, questions and answer options up and down the questionnaire tree, within the entity it is currently contained in:

- **Questions Groups** - these can be arranged on the questionnaire tree at the root level.

- **Questions** - these can be arranged within a question group, in and out of question groups, and up and down levels.
- **Answer Options** - these can be arranged within a question.

Using the drag and drop functionality, you can:

- Move questions in and out of question groups
- Change a follow-up question into a stand-alone question by dropping onto a question group or the root of the tree
- Change a question into a follow-up question by dropping onto an answer option that allows follow-up questions.

The questionnaire tree represents how the questions appear in the Questionnaire in the console. By arranging question groups, questions, and answer options, and you modify how you want the questionnaire to appear in the console.

Configuring Cross Application Logistics Components

You can configure the components used by different logistics related functionality throughout the business application module.

You can use the Logistics branch for:

- [Defining Logistics Attributes](#)
- [Defining Delivery Codes](#)
- [Defining Shipment Modes](#)
- [Defining Outbound Constraints](#)

5.1 Defining Logistics Attributes

You can define rules and common codes associated logistics of shipping an order.

You can use the Logistics Attributes branch for:

- [Defining Freight Terms](#)
- [Defining Shipment Modes](#)
- [Defining Carrier Modification Reasons](#)
- [Defining Additional Logistic Rules](#)

5.1.1 Defining Freight Terms

You can define common codes used when associating a freight term to a Carrier. A **freight term** identifies how transportation costs are calculated.

The default freight terms of the Sterling Multi-Channel Fulfillment Solution are:

- Cost Insurance and Freight (CIF) - The freight cost is completely paid by either the Seller, the Enterprise, or the Hub.
- Cost and Freight (CFR) - The freight cost is paid by the Buyer and either the Seller, the Enterprise, or the Hub.
- Free On Board (FOB) - The freight cost is paid by the Buyer.

You can use the Freight Terms tab for:

- [Creating a Freight Term](#)
- [Modifying a Freight Term](#)
- [Deleting a Freight Term](#)

5.1.1.1 Creating a Freight Term

To create a freight term:

1. From the tree in the application rules side panel, choose Cross Application > Logistics > Logistics Attributes. The Logistics window displays in the work area.
2. Choose the Freight Terms tab.
3. Choose . The Freight Terms Details pop-up window displays.
4. Enter information in the applicable fields. Refer to [Table 5–1](#) for field value descriptions.
5. Enter Choose .

Table 5–1 Freight Terms Details

Field	Description
Freight Terms	Enter the name of the freight term.
Short Description	Enter a brief description of the freight term.
Long Description	Enter a more detailed description of the freight term.
Consider Buyer's Routing Guide	<p>Both the Buyer and the Enterprise can establish routing guides (rules for shipping), and Economic Shipping parameters (ESP), which control how items are shipped. In some cases only the Buyer organization has established values for these rules. In other cases, only the enterprise has established values for these rules. If neither is set, then Hub rules are used.</p> <p>In cases where both the Buyer and the Enterprise have set values for these rules, this setting determines whether to apply the Buyer's routing rules before applying the routing rules of the Enterprise. See the <i>Sterling Multi-Channel Fulfillment Solution Product Concepts</i> for more information about these shipping concepts.</p>
First Buyer then Enterprise	Select to use any shipping rules established by the buyer first. Enterprise rules are applied if no applicable Buyer rule exists.

Table 5–1 Freight Terms Details

Field	Description
First Enterprise then Buyer	Select to use any shipping rules established by the enterprise first. Buyer rules are applied if no applicable Enterprise rule exists.
Charges paid by	
Buyer	Select this option if the Buyer pays shipping charges.
Shipper	Select this option if the Shipper pays shipping charges.

5.1.1.2 Modifying a Freight Term

To modify a freight term:

1. From the tree in the application rules side panel, choose Cross Application > Logistics > Logistics Attributes. The Logistics window displays in the work area.
2. Choose the Freight Terms tab.
3. Select the applicable freight term and choose . The Freight Terms Details pop-up window displays.
4. Enter the new information in the applicable fields. Refer to [Table 5–1](#) for field value descriptions.
5. Choose .

5.1.1.3 Deleting a Freight Term

To delete a freight term:

1. From the tree in the application rules side panel, choose Cross Application > Logistics > Logistics Attributes. The Logistics window displays in the work area.
2. Choose the Freight Terms tab.
3. Select the applicable freight term and choose .

5.1.2 Defining Carrier Modification Reasons

You can define common codes that appear in the Reason Code drop-down list when you modify a Carrier. This code should provide a

standard reason for modifying a Carrier, such as 'Requested Change' which would be used when the customer requests a change of Carrier.

The default carrier modification reason of the Sterling Multi-Channel Fulfillment Solution is:

- Requested Change

You can use the Modify Carrier Reason tab for:

- [Creating a Carrier Modification Reason](#)
- [Modifying a Carrier Modification Reason](#)
- [Deleting a Carrier Modification Reason](#)

5.1.2.1 Creating a Carrier Modification Reason

To create a carrier modification reason:

1. From the tree in the application rules side panel, choose Cross Application > Logistics > Logistics Attributes. The Logistics window displays in the work area.
2. Choose the Modify Carrier Reason tab.
3. Choose . The Modify Carrier Reason Details pop-up window displays.

The screenshot shows a pop-up window titled 'Modify Carrier Reason Details'. It contains three text input fields arranged vertically. The first field is labeled 'Modify Carrier Reason', the second is labeled 'Short Description', and the third is labeled 'Long Description'. Each field is empty and has a light blue border.

4. In Modify Carrier Reason, enter the name of the carrier modification reason.

5. In Short Description, enter a brief description of the carrier modification reason.
6. In Long Description, enter a more detailed description of the carrier modification reason.
7. Choose .

5.1.2.2 Modifying a Carrier Modification Reason

To modify a carrier modification reason:

1. From the tree in the application rules side panel, choose Cross Application > Logistics > Logistics Attributes. The Logistics window displays in the work area.
2. Choose the Modify Carrier Reason tab.
3. Select the applicable carrier modification reason and choose . The Modify Carrier Reason Details pop-up window displays.
4. In Short Description, enter a brief description of the carrier modification reason.
5. In Long Description, enter a more detailed description of the carrier modification reason.
6. Choose .

5.1.2.3 Deleting a Carrier Modification Reason

To delete a carrier modification reason:

1. From the tree in the application rules side panel, choose Cross Application > Logistics > Logistics Attributes. The Logistics window displays in the work area.
2. Choose the Modify Carrier Reason tab.
3. Select the applicable carrier modification reason and choose .

5.1.3 Defining Additional Logistic Rules

You can define additional rules that pertain to an order document type.

To define additional logistic rules:

1. From the tree in the application rules side panel, choose Cross Application > Logistics > Logistics Attributes. The Logistics window displays in the work area.
2. Choose the Other Rules tab.

The screenshot shows the 'Other Rules' tab in the application rules side panel. The 'Advanced Transit Time Calculation' section is visible, containing the following fields and options:

- ☐ Use Advanced Transit Time Calculation
- ☐ Based on SCAC and Carrier Service
- ☐ Based on Carrier Service
- Fixed Transit Days:
- Distance Per Day:
- UOM:
- ☐ Round Up Transit Time To Nearest Day
- Default Carrier Service For Transfer:

3. Enter information in the applicable fields. Refer to [Table 5–2](#) for field value descriptions.
4. Choose .

Table 5–2 Other Rules Tab

Field	Description
Advance Transit Time Calculation	
Use Advanced Transit Time Calculation	Select this field if advance transit time calculation is required when considering ship dates and delivery dates. Transit time is calculated as Lead Time + Distance Per Day (either from the Distance Per Day for a selected Carrier service).
Based on SCAC and Carrier Service	Select Based on Carrier if you want transit time calculations to be based on the carrier and carrier service being used for an order.
Based on Carrier Service	Select Based on Carrier Service if you want transit time calculations to be based on the specific carrier service being used for an order.

Table 5–2 Other Rules Tab

Field	Description
Delivery Lead Time (Days)	<p>Enter the default delivery lead time.</p> <p>Delivery lead time is used to determine when an order line must be shipped based on the requested delivery date. The delivery lead time indicates the amount of time it takes to transport a load from a ship node to a customer. When calculating the delivery date:</p> <ul style="list-style-type: none"> • If neither the ship date or delivery date are provided, the ship date is defaulted to the current days date and the delivery date is defaulted to that date + delivery lead time. • If the ship date is provided but the delivery date is not, the delivery date is defaulted to ship date + delivery lead time. • If the delivery date is provided but the ship date is not, the ship date is defaulted to delivery date - delivery lead time. • If both the ship date and delivery date are provided, this rule is not applied.
Round Up Transit Time To Nearest Day	<p>If selected, transit time calculations are not specific down to the actual hour. Instead, the system performs the calculations and rounds up to the next available day.</p>
Distance Per Day	<p>Enter the default distance for calculating transit time if a Carrier service is not selected or the service selected does not have a distance per day associated with it.</p>
UOM	<p>Select the distance unit of measure.</p>
Default Carrier Service for Transfer	<p>Select the carrier service you want to use to compute the transfer time between two nodes if they do not have a transfer schedule configured for them.</p> <p>For more information about configuring transfer schedules between nodes, see the appropriate section in this guide.</p>

5.2 Defining Delivery Codes

You can define common codes used for indicating the delivery code when creating or modifying a Carrier. The **delivery code** identifies the entity that pays for the transportation costs.

The default delivery codes of the Sterling Multi-Channel Fulfillment Solution are:

- ENTERPRISE
- MARKETPLACE
- SUPPLIER

You can use the Delivery Codes branch for:

- [Creating a Delivery Code](#)
- [Modifying a Delivery Code](#)
- [Deleting a Delivery Code](#)

5.2.1 Creating a Delivery Code

To create a delivery code:

1. From the tree in the application rules side panel, choose Cross Application > Logistics > Delivery Codes. The Delivery Codes window displays in the work area.
2. Choose . The Delivery Code Details pop-up window displays.

The screenshot shows a pop-up window titled 'Delivery Code Details'. It contains three text input fields with labels to their left: 'Delivery Code', 'Short Description', and 'Long Description'. The fields are empty and have a light blue border.

3. In Delivery Code, enter the name of the delivery code.
4. In Short Description, enter a brief description of the delivery code.
5. In Long Description, enter a more detailed description of the delivery code.

6. Choose .

5.2.2 Modifying a Delivery Code

To modify a delivery code:

1. From the tree in the application rules side panel, choose Cross Application > Logistics > Delivery Codes. The Delivery Codes window displays in the work area.
2. Select the applicable delivery code and choose . The Delivery Code Details pop-up window displays.
3. In Short Description, enter a brief description of the delivery code.
4. In Long Description, enter a more detailed description of the delivery code.
5. Choose .

5.2.3 Deleting a Delivery Code

To delete a delivery code:

1. From the tree in the application rules side panel, choose Cross Application > Logistics > Delivery Codes. The Delivery Codes window displays in the work area.
2. Select the applicable delivery code and choose .

5.3 Defining Shipment Modes

You can define common codes used when indicating the ship mode. The **shipment mode** describes how an order is being shipped.

The default shipment modes of the Sterling Multi-Channel Fulfillment Solution are:

- TL - Truckload
- LTL - Less-Than Truckload
- PARCEL

You can use the Shipment Modes tab for:

- [Creating a Shipment Mode](#)

- [Modifying a Shipment Mode](#)
- [Deleting a Shipment Mode](#)

5.3.1 Creating a Shipment Mode

To create a shipment mode:

1. From the tree in the application rules side panel, choose Cross Application > Logistics > Shipment Modes. The Shipment Modes window displays in the work area.
2. Choose . The Shipment Mode Details pop-up window displays.

The image shows a 'Shipment Mode Details' pop-up window. It contains three text input fields stacked vertically. The first field is labeled 'Shipment Mode', the second is labeled 'Short Description', and the third is labeled 'Long Description'. Each label is to the left of its corresponding text box.

3. In Shipment Mode, enter the name of the shipment mode.
4. In Short Description, enter a brief description of the shipment mode.
5. In Long Description, enter a more detailed description of the shipment mode.
6. Choose .

5.3.2 Modifying a Shipment Mode

To modify a shipment mode:

1. From the tree in the application rules side panel, choose Cross Application > Logistics > Shipment Modes. The Shipment Modes window displays in the work area.

2. Select the applicable shipment mode and choose . The Shipment Mode Details pop-up window displays.
3. In Short Description, enter a brief description of the shipment mode.
4. In Long Description, enter a more detailed description of the shipment mode.
5. Choose .

5.3.3 Deleting a Shipment Mode

To delete a shipment mode:

1. From the tree in the application rules side panel, choose Cross Application > Logistics > Shipment Modes. The Shipment Modes window displays in the work area.
2. Select the applicable shipment mode and choose .

5.4 Defining Outbound Constraints

Outbound constraints are used to describe conditions that control how shipping is done. These include whether certain items can be shipped together, whether to use Economic Shipping Parameters, and how routing is performed. You can also use Outbound Constraints for:

- [Creating a Routing Guide](#)
- [Modifying a Routing Guide](#)
- [Deleting a Routing Guide](#)

Note: the Outbound Constraints node does not apply to Reverse Logistics or Supply Collaboration.

To define outbound constraints:

1. From the tree in the application rules side panel, choose Cross Application > Logistics > Outbound Constraints. The Outbound Constraints window displays in the work area.
2. Enter information in the applicable fields. Refer to [Table 5–3](#) for field value descriptions.

3. Choose .

Outbound Constraints (DEFAULT)

Do not mix in a shipment:

☐ Buyer Mark For Node Id ☐ Customer PO #

☐ Department Code ☐ Gift Flag

☐ Mark For ☐ Order #

☐ Order Type

Transportation optimization:

Routing Guides    

Name	Routing Guide #	Effective Date	Freight Terms
Results 0 of 0			

Outbound Constraints (DEFAULT)

Table 5–3 Outbound Constraint Window

Field	Description
Do not mix in Shipment	If any of the following are selected, separate shipments must be create for items that have different values for these attributes. For example, if Department Code is selected, items that are for different departments can not be included in the same shipment.
Customer PO #	Customer's Purchase Order number.
Mark For	Person for whom this shipment is marked for
Department Code	The department for which the item is intended.
Order #	The order number.
Order Type	The order type.

Table 5–3 Outbound Constraint Window

Field	Description
Transportation optimization	
Economic shipping parameters maintained	<p>Economic Shipping Parameters (ESP) are used in shipping consolidation. Select this field to enable the following Economic Shipping Parameters fields.</p> <p>ESP support consolidation of shipments until a weight or volume threshold is met, or until an certain time elapses. By consolidating shipments, shipping costs can be reduced</p> <p>For example, you can set that shipments should be consolidated until the shipment weight is 300 pounds, or 50 cubic feet in volume. To ensure that eventually the shipment is set, you can establish a maximum number of days to wait until the conditions are met.</p> <p>When either the weight, volume or delay shipment threshold is met, the shipment is moved to the next stage in shipping.</p>
Delay shipment by not more than ___ Days	<p>Enter the number of days this shipment can be delayed before it should be shipped.</p> <p>For example, if a value is set for weight threshold of 300 pounds, and this field has been set to 3 days, the shipment is shipped after 3 days, regardless of whether the weight threshold has been met.</p>
Consolidate up to weight threshold of	Enter a weight.
Consolidate up to volume threshold of	Enter a volume
Routing Guide	
Not Maintained	Select this to use manual routing. Shipments are managed in the shipment console, and any routing guides are not consulted.

Table 5–3 Outbound Constraint Window

Field	Description
Maintained in Sterling	<p>Select this to use the Routing Guides maintained in the Sterling Multi-Channel Fulfillment Solution to determine how shipments should be routed. See Section 5.4.1, "Creating a Routing Guide".</p> <p>In addition to the routing guide maintained here by the enterprise, there may be a routing guide for the buyer organization.</p> <p>For more information about using both buyer and enterprise routing guides, see Section 5.1.1.1, "Creating a Freight Term".</p>
Maintained Externally	<p>Select this to indicate that an external routing system is used. The routing guides maintained in the Sterling Multi-Channel Fulfillment Solution is not consulted.</p> <p>Examples of external routing systems include using an integrated Transportation Management System (TMS), or implementing a User Exit which consults with the buyer organization.</p>

5.4.1 Creating a Routing Guide

Routing Guides are a list of conditions which determine how a shipment should be routed. A routing guide has a time period for which is effective, and conditions for when it should be applied. These conditions are based on Freight Terms and Department.

Each routing guide contains a list of *routing guide lines*, each of which describe detailed conditions for selecting a carrier. The routing guide information is based on data used by VICS (Voluntary InterIndustry Commerce Standards) routing.

To create a routing guide:

1. From the tree in the application rules side panel, choose Cross Application > Logistics > Outbound Constraints. The Outbound Constraints window displays in the work area.
2. Select  on the Routing Guides list window. The Routing Guide Details window displays in the work area.
3. Enter information in the applicable fields. Refer to [Table 5–4](#) for field value descriptions.

4. Choose .

Field	Descriptions
Name	Enter a name for the routing guide.
Routing Guide #	A number for the routing guide.
Publish Date	When this routing guide is available within the system.
Supersedes Routing Guide #	Tracking information. For example, if a minor revision is made to routing guide "1234", you might create a routing guide "1234-A", and enter that it supersedes routing guide "1234". This field is for informational purposes and is not used to determine the effective routing guide.
Effective Date	The start date for applying the routing information in this routing guide. You can use the effective date and expiration date to apply routing guidelines for particular periods of time.
Expiration Date	The end date for applying the routing information in this routing guide.
Apply this Routing Guide when	

Table 5–4 Routing Guide Details Window

Field	Descriptions
Freight Terms	<p>Apply this routing guide when this condition is met. Select <i>is</i>, <i>is in</i>, or <i>is not</i>. Use:</p> <ul style="list-style-type: none"> • <i>is</i> to specify a single Freight Term. • <i>is in</i> to specify a group of Freight Terms, one of which must be matched. • <i>is not in</i> to specify a group of Freight Terms. The routing guide is used if the Freight Term does not match one of these values.
Item Classification	<p>Items can be classified.</p> <p>Note: This field displays when valid item classifications have been set up for Routing Guide.</p>

5.4.2 Modifying a Routing Guide

To modify a routing guide:

1. From the tree in the application rules side panel, choose Cross Application > Logistics > Outbound Constraints. The Outbound Constraints window displays in the work area.
2. Select a routing guide in the Routing Guide list window, and select .
3. The Routing Guide Details window displays in the work area.
4. Enter information in the applicable fields. Refer to [Table 5–4](#) for field value descriptions.
5. Choose .

5.4.2.1 Creating a Routing Guide Line

Routing guide lines contain the specific conditions to use when routing a shipment. A routing guide can contain multiple routing guide lines.

When routing occurs, the shipment is matched against the routing guide lines. Based on the criteria specified, a carrier and carrier service is selected.

When routing results in a change to the shipment destination, the system re-routes, with the revised destination as the factor for routing. This type of configuration is used for consolidator nodes. While routing the second

time, system looks for the routing guide entry that contains destination node, but without any other destination parameters filled out (such as address, country, etc.).

To create a routing guide line:

1. From the Routing Guide Details window, select the Routing Guidelines Tab. To have access to the Routing Guidelines Tab, save the information you have entered on the Primary Info Tab.
2. A Routing Guide Line search window displays.

Figure 5–2 Routing Guide Details Window

3. Select . A Routing Guide Line Details screen displays in the work area.

4. Enter information in the applicable fields. Refer to [Table 5–5](#) for field value descriptions.
5. Choose .

Figure 5–3 Routing Guide Line Details Window

Table 5–5 Routing Guide Line Details

<p>Setting conditions:</p> <p>In many of the following fields, you can select <i>is</i>, <i>is in</i>, or <i>is not in</i> and then specify a value. Use:</p> <ul style="list-style-type: none"> • <i>is</i> to specify that a single value must be matched • <i>is in</i> to specify a group of values, one of which must be matched. • <i>is not in</i> to specify a group of values. The routing guide line is used if none of these values match. <p>For example to match any one of a group of states, specify State <i>is in</i> California, Washington, Oregon, Nevada. When assessing the condition, California would match, Florida would not.</p>	
Field	Description
Ship From	
Node	Select the node.
When ship from is not node, select the following attribute(s)	Enter this option if not shipping from the node and then enter one or more of the following conditions.
Country	Select the country name(s).
State	Enter the state name(s).
City	Enter the city name(s).
Zip Code	Enter the zip code or zip code range.
Ship To	
Node	Select the node.
Region	Enter the region.
When ship to is not node and region, select the following attribute(s)	Select this option if not shipping to a node within a specific region and then select one or more of the following conditions.
Country	Select the country name(s).
State	Enter the state name(s).
City	Enter the city name(s).
Zip Code	Enter the zip code or zip code range.
Consolidator	Select the consolidator name(s).

Table 5–5 Routing Guide Line Details

Store#	Select the store number(s).
And weight is in the range:	You can match weight. For example, if you want packages that weigh between 100 and 500 pounds to be shipped using a specific carrier, you would specify From as '100' and To as '500'.
From	Enter the minimum value.
To	Enter the maximum value.
And volume is in the range:	You can match volume. For example, if you want packages that are between 3 and 10 cubic feet to be shipped using a specific carrier, you would specify From as '3' and To as '10'.
From	Enter the minimum value.
To	Enter the maximum value.
And handling units are in the range:	Number of containers.
From	Enter the minimum value.
To	Enter the maximum value.
And if requested carrier service code is	
Carrier Service Code	Select a carrier service code.
For more information about defining carrier services, see Section 5.4.2.1.1, "Defining Carrier Services" .	
Then ship via:	
Priority	Indicates the number to give this rule a relative importance. When a shipment is compared to the routing guide lines, there may be two carrier services that could be used. This priority serves as a tie breaker. The carrier service with the lowest number is used.
Carrier / Service	Indicates the carrier and service code that is desired.
Break Bulk Node	The break bulk node that is close to the buyer.
Contact Specified	Indicates whether the contact details for the shipment is specified.
With overrides:	

Table 5–5 Routing Guide Line Details

Override Freight Terms	Select to override the shipment's Freight Term.
Override Ship To	To override the Ship To value, select this field, and then select one of the following. This is only used when performing routing again due to a revised ship to address.
Node	Select the node name.
Consolidator	Select the consolidator name.
Store#	Select the store number.

When the conditions set are assessed, the routing guide line which matches the most conditions is used. For example, imagine there are three routing guide lines:

Routing guide line A - What to do when shipping from Massachusetts

Routing guide line B - What to do when shipping from Massachusetts, and when shipping from the zip code 01810.

Routing guide line C - What to do when shipping from Massachusetts or NY.

If the shipment originates from the zip code 01810, it matches all of these routing guide lines. The actions specified in *Routing guide line B* is used, as more conditions are met (both the state and the zip code).

If the shipment originates from Massachusetts, but not from zip code 01810, then both *Routing guideline A* and *Routing guide line C* match. The priority on the guidelines are used to determine which is used, with the lowest numbered priority being selected. If *Routing guideline A* had a priority number of 3, and *Routing guideline C* had a priority number of 5, *Routing guideline A* is used.

5.4.2.1.1 Defining Carrier Services

When routing occurs, the shipment is matched against the routing guidelines. Based on the criteria specified, you select a carrier service to use.

You can use the Carrier Services panel for:

- [Creating a Carrier Service](#)

- [Modifying a Carrier Service](#)
- [Deleting a Carrier Service](#)

Creating a Carrier Service

To create a carrier service:

1. From the Routing Guidelines Details window, in the Carrier Services panel, select . The Carrier Services window displays.

2. Enter information in the applicable fields. Refer to [Table 5–6](#) for field value descriptions.
3. Choose .

Table 5–6 *Carrier Services*

Fields	Description
Priority	Enter a number to give this rule a relative importance. When a shipment is compared to the routing guide lines, there may be two carrier services that could be used. This priority serves as a tie breaker. The carrier service with the lowest number is used.
Carrier/Service	Select the carrier or service code that is desired.

Table 5–6 Carrier Services

Fields	Description
Break Bulk Node	Select the break bulk node that is close to the buyer.
Contact Address	This is used to specify the address information for the carrier service's contact person. Click  to change the contact Address.

Modifying a Carrier Service

To modify a carrier service:

1. From the Routing Guidelines Details window, in the Carrier Services panel, select a carrier service from the list in the Carrier Services list window, and select . The Carrier Services window displays.
2. Enter the new information in the applicable fields. Refer to [Table 5–6](#) for field value descriptions.
3. Choose .

Deleting a Carrier Service

To modify a carrier service:

1. From the Routing Guidelines Details window, in the Carrier Services panel, select a carrier service in the Carrier Services list window and select .
2. Choose .

5.4.2.2 Modifying a Routing Guide Line

To modify a routing guide line:

1. From the Routing Guidelines Details window, select the Routing Details Tab. A Routing Guide Line search window displays.
2. Select a routing guide line in the Routing Guide Line list window, and select . The Routing Guide Line Details window displays.
3. Enter the new information in the applicable fields. Refer to [Table 5–5](#) for field value descriptions.
4. Choose .

5.4.2.3 Deleting a Routing Guide Line

To delete a Routing Guide Line:

1. From the Routing Guide Lines Details window, select the Routing Details Tab. A Routing Guide Line search window displays.
2. Select a routing guide line in the Routing Guide Line list window, and choose .

5.4.3 Deleting a Routing Guide

To delete a routing guide:

1. From the tree in the application rules side panel, choose Cross Application > Logistics > Outbound Constraints. The Outbound Constraints window displays in the work area.
2. Select the applicable Routing Guide and choose .

Configuring Cross Application Pricing Components

You can configure the components used for pricing by the Sterling Multi-Channel Fulfillment Solution financial engine throughout the Distributed Order Management business application module.

You can use the Financials branch for:

- [Defining Pricing by Region](#)
- [Defining Price Programs and Price Lists](#)

6.1 Defining Pricing by Region

You can define the region schema the organization you are configuring uses for product, delivery service, and provided service pricing.

For example, if you are configuring an organization that offers a delivery service that is associated with a region schema in which they deliver to a given metro area region and a suburb region, the organization may want to charge more for delivery in the metro area than the suburbs. In this case you would want to associate a region schema to configure different service pricing for the different regions.

For more information about region schemas, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

To define pricing by region:

1. From the tree in the application rules side panel, choose Cross Application > Financials > Region Usage For Pricing. The Region Usage For Pricing pop-up window displays in the work area.

- 2. Enter information in the applicable fields. Refer to [Table 6–1](#) for field value descriptions.
- 3. Choose .

Region Usage For Pricing

Schema for Product being shipped

Schema for Product being delivered

Schema for Provided Service

Table 6–1 Region Usage For Pricing Pop-Up Window

Field	Description
Schema for Product being shipped	Select the region schema you want to use for the organization's product item pricing.
Schema for Product being delivered	Select the region schema you want to use for the organization's delivery service pricing.
Schema for Provided Service	Select the region schema you want to use for the organization's provided service pricing.

6.2 Defining Price Programs and Price Lists

Note: This configuration is not required if you are using an external pricing engine.

A price program is a way to offer different pricing to different customers at different times. A price program may have one or more price lists.

Each price list defines pricing for a specific currency. A price program definition defines which price list to use for specific time period.

For example, you may want to set up a special price program for your best customers offering items at a discounted price if they order before Christmas. You can create two price lists; "Before" and "After". "Before" lists each item's discounted price before Christmas. "After" lists the item's regular price after Christmas. You can then create a price program to specify that between now and December 25, orders in that price program are calculated using "Before" and after December 25, using "After".

If a customer orders an item that is part of the price program, but falls outside of the specified date range, quantity range, or currency, the price is calculated as zero. In this case, the CSR must manually enter the price.

Note: An organization that is defined as an enterprise cannot inherit price programs from its 'Inherit Configuration from' organization.

Important: You must select Allow Price Calculation For Draft Orders to apply pricing during draft order creation for the order document. You must select Allow Price Calculation For Confirmed Orders, if you want to apply pricing during both draft order confirmation and order creation. For more information about this parameter, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

Use the Price Programs and Price Lists branches for:

- [Creating a Price List](#)
- [Adding Items to a Price List](#)
- [Modifying an Item Price List](#)
- [Deleting an Item Price List](#)
- [Modifying a Price List](#)
- [Deleting a Price List](#)

- [Creating a Price Program](#)
- [Modifying a Price Program](#)
- [Deleting a Price Program](#)
- [Adding a New Price List to a Price Program](#)
- [Modifying a Price List](#)
- [Deleting a Price List in a Price Program](#)

6.2.1 Creating a Price List

To create a price list:

1. From the tree in the application rules side panel, choose Cross Application > Financials > Price Lists. The Price Lists window displays in the work area.
2. Choose . The Price List Details window displays.
3. Enter information in the applicable fields. Refer to [Table 6–2](#) for field values.
4. Choose .

6.2.1.2 Modifying an Item Price List

Table 6–3 Price List: Item Details Window

Field	Description
Item ID	Enter the item ID for the item you are adding to the price list.
UOM	Select a unit of measure for the item.
Product Class	Select the product class the item falls under.
List Price	Enter the price the item is listed for.
Retail Price	Enter the price the item is sold for.
Unit Price By Quantity Range	<p>Once the item is created choose  to add item price set details.</p> <p>Choose  to modify a detail.</p> <p>Choose  to delete a detail.</p>
Region	<p>Enter the region that the item pricing is applicable to.</p> <p>For example, if you adding a delivery service item that delivers to both a metro region and a suburb region, but charges for delivery to the metro regions, you would create two records: one specifying the metro region and its pricing and one for the suburb region.</p> <p>Note: This field is optional. If left blank, the quantity pricing range works for any region.</p> <p>Note: The region specified here must be part of the region schema associated with the item you are creating. For more information about associating a region schema for pricing, see Section 6.1, "Defining Pricing by Region".</p>
From Quantity	Enter the beginning amount for quantity pricing.
To Quantity	Enter the end amount for a price range based on purchase of a particular number of items.
Unit Price	Enter the cost per item for that start and end quantity.

To modify an item price list:

1. In the Price List Details window select the applicable item and choose  from the Item Level Pricing list. The Item Price Set Details window displays.
2. Enter information in the applicable fields. Refer to [Table 6–3](#) for field value descriptions.
3. Choose .

6.2.1.3 Deleting an Item Price List

To delete an item price list, in the Price List Details window, select the applicable item and choose .

6.2.2 Modifying a Price List

To modify a price list:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose Cross Application > Financials > Price Lists. The Price Lists window displays in the work area.
3. Select the applicable price list and choose . The Price Set Details window displays.
4. In Description, enter a brief description of the price list.
5. Choose .

6.2.3 Deleting a Price List

To delete a price list:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose Cross Application > Financials > Price Lists. The Price Lists window displays in the work area.
3. Select the applicable price list and choose .

6.2.4 Creating a Price Program

To create a price program:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose Cross Application > Financials > Price Programs. The Price Programs window displays in the work area.
3. Choose . The Price Program Details window displays.

The screenshot shows the 'Price Program (DEFAULT)' window. It has a title bar with a green icon and standard window controls. Below the title bar, there are two text input fields: 'Price Program Name' and 'Description'. Below these fields is a section titled 'Price Program Definitions' with a blue header and a small icon. This section contains a table with four columns: 'Price List Name', 'Currency', 'Start Date', and 'End Date'. The table body is currently empty. At the bottom left of the window, it says 'Results 0 Of 0'.

Price List Name	Currency	Start Date	End Date
-----------------	----------	------------	----------

4. In Price Program Name, enter the name of the price program.
5. In Description, enter a brief description of the price program.
6. Choose .

You can use the Price Program Details window for:

- [Adding a New Price List to a Price Program](#)
- [Deleting a Price List in a Price Program](#)

6.2.4.1 Adding a New Price List to a Price Program

To add a new price list to a price program:

1. In the Price Program Details window, choose  from the Price Program Definitions list. The Price Program Definition pop-up window displays.

The image shows a 'Price Program Definition' window. It contains four input fields: 'Price List' (a dropdown menu), 'Currency' (a dropdown menu), 'Start Date' (a text box), and 'End Date' (a text box). To the right of each field is a small icon: a green plus sign for Price List and Currency, and a calendar icon for Start Date and End Date.

2. From Price List, select the price list you want to add to the price program.
3. From Currency, select the currency the price list is in.
4. In Start Date, enter the date that the pricing for the items in the price program begins.
5. In End Date, enter the date that the pricing for the items in the price program ends.
6. Choose .

6.2.4.2 Deleting a Price List in a Price Program

To delete a price list in a price program, from the Price Program Details window, select the applicable price list and choose .

6.2.5 Modifying a Price Program

To modify a price program:

1. From the tree in the application rules side panel, choose Cross Application > Financials > Price Programs. The Price Programs window displays in the work area.
2. Select the applicable Price Program and choose . The Price Program Details window displays.
3. In Description, enter a brief description of the price program.
4. Choose .

6.2.6 Deleting a Price Program

To delete a price program:

1. From the tree in the application rules side panel, choose Cross Application > Financials > Price Programs. The Price Programs window displays in the work area.
2. Select the applicable Price Program and choose .

Configuring Cross Application Payment Components

You can configure the components used in the Sterling Multi-Channel Fulfillment Solution to define the types of payment the system accepts and the rules surrounding payment collection.

You can use the Financials branch for:

- [Defining Payment Types](#)
- [Defining Payment Rules](#)

7.1 Payment Processing Rules Determination

Payment Processing Rules, such as the type of payment or the order in which multiple payment types are applied, can be determined at either the seller organization or enterprise level. To enable Payment Processing Rules to be configured at the enterprise level:

1. From the tree in the application rules side panel, choose Cross Application > Financials > Payment Processing Rules Determination. The Payment Processing Rules Determination window displays in the work area.
2. To enable Payment Processing Rules to be configured at the enterprise level, check the box next to the "Use Enterprise of an Order (Instead of the Seller Organization) to Determine Payment Processing Rules".
3. Choose .

Note: This rule is only supported when using a compatible PCA and not by the Sterling Multi-Channel Fulfillment Solution Consoles alone.

7.2 Defining Payment Types

You can define common codes for payment types. **Payment types** are the different methods of payment that can be used in financial transactions between organizations, for example, credit card or check.

The default payment types of the Sterling Multi-Channel Fulfillment Solution are:

- CHECK
- CREDIT_CARD
- CUSTOMER_ACCOUNT
- OTHER

You can use the Payment Types branch for:

- [Creating a Payment Type](#)
- [Modifying a Payment Type](#)
- [Deleting a Payment Type](#)

7.2.1 Creating a Payment Type

To create a payment type:

1. From the tree in the application rules side panel, choose Cross Application > Financials > Payment Types. The Payment Types window displays in the work area.
2. Choose . The Payment Type Details pop-up window displays.
3. Enter information in the applicable fields. Refer to [Table 7–1](#) for field value descriptions.
4. Choose .

Payment Type Details

☐ Create Refund Payment and Charge Request

☐ Create Refund Payment and Wait for Payment Information

Table 7–1 Payment Type Details Pop-Up Window

Field	Description
Payment Type	
Payment Type	Enter a name for the payment type.
Payment Type Group	Select a payment type group
Description	Enter a brief description of the payment type.
Charge	

Table 7–1 Payment Type Details Pop-Up Window

Field	Description
Charge Sequence	<p>Enter the preferred charge sequence for the payment type, 0 being highest.</p> <p>When defining payment types you can set the default order in which payment types are charged. For example, if the Seller organization uses gift certificates and prefers to collect against the gift certificate and then collect any remaining amount against a credit card, you may configure a payment type of Gift Certificate to have a charge sequence of 1 and a payment type of Credit Card to have a charge sequence of 2. For more information about charge sequencing, see the <i>Sterling Multi-Channel Fulfillment Solution Product Concepts</i>.</p>
Charge Instead of Authorize	<p>Select this field if you want to create a charge request for this payment type instead of an authorization request.</p> <p>This flag is used to trigger the GetFundsAvailable user exit that determines the amount of funds available in the account when a payment type is charged during order processing. For more information about the GetFundsAvailable user exit, see the <i>Sterling Multi-Channel Fulfillment Solution Javadocs</i>.</p>
Charge Up To Available	<p>Select this field to allowing charging up to the available amount. This field is only available for payment types in the Stored Value Card payment type group.</p>

Table 7–1 Payment Type Details Pop-Up Window

Field	Description
Charge Consolidation Allowed	<p>Select Charge Consolidation Allowed if you want to consolidate charge requests.</p> <p>If this option is selected, when a charge transaction record is created the collection date for the record is set to the execution date of the authorization + the time you enter in the Consolidation Window (hrs) field. The collection date is the date (and time) after which the executeCollection time-triggered transaction picks up the record(s) for processing.</p> <p>If further charging is required for a given order for the same payment type, the existing charge transaction record is updated instead of a new record being inserted.</p> <p>Note: This flag is only applicable to Sales Order document types.</p> <p>Note: If the charge is not created from an authorization, it is not taken into consideration for consolidation.</p>
Consolidation Window (hrs)	If you selected Charge Consolidation Allowed, enter the timeframe (in hours) for charges to be consolidated within.
Refund	
Valid for Return	Select Valid for Return if this payment type can be credited according to the Seller's business practices.
Refund Sequence	<p>Enter the preferred refund sequence for the payment type, 0 being highest.</p> <p>When defining payment types you can set the default order in which the Seller credits a Buyer's payment types. For example, if the Seller organization prefers to credit a customer's account and then a customer's credit card, you may configure a payment type of Customer Account to have a refund sequence of 1 and a payment type of Credit Card to have a charge sequence of 2. For more information about refund sequencing, see the <i>Sterling Multi-Channel Fulfillment Solution Product Concepts</i>.</p>

Table 7–1 Payment Type Details Pop-Up Window

Field	Description
Default for Return	Select Default for Return to designate this payment type as the default type to be credited in the Return Console. If an order does not have any payments valid for a return, the payment type for which this is selected is used to create a new payment record.
Refund To Same Payment Method	Select this field to allow refunds to the same payment method.
Refund To New Payment Method	Select this field to allow refunds to a new payment method.
Refund To New Payment Method of Payment Type	<p>If you selected 'Refund To New Payment Method' above, use this field to select a new payment type to use.</p> <p>Only payment types in the STORED VALUE CARD or OTHER payment type group are available.</p>
When Refunding to a New Payment Method	
Use the Following Constraints	<p>Select this option to denote that this payment type has a refund constraint.</p> <p>This allows you to issue a refund using a different payment type if the refund amount is greater than or less than a certain value.</p>
If The Refund Amount is	Choose 'Greater Than' or 'Less Than' from the drop-down menu, and enter a refund amount to use as a constraint.
Refund Using Payment Type	Choose a refund payment type to use if the constraint is valid.
Create Refund Fulfillment Order Using	Select this option to create a refund fulfillment order instead of creating a new payment method.
ItemID	From the drop down menu select the Item ID of the item to fulfill the refund.
UOM	From the drop down select the UOM of the item to fulfill the refund.

Table 7–1 Payment Type Details Pop-Up Window

Field	Description
Create Refund Payment and Charge Request	Select this option to create a refund payment and charge request when refunding to a new payment method.
Create Refund Payment and Wait for Payment Information	Select this option to not create a refund charge request. This also raises the Incomplete Payment Information event, if it is enabled.

7.2.2 Modifying a Payment Type

To modify a payment type:

1. From the tree in the application rules side panel, choose Cross Application > Financials > Payment Types. The Payment Types window displays in the work area.
2. Select the applicable payment type and choose . The Payment Type Details pop-up window displays.
3. Enter information in the applicable fields. Refer to [Table 7–1](#) for field value descriptions.
4. Choose .

7.2.3 Deleting a Payment Type

To delete a payment type:

1. From the tree in the application rules side panel, choose Cross Application > Financials > Payment Types. The Payment Types window displays in the work area.
2. Select the applicable payment type and choose .

7.3 Defining Payment Rules

You can set up the rules that the organization uses at the time of payment collection.

You can use the Payment Rules branch for:

- [Creating a Payment Rule](#)
- [Modifying a Payment Rule](#)

- [Deleting a Payment Rule](#)

7.3.1 Creating a Payment Rule

To create a payment rule:

1. From the tree in the application rules side panel, choose Cross Application > Financials > Payment Rules. The Payment Rules window displays in the work area.
2. Choose . The Payment Rule Details pop-up window displays.
3. Enter information in the applicable fields. Refer to [Table 7–2](#) for field value descriptions.
4. Choose .

Table 7–2 *Payment Rule Pop-Up Window*

Field	Description
Payment Rule ID	Enter the payment rule ID as you would like it to appear throughout the system.
Publish Invoice	<p>Choose At Creation to publish an order's invoice when it is created.</p> <p>Choose At Collection to publish an order's invoice after payment is collected on the invoice.</p> <p>Note: The PUBLISH_INVOICE_DETAIL event must be configured and the Send Invoice time-triggered transaction must be run for an invoice to be published.</p>

Table 7–2 Payment Rule Pop-Up Window

Field	Description
Collect Externally Through Accounts Receivable	<p>If checked, all the invoice details are published to an external accounts receivable system. Any collections performed outside of the Sterling Multi-Channel Fulfillment Solution need not be reported.</p> <p>If unchecked, the Sterling Multi-Channel Fulfillment Solution handles all financial collections, provided you have programmed the user exits to do so.</p> <p>Note: If using an external system to handle your accounts, Collect Externally Through Accounts Receivable must be checked and Settlement Required and Authorization Required must be unchecked.</p>
Merchant ID	If the organization uses a third-party agency to handle payments, enter their merchant identifier.
Settlement Required	Select Settlement Required if payments require settlement before they can be processed.
Authorization Required	Select Authorization Required if payments require any type of authorization before they can be processed.
Deferred Credit On Return Required	Select Deferred Credit On Return Required if an event should be raised with the cancelled amount that was not refunded when part of a pre-collected order is cancelled.
Customer Account Maintained Internally	<p>Select Customer Account Maintained Internally if the payment processing for an account is handled from within the Sterling Multi-Channel Fulfillment Solution.</p> <p>This rule prevents the YFSCollectionCustomerAccountUE user exit from being called for Authorization if the Customer Payment Method has a limit set for it.</p>

7.3.2 Modifying a Payment Rule

To modify a payment rule:

1. From the tree in the application rules side panel, choose Cross Application > Financials > Payment Rules. The Payment Rules window displays in the work area.

2. Select the applicable payment rule and choose . The Payment Rule Details pop-up window displays.
3. Modify information in the applicable fields. Refer to [Table 7–2](#) for field value descriptions.
4. Choose .

7.3.3 Deleting a Payment Rule

To delete a payment rule:

1. From the tree in the application rules side panel, choose Cross Application > Financials > Payment Rules. The Payment Rules window displays in the work area.
2. Select the applicable payment rule and choose .

Configuring Cross Application Customer Components

You can define the customers that buy from an organization, and attributes about them such as their classification, primary information, and service preferences. You can use the Customer branch for:

- [Defining Customer Rules](#)
- [Defining Customer Definitions](#)
- [Defining Contact Types](#)

8.1 Defining Customer Rules

You can use the Customer Rules branch for:

- [Defining Customer Classifications](#)
- [Defining Additional Customer Rules](#)

8.1.1 Defining Customer Classifications

You can configure the customer classification codes to associate with a customer identification master. For more information about creating a customer identification master, see [Section 8.2, "Defining Customer Definitions"](#).

You can use the Customer Classification branch for:

- [Creating a Customer Classification](#)
- [Modifying a Customer Classification](#)
- [Deleting a Customer Classification](#)

8.1.1.1 Creating a Customer Classification

To create a customer classification:

1. From the tree in the application rules side panel, choose Cross Application > Customer > Customer Rules. The Customer Rules window displays in the work area.
2. Click the Customer Classification tab.
3. Click . The Customer Classification Code Details pop-up window displays.

The image shows a pop-up window titled "Customer Classification Code Details". It has a light blue header bar with the title and a small icon on the right. The main area is white and contains three text input fields. The first field is labeled "Customer Classification Code", the second is labeled "Short Description", and the third is labeled "Long Description". Each label is to the left of its corresponding input field.

4. In Customer Classification Code, enter the classification ID code.
5. In Short Description, enter a brief description of the classification ID code.
6. In Long Description, enter a more detailed description of the classification ID code.
7. Click .

8.1.1.2 Modifying a Customer Classification

To modify a customer classification:

1. From the tree in the application rules side panel, choose Cross Application > Customer > Customer Rules. The Customer Rules window displays in the work area.
2. Click the Customer Classification tab.
3. Select the applicable customer classification code and click . The Customer Classification Code Details pop-up window displays.

4. In Short Description, enter a brief description of the classification ID code.
5. In Long Description, enter a more detailed description of the classification ID code.
6. Click .

8.1.1.3 Deleting a Customer Classification

To delete a customer classification:

1. From the tree in the application rules side panel, choose Cross Application > Customer > Customer Rules. The Customer Rules window displays in the work area.
2. Click the Customer Classification tab.
3. Select the applicable customer classification code and click .

8.1.2 Defining Additional Customer Rules

To define additional customer rules:

1. From the tree in the application rules side panel, choose Cross Application > Customer > Customer Rules. The Customer Rules window displays in the work area.
2. Click the Other Rules tab.

Customer Rules (DEFAULT)

Customer Classification **Other Rules**

Service Slot Group Used By Customer For Slot Preferences  

☐ Manual User To Customer Assingment Is Required

3. In the Service Slot Group Used By Customer For Slot Preference field, select from the drop-down list the identifier of the service slot group that is used to define customer preferences.

4. If you want specific users (or members of a team) to manage the relationship with certain customers check the Manual User To Customer Assignment Is Required box. This provides the assigned user with access to all of this customer's orders and related information.
5. Click .

8.2 Defining Customer Definitions

You can the configure customer definitions that establish a relationship between an organization and its Buyers. When creating a customer definition, you associate an existing Buyer organization with a specific customer ID and classification. The customer identification uniquely identifies the Buyer organization in instances where multiple ERP systems download Buyer information into the Sterling Multi-Channel Fulfillment Solution.

You can use the Customer Definition branch for:

- [Creating a Customer Definition](#)
- [Modifying a Customer Definition](#)
- [Deleting a Customer Definition](#)

8.2.1 Creating a Customer Definition

To create a customer definition:

1. From the tree in the application rules side panel, choose Cross Application > Customer > Customer Definitions. The Customer Search window displays in the work area.
2. Choose . The Customer pop-up window displays.

Create Customer

☒ This Customer Is A Business

3. Enter information into the applicable fields. Refer to [Table 8–1](#) for field value descriptions.
4. Choose .

Table 8–1 Customer Pop-Up Window

Field	Description
This Customer Is a Business	Select this if the customer with whom you trade participates as a company (as in a B2B scenario). If you choose this option, see Business Customer Details in this table for further information specific to this scenario.
This Customer Is a Consumer	Select this if the customer with whom you trade participates as an individual (as in a B2C scenario). If you choose this option, see Business Customer Details in this table for further information specific to this scenario.
Customer ID	Enter the unique Identifier.
Customer Classification	Select the classification, if applicable.
Business Customer Details	
Select Existing Organization	Choose this and select the applicable Buyer if you want to associate the customer ID with an existing Buyer organization.
Create A New Organization	Choose this if you want to create a new organization to associate with the customer.
Organization Code	If you chose Create Buyer Organization, enter the Buyer's organization code.
Organization Name	When creating a new organization, enter the Buyer's organization name.
This Organization Is Also a Ship To	When creating a new organization, choose this if the organization also functions as a receiving node.
DUNS Number	If you chose Create Buyer Organization, enter the Buyer's DUNS number.
Account Number With Hub	If you chose Create Buyer Organization, enter the Buyer's account number with the Hub organization.
Locale	If you chose Create Buyer Organization, select the Buyer's locale.
Identifies This Enterprise As	Enter the customer assigned Vendor Identifier with which the customer identifies this Enterprise.
Send Functional Acknowledgement	Check this box if a functional acknowledgment must be sent to the customer.

Table 8–1 Customer Pop-Up Window

Field	Description
Functional Acknowledgement Time (Hrs)	Enter the number of hours taken by the supplier to send the functional acknowledgement.
Send Commitment	Check this box if a commitment must be sent to the customer.
Commitment Time (Hrs)	Enter the number of hours taken by the supplier to send the commitment.
Send ASN	Check this box if an Advanced Shipment Notice (ASN) must be sent to the customer.
Consumer Address Details	
Address	Enter the consumer's name and shipping address here.
Contact Info	Enter the consumer's telephone, cell phone, fax number, and e-mail address.

8.2.2 Modifying a Customer Definition

To modify a customer definition:

1. From the tree in the application rules side panel, choose Cross Application > Customer > Customer Definitions. The Customer Search window displays in the work area.
2. Enter applicable search criteria and choose . A list of customers displays.
3. Locate the applicable customer and choose . The Customer window displays.

You can use the customer window for:

- [Defining the Customer's Primary Information](#)
- [Defining the Customer's Service Preferences](#)
- [Defining a Customer's Scheduling Preferences](#)

8.2.2.1 Defining the Customer's Primary Information

The information displayed on the Primary Information tab depends on what type of customer has been defined:

8.2.2.1.1 If the Customer Is a Consumer

If the customer is a consumer, a consumer address panel displays. Click  to edit the consumer's address.

A customer that is a consumer may have as many ship to addresses as it wants to define. A child customer in the Sterling Multi-Channel Fulfillment Solution is defined as a node organization. Therefore, you can use the Child Customers panel to add, modify, or delete organizations to which products can alternatively be shipped. Use  to define a new one,  to modify an existing one, or  to delete an existing one.

The screenshot displays two side-by-side panels. The left panel, titled "Consumer Address", contains a large empty text area and two buttons at the bottom: "Address" and "Contact Info". The right panel, titled "Ship To", features a table with two columns: "Customer ID" and "Customer Classification". Below the table, it shows "Results 0 of 0". Both panels have icons in their top right corners: a gear icon for editing and a plus/minus icon for adding/deleting.

8.2.2.1.2 If the Customer Is a Business

If the customer is a business, an organization field displays, as well as a Ship To inner panel. You can click  to edit the organization details. For more information about configuring organizations, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

A business customer may have as many ship to addresses as it may wish to define. A Ship To address in the Sterling Multi-Channel Fulfillment Solution is defined as a node organization. Therefore, you can use the Ship To panel to add, modify or delete organizations to which products can alternatively be shipped. Use  to define a new one,  to modify an existing one, or  to delete an existing one.

While creating additional ship to addresses, you may want to specify an organization that is an independent buyer. When a customer is not a buyer organization, it cannot have multiple ship to addresses. Therefore,

in the create window that pops up through the Ship To inner panel, the This Organization Is Also a Ship To radio button is replaced with a This Organization Is Also A Buyer radio button.

8.2.2.2 Defining the Customer's Service Preferences

Customers defined in the Sterling Multi-Channel Fulfillment Solution can specify slot preferences for deliveries.

☐ Consider Supplemental Capacity While Planning Appointment By Default

When Appointments Are Planned For This Customer

☐ Any Slot Can Be Used
 ☐ Specific Slots Must Be Used
 ☒ Customer Prefers Specific Slots (Other Slots Can Be Used)

Slot Preferences									
Slot	Start Time	End Time	Sun	Mon	Tue	Wed	Thu	Fri	Sat
Day	09:00:00	17:00:00	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Evening	18:00:00	20:00:00	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Table 8–2 Service Preferences Tab

Field	Description
Consider Supplemental Capacity While Planning Appointment By Default	Check this if you want to consider supplemental capacity by default when planning an appointment for this customer.
When Appointments Are Planned For This Customer	
Any Slot Can Be Used	Check this if any slot can be used when planning an appointment for this customer. The Slot Preferences table is hidden then.
Specific Slots Must Be Used	Check this if only the slots specified in the Slot Preferences table can be used when planning an appointment for this customer.
Customer Prefers Specific Slots (Other Slots Can Be Used)	Check this if the slots specified in the Slot Preferences table preferred slot table
Slot Preferences	
Slot	The name of the slot.
Start Time	The start time of the slot, in 24 hour format.
End Time	The end time of the slot, in 24 hour format.
Sun	Check this if you want this slot to be part of the customer's preferred slots.
Mon	Check this if you want this slot to be part of the customer's preferred slots.
Tue	Check this if you want this slot to be part of the customer's preferred slots.
Wed	Check this if you want this slot to be part of the customer's preferred slots.
Thu	Check this if you want this slot to be part of the customer's preferred slots.
Fri	Check this if you want this slot to be part of the customer's preferred slots.
Sat	Check this if you want this slot to be part of the customer's preferred slots.

8.2.2.3 Answering a Customer's Address Questions

Answering address questions for a customer populates answers for address questions the next time this customer places an order. From the Service Preferences tab, select the Address Questions tab. If configured, the address questions configured for the Enterprise appear.

8.2.2.4 Defining a Customer's Scheduling Preferences

You can define scheduling constraints for a specific customer by specifying these scheduling preferences. Refer to [Table 8–3](#) for more information.

Constraints

☒ Ship from Single Node
 ☒ Line Ship from Single Node

☐ Ship Complete
 ☒ Line Ship Complete

Inventory Controls

☐ Cancel Order For Inventory Shortage
 ☐ Allow Item Substitution If Inventory Is Not Available

Sourcing Controls

☒ Allow Scheduling Against The Node That Requires Drop Ship Chained Order Creation

Table 8–3 Scheduling Preferences Tab

Field	Description
Constraints	
Ship from Single Node	Check this box to ensure that orders are shipped from a single node. This automatically checks the Line Ship from Single Node checkbox.
Line Ship from Single Node	Check this box to ensure that order lines are shipped from a single node. This is disabled if the Ship from Single Node checkbox is checked.
Ship Complete	Check this box to ensure that orders are shipped complete. This automatically checks the Line Ship Complete checkbox.

Table 8–3 Scheduling Preferences Tab

Field	Description
Line Ship Complete	Check this box to ensure that order lines are shipped complete. This is disabled if the Ship Complete checkbox is checked.
Inventory Controls	
Cancel Order For Inventory Shortage	Check this box to cancel the backordered quantity in the event of inventory shortage.
Allow Item Substitution If Inventory Is Not Available	Check this box to allow item substitution if inventory for the selected item is not available.
Sourcing Controls	
Allow Scheduling Against The Node That Requires Drop Ship Chained Order Creation	Check this box to allow scheduling against the node that requires a drop-shipped chained order to be created.

Note: Constraints passed at the order level override customer scheduling preferences.

8.2.2.5 Defining Customer Contacts

You can define multiple contacts for each customer. These contacts represent individuals at a customer location. Please refer to [Table 8–4](#) for more information.

Customer Contact ID	Last Name	First Name	Email Address	User ID	Spending Limit
UsrID	Consumer1	Contact			

Table 8–4 Customer Contacts Tab

Field	Definition
Customer Contact ID	The ID of the customer contact.
Last Name	The contact's last name.

Table 8–4 Customer Contacts Tab

Field	Definition
First Name	The contact's first name.
Email Address	The contact's e-mail address.
User ID	The user ID of the contact.
Spending Limit	The contact's spending limit, if defined.

8.2.2.5.1 Defining Customer Contact Information

To define customer contact information:

1. From the Customer Definition screen, select the Contacts tab. The Customer Contact Info screen displays.
2. Choose  to add an additional customer contact.
3. Select the Customer Contact Info tab.
4. Enter information in the applicable fields. Refer to [Table 8–5](#) for field values.
5. Choose OK.

Customer Contact InfoLimitsAdditional Address

Table 8–5 Customer Contact Info

Field	Description
Name	
First Name	Enter the contact's first name.
Middle Name	Enter the contact's middle name.
Last Name	Enter the contact's last name.
Company	Enter the company at which the contact works.
Phone	

Table 8–5 Customer Contact Info

Field	Description
Day Time Phone	Enter the contact's day time phone number.
Evening Phone	Enter the contact's evening phone number.
Cell Phone	Enter the contact's cellular phone number.
Fax	Enter the contact's fax number.
Email	Enter the contact's email address.
User ID	Enter the contact's user ID.
Date Of Birth	Enter the contact's date of birth.
Spouse Date Of Birth	Enter the contact's spouse's date of birth.
Wedding Anniversary	Enter the contact's wedding anniversary.
Customer Contact ID	Enter the contact's customer contact ID.

8.2.2.5.2 Defining Limits for Customer Contacts

To define limits for customer contacts:

1. From the Customer Definition screen, select the Contacts tab. The Customer Contact Info screen displays.
2. Choose  to add an additional customer contact.
3. Select the Limits tab.
4. Enter information in the applicable fields. Refer to [Table 8–6](#) for field value descriptions.
5. Choose OK.

The screenshot shows the 'Limits' tab of a software interface. Under the 'Approval' heading, there are three input fields. The first field, 'Spending Limit', consists of a text box, a small dropdown menu, and a green plus icon. The second field is 'Approver User Id' with a text box. The third field is 'Approver Proxy User Id' with a text box. The interface has three tabs at the top: 'Customer Contact Info', 'Limits', and 'Additional Address'.

Table 8–6 Limits

Field	Description
Approval	
Spending Limit	<p>Enter the spending limit for the customer contact. Choose the currency in which the spending limit is configured from the drop-down list.</p> <p>To create a new currency, choose  and enter information to the applicable fields. For more information about defining the currency, see Section 3.4.6.1, "Currency Details".</p>
Approver User ID	Enter the user ID of the primary approver.
Approver Proxy	Enter the proxy for the approver.

8.2.2.5.3 Defining Additional Contact Addresses

1. From the Customer Definition screen, select the Contacts tab. The Customer Contact Info screen displays.
2. Choose  to add an additional customer contact information. The Customer Contact Info screen displays.
3. Select the Additional Addresses tab.

4. Refer to [Step 2](#) in section [Section 8.2.2.6, "Defining Additional Addresses"](#) for information about defining additional addresses.

8.2.2.6 Defining Additional Addresses

You can define multiple additional or alternative addresses for a customer or contact. See [Table 8–7](#) for field value descriptions.

Additional Address   				
Address ID	Is Ship To	Is Default Ship To	Is Bill To	Is Default Bill To
ID	✓	✓	✓	✓

Table 8–7 Additional Addresses Tab

Field	Description
Additional Address ID	The ID of the additional address.
Is Ship To	This field appears checked if the address is configured as a ship to address.
Is Default Ship To	This field appears checked if the address is configured as the default ship to address.
Is Bill To	This field appears checked if the address is configured as a bill to address.
Is Default Bill To	This field appears checked if the address is configured as the default bill to address.

To define an additional address:

1. From the Customer Definition screen, select the Additional Address tab. The Additional address screen displays.
2. Choose  to add an additional address.
3. Enter information in the applicable fields. Refer to [Table 8–8](#) for field values.
4. Choose  to enter the additional address.
5. Choose OK.

Address Details

Is Default Bill To	Check this box if this is the default bill to address.
Is Ship To	Check this box if this is a ship to address.

Table 8–8 Defining an Additional Address

Field	Description
Is Default Ship To	Check this box if this is the default ship to address.
Is Sold To	Check this box if this is a sold to address.
Is Default Sold To	Check this box if this is the default sold to address.

8.2.3 Deleting a Customer Definition

To delete a customer definition:

1. From the tree in the application rules side panel, choose Cross Application > Customer > Customer Definitions. The Customer Search window displays in the work area.
2. Enter applicable search criteria and choose . A list of customers displays.
3. Locate the applicable customer and choose .

8.3 Defining Contact Types

You can configure the contact types of both business and consumer customers when specifying the contact information of a customer on work order notes. For more information about creating a customer, see [Section 8.2, "Defining Customer Definitions"](#).

You can use the Contact Types branch for:

- [Creating a Contact Type](#)
- [Modifying a Contact Type](#)
- [Deleting a Contact Type](#)

8.3.1 Creating a Contact Type

To create a contact type:

1. From the tree in the application rules side panel, choose Cross Application > Customer > Contact Types. The Customer Contact Types window displays in the work area.
2. Click . The Contact Type Details pop-up window displays.

A screenshot of a software dialog box titled "Contact Type Details". The dialog has a light gray background and a purple header bar with the title and a small icon. Inside the dialog, there is a white rectangular area containing three text input fields. The first field is labeled "Contact Type", the second is labeled "Short Description", and the third is labeled "Long Description". Each label is to the left of its corresponding text box. The text boxes are empty and have a thin blue border.

3. In Contact Type, enter the contact type.
4. In Short Description, enter a brief description of the contact type.
5. In Long Description, enter a more detailed description of the contact type.
6. Click .

8.3.2 Modifying a Contact Type

To modify a contact type:

1. From the tree in the application rules side panel, choose Cross Application > Customer > Contact Types. The Customer Contact Types window displays in the work area.
2. Select the applicable contact type and click . The Contact Type Details pop-up window displays.
3. In Short Description, enter a brief description of the contact type.
4. In Long Description, enter a more detailed description of the contact type.
5. Click .

8.3.3 Deleting a Contact Type

To delete a contact type:

1. From the tree in the application rules side panel, choose Cross Application > Customer > Contact Types. The Contact Types window displays in the work area.
2. Select the contact type and click .

Configuring a Document's Attributes

You can define common codes as they pertain to order documents viewed in the Application Consoles.

You can use the Order Attributes branch for

- [Defining Order Types](#)
- [Defining Order Sources](#)
- [Defining External References for the Order Level](#)
- [Defining External References for the Order Line Level](#)
- [Defining Order Address Types](#)
- [Defining Line Types](#)
- [Defining Other Attributes](#)

9.1 Defining Order Types

You can define codes for order types that appear on a document type. This code has no application logic associated with it and can be set up as per your business practices. Examples of order types are Consumer Orders, Service Rep Orders, and Retail Orders.

You can use the Order Types tab for:

- [Creating an Order Type](#)
- [Modifying an Order Type](#)
- [Deleting an Order Type](#)

9.1.1 Creating an Order Type

To create an order type:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Order Attributes. The Order Attributes window displays in the work area.
2. Choose the Order Types tab.
3. Choose . The Order Type Details pop-up window displays.

The image shows a pop-up window titled "Order Type Details". It contains three text input fields with labels to their left: "Order Type", "Short Description", and "Long Description". Each label is followed by a rectangular text box for input.

4. In Order Type, enter the name of the order type.
5. In Short Description, enter a brief description of the order type.
6. In Long Description, enter a more detailed description of the order type.
7. Choose .

9.1.2 Modifying an Order Type

To modify a order type:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Order Attributes. The Order Attributes window displays in the work area.
2. Choose the Order Types tab.
3. Select the applicable order type and choose . The Order Type Details pop-up window displays.

4. In Short Description, enter a brief description of the order type.
5. In Long Description, enter a more detailed description of the order type.
6. Choose .

9.1.3 Deleting an Order Type

To delete a order type:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Order Attributes. The Order Attributes window displays in the work area.
2. Choose the Order Types tab.
3. Select the applicable order type and choose .

9.2 Defining Order Sources

You can define codes for order sources that appear on a document type. This code has no application logic associated with it and can be set up as per your business practices.

You can use the Order Sources tab for:

- [Creating an Order Source](#)
- [Modifying an Order Source](#)
- [Deleting an Order Source](#)

9.2.1 Creating an Order Source

To create an order source:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Order Attributes. The Order Attributes window displays in the work area.
2. Choose the Order Sources tab.
3. Choose . The Order Source Details pop-up window displays.

The screenshot shows a dialog box titled "Order Source Details". It contains three text input fields stacked vertically. The first field is labeled "Order Source", the second is labeled "Short Description", and the third is labeled "Long Description". Each field is currently empty.

4. In Order Source, enter the name of the order source.
5. In Short Description, enter a brief description of the order source.
6. In Long Description, enter a more detailed description of the order source.
7. Choose .

9.2.2 Modifying an Order Source

To modify a order source:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Order Attributes. The Order Attributes window displays in the work area.
2. Choose the Order Sources tab.
3. Select the applicable order source and choose . The Order Source Details pop-up window displays.
4. In Short Description, enter a brief description of the order source.
5. In Long Description, enter a more detailed description of the order source.
6. Choose .

9.2.3 Deleting an Order Source

To delete a order source:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Order Attributes. The Order Attributes window displays in the work area.
2. Choose the Order Sources tab.
3. Select the applicable order source and choose .

9.3 Defining External References for the Order Level

You can define codes for external references that appear on a document type at the order level. This code has no application logic associated with it and can be set up as per your business practices. You can create, modify, and delete external references.

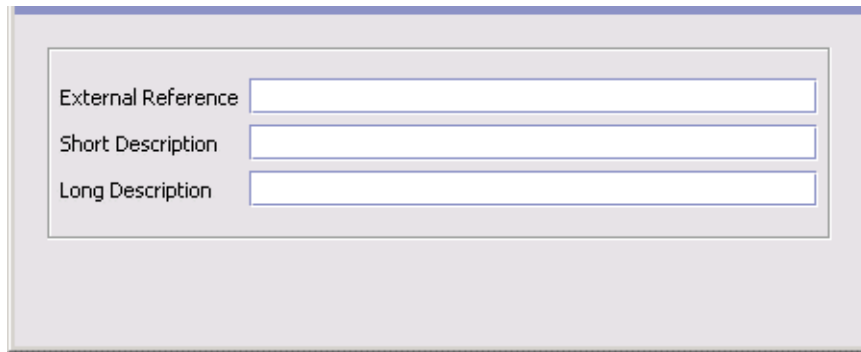

You can use the Order References tab for:

- [Creating an External Reference for the Order Header Level](#)
- [Modifying an External Reference for the Order Header Level](#)
- [Deleting an External Reference for the Order Header Level](#)

9.3.1 Creating an External Reference for the Order Header Level

To create an order reference for the order level:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Order Attributes. The Order Attributes window displays in the work area.
2. Choose the Order References tab.
3. From the Order Header External References list choose . The External Reference Details pop-up window displays.

External Reference

Short Description

Long Description

4. In External Reference, enter the name of the external reference.
5. In Short Description, enter a brief description of the external reference.
6. In Long Description, enter a more detailed description of the external reference.
7. Choose .

9.3.2 Modifying an External Reference for the Order Header Level

To modify an external reference for the order level:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Order Attributes. The Order Attributes window displays in the work area.
2. Choose the Order References tab.
3. In Order Header External References select the applicable external reference and choose . The External Reference Details pop-up window displays.
4. In Short Description, enter a brief description of the external reference.
5. In Long Description, enter a more detailed description of the external reference.

6. Choose .

9.3.3 Deleting an External Reference for the Order Header Level

To delete an external reference for the order level:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Order Attributes. The Order Attributes window displays in the work area.
2. Choose the Order References tab.
3. In Order Header External References select the applicable external reference and choose .

9.4 Defining External References for the Order Line Level

You can define codes for external references that appear on a document type at the order line level. This code has no application logic associated with it and can be set up as per your business practices. You can create, modify, and delete external references.

You can use the Order References tab for:

- [Creating an External Reference for the Order Line Level](#)
- [Modifying an External Reference for the Order Line Level](#)
- [Deleting an External Reference for the Order Line Level](#)

9.4.1 Creating an External Reference for the Order Line Level

To create an order reference for the order line level:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Order Attributes. The Order Attributes window displays in the work area.
2. Choose the Order References tab.
3. From the Order Line External References list choose . The External Reference Details pop-up window displays.

External Reference

Short Description

Long Description

4. In External Reference, enter the name of the external reference.
5. In Short Description, enter a brief description of the external reference.
6. In Long Description, enter a more detailed description of the external reference.
7. Choose .

9.4.2 Modifying an External Reference for the Order Line Level

To modify an external reference for the order line level:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Order Attributes. The Order Attributes window displays in the work area.
2. Choose the Order References tab.
3. In Order Line External References select the applicable external reference and choose . The External Reference Details pop-up window displays.
4. In Short Description, enter a brief description of the external reference.
5. In Long Description, enter a more detailed description of the external reference.

6. Choose .

9.4.3 Deleting an External Reference for the Order Line Level

To delete an external reference for the order level:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Order Attributes. The Order Attributes window displays in the work area.
2. Choose the Order References tab.
3. In the Order Line External References list select the applicable external reference and choose .

9.5 Defining Order Address Types

You can define codes for order address types that appear in the Additional Addresses view in the User Interface for a document type.

You can use the Order Address Types tab for:

- [Creating an Order Address Type](#)
- [Modifying an Order Address Type](#)
- [Deleting an Order Address Type](#)

9.5.1 Creating an Order Address Type

To create an order address type:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Order Attributes. The Order Attributes window displays in the work area.
2. Choose the Order Address Types tab.
3. Choose . The Order Address Type Details pop-up window displays.

The screenshot shows a dialog box with a light gray background. Inside, there is a white rectangular area containing three text input fields. The first field is labeled 'Address Type', the second 'Short Description', and the third 'Long Description'. Each label is to the left of its corresponding text box.

4. In Order Address Type, enter the name of the order address type.
5. In Short Description, enter a brief description of the order address type.
6. In Long Description, enter a more detailed description of the order address type.
7. Choose .

9.5.2 Modifying an Order Address Type

To modify a order address type:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Order Attributes. The Order Attributes window displays in the work area.
2. Choose the Order Address Types tab.
3. Select the applicable order address type and choose . The Order Address Type Details pop-up window displays.
4. In Short Description, enter a brief description of the order type.
5. In Long Description, enter a more detailed description of the order type.
6. Choose .

9.5.3 Deleting an Order Address Type

To delete a order address type:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Order Attributes. The Order Attributes window displays in the work area.
2. Choose the Order Address Types tab.
3. Select the applicable order address type and choose .

9.6 Defining Line Types

You can define codes and for line types that appear on a document type.

You can use the Line Types tab for:

- [Creating a Line Type](#)
- [Modifying a Line Type](#)
- [Deleting a Line Type](#)

9.6.1 Creating a Line Type

To create a line type:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Order Attributes. The Order Attributes window displays in the work area.
2. Choose the Line Types tab.
3. Choose . The Line Type Details pop-up window displays.
4. In Line Type, enter the name of the line type.
5. In Description, enter a brief description of the line type.
6. Choose .

The image shows a dialog box with a light gray background. Inside, there is a white rectangular area containing two text input fields. The first field is labeled 'Line Type' and the second is labeled 'Description'. Both fields are empty and have a thin blue border. The dialog box has a standard title bar at the top.

9.6.2 Modifying a Line Type

To modify a line type:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Order Attributes. The Order Attributes window displays in the work area.
2. Choose the Line Types tab.
3. Select the applicable line type and choose . The Line Type Details pop-up window displays.
4. In Description, enter a brief description of the line type.
5. Choose .

9.6.3 Deleting a Line Type

To delete a line type:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Order Attributes. The Order Attributes window displays in the work area.
2. Choose the Line Types tab.
3. Select the applicable line type and choose .

9.7 Defining Other Attributes

You can define other attributes that appear on the document type.

You can use the Others tab for:

- [Generating a Prime Line Number for a New Line from a Pre-Configured Number](#)

9.7.1 Generating a Prime Line Number for a New Line from a Pre-Configured Number

Generating a prime line number for a new line from a pre-configured number prevents conflicts between prime line numbers in the Sterling Multi-Channel Fulfillment Solution and in an external system when order synchronization occurs.

To specify a pre-configured starting number:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Order Attributes. The Order Attributes window displays in the work area.
2. Choose the Others tab.
3. In Generate Prime Line No. For New Line Starting From, enter the starting number. The starting prime line number must be a positive integer
4. Choose .

The screenshot shows the 'Order Attributes' window with the 'Others' tab selected. The 'Generate Prime Line Number For New Line Starting From' field is a text input box containing the value '1'. The window has a tabbed interface with tabs for 'Order Types', 'Order Sources', 'Order References', 'Order Address Types', 'Line Types', and 'Others'.

Note: The value entered in the "Generate Prime Line Number for New Line Starting From:" field only affects orders created through the Console UI, not through direct API calls (e.g. createOrder()).

Configuring a Document's Order Validation

You can define configuration for defaulting Seller and Buyer validation during order creation for a particular Enterprise and document type. This validation is used to determine the Sellers and Buyers that are available to create an order for and narrows the search results in the Application Consoles based on the validation type you configured.

For example, you are configuring a Hub environment with 10 Enterprises, 50 Sellers, and 100 Buyers. A particular Enterprise only interacts with 10 of the 50 Sellers and 25 of the 100 Buyers as defined in the organization hierarchy. If you set both the Seller and Buyer validations to 'Defined In The Enterprise Hierarchy', when a user creates an order the system verifies that the Seller on the order is one of the 10 Sellers defined in the Enterprise's hierarchy and the Buyer on the order is one of the 25 Buyers defined in the Enterprise's hierarchy. Also, if the user chooses the lookup for either the Seller or Buyer fields, only the Sellers and Buyers defined for the Enterprise appear in the results.

To define an order document's order validation:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Order Validation. The Order Validation pop-up window displays in the work area.
2. Enter information into the applicable fields. Refer to [Table 10–1](#) for field value descriptions.
3. Choose .

 **Order Validation** 

Seller Validation

☐ Validate Bill To Id As Customer Id

☐ Validate Vendor Id

☐ Validate Item

Table 10–1 Order Validation Pop-Up Window

Field	Description
Seller Validation	<p>Select the type of validation you want to use to verify the Seller on the order document.</p> <p>You can choose from the following options:</p> <ul style="list-style-type: none">• None - No validation is performed for Sellers on an order. All Sellers in the system can be used during order creation. Also, all Sellers in the system display when the Seller lookup is chosen in the Application Consoles.• Same As Enterprise - The system validates the Seller on the order is the Enterprise.• Defined In The Enterprise Hierarchy - The system validates that the Seller on the order is defined within the Enterprise's organizational hierarchy. Also, only the Sellers defined within the Enterprise's organizational hierarchy display when the Seller lookup is chosen in the Application Consoles. For more information about configuring the organizational hierarchy, see the <i>Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide</i>. <p>Customer Of The Enterprise - The system validates that the Seller on the order has been configured as a customer. Also, only the organization's defined as customers of the Enterprise display when the Seller lookup is chosen in the Application Consoles.</p>

Table 10–1 Order Validation Pop-Up Window

Field	Description
Buyer Validation	<p>Select the type of validation you want to use to verify the Buyer on the order document.</p> <p>You can choose from the following options:</p> <ul style="list-style-type: none"> • None - No validation is performed for Buyers on an order. All Buyers in the system can be used during order creation. Also, all Buyers in the system display when the Buyer lookup is chosen in the Application Consoles. • Same As Enterprise - The system validates the Buyer on the order is the Enterprise. • Defined In The Enterprise Hierarchy - The system validates that the Buyer on the order is defined within the Enterprise's organizational hierarchy. Also, only the Buyers defined within the Enterprise's organizational hierarchy display when the Buyer lookup is chosen in the Application Consoles. For more information about configuring the organizational hierarchy, see the <i>Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide</i>. • Customer Of The Enterprise - The system validates that the Buyer on the order has been configured as a customer. Also, only the organization's defined as customers of the Enterprise display when the Buyer lookup is chosen in the Application Consoles.
Validate Bill To ID As Customer ID	Select Validate Bill To ID As Customer ID if you want to validate that the customer ID on an order is defined for the Enterprise.
Validate Vendor ID	Select Validate Vendor ID if you want to validate that the vendor ID on an order is defined for the Enterprise.
Validate Item	Select Validate Item if you want to validate that the product items on the order belong to the Enterprises catalog. Service items, on the other hand, always need to exist within the Sterling Multi-Channel Fulfillment Solution.

Configuring a Document's Instruction Types

You can define the common codes used when adding special instructions to an order document.

The default instruction types of the Sterling Multi-Channel Fulfillment Solution are:

- PICK
- PACK
- SHIP
- GIFT
- ORDERING
- OTHER

You can use the Instruction Types branch for:

- [Creating an Instruction Type](#)
- [Modifying an Instruction Type](#)
- [Deleting an Instruction Type](#)

11.1 Creating an Instruction Type

To create an instruction type:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Instruction Types. The Instruction Types window displays in the work area.

2. Choose . The Instruction Type Details pop-up window displays.

Instruction Type: ORDERING

Short Description: Instruction Type For Ordering

Long Description: Instruction Type For Ordering

☒ Automatically Copy Item Instruction with Matching Type To Order Line

3. In Instruction Type, enter the instruction type.
4. In Short Description, enter a brief description of the instruction type.
5. In Long Description, enter a more detailed description of the instruction type.
6. Check Automatically Copy Item Instruction with Matching Type To Order Line to force the system to automatically copy item instructions with matching instruction types to order lines when the items are added onto an order.
7. Choose .

11.2 Modifying an Instruction Type

To modify an instruction type:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Instruction Types. The Instruction Types window displays in the work area.
2. Select the applicable instruction type and choose . The Instruction Type Details pop-up window displays.
3. In Short Description, enter a brief description of the instruction type.
4. In Long Description, enter a more detailed description of the instruction type.

5. Check Automatically Copy Item Instruction with Matching Type To Order Line to force the system to automatically copy item instructions with matching instruction types to order lines when the items are added onto an order.
6. Choose .

11.3 Deleting an Instruction Type

To delete an instruction type:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Instruction Types. The Instruction Types window displays in the work area.
2. Select the applicable instruction type and choose .

12

Configuring a Document's Modification Reasons

You can define common codes for **modification reasons**. These codes define why a modification was made by a user in the Application Consoles.

Note: In addition to modification reasons, the codes that you define are used as hold reasons when you put an order on hold in the Application Consoles.

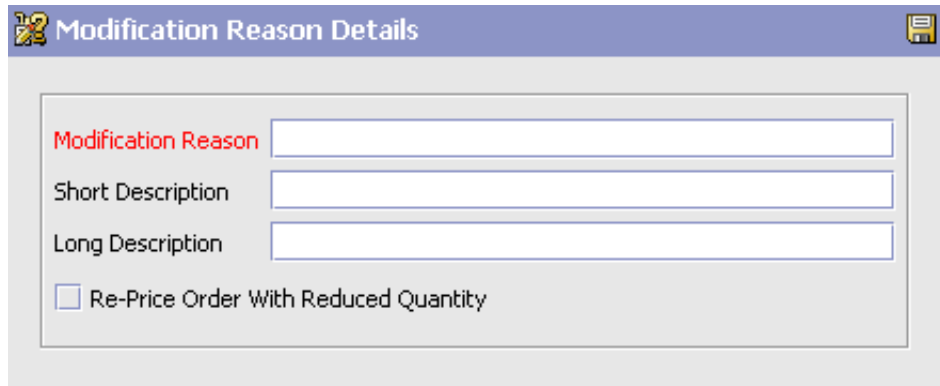

You can use the Modification Reasons branch for:

- [Creating a Modification Reason](#)
- [Modifying a Modification Reason](#)
- [Deleting a Modification Reason](#)

12.1 Creating a Modification Reason

To create a modification reason:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Modification Reasons. The Modification Reasons window displays in the work area.
2. Choose . The Modification Reason Details pop-up window displays.

Modification Reason Details

Modification Reason

Short Description

Long Description

☐ Re-Price Order With Reduced Quantity

3. In Modification Reason, enter the modification reason.
4. In Short Description, enter a brief description of the modification reason.
5. In Long Description, enter a more detailed description of the modification reason.
6. If this modification reason requires that the order be re-priced due to a reduced quantity, check the Re-Price Order With Reduced Quantity checkbox.

This flag is applicable only if this modification reason is used for cancellations, where re-pricing needs to occur against a reduced quantity: the quantity against which the order line is re-priced (re-pricing quantity) is adjusted to the reduced quantity. For more information about re-pricing quantity, see the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

Note: If this modification reason is used for a modification which does not reduce quantity, this flag is not applicable.

Note: This field does not exist for Load Modification Reasons.

7. Choose .

12.2 Modifying a Modification Reason

To modify a modification reason:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Modification Reasons. The Modification Reasons window displays in the work area.
2. Select the applicable modification reason and choose . The Modification Reason Details pop-up window displays.
3. In Short Description, enter a brief description of the modification reason.
4. In Long Description, enter a more detailed description of the modification reason.
5. If this modification reason requires that the order be re-priced due to a reduced quantity, check the Re-Price Order With Reduced Quantity checkbox.

This flag is applicable only if this modification reason is used for cancellations, where re-pricing needs to occur against a reduced quantity: the quantity against which the order line is repriced (re-pricing quantity) is adjusted to the reduced quantity. For more information about re-pricing quantity, see the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

Note: If this modification reason is used for a modification which does not reduce quantity, this flag is not applicable.

Note: This field does not exist for Load Modification Reasons.

6. Choose .

12.3 Deleting a Modification Reason

To delete a modification reason:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Modification Reasons. The Modification Reasons window displays in the work area.
2. Select the applicable modification reason and choose .

13

Configuring a Document's Backorder Reasons

You can define common codes for **backorder reasons**. These codes describe why an order was backordered.

The default backorder reason of the Sterling Multi-Channel Fulfillment Solution is:

- No Stock

You can use the Backorder Reasons branch for:

- [Creating a Backorder Reason](#)
- [Modifying a Backorder Reason](#)
- [Deleting a Backorder Reason](#)

13.1 Creating a Backorder Reason

To create a backorder reason:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Backorder Reasons. The Backorder Reasons window displays in the work area.
2. Choose . The Backorder Reason Details pop-up window displays.

A screenshot of a software window titled "Backorder Reason Details". The window has a light gray background and a darker gray border. Inside, there is a white rectangular area containing three text input fields. The first field is labeled "Backorder Reason", the second is labeled "Short Description", and the third is labeled "Long Description". Each label is to the left of its corresponding text box. The text boxes are empty and have a thin blue border.

3. In Backorder Reason, enter the backorder reason.
4. In Short Description, enter a brief description of the backorder reason.
5. In Long Description, enter a more detailed description of the backorder reason.
6. Choose .

13.2 Modifying a Backorder Reason

To modify a backorder reason:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Backorder Reasons. The Backorder Reasons window displays in the work area.
2. Select the applicable backorder reason and choose . The Backorder Reason Details pop-up window displays.
3. In Short Description, enter a brief description of the backorder reason.
4. In Long Description, enter a more detailed description of the backorder reason.
5. Choose .

13.3 Deleting a Backorder Reason

To delete a backorder reason:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Backorder Reasons. The Backorder Reasons window displays in the work area.
2. Select the applicable backorder reason and choose .

Configuring a Document's Note Reasons

You can define reason codes for entering a note. These codes define why a note was entered by a user in the Sterling Multi-Channel Fulfillment Solution Consoles.

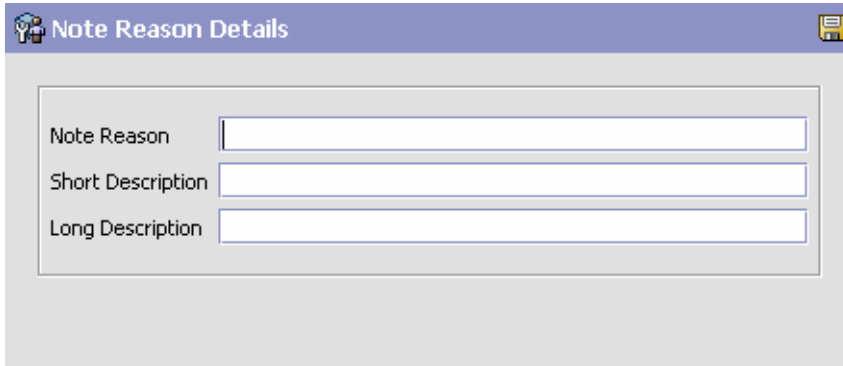

You can use the Note Reasons branch for:

- [Creating a Note Reason](#)
- [Modifying a Note Reason](#)
- [Deleting a Note Reason](#)

14.1 Creating a Note Reason

To create a note reason:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Note Reasons. The Note Reasons window displays in the work area.
2. Choose . The Note Reason Details window displays.

The screenshot shows a window titled "Note Reason Details". It contains three text input fields with the following labels:

- Note Reason
- Short Description
- Long Description

3. In Note Reason, enter the note reason as you want it to appear throughout the system.
4. In Short Description, enter a brief description of the note reason.
5. In Long Description, enter a more detailed description of the note reason.
6. Choose .

14.2 Modifying a Note Reason

To modify a note reason:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Note Reasons. The Note Reasons window displays in the work area.
2. Select the applicable appointment failure reason and choose . The Note Reason Details window displays.
3. In Short Description, enter a brief description of the note reason.
4. In Long Description, enter a more detailed description of the note reason.
5. Choose .

14.3 Creating a New Note Reason Based on an Existing One

To create a new note reason based on an existing one:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Note Reasons. The Note Reasons window displays in the work area.
2. Select the applicable note reason and choose . The Note Reason Details window displays.
3. Enter information in the applicable fields.
4. Choose .

14.4 Deleting a Note Reason

To delete a note reason:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Note Reasons. The Note Reasons window displays in the work area.
2. Select the applicable appointment failure reason and choose . The Confirmation window displays.
3. Choose OK.

15

Configuring a Document's Line Relationship Type

You can define the relationship types used when linking two related lines together. These relationships are used to group similar products together on an order.

15.1 Defining a Line Relationship Type

To create a line relationship type:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Line Relationship Type. The Line Relationship Type window appears in the work area.
2. Choose . The Line Relationship Details window appears.

The image shows a software window titled "Line Relationship Type Details". It has a purple header bar with a key icon on the left and a save icon on the right. The main content area is light gray and contains three text input fields labeled "Relationship Type", "Short Description", and "Long Description". Below these fields is a checkbox labeled "Consider For Sorting".

3. In Relationship Type, enter the relationship type as you want it to appear throughout the system.

4. In Short Description, enter a brief description of the relationship type.
5. In Long description, enter a more detailed description of the relationship type.
6. To enable sorting on this relationship type, check the Consider For Sorting checkbox.
7. Choose .

15.2 Modifying a Line Relationship Type

To modify a line relationship type:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Line Relationship Type. The Relationship Type window appears in the work area.
2. Select the applicable relationship and choose . The Relationship Type Details window appears.
3. In Short Description, enter a brief description of the relationship type.
4. In Long description, enter a more detailed description of the relationship type.
5. To enable sorting on this relationship type, check the Consider For Sorting checkbox.
6. Choose .

15.3 Creating a New Line Relationship Type Based on an Existing One

To create a new line relationship type based on an exiting one.

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Line Relationship Type. The Relationship Type window appears in the work area.
2. Select the applicable relationship type and choose . The Relationship Type Details window appears.
3. Enter information in the applicable fields
4. Choose .

15.3.1 Deleting a Line Relationship Type

To delete a line relationship type:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Line Relationship Type. The Relationship Type window appears in the work area.
2. Select the applicable relationship type and choose . The Confirmation window appears.
3. Choose OK.

Configuring a Document's Modification Components

You can configure the modification rules and types of a document when it is in a specific status. These rules determine which parts of a document can be modified as well as in which status the modifications can be performed.

If you are using the Distributed Order Management module, you can configure modification components at the following process type levels:

- Fulfillment
- Outbound Logistics

If you are using the Logistics Management module, you can configure modification components at the load process type level.

If you are using the Supply Collaboration module, you can configure modification components at the following process type levels:

- Fulfillment
- Inbound Logistics

If you are using the Reverse Logistics module, you can configure modification components at the following process type levels:

- Fulfillment
- Logistics
- Receipt

You can use the Order Modification branch for:

- [Defining Modification Rules](#)

- [Defining Custom Modification Types](#)
- [Defining Modifications Impacting Pricing](#)

16.1 Defining Modification Rules

Most documents flow through a pipeline without requiring any intervention by a customer service representative. However, there are times when modifications are required, such as changing credit card information or quantity. The Sterling Multi-Channel Fulfillment Solution supports modification through the Sterling Multi-Channel Fulfillment Solution Consoles and APIs. It is critical for you to decide which modifications are allowed for each modification type, modification level, and status combination.

Important: Contemplate business and system integration implications before allowing a modification that is disallowed as part of the system defaults. For example, adding instructions to a sales order document type is disallowed after the release has been sent to the node. If you change the modification to be allowed, the system has no way of communicating the new instruction to the node center because the release has already been sent.

The modification type indicates the type of modification carried out on a document. The Sterling Multi-Channel Fulfillment Solution provides the ability to perform modifications on specific attributes. An example of a modification type is adding an order line to an order.

Modification level indicates the level at which a particular modification type is carried out. These include the following levels:

- Header
- Line
- Release
- Release Line
- Negotiation
- Negotiation Line

- Shipment
- Receipt

For a complete list of the system modification types and their modification levels, see [Appendix B, "Order Modification Types"](#).

Modifications are applied to a particular level and a particular processing status. For example, if modifications are requested for a document at the header level or at the line level, then the order lines, as well as the order release lines, are picked up for validating whether or not modifications are allowed for those order statuses. If modifications are requested at the release or release line level, then order release lines are picked up for validating whether or not modifications are allowed for those order statuses.

You can group modifications in the Modification Rules window by modification type, modification level, or status, by selecting the corresponding grouping from Group By. The Modification Rules window then displays the grouping you have chosen in a hierarchical structure.

All modification rules operate within a certain system defined range. For instance, for Sales Orders, the Change Bill To modification on the order entity is always defined to be in between the statuses 1000 (Draft Order Created) and 3350 (Included In Shipment). The system never allows a Change Bill To modification at a status of 3700 (Return Created). On the other hand, you are able to allow modifications in between the statuses 1000 and 3350. If an entity is in multiple statuses, the modification is allowed, provided that at least one of the statuses is within the system-defined range.

The following table defines the different settings you can apply to modifications:

Table 16–1 Order Document Type Rule Modifications

Field	Description
Status	Indicates each status that is applicable to a modification level and type.
Allow	Indicates whether or not modifications may be made at this modification level and type for the specified status.
Disallow	Indicates that no modifications may be made at this modification level and type for the specified status.

Table 16–1 Order Document Type Rule Modifications

Field	Description
Ignore	Indicates that modifications are ignored at this modification level and type for the specified status.
<p>There are several scenarios to consider for the Allow, Disallow, and Ignore settings:</p> <ul style="list-style-type: none"> • If one line is in status 1 and another line is in status 2 - and both statuses are set to Allow, the modification is allowed. • If one line is in status 1, another line is in status 2, and another is in status 3 - and the 1 and 2 statuses are set to Allow, but the 3 status is set to Disallow, all modifications are disallowed, because one of the currently applied statuses is disallowed. • If one line is in status 1 and one is in the extended status 2 - If the 1 status is set to Allow, but the extended status is set to Ignore (all extended statuses are defaulted to ignore, so that they pick up their base status settings unless you have explicitly overridden the setting) then all modifications are allowed only if the base status is set to allow. If the base status is set to disallow, then all modifications are disallowed. <p>If all lines are set to Ignore, then all modifications are disallowed, regardless of the base status settings.</p>	

Note: Application Console users can be granted permission to override the modification rules through user group permissions. When a user has been granted this permission, they can still perform a modification that has been disallowed within the Application Consoles. For more information about configuring user group permissions, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

16.1.1 Changing Modification Rules

To change modification rules:

1. From the tree in the application rules side panel, choose Document Specific > (Document Type) > (Process Type) > (Process Type) Modification > (Process Type) Modification Rules. The Modification Rules window displays in the work area.

2. Expand the applicable modification types and levels for which you want to set up rules.
3. Right click on the applicable rule and choose allow, disallow, or ignore as per your business practices. Refer to [Table 16–1](#) for field value descriptions.

16.2 Defining Custom Modification Types

You can define custom modification types for a process type. Creating a modification type allows you to classify certain attributes (including extended attributes) into one group for which rules that determine when these attributes can and cannot be modified can be defined.

Once created, the custom modification type displays under the modification rules for the business document of the process type you are defining. From there you can decide whether to allow, disallow, or ignore

the custom modification type for a given status. For more information about modification types and rules see [Section 16.1, "Defining Modification Rules"](#).

You can use the Order Modification Types branch for:

- [Creating a Custom Modification Type](#)
- [Modifying a Custom Modification Type](#)
- [Deleting a Custom Modification Type](#)

16.2.1 Creating a Custom Modification Type

To create a custom modification type:

1. From the tree in the application rules side panel, choose Document Specific > *(Document Type)* > *(Process Type)* > *(Process Type)* Modification > *(Process Type)* Modification Types. The Custom Modification List window displays in the work area.
2. From the Custom Modification List, choose . The Custom Modification window displays. Enter information in the applicable fields. Refer to [Table 16–2](#) for field value descriptions.
3. Choose . A pop-up warning you to sign out of the application for changes to take place displays.

Modification Type	Enter the name of the modification type.
Description	Enter a brief description of the modification type.
Min. Allowed Status	Select the minimum status the modification type can be performed at.
Max Allowed Status	Select the maximum status the modification type can be performed at.

Table 16–2 Custom Modification Window

Field	Description
Available	A list of XML attributes that can be associated with the modification type. To add an available attribute to the modification type, select the attribute you want to add and choose  .
Subscribed	A list of XML attributes that have been associated with the modification type. To remove a subscribed attribute, select the attribute you want to remove and choose  .

16.2.2 Modifying a Custom Modification Type

To modify a custom modification type:

1. From the tree in the application rules side panel, choose Document Specific > *(Document Type)* > *(Process Type)* > *(Process Type)* Modification > *(Process Type)* Modification Types. The Custom Modification List window displays in the work area.
2. From the Custom Modification List, locate the applicable Custom Modification and choose . The Custom Modification window displays.
3. Enter information in the applicable fields. Refer to [Table 16–2](#) for field value descriptions.
4. Choose .

16.2.3 Deleting a Custom Modification Type

To delete a custom modification type:

1. From the tree in the application rules side panel, choose Document Specific > *(Document Type)* > *(Process Type)* > *(Process Type)* Modification > *(Process Type)* Modification Types. The Custom Modification List window displays in the work area.
2. From the Custom Modification List, locate the applicable Custom Modification and choose .

16.3 Defining Modifications Impacting Pricing

You can specify whether a modification type impacts pricing on an order. When modifications of these modification types occur, `OrderRepricingUE` is called to update price and charge information at the level indicated for that modification type. For more information about `OrderRepricingUE`, see the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

16.3.1 Adding/Removing a Modification Type for Modifications Impacting Pricing

To specify whether a modification type has pricing impact:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > (*Process Type*) > (*Process Type*) Modification > Modifications Impacting Pricing. The Modifications Impacting Pricing List window displays in the work area.
2. From the Modifications Impacting Pricing List, choose . The Modification Type List window displays.
3. To add a modification type to the Modifications Impacting Pricing list, select the desired modification type(s) from the Modification Types and choose .
4. To remove a modification type from the Modifications Impacting Pricing list, select the desired modification type(s) from the Modification Types and choose .
5. Choose .

16.4 Defining Modifications Requiring Auditing

You can specify which modification types will require an audit after being completed.

To specify which modification types require an audit:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Fulfillment > Order Modification > Modifications Requiring Auditing. The Modifications Requiring Auditing window displays in the work area.

2. From the Modifications Requiring Auditing window, choose .

Note: When opening the Modifications Requiring Auditing screen for the first time, all modification types are listed as requiring audits.

3. To add a modification type to the Modifications Requiring Auditing list, select the desired modification type(s) from the Modification Types column and choose .
4. To remove a modification type from the Modifications Requiring Auditing list, select the desired modification type(s) from the Modification Types column and choose .
5. Choose .

Configuring an Order Document's Fulfillment Specific Components

To complete an order document's lifecycle, each document has a set of different processes that it can go through. These processes are called process types. Every order document has a defined set of process types in the Sterling Multi-Channel Fulfillment Solution.

The following process types are defined in the Sterling Multi-Channel Fulfillment Solution for the order document types:

- Order Fulfillment
- Order Negotiation
- Outbound Shipment

You can configure the rules and components specific to an order document's fulfillment process type.

You can use process type configuration for:

- [Defining Hold Types](#)
- [Defining Fulfillment Rules](#)
- [Defining Process Type Details](#)
- [Process Type Pipeline Configuration](#)
- [Defining Transaction Rules](#)
- [Defining Status Inventory Types](#)
- [Defining Monitoring Components](#)
- [Defining Monitoring Events](#)

- [Defining Transaction Dependencies](#)

17.1 Defining Hold Types

Orders and order lines can be placed on hold manually or automatically, by applying a particular hold type. Certain transactions can be configured to not process documents that are on a specific type of hold. Likewise, modification types can be configured to not process documents that are on a specific type of hold. By default, all transactions and modification types are allowed to process all documents for all hold types.

The transactions that can be prevented from processing orders or order lines on a specific type of hold have the checkbox, *This Transaction Can Be Stopped From Processing Orders That Are On Hold*, checked in the *Others* tab of the transaction details screen. For more information about viewing transaction details, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

You can use the Hold Types branch in the Sterling Multi-Channel Fulfillment Solution Configurator for:

- [Creating a Hold Type](#)
- [Creating an Order Line Level Hold Type](#)
- [Deleting a Hold Type](#)

17.1.1 Creating a Hold Type

Hold types can be created at either the order or order line level. Selecting Hold Types from the application rules side panel displays the Order Hold Types screen.

Figure 17–1 Order Hold Types Screen

Hold Type	Hold Type Description
order hold 1	order hold1

Results 1 of 1

Order Line Hold Types

Hold Type	Hold Type Description
line hold 1	line hold 1

Results 1 of 1

This screen provides a list of previously created holds and their associated level.

17.1.1.1 Creating an Order Level Hold Type

To create an order level hold type:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Fulfillment > Hold Types. The Hold Types window displays in the work area.
2. Click  in the Order Hold Types panel. The Hold Type pop-up window displays.
3. In the Hold Type field, enter the type of the hold.
4. In the Description field, enter the description of the hold type.
5. Enter the information in the applicable fields. For field value descriptions, see [Table 17–1](#), [Table 17–2](#) and [Table 17–3](#).
6. Click .

17.1.1.2 Creating an Order Line Level Hold Type

To create an order line level hold type:

- From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Fulfillment > Hold Types. The Hold Types window displays in the work area.
- Click  in the Order Line Hold Types panel. The Hold Type pop-up window displays.
- In the Hold Type field, enter the type of the hold.
- In the Description field, enter the description of the hold type.
- Enter the information in the applicable fields. For field value descriptions, see [Table 17–4](#), [Table 17–5](#) and [Table 17–6](#).
- Click .

17.1.2 Modifying a Hold Type

To modify a hold type:

- From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Fulfillment > Hold Types. The Hold Types window displays in the work area.
- Select the applicable hold type and click . The Hold Type pop-up window displays. Enter information in the applicable fields. For field value descriptions, see [Table 17–1](#), [Table 17–2](#) and [Table 17–3](#) (for Order Level Holds) or [Table 17–4](#), [Table 17–5](#), and [Table 17–6](#) (for Order Line Level Holds).

3. Click .

17.1.3 Deleting a Hold Type

To delete a hold type:

1. From the tree in the application rules side panel, choose Document Specific > *(Document Type)* > Fulfillment > Hold Types. The Hold Types window displays in the work area.
2. Select the applicable hold type and click .

17.2 Defining Fulfillment Rules

You can define generic rules that the Sterling Multi-Channel Fulfillment Solution uses at order fulfillment time. These can affect order controls and reservations.

To define fulfillment rules:

1. From the tree in the application rules side panel, choose Document Specific > *(Document Type)* > Fulfillment > Fulfillment Rules. The Fulfillment Rules window displays in the work area.
2. Enter information in the applicable fields. Refer to [Table 17–7](#) for field value descriptions.
3. Click .

Fulfillment Rules : Sales Order (DEFAULT)

Order Controls

☐ A line can be fulfilled from a single node only.

For lines with a firm pre-defined ship node:

☐ When the line is partially backordered or unscheduled, split it into two separate lines so that a different ship node can be selected for the new line.

For lines without a firm pre-defined ship node:

☐ When the line is partially backordered or unscheduled, split it into two separate lines so that the sourcing logic can determine an alternate ship node for the new line.

☐ When a complete line is backordered, backorder against the highest priority ship node regardless of the ship node present on the line.

☒ When reserving or scheduling a product line, use node from the work order.

☐ Allow scheduling of a product line that is part of a work order, before appointment is taken.

Reservations

☐ Attempt to reserve the complete quantity of an order line.

☐ Reservation is mandatory for the complete quantity of an order line.

☒ Inventory reservations created for a specific date are valid for all orders with the same or future ship date.

☐ Suppress the validation of reservations on order line modifications.

Table 17–7 Order Fulfillment window

Field	Description
Order Controls	
A line can be fulfilled from a single node only	Check this box if you want any quantity of an order line to be shipped from the same ship node. Checking this enables the three checkboxes below to be checked.
For lines with a firm pre-defined ship node:	
When the line is partially backordered or unscheduled, split it into two separate lines so that a different ship node can be selected for the new line	Check this box if you want the Sterling Multi-Channel Fulfillment Solution to automatically split partially backordered or unscheduled lines into two separate lines. This allows the user to manually assign a new ship node for the backordered portion of the line, so that the entire original order line may be shipped.

Table 17–7 Order Fulfillment window

Field	Description
For lines without a firm pre-defined ship node:	
When the line is partially backordered or unscheduled, split it into two separate lines so that the sourcing logic can determine an alternate ship node for the new line	Check this box if you want the Sterling Multi-Channel Fulfillment Solution to automatically split partially backordered or unscheduled lines into two separate lines. This allows the backordered portion of the line to be scheduled and potentially find a new ship node so that the entire original order line may be shipped.
When a complete line is backordered, backorder against the highest priority ship node regardless of the ship node present on the line.	Check this box if you want the Sterling Multi-Channel Fulfillment Solution to automatically select the ship node that is highest in the sourcing priority, even if that ship node is different from the ship node specified on the order line in the event of a backorder of the complete order line.
When reserving or scheduling a product line, use node from the work order	Check this box if you want the Sterling Multi-Channel Fulfillment Solution to use the node specified on the work order when reserving or scheduling a product line, if no ship node has been specified on the order line, or if the node is non-firm. If a ship node is specified on the order line, the Sterling Multi-Channel Fulfillment Solution uses that node over the node specified on the work order.
Allow scheduling of a product line that is part of a work order, before appointment is taken.	Check this box if you want the Sterling Multi-Channel Fulfillment Solution to allow order lines with delivery method set to Delivery to be scheduled when an appointment has not yet been taken on the associated service work order. Note: If scheduling and releasing the order line at the same time, the order line is not scheduled, even with this flag enabled.
Reservations	
Attempt to reserve the complete quantity of an order line.	Check this box if you want the Sterling Multi-Channel Fulfillment Solution to try to promise the complete quantity of an order line against reserved inventory. For example, if an order line is placed for quantity five, and reserved inventory of quantity three is available, then the Sterling Multi-Channel Fulfillment Solution reserves quantity three of that order line.

Table 17–7 Order Fulfillment window

Field	Description
Reservation is mandatory for the complete quantity of an order line.	Check this box if you want the Sterling Multi-Channel Fulfillment Solution to always try to use reserved inventory for the complete quantity of an order line. If it is not possible, an error is thrown.
Inventory reservations created for a specific date are valid for all orders with the same or future ship date.	<p>Check this box if you want to allow orders to be promised against inventory that is reserved for a date anterior to the requested ship date.</p> <p>For example, if an order is placed with a requested ship date that is three days in the future, and if reserved inventory is available two days in the future, the Sterling Multi-Channel Fulfillment Solution enables the order to use that inventory if this is checked.</p> <p>If this not checked, only inventory reserved for the same day as the requested ship date is allowed to be used for order promising.</p> <p>Note: This field is primarily for backward compatibility issues.</p>
Suppress the validation of reservations on order line modifications.	<p>Check this box if you do not want the Sterling Multi-Channel Fulfillment Solution to check for reservations for existing reserved quantity when a modification is made to a previously reserved order line.</p> <p>For example, if an order line that has been reserved at Node 1 is modified to be sourced from Node 2, the Sterling Multi-Channel Fulfillment Solution does not check Node 2's inventory to ensure it can be reserved there.</p> <p>Note: This field is primarily for backward compatibility issues.</p>

17.3 Defining Process Type Details

You can define the parameters and templates that distinguish a process type.

For more information about defining process type details, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

17.4 Process Type Pipeline Configuration

A **process type pipeline** is a series of transactions and statuses that guide document types, such as a Sales Order, through a predefined process. A pipeline consists of the different statuses a document goes through during fulfillment, negotiation, shipment, or receipt. You can also set up transactions consisting of events, actions, and conditions, as they pertain to the pipeline you are configuring.

Repositories

A repository is a logical collection of entities that define the business process workflow.

The following entities are included in a repository:

- Pipelines
- Transactions
- Statuses
- Conditions
- Actions
- Services

The Sterling Multi-Channel Fulfillment Solution provides a base repository for each of the system defined process types. Some of the entities within a repository are copied when creating a new document type. For more information about creating a new document type, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

The process of order fulfillment is modeled through a pipeline. This represents the process configuration that is unique to an organization. An organization may also specify unique processes for each participating Enterprise.

17.4.1 Defining Pipeline Determination

Pipeline determination is used to set up conditions that affect which pipeline is used during the start of the business process workflow. For example, an organization deals with sales orders that sometimes contain hazardous materials. They have two separate pipelines, one in which orders with order lines without any hazardous materials go through and one in which orders with order lines containing hazardous materials must

go through for inspection before continuing through the order process. The organization uses pipeline determination to set up a condition that determines whether or not order lines contain hazardous materials and sends the order line down the correct pipeline.

When you expand the Pipeline Determination branch, the components displayed depends on what role you are logged in as. If you are logged in as a Hub role, the Hub Rule displays. If you are logged in as an Enterprise role, both the Hub Rule and My Rule components display. Double-click on the applicable node to display the pipeline determination rules.

Note: If you are logged in as an Enterprise role, the Hub Rule screen is grayed out and cannot be modified.

Drag conditions and pipelines into the work area to construct pipeline determination rules. A single pipeline or condition must be the root. Conditions cannot link back to an earlier component in the chain and a pipeline cannot be linked to twice.

Note: When configuring pipeline determination for an order document type pipeline, please note that pipeline determination is only considered when adding a line or creating an order. When changes are made to draft orders pipeline determination does not occur.

17.4.1.1 Condition Variables for Pipeline Determination

For a list of the condition variables that can be used at the order header and order line level for pipeline determination, refer to [Appendix C, "Condition Builder Attributes"](#).

17.4.2 Pipelines

For more information about configuring pipelines, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

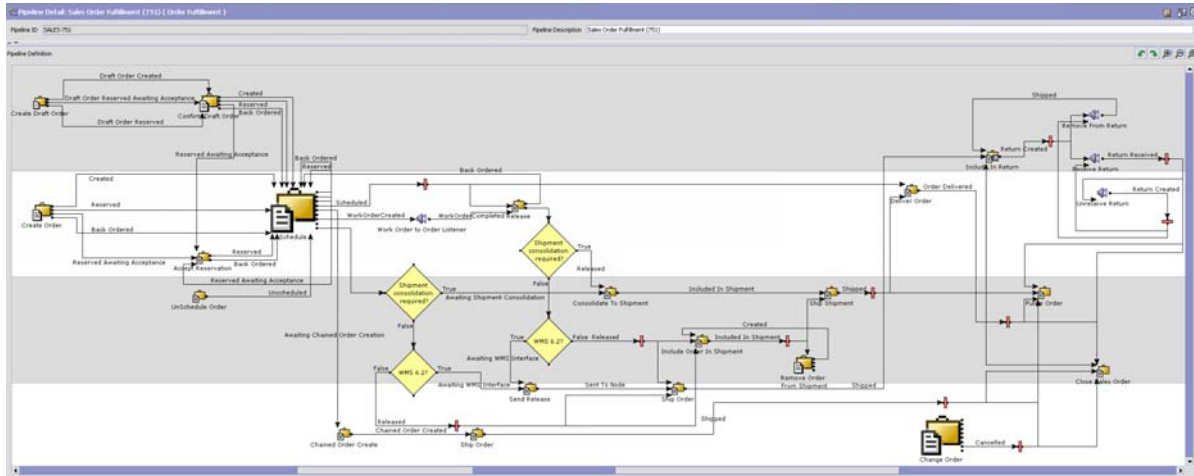

To view the order fulfillment pipeline details,

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Fulfillment > Fulfillment Process Model. The Order Fulfillment window displays.

2. In the Order Fulfillment window, choose Order Fulfillment Repository > Pipelines > Sales Order Fulfillment.
3. The Pipeline Detail: Sales Order Fulfillment (Order Fulfillment) window displays.

For more information about creating and modifying a pipeline, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

17.4.3 Transactions

Every process type has a set of base transactions defined for it. A transaction is a logical unit of work that is necessary for performing activity within the Sterling Multi-Channel Fulfillment Solution. Base transactions are predefined transactions that contain information about how the transaction behaves, such as how many copies of a transaction can be kept in a process type and whether or not it can have configurable base pick and drop statuses. Base transactions can be used to create new transactions. These transactions can be changed within the limits defined in the base transaction.

For more information about Transactions, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

To view the transaction details for an order fulfillment pipeline:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Fulfillment > Fulfillment Process Model. The Order Fulfillment window displays.
2. In the Order Fulfillment window, choose .
3. The Transactions tab window displays.

For more information about creating and modifying transactions, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

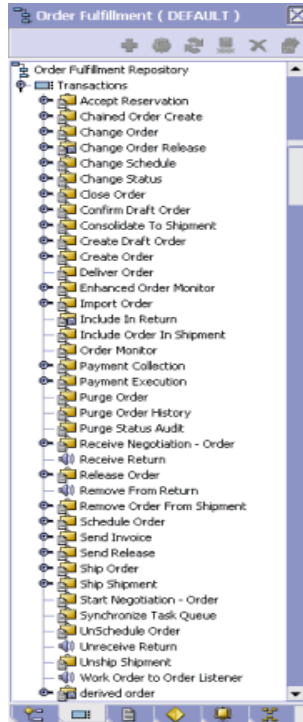

Table 17–8 Order Fulfillment Pipeline - Transactions Tab Window

Field	Description
Chained Order Create	This transaction represents a point in the pipeline where a chained order is created.
Change Order	This transaction represents any modifications that may be made to an order.
Change Order Release	This transaction represents any modifications that may be made to an order release.
Change Schedule	This transaction represents any modifications that may be made to the scheduling determinations for an order or order line.

Table 17–8 Order Fulfillment Pipeline - Transactions Tab Window

Field	Description
Change Status	This transaction represents any modifications that may be made involving an order or order line's status.
Close Order	This transaction represents an order being closed and archived in the system.
Confirm Draft Order	This transaction represents a draft order is manually confirmed and considered an actual order in the system.
Consolidate To Shipment	This transaction the process of finding a shipment into which a given order release can be included.
Create Draft Order	This transaction represents the creation of a draft order in the system.
Create Order	This transaction represents the creation of an order in the system.
Enhanced Order Monitor	This transaction represents the advanced set of parameters used to monitor orders in the system.
Import Order	This transaction represents the process of importing an order that has already been processed to some extent by an external system.
Include In Return	This transaction represents the process of creating a return.
Include Order In Shipment	This transaction represents the process of creating a shipment.
Order Monitor	This transaction represents the basic set of parameters used to monitor orders in the system.
Payment Collection	This transaction represents the process of requesting credit validation for orders that are pending authorization or charging.
Payment Execution	This transaction represents the processing of all requests that are pending authorization and charging.
Purge Order	This transaction represents an order that can be purged moved from the tables into history tables.
Purge Order History	This transaction represents the process of purging orders from the history tables and removing them from the system.

Table 17–8 Order Fulfillment Pipeline - Transactions Tab Window

Field	Description
Purge Status Audit	This transaction represents the process of removing order status audit data from the system.
Receive Negotiation	This transaction represents receiving negotiation requests from the Buyer on the order. After a negotiation is finished, this transaction applies the results of the negotiation to the order.
Receive Return	This listener transaction monitors the reverse logistics pipeline and indicates when the return for an order has been received at the receiving node.
Release Order	This transaction represents the process of releasing orders to specific ship nodes, making sure that the scheduled ship nodes have enough inventory to process the order.
Remove From Return	This transaction represents the process of removing an order from an existing return.
Remove Order From Shipment	This transaction represents the process of removing an order from an existing shipment. This transaction internally invokes the <code>confirmShipment</code> API. See the <i>Sterling Multi-Channel Fulfillment Solution Javadocs</i> for more information.
Schedule Order	This transaction represents the process of scheduling orders to specific ship nodes making sure that the scheduled ship nodes have enough inventory to process the order.
Send Invoice	This transaction represents the process of publishing invoice data that can be directed to an external accounts receivable systems.
Send Release	This transaction represents the process of dispatching releases to ship nodes.
Ship Order	This transaction represents the process of an order being shipped when no shipment data has been created. This transaction internally invokes the <code>confirmShipment</code> API. See the <i>Sterling Multi-Channel Fulfillment Solution Javadocs</i> for more information.
Ship Shipment	This transaction represents the process of an order being shipped after shipment data is created. This transaction internally invokes the <code>confirmShipment</code> API. See the <i>Sterling Multi-Channel Fulfillment Solution Javadocs</i> for more information.

Table 17–8 Order Fulfillment Pipeline - Transactions Tab Window

Field	Description
Start Negotiation - Order	This transaction represents the process of initiating the negotiation process with the Buyer on an order.
Synchronize Task Queue	This transaction represents the process of synchronizing the order fulfillment task queue.
Unschedule Order	This transaction represents the process of unscheduling an order that has already been scheduled to a ship node.
Work Order to Order Listener	This listener transaction notifies the pipeline of work order completion.

17.4.4 Statuses

Statuses are the actual states that a document moves through in the pipeline. A transaction can contain two types of statuses, a drop status and a pickup status. A document is moved into a **drop status** when the events and conditions of a transaction have been completed. A **pickup status** takes the document from the previous drop status and moves it through the next transaction. Created and Scheduled are examples of statuses.

For more information about Statuses, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

To view the status details of an order fulfillment pipeline:

1. From the tree in the application rules side panel, choose Document Specific > (Document Type) > Fulfillment > Fulfillment Process Model. The Order Fulfillment window displays.
2. In the Order Fulfillment window, choose .
3. The Statuses tab window displays.

For more information about creating and modifying statuses, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

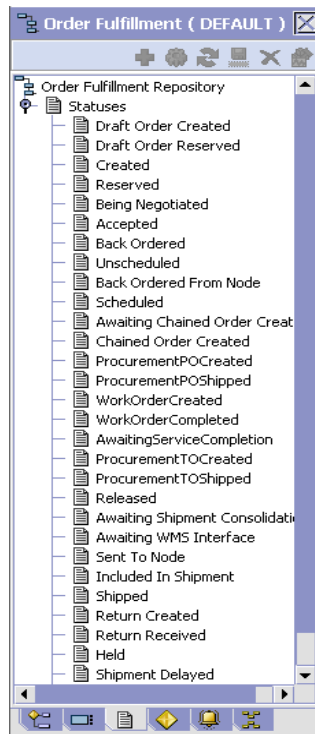

Table 17–9 Order Fulfillment Pipeline - Statuses Tab Window

Field	Description
Draft Order Created	This indicates that a draft order has been created.
Created	This indicates that an order has been created.
Reserved	This indicates the order has been created, but it is not ready to schedule yet.
Being Negotiated	This indicates that the order is undergoing the negotiation process with the Buyer on the order.
Accepted	This indicates that an order has been manually accepted.
Backordered	This indicates that an order is backordered until sufficient inventory is available.

Table 17–9 Order Fulfillment Pipeline - Statuses Tab Window

Field	Description
Unscheduled	This indicates that the order has been removed from Scheduled status and any inventory that has been reserved for the order at the scheduled node(s) is canceled.
Backordered From Node	This indicates that the order has been created and released to the node, but the node does not have enough inventory to fulfill the order.
Scheduled	This indicates that the applicable node(s) have the inventory to fulfill the order and can be scheduled for release.
Awaiting Chained Order Creation	This indicates that the wave has been printed for picking.
Chained Order Created	This indicates that a chained order must be created and sent to the applicable node.
Procurement PO Created	This indicates that a procurement purchase order has been created.
Procurement PO Shipped	This indicates that a procurement purchase order has been shipped.
Procurement TO Created	This indicates that a procurement transfer order has been created.
Procurement TO Shipped	This indicates that a procurement transfer order has been shipped.
Work Order Created	This indicates that a work order has been created.
Work Order Completed	This indicates that a work order has been completed.
Released	This indicates that there is enough inventory to schedule to the order for fulfillment. The order is released to the Application Consoles, the Sterling Warehouse Management System, or another third-party warehouse management system.
Awaiting Shipment Consolidation	This indicates that the order is to be grouped and consolidated with other shipments before it continues through the pipeline.

Table 17–9 Order Fulfillment Pipeline - Statuses Tab Window

Field	Description
Awaiting WMS Interface	This indicates that the order must interface with the Sterling Warehouse Management System before continuing in the pipeline.
Sent To Node	This indicates that the order is sent in the form of an order release.
Included In Shipment	This indicates that the order is included in a shipment.
Shipped	This indicates that the order has been shipped
Return Created	This indicates that the Buyer is returning one or more items included in the order.
Return Received	This indicates that returned items have been received at the return node.
Held	This indicates that the order is being held and no modifications can be made until it is released from the hold.
Shipment Delayed	This indicates that all or part of the order shipment has been delayed.
Cancelled	This indicates that the order has been canceled.
Shorted	This indicates that the order contains less quantity than requested.

17.4.5 Conditions

A **condition** matches document type attributes against decision points and routes the documents to different paths based on the specified attribute and value combinations. The document type attributes against which conditions can be created are predefined in the Sterling Multi-Channel Fulfillment Solution. You can use these attributes in any combination or you can create conditions that run the appropriate application logic for specific circumstances.

For more information about conditions, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

To view the condition details of an order fulfillment pipeline:

- 1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Fulfillment > Fulfillment Process Model. The Order Fulfillment window displays.
- 2. In the Order Fulfillment window, choose .
- 3. The Conditions tab window displays.

For more information about creating and modifying conditions, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

Table 17–10 Order Fulfillment Pipeline - Conditions Tab Window

Field	Description
Conditions	Displays conditions that are specific to the order fulfillment pipeline, if any.

17.4.6 Actions

An **action** is a process or program that is triggered by an event. These processes and programs send user alert notifications and automatically resolve issues.

For example, when an order is released (the event), you can set an action to send the customer an e-mail.

For more information about Actions, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

To view the action details of an order fulfillment pipeline:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Fulfillment > Fulfillment Process Model. The Order Fulfillment window displays.
2. In the Order Fulfillment window, choose .
3. The Actions tab window displays.

For more information about creating and modifying actions, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

17.5 Defining Transaction Rules

You can define additional rules for shipment advice, shipment confirmation, order entry, order monitoring, and negotiation monitoring.

To define additional transaction rules:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Fulfillment > Transaction Specific Rules. The Transaction Rules window displays.
2. Enter information in the applicable fields. Refer to [Table 17–11](#) for field value descriptions.
3. Choose .

 **Transaction Rules : Sales Order (DEFAULT)**  

Ship Advice <input checked="" type="checkbox"/> Include Price Information in Instruction	Ship Confirm <input type="checkbox"/> Cancel Order on Inventory Shortage
Order Monitor Order Monitor Relog Interval <input type="text" value="24"/> Hours	Negotiation Monitor Negotiation Monitor Relog Interval <input type="text" value="24"/> Hours
Post Voided Sale on Order Mark Post Voided Sale for Auto-Cancellation After <input type="text" value="24"/> Hours	Reship Order Minimum Reship Window <input type="text" value="5"/> Days
Action to take on parent line when chained line is canceled <input checked="" type="radio"/> Unschedule <input type="radio"/> Cancel	
Cancellation Of Order Lines With Work Orders <input type="checkbox"/> Allow Cancellation Even If Work Order Cannot Be Canceled	
Synchronize Dates <input type="checkbox"/> Synchronize Dates Between Master Order Dates And Dates On Order Line And Schedules

Table 17–11 Transactions Rules Window

Field	Description
Ship Advice	
Include Price Information in Instruction	<p>When selected, the system sends down price information on the order as a part of the ship advice instructions.</p> <p>This is a DCS-specific parameter. Key price-related elements from the Sterling Multi-Channel Fulfillment Solution is sent to DCS as instructions of type SHC (shipping and handling charges at order header level), PRM (discount amount at the order header level), and STX (tax at the order header level).</p>
Ship Confirm	
Cancel Order on Inventory Shortage	When selected, items are canceled or backordered in case of inventory shortage.
Order Monitor	
Order Monitor Relog Interval	<p>Enter the number of hours after which the order monitor raises an action if a document type remains in the same status in a pipeline.</p> <p>The Inventory Monitor and Order Monitor run at pre-defined (scheduled) intervals. Once an alert is raised, the same alert should not be raised over and over again at every run. Relog intervals control how soon after the previous alert the next alert should be triggered.</p> <p>Important: This field has no impact on the Enhanced Order Monitor.</p>
Negotiation Monitor	
Negotiation Monitor Relog Interval	Enter the number of hours after which the Negotiation Monitor raises an action if a document type remains in the same status in a negotiation pipeline.
Post Voided Sale on Order	
Mark Post Voided Sale for Auto-Cancellation After	Enter the number of hours based on which the auto-cancel date is set on the order.
Reship Order	

Table 17–11 Transactions Rules Window

Field	Description
Minimum Reship Window	Enter the minimum number of days allowed to pass after an order line has been shipped before an order line may need to be reshipped.
Action to take on parent line when chained line is canceled	
Unschedule	When selected the unschedule action is performed on the parent order line when a chained order line is canceled. An unscheduled parent line is synonymous with a backordered line. For more information about chained orders, see the <i>Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide</i> .
Cancel	When selected the parent line is canceled when a chained order line is canceled. For more information about chained orders, see the <i>Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide</i> .
Cancellation of Order Lines with Work Orders	
Allow Cancellation Even If Work Order Cannot Be Cancelled	<p>An order may have generated a work order to customize the item for the customer. In some scenarios, the work order cannot be cancelled. For example, the work order cannot be cancelled because the work order has already been completed, or because the work order is performed by an organization that does not accept work order cancellations.</p> <p>By default, the order associated with the work order cannot be cancelled. Select 'Allow Cancellation Even If Work Order Cannot Be Cancelled' to permit the parent orders to be cancelled if the work order cannot be cancelled.</p>
Synchronize Dates	

Table 17–11 Transactions Rules Window

Field	Description
Synchronize Dates Between Master Order Dates And Dates On Order Line And Schedules	<p>Check this box to synchronize the requested dates and the expected ship dates for the Order, Order Header, Order Line, and Order Line Schedules.</p> <p>The requested dates synchronize with the requested ship, requested deliver, and cancel dates on the order line or header.</p> <p>The expected dates synchronize with the order schedules.</p> <p>Note: If this rule is not chosen, the synchronization between dates is not possible.</p>
Expected Dates On Order	
Do Not Recompute Expected Dates When Requested Dates On The Order Are Changed	<p>Check this box when you do not want the requested dates on the order line to be synchronized with the expected dates on the order line schedule.</p> <p>Note: The dates are synchronized only during the line creation.</p> <p>Note: Scheduling should not be used on orders which have expected and requested dates that are not synchronized.</p>
Pickup Order Lines	
Compute Expected Dates When Requested Dates On The Pickup Order Lines Are Changed	<p>Check this box to recompute the expected ship date of an item when a customer chooses to pick up either a portion of an order or the complete order at a later date.</p> <p>Note: This flag is available for outbound orders only.</p>
Action To Take When Unsheduling Last Product Line	
Keep Association To Delivery Service Line	When selected, if the last product line on a work order is cancelled, the association with the delivery line is kept.
Remove Association To Delivery Service Line	When selected, if the last product line on a work order is cancelled, the association with the delivery line is removed.

Table 17–11 Transactions Rules Window

Field	Description
Order Approval	
Hold Type To Be Applied When Order Needs Approval	<p>Select the hold type you want to be applied when an order requires approval.</p> <p>Note: The hold is triggered internally by the system, and therefore, should not be set to automatically apply in the hold configuration.</p>

17.6 Defining Status Inventory Types

You can define how and when inventory is updated for Sellers and Buyers tracking inventory, on a status-by-status basis. The Status Inventory Types table is used to associate statuses with specific supply and demand types according to organization. When an order moves through the statuses of a given fulfillment pipeline the values corresponding to the Buyer supply type and Seller demand type associated with the original status are decreased and the values for the status the order is moving into are increased.

Example

Assume you have the following records in the Status Inventory Type table:

Table 17–12 Sample Status Inventory Type Records

Status	Buyer Supply Type	Seller Demand Type	Seller Supply Type	Increment Seller Supply
1100	Purchase Order Placed	Open Order	Onhand	N
3200	Purchase Order Released	Released	Onhand	N
3700	Intransit			Y

When an order with a line item quantity of 10 is created in Created (1100) status, the Purchase Order Placed supply record is updated with a quantity of 10. A Open Order demand type with a quantity of 10 is created for the Seller.

In this example, if a quantity of 3 is moved into Released (3200) status, the Purchase Order Placed supply record is decreased by 3 and a new supply record with a quantity of 3 is created for the Purchase Order Released supply type. The Open Order demand record is also decreased by 3 and a new demand record is with a quantity of 3 is created for the Released demand type.

When the order moves from Released (3200) status to Shipped (3700) status, the Buyer's supply is decreased for the Purchase Order Released supply type and increased for Intransit. The Seller's demand is decreased for the Released demand type. However, the demand type is not increased for a new type, because the Seller Demand Type associated with the Shipped (3700) status is blank.

In the above configuration, the Increment Seller Supply flag is set to 'Y' and the Seller's supply type for the Shipped (3700) status is Onhand. The Increment Seller Supply flag indicates that the Seller's supply must be adjusted when moving any quantity into the Shipped (3700) status.

The value in the Seller Supply Type column indicates the supply type that should be updated, in this example, Onhand. Since the record for the Released (3200) status has the Onhand Seller supply type associated with it and the Shipped (3700) status record has a blank Seller supply type associated with it, the Onhand Seller supply type decreases when moving from Released (3200) status to Shipped (3700) status. The Seller supply type is not increased with this status move because the value in the Seller Supply Type column for the Shipped (3700) status is blank.

To view a process type's status inventory types, from the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Fulfillment > Status Inventory Types. The Status Inventory window displays. Refer to [Table 17–13](#) for assistance.

Status Inventory Types : Sales Order (DEFAULT)

Orders Without Chaining Orders With Chained Children Procurement Orders

Orders Without Chaining

Status	Buyer Supply Type	Seller Supply Type	Update Seller Supply	Seller Demand Type
Draft Order Reserved	Purchase Order Placed	Onhand	N	Reserved Order
Created	Purchase Order Placed	Onhand	N	Open Order
Reserved	Purchase Order Placed	Onhand	N	Reserved Order
Being Negotiated	Purchase Order Placed	Onhand	N	Open Order
Accepted	Purchase Order Placed	Onhand	N	Open Order
Backordered	Purchase Order Backorder	Onhand	N	Backorder
Unscheduled	Purchase Order Backorder	Onhand	N	Backorder
Scheduled	Purchase Order Scheduled	Onhand	N	Scheduled
Awaiting Chained Order Cre...	Purchase Order Released	Onhand	N	Allocated
Work Order Created	Purchase Order Scheduled	Onhand	N	Scheduled
Released	Purchase Order Released	Onhand	N	Allocated
Sent To Node	Purchase Order Released	Onhand	N	Allocated
Included In Shipment	Purchase Order Released	Onhand	N	Allocated
Shipped	In Transit		Y	
Cancelled		Onhand	N	

Table 17–13 Status Inventory Types Window

Field	Description
Orders Without Chaining/Orders With Chained Children/Procurement Orders	<p>Select the Orders Without Chaining tab to view the status inventory types for orders that flow through the process type pipeline without having any associated chained orders.</p> <p>Select the Orders With Chained Children tab to view the status inventory types of orders having associated drop-ship chained orders.</p> <p>Select the Procurement Orders tab to view the status inventory types of procurement orders.</p>
Status	The order document's status.
Buyer Supply Type	The Buyer's supply type associated with the order document's status.
Seller Supply Type	The Seller's supply type associated with the order document's status.
Update Seller Supply	Indicates if inventory updates are made when an order document moves into the associated status.
Seller Demand Type	The Seller's demand type associated with the order document's status.

You can use the Status Inventory Types branch for:

- [Creating a Status Inventory Type](#)
- [Modifying a Status Inventory Type](#)
- [Deleting a Status Inventory Type](#)

17.6.1 Creating a Status Inventory Type

To to create a status inventory type:

1. In the Status Inventory Types window, choose . The Status Inventory Type Details window displays.
2. Enter information in the applicable fields. Refer to [Table 17–14](#) for field value descriptions.
3. Choose .

The screenshot shows a window titled 'Status Inventory Type Details'. It contains the following fields:

- Status**: A dropdown menu.
- Buyer Supply Type**: A dropdown menu.
- Seller Supply Type**: A dropdown menu.
- ☐ **Update Seller Supply**: A checkbox.
- Seller Demand Type**: A dropdown menu.

Table 17–14 *Status Inventory Type Details Window*

Field	Description
Status	Select the order document status that you want to associate inventory types with.
Buyer Supply Type	Select the Buyer supply type that you want to associate with the order document status.

Table 17–14 Status Inventory Type Details Window

Field	Description
Seller Supply Type	Select the Seller supply type that you want to associate with the order document status.
Update Seller Supply	Select this field if you want inventory updates to be performed on the associated inventory types when the order document enters this status. Note: If you are integrating with Sterling WMS, this field must be selected and you must specify the Seller Supply Type.
Seller Demand Type	Select the Seller demand type that you want to associate with the order document status.

17.6.2 Modifying a Status Inventory Type

To modify a status inventory type:

1. In the Status Inventory Types window, locate the applicable status inventory type and choose . The Status Inventory Type Details window displays.
2. Enter information in the applicable fields. Refer to [Table 17–14](#) for field value descriptions.
3. Choose .

17.6.3 Deleting a Status Inventory Type

To delete a status inventory type, locate the applicable status inventory type in the Status Inventory Types window and choose .

Note: Default status inventory types which are originally shipped with the Sterling Multi-Channel Fulfillment Solution cannot be deleted.

17.7 Defining Monitoring Components

You can define the components used to measure and report unexpected conditions and delays in the order document's lifecycle. For more information about using these components to configure monitoring rules,

see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

To define a process type's monitoring components, from the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Fulfillment > Order Monitoring. The Monitoring window displays.

You can use the Monitoring window for:

- [Defining Date Types](#)
- [Defining Milestones](#)

17.7.1 Defining Date Types

You can define custom date types. These dates automatically appear in the configuration screen and the Order/Shipment Dates window in the Sterling Multi-Channel Fulfillment Solution Consoles.

You can use the Date Types tab for:

- [Creating a Date Type](#)
- [Modifying a Date Type](#)
- [Deleting a Date Type](#)

17.7.1.1 Creating a Date Type

To create a date type:

1. In the Monitoring window, choose the Date Types tab.
2. From the Date Types list, choose . The Date Type Details window displays.
3. Enter information in the applicable fields. Refer to [Table 17–15](#) for field value descriptions.
4. Choose .

Figure 17–2 Date Type Details
Table 17–15 Date Type Details Window

Field	Description
Date Type	Enter the name of the date type.
Description	Enter a brief description of the date type.
Requested	Check this box to indicate if the date type represents a date requested by a Buyer, user, and so forth.
Expected	Check this box to indicate if the date type represents the date that the system expects or has calculated something to occur.
Actual	Check this box to indicate if the date type represents the actual date.
Committed	Check this box to indicate if the date type represents a committed date.

17.7.1.2 Modifying a Date Type

To modify a date type:

1. In the Monitoring window, choose the Date Types tab.
2. From the Date Types list, locate the applicable date type and choose . The Date Type Details window displays.
3. Enter information in the applicable fields. Refer to [Table 17–15](#) for field value descriptions.
4. Choose .

17.7.1.3 Deleting a Date Type

To delete a date type:

Note: The following system dates cannot be deleted:

- Delivery Date
- Order Date
- Ship Date

1. In the Monitoring window, choose the Date Types tab.
2. From the Date Types list, locate the applicable date type and choose

17.7.2 Defining Milestones

You can configure applicable statuses in a process type to be milestones. A milestone is a type of date that the Sterling Multi-Channel Fulfillment Solution automatically determines when an order moves from one status to another. A milestone represents a significant point in the processing lifecycle that can be used as a criterion for monitoring. Milestones can be defined at the order, order line, order release, and order release line levels.

Note: A milestone can be reached whenever there is a change in an order line. The Sterling Multi-Channel Fulfillment Solution marks a milestone as reached if an order line reaches a status marked as a milestone. However, there may be times that only part of an order line reaches a particular status defined as milestone.

You can use the Milestones tab for:

- [Creating a Milestone](#)
- [Modifying a Milestone](#)
- [Deleting a Milestone](#)

17.7.2.1 Creating a Milestone

To create a milestone:

1. In the Monitoring window, choose the Milestones tab.
2. From the Milestones list, choose . The Milestone Details window displays.
3. Enter information in the applicable fields. Refer to [Table 17–16](#) for field value descriptions.
4. Choose .

Table 17–16 Milestone Details

Field	Description
Date Type	Enter the name of the milestone being created. Note: You cannot use date types you have created on the date type tab. You must create a unique name for the milestone.
Description	Enter a brief description of the milestone.
Requested	Select this field to indicate if the milestone represents a date requested by a Buyer, user, etc.
Expected	Select this field to indicate if the milestone represents a date the system expects or has calculated something to occur.
Actual	This field is not applicable for milestones.
Committed	Select this field to indicate if there is a committed date available for this date type.

17.7.2.1.1 Creating a Status Milestone

To create a Status Milestone:

1. From the Milestone Details window, choose the Milestone Statuses tab.
2. From the Status Milestones list, choose . The Status Milestone Details window displays.
3. Enter information in the applicable fields. Refer to [Table 17–17](#) for field value descriptions.
4. Choose .

Table 17–17 *Status Milestone Details*

Field	Description
Date Type	The date type if any associated with the milestone.
Status	Select the status you want use to indicate the milestone has been reached.

Table 17–17 Status Milestone Details

Field	Description
Milestone Level	Select Order to indicate this status must be reached at the order header level. Select Order Line to indicate that this status must be reached at the order line level. Select Order Release to indicate that this status must be reached at the order release level.
Quantity Type	Select Initial to indicate that the milestone is met when any quantity at the above selected level moves into the status. Select Complete to indicate that the milestone is met when all quantity at the above selected level moves into the status.

17.7.2.2 Modifying a Milestone

Important: If modifications are made to an existing milestone, the changes are only applied to new orders. Existing orders for which milestone records have already been created are not considered.

To modify a milestone:

1. In the Monitoring window, choose the Milestones tab.
2. From the Milestones list, locate the applicable milestone and choose . The Milestone Details window displays.
3. Enter information in the applicable fields. Refer to [Table 17–16](#) for field value descriptions.
4. Choose .

17.7.2.3 Deleting a Milestone

To delete a milestone:

1. From the Monitoring window, choose the Milestones tab.
2. From the Milestones list, locate the applicable milestone and choose .

17.8 Defining Monitoring Events

Events are used in instances where the Enhanced Order Monitor may raise multiple alerts of the same type. For example, if an order with multiple lines that are shipped together has a shipment delay and you have configured the Enhanced Order Monitor to raise alerts when shipments are delayed at the line level, an alert of the same type would be raised against each line in the order. You can create rules to aggregate all of these similar alerts and raise one "root cause".

You can use the Monitor Events tab for:

- [Creating an Event Rule](#)
- [Modifying an Event](#)
- [Deleting an Event](#)

17.8.1 Creating an Event Rule

To create an event rule:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Fulfillment > Monitor Events. The Monitor Events window displays.
2. From the Monitor Events list, choose . The Monitor Events Details window displays.
3. Enter information in the applicable fields. Refer to [Table 17–18](#) for field value descriptions.
4. Choose .

Table 17–18 Monitor Event Details Pop-Up Window

Field	Description
Event ID	Enter the event ID.
Description	Enter a brief description of the event.
Requires Realert	Select this field if you want users to be re-alerted if the issue has not been resolved within a certain timeframe.

Table 17–18 Monitor Event Details Pop-Up Window

Field	Description
Realert Interval	If you selected Requires Realert, enter the interval (in hours) that re-alerts should be sent.
Automatically Resolve Alerts	Select this field to automatically remove an alert if the alert condition is no longer valid. Once the alert is resolved, a new alert is raised if the condition is detected again.
Event Identified By	
Order	Select this field if you want two or more alert conditions to be treated the same if they belong to the same order. Note: This field can be selected in conjunction with Order Line and/or Order Release fields.
Order Line	Select this field if you want two or more alert conditions to be treated the same if they belong to the same order line. Note: This field can be selected in conjunction with Order and/or Order Release fields.
Order Release	Select this field if you want two or more alert conditions to be treated the same if they belong to the same order release. Note: This field can be selected in conjunction with Order and/or Order Line fields.
Ship Node	Select this field if you want two or more alert conditions to be treated the same if they belong to the same ship node. Note: This field must be used in conjunction with the Order, Order Line, and/or Order Release fields.
Seller Organization	Select this field if you want two or more alert conditions to be treated the same if they belong to the same Seller. Note: This field must be used in conjunction with the Order, Order Line, and/or Order Release fields.
Buyer Organization	Select this field if you want two or more alert conditions to be treated the same if they belong to the same Buyer. Note: This field must be used in conjunction with the Order, Order Line, and/or Order Release fields.

Table 17–18 Monitor Event Details Pop-Up Window

Field	Description
Service To Be Invoked	Select the alert service to be invoked should the event consolidation rule conditions be met.
Aggregate And Invoke Service For	
Order	Select this field if you want only one alert to be raised for an order when alert conditions are detected.
Order Line	Select this field if you want only one alert to be raised per order line when alert conditions are detected.
Order Release	Select this field if you want only one alert to be raised for an order release when alert conditions are detected.
Ship Node	Select this field if you want only one alert to be raised for a particular ship node when alert conditions are detected.
Seller Organization	Select this field if you want only one alert to be raised for a particular Seller when alert conditions are detected.
Buyer Organization	Select this field if you want only one alert to be raised for a particular Buyer when alert conditions are detected.

Note: In most cases the attributes that identify an event should be a subset of the attributes that specify event aggregation.

17.8.2 Modifying an Event

To modify an event rule:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Fulfillment > Monitor Events. The Monitor Events window displays.
2. From the Monitor Events list, select the applicable event rule and choose . The Monitor Event Details window displays.
3. Enter information in the applicable fields. Refer to [Table 17–18](#) for field value descriptions.

4. Choose .

17.8.3 Deleting an Event

To delete an event rule:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Fulfillment > Monitor Events. The Monitor Events window displays.
2. From the Monitor Events list, select the applicable event rule and choose .

17.9 Defining Transaction Dependencies

Transaction dependency enables you to process an order based on certain conditions defined for a transaction. It provides the ability for a transaction to allow some order lines to not be processed until certain conditions are met. These conditions can also apply to other lines in the same order.

For example, a customer orders a DSL modem along with the DSL line activation service. In this scenario, the modem cannot be shipped until the account is activated. As a result, you need to sequence the order. The sequencing of the order can be based on:

1. Transaction completion of certain lines, such as the account activation being completed before the modem could be shipped.
2. Specific dates, such as not to ship the modem until 5 days before the activation date.

Note: The above mentioned rules, do not apply for all types of order lines. Bundle order fulfillment cannot be configured with the transaction or date-type dependency because the order lines can have interdependencies such that a bundle parent line cannot move forward in the pipeline until all the child lines are fulfilled.

You can configure transaction dependencies in groups, with one dependency group being active at a time. The dependencies are configured at an enterprise, document type, or process type level and

are applied while processing the order. If necessary, the enterprise level inheritance can be used.

The dependencies are configured in two steps:

1. The dependent lines are configured by specifying the item ID, classification, or a service type. An optional condition builder is also included to identify lines based on other order lines and header attributes such as a line type.
2. Once the rules are defined, you can configure additional constraints based on either of the dependency types:
 - Transaction Based
 - Date Based

Each of these dependencies are modeled as a constraint accounting for approximately 20 different template types serving the general, bundle, and item attributes.

The limitations assumed by transaction dependencies are:

- The dependency rules specified by a transaction is independent of the pipeline or the order.
- Even though transaction dependency can understand the relationship between multiple lines and dates, it does not take into consideration all the due date dependencies. For example, if the DSL activation due date is modified, the dependency does not identify how much longer the other dependent lines can be delayed.

You can use the Transaction Dependencies branch for:

- [Defining a Default Dependency Group](#)
- [Creating a Transaction Dependency Group](#)
- [Creating a Dependency Rule Constraint](#)
- [Modifying a Transaction Dependency Group](#)
- [Deleting a Transaction Dependency Group](#)

17.9.1 Defining a Default Dependency Group

To define a Default Dependency Group:

1. From the tree in the application rules side panel, choose Document Specific > (Document Type) > Fulfillment > Transaction Dependencies. The Transaction Dependency window for the chosen document type displays.
2. In the Default Dependency Group field, select one of the available transaction dependency groups from the drop-down list. Refer to [Table 17–19](#) for field value descriptions.
3. Choose .

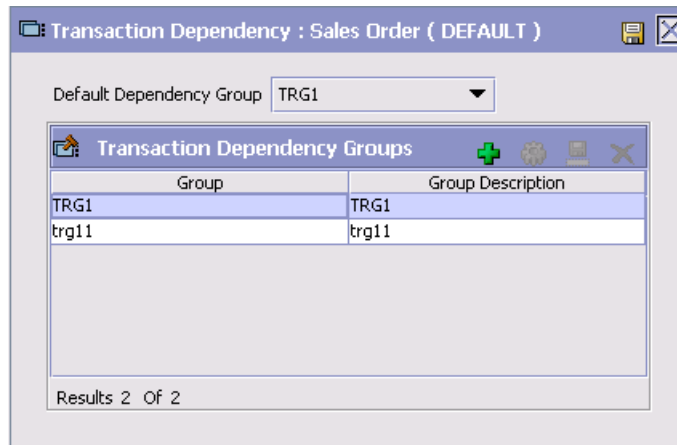

Table 17–19 Transaction Dependency Window

Field	Description
Default Dependency Group	Select the default transaction dependency group to use.
Transaction Dependency Groups	
For more information about creating a transaction dependency group, see Section 17.9.2, "Creating a Transaction Dependency Group" .	
Group	The name of the transaction dependency group.
Group Description	The description of the transaction dependency group.

17.9.2 Creating a Transaction Dependency Group

To create a Transaction Dependency Group:

- 1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Fulfillment > Transaction Dependencies. The Transaction Dependency window for the chosen document type displays.
- 2. From the Transaction Dependency Groups list, choose . The Transaction Dependency Group Detail window displays.
- 3. Enter information into the applicable fields. Refer to [Table 17–20](#) for field value descriptions.
- 4. Choose .
- 5. After saving the transaction dependency group, you can add transaction dependency rules to the group. For more information refer to [Section 17.9.2.1, "Creating a Transaction Dependency Rule"](#).

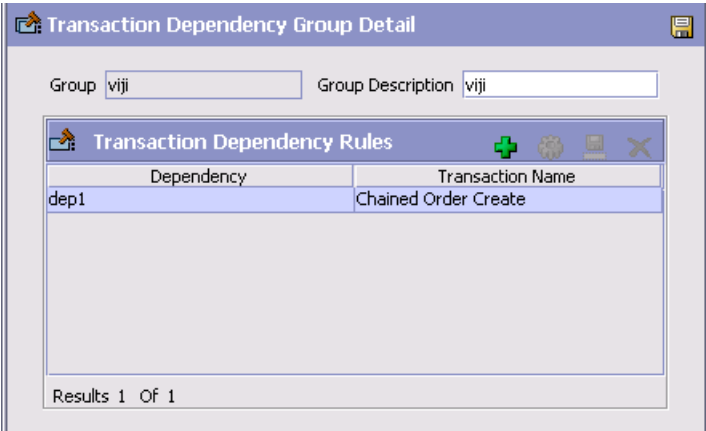

Table 17–20 Transaction Dependency Group Detail Window

Field	Description
Group	Enter the name of the transaction dependency group.
Group Description	Enter the description of the transaction dependency group.
Transaction Dependency Rules	
For more information about creating a transaction dependency rule, see Section 17.9.2.1, "Creating a Transaction Dependency Rule" .	

Table 17–20 Transaction Dependency Group Detail Window

Field	Description
Transaction Dependency Name	The name of the transaction dependency rule.
Transaction Name	The transaction allowed to run based on this transaction dependency.

17.9.2.1 Creating a Transaction Dependency Rule

To create a transaction dependency rule:

1. From the Transaction Dependency Group Detail window, choose  from the Transaction Dependency Rules list. The Transaction Dependency Rule Detail window displays.
2. Enter information into the applicable fields. Refer to [Table 17–21](#) for field value descriptions.
3. Choose .

Dependency	Enter the name for this transaction dependency.
Apply Dependency To Any Order Line Having	<p>From the drop-down list, select the criterion you want to use for the order lines to which this dependency can be applied.</p> <p>Depending on the criterion you select, you may have to indicate specific items, or service types. To specify these items or service types, choose . The corresponding list screen displays.</p>
Condition	<p>The condition that is created for this transaction dependency rule. The order fulfillment condition builder displays.</p> <p>For more information about creating conditions, see the <i>Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide</i>.</p> <p>The field values of the order fulfillment condition builder are provided in the ORDER_TRANDEP_CONDITION template.</p> <pre><OrderLine LineType="" OrderedQty=""> <LinePriceInfo LineTotal="" UnitPrice=""/> <Order BuyerOrganizationCode="" EnterpriseCode="" OrderType="" SellerOrganizationCode=""/> </OrderLine></pre> <p>Note: The  icon is disabled in the condition builder screen since there are no related entities affected by this condition.</p>
Allow Transaction To Execute Only If The Following Conditions Are Met	From this drop-down list, select the transaction that is allowed to run based on the conditions indicated in this transaction dependency rule.
Dependency Rule Constraints	
<p>The dependency constraints are populated based on the created rule. For information about creating the dependency rule constraints, see Section 17.9.2.1.1, "Creating a Dependency Rule Constraint".</p>	

17.9.2.1.1 Creating a Dependency Rule Constraint

To create a dependency constraint rule:

1. From the Transaction Dependency Rule Detail window, choose  from the Dependency Rules Constraint List. The Constraint Detail window for the chosen document type displays.
2. Enter information into the applicable fields. Refer to [Table 17–22](#) for field value descriptions.
3. Choose OK.

Table 17–22 *Constraint Detail Window*

Field	Description
Transaction Based Dependencies	Choose this option if this dependency is transaction based, and select the constraint type you want to use from the drop-down list.
Date Type Based Dependencies	Choose this option if this dependency is date type based, and select the constraint type you want to use from the drop-down list.
Constraint Type	Based on the template you have selected, click where indicated to fill in the desired values necessary to complete this constraint type.

17.9.2.1.2 Modifying a Dependency Rule Constraint

To modify a dependency rule constraint:

1. From the Transaction Dependency Rule Detail window, select the constraint type you wish to modify and choose . The Dependency Detail window for the chosen constraint displays.
2. Edit the information in the applicable fields. Refer to [Table 17–22](#) for field value descriptions.
3. Choose .

17.9.2.1.3 Deleting a Dependency Rule Constraint

To delete a dependency rule constraint:

1. From the Transaction Dependency Rule Detail window, select the constraint type you wish to delete.
2. Choose .

17.9.2.2 Modifying a Transaction Dependency Rule

To modify a transaction dependency rule:

1. From the Transaction Dependency Group Details window, select the transaction dependency rule you wish to modify and choose . The Transaction Dependency Rule Detail window for the chosen constraint displays.
2. Edit the information in the applicable fields. Refer to [Table 17–21](#) for field value descriptions.
3. Choose OK.

17.9.2.3 Deleting a Transaction Dependency Rule

To delete a transaction dependency rule:

1. From the Transaction Dependency Group Details window, select the transaction dependency rule you wish to delete.
2. Choose .

17.9.3 Modifying a Transaction Dependency Group

To modify a transaction dependency group:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Fulfillment > Transaction

Dependencies. The Transaction Dependencies window for the chosen document type displays.

2. From the Transaction Dependency Groups list, select the transaction dependency group you wish to modify and choose . The Transaction Dependency Group Details window displays.
3. Edit the information in the applicable fields. Refer to [Table 17–20](#) for field value descriptions.
4. Choose .

17.9.4 Deleting a Transaction Dependency Group

To delete a transaction dependency group:

1. From the tree in the application rules side panel, choose Document Specific > *(Document Type)* > Fulfillment > Transaction Dependencies. The Transaction Dependencies window for the chosen document type displays.
2. From the Transaction Dependency Groups list, select the applicable transaction dependency group and choose .

Configuring an Order Document's Shipment Specific Components

Important: Be aware that return fulfillment requires sourcing configuration. Sourcing configuration is accessible through the Distributed Order Management configuration grouping. For more information about configuring sourcing, see the *Sterling Distributed Order Management Configuration Guide*.

To complete an order document's lifecycle, each document has a set of different processes that it can go through. These processes are called process types. Every order document has a defined set of process types in the Sterling Multi-Channel Fulfillment Solution.

The following process types are defined in the Sterling Multi-Channel Fulfillment Solution for the order document types:

- Fulfillment
- Negotiation
- Shipment
- Receipt

You can configure the rules and components specific to an order document's shipment process type.

You can use process type configuration for:

- [Defining Hold Types](#)
- [Defining Process Type Details](#)

- [Process Type Pipeline Configuration](#)
- [Defining Monitoring Components](#)
- [Defining Monitoring Events](#)
- [Defining Shipment Preferences](#)

18.1 Defining Hold Types

Shipments can be placed on hold manually or automatically by applying a particular hold type. Certain transactions can be configured to ensure that shipments put on hold are not processed. Likewise, modification types can be configured to ensure shipments that are on hold are not processed. By default, all transactions and modification types are allowed to process all documents for all hold types.

To prevent transactions from processing shipments that are put on hold, in the Others tab in the Transaction Detail screen, check the "This Transaction Can Be Stopped From Processing Shipments That Are On Hold" box. For more information about viewing transaction details, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

To create, modify, and delete hold types, from the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Outbound Logistics > Hold Types. For more information about defining hold types, see the *Sterling Logistics Management Configuration Guide*.

18.2 Defining Process Type Details

You can define the parameters and templates that distinguish a process type.

For more information about defining process type details, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

18.3 Process Type Pipeline Configuration

A **process type pipeline** is a series of transactions and statuses that guide document types, such as a Sales Order, through a predefined process. A pipeline consists of the different statuses a document goes through during fulfillment, negotiation, shipment, or receipt. You can also

set up transactions consisting of events, actions, and conditions, as they pertain to the pipeline you are configuring.

Repositories

A repository is a logical collection of entities that define the business process workflow.

The following entities are included in a repository:

- Pipelines
- Transactions
- Statuses
- Conditions
- Actions
- Services

The Sterling Multi-Channel Fulfillment Solution provides a base repository for each of the system defined process types. Some of the entities within a repository are copied when creating a new document type. For more information about creating a new document type, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

The process of shipment is modeled through a pipeline. This represents the process configuration that is unique to an organization. An organization may also specify unique processes for each participating Enterprise.

18.3.1 Defining Pipeline Determination

Pipeline determination is used to set up conditions that affect which pipeline is used during the start of the business process workflow. For example, an organization deals with sales orders that sometimes contain hazardous materials. They have two separate pipelines, one in which orders with order lines without any hazardous materials go through and one in which orders with order lines containing hazardous materials must go through for inspection before continuing through the order process. The organization uses pipeline determination to set up a condition that determines whether or not order lines contain hazardous materials and sends the order line down the correct pipeline.

When you expand the Pipeline Determination branch, the components displayed depends on what role you are logged in as. If you are logged in as a Hub role, the Hub Rule displays. If you are logged in as an Enterprise role, both the Hub Rule and My Rule components display. Double-click on the applicable node to display the pipeline determination rules.

Note: If you are logged in as an Enterprise role, the Hub Rule screen is grayed out and cannot be modified.

Drag conditions and pipelines into the work area to construct pipeline determination rules. A single pipeline or condition must be the root. Conditions cannot link back to an earlier component in the chain and a pipeline cannot be linked to twice.

Note: When configuring pipeline determination for an order document type pipeline, please note that pipeline determination is only considered when adding a line or creating an order. When changes are made to draft orders pipeline determination does not occur.

18.3.2 Pipelines

For more information about configuring pipelines, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

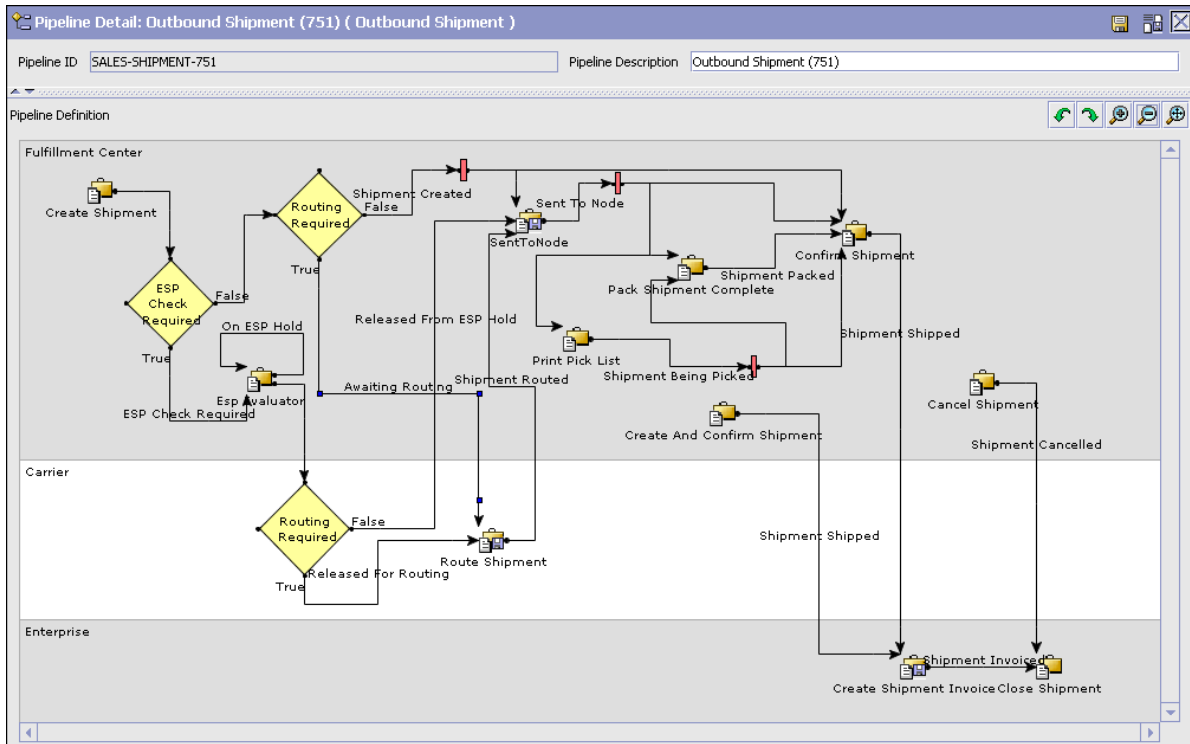

To view the outbound shipment pipeline details:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Outbound Logistics > Shipment Process Model. The Outbound Shipment window displays.

2. In the Outbound Shipment window, choose Outbound Shipment Repository > Pipelines > Outbound Shipment.
3. The Pipeline Detail: Outbound Shipment (Outbound Shipment) window displays.

For more information about creating and modifying a pipeline, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

18.3.3 Transactions

Every process type has a set of base transactions defined for it. A transaction is a logical unit of work that is necessary for performing activity within the Sterling Multi-Channel Fulfillment Solution. Base transactions are predefined transactions that contain information about how the transaction behaves, such as how many copies of a transaction can be kept in a process type and whether or not it can have configurable base pick and drop statuses. Base transactions can be used to create new transactions. These transactions can be changed within the limits defined in the base transaction.

For more information about transactions, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

To view the transaction details for an outbound shipment pipeline:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Outbound Logistics > Shipment Process Model. The Outbound Shipment window displays.
2. In the Outbound Shipment window, choose .
3. The Transactions tab window displays.

For more information about creating and modifying transactions, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

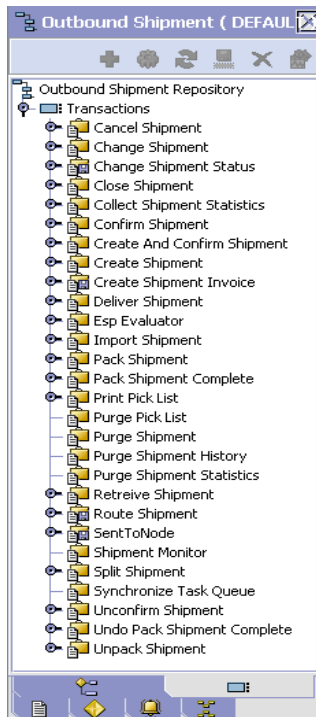

Table 18–1 Outbound Shipment Pipeline - Transactions Tab Window

Field	Description
Cancel Shipment	This transaction represents the process of cancelling a shipment.
Change Shipment	This transaction represents any modifications that may be made to a shipment.
Change Shipment Status	This transaction represents any modifications that may be made involving an order or order line's status.
Close Shipment	This transaction represents a shipment being closed and archived in the system.
Confirm Shipment	This transaction represents a shipment is manually confirmed and shipped.
Create And Confirm Shipment	This transaction represents the process of creating a shipment and shipping it.
Create Shipment	This transaction represents the creation of a shipment in the system.
Create Shipment Invoice	This transaction represents the creation of a shipment invoice.
Deliver Shipment	This transaction represents a shipment being delivered.
ESP Evaluator	This transaction represents the shipment being evaluated for ESP terms of weight and volume.
Import Shipment	This transaction represents the process of importing a shipment that has already been processed to some extent by an external system.
Pack Shipment	This transaction represents the process of packing a shipment.
Pack Shipment Complete	This transaction represents the completion of the packing process.
Print Pick List	This transaction represents the process of printing a pick list.
Purge Pick List	This transaction represents a pick list that can be purged from the system.
Purge Shipment	This transaction represents the process of moving shipments to the history tables.

Table 18–1 Outbound Shipment Pipeline - Transactions Tab Window

Field	Description
Purge Shipment History	This transaction represents the process of purging shipments from the history tables and removing them from the system.
Receipt Closure Listener	This listener transaction monitors the receipt pipeline and indicates when the receipt has been closed.
Route Shipment	This transaction represents the process of assigning carriers to a shipment based on routing guidelines. When possible, it creates consolidated shipments into loads to save on transporting costs.
Sent To Node	This transaction represents the process of sending a created shipment to a node to be pick, packed, and shipped.
Shipment Monitor	This transaction represents the process of monitoring shipments in the system based on defined parameters.
Split Shipment	This transaction represents splitting an existing shipment into multiple shipments.
Synchronize Task Queue	This transaction represents the process of synching the order fulfillment task queue.
Undo Pack Shipment Complete	This transaction indicates that a shipment that has moved through the Pack Shipment Complete transaction is undone.
Unpack Shipment	This transaction represents the process of unpacking a shipment that has already been packed.

18.3.4 Statuses

Statuses are the actual states that a document moves through in the pipeline. A transaction can contain two types of statuses, a drop status and a pickup status. A document is moved into a **drop status** when the events and conditions of a transaction have been completed. A **pickup status** takes the document from the previous drop status and moves it through the next transaction. Created and Scheduled are examples of statuses.

For more information about statuses, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

To view the status details of an outbound shipment pipeline:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Outbound Logistics > Shipment Process Model. The Outbound Shipment window displays.
2. In the Outbound Shipment window, choose .
3. The Statuses tab window displays.

For more information about creating and modifying statuses, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

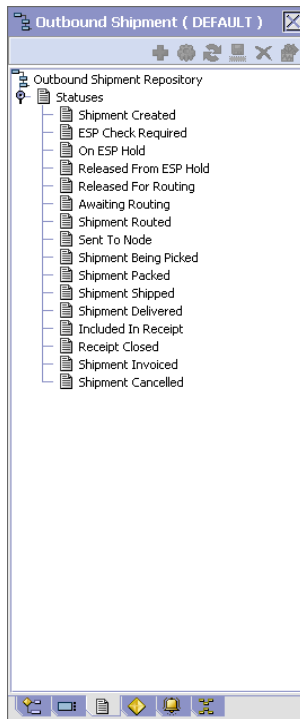

Table 18–2 Outbound Shipment Pipeline - Statuses Tab Window

Field	Description
Shipment Created	This indicates that a shipment has been created.
ESP Check Required	This indicates that the ESP evaluator must be run to determine if ESP conditions have been met.

Table 18–2 Outbound Shipment Pipeline - Statuses Tab Window

Field	Description
On ESP Hold	This indicates that the shipment is being held until ESP conditions are met.
Released From ESP Hold	Indicates that the shipment has been released from ESP hold.
Released For Routing	Indicates that the shipment has met specified parameters for routing guidelines to be applied to it. For more information about configuring routing guidelines, see the <i>Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide</i> .
Awaiting Routing	Indicates that routing guidelines must be applied to the shipment before it continues through the pipeline. For more information about configuring routing guidelines, see the <i>Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide</i> .
Shipment Routed	This indicates that routing guidelines have been applied to the shipment. For more information about configuring routing guidelines, see the <i>Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide</i> .
Sent To Node	This indicates that the shipment has been sent to be packed
Shipment Being Picked	This indicates that the line items are physically being picked in preparation for shipment.
Shipment Packed	This indicates that the shipment has been packed.
Shipment Shipped	This indicates that the shipment has been shipped to the ship to address.
Shipment Delivered	This indicates that the shipment has been delivered to the ship node address.
Included In Receipt	This indicates that the shipment has been included in the receipt.
Receipt Closed	This indicates that the shipment has been received and is considered complete.

Table 18–2 Outbound Shipment Pipeline - Statuses Tab Window

Field	Description
Shipment Invoiced	This indicates that an invoice has been created for the shipment.
Shipment Cancelled	This indicates that the shipment has been cancelled.

18.3.5 Conditions

A **condition** matches document type attributes against decision points and routes the documents to different paths based on the specified attribute and value combinations. The document type attributes against which conditions can be created are predefined in the Sterling Multi-Channel Fulfillment Solution. You can use these attributes in any combination or you can create conditions that run the appropriate application logic for specific circumstances.

For more information about conditions, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

To view the condition details of an outbound shipment pipeline:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Outbound Logistics > Shipment Process Model. The Outbound Shipment window displays.
2. In the Outbound Shipment window, choose .
3. The Conditions tab window displays.

For more information about creating and modifying conditions, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

Table 18–3 Outbound Shipment Pipeline - Conditions Tab Window

Field	Description
ESP Check Required	This condition is used to determine whether a shipment requires an ESP check.
Routing Required	This condition is used to determine whether a shipment requires routing guidelines to be applied to it. For more information about configuring routing guidelines, see the <i>Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide</i> .

18.3.6 Actions

An **action** is a process or program that is triggered by an event. These processes and programs send user alert notifications and automatically resolve issues.

For example, when an order is released (the event), you can set an action to send the customer an e-mail.

For more information about actions, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

To view the action details of an outbound shipment pipeline:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Outbound Logistics > Shipment Process Model. The Outbound Shipment window displays.
2. In the Outbound Shipment window, choose .
3. The Actions tab window displays.

For more information about creating and modifying actions, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

18.4 Defining Monitoring Components

You can define the components used to measure and report unexpected conditions and delays in the order document's lifecycle. For more information about using these components to configure monitoring rules, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

To define monitoring components, from the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Outbound Logistics > Shipment Monitoring. The Monitoring window displays.

You can use the Monitoring window for:

- [Defining Date Types](#)
- [Defining Milestones](#)

18.4.1 Defining Date Types

You can define custom date types. These dates automatically appear in the configuration screen and the Order/Shipment Dates window in the Sterling Multi-Channel Fulfillment Solution Consoles.

You can use the Date Types tab for:

- [Creating a Date Type](#)

- [Modifying a Date Type](#)
- [Deleting a Date Type](#)

18.4.1.1 Creating a Date Type

To create a date type:

1. In the Monitoring window, choose the Date Types tab.
2. From the Date Types list, choose . The Date Type Details window displays.
3. Enter information in the applicable fields. Refer to [Table 18–4](#) for field value descriptions.
4. Choose .

Table 18–4 *Date Type Details Window*

Field	Description
Date Type	Enter the name of the date type.
Description	Enter a brief description of the date type.
Requested	Select this field to indicate if the date type represents a date requested by a Buyer, user, etc.

Table 18–4 *Date Type Details Window*

Field	Description
Expected	Select this field to indicate if the date type represents a date the system expects or has calculated something to occur.
Actual	Select this field to indicate if the date type represents the actual date.

18.4.1.2 Modifying a Date Type

To modify a date type:

5. In the Monitoring window, choose the Date Types tab.
6. From the Date Types list, locate the applicable date type and choose . The Date Type Details window displays.
7. Enter information in the applicable fields. Refer to [Table 18–4](#) for field value descriptions.
8. Choose .

18.4.1.3 Deleting a Date Type

To delete a date type:

Note: The following system dates cannot be deleted:

- Delivery Date
- Ship Date

1. In the Monitoring window, choose the Date Types tab.
2. From the Date Types list, locate the applicable date type and choose .

18.4.2 Defining Milestones

You can configure applicable statuses in a process type to be milestones. A milestone is a type of date that the Sterling Multi-Channel Fulfillment Solution automatically determines when an order moves from one status to another. A milestone represents a significant point in the processing

lifecycle that can be used as a criterion for monitoring. Milestones can be defined at the order, order line, and order release.

Note: A milestone can be reached whenever there is a change in an order line. The Sterling Multi-Channel Fulfillment Solution marks a milestone as reached if an order line reaches a status marked as a milestone. However, there may be times that only part of an order line reaches a particular status defined as milestone.

You can use the Milestones tab for:

- [Creating a Milestone](#)
- [Modifying a Milestone](#)
- [Deleting a Milestone](#)

18.4.2.1 Creating a Milestone

To create a milestone:

1. In the Monitoring window, choose the Milestones tab.
2. From the Milestones list, choose . The Milestone Details window displays.
3. Enter information in the applicable fields. Refer to [Table 18–5](#) for field value descriptions.
4. Choose .

Primary Info

Milestone Statuses

Date Type

Description

☐ Requested

☐ Expected

☒ Actual

☐ Committed

Table 18–5 Milestone Details

Field	Description
Date Type	Enter the name of the milestone being created. Note: You cannot use date types you have created on the date type tab. You must create a unique name for the milestone.
Description	Enter a brief description of the milestone.
Requested	Select this field to indicate if the milestone represents a date requested by a Buyer, user, etc.
Expected	Select this field to indicate if the milestone represents a date the system expects or has calculated something to occur.
Actual	This field is not applicable for milestones.
Milestone Statuses	You can add statuses to associate with the milestone by selecting  and entering information in the applicable fields. Note: This tab can only be accessed once the Primary Info tab has been filled out and saved.
Date Type	The date type if any associated with the milestone.
Status	Select the status you want use to indicate the milestone has been reached.

Table 18–5 Milestone Details

Field	Description
Level	<p>Select Order to indicate this status must be reached at the order header level.</p> <p>Select Order Line to indicate that this status must be reached at the order line level.</p> <p>Select Order Release to indicate that this status must be reached at the order release level.</p>
Quantity Type	<p>Select Initial to indicate that the milestone is met when any quantity at the above selected level moves into the status.</p> <p>Select Complete to indicate that the milestone is met when all quantity at the above selected level moves into the status.</p>

18.4.2.2 Modifying a Milestone

Important: If modifications are made to an existing milestone, the changes are only applied to new orders. Existing orders for which milestone records have already been created are not considered.

To modify a milestone:

1. In the Monitoring window, choose the Milestones tab.
2. From the Milestones list, locate the applicable milestone and choose . The Milestone Details window displays.
3. Enter information in the applicable fields. Refer to [Table 18–5](#) for field value descriptions.
4. Choose .

18.4.2.3 Deleting a Milestone

To delete a milestone:

1. From the Monitoring window, choose the Milestones tab.
2. From the Milestones list, locate the applicable milestone and choose .

18.5 Defining Monitoring Events

Events are used in instances where the Order Monitor may raise multiple alerts of the same type. For example, if an order with multiple lines that are shipped together has a shipment delay and you have configured the Order Monitor to raise alerts when shipments are delayed at the line level, an alert of the same type would be raised against each line in the order. You can create rules to aggregate all of these similar alerts and raise one "root cause".

You can use the Monitor Events tab for:

- [Creating an Event Rule](#)
- [Modifying an Event](#)
- [Deleting an Event](#)

18.5.1 Creating an Event Rule

To create an event rule:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Fulfillment > Monitor Events. The Monitor Events window displays.
2. From the Monitor Events list, choose . The Monitor Events Details window displays.
3. Enter information in the applicable fields. Refer to [Table 18–6](#) for field value descriptions.
4. Choose .

Event Id	<input type="text"/>
Description	<input type="text"/>
<input type="checkbox"/> Requires Realert	Realert Interval <input type="text"/>
<input type="checkbox"/> Automatically Resolve Alerts	
Event Identified By	
<input checked="" type="checkbox"/> Shipment	
Service To Be Invoked	<input type="text"/>
Aggregate And Invoke Service For	
<input checked="" type="checkbox"/> Shipment	

Table 18–6 Monitor Event Details Pop-Up Window

Field	Description
Event ID	Enter the event ID.
Description	Enter a brief description of the event.
Requires Realert	Select this field if you want users to be re-alerted if the issue has not been resolved within a certain timeframe.

Table 18–6 Monitor Event Details Pop-Up Window

Field	Description
Realert Interval	If you selected Requires Realert, enter the interval (in hours) that re-alerts should be sent.
Automatically Resolve Alerts	Select this field to automatically remove an alert if the alert condition is no longer valid. Once the alert is resolved, a new alert is raised if the condition is detected again.
Event Identified By	
Shipment	Select this field if you want two or more alert conditions to be treated the same if they belong to the same shipment.
Service To Be Invoked	Select the alert service to be invoked should the event consolidation rule conditions be met.
Aggregate And Invoke Service For	
Shipment	Select this field if you want only one alert to be raised for a shipment when alert conditions are detected.

Note: In most cases the attributes that identify an event should be a subset of the attributes that specify event aggregation.

18.5.2 Modifying an Event

To modify an event rule:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Fulfillment > Monitor Events. The Monitor Events window displays.
2. From the Monitor Events list, select the applicable event rule and choose . The Monitor Event Details window displays.
3. Enter information in the applicable fields. Refer to [Table 18–6](#) for field value descriptions.
4. Choose .

18.5.3 Deleting an Event

To delete an event rule:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Fulfillment > Monitor Events. The Monitor Events window displays.
2. From the Monitor Events list, select the applicable event rule and choose .

18.6 Defining Shipment Preferences

Shipment preferences can be created to enable over shipment of products, or allow the creation of shipments without order information in the system.

Shipment Preferences are divided into two sets:

- [Over Shipping Preferences](#)
- [Transaction Rules](#)

18.6.1 Over Shipping Preferences

Over shipment is the ability to ship more than an ordered quantity. Over shipment tolerance definitions can be configured using the following criteria:

- Line Type
- Seller Organization Code
- CustomerVendor Classification/BuyerSeller Organization Code
- Item Classification/Item ID

During shipment, if a shipping preference has not been configured that matches the criteria of the shipment line, over shipment is not allowed. Otherwise, over shipment within the specified percentage is allowed.

You can use the Shipping Preference branch for:

- [Creating a Shipment Preference](#)
- [Modifying a Shipment Preference](#)
- [Deleting a Shipment Preference](#)

18.6.1.1 Creating a Shipment Preference

To create a shipment preference:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Outbound Logistics > Shipping Preference. The Shipping Preference window displays.
2. In the Shipping Preference window, choose the Over Shipping Preferences tab. The Shipping Preference Search panel displays.

The screenshot shows the 'Over Shipping Preferences' tab selected. The 'Shipping Preference Search : Sales Order (DEFAULT)' panel contains several input fields: 'Line Type' (dropdown), 'Item ID' (text), 'Item Classification' (text with a magnifying glass icon), 'Seller Organization' (dropdown), 'Buyer Organization' (dropdown), and 'Customer Classification' (dropdown with a green plus icon). Below these fields is a 'Search Results' panel with a table header containing columns: 'Line Type', 'Item ID', 'Item Classification', 'Seller Organization', 'Buyer Organization', and 'Customer Classification'. The table body is currently empty.

3. In the Search Results panel, choose . The Shipping Preference Details pop-up window displays.
4. Enter information into the applicable fields. Refer to [Table 18–7](#) for field value descriptions.
5. Choose .

Shipping Preference Details

Line Type

Item ID 

Item Classification

Seller Organization

Buyer Organization

Customer Classification 

Over Ship Percentage

Table 18–7 Shipping Preference Details

Field	Description
Line Type	Select the line type you want to allow over shipment for.
Item ID	Enter the item ID of the item you want to allow over shipment for, if applicable.
Item Classification	Enter the item classification group you want to allow over shipment for, if applicable. For more information about item classification, see the <i>Sterling Product Management Configuration Guide</i> .
Seller Organization	Select the Seller organization that you want to allow to over ship.
Buyer Organization	Select the Buyer organization that you want to be able to receive over shipments.
Customer Classification	Select the customer classification that you want to be able to receive over shipments, if applicable.
Over Ship Percentage	Enter the percentage allowed for over shipment.

18.6.1.2 Modifying a Shipment Preference

To modify a shipment preference:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Outbound Logistics > Shipping Preference. The Shipping Preference window displays.
2. In the Shipping Preference window, choose the Over Shipping Preferences tab. The Shipping Preference Search panel displays.
3. Enter the applicable search criteria and choose . A list of preferences displays.
4. Select the applicable preference and choose . The Shipping Preference Details pop-up window displays.
5. Enter information into the applicable fields. Refer to [Table 18–7](#) for field value descriptions.
6. Choose .

18.6.1.3 Deleting a Shipment Preference

To delete a shipment preference:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Outbound Logistics > Shipping Preference. The Shipping Preference window displays.
2. In the Shipping Preference window, choose the Over Shipping Preferences tab. The Shipping Preference Search panel displays.
3. In the Over Shipping Preferences tab, enter the applicable search criteria and choose . A list of preferences displays.
4. Select the applicable preference and choose .

18.6.2 Transaction Rules

Transaction Rules define whether the system allows the creation of shipments without an existing order information on the system.

To define transaction rules:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Outbound Logistics > Shipping Preference. The Shipping Preference Search window displays.
2. In the Shipping Preference Search window, choose the Transaction Rules tab.

3. Enter information in the applicable fields. Refer to [Table 18–8](#) for field value descriptions.
4. Choose .

Figure 18–1 Transaction Rules, Shipping Preference

The screenshot shows a software window titled "Over Shipping Preferences" with a sub-tab "Transaction Rules". Inside, there is a label "Order Available On System" followed by a drop-down menu. The menu is open, displaying three options: "No", "May Be", and "Yes". The "No" option is highlighted, indicating it is the current selection.

Table 18–8 Transaction Rules Tab

Field	Description
Order Available On System	<p>Select the appropriate option from the drop-down list to ensure that the shipments are either created against existing orders or not. Options are:</p> <ul style="list-style-type: none"> • May Be - Select this option if the orders might be available on the system. • No - Select this option if the orders are not available on the system. • Yes - Select this option if the orders are available on the system.

Configuring a Document's Financial Components

You can define rules and common codes as they pertain to payments and charges for a given order document.

You can use the Financial Attributes branch for:

- [Defining Payment Terms](#)
- [Defining Charge Definitions](#)
- [Defining Tax Names](#)
- [Defining Additional Payment Rules](#)

19.1 Defining Payment Terms

You can define common codes for **payment terms** that you may have with your customers. These terms are pre-defined methods of payment.

You can use the Payment Terms tab for:

- [Creating a Payment Term](#)
- [Modifying a Payment Term](#)
- [Deleting a Payment Term](#)

19.1.1 Creating a Payment Term

To create a payment term:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Financials > Payment Terms. The Payment Terms window displays in the work area.

2. Choose . The Payment Term Details pop-up window displays.

A screenshot of a 'Payment Term Details' pop-up window. It has a light gray background and a thin border. Inside, there is a white rectangular area containing three text input fields. The first field is labeled 'Payment Terms', the second 'Short Description', and the third 'Long Description'. Each label is to the left of its corresponding text box.

3. In Payment Term, enter the name of the payment term.
4. In Short Description, enter a brief description of the payment term.
5. In Long Description, enter a more detailed description of the payment term.
6. Choose .

19.1.2 Modifying a Payment Term

To modify a payment term:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Financials > Payment Terms. The Payment Terms window displays in the work area.
2. Select the applicable payment term and choose . The Payment Term Details pop-up window displays.
3. In Short Description, enter a brief description of the payment term.
4. In Long Description, enter a more detailed description of the payment term.
5. Choose .

19.1.3 Deleting a Payment Term

To delete a payment term:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Financials > Payment Terms. The Payment Terms window displays in the work area.
2. Select the applicable payment term and choose .

19.2 Defining Charge Definitions

You can define **charge definitions** that you can associate with orders and invoices by creating charge categories. These categories contain a group of related charge names that can be used when the particular category is used. When adding a charge to an order header or an order line, you must use the charge categories that you have defined here. The charge name that is used on the order header or on the order line may or may not be defined, depending on the Validate Charge Name rule in the additional payment rules. For more information about this rule, see [Section 19.4, "Defining Additional Payment Rules"](#).

The default charge definitions of the Sterling Multi-Channel Fulfillment Solution are:

- Shipping
- Handling
- Personalization
- Discount

Note: The default charge definitions are only available to the Hub organization at the time of installation. Any Enterprises that are created must create their own charge definitions.

Use the Charge Definitions tab for:

- [Creating a Charge Category](#)
- [Modifying a Charge Category](#)
- [Adding a Charge Name Associated with a Charge Category](#)
- [Modifying a Charge Name Associated with a Charge Category](#)
- [Deleting a Charge Name Associated with a Charge Definition](#)

- [Deleting a Charge Definition](#)

19.2.1 Creating a Charge Category

To create a charge category:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Financials > Financial Attributes. The Financial window displays in the work area.
2. Choose the Charge Definitions tab.
3. Choose . The Charge Category Details window displays.

Charge Name	Description
Handling	Handling

4. In Charge Category, enter the name of the charge category.
5. In Description, enter a brief description of the charge category.

6. Select Billable if the charge is billable. Non-billable charges are not considered in order totals, but do appear in invoices.
7. Select Is Fee (or Discount if applied to a pickup request) if the charge you are creating is a discount charge type.
8. Choose .

Note: Charge categories cannot be localized. For more information about localization, see the *Sterling Multi-Channel Fulfillment Solution Localization Guide*.

You can use the Charge Category Details window for:

- [Adding a Charge Name Associated with a Charge Category](#)
- [Modifying a Charge Name Associated with a Charge Category](#)
- [Deleting a Charge Name Associated with a Charge Category](#)

19.2.1.1 Adding a Charge Name Associated with a Charge Category

Charge names are names of the actual charges included in the charge definition.

Note: Sterling Commerce recommends that you clearly specify between order charges and discount charges when naming a charge. In the Application Consoles both order charges and discount charges appear on the same screens and drop-down menu. There is no way for the user to distinguish which is an order charge and which is a discount charge other than its naming convention.

To add a charge name to a charge category:

1. In the Charge Category Details window, choose . The Charge Name Details pop-up window displays.

The image shows a dialog box titled "Charge Name Details". It contains three text input fields. The first field is labeled "Charge Category" and contains the text "Shipping". The second field is labeled "Charge Name" and is empty. The third field is labeled "Description" and is empty. There is a small icon in the top right corner of the dialog box.

2. In Charge Name, enter the charge name.
3. In Description, enter a brief description of the charge name.
4. Choose .

Note: Charge names cannot be localized. For more information about localization, see the *Sterling Multi-Channel Fulfillment Solution Localization Guide*.

19.2.1.2 Modifying a Charge Name Associated with a Charge Category

To modify a charge category's charge name:

1. In the Charge Category Details window, select the applicable charge name and choose . The Charge Name Details pop-up window displays.
2. In Description, enter a brief description of the charge name.
3. Choose .

19.2.1.3 Deleting a Charge Name Associated with a Charge Category

To delete a charge category's charge name select the applicable charge name in the Charge Category Details window and choose .

19.2.2 Modifying a Charge Category

To modify a charge category:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Financials > Financial Attributes. The Financial window displays in the work area.
2. Choose the Charge Definitions tab.
3. Select the applicable charge category and choose . The Charge Category Details window displays.
4. In Description, enter a brief description of the charge category.
5. Select Billable if the charge is billable. Non-billable charges are not considered in order totals, but do appear in invoices.
6. Select Discount if the charge you are creating is a discount charge type.
7. Choose .

19.2.3 Deleting a Charge Category

To delete a charge definition:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Financials > Financial Attributes. The Financial window displays in the work area.
2. Choose the Charge Definitions tab.
3. Select the applicable charge category and choose .

19.3 Defining Tax Names

You can define common codes for tax names. **Tax names** are any specific taxes that may pertain to orders and invoices.

The Sterling Multi-Channel Fulfillment Solution understands three different types of taxes: a tax against a price, against a charge, or a flat tax.

- A tax against a price is an additional cost for a percentage of the price of the order line.

- A tax against a charge is an additional cost for a percentage of an existing charge on the order header, or order line. When adding a tax against a charge, the charge category must be one that already exists on the order header, or on the order line.
- A flat tax is a fixed tax applied on an order, independently of any charge, or price.

You can use the Tax Names tab for:

- [Creating a Tax Name](#)
- [Modifying a Tax Name](#)
- [Deleting a Tax Name](#)

19.3.1 Creating a Tax Name

To create a tax name:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Financials > Financial Attributes. The Financial window displays in the work area.
2. Choose the Tax Names tab.
3. Choose . The Tax Name Details pop-up window displays.

The screenshot shows a 'Tax Name Details' pop-up window. It has a light gray background and a white border. Inside, there is a white rectangular area containing three text input fields. The first field is labeled 'Tax Name', the second is labeled 'Short Description', and the third is labeled 'Long Description'. Each label is to the left of its corresponding input field.

4. In Tax Name, enter the name of the tax name.
5. In Short Description, enter a brief description of the tax name.

6. In Long Description, enter a more detailed description of the tax name.
7. Choose .

19.3.2 Modifying a Tax Name

To modify a tax name:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Financials > Financial Attributes. The Financial window displays in the work area.
2. Choose the Tax Names tab.
3. Select the applicable tax name and choose . The Tax Name Details pop-up window displays.
4. In Short Description, enter a brief description of the tax name.
5. In Long Description, enter a more detailed description of the tax name.
6. Choose .

19.3.3 Deleting a Tax Name

To delete a tax name:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Financials > Financial Attributes. The Financial window displays in the work area.
2. Choose the Tax Names tab.
3. Select the applicable tax name and choose .

19.4 Defining Additional Payment Rules

You can set up payment collection rules that are used when an order is sent for payment authorization.

To define additional payment rules:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Financials > Financial Attributes. The Financial window displays in the work area.

- Choose the Others tab.

Charge Definitions **Tax Names** **Others**

☒ Hold Order For Authorization ☐ Use Same Authorization Multiple Times

☐ Allow Refund To Exceed Charged Amount ☒ Validate Charge Name

☐ Create Invoice Before Order Or Shipment ☐ Apply Price Change To Invoiced Quantity

☐ Do Not Allow Debit And Credit Invoices To Settle Each Other

Expiration For Authorization (Days)

Hold To Be Applied Due To Insufficient Funds In Customer Account

Create Shipment Invoice For Bundle Parent On Invoicing Of

☐ All Bundle Components ☒ First Bundle Component

- Enter information in the applicable fields. Refer to [Table 19–1](#) for field value descriptions.
- Choose .

Table 19–1 Others Tab

Field	Description
Hold Order For Authorization	Check this box if you want to hold the order for authorization purposes.
Use Same Authorization Multiple Times	Check this box if you want to use the same authorization for multiple transactions.
Apply Price Change To Invoiced Quantity	Check this box to apply the price changes to the invoiced quantity. If this box is unchecked, then price change after invoicing is not applied to the order.
Allow Refund To Exceed Charged Amount	Check this box if you want to allow refunds to exceed the amount charged.
Validate Charge Name	Check this box to indicate that the system is to check that the charge names used for an order document are valid before proceeding with payment collection.

Field	Description
Create Invoice Before Order or Shipment	Check this box if you want to be able to create an informational invoice before an order or a shipment.
Do Not Allow Debit And Credit Invoices To Settle Each Other	Check this box to ensure that positive and negative transactions are not able to negate each other.
Expiration for Authorization Days	Enter the number of days in which the authorization expires.
Hold To Be Applied Due To Insufficient Funds In Customer Account	Create or choose the hold type to be applied for cases in which a customer account contains insufficient funds to complete a transaction. Note: The hold is triggered internally by the system, and therefore, should not be set to automatically apply in the hold configuration.
Create Shipment Invoice for Bundle Parent on Invoicing of	
All Bundle Components	Check this box to create a shipment invoice for the bundle parent once all bundle components have been invoiced.
First Bundle Component	Check this box to create a shipment invoice for the bundle parent once the first bundle component has been invoiced.

19.5 Defining Receiving Discrepancy Reasons

You can define codes to specify reasons for any discrepancies that may occur during a receipt of a shipment or a return.

There are three types of receiving discrepancies:

- Over Receipt - Occurs when a receiving node receives additional quantity compared to the expected quantity.
- Under Receipt - Occurs when a receiving node receives less than the expected quantity for the receipt.
- Damaged Receipt - Occurs when the receiving disposition code indicates that a damaged product has been received.

Note: A given discrepancy type can have multiple reason codes defined for it. For example, if a shipment is received with a quantity of 10 under the expected receiving quantity, it is possible for the under receipt discrepancy to have two different reasons for the receipt, such as 6 units SHORT_SHIPMENT and 4 units CARRIER_FAULT.

You can use the Receiving Discrepancy Reasons branch for:

- [Creating a Receiving Discrepancy Reason](#)
- [Modifying a Receiving Discrepancy Reason](#)
- [Deleting a Receiving Discrepancy Reason](#)

19.5.1 Creating a Receiving Discrepancy Reason

To create a receiving discrepancy reason:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Receipt > Receiving Discrepancy Reasons. The Receiving Discrepancy Reasons window displays in the work area.
2. Choose . The Receiving Discrepancy Reason Details pop-up window displays.
3. Enter information into the applicable fields. Refer to [Table 19–2](#) for field value descriptions.
4. Choose .

Receiving Discrepancy Reason Details

Discrepancy Reason Code

Discrepancy Reason Description

Discrepancy Reference

Discrepancy Type Group

☒ Over Receipt ☐ Under Receipt ☐ Damaged Receipt

☐ Requires Invoice Adjustment

Invoice Adjustment Type Group

☐ Credit ☐ Debit

Invoice Line Reference

Table 19–2 Receiving Discrepancy Reason Details

Field	Description
Discrepancy Reason Code	Enter the name of the discrepancy reason code as you want it to appear throughout the system.
Discrepancy Reason Description	Enter a brief description of the reason discrepancy.
Discrepancy Reference	Enter any additional reference information according to your business practices.
Discrepancy Type Group	
Over Receipt	Select Over Receipt if you want the discrepancy reason to identify scenarios in which a receiving node receives more than the expected quantity.
Under Receipt	Select Under Receipt if you want the discrepancy reason to identify scenarios in which a receiving node receives less than the expected quantity.
Damaged Receipt	Select Damaged Receipt to identify scenarios in which a receiving node receives items with a receiving disposition identifying them as damaged.

Table 19–2 Receiving Discrepancy Reason Details

Field	Description
Requires Invoice Adjustment	Select Requires Invoice Adjustment if a monetary adjustment must be made when a receipt discrepancy is associated with this discrepancy reason.
Invoice Adjustment Type Group	
Credit	If you selected Requires Invoice Adjustment, select Credit if the adjustment amount results in a credit invoice.
Debit	If you selected Requires Invoice Adjustment, select Debit if the adjustment amount results in a debit invoice.
Invoice Line Reference	If you selected Requires Invoice Adjustment, enter a name for the adjustment. This reference value is used in instances when multiple adjustment invoices are created for the same order line, in which case they are split into different invoice lines if they have different invoice line references.

19.5.2 Modifying a Receiving Discrepancy Reason

To modify a receiving discrepancy reason:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Receipt > Receiving Discrepancy Reasons. The Receiving Discrepancy Reasons window displays in the work area.
2. Select the receiving discrepancy reason and choose . The Receiving Discrepancy Reason Details pop-up window displays.
3. Enter information into the applicable fields. Refer to [Table 19–2](#) for field value descriptions.
4. Choose .

19.5.3 Deleting a Receiving Discrepancy Reason

To delete a receiving discrepancy reason:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Receipt > Receiving Discrepancy

Reasons. The Receiving Discrepancy Reasons window displays in the work area.

2. Select the receiving discrepancy reason and choose .

Configuring a Document's Purge Criteria

Purge Criteria business rules are used to define qualifications around each type of purge. **Purges** are the process by which old data is removed from the system database. Purges minimize the number of unused database records to increase search efficiency and reduce the size of the required physical disk. In Purge Criteria Rules, default purge rules are provided. These can be modified for your system operations.

[Table 20–1](#) lists the purge rules provided for order document types in the Sterling Multi-Channel Fulfillment Solution.

Table 20–1 Order Document Type Purge Rules

Rule	Description	Default Retention Days
PRG_SHIP_STATS	Purges shipment statistics and archives them in the history tables.	30
STATUSAUDITPRG	Purges order age alerts (if you have configured the system to trigger alerts when the order document type stays in a particular status for a specified time period).	30
NEGOTIATIONPRG	Purges negotiation information and archives it in the history tables.	30
NEGOTIATIONHISTPRG	Purges negotiation information from the negotiation history tables.	30

Table 20–1 Order Document Type Purge Rules

Rule	Description	Default Retention Days
RECEIPTPRG	Purges receipt information and archives it in the history tables.	30
RECEIPTHISTPRG	Purges receipt information from the receipt history tables.	30
ORDERHISTPRG	Purges order information from the order history tables.	30
ORDERPRG	Purges order information and archives it in the history tables.	30
PICKLISTPRG	Purges pick list information.	30
SHIPMENTHISTPRG	Purges shipment information from the shipment history tables.	30
SHIPMENTPRG	Purges shipment information and archives it in the history tables.	30
DRAFTORDERNOLINEPRG	Purges draft orders that do not have any order lines.	30
DRAFTORDERNOLINEHISTPRG	Purges draft orders without any order lines from the history table.	30

20.1 Modifying an Order Document Type's Purge Criteria Rule

To modify an order document type's purge criteria rule:

1. From the tree in the application rules side panel, choose Document Specific > (*Document Type*) > Purge Criteria. The Purge Criteria List window displays in the work area.
2. Enter information in the applicable fields. Refer to [Table 20–2, "Purge Criteria Details Pop-up Window"](#) for field value descriptions.

3. Choose .

Purge Criteria Details

Purge Code: Description:

Rollback Segment: Retention Days:

☒ Write To Log File Log File Name:

Additional Purge Criteria

Line Type	Additional Retention Days
[E1 line type]	600
*	

Table 20–2 Purge Criteria Details Pop-up Window

Field	Description
Purge Code	Identifies a purge program. This is a system defined code.
Description	Describes the type of purge.
Rollback Segment	Defines the rollback segment that should be explicitly used for the purge transaction qualified by the purge code. This is useful when there are huge logical data sets that have to be purged. This is optional and used for order related purges.
Retention Days	Enter the number of days the data is to be retained in the database (going backwards from the time the program runs). Make sure that your table size takes into account the number of retention days entered here.
Write to Log File	Check this box if you want purged data written to a log file. The log file can be backed up and used as a journal at a later date.

Table 20–2 Purge Criteria Details Pop-up Window

Field	Description
Log File Name	<p>Enter a log file name. The log file is created in the directory specified in the <code>yfs.purge.path</code> property. If this is not passed, it defaults to the value specified in the <code>yfs.properties</code> file. If a variable is introduced, then the <code>yfs.purge.path</code> is ignored. To modify this property, add an entry for it in the <code><INSTALL_DIR>/properties/customer_overrides.properties</code> file. For additional information about modifying properties and the <code>customer_overrides.properties</code> file, see the <i>Sterling Multi-Channel Fulfillment Solution Installation Guide</i>.</p> <p>For more information about using variables for the log file directory, see the <i>Sterling Multi-Channel Fulfillment Solution Customization Guide</i>.</p> <p>For information about filename limitations related to internationalization, see the <i>Sterling Multi-Channel Fulfillment Solution Localization Guide</i>.</p>
<p>Additional Purge Criteria</p> <p>These parameters are used to override the order history purge retention days. This override is configured based on the line types within each order defined at the enterprise and document type levels.</p> <p>Note: These additional parameters can be defined only for order history purge (ORDHISTPRG) criteria.</p>	
Line Type	Select the line types from the drop-down list. For more information about defining line types, see the appropriate section in this guide.
Additional Retention Days	<p>Enter the additional number of days (apart from the retention days specified by the order history purge) the data is to be retained in the database. Make sure that your table size takes into account the number of retention days entered here.</p> <p>Note: To be considered for additional retention days, the order line must have at least some quantity that is not cancelled or shorted.</p>

Note: The history purge date cannot be reset when you restore the order after it was purged. For example, if an order is purged with a history purge date of 20070801 and when the order is restored in the year 2006, the history purge date still remains as 20070801.

The following example provides an use-case of the line type purge in an order placement scenario:

Example 20–1 Line Type Purge

An order is placed with the following 4 order lines:

- Order Line 1 - Television
- Order Line 2 - 2 year Television service plan with Line Type as 2YR_WARRANTY. Therefore, the additional retention days are 721.
- Order Line 3 - Stereo
- Order Line 4 - 4 year Stereo service plan with Line Type as 4YR_WARRANTY. Therefore, the additional retention days are 1451.

Assume that the order is set to be purged after 30 days. On day 1, the order moves into a purgeable status. On day 30, the order is purged to the history table. The purge history date is set as:

Today + 10 + Maximum(721, 1491) = 1491 days, where 10 is the number of retention days for the history purge.

On day 40, the history purge agent does not pick up this order to purge, since the purge history date is set. Rather, the order is purged from the history on day 1491.

Configuring Value-Added Services

Enterprises provide services along with the products they sell to their customers. Some examples of services provided include:

- Annual maintenance contract.
- Installing a customer's home theater system.
- Installing software on a new computer, and configuring the computer to work on a home network.

These services are either fulfilled by the enterprise, or by third-party service providers who have a relationship with the enterprise to provide such services.

Use Value Added Services for:

- [Defining Value-Added Services Modification Reasons](#)
- [Defining Value-Added Services Cancellation Reasons](#)
- [Defining Value-Added Services Appointment Failure Reasons](#)
- [Defining Value-Added Services Note Reasons](#)
- [Defining Value-Added Services Instruction Types](#)
- [Defining Value-Added Services Rules](#)
- [Defining Value-Added Services Modification Rules](#)
- [Defining Value-Added Services Hold Types](#)
- [Defining Value-Added Services Process Types](#)
- [Defining Value-Added Services Process Model](#)
- [Defining Value-Added Services Monitoring](#)

- [Viewing Value-Added Services Purge Criteria](#)

21.1 Defining Value-Added Services Modification Reasons

You can define reason codes for modifications. These codes define why modification was made by a user in the Application Consoles.

You can use the Modification Reasons branch for:

- [Creating a Modification Reason](#)
- [Modifying a Modification Reason](#)
- [Deleting a Modification Reason](#)

21.1.1 Creating a Modification Reason

To create a modification reason:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > Modification Reasons. The Modification Reasons window displays in the work area.
3. Choose . The Modification Reason Details window displays.

The screenshot shows a window titled "Modification Reason Details". It contains three text input fields with the following labels:

- Modification Reason
- Short Description
- Long Description

4. In Modification Reason, enter the modification reason as you want it to appear throughout the system.
5. In Short Description, enter a brief description of the modification reason.

6. In Long Description, enter a more detailed description of the modification reason.
7. Choose .

21.1.2 Modifying a Modification Reason

To modify a modification reason:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > Modification Reasons. The Modification Reasons window displays in the work area.
3. Select the applicable modification reason and choose . The Modification Reason Details window displays.
4. In Short Description, enter a brief description of the modification reason.
5. In Long Description, enter a more detailed description of the modification reason.
6. Choose .

21.1.3 Creating a New Modification Reason Based on an Existing One

To create a new modification reason based on an existing one:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > Modification Reasons. The Modification Reasons window displays in the work area.
3. Select the applicable modification reason and choose . The Modification Reason Details window displays.
4. Enter information in the applicable fields.
5. Choose .

21.1.4 Deleting a Modification Reason

To delete a modification reason:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > Modification Reasons. The Modification Reasons window displays in the work area.
3. Select the applicable modification reason and choose . The Confirmation window displays.
4. Choose OK.

21.2 Defining Value-Added Services Cancellation Reasons

You can define reason codes for cancellation. These codes define why cancellation was made by a user in the Application Consoles.

You can use the Cancellation Reasons branch for:

- [Creating a Cancellation Reason](#)
- [Modifying a Cancellation Reason](#)
- [Deleting a Cancellation Reason](#)

21.2.1 Creating a Cancellation Reason

To create a cancellation reason:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > Cancellation Reasons. The Cancellation Reasons window displays in the work area.
3. Choose . The Cancellation Reason Details window displays.

Work Order Cancellation Reasons Details

Work Order Cancellation Reasons

Short Description

Long Description

4. In Cancellation Reason, enter the cancellation reason as you want it to appear throughout the system.
5. In Short Description, enter a brief description of the cancellation reason.
6. In Long Description, enter a more detailed description of the cancellation reason.
7. Choose .

21.2.2 Modifying a Cancellation Reason

To modify a cancellation reason:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > Cancellation Reasons. The Cancellation Reasons window displays in the work area.
3. Select the applicable cancellation reason and choose . The Cancellation Reason Details window displays.
4. In Short Description, enter a brief description of the cancellation reason.
5. In Long Description, enter a more detailed description of the cancellation reason.

6. Choose .

21.2.3 Creating a New Cancellation Reason Based on an Existing One

To create a new cancellation reason based on an existing one:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > Cancellation Reasons. The Cancellation Reasons window displays in the work area.
3. Select the applicable cancellation reason and choose . The Cancellation Reason Details window displays.
4. Enter information in the applicable fields.
5. Choose .

21.2.4 Deleting a Cancellation Reason

To delete a cancellation reason:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > Cancellation Reasons. The Cancellation Reasons window displays in the work area.
3. Select the applicable cancellation reason and choose . The Confirmation window displays.
4. Choose OK.

21.3 Defining Value-Added Services Appointment Failure Reasons

You can define reason codes for appointment failures. These codes define why an appointment was failed by a user in the Application Consoles.

You can use the Appointment Failure Reasons branch for:

- [Creating a Appointment Failure Reason](#)
- [Modifying a Appointment Failure Reason](#)
- [Deleting a Appointment Failure Reason](#)

21.3.1 Creating a Appointment Failure Reason

To create a appointment failure reason:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > Appointment Failure Reasons. The Appointment Failure Reasons window displays in the work area.
3. Choose . The Appointment Failure Reason Details window displays.

The screenshot shows a window titled "Appointment Failure Reason Details". It contains three text input fields with labels to their left: "Appointment Failure Reason", "Short Description", and "Long Description". Each field is empty and has a standard text box border.

4. In Appointment Failure Reason, enter the failure reason as you want it to appear throughout the system.
5. In Short Description, enter a brief description of the appointment failure reason.
6. In Long Description, enter a more detailed description of the appointment failure reason.
7. Choose .

21.3.2 Modifying a Appointment Failure Reason

To modify a Appointment Failure reason:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > Appointment Failure Reasons. The Appointment Failure Reasons window displays in the work area.
3. Select the applicable appointment failure reason and choose . The Appointment Failure Reason Details window displays.
4. In Short Description, enter a brief description of the appointment failure reason.
5. In Long Description, enter a more detailed description of the appointment failure reason.
6. Choose .

21.3.3 Creating a New Appointment Failure Reason Based on an Existing One

To create a new Appointment Failure reason based on an existing one:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > Appointment Failure Reasons. The Appointment Failure Reasons window displays in the work area.
3. Select the applicable appointment failure reason and choose . The Appointment Failure Reason Details window displays.
4. Enter information in the applicable fields.
5. Choose .

21.3.4 Deleting a Appointment Failure Reason

To delete a Appointment Failure reason:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.

2. From the Distributed Order Management tree, choose VAS > Appointment Failure Reasons. The Appointment Failure Reasons window displays in the work area.
3. Select the applicable appointment failure reason and choose . The Confirmation window displays.
4. Choose OK.

21.4 Defining Value-Added Services Note Reasons

You can define reason codes for entering a note. These codes define why a note was entered by a user in the Sterling Multi-Channel Fulfillment Solution Consoles.

You can use the Note Reasons branch for:

- [Creating a Note Reason](#)
- [Modifying a Note Reason](#)
- [Deleting a Note Reason](#)

21.4.1 Creating a Note Reason

To create a note reason:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > Note Reasons. The Note Reasons window displays in the work area.
3. Choose . The Note Reason Details window displays.

The screenshot shows a software window titled "Note Reason Details". It contains three text input fields stacked vertically, each with a label to its left: "Note Reason", "Short Description", and "Long Description". The window has a standard title bar with a small icon on the left and a save icon on the right.

4. In Note Reason, enter the note reason as you want it to appear throughout the system.
5. In Short Description, enter a brief description of the note reason.
6. In Long Description, enter a more detailed description of the note reason.
7. Choose .

21.4.2 Modifying a Note Reason

To modify a note reason:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > Note Reasons. The Note Reasons window displays in the work area.
3. Select the applicable appointment failure reason and choose . The Note Reason Details window displays.
4. In Short Description, enter a brief description of the note reason.
5. In Long Description, enter a more detailed description of the note reason.
6. Choose .

21.4.3 Creating a New Note Reason Based on an Existing One

To create a new note reason based on an existing one:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > Note Reasons. The Note Reasons window displays in the work area.
3. Select the applicable note reason and choose . The Note Reason Details window displays.
4. Enter information in the applicable fields.
5. Choose .

21.4.4 Deleting a Note Reason

To delete a note reason:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > Note Reasons. The Note Reasons window displays in the work area.
3. Select the applicable appointment failure reason and choose . The Confirmation window displays.
4. Choose OK.

21.5 Defining Value-Added Services Instruction Types

You can define the common codes used when adding special instructions to an work order document.

You can use the Instruction Types branch for:

- [Creating an Instruction Type](#)
- [Modifying an Instruction Type](#)

- [Deleting an Instruction Type](#)

21.5.1 Creating an Instruction Type

To create an instruction type:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > Instruction Types. The Instruction Types window displays in the work area. Choose . The Instruction Type Details pop-up window displays.

Instruction Type: ORDERING

Short Description: Instruction Type For Ordering

Long Description: Instruction Type For Ordering

☒ Automatically Copy Item Instruction with Matching Type To Order Line

3. In Instruction Type, enter the instruction type.
4. In Short Description, enter a brief description of the instruction type.
5. In Long Description, enter a more detailed description of the instruction type.
6. Choose .

21.5.2 Modifying an Instruction Type

To modify an instruction type:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.

2. From the Distributed Order Management tree, choose VAS > Instruction Types. The Instruction Types window displays in the work area. Choose . The Instruction Type Details pop-up window displays.
3. Select the applicable instruction type and choose . The Instruction Type Details pop-up window displays.
4. In Short Description, enter a brief description of the instruction type.
5. In Long Description, enter a more detailed description of the instruction type.
6. Choose .

21.5.3 Deleting an Instruction Type

To delete an instruction type:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > Instruction Types. The Instruction Types window displays in the work area. Choose . The Instruction Type Details pop-up window displays.
3. Select the applicable instruction type and choose .

21.6 Defining Value-Added Services Rules

Pre-calling a customer is required for appointments that are made for distant dates. You can make a pre-calls closer to the service date, to confirm the appointment from the customer.

21.6.1 Setting Up Value-Added Services Pre-Call Rules

To set up Value-Added Services pre-call rules:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.

2. From the Distributed Order Management tree, choose VAS > VAS Process > VAS Rules. The VAS Rules Details window displays in the work area.

3. Select the appropriate condition for which you need to make a pre-call. The pre-call status on work order is determined based on the selected condition. For more information about the pre-call statuses, see the *Sterling Multi-Channel Fulfillment Solution Javadocs*.
4. Enter how many days in advance you need to make a pre-call closer to the appointment date.
5. Choose .

21.6.2 Setting Up Value-Added Services Other Rules

To set up Value-Added Services other rules:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > VAS Process > VAS Rules. The VAS Rules Details window displays in the work area.

VAS Rules : Work Order (DEFAULT)

Pre-Call Rules

Pre-Call is required for work order which meets the following condition

No. of days Pre-Call must be performed before the work order is executed

Work Order Generation

Minimum hours before appointment required when consolidating

3. Enter how many hours in advance you need to consolidate product lines to the work order before the appointment date. A lead time zero (0) is equivalent to 12 a.m. the next day and excludes all work orders whose first appointment is on the current date. Negative numbers can be entered in this field to apply the rule to the current date. For example, -24 corresponds to 12 a.m. of the current date. -12 corresponds to 12 p.m. (noon) of the current date.
4. Choose .

21.7 Defining Value-Added Services Modification Rules

You can configure the rules and components used when determining what parts of value-added services can be modified as well as when in the value-added services lifecycle the modifications can be performed.

Most work order document types flow through a pipeline without requiring any intervention by a customer service representative. However, there are times when modifications are required, such as modifying appointments. The Sterling Multi-Channel Fulfillment Solution supports modification through the Sterling Multi-Channel Fulfillment Solution Consoles and APIs. It is critical to decide which modifications are allowed for each modification type, modification level, and status combination.

Important: Contemplate business and system integration implications before allowing a modification that is disallowed as part of the system defaults.

21.7.1 Setting Up Value-Added Services Modification Rules

You can group modifications in the Modification Rules window by modification type, modification level, or status, by selecting the corresponding grouping from Group By. The Modification Rules window then displays the grouping you have chosen in a hierarchical structure.

To set up Value-Added Services modification rules:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > VAS Process > VAS Modification Rules. The Modification Rules window displays in the work area.

3. Expand the applicable modification types and levels for which you want to set up rules.
4. Select the Value-Added Services process whose Modification Rule is to be set, and choose any of the following option as per your business practices:

-  to allow modification
-  to disallow modification
-  to ignore modification

5. Refer to the following table for settings definition you can apply to modifications:

Table 21–1 Value-Added Services Rule Modifications

Field	Description
Allow	Indicates whether or not modifications may be made at this modification level and type for the specified status.
Disallow	Indicates that no modifications may be made at this modification level and type for the specified status.
Ignore	Indicates that modifications are ignored at this modification level and type for the specified status.
<p>There are several scenarios to consider for the Allow, Disallow, and Ignore settings:</p> <ul style="list-style-type: none"> • If one line is in status 1 and another line is in status 2 - and both statuses are set to Allow, the modification is allowed. • If one line is in status 1, another line is in status 2, and another is in status 3 - and the 1 and 2 statuses are set to Allow, but the 3 status is set to Disallow, all modifications are disallowed, because one of the currently applied statuses is disallowed. • If one line is in status 1 and one is in the extended status 2 - If the 1 status is set to Allow, but the extended status is set to Ignore (all extended statuses are defaulted to ignore, so that they pick up their base status settings unless you have explicitly overridden the setting) then all modifications are allowed only if the base status is set to allow. If the base status is set to disallow, then all modifications are disallowed. 	

21.8 Defining Value-Added Services Hold Types

Work orders can be placed on hold manually or automatically, by applying a particular hold type. Certain transactions can be configured to not process documents that are on a given hold. Likewise, modification types can be configured to not process documents that are on a given

hold. By default, all transactions and modification types are allowed to process all documents for all hold types.

The transactions that can be prevented from processing work orders on a given hold type have the checkbox *This Transaction Can Be Stopped From Processing Orders That Are On Hold* checked in the *Others* tab of the transaction details. For more information about viewing transaction details, refer to the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

You can use the Hold Types branch for:

- [Creating a Hold Type](#)
- [Modifying a Hold Type](#)
- [Deleting a Hold Type](#)

21.8.1 Creating a Hold Type

To create a hold type:

1. From the tree in the application rules side panel, choose VAS > VAS Process > Hold Types. The Hold Types window displays in the work area.
2. Click . The Hold Type pop-up window displays. The type of this hold in the Hold Type field, and its description in the Description field. Enter the rest of the information in the applicable fields. Refer to [Table 21–2](#), [Table 21–3](#) and [Table 21–4](#) for field value descriptions.
3. Click .

Hold Type

21.8.2 Modifying a Hold Type

1. From the tree in the application rules side panel, choose VAS > VAS Process > Hold Types. The Hold Types window displays in the work area.
2. Select the applicable hold type and click . The Hold Type pop-up window displays. Enter information in the applicable fields. Refer to [Table 21–2](#), [Table 21–3](#) and [Table 21–4](#) for field value descriptions.
3. Click .

21.8.3 Deleting a Hold Type

1. From the tree in the application rules side panel, choose VAS > VAS Process > Hold Types. The Hold Types window displays in the work area.

2. Select the applicable hold type and click .

21.9 Defining Value-Added Services Process Types

Value Added Services Process Type Details define parameters and templates that distinguish a process type.

A process type pipeline is a series of transactions and statuses that guide document types, such as a Value Added Services execution, through a predefined process. You can also set up transactions consisting of events, actions, and conditions, as they pertain to the pipeline you are configuring.

VAS Repositories

A value-added services repository is a logical collection of entities that define the business process workflow.

The following entities are included in a repository:

- Pipelines
- Transactions
- Statuses
- Conditions
- Actions
- Service Definitions

21.9.1 Viewing Value-Added Services Process Type Details

To view Value-Added Services process type details:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > VAS Process > VAS Process Type Details. The Process Type Details window displays in the work area.

Process Type Details : Work Order (DEFAULT)

Primary Info

Process Type	VAS	Process Type Name	VAS Process
Description	VAS Process		

3. In Process Type, VAS is automatically populated by the system.
4. In Process Type Name, the name of the process type displays, which is editable.
5. In Description, a brief description of the process type displays, which is editable.

21.10 Defining Value-Added Services Process Model

The Value-Added Services process is modeled through a pipeline. This represents the process configuration that is unique to an enterprise. For example, installing Television at the customer's site.

21.10.1 Pipeline Determination

Pipeline determination is used to set up conditions that affect which pipeline is used during the start of the business process workflow.

21.10.1.1 Hub Rule

When you expand the Pipeline Determination branch, the components displayed depends on what role you are logged in as. If you are logged in as a Hub role, the Hub Rule displays. If you are logged in as an Enterprise role, both the Hub Rule and all user created determination rules (For example, My Rule) components display. Double-click on the Standard Work Order Pipeline rule to view the pipeline determination rules.

Note: If you are logged in as an Enterprise role, the Hub Rule screen is grayed out and cannot be modified.

Drag conditions and pipelines into the work area to construct pipeline determination rules. A single pipeline or condition must be the root.

Conditions cannot link back to an earlier component in the chain and a pipeline cannot be linked to twice.

Note: When configuring pipeline determination for an order document type pipeline, please note that pipeline determination is only considered when adding a line or creating an order. When changes are made to draft orders pipeline determination does not occur.

21.10.1.2 Condition Variables for Pipeline Determination

When using conditions for pipeline determination, the following condition variables can be used:

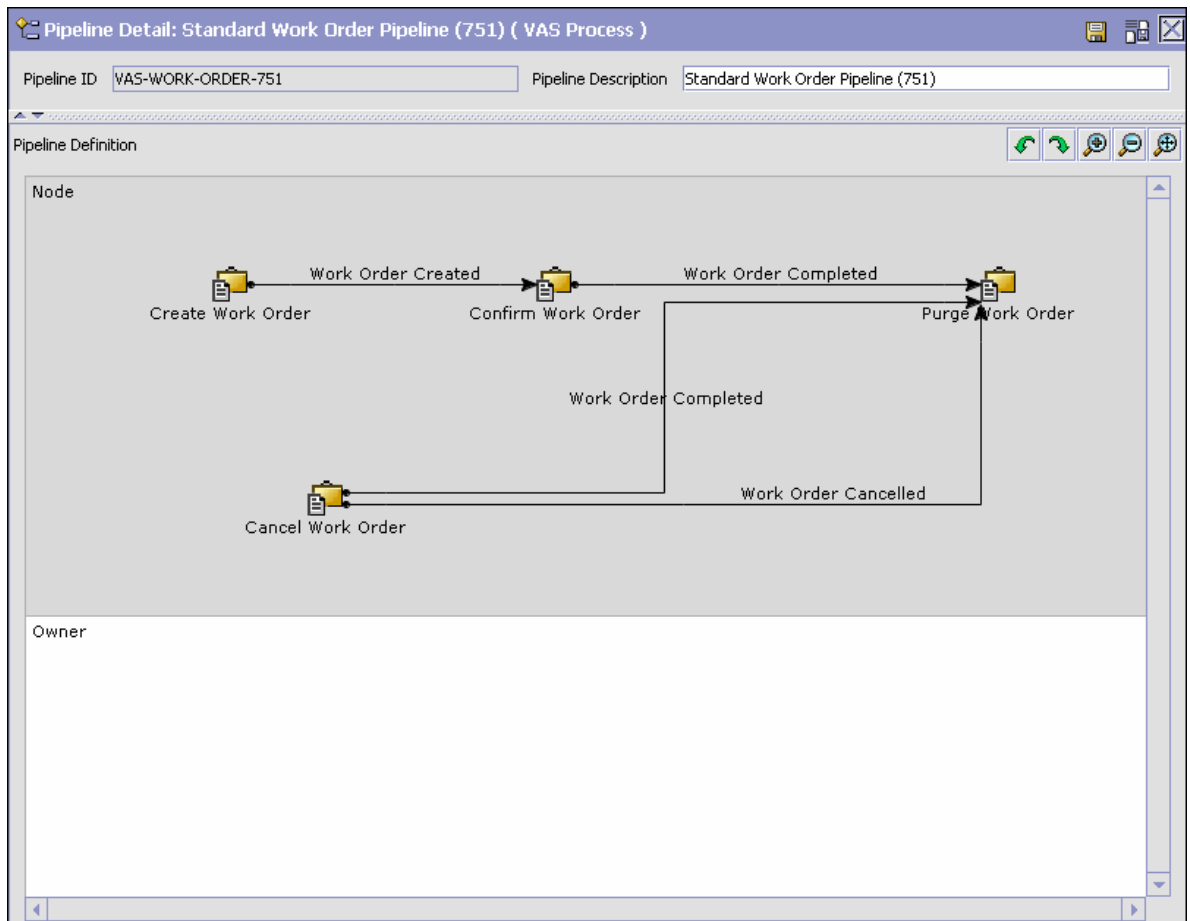

- Enterprise Code
- Node
- Provider Organization
- Service Item ID

21.10.2 Pipelines

To view Value-Added Services pipeline details:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > VAS Process > VAS Process Model > Pipelines > Standard Work Order Pipeline. The Pipeline Detail: Standard Work Order Pipeline (VAS Process) window displays in the work area.

For more information about creating, modifying, deleting, and monitoring rules, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

21.10.3 Transactions

Every process type has a set of base transactions defined for it. A transaction is a logical unit of work that is necessary for performing activity within the Sterling Multi-Channel Fulfillment Solution. Base transactions are predefined transactions that contain information about how the transaction behaves, such as how many copies of a transaction can be kept in a process type and whether or not it can have configurable base pick and drop statuses. Base transactions can be used to create

new transactions. These transactions can be changed within the limits defined in the base transaction.

To view the transaction details of Value-Added Services pipeline:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > VAS Process > VAS Process Models.
3. In the VAS window, choose . The Transactions tab window displays.

For more information about creating, modifying, or deleting transactions, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

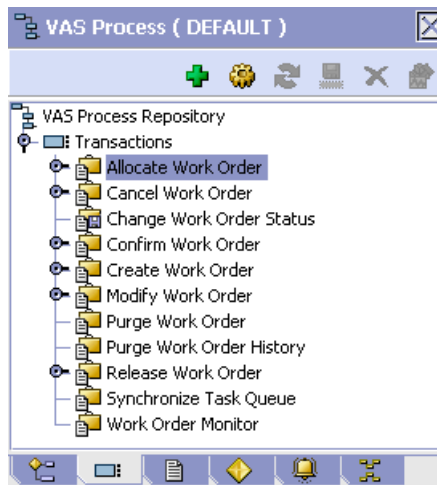

Table 21–5 Transactions Tab Window

Field	Description
Allocate Work Order	This transaction indicates the allocation of a work order created for VAS.
Cancel Work Order	This transaction indicates the cancellation of a work order created for VAS.
Change Work Order Status	This transaction indicates the change in status of a work order created for VAS.
Confirm Work Order	This transaction indicates that the work order needs to be confirmed for VAS.
Create Work Order	This transaction indicates creation of a work order for VAS.
Modify Work Order	This transaction indicates the modification of a work order for VAS.
Purge Work Order	This transaction indicates the purge of work orders created for VAS.
Purge Work Order History	This transaction indicates the purge of the work order history for VAS.
Release Work Order	The transaction indicates the release of a work order created for VAS.
Synchronize Task Queue	The transaction indicates synchronization of task queue for work orders created for VAS.
Work Order Monitor	This transaction indicates monitoring of work orders created for VAS.

21.10.4 Statuses

Statuses are the actual states that a document moves through in the pipeline. A transaction can contain two types of statuses, a drop status and a pickup status. A document is moved into a drop status when the events and conditions of a transaction have been completed. A pickup status takes the document from the previous drop status and moves it through the next transaction.

To view the status details of a Value-Added Services pipeline:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.

2. From the Distributed Order Management tree, choose VAS > VAS Process > VAS Process Models.
3. In the VAS window, choose . The Statuses tab window displays.

For more information about creating, modifying, or deleting statuses, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

Table 21–6 *Statuses Tab Window*

Field	Description
Work Order Created	This indicates that a work order is created. This corresponds to the first step of the 'Create Work Order' transaction.

Table 21–6 *Statuses Tab Window*

Field	Description
Work Order Completed	This indicates that a work order is complete. This corresponds to the 'Confirm Work Order' transaction.
Work Order Cancelled	This indicates cancellation of a work order. This corresponds to the 'Cancel Work Order' transaction.

21.10.5 Conditions

A condition matches document type attributes against decision points and routes the documents to different paths based on the specified attribute and value combinations. The document type attributes against which conditions can be created are predefined in the Sterling Multi-Channel Fulfillment Solution. You can use these attributes in any combination or you can create conditions that run the appropriate application logic for specific circumstances.

To view the condition details of a Value-Added Services pipeline:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > VAS Process > VAS Process Models.
3. In the VAS window, choose . The Conditions tab window displays.

For more information about creating, modifying, or deleting conditions, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

Table 21–7 Conditions Tab Window

Field	Description
Pre-Call	This indicates the pre-call conditions specific to VAS pipeline.
Service Status	This indicates the service status conditions specific to VAS pipeline.

21.10.6 Actions

An action is a process or program that is triggered by an event. These processes and programs send user alert notifications and automatically resolve issues.

For example, when the service is completed, you can set an action to send the customer an e-mail.

To view the action details of a Value-Added Services pipeline:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > VAS Process > VAS Process Models.
3. In the VAS window, choose . The Actions tab window displays.

For more information about creating, modifying, or deleting actions, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

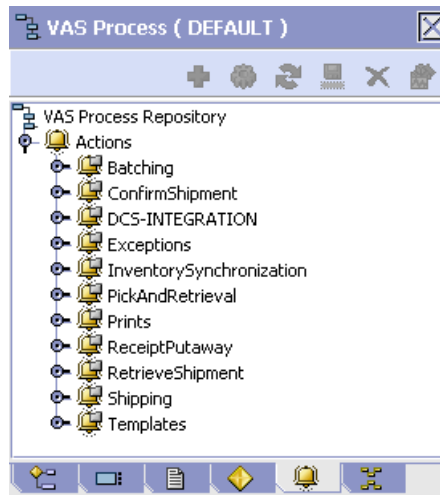

Table 21–8 Actions Tab Window

Field	Description
Templates	<p>Default settings are provided for:</p> <p>Publish Data—Sends data to external queue or internal tables.</p> <p>Raising an Exception—Raises an alert using the Sterling Multi-Channel Fulfillment Solution Event Management from the published information.</p> <p>Send Email—Raises an email action utilizing a template to format from the published information.</p> <p>Send Email-HTML format—Raises an email action to create an HTML email format from the published information.</p>

21.10.7 Service Definitions

Service definitions are a representation of the logic that regulates document workflow services. The Service Builder is a graphical interface that enables you to create a graphical representation of these services.

To view the service definition details of a Value-Added Services pipeline:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > VAS Process > VAS Process Models.
3. In the VAS window, choose . The Service Definitions tab window displays.

For more information about creating, modifying, or deleting service conditions, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

Table 21–9 Service Conditions Tab Window

Field	Description
Service Definitions	Displays service definitions that are specific to the VAS pipeline.

21.11 Defining Value-Added Services Monitoring

Use Value-Added Services Monitoring to view Date Types and configure Monitoring Events.

21.11.1 Viewing Value-Added Services Date Types

You can view Value-Added Services date types.

To view date types:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.

- From the Distributed Order Management tree, choose VAS > VAS Process > VAS Monitoring. The Monitoring: Work Order window displays. Choose the Date Types tab.

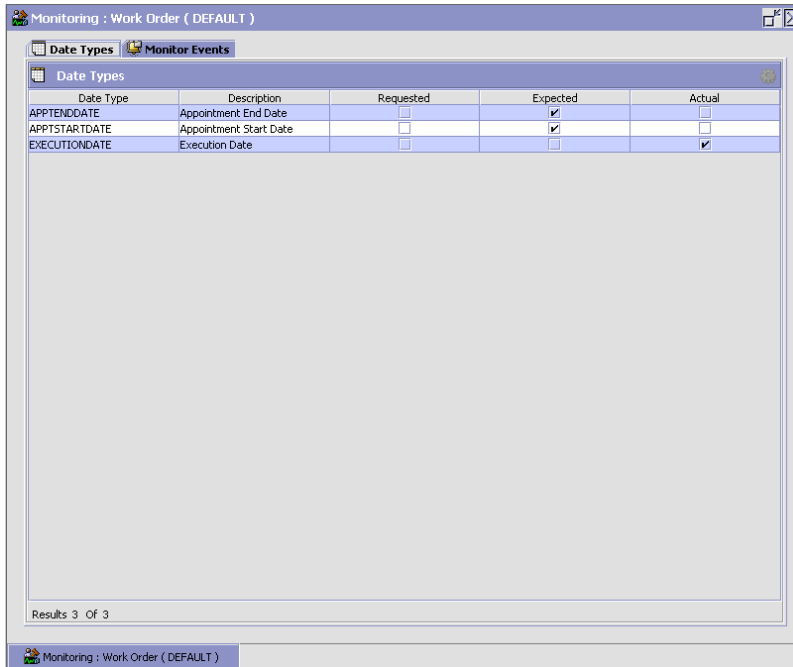

Table 21–10 Monitoring: Work Order - Date Types

Field	Description
Date Type	The name of VAS date type.
Description	The date type description.
Requested	Indicates if the date type is requested by a user.
Expected	Indicates if the date type represents a date the system expects or has calculated something to occur.
Actual	Indicate if the date type represents the actual date.

21.11.2 Defining Value-Added Services Event Monitoring

Events are used in instances where the Work Order Monitor may raise multiple alerts of the same type. For example, for a work order if the pre-call status is pending, and you have configured the Work Order Monitor to raise alerts and if the pre-call confirmation is delayed, an alert would be raised against the work order. You can create rules to aggregate all of these similar alerts and raise one "root cause".

You can use the Event Monitoring tab for:

- [Creating an Event Rule](#)
- [Modifying an Event](#)
- [Creating a New Event](#)
- [Deleting an Event](#)

Table 21–11 View Events

Field	Description
Event ID	The event ID.
Description	A brief description of the event.

21.11.2.1 Creating an Event Rule

To create an event rule:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > VAS Process > VAS Monitoring. The Monitoring: Work Order window displays. Choose the Monitor Events tab.
3. In the Monitor Events list window, choose . The Monitor Event Details pop-up window displays.

Figure 21–1 Monitor Event Details

Monitor Event Details

☐ Automatically Resolve Alerts

Event Identified By

☒ WorkOrder

Service To Be Invoked

Aggregate And Invoke Service For

☒ WorkOrder

4. Enter information in the applicable fields. Refer to [Table 21–12](#) for field value descriptions.
5. Choose .

Table 21–12 Event Monitoring

Field	Description
Event ID	The event ID.
Description	A brief description of the event.
Requires Realert	Check this box if you want the users to be re-alerted if the issue has not been resolved within a certain timeframe.
Realert Interval	If you have selected Requires Realert, enter the interval (in hours) that re-alerts should be sent.
Automatically Resolve Alerts	Check this box to automatically remove an alert if the alert condition is no longer valid. Once the alert is resolved, a new alert is raised if the condition is detected again.
Event Identified By	

Table 21–12 Event Monitoring

Field	Description
Work Order	Select this field if you want two or more alert conditions to be treated the same, belonging to the same work order.
Service To Be Invoked	Select the service to be invoked, whenever the event is raised.
Aggregate And Invoke Service For	
Work Order	Select this field if you want only one alert to be raised for a work order when alert conditions are detected.

21.11.2.2 Modifying an Event

To modify an event rule:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > VAS Process > VAS Monitoring. The Monitoring: Work Order window displays. Choose the Monitor Events tab.
3. In the Monitor Events window, choose . The Monitor Event Details window displays.
4. Enter information in the applicable fields. Refer to [Table 21–12](#) for field value descriptions.
5. Choose .

21.11.2.3 Creating a New Event

To create a new event rule:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > VAS Process > VAS Monitoring. The Monitoring: Work Order window displays. Choose the Monitor Events tab.

3. In the Monitor Events window, choose . The Monitor Event Details window displays.
4. Choose .

21.11.2.4 Deleting an Event

To delete an event:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > VAS Process > VAS Monitoring. The Monitoring: Work Order window displays. Choose the Monitor Events tab.
3. In the Monitor Events window, choose . The Confirmation window displays.
4. Choose OK.

21.12 Viewing Value-Added Services Purge Criteria

Transactional data collected by the Sterling Multi-Channel Fulfillment Solution during the execution are periodically removed from the 'live' transactional tables. It is common to retain work order related information for extended period of time. There are history tables provided for relevant transactional tables to move data from the day-to-day 'live' tables to a historical table. Purges are the process by which old data is removed from the system database. Purges minimize the number of unused database records to increase search efficiency and reduce the size of the required physical disk.

To view purge criteria:

1. From the menu bar, choose Applications > Distributed Order Management. The Distributed Order Management tree displays in the side panel.
2. From the Distributed Order Management tree, choose VAS > VAS Process > Purge Criteria. The Purge Criteria List window displays.

Purge Code	Purge Description	Retention Days
WORK_ORDER_PURGE	Work Order Purge	30
WORK_ORDER_HISTORY_PURGE	Work Order History Purge	30

Results 2

Table 21–13 Purge Criteria

Field	Description
Purge Code	Identifies a purge program. This is a system defined code.
Purge Description	A brief description of the purge.
Retention Days	Automatically purges the work order information on exceeding the specified retention days.

Time-Triggered Transaction Reference

The Sterling Multi-Channel Fulfillment Solution provides a collection of time-triggered transactions, which are utilities that perform a variety of individual functions, automatically and at specific time intervals.

Time-triggered transactions perform repetitive actions on a scheduled basis, typically performing database updates, raising events, or calling APIs. One type of transaction, monitors, are designed to watch for processes or circumstances that are out of bounds and then raise alerts. Often, but not always, they retrieve tasks from the task queue or work from the pipeline.

Some transactions enable you to collect statistical data regarding the application's health. This data is collected periodically, using the value specified for the `yantra.statistics.persist.interval` attribute in the `yfs.properties` file. By default, statistics collection set to on. To modify this property, add an entry in the `<INSTALL_DIR>/properties/customer_overrides.properties` file. For additional information about modifying properties and the `customer_overrides.properties` file, see the *Sterling Multi-Channel Fulfillment Solution Installation Guide*.

For more information about statistics persistence, see the *Sterling Multi-Channel Fulfillment Solution Performance Management Guide*. For more information about the specific statistics parameters used, see the applicable time-triggered transactions.

The time-triggered transactions described in this appendix are unique transactions, that may or may not be document type specific. For document specific transactions, the nomenclature helps define which unique transaction it is based on: a transaction ID is in the format `Unique_Transaction_ID.Document_Type_Code`. For example, the transaction ID for Purge Return is `PURGE.0003`, indicating that it is based on the unique transaction `PURGE`, for document type `0003`, which is

Return Order. Therefore, in order to be able to configure Purge Return, you should look for the PURGE transaction ID in this appendix, which is Order Purge.

The Sterling Multi-Channel Fulfillment Solution provides the following types of time-triggered transactions:

- [Business Process Time-Triggered Transactions](#) - responsible for processing
- [Time-Triggered Purge Transactions](#) - clear out data that may be discarded after having been processed
- [Task Queue Syncher Time-Triggered Transactions](#) - update the task queue repository with the latest list of open tasks to be performed by each transaction, based on the latest pipeline configuration.
- [Monitors](#) - watch and send alerts for processing delays and exceptions

The Sterling Multi-Channel Fulfillment Solution tracks the following statistics for each time-triggered transaction:

- `ExecuteMessageCreated` - The number of jobs added to the JMS queue in a given time interval.
- `ExecuteMessageSuccess` - The number of jobs that were run successfully in a given time interval.
- `ExecuteMessageError` - The number of jobs that failed to run in a given time interval.
- `GetJobsProcessed` - The number of `GetJob` messages that were processed in a given time interval.

Note: Some of the statistics collected and tracked in Release 8.0 for time-triggered transactions, monitors, and integration and application servers may change with the next release of the Sterling Multi-Channel Fulfillment Solution.

A.1 Running Time-Triggered Transactions

All time-triggered transactions are threadable. This means that you can run multiple instances of a transaction within a single process. For more information about running time-triggered transactions, see the *Sterling*

Multi-Channel Fulfillment Solution Installation Guide. For more information about fine-tuning system performance while running them concurrently, see the *Sterling Multi-Channel Fulfillment Solution Performance Management Guide*.

A.1.1 Steps to Complete Before Scheduling Time-Triggered Transactions

Before running and scheduling a time-triggered transaction, ensure that you have completed the following:

1. Configure a JMS Connection Factory to correlate with the QCF name configured for the time-triggered transaction. The Sterling Multi-Channel Fulfillment Solution factory defaults include the `AGENT_QCF` as the JMS Connection Factory. For more information about configuring JMS, see the documentation for your specific application server.
2. Configure JMS Server Destinations to correlate with the group or individual name of the time-triggered transaction. The Sterling Multi-Channel Fulfillment Solution factory defaults include the `DefaultAgentQueue` as the server destination.

Note: Do not put a dot (.) in the name of a JMS Server Destination, for example, 'A.0001'. If you do, the Sterling Multi-Channel Fulfillment Solution is unable to communicate with it.

3. Using the Sterling Multi-Channel Fulfillment Solution Configurator, configure each time-triggered transaction required for your business process as described in [Section 4.2.6, "Defining Transactions"](#). Each set of time-triggered transaction criteria parameters must ensure the appropriate association of a JMS Agent Server.

A.2 Business Process Time-Triggered Transactions

This section provides an alphabetical list of all business process transactions.

Note: Some of the statistics collected and tracked in Release 8.0 for time-triggered transactions, monitors, and integration and application servers may change with the next release of the Sterling Multi-Channel Fulfillment Solution.

Note: All Business Process Time-Triggered Transactions have a `CollectPendingJobs` criteria parameter. If this parameter is set to `N`, the agent does not collect information on the pending jobs for that time-triggered transaction. This pending job information is used for monitoring the monitor in the Sterling Multi-Channel Fulfillment Solution System Management Console.

By default, `CollectPendingJobs` is set to `Y`. It can be helpful to set it to `N` if one particular time-triggered transaction is performing a significant amount of `getPendingJobs` queries, and the overhead cost is too high.

A.2.1 Change Load Status

This transaction is equivalent to the `changeLoadStatus()` API. For detailed information about this transaction, see the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

To be configured as part of your load processing pipeline, this transaction can be used whenever an automatic change in the status of a load is required. This automatic change could represent exporting load information to load planning software or transmission to the load's carrier.

Note: This transaction should be configured to work from the task queue.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–1 Change Load Status Attributes

Attribute	Value
Base Transaction ID	CHANGE_LOAD_STATUS
Base Document Type	Load
Base Process Type	Load Execution
Abstract Transaction	Yes
APIs Called	changeLoadStatus()

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–2 Change Load Status Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–3 Change Load Status Statistics

Statistic Name	Description
NumLoadsChanged	Number of loads whose status was changed.

Pending Job Count

For this transaction the pending job count is the number of records available to be processed by the transaction with the AVAILABLE_DATE value less than or equal to (\leq) the CurrentDate value in the YFS_Task_Q table.

Events Raised

This transaction raises events as specified under the `changeLoadStatus()` API in the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

A.2.2 Change Shipment Status

This transaction is equivalent to the `changeShipmentStatus()` API. For detailed information about this transaction, see the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

To be configured as part of your shipment processing pipeline, this transaction can be used whenever an automatic change in the status of a shipment is required. For example, this automatic change could represent exporting shipment information to a warehouse management system or to transmit an Advance Shipping Notice to the buyer.

Note: This transaction should be configured to work from the task queue.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–4 Change Shipment Status Attributes

Attribute	Value
Base Transaction ID	CHANGE_SHIPMENT_STATUS
Base Document Type	Order
Base Process Type	Order Delivery
Abstract Transaction	Yes
APIs Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–5 *Change Shipment Status Parameters*

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–6 *Create Chained Order Statistics*

Statistic Name	Description
NumShipmentsChanged	Number of shipments whose status was changed.

Pending Job Count

For this transaction the pending job count is the number of records available to be processed by the transaction with the AVAILABLE_DATE value less than or equal to (\leq) the current date value in the YFS_Task_Q table.

Events Raised

This transaction raises events as specified under the `changeShipmentStatus()` API in the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

A.2.3 Close Delivery Plan

To boost system performance, this transaction serves as a temporary purge until the Delivery Plan Purge deletes delivery plan-related data (see [Section A.3.3.3, "Delivery Plan Purge"](#)).

This transaction picks all delivery plans that do not have any of their loads or shipments still open and marks the `deliveryplan_closed_flag='Y'`. This flag indicates no further operations are possible on the plan.

This transaction corresponds to the base transaction close delivery plan (CLOSE_DELIVERY_PLAN) in the load pipeline.

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge jobs.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–7 Close Delivery Plan Attributes

Attribute	Value
Base Transaction ID	CLOSE_DELIVERY_PLAN
Base Document Type	Load
Base Process Type	Load Execution
Abstract Transaction	No
APIs Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–8 Close Delivery Plan Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–9 Close Delivery Plan Statistics

Statistic Name	Description
NumDeliveryPlansClosed	Number of delivery plans closed.

Pending Job Count

For this transaction the pending job count is the number of records available to be processed by the transaction with the AVAILABLE_DATE value less than or equal to (\leq) the current date value in the YFS_Task_Q table.

Events Raised

The following events are raised by this time-triggered transaction:

Table A–10 Events Raised by Close Delivery Plan Transaction

Transaction/Event	Key Data	Data Published	Template Support?
ON_SUCCESS	delivery_ plan_dbd.txt	YDM_CLOSE_ DELIVERY_ PLAN.ON_ SUCCESS.xml	Yes

However, note that the template name would read \langle TransactionId \rangle .ON_SUCCESS.xml.

A.2.4 Close Load

To boost system performance, this transaction serves as a temporary purge until the Load Purge deletes load-related data (see [Section A.3.3.11, "Load Purge"](#)).

This transaction corresponds to the base transaction Close Load (CLOSE_LOAD) in the load pipeline.

If you use the Load processing pipeline, you must schedule this transaction. Only closed loads are picked up by the purge transaction. Therefore, it is required that this transaction be made part of the pipeline and scheduled to run at the end of the day.

Note: This transaction should be made part of the pipeline. In addition, it should be configured to work from the task queue.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–11 *Close Load Attributes*

Attribute	Value
Base Transaction ID	CLOSE_LOAD
Base Document Type	Load
Base Process Type	Load Execution
Abstract Transaction	No
APIs Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–12 *Close Load Parameters*

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Next Task Queue Interval	Optional. Specifies in hours how long a failed task should be suspended before it is considered for reprocessing. Defaults to 5 hours.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–13 *Close Load Statistics*

Statistic Name	Description
NumLoadsClosed	Number of loads closed.

Pending Job Count

For this transaction the pending job count is the number of open delivery plans, which are not associated to any open loads and open shipments.

Events Raised

The following events are raised by this time-triggered transaction:

Table A–14 *Events Raised by the Close Load Transaction*

Transaction/Event	Data Published	Template Support?
ON_SUCCESS	YDM_CLOSE_LOAD_PLAN.ON_SUCCESS.xml	Yes

However, note that the template name would read <TransactionId>.ON_SUCCESS.xml.

A.2.5 Close Manifest

This time-triggered transaction sets the manifest's MANIFEST_CLOSED_FLAG flag to 'Y' and updates the manifest status to CLOSED. This time-triggered transaction confirms all the shipments that are pending confirmation, and closes the manifest.

Note: If the Close Manifest Agent is triggered without any criteria, it closes all the candidate manifests across all ShipNodes.

The `yfs.closemanifest.online` property in the `yfs.properties_ysc_ext.in` file is used to set this time-triggered transaction to work in online or offline mode. To modify this property, add an entry for it in the `<INSTALL_DIR>/properties/customer_overrides.properties` file. For additional information about modifying properties and the `customer_`

overrides.properties file, see the *Sterling Multi-Channel Fulfillment Solution Installation Guide*.

- **Online mode:** In the online mode, the close manifest transaction runs as usual, confirming all shipments in the manifest and then closing the manifest.
- **Offline mode:** In the offline mode, the close manifest transaction triggers an agent and changes the manifest status to 'Closure Requested'. When the agent runs, it confirms either each shipment of the manifest, or closes the manifest, in an execution call.

The mode of operation (online or offline) is decided on the basis of the value specified for the `yfs.closemanifest.online` property in the `yfs.properties_ycs_ext.in` file. To modify this property, add an entry for it in the `<INSTALL_DIR>/properties/customer_overrides.properties` file. For additional information about modifying properties and the `customer_overrides.properties` file, see the *Sterling Multi-Channel Fulfillment Solution Installation Guide*.

The default out-of-the-box shipped property causes the Close Manifest transaction to run in online mode.

Note: In instances where the Close Manifest transaction is run in offline mode, ensure that all Agent Criteria defined for the transaction are configured properly.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–15 *Close Manifest Attributes*

Attribute	Value
Base Transaction ID	CLOSE_MANIFEST
Base Document Type	General
Base Process Type	Manifesting
Abstract Transaction	No
APIs Called	confirmShipment()

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–16 *Close Manifest Criteria Parameters*

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
AgentCriteriaGroup	Optional. Used to classify nodes. This value can be accepted by WMS time-triggered transactions that only perform their tasks on the nodes with a matching node transactional velocity value. Valid values are: LOW, HIGH, and any additional values defined by the Hub from Platform > System Administration > Agent Criteria Groups.
ShipNode	Optional. Ship node for which the Close Manifest needs to be run. If not passed, then all ship nodes are monitored.

Statistics Tracked

The following are statistics are tracked for this transaction:

Table A–17 *Close Manifest Statistics*

Statistic Name	Description
NumShipmentsConfirmed	Number of shipments confirmed.
NumManifestsClosed	Number of manifests closed.
NumManifestsErrored	Number of manifests errored.
NumShipmentsErrored	Number of shipments errored.

Pending Job Count

For this transaction the pending job count is the sum of open manifests and shipments belonging to manifests (with MANIFEST_STATUS='1200').

Events Raised

The following events are raised by this time-triggered transaction:

Table A–18 Events Raised by the Close Manifest Transaction

Transaction/Event	Key Data	Data Published	Template Support?
ON_SUCCESS	manifest_dbd.txt	YDM_CLOSE_MANIFEST.ON_SUCCESS.xml	Yes

A.2.6 Close Order

This time-triggered transaction sets the order's ORDER_CLOSED flag to 'Y' and raises the ON_SUCCESS event. These actions are only performed when the entire ORDER_QTY for all the order lines reaches the configured pickup status. If an order has ORDER_CLOSED set to 'Y', it is not picked up for monitoring.

Note: The Close Order agent must be configured along with the Purge transaction in the pipeline.

Note: The Close Order agent must be run before running the Monitor agent in order to avoid alerts getting raised for cancelled orders.

Note: Many of this transaction's elements and attributes are template-driven. Refer to the XML for element level details.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–19 Close Order Attributes

Attribute	Value
Base Transaction ID	CLOSE_ORDER
Base Document Type	Order
Base Process Type	Order Fulfillment
Abstract Transaction	No
APIs Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–20 Close Order Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Next Task Queue Interval	Optional. Specifies in hours how long a failed task should be suspended before it is considered for reprocessing. Defaults to 5 hours.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–21 Close Order Statistics

Statistic Name	Description
NumOrdersProcessed	Number of orders processed.
NumOrdersClosed	Number of orders closed.

Pending Job Count

For this transaction the pending job count is the number of records available to be processed by the transaction with the AVAILABLE_DATE

value less than or equal to (\leq) the current date value in the YFS_Task_Q table, if tasks on hold are not ready to be processed.

Events Raised

The following events are raised by this time-triggered transaction:

Table A–22 *Events Raised by the Close Order Transaction*

Transaction/Event	Data Published	Template Support?
ON_SUCCESS	YFS_CLOSE_ORDER.ON_SUCCESS.xml	Yes

A.2.7 Close Receipts

This time-triggered transaction closes receipts using the receiving rule specified.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–23 *Close Receipts Attributes*

Attribute	Value
Base Transaction ID	RECEIPT_COMPLETE
Base Document Type	Order
Base Process Type	Receipt (Purchase Order Receipt, Return Receipt, Transfer Order Receipt, Sales Order Receipt)
Abstract Transaction	No
APIs Called	None
User Exits Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–24 *Close Receipts Criteria Parameters*

Parameter	Description
Action	Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
EnterpriseCode	Enterprise for which the Close Receipts needs to be run. If not passed, then all enterprises are monitored.
Node	Node for which the Close Receipts Purge needs to be run. If not passed, then all nodes are monitored.
AgentCriteriaGroup	Used to classify nodes. This value can be accepted by WMS time-triggered transactions that only perform their tasks on the nodes with a matching node transactional velocity value. Valid values are: LOW, HIGH, and any additional values defined by the Hub from Platform > System Administration > Agent Criteria Groups.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–25 *Close Receipts Statistics*

Statistic Name	Description
NumReceiptsClosed	Number of receipts closed.

Pending Job Count

For this transaction the pending job count is the number of Receipts that can be closed (with OPEN_RECEIPT_FLAG='Y').

Events Raised

The following events are raised by this time-triggered transaction:

Table A–26 Events Raised by the Close Receipts Transaction

Transaction/Event	Key Data	Data Published	Template Support?
ON_SUCCESS	receipt_ dbd.txt	YFS_RECEIPT_ COMPLETE.ON_ SUCCESS.xml	Yes

Troubleshooting Tip: When multiple inbound shipments are received into the same location, and the inventory received is not license plated, an error message, "There is no inventory for put away at the SourceLocation" displays. The solution to this problem lies in one of these steps:

- Manually create move requests for receipts that you already received. For more information about creating move requests, refer to the *Sterling Warehouse Management System User Guide*.
- For receipts that are expected to be received, ensure that the inventory is license plated and that you don't receive inbound shipments and inventory for put away into the same location.

A.2.8 Close Shipment

To boost system performance, this transaction serves as a temporary purge until the Shipment Purge deletes all shipment-related data (see [Section A.3.3.28, "Shipment Purge"](#)).

This transaction picks all shipments eligible to be closed, based on the pipeline configuration for pickup for transaction CLOSE_SHIPMENT, and marks the shipment_closed_flag='Y'. This flag indicates no further operations are possible on the shipment. There is no status change involved. This transaction can be configured in the pipeline so that it picks up either Shipped or Delivered status.

This transaction corresponds to the base transaction close shipment (CLOSE_SHIPMENT) in the shipment pipeline.

Note: This transaction should be made part of the pipeline. In addition, it should be configured to work from the task queue.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–27 *Close Shipment Attributes*

Attribute	Value
Base Transaction ID	CLOSE_SHIPMENT
Base Document Type	Order
Base Process Type	Order Delivery
Abstract Transaction	No
APIs Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–28 *Close Shipment Criteria Parameters*

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Next Task Queue Interval	Optional. Specifies in hours how long a failed task should be suspended before it is considered for reprocessing. Defaults to 5 hours.

Statistics Tracked

The following are statistics are tracked for this transaction:

Table A–29 Close Shipment Statistics

Statistic Name	Description
NumShipmentsClosed	Number of shipments closed.

Pending Job Count

For this transaction the pending job count is the number of records available to be processed by the transaction with the AVAILABLE_DATE value less than or equal to (\leq) the current date value in the YFS_Task_Q table.

Events Raised

The following events are raised by this time-triggered transaction:

Table A–30 Events Raised by the Close Shipment Transaction

Transaction/Event	Key Data	Data Published	Template Support?
ON_SUCCESS	shipment_dbd.txt	YDM_CLOSE_SHIPMENT.ON_SUCCESS.xml	Yes

A.2.9 Collect Shipment Statistics

Collect Shipment Statistics is a time-triggered transaction which can be invoked to process the shipments, and generate information required for the Daily Shipment Report.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–31 Collect Shipment Statistics Attributes

Attribute	Value
Transaction Name	Collect Shipment Statistics
Transaction ID	COLLECT_STATISTICS
Base Document Type	Order
Base Process Type	Order Delivery

Table A–31 *Collect Shipment Statistics Attributes*

Attribute	Value
Abstract Transaction	No
APIs Called	None
User Exits Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–32 *Collect Shipment Statistics Criteria Parameters*

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Node	Required. The warehouse management ship node for which records are being processed.
AgentCriteriaGroup	Optional. Used to classify nodes. This value can be accepted by WMS time-triggered transactions that only perform their tasks on the nodes with a matching node transactional velocity value. Valid values are: LOW, HIGH, and any additional values defined by the Hub from Platform > System Administration > Agent Criteria Groups.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–33 *Statistics for Collect Shipment Statistics*

Statistic Name	Description
NumDaysStatisticsCollected	Number of days for which shipment statistics have been collected.

Pending Job Count

For this transaction the pending job count is the number of days for which shipment statistics needs to be collected. The number of days is calculated as the difference (in days) between the current date and the last date when shipment statistics was collected.

Events Raised

The following events are raised by this time-triggered transaction:

Table A–34 Events Raised by the Collect Shipment Statistics Transaction

Transaction/Event	Data Published	Template Support?
ON_SUCCESS	YDM_COLLECT_STATISTICS.ON_SUCCESS.xml	No

A.2.10 Complete Planned Order

Complete Planned Order takes planned orders to completion after negotiations are resolved. Use this time-triggered transaction on a planned order after negotiation is complete. This time-triggered transaction was deprecated in Release 5.0 SP1.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–35 Complete Planned Order Attributes

Attribute	Value
Transaction Name	Complete Planned Order
Transaction ID	PLAN_ORDER_COMPLETE
Base Document Type	Order
Base Process Type	Planned Order Execution
Abstract Transaction	No
APIs Called	None
User Exits Called	None

Criteria Parameters

The following are the parameters for this transaction:

Table A–36 Order Complete Criteria Parameters

Parameter	Description
DocumentType	Required. The type of document to process for a particular run. Valid values are: <ul style="list-style-type: none"> • 0001 - Sales Order (Default) • 0002 - Planned Order
TotalRecords	Optional. Number of records for the time-triggered transaction to pass. If not passed, defaults to 5000.

Statistics Tracked

None.

Pending Job Count

None.

Events Raised

The following events are raised by this time-triggered transaction:

Table A–37 Events Raised by the Order Complete Transaction

Transaction/Event	Key Data	Data Published	Template Support?
PLAN_ORDER_COMPLETE	modifyOrder_dbd.txt	YFS_getPlannedOrderStatus_Output.xml	No

A.2.11 Consolidate Additional Inventory

The Consolidate Additional Inventory time-triggered transaction consolidates supply and demand from the YFS_INVENTORY_SUPPLY_ADDNL and YFS_INVENTORY_DEMAND_ADDNL tables. Consolidation is performed by summing up the quantities of additional supply and demand in the YFS_INVENTORY_SUPPLY and YFS_INVENTORY_DEMAND tables.

If no matching supply or demand is found, a new supply or demand is created with the sum quantity of the changes in the YFS_INVENTORY_SUPPLY_ADDNL and YFS_INVENTORY_DEMAND_ADDNL tables. After the changes are applied, the records in the YFS_INVENTORY_SUPPLY_ADDNL and YFS_INVENTORY_DEMAND_ADDNL tables that were used in the consolidation process, are deleted.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–38 Consolidate Additional Inventory Attributes

Attribute	Value
Base Transaction ID	CONSOLIDATE_ADDNL_INV
Base Document Type	General
Base Process Type	General
Abstract Transaction	No
APIs Called	None

Criteria Parameters

The following are the parameters for this transaction:

Table A–39 Consolidate Additional Inventory Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of inventory item records (whose additional supplies and demands are consolidated_ to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–40 Consolidate Additional Inventory Statistics

Statistic Name	Description
NumInventorySupplyAddnlsProcessed	Number of additional inventory supply records processed in the consolidation.
NumInventoryDemandAddnlsProcessed	Number of additional inventory demand records processed in the consolidation.
NumInventoryDemandDtlsProcessed	Number of inventory demand details records processed in the consolidation.

Pending Job Count

For this transaction the pending job count is the number of distinct inventory items in the YFS_Inventory_Supply_Addnl and YFS_Inventory_Demand_Addnl tables, multiplied by two.

Events Raised

None.

A.2.12 Consolidate To Shipment

This is a task queue based transaction in the order pipeline that corresponds to base transaction CONSOLIDATE_TO_SHIPMENT. This transaction finds a shipment into which a given order release can be included. If it finds an existing shipment, it calls `changeShipment()` API. Otherwise, it calls the `createShipment()` API.

To find the existing shipments it matches ShipNode, ShipTo Address, SellerOrganizationCode, Carrier, DocumentType and so forth, of the Order Release with that of existing shipments. List of attributes it matches is actually based on Document Template for Document Type of the Order.

This transaction is applicable only to the shipments in one of the following Statuses:

- Shipment Created
- ESP Check Required

- On ESP Hold
- Released from ESP Hold
- Released For Routing
- Awaiting Routing
- Shipment Routing
- Sent To Node
- Shipment Being Picked

Troubleshooting Tip: To successfully consolidate an Order Release to an existing shipment, the Add Line and related modification types on shipment in its current status should be allowed.

For more information, see the details provided under the `createShipment()`, `changeShipment()`, and `releaseOrder()` APIs in the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

Note: This transaction is a part of the Order Fulfillment pipeline. In addition, it should be configured to work from the task queue.

Note: Order releases with GIFT_FLAG set to Y are never consolidated with any other release.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–41 Consolidate to Shipment Attributes

Attribute	Value
Base Transaction ID	CONSOLIDATE_TO_SHIPMENT
Base Document Type	Order
Base Process Type	Order Fulfillment

Table A–41 Consolidate to Shipment Attributes

Attribute	Value
Abstract Transaction	No
APIs Called	<code>createShipment()</code> and <code>changeShipment()</code>
User Exits	<ul style="list-style-type: none"> It calls <code>beforeConsolidateToShipment</code> in <code>com.yantra.ydm.japi.ue.YDMBeforeConsolidateToShipment</code> for each release before it begins processing. After it finds the shipments, it calls <code>determineShipmentToConsolidateWith</code> in <code>com.yantra.ydm.japi.ue.YDMDetermineShipmentToConsolidateWith</code>. For more information, see the <i>Sterling Multi-Channel Fulfillment Solution Javadocs</i>.

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–42 Consolidate to Shipment Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to <code>Get</code> , the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Next Task Queue Interval	Optional. Specifies in hours how long a failed task should be suspended before it is considered for reprocessing. Defaults to 5 hours.

Statistics Tracked

The following statistics are tracked for this transaction:

Pending Job Count

Table A–43 Consolidate to Shipment Statistics

Statistic Name	Description
NumOrderReleasesConsolidated	Number of order releases consolidated.

For this transaction the pending job count is the number of records available to be processed by the transaction with the AVAILABLE_DATE value less than or equal to (\leq) the current date value in the YFS_Task_Q table.

Events Raised

The following events are raised by this time-triggered transaction:

Table A–44 Events Raised by the Consolidate to Shipment Transaction

Transaction/Event	Key Data	Data Published	Template Support?
ON_SUCCESS	shipment_dbd.txt	YDM_CONSOLIDATE_TO_SHIPMENT.ON_SUCCESS.xml	Yes

Note: This transaction also raises events as specified under the `createShipment()` and `changeShipment()` APIs in the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

However, note that the template name would read `<TransactionId>.ON_SUCCESS.xml`. The XML and DTD depicted above represent the output that the abstract transaction CONSOLIDATE_TO_SHIPMENT transaction is capable of generating.

A.2.13 Create Chained Order

This transaction creates one or more chained orders from an order whose OrderHeaderKey is stored in the task queue object. Chainable lines of the order can also be added to existing chained orders, instead of creating new chained orders with these lines. The existing chained orders must be identified by the `determineChainedOrderForConsolidation` user exit. If

the user exit is not implemented, or if the user exit returns a blank document, one or more new chained orders are created.

For more information about the creation of chained orders, see the information provided under the `createChainedOrder()` API and the `YFSDetermineChainedOrderForConsolidation` user exit in the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

This transaction should be invoked after order scheduling.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–45 Create Chained Order Attributes

Attribute	Value
Base Transaction ID	CHAINED_ORDER_CREATE
Base Document Type	Order
Base Process Type	Order Fulfillment
Abstract Transaction	Yes
APIs Called	<code>createChainedOrder()</code>

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–46 Create Chained Order Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Next Task Queue Interval	Optional. Specifies in hours how long a failed task should be suspended before it is considered for reprocessing. Defaults to 5 hours.

Statistics Tracked

The following statistics are tracked for this transaction:

Note: If there are 2 orders being processed and the first order creates a
Table A–47 Create Chained Order Statistics

Statistic Name	Description
NumOrdersProcessed	Number of orders processed for creating chained order.
NumOrdersCreated	Number of chained orders created.

chained order, the `DetermineChainedOrderForConsolidation` user exit causes the lines of the 2nd order to be added to the first order. The number of chained orders created is counted as 2.

Pending Job Count

For this transaction the pending job count is the number of records available to be processed by the transaction with the `AVAILABLE_DATE` value less than or equal to (\leq) the current date value in the `YFS_Task_Q` table.

Events Raised

This transaction raises events as specified under the `createChainedOrder()` API in the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

A.2.14 Create Derived Order

This transaction creates one or more derived orders from an order whose `OrderHeaderKey` is stored in the task queue object. For existing derived orders, you can add derivable lines or create new derived orders with these lines. The existing derived orders must be identified by the `determineDerivedOrderForConsolidation` user exit. If the user exit is not implemented or if the user exit returns a null document, new derived orders are created. For more information about the creation of derived orders, see the details provided under the `createDerivedOrder()` API and `YFSDetermineDerivedOrderForConsolidation` user exit in the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–48 *Create Derived Order Attributes*

Attribute	Value
Base Transaction ID	DERIVED_ORDER_CREATE
Base Document Type	Order
Base Process Type	Order Fulfillment
Abstract Transaction	Yes
APIs Called	<code>createDerivedOrder()</code>

Note: The TransactionKey posted in the task queue object must be an instance of the Abstract Transaction DERIVED_ORDER_CREATE for the ProcessType associated with the Order. Otherwise, an exception is thrown.

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–49 *Create Derived Order Criteria Parameters*

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Next Task Queue Interval	Optional. Specifies in hours how long a failed task should be suspended before it is considered for reprocessing. Defaults to 5 hours.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–50 Create Derived Order Statistics

Statistic Name	Description
NumOrdersProcessed	Number of orders processed.
NumOrdersCreated	Number of derived orders created.

Note: If there are 2 orders being processed and the first order creates a derived order, the DetermineChainedOrderForConsolidation user exit causes the lines of the 2nd order to be added to the first order. The number of derived orders created is counted as 2.

Pending Job Count

For this transaction the pending job count is the number of records available to be processed by the transaction with the AVAILABLE_DATE value less than or equal to (\leq) the current date value in the YFS_Task_Q table.

Events Raised

This transaction raises events as specified under the `createDerivedOrder()` API in the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

A.2.15 Create Order Invoice

This transaction creates one or more invoices from an order whose OrderHeaderKey is stored in a task queue object. The `createOrderInvoice()` API is called for the OrderHeaderKey.

Configure this transaction in the pipeline only after all processing that can impact quantity or price has been completed. Post invoice creation, the line quantity cannot be reduced below the invoiced quantity.

Note: Both the Create Order Invoice and Create Shipment Invoice transactions can create invoices for an Order. When configuring your pipeline, ensure that only *one* of these two transactions is configured to create invoices for a particular order line. For more information, see [Section A.2.16, "Create Shipment Invoice"](#).

Attributes

The following are the attributes for this time-triggered transaction:

Table A–51 Create Order Invoice Attributes

Attribute	Value
Base Transaction ID	CREATE_ORDER_INVOICE
Base Document Type	Order
Base Process Type	Order Fulfillment
Abstract Transaction	Yes
APIs Called	createOrderInvoice()

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–52 Create Order Invoice Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–53 Create Order Invoice Statistics

Statistic Name	Description
NumOrderInvoicesCreated	Number of order invoices created.

Pending Job Count

For this transaction the pending job count is the number of records available to be processed by the transaction with the `AVAILABLE_DATE` value less than or equal to (`<=`) the current date value in the `YFS_Task_Q` table.

Events Raised

This transaction raises events as specified under the `createOrderInvoice()` API in the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

A.2.16 Create Shipment Invoice

Invoicing is mandatory if an order requires payment processing. Invoicing occurs if the following conditions are met:

- Invoicing is enabled at the document parameter level.
- The Seller requires payment processing.

This transaction creates one or more invoices for the shipment whose `ShipmentKey` is stored in the task queue object. The `createShipmentInvoice()` API is called for the `ShipmentHeaderKey`.

This transaction should be configured in the shipment pipeline only after the shipment has reached a shipped status.

Note: Both the Create Order Invoice and Create Shipment Invoice can create invoices for an order. When configuring your pipeline, ensure that only *one* of these two transactions is configured to create invoices for a particular order line. See [Section A.2.15, "Create Order Invoice"](#).

Attributes

The following are the attributes for this time-triggered transaction:

Table A–54 Create Shipment Invoice Attributes

Attribute	Value
Base Transaction ID	CREATE_SHIPMENT_INVOICE
Base Document Type	Order
Base Process Type	Order Delivery
Abstract Transaction	Yes
APIs Called	createShipmentInvoice()

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–55 Create Shipment Invoice Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–56 Create Shipment Invoice Statistics

Statistic Name	Description
NumShipmentInvoicesCreated	Number of shipment invoices created.

Pending Job Count

For this transaction the pending job count is the number of records available to be processed by the transaction with the `AVAILABLE_DATE` value less than or equal to (\leq) the current date value in the `YFS_Task_Q` table.

Events Raised

This transaction raises events as specified under the `createShipmentInvoice()` API in the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

A.2.17 ESP Evaluator

The ESP Evaluator time-triggered transaction verifies whether a shipment meets certain economic shipping parameters (ESP). ESP can be configured either for buyer or enterprise, with the freight terms on the shipment determining which one is used.

If the configuration is defined to hold shipment for ESP, the shipment when created is held for ESP (with status *On ESP Hold*). This task queue based time-triggered transaction evaluates the shipment for ESP, and passes it on to the next step in the shipment pipeline if the criteria (weight and volume limits, plus maximum days of hold up) are met. The shipment status is now set to *Released from ESP hold*, and routing processing begins.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–57 ESP Evaluator Attributes

Attribute	Value
Base Transaction ID	ESP_EVALUATOR.0001
Base Document Type	Order
Base Process Type	Outbound Shipment
Abstract Transaction	No
APIs Called	None
User Exits Called	getNodeMinimumNotificationTime

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–58 ESP Evaluator Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
EnterpriseCode	Optional. Enterprise for which the ESP Evaluator needs to be run. If not passed, then all enterprises are monitored.
Number of Records to Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Next Task Queue Interval	Optional. Specifies in hours how long a failed task should be suspended before it is considered for reprocessing. Defaults to 5 hours.
Node	Required. The warehouse management ship node for which records are being processed.
AgentCriteriaGroup	Optional. Used to classify nodes. This value can be accepted by WMS time-triggered transactions that only perform their tasks on the nodes with a matching node transactional velocity value. Valid values are: LOW, HIGH, and any additional values defined by the Hub from Platform > System Administration > Agent Criteria Groups.

Statistics Tracked

None.

Pending Job Count

For this transaction the pending job count is the number of records available to be processed by the transaction with the AVAILABLE_DATE value less than or equal to (\leq) the current date value in the YFS_Task_Q table.

Events Raised

The following events are raised by this time-triggered transaction:

Table A-59 Events Raised by ESP Evaluator Transaction

Transaction/Event	Key Data	Data Published	Template Support?
ON_SUCCESS	shipment_dbd.txt	ESP_EVALUATOR.ON_SUCCESS.xml	Yes

A.2.18 Item Based Allocation

The Item Based Allocation transaction allocates unpromised and promised demands of existing orders to more suitable supplies based upon inventory items and nodes which have been triggered for the Item Based Allocation process in the YFS_IBA_TRIGGER table.

The Item Based Allocation agent obtains and processes all Item Based Allocation triggers from the YFS_IBA_TRIGGER table that meet the following conditions:

- IBA_RUN_REQUIRED = "Y"
- LAST_IBA_PROCESSED_TS was 'x' hours before current time, where 'x' is from the 'Item Based Allocation Agent Execution Interval (in hours)' rule in the Installation rules. For more information about installation rules, refer to the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*. This rule is used to indicate the interval that the Item Based Allocation agent should not reprocess the triggers in the YFS_IBA_TRIGGER table, which were processed earlier. This prevents the IBA agent from over-processing

the item and node combination in the given time interval to avoid any high loads on the system.

- PROCESSING_BY_AGENT="N" or PROCESS_OVER_BY_TS is before the current timestamp. The PROCESSING_BY_AGENT field is used to prevent the picking up of the IBA trigger which is being processed by another instance of the agent.

If InventoryOrganizationCode is specified in the agent criteria, only the IBA trigger with inventory items of that inventory organization is retrieved.

For each triggered item and node combination, the agent finds all of the applicable order lines or order line reservations that contain the item and node and tries to move their un-promised and promised demands to more suitable available supplies in the FIFO (First-In-First-Out) order. The Sterling Multi-Channel Fulfillment Solution creates new positive order line reservations with the matched supply's first ship date and negative order line reservations for the existing demand ship date. Once all orders are processed, they are placed on hold to be rescheduled if changes are detected in the order line reservations.

Note: The following configuration is required for the Item Based Allocation process:

- The Use Item Based Allocation rule needs to be enabled.
 - Item and node need to have Item Based Allocation Allowed enabled.
 - A hold type is required to be set up for the change order line reservations modification type so that the order can be placed on hold for rescheduling. For more information, refer to the *Sterling Multi-Channel Fulfillment Solution Javadocs*.
-

Note: The 'When a line is backordered, backorder against the highest priority ship node' rule should be checked in order to reallocate backordered demand. For more information, see the Fulfillment Rules section in the *Sterling Distributed Order Management Configuration Guide*.

Before processing the Item Based Allocation logic, the Item Based Allocation agent updates the following fields on the Item Based Allocation trigger:

- PROCESSING_BY_AGENT = "Y". This indicates that an instance of the agent is currently processing this trigger.
- PROCESS_OVER_BY_TS = current time + 1 hr. This indicates the expected time that the agent should finish with processing this IBA trigger. One hour is the fixed window and cannot be changed. The Sterling Multi-Channel Fulfillment Solution treats the PROCESSING_BY_AGENT flag as "N" regardless of the actual value when current timestamp is after this timestamp.
- IBA_RUN_REQUIRED = "N". This resets the IBA_RUN_REQUIRED flag back to "N".

Obtaining a List of Demands Based on Applicable Order Release Statuses and Order Line Reservations to be Allocated

A list of demands is derived from applicable order release statuses and order line reservations, which have the item and node in the IBA trigger. The following types of demands are retrieved:

- Demands of chained orders
- Demands of orders with chained order already created
- Demands of orders with procurement node but chained order creation is not yet created
- Demands of orders without procurement node
- Demands from order line reservations

The demand quantity is derived based on the order release status quantity with the status from the Status Inventory Type configuration that has a demand type, which considers the supply type with 'Use Consider Demand Type for Item Based Allocation' enabled. For more information, refer to the *Sterling Global Inventory Visibility Configuration Guide*.

Obtaining a List of Available Supplies for Allocation

The Sterling Multi-Channel Fulfillment Solution obtains the available supply based on the availability of the item at the node by ignoring unpromised and promised demands. If the inventory organization maintains its inventory externally, the external availability can be read by the `YFSGetExternalInventoryUE` user exit. Only the availability of supplies that consider the 'Demand Type Look for Availability during Item Based Allocation' are used in the allocation logic. For more information, refer to the *Sterling Global Inventory Visibility Configuration Guide*.

Note: Allocated demands should be matched with the same supplies as "Demand to look for during release".

Matching Demands Against Supplies in FIFO (First-In-First-Out) Order

The Sterling Multi-Channel Fulfillment Solution sorts the list of available supplies in the order of the first shippable date (ETA), and matches the obtained list of demands using the top-down logic (unlike the normal matching logic for obtaining availability, where matches are based on the closest ETA). Demands are allocated in the following orders:

- Demands of chained orders in ascending order of order creation date. (These types of demands are matched based on the closest ETA to avoid any changes in the chained orders).
- Demands of orders with chained order already created in ascending order of product availability date. (These types of demands are matched based on the closest ETA to avoid any changes in the orders).
- Demands of orders with procurement node and chained order creation is imminent (within the advanced notification time window) in order of order creation date.
- Demands of orders without a procurement node and within the release window (advanced notification time window) in order of order creation date.
- Demands from order line reservations on the order lines in the order of requested reservation date.
- Left over demands (outside of the advanced notification time window) of orders with or without a procurement node in the order of order creation date.
- Demands from inventory reservations in the order of ship date.

Notice that different types of demands are given different priorities based on their significance. The demands of chained orders or orders related to chained orders are treated with a higher priority than the demands of normal orders. Furthermore, the demands with a ship date within the advanced notification time window also have a higher priority than the demands with a date outside of the advanced notification time window.

Updating Order Reservations for the Matched Demands

After matching the available supply and demand in the FIFO order, the system builds up a list of order line reservation changes and inventory demand changes (corresponding to the order line reservation changes) and summarize them to optimize the number of order reservation updates and inventory updates. Negative order line reservations are added for the matched demands. Positive order reservations are added for the matched demands with the product availability date set to the matched supplies' first ship date.

After the Item Based Allocation agent completes its tasks for an Item Based Allocation trigger, it updates the fields of the trigger with the following values:

- IBA_REQUIRED = "N"
- LAST_IBA_PROCESSED_TS = current timestamp.
- PROCESS_OVER_BY_TS = current timestamp.
- PROCESSING_BY_AGENT = "N"

The Item Based Allocation agent should be used in conjunction with the rescheduling process as the rescheduling process reschedules the affected orders by utilizing the order line reservations created by the Item Based Allocation process.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–60 *Item Based Allocation Attributes*

Attribute	Value
Base Transaction ID	ITEM_BASED_ALLOCATION
Base Document Type	General
Base Process Type	General
Abstract Transaction	No
APIs Called	changeOrder – for updating the order line reservations created as part of the Item Based Allocation process.
User Exits Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–61 Item Based Allocation Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
InventoryOrganizationCode	The inventory organization code of the inventory items which are processed by the Item Based Allocation agent. If provided, only the IBA triggers with the inventory item that belongs to this inventory organization are processed.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–62 Item Based Allocation Statistics

Statistic Name	Description
NumOrdersProcessed	Number of orders processed by the Item Based Allocation agent.
NumOrdersRequiredReschedule	Number of orders required rescheduling as the result of Item Based Allocation process.

Pending Job Count

None.

Events Raised

This transaction raises events as specified under the changeOrder API in the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

A.2.19 Mark Load as Trailer Loaded

This is a time-triggered transaction which works on “Load pipeline”.

This time-triggered transaction gets records from the Task Q. This transaction is used to mark the load as trailer loaded when all containers for the load are on the trailer.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–63 Mark Load As Trailer Loaded Attributes

Attribute	Value
Base Transaction ID	MARK_AS_TRAILER_LOADED
Base Document Type	Load
Base Process Type	Load Execution
Abstract Transaction	No
APIs Called	None
User Exits Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–64 Mark Load As Trailer Loaded Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
ReprocessInterval	Optional. Reprocess Interval is the time taken to reprocess the load.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–65 Mark Load As Trailer Loaded Statistics

Statistic Name	Description
NumLoadsChanged	Number of trailer loads changed.

Pending Job Count

For this transaction the pending job count is the number of records available to be processed by the transaction with the AVAILABLE_DATE value less than or equal to (\leq) the current date value in the YFS_Task_Q table.

Events Raised

None.

A.2.20 Match Inventory

Match Inventory processes all pending records in the YFS_INVENTORY_SHIPMENT table. Pending records have a smaller number in POSTED_QUANTITY than in QUANTITY.

Each pending record is matched against the receipt records in YFS_INVENTORY_RECEIPT table by applying the inventory cost determination logic. The unit cost at which the sales and receipt data are matched is also posted in YFS_INVENTORY_MATCH table.

Use this transaction if any of the configured ship nodes maintain inventory cost.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–66 Match Inventory Attributes

Attribute	Value
Base Transaction ID	INVENTORY_MATCH
Base Document Type	General
Base Process Type	General

Table A–66 Match Inventory Attributes

Attribute	Value
Abstract Transaction	No
APIs Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–67 Match Inventory Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
InventoryOrganizationCode	Optional. Valid inventory owner organization. Organization to process in this run. If not passed, all inventory organizations are processed.
CutOffDate	Optional. If passed, records are matched up to this date. Defaults to all unmatched records in Database.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–68 Match Inventory Statistics

Statistic Name	Description
NumInventoryShipmentsProcessed	Number of inventory shipments processed.
NumInventoryMatchesInserted	Number of inventory matches inserted.

Pending Job Count

For this transaction the pending job count is the number of distinct inventory items that exist in the YFS_INVENTORY_SHIPMENT table where the QUANTITY value is not equal to the POSTED_QUANTITY value.

Events Raised

None.

A.2.21 Payment Collection

This transaction requests credit validation for orders that are pending authorization or charging.

Use this transaction for creating authorization and charge requests.

Note: This transaction works in combination with the Payment Execution transaction. Although this transaction can run independent of that transaction, authorization and collection occurs *only* after the Payment Execution dependencies are met. For more details, see [Section A.2.22, "Payment Execution"](#).

Attributes

The following are the attributes for this time-triggered transaction:

Table A–69 Payment Collection Attributes for Sales Orders

Attribute	Value
Base Transaction ID	PAYMENT_COLLECTION
Base Document Type	Order
Base Process Type	Order Fulfillment
Abstract Transaction	No
APIs Called	requestCollection()

Table A–70 Payment Collection Attributes for Return Orders

Attribute	Value
Base Transaction ID	PAYMENT_COLLECTION.0003
Base Document Type	Order
Base Process Type	Reverse Logistics
Abstract Transaction	No
APIs Called	requestCollection()

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–71 Payment Collection Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
EnterpriseCode	Optional. The enterprise for which the transaction needs to be run. If left blank, orders for all enterprises are processed. If specified, only orders for that enterprise are processed.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–72 Payment Collection Statistics

Statistic Name	Description
NumOrdersProcessed	Number of orders processed.
NumChargeReqsCreated	Number of charge requests created.
NumAuthorizationReqsCreated	Number of authorization requests created.

Pending Job Count

For this transaction the pending job count is the number of orders in the appropriate payment statuses with the value of the AUTHORIZATION_EXPIRATION_DATE is less than or equal to (\leq) the current date. The appropriate payment statuses for such orders are:

- AWAIT_PAY_INFO
- AWAIT_AUTH
- REQUESTED_AUTH
- REQUEST_CHARGE
- AUTHORIZED, INVOICED
- PAID
- RELEASE_HOLD
- FAILED_AUTH
- FAILED_CHARGE
- VERIFY
- FAILED

Events Raised

The following events are raised by this time-triggered transaction:

Table A–73 Events Raised by the Payment Collection Transaction

Transaction/Event	Key Data	Data Published	Template Support?
INCOMPLETE_PAYMENT_INFORMATION	modifyOrder_dbd.txt	YFS_PAYMENT_COLLECTION.INCOMPLETE_PAYMENT_INFORMATION.xml	Yes
PAYMENT_STATUS	YFS_PAYMENT_COLLECTION.PAYMENT_STATUS_dtd.txt	YFS_PAYMENT_COLLECTION.PAYMENT_STATUS.xml	Yes

Table A–73 Events Raised by the Payment Collection Transaction

Transaction/Event	Key Data	Data Published	Template Support?
ON_LIABILITY_TRANSFER	modifyOrder_dbd.txt	YFS_PAYMENT_COLLECTION.ON_LIABILITY_TRANSFER.xml	Yes
ON_INVOICE_COLLECTION	order_dbd/txt	YFS_CREATE_ORDER_INVOICE.ON_INVOICE_COLLECTION.xml	Yes

A.2.22 Payment Execution

This transaction processes all requests that are pending authorization and charging.

Note: Use this time-triggered transaction for processing all authorization and charge requests.

This transaction requires interfacing with a product that provides financial services.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–74 Payment Execution Attributes for Sales Orders

Attribute	Value
Base Transaction ID	PAYMENT_EXECUTION
Base Document Type	Order
Base Process Type	Order Fulfillment
Abstract Transaction	No
APIs Called	executeCollection()
User Exits Called	collectionCreditCard, collectionOthers, collectionCustomerAcct

Table A–75 *Payment Execution Attributes for Return Orders*

Attribute	Value
Base Transaction ID	PAYMENT_EXECUTION.0003
Base Document Type	Order
Base Process Type	Reverse Logistics
Abstract Transaction	No
APIs Called	executeCollection()
User Exits Called	collectionCreditCard, collectionOthers, collectionCustomerAcct

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–76 *Payment Execution Criteria Parameters*

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
ChargeType	Type of credit card process. Valid values are: <ul style="list-style-type: none"> AUTHORIZATION - Validates the credit card account CHARGE - Applies the charge to the credit card

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–77 Payment Execution Statistics

Statistic Name	Description
NumAuthTransProcessed	Number of authorization transaction processed.
NumAuthTransSuccessfullyProcessed	Number of successful returns from user exit for authorization transaction processed.
NumChargeTransProcessed	Number of charge transaction processed.
NumChargeTransSuccessfullyProcessed	Number of successful returns from user exit for charge transaction processed.
NumCollectionValidations	Number of successful returns from the invoked validate collection user exits.
NumCreditCardCollections	Number of credit card collections.
NumCustomerAccountCollections	Number of successful returns from the customer account collection user exits.
NumOtherCollections	Number of successful returns from the other collection user exits.

Pending Job Count

For this transaction the pending job count is the number of open charge and authorization transactions.

Events Raised

The following events are raised by this time-triggered transaction:

Table A–78 Events Raised by Payment Execution Transaction

Transaction/Event	Key Data	Data Published	Template Support?
CHARGE_FAILED	modifyOrder dbd.txt	PAYMENT_EXECUTION_ CHARGE_FAILED_ dbd.txt	No

This transaction raises events as specified under the `executeCollection()` API in the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

A.2.23 Post Inventory Match

This transaction processes all open records in YFS_INVENTORY_MATCH table and posts the records to a financial system. An open record in the YFS_INVENTORY_MATCH table has the status of 01. After posting, the status is changed to 02.

Use this transaction if any of the configured ship nodes maintain inventory cost.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–79 Post Inventory Match Attributes

Attribute	Value
Base Transaction ID	POST_INVENTORY_MATCH
Base Document Type	General
Base Process Type	General
Abstract Transaction	No
APIs Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–80 Post Inventory Match Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–81 Post Inventory Match Statistics

Statistic Name	Description
NumInventoryMatchPosted	Number of inventory match records posted.

Pending Job Count

For this transaction the pending job count is the number of inventory matches with an open status.

Events Raised

The following events are raised by this time-triggered transaction:

Table A–82 Events Raised by the Post Inventory Match Transaction

Transaction/Event	Key Data	Data Published	Template Support?
POST_INVENTORY_MATCH	POST_INVENTORY_MATCH_dbd.txt	YFS_postInventoryMatch_output.xml	No

A.2.24 Process Order Hold Type

You can create a time-triggered transaction, derived from the PROCESS_ORDER_HOLD_TYPE abstract transaction. It can be configured as the processing transaction for one or more hold types. If an order is associated with a hold type that has a transaction configured as the processing transaction, a record is created in the YFS_TASK_Q table for processing that transaction.

When the processing transaction is triggered, it checks the hold types that it can process based on the hold type configuration. If no hold types can be processed, the YFS_TASK_Q record is deleted. If some hold types can be processed, the processOrderHoldType user exit is invoked with the list of hold types to be processed. The processOrderHoldType user exit returns the list of hold types that can be removed from the order.

The transaction then modifies the order and updates the order hold type list based on the output returned by the processOrderHoldType user exit. If now no hold types can be processed, the YFS_TASK_Q record is deleted. If some hold types can still be processed, YFS_TASK_Q is updated with the next available date.

You can also call the processOrderHoldType user exit to add new hold types or change the status of a hold type that is already applied to an order. For more information about the processOrderHoldType user exit, see the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–83 Process Order Hold Type Attributes

Attribute	Value
Base Transaction ID	PROCESS_ORDER_HOLD_TYPE
Base Document Type	Order
Base Process Type	Order Fulfillment
Abstract Transaction	Yes
APIs Called	changeOrder

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–84 Process Order Hold Type Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Next Task Queue Interval	Optional. Specifies in hours how long a failed task should be suspended before it is considered for reprocessing. Defaults to 5 hours.

Statistics Tracked

None.

Pending Job Count

None

Events Raised

The following events are raised by this time-triggered transaction:

Table A–85 Events Raised by Process Order Hold Type Transaction

Transaction/Event	Raised when...	Key Data	Data Published	Template Support?
ON_SUCCESS	On success	modifyOrder_dbd.txt	YFS_ORDER_CHANGE.ON_SUCCESS.xml	Yes *
ON_HOLD_TYPE_STATUS_CHANGE	The status of a hold type is changed.	modifyOrder_dbd.txt	YFS_ON_HOLD_TYPE_STATUS_CHANGE.xml	Yes
ON_ORDER_LINE_HOLD_TYPE_STATUS_CHANGE	The status of a hold type is changed.	modifyOrder_dbd.txt	YFS_ON_ORDER_LINE_HOLD_TYPE_STATUS_CHANGE.xml	Yes
* Note: Some of the elements and attributes are not template-driven. Refer to the xml for element level details.				

A.2.25 Process Work Order Hold Type

This time-triggered transaction is identical to the [Process Order Hold Type](#) transaction, but it is used for work orders instead.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–86 Process Work Order Hold Type Attributes

Attribute	Value
Base Transaction ID	PROCESS_WO_ORDER_HOLD_TYPE
Base Document Type	Work Order
Base Process Type	VAS Process
Abstract Transaction	Yes
APIs Called	modifyWorkOrder

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–87 Process Work Order Hold Type Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Next Task Queue Interval	Optional. Specifies in hours how long a failed task should be suspended before it is considered for reprocessing. Defaults to 5 hours.

Statistics Tracked

None.

Pending Job Count

None

Events Raised

The following events are raised by this time-triggered transaction:

Table A–88 Events Raised by Process Work Order Hold Type Transaction

Transaction/Event	Raised when...	Key Data	Data Published	Template Support?
ON_SUCCESS	On success	workOrder_dbd.txt	VAS_MODIFY_WORK_ORDER.ON_SUCCESS.xml	Yes *
ON_HOLD_TYPE_STATUS_CHANGE	The status of a hold type is changed.	workOrder_dbd.txt	VAS_ON_HOLD_TYPE_STATUS_CHANGE.xml	Yes
* Note: Some of the elements and attributes are not template driven. Refer to the xml for elements level details.				

A.2.26 Publish Negotiation Results

This transaction publishes the negotiated terms to the order.

Use this transaction in environments where an order must go through a negotiation phase.

Note: This transaction needs to be run after negotiation is completed.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–89 Publish Negotiation Results Attributes

Attribute	Value
Base Transaction ID	PUBLISH_ORD_NEGOTIATION
Base Document Type	Order
Base Process Type	Order Negotiation
Abstract Transaction	No
APIs Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–90 Publish Negotiation Results Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Next Task Queue Interval	Optional. Specifies in hours how long a failed task should be suspended before it is considered for reprocessing. Defaults to 5 hours.

Statistics Tracked

The following statistics are tracked for this transaction:

Pending Job Count

Table A–91 Publish Negotiation Results Statistics

Statistic Name	Description
NumNegotiationsProcessed	Number of negotiations processed.
NumNegotiationsPublished	Number of negotiations published.

For this transaction the pending job count is the number of records available to be processed by the transaction with the AVAILABLE_DATE value less than or equal to (\leq) the current date value in the YFS_Task_Q table.

Events Raised

The following events are raised by this time-triggered transaction:

Table A–92 Events Raised by Publish Negotiation Results Transaction

Base Transaction	Raised when...	Key Data	Data Published	Template Support?
PUBLISH_ORD_NEGOTIATION/ON_SUCCESS	On success	Negotiation_dbd.txt	YCP_getNegotiationDetails_output.xml	Yes *
RECEIVE_ORD_NEGOTIATION/ON_SUCCESS	On success, when DocumentType is 0001, EntityType is ORDER.	Number of concurrent time-triggered transactions running.	receiveOrderNegotiation_dbd.txt	No
* Note: Template used for this event is the same template used by the <code>getNegotiationDetails()</code> API to form the output XML.				

A.2.27 Release

This transaction releases orders to specific ship nodes, making sure that the scheduled ship nodes have enough inventory to process the order.

This transaction should be invoked after the scheduling process.

For more details, see the information provided under the `releaseOrder()` API in the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

Important: Sterling Commerce recommends that if you run the combined 'Schedule and Release' agent, you do not also run the individual Schedule or the individual Release agents.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–93 Release Attributes

Attribute	Value
Base Transaction ID	RELEASE
Base Document Type	Order
Base Process Type	Order Fulfillment
APIs Called	<code>releaseOrder()</code>

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–94 Release Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
IgnoreReleaseDate	Optional. Determines whether the schedule process should ignore line release date criteria. Valid values are: <ul style="list-style-type: none"> Y - Releases line quantities regardless of release date criteria N - Default value. Releases line quantities only after release date criteria have been met.
CheckInventory	Optional. Determine whether inventory should be checked. Valid values are: <ul style="list-style-type: none"> Y - Default value. Inventory needs to be checked. N - Inventory does not need to be checked.
Next Task Queue Interval	Optional. Specifies in hours how long a failed task should be suspended before it is considered for reprocessing. Defaults to 5 hours.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–95 Release Criteria Statistics

Statistic Name	Description
NumFutureDateFailures	Number of orders did not attempt to release because of future date failures.
NumOrdersAttempted	Number of orders attempted to release.
NumOrdersCannotBeProcessedFailures	Number of orders did not attempt to release because of cannot be processed failures.
NumOrdersProcessed	Number of orders processed.
NumOrdersReleased	Number of orders released.
NumOrdersBackordered	Number of orders backordered.
NumOrderLinesReleased	Number of order lines released.
NumOrderLinesBackordered	Number of order lines backordered.
NumReleasesCreated	Number of order releases created.
NumOrdersCannotBeProcessedFailures	Number of orders that were not released due to process failure.

Note: If the release process results in splitting of an order line, NumOrderLinesReleased, NumOrderLinesBackordered, and NumOfReleasesCreated may result in more than one count.

Pending Job Count

For this transaction the pending job count is the number of records available to be processed by the transaction with the AVAILABLE_DATE value less than or equal to (\leq) the current date value in the YFS_Task_Q table, if tasks on hold are not ready to be processed.

Events Raised

This transaction raises events as specified under the `releaseOrder()` API in the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

A.2.28 Route Shipment

This time-triggered transaction is used to route shipments and belongs to the Outbound Shipment pipeline. It assigns the Carrier and Carrier Service codes for the shipment based on the Routing Guide configured.

The Route Shipment transaction either includes shipments in an existing load or creates a new load and includes the shipments in it.

Shipments can be consolidated to a load, only if the following conditions are met:

- Expected Ship Date - The expected ship date of the shipments must be less than or equal to the must ship before date of the load.
- Expected Load Departure Date - The expected load departure date must be less than or equal to the must ship before date of the shipments in the load.

The must ship before date is a date computed for the load, based on all shipments present in the load. For example, if a load has three shipments with their must ship before dates as 12.22.2005, 12.12.2005, and 12.19.2005 respectively, then the must ship before date of the load is computed as 12.12.2005, as it is the earliest of the three dates.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–96 Route Shipment

Attribute	Value
Base Transaction ID	ROUTE_SHIPMENT.0001
Base Document Type	Order
Base Process Type	ORDER_DELIVERY
Abstract Transaction	No
APIs Called	None
User Exits Called	com.yantra.ydm.japi.ue.YDMSOverrideDetermineRoutingUE com.yantra.ydm.japi.ue.YDMBeforeDetermineRoutingUE

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–97 Route Shipment Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
EnterpriseCode	Optional. Enterprise for which the Route Shipment transaction needs to be run. If not passed, then all enterprises are monitored.
Next Task Queue Interval	Optional. Specifies in hours how long a failed task should be suspended before it is considered for reprocessing. Defaults to 5 hours.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–98 Route Shipment Statistics

Statistic Name	Description
NumRouted	Number of shipments routed.

Pending Job Count

For this transaction the pending job count is the number of records representing the unheld orders that are available to be processed by the transaction with the AVAILABLE_DATE value less than or equal to (\leq) the current date value in the YFS_Task_Q table.

Events Raised

The following events are raised by this time-triggered transaction:

Table A–99 Events Raised by the Route Shipment Transaction

Transaction/Event	Key Data	Data Published	Template Support?
ON_SUCCESS	shipment_dbd.txt	YDM_ROUTE_SHIPMENT.ON_SUCCESS.xml	Yes
ON_FAILURE	shipment_dbd.txt	YDM_ROUTE_SHIPMENT.ON_FAILURE.xml	Yes

However, note that the template name would read <TransactionId>.ON_SUCCESS.xml.

A.2.29 Schedule

This transaction schedules orders to specific ship nodes making sure that the scheduled ship nodes have enough inventory to process the order.

Run this transaction after order creation.

Important: Sterling Commerce recommends that if you run the combined 'Schedule and Release' agent, you do not also run the individual Schedule or the individual Release agents.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–100 Schedule Attributes

Attribute	Value
Base Transaction ID	SCHEDULE
Base Document Type	Order
Base Process Type	Order Fulfillment
APIs Called	scheduleOrder()

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–101 *Schedule Criteria Parameters*

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
OptimizationType	Optional. Determines the optimization rules to apply to the scheduling process. Valid values are: <ul style="list-style-type: none"> • 01 - Optimize on date (Default) • 02 - Optimize on ship node priority • 03 - Optimize on number of shipments
OrderFilter	Optional. Determines the types of orders to filter. Possible values are: <ul style="list-style-type: none"> • A - All orders (Default) • B - Backorders only • N - New orders only
ScheduleAndRelease	Optional. Notify the schedule process to release all releasable line quantities. Valid values are: <ul style="list-style-type: none"> • Y - Releases successfully scheduled line quantities. • N - Default value. Only schedules line quantities. <p>Note: Enabling this parameter does not validate hold types configured for the release transaction.</p>

Table A–101 Schedule Criteria Parameters

Parameter	Description
IgnoreReleaseDate	Optional. Determines whether the schedule process should ignore line release date criteria. Valid values are: <ul style="list-style-type: none">• Y - Releases line quantities regardless of release date criteria.• N - Releases lines quantities only after release date criteria have been met. Default.
Next Task Queue Interval	Not used. This agent updates a failed task so that it is suspended for the back order retry interval setup in the appropriately scheduled rule.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–102 *Schedule Statistics*

Statistic Name	Description
NumFutureDateFailures	<p>Number of orders that the Sterling Multi-Channel Fulfillment Solution did not attempt to schedule because of future date failures.</p> <p>Failures can be caused by any of the following:</p> <ul style="list-style-type: none"> • If the OrderFilter is "B" (Backorders Only) and there are no backordered or unscheduled lines. • If the OrderFilter is "N" (New orders Only) and there are some backordered or unscheduled lines. • If order has order lines within only backordered or unscheduled status and the status modify timestamp is after the current time - the back order wait period specified in the scheduling rule.
NumOrdersAttempted	<p>Number of orders attempted to schedule. This statistic does not include the values for NumFutureDateFailures and NumOrdersCannotBeProcessedFailures statistics.</p>
NumOrderLinesReleased	<p>Number of order lines that have been released.</p>

Table A-102 Schedule Statistics

Statistic Name	Description
NumOrdersCannotBeProcessedFailures	<p>Number of orders that the Sterling Multi-Channel Fulfillment Solution did not attempt to schedule because of cannot be processed failures.</p> <p>Failures can be caused by any of the following:</p> <ul style="list-style-type: none"> • The result of the YFSCheckOrderBeforeProcessingUE user exit returns as false. • The Order has the HoldFlag attribute set to 'Y'. • The Order has the SaleVoided attribute set to 'Y'. • The Order does not have PaymentStatus as AUTHORIZED, INVOICED, PAID, nor NOT_APPLICABLE.
NumOrdersCreated	Number of orders created. This also includes the number of procurement orders created.
NumOrderLinesCreated	Number of order lines created.
NumOrdersProcessed	Number of orders processed.
NumOrdersScheduled	<p>Number of orders that have at least one line that was scheduled.</p> <p>Note: This includes scheduled lines in any status except BACKORDER.</p>
NumOrdersProcOrdersCreated	Number of procurement orders created.
NumWorkOrdersCreated	Number of work orders created.
NumOrdersBackordered	Number of orders backordered.
NumOrderLinesScheduled	Number of order lines scheduled.
NumOrderLinesBackordered	Number of order lines backordered.
NumReleasesCreated	Number of order releases created.

Pending Job Count

For this transaction the pending job count is the number of records representing the unheld orders that are available to be processed by the transaction with the AVAILABLE_DATE value less than or equal to (\leq) the current date value in the YFS_Task_Q table, if tasks on hold are not ready to be processed.

Events Raised

This transaction raises events as specified under the `scheduleOrder()` API in the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

A.2.30 Send Invoice

This transaction publishes invoice data that can be directed to an external accounts receivable system.

In environments that require an interface with accounts receivable systems, this transaction needs to be scheduled. This transaction raises an event for an invoice based on the following configuration at the following times in the order lifecycle:

- Publish invoice at shipment creation - This implies that your accounts payable system takes care of payment collection. Invoices can be published as soon as they are created.
- Publish invoice after payment collection - This implies that the Sterling Multi-Channel Fulfillment Solution Consoles take care of the payment collection. When payment is in the AT_COLLECT status and the payment is not from an external system, an invoice is published only if the entire payment amount is collected. If the payment is in the AT_CREATE status or the payment is from an external system, the invoice is published unconditionally.

Note: Many of this transaction's elements and attributes are template driven. Refer to the XML for element level details.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–103 Send Invoice Attributes

Attribute	Value
Base Transaction ID	SEND_INVOICE
Base Document Type	Order
Base Process Type	Order Fulfillment
Abstract Transaction	No
APIs Called	getOrderInvoiceDetails()

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–104 Send Invoice Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–105 Send Invoice Statistics

Statistic Name	Description
NumInvoicesSent	Number of invoices sent.

Pending Job Count

For this transaction the pending job count is the number of order invoices in created ("00") status.

Events Raised

The following events are raised by this time-triggered transaction:

Table A–106 Events Raised by the Send Invoice Transaction

Transaction/Event	Key Data	Data Published	Template Support?
PUBLISH_INVOICE_DETAIL	modifyOrder_dbd.txt and sendInvoice_dbd.txt	YFS_getOrderInvoiceDetails_output.xml	Yes

Additional events may be raised by the `getOrderInvoiceDetails()` API. For detailed information about the events, see the details provided under this API in the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

A.2.31 Send Item Changes

In integrated environments, this transaction publishes item data changes that are directed to the Sterling Multi-Channel Selling Solution.

When item changes occur in the Sterling Multi-Channel Fulfillment Solution, they need to be communicated to the Sterling Multi-Channel Selling Solution.

The business process may require the synchronization of items all at once in a batch. For example, at the end of each business day, the `sendItemChanges` agent can be configured to synchronize items based on the synchronization logic. This transaction retrieves all items that are not logical kit or dynamic physical kit items and whose `SyncTS` is null or `MaxModifyTS` is greater than the `SyncTS`.

Note: The `MaxModifyTS` of an item is updated with the current timestamp whenever an item is modified. The transaction then retrieves detailed information about those items and raises the `ON_SUCCESS` event. This event should be configured to invoke the Send Item Changes action.

For more information about how this integration is implemented, see the *Sterling Selling and Fulfillment Suite Integration Guide*.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–107 *Send Item Changes Attributes*

Attribute	Value
Base Transaction ID	SEND_ITEM_CHANGES
Base Document Type	None
Base Process Type	General
Abstract Transaction	No
APIs Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–108 *Send Item Changes Criteria Parameters*

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Organization Code	Optional. The organization from which items are synchronized. This field is blank by default.

Statistics Tracked

None.

Pending Job Count

For this transaction the pending job count is the number of items requiring synchronization. This is determined for product items that are not logical kit or dynamic physical kit items and whose SyncTS is null or MaxModifyTS is greater than the SyncTS.

Events Raised

The following events are raised by this time-triggered transaction:

Table A-109 *Events Raised by the Send Item Changes Transaction*

Transaction/Event	Key Data	Data Published	Template Support?
ON_SUCCESS	None	YCM_SEND_ITEM_CHANGES_ON_SUCCESS.XML	Yes

A.2.32 Send Customer Changes

In integrated environments, this transaction publishes customer data changes that are directed to the Sterling Multi-Channel Selling Solution.

When customer changes occur in the Sterling Multi-Channel Fulfillment Solution, they need to be communicated to the Sterling Multi-Channel Selling Solution.

The business process may require the synchronization of customers all at once in a batch. For example, at the end of each business day, the `sendItemChanges` agent can be configured to synchronize items based on the synchronization logic. This transaction retrieves all customers that are consumers, have a user ID present, and are required to synchronize. This transaction can also be used to complete the initial synchronization of users between the two systems. For example, if the Sterling Multi-Channel Selling Solution is already in place, and the Sterling Multi-Channel Fulfillment Solution is then added, the `SendCustomerChanges` agent synchronizes the users from the Sterling Multi-Channel Selling Solution.

The `sendCustomerChanges` agent also serves as a backup mechanism. If a customer synchronization event fails, the agent automatically retries the synchronization after a specified amount of time.

Note: The MaxModifyTS of an customer is updated with the current timestamp whenever an customer is modified, whenever syncTS is less than MaxModifyTS, or when syncTS is null. The transaction then retrieves detailed information about those customers and raises the ON_SUCCESS event. This event should be configured to invoke the Send Customer Changes action.

For more information about how this integration is implemented, see the *Sterling Selling and Fulfillment Suite Integration Guide*.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–110 Send Customer Changes Attributes

Attribute	Value
Base Transaction ID	SEND_CUSTOMER_CHANGES
Base Document Type	None
Base Process Type	General
Abstract Transaction	No
APIs Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–111 Send Customer Changes Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.

Table A–111 Send Customer Changes Criteria Parameters

Parameter	Description
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Organization Code	Optional. The organization from which customers are synchronized. This field is blank by default.

Statistics Tracked

None.

Pending Job Count

For this transaction the pending job count is the number of customers requiring synchronization. This is determined for customers that are consumers, have a user ID present, and are required to synchronize.

Events Raised

The following events are raised by this time-triggered transaction:

Table A–112 Events Raised by the Send Customer Changes Transaction

Transaction/Event	Key Data	Data Published	Template Support?
SEND_CUSTOMER_CHANGES.ON_SUCCESS	None	YSC_SEND_CUSTOMER_CHANGES.ON_SUCCESS.XML	Yes

A.2.33 Send Order

This transaction tries to raise the ON_SUCCESS event for an order whose OrderHeaderKey is stored in the task queue object. The event is raised only if all of the order lines of the order reach particular status(es) completely. That is, the entire ORDERED_QTY of each line must be in the particular status(es). In addition to raising the event, the line statuses are also changed to the drop statuses, corresponding to the pickup statuses. The SendOrder transaction, derived from the abstract transaction SEND_ORDER, should have the event, pickup, and drop statuses configured. For more information, see the details provided under

the `sendOrder()` API in the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

If an order needs to be communicated to a third party, use this transaction.

Note: The TransactionKey posted in the task object must be an instance of the Abstract Transaction SEND_ORDER for the ProcessType associated with the Order. Otherwise, an exception is thrown.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–113 Send Order Attributes

Attribute	Value
Base Transaction ID	SEND_ORDER
Base Document Type	Order
Base Process Type	Order Fulfillment
Abstract Transaction	Yes
APIs Called	<code>sendOrder()</code>

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–114 Send Order Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Next Task Queue Interval	Optional. Specifies in hours how long a failed task should be suspended before it is considered for reprocessing. Defaults to 5 hours.

Statistics Tracked

None.

Pending Job Count

For this transaction the pending job count is the number of records available to be processed by the transaction with the AVAILABLE_DATE value less than or equal to (\leq) the current date value in the YFS_Task_Q table.

Events Raised

This transaction raises events as specified under the `sendOrder()` API in the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

A.2.34 Send Release

The Send Release Agent dispatches releases to ship nodes.

Attributes

The following are the attributes for this time-triggered transaction:

Table A-115 Send Release Attributes

Attribute	Value
Transaction Name	Send Release
Transaction ID	SHIP_ADVICE
Base Process Type	Order Fulfillment
Abstract Transaction	No
APIs Called	com.yantra.yfs.agent.YFSWMSShipAdviceAgent

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–116 Send Release Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Next Task Queue Interval	Optional. Specifies in hours how long a failed task should be suspended before it is considered for reprocessing. Defaults to 5 hours.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–117 Send Release Statistics

Statistic Name	Description
NumReleasesProcessed	Number of order releases processed.
NumReleasesSent	Number of order releases sent.

Pending Job Count

For this transaction the pending job count is the number of records available to be processed by the transaction with the AVAILABLE_DATE value less than or equal to (\leq) the current date value in the YFS_Task_Q table.

Events Raised

The following events are raised by this time-triggered transaction:

Table A–118 Events Raised by the Send Release Transaction

Transaction/Event	Data Published
PUBLISH_SHIP_ADVICE	YFS_publishShipAdvice.xml

A.2.35 Start Order Negotiation

This transaction creates the negotiations for orders that are configured to go through the negotiation process.

Use this transaction in environments where an Order needs to go through a Negotiation phase before it is released.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–119 Start Order Negotiation Attributes

Attribute	Value
Base Transaction ID	START_ORD_NEGOTIATION
Base Document Type	Order
Base Process Type	Order Fulfillment
Abstract Transaction	No
APIs Called	<code>createNegotiation()</code>
User Exits Called	YCPBeforeCreateNegotiationUE, YCPGetNegotiationNoUE

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–120 Start Order Negotiation Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Next Task Queue Interval	Optional. Specifies in hours how long a failed task should be suspended before it is considered for reprocessing. Defaults to 5 hours.
Node	Required. The warehouse management ship node for which records are being processed.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–121 *Start Order Negotiation Statistics*

Statistic Name	Description
NumOrdersProcessed	Number of orders processed.
NumNegotiationsCreated	Number of negotiations created.

Pending Job Count

For this transaction the pending job count is the number of records available to be processed by the transaction with the `AVAILABLE_DATE` value less than or equal to (`<=`) the current date value in the `YFS_Task_Q` table.

Events Raised

This transaction raises events as specified under the `createNegotiation()` API in the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

A.2.36 PopulateOwnershipTransferSummary

This method updates the `YFS_OWNERSHIP_TRANSFER_SUMMARY` table.

This transaction updates the `YFS_OWNERSHIP_TRANSFER_SUMMARY` table by checking the records in `YFS_INV_OWN_TRANSFER_RCD` table.

It also updates the `IS_STATISTICS_UPDATED` to 'Y' in `YFS_INV_OWN_TRANSFER_RCD` table after the record has been used by the transaction.

Attributes

Following are the attributes for this time-triggered transaction:

Class Process
Table A–122 *YFSPopulateOwnershipTransfer Attributes*

Attribute	Value
Base Transaction ID	POPULATE_OWN_TRANS_SUMM
Base Document Type	General
Base Process Type	General

Abstract Transaction	No
APIs Called	None

Criteria Parameters

Following are the criteria parameters for this transaction:

Table A–123 *YFSPopulateOwnershipTransfer Criteria Parameters*

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, which is the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.

Statistics Tracked

None

Pending Job Count

None

Events Raised

None

A.3 Time-Triggered Purge Transactions

There are several transactions that you can use to purge your database tables at specific time intervals.

Purge transactions determine when a table should be purged by determining the current date and subtracting the retention days specified by the purge. If the timestamp on the table is less than or equal to (current day - retention days) the table is purged.

Note: In some cases, a purge may look at another field other than the table's timestamp. These are pointed out in the documentation.

Note: When an entity is being purged, the related or dependent information that is present in other tables should be taken into consideration for purging along with it. For example, if a sales order with live shipments is being purged, any cross reference to that order is not accurate in the Order Shipment Console.

Note: Some of the statistics collected and tracked in Release 8.0 for time-triggered transactions, monitors, and integration and application servers may change with the next release of the Sterling Multi-Channel Fulfillment Solution.

Note: All Time-Triggered Purge Transactions have a `CollectPendingJobs` criteria parameter. If this parameter is set to `N`, the agent does not collect information on the pending jobs for that time-triggered transaction. This pending job information is used for monitoring the monitor in the Sterling Multi-Channel Fulfillment Solution System Management Console.

By default, `CollectPendingJobs` is set to `Y`. It can be helpful to set it to `N` if one particular time-triggered transaction is performing a significant amount of `getPendingJobs` queries, and the overhead cost is too high.

A.3.1 Purge Strategy

The following recommendations should be taken into consideration when planning a purge strategy for each purge transaction:

- Test purges by setting Live to 'N'.
- Turn on logging to test what is purged.
- Set up purge traces in the System Management Console and analyze the information.

A.3.2 Configuring Purge Transaction Log Files

You can configure purges to write log files to a directory you specify. Each time you run a particular purge, new data is appended to this file. If no file exists, one is created.

To specify a purge log file directory:

1. Configure the `yfs.purge.path` property in the `<INSTALL_DIR>/properties/customer_overrides.properties` file. For example, on UNIX you might specify the log files to be written to the `/app/yfs/logs/purges` directory.

For additional information about modifying properties and the `customer_overrides.properties` file, see the *Sterling Multi-Channel Fulfillment Solution Installation Guide*.

2. Run the `<INSTALL_DIR>/bin/setupfiles.sh` script on UNIX, or the `<INSTALL_DIR>/bin/setupfiles.cmd` script on Windows.

A.3.3 Available Purges

This section contains details of all purge transactions in alphabetical order. The time-triggered purge transactions are:

- [Alert Purge](#)
- [Capacity Purge](#)
- [Delivery Plan Purge](#)
- [Export Table Purge](#)
- [Import Table Purge](#)
- [Inventory Audit Purge](#)
- [Inventory Purge](#)
- [Inventory Supply Temp Purge](#)
- [Item Audit Purge](#)

- Load History Purge
- Load Purge
- Manifest Purge

- Shipment Purge
- Shipment Statistics Purge
- Statistics Purge
- User Activity Purge
- User Activity Audit Purge
- Work Order History Purge
- Work Order Purge
- YFS Audit Purge
- YFSInventoryOwnershipAudit Purge

A.3.3.1 Alert Purge

This purge removes alert data from the system. This reduces the load on frequently accessed tables. The alert should be marked as CLOSED.

Any enterprise that uses the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

You can use purge codes pseudo-logic to analyze purges. If the following conditions are met, an alert is picked up for purge:

- The alert should be in "Closed" status.
- An inactive alert should have the resolution date earlier than or equal to the current date minus the purge criteria's retention days.
- If the alert is in "Open" status, the number of expiration days should be greater than 0, and the modified timestamp should be less than the current date minus the number of expiration days.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–124 Alert Console Purge Attributes

Attribute	Value
Base Transaction ID	INBOXPRG
Base Document Type	General
Base Process Type	General
Abstract Transaction	No
APIs Called	None
User Exits Called	YFSBeforePurgeUE

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–125 Alert Console Purge Criteria Parameters

Criteria Parameters	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
CollectPendingJobs	If this parameter is set to N, the agent does not collect information on the pending jobs for this monitor. This pending job information is used for monitoring the monitor in the Sterling Multi-Channel Fulfillment Solution System Management Console.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
EnterpriseCode	Optional. The organization for which the Alert Purge needs to be run. If not passed, then all enterprises are monitored.
ExceptionsWithBlank EnterpriseOnly	Optional. If the parameter is set to Y, the agent purges only those exceptions that has blank enterprise code. In this case, the value set for the EnterpriseCode criteria parameter is ignored.
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Moves qualifying records from the regular tables listed under Tables Purged to the corresponding history tables. N - Test mode. Determines the rows that are moved to history tables without actually moving them.
PurgeCode	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds with the PurgeCode used in Business Rules Purge Criteria.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–126 Alert Console Purge Statistics

Statistic Name	Description
NumInboxPurged	Number of inbox records purged.

Pending Job Count

For this transaction the pending job count is the number of records that can be purged from the YFS_INBOX table.

Events Raised

None.

Tables Purged

YFS_INBOX

YFS_INBOX_NOTES

YFS_INBOX_AUDIT

YFS_INBOX_REFERENCES

A.3.3.2 Capacity Purge

This purge removes capacity data from the system. This reduces the load on frequently accessed tables.

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

You can use purge codes pseudo-logic to analyze purges. If the following conditions are met, a capacity data gets picked up for purge:

- All resource pool standard capacity periods with effective to date earlier than or equal to the current date minus the purge criteria's retention days.
- All resource pool overridden capacity with the capacity date earlier than or equal to the current date minus the purge criteria's retention days.
- All resource pool capacity consumption with consumption date less than or equal to the current date minus the purge criteria's retention days.

- All resource pool capacity consumption details where appointment date is earlier than the system date minus the purge criteria's retention days (or ManualReservationPurgeLeadDays for manually created reservations).
- All resource pool capacity consumption details where expiration date has passed and reservation Id is not blank.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–127 Capacity Purge Attributes

Attribute	Value
Base Transaction ID	CAPACITYPRG
Base Document Type	General
Base Process Type	General
Abstract Transaction	No
APIs Called	None
User Exits Called	YFSBeforePurgeUE

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–128 Capacity Purge Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.

Table A–128 Capacity Purge Criteria Parameters

Parameter	Description
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Moves qualifying records from the regular tables listed under Tables Purged to the corresponding history tables. N - Test mode. Determines the rows that are moved to history tables without actually moving them.
PurgeCode	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds with the PurgeCode used in Business Rules Purge Criteria.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–129 Capacity Purge Statistics

Statistic Name	Description
NumStdCapacityPeriodsPurged	Number of standard capacity periods purged.
NumCapacityOverridesPurged	Number of capacity overrides purged.
NumCapacityConsumptionsPurged	Number of capacity consumptions purged.

Pending Job Count

For this transaction the pending job count is the total number of records that can be purged from the YFS_RES_POOL_STD_CAPCTY_PERD, YFS_RES_POOL_CAPCTY_OVERRIDE, YFS_RES_POOL_CONSMPTN_DTLS and YFS_RES_POOL_CAPCTY_CONSMPTN tables.

Events Raised

None.

Tables Purged

The YFS_RES_POOL_STD_CAPCTY_PERD table is purged when $\text{EFFECTIVE_TO_DATE} \leq (\text{CurrentDate} - \text{LeadDays})$

The YFS_RES_POOL_CAPCTY_OVERRIDE table is purged when $\text{CAPACITY_DATE} \leq (\text{CurrentDate} - \text{LeadDays})$

The YFS_RES_POOL_CAPCTY_CONSMPTN table is purged when $\text{CONSUMPTION_DATE} \leq (\text{CurrentDate} - \text{LeadDays})$, or if a manual reservation is taken, when $\text{CONSUMPTION_DATE} \leq (\text{CurrentDate} - \text{Manual Reservation Retention Days})$. When this table is purged, YFS_RES_POOL_CONSMPTN_DTLS is also purged.

The YFS_RES_POOL_CONSMPTN_DTLS table is purged when $\text{RESERVATION_EXPIRATION_DATE} \leq (\text{CurrentDate} - \text{LeadDays})$

A.3.3.3 Delivery Plan Purge

This purge deletes delivery plans after they have completed their typical life-cycle. It purges all the delivery plans that have been marked as 'Closed' for a period greater than the retention days specified in the criteria parameters and those that do not have any shipments or loads. The order should have been moved to history before the lead time setup.

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

You can use purge codes pseudo-logic to analyze purges. If the following conditions are met, a delivery plan is picked up for purge:

- The delivery plan should be in the "Closed" status.
- The delivery plan should not be associated with any load or shipment.
- All orders associated with the delivery plan should be purged.
- The last modification performed on the delivery plan should fall before the lead time setup.

Note: All the loads and shipments that are associated with the delivery plans should have been purged before running this purge agent.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–130 Delivery Plan Purge Attributes

Attribute	Value
Base Transaction ID	DELIVERYPLANPRG
Base Document Type	Load
Base Process Type	Load Execution
Abstract Transaction	No
APIs Called	None
User Exits Called	YFSBeforePurgeUE

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–131 Delivery Plan Purge Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
EnterpriseCode	Optional. Enterprise for which the Delivery Plan Purge needs to be run. If not passed, then all enterprises are monitored.

Table A–131 *Delivery Plan Purge Criteria Parameters*

Parameter	Description
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Moves qualifying records from the regular tables listed under Tables Purged to the corresponding history tables. N - Test mode. Determines the rows that are moved to history tables without actually moving them.
PurgeCode	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds with the PurgeCode used in Business Rules Purge Criteria.
BatchDelete	Required. The method by which all records are deleted from the table. Valid values are: <ul style="list-style-type: none"> Y - Default value. Records are deleted in batches. N - Records are deleted one by one.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–132 *Delivery Plan Purge Statistics*

Statistic Name	Description
NumDeliveryPlansPurged	Number of delivery plans purged.

Pending Job Count

For this transaction the pending job count is the number of records that can be purged from the YFS_Delivery_Plan table.

Events Raised

None.

Tables Purged

YFS_DELIVERY_PLAN

A.3.3.4 Export Table Purge

This purge removes export table data from the system. This reduces the load on frequently accessed tables.

You can use purge codes pseudo-logic to analyze purges. If the following conditions are met, a YFS_EXPORT table is picked up for purge:

- YFS_EXPORT records should be marked as processed (Status = 10).
- The last modified time should fall before the lead time setup.

Note: This purge only reads the rules defined by the hub. Enterprise overridden rules are not considered. This purge should be single threaded when you run it in batch delete mode(BatchDelete=Y).

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–133 *Export Table Purge Attributes*

Attribute	Value
Base Transaction ID	EXPORTTBLPRG
Base Document Type	General
Base Process Type	General
Abstract Transaction	No
APIs Called	None
User Exits Called	YFSBeforePurgeUE

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–134 *Export Table Purge Criteria Parameters*

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Moves qualifying records from the regular tables listed under Tables Purged to the corresponding history tables. N - Test mode. Determines the rows that are moved to history tables without actually moving them.
BatchDelete	Required. The method by which all records are deleted from the table. Valid values are: <ul style="list-style-type: none"> Y - Default value. Records are deleted in batches. N - Records are deleted one by one.
PurgeCode	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds with the PurgeCode used in Business Rules Purge Criteria.
CollectPendingJobs	If this parameter is set to "N", the agent does not collect information on the pending jobs for this monitor. This pending job information is used for monitoring the monitor in the Sterling Multi-Channel Fulfillment Solution System Management Console.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–135 Export Table Purge Statistics

Statistic Name	Description
NumExportsPurged	Number of exports purged.

Pending Job Count

For this transaction the pending job count is the number of records that can be purged from the YFS_Export table.

Events Raised

None.

Tables Purged

YFS_EXPORT

A.3.3.5 Import Table Purge

This purge removes import table data from the system. This reduces the load on frequently accessed tables.

You can use purge codes pseudo-logic to analyze purges. If the following conditions are met, a YFS_IMPORT table is picked up for purge:

- YFS_IMPORT records should be marked as processed (Status = "10").
- The "last modified time" should fall before the lead time setup.

Note: This purge only reads the rules defined by the hub. Enterprise overridden rules are not considered. This purge should be single threaded when you run it in batch delete mode(BatchDelete=Y).

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

Attributes

The following are the attributes for this time-triggered transaction:

Attribute	Value
Base Transaction ID	IMPORTTBLPRG
Base Document Type	General
Base Process Type	General
Abstract Transaction	No
APIs Called	None
User Exits Called	YFSBeforePurgeUE

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–137 Import Table Purge Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Moves qualifying records from the regular tables listed under Tables Purged to the corresponding history tables. N - Test mode. Determines the rows that are moved to history tables without actually moving them.
BatchDelete	Required. The method by which all records are deleted from the table. Valid values are: <ul style="list-style-type: none"> Y - Default value. Records are deleted in batches. N - Records are deleted one by one.

Table A–137 Import Table Purge Criteria Parameters

Parameter	Description
PurgeCode	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds with the PurgeCode used in Business Rules Purge Criteria.
CollectPendingJobs	If this parameter is set to "N", the agent does not collect information on the pending jobs for this monitor. This pending job information is used for monitoring the monitor in the Sterling Multi-Channel Fulfillment Solution System Management Console.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–138 Import Table Purge Statistics

Statistic Name	Description
NumImportsPurged	Number of import tables purged.

Pending Job Count

For this transaction the pending job count is the number of records that can be purged from the YFS_Import table.

Events Raised

None.

Tables Purged

YFS_IMPORT

A.3.3.6 Inventory Audit Purge

This purge removes inventory audit data from the system. This reduces the load on frequently accessed tables.

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

All inventory audits of the provided organization with modify timestamp earlier than the current date minus the purge criteria's retention days can be configured to be picked up by the Inventory Audit Purge.

You can use purge codes pseudo-logic to analyze purges. If the following condition is met, an inventory audit record is picked up for purge:

- The inventory audit record's last modification is earlier than the current timestamp minus the retention days.

Note: Number of threads for this purge's agent criteria details must be set to 1. For more information about agent criteria, see the *Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide*.

Important: The Inventory Audit purge does not purge any records under 60 days old, even if configured to do so.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–139 Inventory Audit Purge Attributes

Attribute	Value
Base Transaction ID	INVENTORYAUDITPRG
Base Document Type	General
Base Process Type	General
Abstract Transaction	No
APIs Called	None
User Exits Called	YFSBeforePurgeUE

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–140 Inventory Audit Purge Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
EnterpriseCode	Optional. The inventory organization for which the Inventory Audit Purge needs to be run. If not passed, then all enterprises are monitored.
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Moves qualifying records from the regular tables listed under Table Purged to the corresponding history tables. N - Test mode. Determines the rows that are moved to history tables without actually moving them.
PurgeCode	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds with the PurgeCode used in Business Rules Purge Criteria.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–141 Inventory Audit Statistics

Statistic Name	Description
NumInventoryAuditsPurged	Number of inventory audits purged.

Pending Job Count

For this transaction the pending job count is the number of records that can be purged from the YFS_Inventory_Audit table.

Events Raised

None.

Table Purged

YFS_INVENTORY_AUDIT

A.3.3.7 Inventory Purge

This purge removes inventory data from the system. This reduces the load on frequently accessed tables. This purge does not take retention days into account when purging.

You can use purge codes pseudo-logic to analyze purges.

For YFS_INVENTORY_SUPPLY, if the following conditions are met, an inventory supply is picked up for purge:

- Supply record has the same availability type as the node. For example, TRACK or INFINITE.
- Supply record has 0 quantity.
- Supply record does not contain the supply type "INFO".

For YFS_INVENTORY_DEMAND, if the following conditions are met, an inventory demand is picked up for purge:

- Demand record has 0 quantity or lesser.
- Demand record does not have demand details as well as matching demand record in YFS_INVENTORY_DEMAND_ADDNL tables.

For YFS_INVENTORY_TAG, it is purged if the INVENTORY_TAG_KEY is not used by any of the existing supply and demand.

For YFS_INVENTORY_RESERVATION, an inventory reservation is picked up for purge if it meets the following conditions:

- Inventory reservation record has 0 quantity or ship date is earlier than the system date minus the purge criteria's retention days.

For YFS_INVENTORY_NODE_CONTROL, it is purged if the INV_PIC_INCORRECT_TILL_DATE is earlier than the current time stamp minus the purge criteria's retention days.

For YFS_IBA_TRIGGER, it is purged if IBA_REQUIRED = 'N', IBA_RUN_REQUIRED = 'N', and LAST_IBA_PROCESSED_TS is earlier than the current time stamp minus the purge criteria's retention days.

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–142 Inventory Purge Attributes

Attribute	Value
Base Transaction ID	INVENTORYPRG
Base Document Type	General
Base Process Type	General
Abstract Transaction	No
APIs Called	None
User Exits Called	YFSBeforePurgeUE

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–143 Inventory Purge Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.

Table A–143 Inventory Purge Criteria Parameters

Parameter	Description
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Moves qualifying records from the regular tables listed under Tables Purged to the corresponding history tables. N - Test mode. Determines the rows that are moved to history tables without actually moving them.
PurgeCode	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds with the PurgeCode used in Business Rules Purge Criteria.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–144 Inventory Purge Statistics

Statistic Name	Description
NumInventoryDemandsPurged	Number of inventory demands purged.
NumInventoryNodeControlsPurged	Number of inventory node controls purged.
NumInventoryReservationsPurged	Number of inventory reservations purged.
NumInventoryTagsPurged	Number of inventory tags purged.
NumItemBasedAllocationTriggersPurged	Number of item based allocation triggers purged.

Pending Job Count

For this transaction, the pending job count is the total number of records that can be purged from the YFS_Inventory_Supply, YFS_Inventory_Demand, YFS_Inventory_Tag, YFS_Inventory_Reservation, YFS_IBA_Trigger, and YFS_Inventory_Node_Control tables.

Events Raised

None.

Tables Purged

YFS_IBA_TRIGGER

YFS_INVENTORY_DEMAND

YFS_INVENTORY_TAG

YFS_INVENTORY_RESERVATION

YFS_INVENTORY_SUPPLY

YFS_INVENTORY_NODE_CONTROL

A.3.3.8 Inventory Supply Temp Purge

The Inventory Supply Temp purge agent cleans up the contents in the temporary inventory tables generated by the process of synchronizing the Sterling Multi-Channel Fulfillment Solution inventory picture with the actual inventory picture at the nodes.

The node inventory picture is stored during the loading process into the YFS_INVENTORY_SUPPLY_TEMP table. Once the synchronization phase is complete and the YFS_INVENTORY_SUPPLY table has been updated, the YFS_INVENTORY_SUPPLY_TEMP table needs to be purged, which is done through this agent.

For more information about configuring the synchronization with node inventory, see the *Sterling Global Inventory Visibility Configuration Guide*.

The Inventory Supply Temp purge agent is used to purge all records in the YFS_INVENTORY_SUPPLY_TEMP table whose modify timestamp is less than current time minus the purge criteria's retention days for a group of YantraMessageGroupID.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–145 Inventory Supply Temp Purge Attributes

Attribute	Value
Base Transaction ID	SUPPLYTEMPPRG
Base Document Type	General
Base Process Type	General
Abstract Transaction	No
APIs Called	None
User Exits Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–146 Inventory Supply Temp Purge Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Moves qualifying records from the regular tables listed under Tables Purged to the corresponding history tables. N - Test mode. Determines the rows that are moved to history tables without actually moving them.
EnterpriseCode	Optional. The inventory organization for which the Inventory Supply Temp Purge needs to be run. If not passed, then all enterprises are monitored.organization.
PurgeCode	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds with the PurgeCode used in Business Rules Purge Criteria.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A-147 Inventory Supply Temp Purge Statistics

Statistic Name	Description
NumInventorySupplyTempsPurged	Number of entries in the YFS_INVENTORY_SUPPLY_TEMP table purged.

Pending Job Count

Number of unique YantraMessageGroupIDs from YFS_INVENTORY_SUPPLY_TEMP table whose maximum modify timestamp is less than current timestamp minus purge criteria's lead day.

Events Raised

None.

Tables Purged

YFS_INVENTORY_SUPPLY_TEMP

A.3.3.9 Item Audit Purge

This purge removes the YFS_AUDIT table data from the system, which reduces the load on frequently accessed tables. It purges records in the YFS_AUDIT and the YFS_AUDIT_HEADER tables that meet the following conditions:

- YFS_AUDIT records that have 'modifyts' greater than the retention days specified and the records have the table name as 'YFS_ITEM'.
- The last modified time is before the lead time setup.

When the enterprise modifies records in the YFS_ITEM table through the Sterling Multi-Channel Fulfillment Solution Configurator, the YFS_ITEM is audited and the audit records are inserted in the YFS_AUDIT table. In order to clean up the audit records, this purge transaction can be used.

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions accordingly.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–148 *Item Audit Purge Attributes*

Attribute	Value
Base Transaction ID	YFS_ITEM_AUDIT_PURGE
Base Document Type	General
Base Process Type	General
Abstract Transaction	No
APIs Called	None
User Exits Called	YFSBeforePurgeUE

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–149 *Item Audit Purge Criteria Parameters*

Parameter	Description
Action	Required. Triggers the transaction. If left blank, the value defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), this value defaults to 5000.
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Production mode. Deletes records from the regular tables. N - Test mode.
PurgeCode	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds with the PurgeCode used in Business Rules Purge Criteria.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–150 *Item Audit Purge Statistics*

Statistic Name	Description
NumItemAuditRecordsPurged	Number of item audit records purged.

Pending Job Count

For this transaction, the pending job count is the number of records that can be purged from the YFS_AUDIT table that match the criteria values.

Events Raised

None.

Tables Purged

YFS_AUDIT, YFS_AUDIT_HEADER

A.3.3.10 Load History Purge

This purge deletes the load data from history tables after it completes its typical lifecycle. This reduces the load on frequently accessed tables.

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

You can use purge codes pseudo-logic to analyze purges. If the following condition is met, a load is picked up for purge:

- The last modification made to the load is before the lead time setup.

Note: Before you run this transaction, ensure to purge loads and move them to history tables. For more information about purging loads, see [Section A.3.3.11, "Load Purge"](#).

Attributes

The following are the attributes for this time-triggered transaction:

Table A–151 Load History Purge Attributes

Attribute	Value
Base Transaction ID	LOADHISTPRG
Base Document Type	Load
Base Process Type	Load Execution
Abstract Transaction	No
APIs Called	None
User Exits Called	YFSBeforePurgeUE

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–152 Load History Purge Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
EnterpriseCode	Optional. Enterprise for which the Load Purge needs to be run. If not passed, all enterprises are monitored.
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Moves qualifying records from the regular tables listed under Tables Purged to the corresponding history tables. N - Test mode. Determines the rows that are moved to history tables without actually moving them.
Purge Code	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds with the PurgeCode used in Business Rules Purge Criteria.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–153 Load History Purge Statistics

Statistic Name	Description
NumLoadHistoriesPurged	Number of load histories purged.
NumLoadShipmentHistoriesPurged	Number of load shipment histories purged.

Pending Job Count

For this transaction, the pending job count is the number of records that can be purged from the YFS_Load_H table.

Events Raised

None.

YFS_LOAD_SHIPMENT_H

YFS_ADDITIONAL_DATE_H

YFS_LOAD_HOLD_TYPE_H

YFS_LOAD_HOLD_TYPE_LOG_H

A.3.3.11 Load Purge

This purge removes load data from the system. It picks up all loads that have been marked as 'Closed' and purges them. Empty Loads (for

example, loads with no shipments) are not considered for purge. As a part of this purge, the associated child tables are also purged.

This is not a pipeline transaction. It also does not work from the task queue.

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

You can use purge codes pseudo-logic to analyze purges. If the following condition is met, a load is picked up for purge:

- The Load's last modification should fall before the lead time setup.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–154 Load Purge Attributes

Attribute	Value
Base Transaction ID	LOADPRG

YFS_LOAD_STATUS_AUDIT
YFS_LOADED_CONTAINER
YFS_SHIPMENT_CONTAINER
YFS_CONTAINER_ACTIVITY

A.3.3.12 Manifest Purge

This purge picks up all the manifests that have been marked as "Closed" and purges them.

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

All manifests which do not associate to any shipments and with modify timestamp less than the current date minus the purge criteria's retention days can be configured to be picked up by the Manifest Purge.

You can use purge codes pseudo-logic to analyze purges. If the following conditions are met, a manifest is picked up for purge:

- The manifest should be in the "Closed" status.
- The last modification performed on the manifest should fall before the lead time setup.
- The manifest should not be associated with any shipment and its last modification should be less than current date minus lead time.

Note: All the shipments associated with the manifests should have been purged before running this purge agent.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–157 Manifest Purge Attributes

Attribute	Value
Base Transaction ID	MANIFESTPRG

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–158 Manifest Purge Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Moves qualifying records from the regular tables listed under Tables Purged to the corresponding history tables. N - Test mode. Determines the rows that are moved to history tables without actually moving them.
PurgeCode	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds with the PurgeCode used in Business Rules Purge Criteria.

Table A–158 Manifest Purge Parameters

Parameter	Description
AgentCriteriaGroup	Optional. Used to classify nodes. This value can be accepted by WMS time-triggered transactions that only perform their tasks on the nodes with a matching node transactional velocity value. Valid values are: LOW, HIGH, and any additional values defined by the Hub from Platform > System Administration > Agent Criteria Groups.
ShipNode	Optional. Ship node for which the Manifest Purge needs to be run. If not passed, then all ship nodes are monitored.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–159 Manifest Purge Statistics

Statistic Name	Description
NumManifestsPurged	Number of manifests purged.

Pending Job Count

For this transaction, the pending job count is the number of records that can be purged from the YFS_Manifest table.

Events Raised

None.

Tables Purged

YFS_MANIFEST

Note: To purge Manifests, the Shipments related to the manifests should be purged by Shipment Purge, and the Manifests should be in 'Closed' status. For more information, see [Section A.3.3.28, "Shipment Purge"](#).

A.3.3.13 Negotiation History Purge

This purge deletes negotiation history data from the system. This reduces the load on frequently accessed tables. It purges data from the order negotiation history tables.

You can use purge codes pseudo-logic to analyze purges. If the following condition is met, a negotiation is picked up for history purge:

- The last modified date of the negotiation exceeds the retention day period.

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–160 *Negotiation History Purge Attributes*

A.3.3.14 Negotiation Purge

This purge archives data into history tables after it completes its typical lifecycle. This reduces the load on frequently accessed tables. It works from the task queue (YFS_TASK_Q) table.

You can use purge codes pseudo-logic to analyze purges. If the following condition is met, a negotiation is picked up for purge:

- The last modification performed on the negotiation falls before the lead time setup.
- The negotiation is in pickable status.

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

Attributes

The following are the attributes for this time-triggered transaction:

YFS_RESPONSE_LINE_DTL

A.3.3.15 Order History Purge

This purge deletes data from history tables after it completes its typical lifecycle. This reduces the load on frequently accessed tables.

You can use purge codes pseudo-logic to analyze purges. If the following condition is met, an order is picked up for history purge:

- The last modified date of the order exceeds the retention day period.

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

For more information about Additional Purge Criteria Based on Line Type, see the *Sterling Distributed Order Management Configuration Guide*.

Note: The order should have been purged and moved into the history tables before you can run this transaction. See [Section A.3.3.16, "Order Purge"](#).

Attributes

The following are the attributes for this time-triggered transaction:

Table A–166 Order History Purge Attributes

Attribute	Value
Base Transaction ID	ORDERHISTPRG
Base Document Type	Order
Base Process Type	Order Fulfillment
Abstract Transaction	No
APIs Called	None
User Exits Called	YFSBeforePurgeUE

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–167 Order History Purge Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
EnterpriseCode	Optional. Enterprise for which the Order History Purge needs to be run. If not passed, then all enterprises are monitored.
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Removes qualifying records from the history tables listed under Tables Purged. N- Test mode. Determines the rows that are removed without actually removing them.
PurgeCode	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds with the PurgeCode used in Business Rules Purge Criteria.

Statistics Tracked

A.3.3.16 Order Purge

This purge archives data into history tables after it completes its typical lifecycle. To purge orders from history tables, see [Section A.3.3.15, "Order History Purge"](#). This reduces the load on frequently accessed tables. It works on a task queue. It picks up the orders from YFS_TASK_Q table that are available for the transaction PURGE.

Note: This transaction depends on all lines of an order being in a status pickable by the Purge transaction.

The following statuses are available for configuration to be picked up by Order Purge:

- Draft Created (1000) and all extended Draft Created Statuses.
- Created (1100) and all extended Created statuses. These statuses are available only for document types Sales Order, Purchase Order and Transfer Order.
- Released (3200) and all extended Released statuses.
- Shipped (3700) and all extended Shipped statuses.
- Received (3900) and all extended Received statuses.
- Cancelled (9000) and all extended Cancelled statuses.
- Shorted (9020) and all extended Shorted statuses.

You can use purge codes pseudo-logic to analyze purges. If the following conditions are met, an order is picked up for purge:

- All open child orders (derived, chained, return, exchange, procurement, or refund fulfillment) for the order must already be purged.
- No pending transfer-out charges to another order exceeding the transfer-ins.
- No pending adjustment invoices.

An order is purged immediately if it meets the above three criteria and is completely cancelled with payment collection complete.

Note: In order for the purge agent to pick up a cancelled order, the payment status of the order must be one of the following:

- Paid
- Cancelled
- Not Applicable

If an order does not meet any of the above criteria, continue checking for the criteria given below:

- No order release status record that does not meet the retention days.
- It should be in the correct status for purge. For example,
 - All service requests for the order should have Shipped or extended Shipped status.
 - The payment status for the order should be Paid, Cancelled, or Not Applicable.
 - It must not have any unpurged negotiations.
- For all order lines other than service request lines:
 - If the Seller inventory update is required, the Status Inventory Type has the "Update Seller Supply" option turned on, and the Seller Supply Type is "Onhand", or blank. (The Seller Supply Type can also be a custom seller supply type with the "Onhand Supply" checkbox enabled.)
 - If the Seller Demand Type is blank.
 - If the Buyer inventory update is required and the Buyer Supply Type is "Onhand", or blank.
- The order's last modification should fall before the lead time setup.
- Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.
- The order must not have a undelivered service line.

- In the case of an exchange order for processing a return order, the exchange order should be purged from history before the return order can be purged.

Note: With no change to status inventory type, a sales order in Shipped (3700) status or its extended status is purged if the Buyer is not passed.

An order in Shipped status or extended Shipped status in the default pipeline is not purged if the Buyer passed on the sales order is tracking inventory. This prevents the purging of the order relating to the pending supply for the Buyer tracking inventory.

To purge such orders, the status inventory type for the Shipped or extended Shipped status should be configured such that the Buyer Supply Type is ONHAND for the status inventory type.

When the purge agent is run, the draft order without lines are purged to the order history table. Once the purge history agent is run, the draft orders without lines gets deleted permanently.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–169 Order Purge Attributes

Attribute	Value
Base Transaction ID	PURGE
Base Document Type	Order
Base Process Type	Order Fulfillment
Abstract Transaction	No

A.3.3.17 Order Status Audit Purge

This purge removes order status audit data from the system. This reduces the load on frequently accessed tables.

You can use purge codes pseudo-logic to analyze purges. If the following condition is met, an order status audit is picked up for history purge:

- The last modified time falls before the lead time setup.

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

Note: This transaction needs to be run after negotiation is completed.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–172 Order Status Audit Purge Attributes

Attribute	Value
Base Transaction ID	STATUSAUDITPRG
Base Document Type	Order
Base Process Type	Order Fulfillment
Abstract Transaction	No
APIs Called	None
User Exits Called	YFSBeforePurgeUE

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–173 Order Status Audit Purge Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
EnterpriseCode	Optional. Enterprise for which the Order Status Audit Purge needs to be run. If not passed, then all enterprises are monitored.
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Moves qualifying records from the regular tables listed under Tables Purged to the corresponding history tables. N - Test mode. Determines the rows that are moved to history tables without actually moving them.
PurgeCode	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds with the PurgeCode used in Business Rules Purge Criteria.

Statistics Tracked

The following statistics are tracked for this transaction:

Pending Job Count

Table A–174 Order Status Audit Purge Statistics

Statistic Name	Description
NumStatusAuditsPurged	Number of status audits purged.

For this transaction, the pending job count is the number of records that can be purged from the YFS_Status_Audit table.

Events Raised

None.

Tables Purged

YFS_STATUS_AUDIT

A.3.3.18 Organization Audit Purge

This purge removes the YFS_AUDIT table data from the system, which reduces the load on frequently accessed tables. It purges records in the YFS_AUDIT and the YFS_AUDIT_HEADER tables that meet the following conditions:

- The YFS_AUDIT records that have 'modifyts' greater than the retention days specified and the records have the table name as 'YFS_ORGANIZATION'.
- The last modified time is before the lead time setup.

When the enterprise modifies records in the YFS_ORGANIZATION table through the Sterling Multi-Channel Fulfillment Solution Configurator, the YFS_ORGANIZATION is audited and the audit records are inserted in the YFS_AUDIT table. In order to clean up the audit records, this purge transaction can be used.

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–175 Organization Audit Purge Attributes

Attribute	Value
Base Transaction ID	YFS_ORGANIZATION_AUDIT_PURGE
Base Document Type	General
Base Process Type	General
Abstract Transaction	No
APIs Called	None
User Exits Called	YFSBeforePurgeUE

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–176 Organization Audit Purge Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, the value defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), this value defaults to 5000.
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Production mode. Deletes records from the regular tables. N - Test mode.
PurgeCode	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds to the PurgeCode used in Business Rules Purge Criteria.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–177 Organization Audit Purge Statistics

Statistic Name	Description
NumOrganizationAuditRecordsPurged	Number of organization audit records purged.

Pending Job Count

For this transaction, the pending job count is the number of records that can be purged from the YFS_AUDIT table that match the criteria values.

Events Raised

None.

Tables Purged

YFS_AUDIT, YFS_AUDIT_HEADER

A.3.3.19 Person Info Purge

This purge gets a list of dates with the person info record count and sorts them by date in ascending order. Then, based on the specified number of records to buffer and the modify timestamp, it purges the applicable records and places them in the YFS_PERSON_INFO_H table.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–178 *PersonInfo Purge Attributes*

Attribute	Value
Base Transaction ID	PERSONINFOPRG
Base Document Type	General
Base Process Type	General
Abstract Transaction	No
APIs Called	None
User Exits Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–179 *Picklist Purge Criteria Parameters*

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. <ul style="list-style-type: none"> If left blank or the number specified is less than 10000, it defaults to 10000. If the number specified is greater than 10000, then that value is used.

Table A–179 *Picklist Purge Criteria Parameters*

Parameter	Description
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Moves qualifying records from the regular tables listed under Tables Purged to the corresponding history tables. N - Test mode. Determines the rows that are moved to history tables without actually moving them.
PurgeCode	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds with the PurgeCode used in Business Rules Purge Criteria.
CollectPendingJobs	If this parameter is set to "N", the agent does not collect information on the pending jobs for this monitor. This pending job information is used for monitoring the monitor in the Sterling Multi-Channel Fulfillment Solution System Management Console.
EnterpriseCode	Optional. Enterprise for which the PersonInfo Purge needs to be run. If not passed, then all enterprises are monitored.

Statistics Tracked

The following statistics are tracked for this transaction:

If it is left blank or any number less than 10,000 is specified, then it defaults to 10,000. But if any number > 10,000 is specified, then that value would be used.

Table A–180 *PersonInfo Purge Statistics*

Statistic Name	Description
NumPersonInfoPurged	Number of person info records purged.

Pending Job Count

For this transaction, the pending job count is the number of records that can be purged from the YFS_PERSON_INFO table.

Events Raised

None.

Tables Purged

YFS_PERSON_INFO

A.3.3.20 Person Info History Purge

This purge deletes records from the YFS_PERSON_INFO_H table based on the purge criteria.

Attributes

User Exits Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–182 *Picklist Purge Criteria Parameters*

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. <ul style="list-style-type: none"> If left blank or the number specified is less than 10000, it defaults to 10000. If the number specified is greater than 10000, then that value is used.
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Moves qualifying records from the regular tables listed under Tables Purged to the corresponding history tables. N - Test mode. Determines the rows that are moved to history tables without actually moving them.
PurgeCode	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds with the PurgeCode used in Business Rules Purge Criteria.
CollectPendingJobs	If this parameter is set to "N", the agent does not collect information on the pending jobs for this monitor. This pending job information is used for monitoring the monitor in the Sterling Multi-Channel Fulfillment Solution System Management Console.
EnterpriseCode	Optional. Enterprise for which the PersonInfo Purge needs to be run. If not passed, then all enterprises are monitored.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–183 PersonInfo Purge Statistics

Statistic Name	Description
NumPersonInfoHistoryRecordsPurged	Number of person info history records purged.

Pending Job Count

For this transaction, the pending job count is the number of records that can be purged from the YFS_PERSON_INFO_H table.

Events Raised

None.

Tables Purged

YFS_PERSON_INFO_H

A.3.3.21 Picklist Purge

This purge picks up all picklists that have been existing for a period greater than the retention days specified in the criteria parameters and those that do not have any shipments.

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

You can use purge codes pseudo-logic to analyze purges. If the following conditions are met, a picklist is picked up for purge:

- The picklist should exist for more than the specified retention period.
- The picklist should not be associated with any shipment.

Attributes

Note: All shipments associated with the picklists should have been purged before running this purge agent.

The following are the attributes for this time-triggered transaction:

Table A–184 *Picklist Purge Attributes*

Attribute	Value
Base Transaction ID	PICKLISTPRG
Base Document Type	Order
Base Process Type	Order Delivery
Abstract Transaction	No
APIs Called	None
User Exits Called	YFSBeforePurgeUE

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–185 *Picklist Purge Criteria Parameters*

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Moves qualifying records from the regular tables listed under Tables Purged to the corresponding history tables. N - Test mode. Determines the rows that are moved to history tables without actually moving them.
PurgeCode	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds with the PurgeCode used in Business Rules Purge Criteria.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–186 *Picklist Purge Statistics*

Statistic Name	Description
NumPickListsPurged	Number of picklists purged.

Pending Job Count

For this transaction, the pending job count is the number of records that can be purged from the YFS_Pick_List table.

Events Raised

None.

Tables Purged

YFS_PICK_LIST

A.3.3.22 Price List Purge

This purge removes price list data from the system. This reduces the load on frequently accessed tables.

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

You can use purge codes pseudo-logic to analyze purges. If the following condition is met, a price list is picked up for purge:

- The price list has valid date less than the current date minus the purge criteria's retention days.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–187 *Price List Purge Attributes*

Attribute	Value
Base Transaction ID	PRICELISTPRG
Base Document Type	General
Base Process Type	General
Abstract Transaction	No

YFS_ITEM_PRICE_SET_DTL

A.3.3.23 Receipt History Purge

This transaction deletes receipts previously archived by the Receipt Purge. See [Section A.3.3.24, "Receipt Purge"](#).

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

You can use purge codes pseudo-logic to analyze purges. If the following conditions are met, a receipt that is previously purged by the receipt purge agent is picked up for history purge:

- The last modified date of the receipt should exceed the retention day period.
- The shipment associated with the receipt should be purged from the history table.

Note: To purge a receipt history, ensure that the Receipts are closed and Shipments are purged.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–190 Receipt History Purge Attributes

Attribute	Value
Base Transaction ID	RECEIPTHISTPRG
Base Document Type	Order
Base Process Type	Order Fulfillment
Abstract Transaction	No
APIs Called	None

A.3.3.24 Receipt Purge

This purge removes receipt data from the system. This reduces the load on frequently accessed tables. This transaction picks up all receipts that are not open and not pending inspection and archives them into their history tables. See [Section A.3.3.23, "Receipt History Purge"](#). It also archives and purges the receipt's child tables.

This is a pipeline transaction and works from a task queue.

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

You can use purge codes pseudo-logic to analyze purges. If the following conditions are met, a receipt is picked up for purge:

- The last modified date of the receipt should exceed the retention day period.
- The shipment associated with the receipt should be purged.
- The receipt should be in pickable status for the purge transaction.
- The value of the OpenReceiptFlag field should be set to "N".
- The receipt should not have pending inspections.

Note: To purge a receipt, ensure that the receipts are closed and Shipments are purged.

Attributes

YFS_REPROCESS_ERROR

A.3.3.26 Reservation Purge

This purge deletes expired inventory reservations from the system. This reduces the load on frequently accessed tables as well as free up demands that are consumed by expired reservations.

You can use purge codes pseudo-logic to analyze purges. If the following condition is met, all records in the YFS_INVENTORY_RESERVATION tables are picked up for purge:

- EXPIRATION_DATE is earlier than the current date or quantity is less than or equal to 0

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–199 Reservation Purge Attributes

Attribute	Value
Base Transaction ID	RESERVATIONPRG
Base Document Type	General
Base Process Type	General
Abstract Transaction	No
APIs Called	None
User Exits Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–200 Reservation Purge Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Moves qualifying records from the regular tables listed under Tables Purged to the corresponding history tables. N - Test mode. Determines the rows that are moved to history tables without actually moving them.
PurgeCode	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds with the PurgeCode used in Business Rules Purge Criteria.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–201 Reservation Purge Statistics

Statistic Name	Description
NumReservationsPurged	Number of reservations purged.

Pending Job Count

For this transaction, the pending job count is the number of records that can be purged from the YFS_INVENTORY_RESERVATION table.

Events Raised

None.

Tables Purged

YFS_INVENTORY_RESERVATION

A.3.3.27 Shipment History Purge

This transaction deletes shipments previously archived by the Shipment Purge. See [Section A.3.3.28, "Shipment Purge"](#).

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

You can use purge codes pseudo-logic to analyze purges. If the following condition is met, all records archived in the history table are picked up for purge:

- The last modification performed on the shipment falls before the lead time setup.

Note: Orders related to the shipments should have been purged by order purge. Shipments should have been closed by the Close Shipment transaction. See [Section A.2.8, "Close Shipment"](#).

Attributes

The following are the attributes for this time-triggered transaction:

Table A–202 Shipment History Purge Attributes

Attribute	Value
Base Transaction ID	SHIPMENTHISTPRG
Base Document Type	Order
Base Process Type	Order Delivery
Abstract Transaction	No
APIs Called	None
User Exits Called	YFSBeforePurgeUE

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–203 Shipment History Purge Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
EnterpriseCode	Optional. Enterprise for which the Shipment History Purge needs to be run. If not passed, then all enterprises are monitored.
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Removes qualifying records from the history tables listed under Tables Purged. N- Test mode. Determines the rows that are removed without actually removing them.
PurgeCode	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds with the PurgeCode used in Business Rules Purge Criteria.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–204 Shipment History Purge Statistics

Statistic Name	Description
NumShipmentHistoriesPurged	Number of shipment histories purged.
NumShipmentLineHistoriesPurged	Number of shipment line histories purged.

Pending Job Count

For this transaction, the pending job count is the number of records that can be purged from the YFS_Shipment_H table.

Events Raised

None.

A.3.3.28 Shipment Purge

This purge removes shipment data from the system. This reduces the load on frequently accessed tables. This transaction picks up all shipments that have been marked as 'Closed' and archives them into their history tables. See [Section A.3.3.27, "Shipment History Purge"](#). It also archives and purges the shipment's child tables.

This is not a pipeline transaction. It also does not work from the task queue.

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

Note: Orders related to the shipments should have been purged by order purge. Shipments should have been closed by the Close Shipment transaction. See [Section A.2.8, "Close Shipment"](#).

You can use purge codes pseudo-logic to analyze purges. If the following conditions are met, a shipment is picked up for purge:

- The last modification performed on the shipment should fall before the lead time setup.
- The value of the ShipmentClosedFlag field should be set to "Y".
- The order record should already be purged for all shipment lines.

Attributes

The following are the attributes for this time-triggered transaction:

A.3.3.29 Shipment Statistics Purge

This transaction deletes the shipment statistics from the table older than the specified retention days.

This agent should be used whenever shipment statistics records need to be removed, such as after application server restart.

You can use purge codes pseudo-logic to analyze purges. If the following condition is met, the shipment statistics are picked up for purge:

- The last modification performed on the shipment statistics should fall before the lead time setup.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–208 Shipment Statistics Purge Attributes

Attribute	Value
Base Transaction ID	PRG_SHIP_STATS
Base Document Type	Order
Base Process Type	Order Delivery
Abstract Transaction	No

User Exits Called	YFSBeforePurgeUE

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–209 Shipment Statistics Purge Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
EnterpriseCode	Optional. Enterprise for which the Shipment Statistics Purge needs to be run. If not passed, then all enterprises are monitored.

Table A–209 Shipment Statistics Purge Criteria Parameters

Parameter	Description
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Moves qualifying records from the regular tables listed under Tables Purged to the corresponding history tables. N - Test mode. Determines the rows that are moved to history tables without actually moving them.
PurgeCode	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds with the PurgeCode used in Business Rules Purge Criteria.

Statistics Parameters

The following are the statistics parameters for this transaction:

Table A–210 Shipment Statistics Purge Statistics

Parameter	Description
NumShipmentStatisticsPurged	Number of shipment statistics purged.

Pending Job Count

For this transaction, the pending job count is the number of records that can be purged from the YFS_SHIPMENT_STATISTICS table.

Events Raised

None.

Tables Purged

YFS_SHIPMENT_STATISTICS

A.3.3.30 Statistics Purge

This purge removes statistics data from the system. It purges all records older than the specified retention days.

You can use purge codes pseudo-logic to analyze purges. If the following condition is met, the statistics detail is picked up for purge:

- The last modification performed on the statistics detail should fall before the lead time setup.

Note: This purge only reads the rules defined by the hub. Enterprise overridden rules are not considered. This purge should be single threaded when you run it in batch delete mode (BatchDelete=Y).

Note: Sterling Commerce recommends that this agent be run often. In a production environment, the YFS_STATISTICS_DETAIL table can grow very large, very quickly. It does not carry any old data, therefore it is a good practice to purge it aggressively, from once a day to once a week, depending on the table size.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–211 Statistics Purge Attributes

Attribute	Value
Base Transaction ID	STATTLPRG
Base Document Type	General
Base Process Type	General
Abstract Transaction	No
APIs Called	None
User Exits Called	YFSBeforePurgeUE

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–212 Statistics Purge Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Moves qualifying records from the regular tables listed under Tables Purged to the corresponding history tables. N - Test mode. Determines the rows that are moved to history tables without actually moving them.
BatchDelete	Required. The mode in which all records get deleted from the table. Valid values are: <ul style="list-style-type: none"> Y - Default value. Records are deleted in batches. N - Records are deleted one by one.
PurgeCode	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds with the PurgeCode used in Business Rules Purge Criteria.
CollectPendingJobs	If this parameter is set to "N", the agent does not collect information on the pending jobs for this monitor. This pending job information is used for monitoring the monitor in the Sterling Multi-Channel Fulfillment Solution System Management Console.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–213 Statistics Purge Statistics

NumStatisticsPurged	Number of statistics purged

Pending Job Count

For this transaction, the pending job count is the number of records that can be purged from the YFS_STATISTICS_DETAIL table.

Events Raised

None.

Tables Purged

YFS_STATISTICS_DETAIL

A.3.3.31 User Activity Purge

This purge deletes the user activity data from the system. It purges all records older than the specified retention days, and those records which have a logged out status. This purge must be single threaded when you run it in batch delete mode (BatchDelete=Y).

The following limitation is assumed when purging records:

This purge do not purge any record if the Application server goes down abruptly because the audit records of users connected to the application server at the time when the server went down cannot be updated. As a result, the last activity time or the logout time is not populated. The purge does not know whether the user has logged out or still logged in. Therefore, you need to manually delete these records.

The following are the attributes for this time-triggered transaction:

Table A–214 User Activity Purge Attributes

Attribute	Value
Base Transaction ID	USERACTIVITYPRG
Base Document Type	None
Base Process Type	None
APIs Called	None
User Exits Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–215 User Activity Purge Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
PurgeCode	Required. Cannot be modified. Used for internal calculations, such as determining retention days. Corresponds with the PurgeCode used in Business Rules Purge Criteria.
Live	Optional. Mode in which to run. Valid values are: <ul style="list-style-type: none"> Y - Default value. Moves qualifying records from the regular tables listed under Tables Purged to the corresponding history tables. N - Test mode. Determines the rows that are moved to history tables without actually moving them.
CollectPendingJobs	If this parameter is set to "N", the agent does not collect information on the pending jobs for this monitor. This pending job information is used for monitoring the monitor in the Sterling Multi-Channel Fulfillment Solution System Management Console.
Number of Records To Buffer	Required. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 100.
BatchDelete	Required. The method by which all records are deleted from the table. Valid values are: <ul style="list-style-type: none"> Y - Default value. Records are deleted in batches. N - Records are deleted one by one.

YFS_USER_ACTIVITY

A.3.3.32 User Activity Audit Purge

This purge removes user activity audit data from the system. It purges all records older than the specified retention days. It purges only those records which have a logged out status (records with a Login_Type of 'T' or 'N'). This purge should be single threaded when you run it in batch delete mode(BatchDelete=Y).

The following limitation is assumed when purging records:

- This purge does not purge any records if the Application server goes down abruptly because the audit records of users connected to application servers at the time the server went down cannot be updated. As a result, the last activity time or the logout time does not get populated and the purge does not know whether the user was logged out or was still logged in. These records have to be deleted manually.

A.3.3.35 YFS Audit Purge

This purge removes the YFS_AUDIT table data from the system, which reduces the load on frequently accessed tables. It purges records in the YFS_AUDIT and the YFS_AUDIT_HEADER tables that meet the following conditions:

- YFS_AUDIT records that have 'modifyts' greater than the retention days specified and the value of table name matches in the YFS_AUDIT table.
- The last modified time is before the lead time setup.

Note: The way you configure the YFS Audit Purge may have some effect on the functioning of the Configuration Data Versioning Tool. For more information about configuration of the Data Versioning Tool, see the *Sterling Multi-Channel Fulfillment Solution Configuration Deployment Tool Guide*.

When the enterprise extends the entities and sets the extended entities attribute AuditTable="Y", the extended tables are audited and the audit records are inserted in the YFS_AUDIT table. In order to clean up the audit records, this purge transaction can be used.

Any enterprise using the Sterling Multi-Channel Fulfillment Solution Consoles must schedule purge transactions.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–226 YFS Audit Purge Attributes

Attribute	Value
Base Transaction ID	YFS_AUDIT_PURGE

YFS_INV_OWN_TRANSFER_RCD

A.4 Task Queue Syncher Time-Triggered Transactions

Many transactions use the task queue as their work repository. The workflow manager automatically creates tasks for transactions to handle the next processing step, as configured in your pipeline.

In some situations, the task queue repository may become out of date. For example, when reconfiguring the processing pipeline while the pipeline is active, the queue may go out of synch with the new pipeline configuration.

Alerts that indicate a halt in the lifecycle of a business document may indicate an out-dated task queue repository.

The task queue syncher transactions are designed to update the task queue repository with the latest list of open tasks to be performed by each transaction, based on the latest pipeline configuration.

The available task queue synchers are:

- [Load Execution Task Queue Syncher](#)
- [Order Delivery Task Queue Syncher](#)
- [Order Fulfillment Task Queue Syncher](#)
- [Order Negotiation Task Queue Syncher](#)

Note: Some of the statistics collected and tracked in Release 8.0 for time-triggered transactions, monitors, and integration and application servers may change with the next release.

A.4.1 Load Execution Task Queue Syncher

This transaction synchronizes the task queue for the load execution process type.

You can use the following pseudo-logic to analyze this time-triggered transaction. If the following conditions are met, a task queue for the load execution process type is synchronized:

- `LOAD_CLOSED_FLAG` of Load should not be 'Y'.

- Load should be in a status that is pickable by a transaction in the pipeline.
- There should not be any Task Q record for the load, transaction combination in the Task Q table. In this case, the system inserts one Task Q record for this load, transaction combination with the current database time as the available date.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–231 Load Execution Task Queue Syncher Attributes

Attribute	Value
Base Transaction ID	TASK_QUEUE_SYNCER_L_D
Base Document Type	Load
Base Process Type	Load Execution
Abstract Transaction	No
APIs Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–232 Load Execution Task Queue Syncher Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.

Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–236 Order Delivery Task Queue Syncher Statistics

Statistic Name	Description
NumTasksCreated	Number of tasks created.

Pending Job Count

None.

Events Raised

None.

A.4.3 Order Fulfillment Task Queue Syncher

This transaction synchronizes the order fulfillment process type.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–237 Order Fulfillment Task Queue Syncher Attributes

Attribute	Value
Base Transaction ID	TASK_QUEUE_SYNCER_O_F
Base Document Type	Order
Base Process Type	Order Fulfillment

Table A–237 Order Fulfillment Task Queue Syncher Attributes

Attribute	Value
Abstract Transaction	No
APIs Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–238 Order Fulfillment Task Queue Syncher Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–239 Order Fulfillment Task Queue Syncher Statistics

Statistic Name	Description
NumTasksCreated	Number of tasks created.

Pending Job Count

None.

Events Raised

None.

A.4.4 Order Negotiation Task Queue Syncher

This transaction synchronizes the order negotiation process type.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–240 *Order Negotiation Task Queue Syncher Attributes*

Attribute	Value
Base Transaction ID	TASK_QUEUE_SYNCER_O_N
Base Document Type	Order
Base Process Type	Order Negotiation
Abstract Transaction	No
APIs Called	None

Criteria Parameters

The following are the criteria parameters for this transaction:

Table A–241 *Order Negotiation Task Queue Syncher Criteria Parameters*

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–242 *Order Negotiation Task Queue Syncher Statistics*

Statistic Name	Description
NumTasksCreated	Number of tasks created.

Pending Job Count

None.

Events Raised

None.

A.5 Monitors

Monitors are transactions that watch for processes or circumstances that are out of bounds and then raise alerts.

Note: Some of the statistics collected and tracked in Release 8.0 for time-triggered transactions, monitors, and integration and application servers may change with the next release of the Sterling Multi-Channel Fulfillment Solution.

Note: All Monitors have a CollectPendingJobs criteria parameter. If this parameter is set to N, the agent does not collect information on the pending jobs for that monitor. This pending job information is used for monitoring the monitor in the Sterling Multi-Channel Fulfillment Solution System Management Console. By default, CollectPendingJobs is set to Y. It can be helpful to set it to N if one monitor is performing a significant amount of getPendingJobs queries and the overhead cost is too high.

A.5.1 Availability Monitor

This time-triggered transaction monitors inventory availability. The Availability Monitor raises global alerts when the available inventory falls below the configured quantities on the current day, on subsequent days within the ATP time frame, and on subsequent days outside of the ATP time frame. The quantities for the days outside of the ATP time frame are determined by the maximum monitoring days. Unlike the schedule and release transactions, the Availability Monitor calculates the actual availability beyond the ATP horizon and does not assume infinite inventory.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–243 Availability Monitor Attributes

Attribute	Value
Base Transaction ID	ATP_MONITOR
Base Document Type	General
Base Process Type	General
Abstract Transaction	No
APIs Called	None

Criteria Parameters

The following are the criteria parameters for this monitor:

Table A–244 Availability Monitor Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
MonitorOption	Optional. Specifies how to monitor inventory. Valid values are: <ul style="list-style-type: none"> • 1 - current inventory • 0 - inventory within and outside of the ATP time frame. This is the default value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
InventoryOrganizationCode	Optional. Valid owner inventory organization. Organization to process in this run. If not passed, all inventory organizations are processed.

Table A–244 Availability Monitor Criteria Parameters

Parameter	Description
CollectPendingJobs	If this parameter is set to N, the agent does not collect information on the pending jobs for this monitor. This pending job information is used for monitoring the monitor in the Sterling Multi-Channel Fulfillment Solution System Management Console.
Status	The negotiation status you are monitoring.

Statistics Tracked

None.

Pending Job Count

None.

Events Raised

No events are raised. Individual actions associated with the monitoring rule are run.

Data published to the actions is `AVAILABILITY_MONITOR_dbd.txt`.

A.5.2 Exception Monitor

This time-triggered transaction monitors exceptions in your system as noted below. It monitors the exceptions logged in the system and escalates these exceptions:

- If an exception has not been assigned to a user by a certain time
- If an exception has not been resolved by a certain time
- If the active size of the queue is more than a certain maximum size

In order to prevent re-alerts on exceptions during every run of the Exception Monitor, specify a re-alert interval through Alert Management in the Sterling Multi-Channel Fulfillment Solution Configurator. This attribute is associated with a queue and can be configured for each queue.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–245 Exception Monitor Attributes

Attribute	Value
Base Transaction ID	EXCEPTION_MONITOR
Base Document Type	General
Base Process Type	General
Abstract Transaction	No
APIs Called	None

Criteria Parameters

The following are the criteria parameters for this monitor:

Table A–246 Exception Monitor Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
QueueID	Optional. Defines the Alert Queue into which exceptions from this monitor are stored.
OrganizationCode	Optional. Organization to process in this run. If not passed, all inventory organizations are processed.
CollectPendingJobs	If this parameter is set to N, the agent does not collect information on the pending jobs for this monitor. This pending job information is used for monitoring the monitor in the Sterling Multi-Channel Fulfillment Solution System Management Console.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–247 Exception Monitor Statistics

Statistic Name	Description
NumInboxProcessed	Number of alerts processed.
NumExceededQueueSizeAlerts	Number of actions raised when the number of unresolved alerts exceeds the queue's maximum active size.
NumUnResolvedAlerts	Number of actions raised when the unresolved alert time of an alert exceeds the queue's resolution time.
NumUnAssignedAlerts	Number of actions raised when the unassigned alert time of an alert exceeds the queue's assignment time.

Pending Job Count

None.

Events Raised

No events are raised. Individual actions associated with the monitoring rule are run.

A.5.3 Inventory Monitor

This time-triggered transaction monitors inventory availability at ship node level. It raises alerts at the ship node level when the available inventory exceeds or drops below the configured quantities.

This monitor uses the OPEN_ORDER demand type to calculate available inventory at a given node. All supplies assigned to a supply type that is considered by the OPEN_ORDER demand type are considered. For more information about configuring inventory supply and demand considerations, refer to the *Sterling Global Inventory Visibility Configuration Guide*.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–248 Inventory Monitor Attributes

Attribute	Value
Base Transaction ID	INVENTORY_MONITOR
Base Document Type	General
Base Process Type	General
Abstract Transaction	No
APIs Called	checkAvailability()

Criteria Parameters

The following are the criteria parameters for this monitor:

Table A–249 Inventory Monitor Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
InventoryOrganizationCode	Optional. Valid inventory owner organization. Organization to process in this run. If not passed, all inventory organizations are processed.
CollectPendingJobs	If this parameter is set to N, the agent does not collect information on the pending jobs for this monitor. This pending job information is used for monitoring the monitor in the Sterling Multi-Channel Fulfillment Solution System Management Console.

Statistics Tracked

None.

Pending Job Count

None.

Events Raised

No events are raised. Individual actions associated with the monitoring rule are run.

Data published to the actions is <INSTALL_DIR>/xapidocs/api_javadocs/dbd/INVENTORY_MONITOR_dbd.txt.

A.5.4 Negotiation Monitor

This time-triggered transaction alerts the Enterprise when a negotiation remains in a particular status for a specific amount of time. This also monitors the negotiation expiration date. This time-triggered transaction invokes the actions configured against the negotiation statuses. Configure status Expired (2000) to monitor negotiation expiration date.

Use this monitor in environments where Order or order release has to go through a negotiation phase and you want to monitor the negotiation.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–250 Negotiation Monitor Attributes

Attribute	Value
Base Transaction ID	ORD_NEGOTIATION_MONITOR
Base Document Type	Order
Base Process Type	Order Negotiation
Abstract Transaction	No
APIs Called	None

Criteria Parameters

The following are the criteria parameters for this monitor:

Table A–251 Negotiation Monitor Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
EnterpriseCode	Optional. Enterprise for which the Negotiation Monitor needs to be run. If not passed, then all enterprises are monitored.
CollectPendingJobs	If this parameter is set to N, the agent does not collect information on the pending jobs for this monitor. This pending job information is used for monitoring the monitor in the Sterling Multi-Channel Fulfillment Solution System Management Console.
Status	The negotiation status you are monitoring.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–252 Negotiation Monitor Statistics

Statistic Name	Description
NumNegotiationsProcessed	Number of negotiations processed.
NumNegotiationsRequiringAlert	Number of negotiations which have at least one alert raised.

Pending Job Count

None.

Events Raised

This invokes the actions configured against the negotiation statuses.

Key Data - Not Applicable.

Data Published - YCP_getNegotiationDetails_output.xml

A.5.5 Order Monitor

This time-triggered transaction alerts the enterprise when an order remains in a particular status for a specific amount of time. For more information about time-triggered transaction, see [Section 4.2.6, "Defining Transactions"](#).

Use this monitor if you care to track how long orders stay in a particular state.

This transaction is deprecated as of Release 5.0. Use the Enhanced Order Monitor time-triggered transaction instead.

Note: The same relog interval is used for all document types.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–253 Order Monitor Attributes

Attribute	Value
Base Transaction ID	ORDER_MONITOR
Base Document Type	Order
Base Process Type	Order Fulfillment
Abstract Transaction	No
APIs Called	None

Criteria Parameters

The following are the criteria parameters for this monitor:

Table A–254 Order Monitor Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
EnterpriseCode	Optional. Enterprise for which the Order Monitor needs to be run. If not passed, then all enterprises are monitored.
Status	Optional. The order status you want to monitor (if not monitoring a status range).
LeastAge1	This field is not used in this version.
FromStatus	Optional. Statuses to monitor that are greater than or equal to the passed status (if not monitoring a specific status).
ToStatus	Optional. Statuses to monitor that are less than or equal to the passed status (if not monitoring a specific status).

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–255 Order Monitor Statistics

Statistic Name	Description
NumOrdersProcessed	Number of orders processed.
NumOrdersRequiringAlert	Number of orders which have at least one alert raised.

Pending Job Count

None.

Events Raised

No events are raised. Individual actions associated with the monitoring rule are run.

Data published to the actions is `ORDER_MONITOR_dbd.txt`.

A.5.6 Enhanced Order Monitor

The enhanced order monitor enables you to monitor the following situations:

- Milestone x has not been reached y hours before a given date type.
- Milestone x has not been reached within y hours of a given date type.
- Milestone x has not been reached within y hours of milestone z.
- Milestone x has been reached y hours before a given date type.
- Milestone x has been reached within y hours of a given date type.
- Milestone x has been reached within y hours after milestone z.
- The order has been in status x for y hours.
- Date type x is y hours before date type z.
- Date type x is y hours after date type z.
- The order has been in hold type x for y hours.
- The order has been in hold type x for y hours before date type z.

The order monitor can be configured to monitor the following system date types for Sales Order and Purchase Order document types:

- Actual Order Date - Read from the `ORDER_DATE` column of the `YFS_ORDER_HEADER` table.
- Requested Ship Date - If there is an order release, read from the `REQ_SHIP_DATE` column of the `YFS_ORDER_RELEASE` table. Otherwise, read from the `REQ_SHIP_DATE` of the `YFS_ORDER_LINE` table.
- Expected Ship Date - Read from the `EXPECTED_SHIPMENT_DATE` column of the `YFS_ORDER_LINE_SCHEDULE` table. If it is null, uses the same logic as Requested Ship Date.
- Actual Ship Date - If the date is before 01/01/2500, read from the `EXPECTED_SHIPMENT_DATE` column of the `YFS_ORDER_LINE_SCHEDULE` table. If the date is on or after 01/01/2500, this date type is returned as null.

- Requested Delivery Date - If there is a release, read from the REQ_DELIVERY_DATE column of the YFS_ORDER_RELEASE table.
- Expected Delivery Date - Read from the EXPECTED_DELIVERY_DATE column of the YFS_ORDER_LINE_SCHEDULE table. If it is null, uses the same logic as Requested Delivery Date.
- Actual Delivery Date - If the date is before 01/01/2500, read from the EXPECTED_DELIVERY_DATE column of the YFS_ORDER_LINE_SCHEDULE table. If the date is on or after 01/01/2500, this date type is returned as null.

Note: For Order Fulfillment, Planned Order Execution, Reverse Logistics, and Purchase Order Execution pipelines, the system defined dates such as Shipment and Delivery are stored without a time component. Therefore when you configure a rule using these dates, all time computations are carried out assuming they are always 12:00:00 AM.

For more information about milestones, date types, and monitoring rules, refer to the *Sterling Supply Collaboration Configuration Guide*, the appropriate section in this guide, and the *Sterling Reverse Logistics Configuration Guide*.

Important: If you run the Enhanced Order Monitor, you must configure and run the Close Order time-triggered transaction in all applicable pipelines. For more information about the Close Order time-triggered transaction, see [Section A.2.6, "Close Order"](#).

Note: The same relog interval is used for all document types.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–256 Enhanced Order Monitor Attributes

Attribute	Value
Base Transaction ID	ORDER_MONITOR_EX
Base Document Type	Order
Base Process Type	Order Fulfillment
Abstract Transaction	No
APIs Called	None

Criteria Parameters

The following are the criteria parameters for this monitor:

Table A–257 Enhanced Order Monitor Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
EnterpriseCode	Optional. Enterprise for which the Order Monitor needs to be run. If not passed, then all enterprises are monitored.

Statistics Tracked

The following statistics are tracked for this monitor:

Table A–258 Enhanced Order Monitor Statistics

Statistic Name	Description
NumOrdersProcessed	Number of orders processed.
NumAlertsRaised	Number of alerts raised.

Pending Job Count

For this transaction the pending job count is the number of open orders with the value of NEXT_ALERT_TS less than or equal to (\leq) the current date.

Events Raised

Table A–259 *Events Raised by the Enhanced Order Monitor Transaction*

Transaction/Event	Key Data	Data Published*	Template Support?
ON_AUTO_CANCEL	ORDER_MONITOR_dbd.txt	YFS_ORDER_MONITOR_EX.ON_AUTO_CANCEL.html	Yes
* These files are located in the following directory: <INSTALL_DIR>/xapidocs/api_javadocs/XSD/HTML			

Note: The Enhance Order Monitor transaction raises the ON_AUTO_CANCEL event, but does not cancel the order. A service on this event should be configured to cancel the order.

Monitor Rule's Condition Template

If a monitor rule contains a condition, the <INSTALL_DIR>/repository/xapi/template/source/sscap/monitor/ORDER_MONITOR_EX_CONDITION.xml template file is used to obtain both the order details and the evaluating monitor rule details. See the provided <INSTALL_DIR>/repository/xapi/template/source/sscap/monitor/ORDER_MONITOR_EX_CONDITION.xml.sample file for more details.

If the <INSTALL_DIR>/repository/xapi/template/source/sscap/monitor/ORDER_MONITOR_EX_CONDITION.xml template file does not exist, the MonitorConsolidation->Order element of the default monitor template, the <INSTALL_

DIR>/repository/xapi/template/source/sscap/monitor/ORDER_MONITOR_EX.xml file, is used.

Note: Note: If the default monitor template is used, the MonitorConsolidation-> Order->OrderStatuses-> OrderStatus->MonitorRule element is ignored and is not passed into the condition.

A.5.7 Enhanced Return Monitor

The enhanced return monitor allows you to monitor the following situations:

- Milestone x has not been reached y hours before a given date type.
- Milestone x has not been reached within y hours of a given date type.
- Milestone x has not been reached within y hours of milestone z.
- Milestone x has been reached y hours before a given date type.
- Milestone x has been reached within y hours of a given date type.
- Milestone x has been reached within y hours after milestone z.
- The order has been in status x for y hours.
- Date type x is y hours before date type z.
- Date type x is y hours after date type z.

The enhanced return monitor can be configured to monitor the following system date types:

- Actual Order Date - Read from the ORDER_DATE column of the YFS_ORDER_HEADER table
- Requested Ship Date - If there is an order release, read from the REQ_SHIP_DATE column of the YFS_ORDER_RELEASE table. Otherwise, read from the REQ_SHIP_DATE of the YFS_ORDER_LINE table.
- Expected Ship Date - Read from the EXPECTED_SHIPMENT_DATE column of the YFS_ORDER_LINE_SCHEDULE table. If it is null, uses the same logic as Requested Ship Date.

- Actual Ship Date - If the date is before 01/01/2500, read from the EXPECTED_SHIPMENT_DATE column of the YFS_ORDER_LINE_SCHEDULE table. If the date is on or after 01/01/2500, this date type is returned as null.
- Requested Delivery Date - If there is a release, read from the REQ_DELIVERY_DATE column of the YFS_ORDER_RELEASE table. Otherwise, read from the REQ_DELIVERY_DATE of the YFS_ORDER_LINE table.
- Expected Delivery Date - Read from the EXPECTED_DELIVERY_DATE column of the YFS_ORDER_LINE_SCHEDULE table. If it is null, uses the same logic as Requested Delivery Date.
- Actual Delivery Date - If the date is before 01/01/2500, read from the EXPECTED_DELIVERY_DATE column of the YFS_ORDER_LINE_SCHEDULE table. If the date is on or after 01/01/2500, this date type is returned as null.

Note: For Order Fulfillment, Planned Order Execution, Reverse Logistics, and Purchase Order Execution pipelines, the system defined dates such as Shipment and Delivery are stored without a time component. Therefore when you configure a rule using these dates, all time computations are carried out assuming they are always 12:00:00 AM.

For more information about milestones, date types, and monitoring rules, refer to the *Sterling Supply Collaboration Configuration Guide*, the appropriate section in this guide, and the *Sterling Reverse Logistics Configuration Guide*.

Important: If you run the Enhanced Return Monitor, you must configure and run the Close Order time-triggered transaction in all applicable pipelines. For more information about the Close Order time-triggered transaction, see [Section A.2.6, "Close Order"](#).

Note: The same relog interval is used for all document types.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–260 *Enhanced Order Monitor Attributes*

Attribute	Value
Base Transaction ID	RETURN_MONITOR_EX
Base Document Type	Return Order
Base Process Type	Reverse Logistics
Abstract Transaction	No
APIs Called	None

Criteria Parameters

The following are the criteria parameters for this monitor:

Table A–261 *Enhanced Order Monitor Criteria Parameters*

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.

Table A–261 Enhanced Order Monitor Criteria Parameters

Parameter	Description
EnterpriseCode	Optional. Enterprise for which the Order Monitor needs to be run. If not passed, then all enterprises are monitored.
FromStatus	Optional. Statuses to monitor that are greater than or equal to the passed status.
ToStatus	Optional. Statuses to monitor that are less than or equal to the passed status.
CollectPendingJobs	If this parameter is set to N, the agent does not collect information on the pending jobs for this monitor. This pending job information is used for monitoring the monitor in the Sterling Multi-Channel Fulfillment Solution System Management Console.

Statistics Tracked

The following statistics are tracked for this monitor:

Table A–262 Enhanced Order Monitor Statistics

Statistic Name	Description
NumOrdersProcessed	Number of orders processed.
NumAlertsRaised	Number of alerts raised.

Pending Job Count

For this transaction the pending job count is the number of open orders with the value of NEXT_ALERT_TS less than or equal to (\leq) the current date.

Events Raised

No events are raised. Individual actions associated with the monitoring rule are run.

The data published is RETURN_MONITOR_EX.xml.

Monitor Rule's Condition Template

If a monitor rule contains a condition, the `<INSTALL_DIR>/repository/xapi/template/source/sscap/monitor/ORDER_MONITOR_EX_CONDITION.xml` template file is used to obtain both the order details and the evaluating monitor rule details. See the provided `<INSTALL_DIR>/repository/xapi/template/source/sscap/monitor/ORDER_MONITOR_EX_CONDITION.xml.sample` file for more details.

If the `<INSTALL_DIR>/repository/xapi/template/source/sscap/monitor/ORDER_MONITOR_EX_CONDITION.xml` template file does not exist, the `MonitorConsolidation->Order` element of the default monitor template, the `<INSTALL_DIR>/repository/xapi/template/source/sscap/monitor/ORDER_MONITOR_EX.xml` file, is used.

Note: Note: If the default monitor template is used, the `MonitorConsolidation-> Order->OrderStatuses-> OrderStatus->MonitorRule` element is ignored and is not passed into the condition.

A.5.8 Real-time Availability Monitor

The Real-time Availability Monitor time-triggered transaction monitors the inventory availability of inventory items. It can be configured to raise the `REALTIME_AVAILABILITY_CHANGE` event when the inventory level for a given item changes between the thresholds defined in the Sterling Multi-Channel Fulfillment Solution Configurator in the Global Inventory Visibility module.

It can be run in three modes:

- Activity Based: Raises the event in real time every time an item goes above or below one of the thresholds.
- Quick Sync: Re-sends the most recently published inventory availability information.
- Full Sync: Monitors all of the items regardless of activity and publishes the inventory information for all of the items.

In all cases, the percentage of future inventory availability is used for considering inventory availability at retrieval time. For more information about future inventory availability, see the *Sterling Global Inventory Visibility Configuration Guide*.

Inventory available at the current date is considered as on-hand. The processing time in the ATP rules must be set to at least 1 day, or else past due supply is included as part of on-hand inventory. For more information about configuring ATP Rules, see the *Sterling Global Inventory Visibility Configuration Guide*.

Demand of type OPEN_ORDER is used in getting the inventory availability picture.

If sourcing is maintained, the Real-time Availability Monitor can either monitor the total availability across nodes or the availability at individual nodes.

When monitoring the total availability across nodes, the Real-time Availability Monitor monitors all nodes in the default distribution group of the inventory organization.

When monitoring the availability at individual nodes, the Real-time Availability Monitor monitors all nodes in a specified distribution group. For more information about configuring distribution groups and node-level inventory monitoring, see the *Sterling Global Inventory Visibility Configuration Guide*.

Inventory items without an Availability Monitor rule, or with a rule that is disabled, is unable to be processed by this time-triggered transaction.

If configured, the Real-time Availability Monitor also considers the onhand and future inventory availability safety factor during monitoring. For more information about the inventory availability safety factors and the `findInventory()` API, see the *Sterling Global Inventory Visibility Configuration Guide* and the *Sterling Multi-Channel Fulfillment Solution Javadocs*.

When the onhand quantity is greater than the configured low threshold, the `REALTIME_ONHAND` alert type is raised, and the alert level is based on the onhand quantity.

When the onhand quantity falls below the configured low threshold, the `REALTIME_FUTURE_MAX` alert type is raised, and the alert level is based on the total future supply (`FutureAvailableQuantity`) with `FirstFutureAvailableDate` set to the date on which the first future

supply is available, and `FutureAvailableDate` set to the date on which the maximum future supply is available.

Note: When the Real-time Availability Monitor is run in activity based mode, changing one of the thresholds of an inventory item does not cause the agent to monitor it unless there is a change in activity. For example, if item I with available quantity 700 is being monitored with a low threshold of 600, and the low threshold is then changed to 1000, no event is published unless there is change in I's activity. In order to ensure that in such a scenario I is not left unmonitored, call the `createInventoryActivity` API when changing a monitoring rule for an item.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–263 Real-time Availability Monitor Attributes

Attribute	Value
Base Transaction ID	REALTIME_ATP_MONITOR
Base Document Type	General
Base Process Type	General
Abstract Transaction	No
APIs Called	FindInventory

Criteria Parameters

The following are the criteria parameters for this monitor:

Table A–264 Real-time Availability Monitor Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
InventoryOrganizationCode	Inventory organization code to use when MonitorOption is passed as 3. The inventory organization has to be an enterprise. If this is not passed, the monitor runs for all inventory organizations.
MonitorOption	1 - Activity Based (Monitor based on distinct inventory items in YFS_INVENTORY_ACTIVITY table). 2 – Quick Sync (Re-raise event to publish information from the YFS_INVENTORY_ALERT table). 3 – Full Sync (Monitor based on all inventory items maintained by the inventory organization provided. If no InventoryOrganizationCode is provided, all inventory item is monitored). If not provided, default value is 1.
ItemStatuses	List of valid statuses of items to be processed. Statuses must be separated by a , for example 3000,2000. This is only used when MonitorOption is passed as 2 or 3. If provided, only items with the matching statuses is monitored.

Table A–264 Real-time Availability Monitor Criteria Parameters

Parameter	Description
FromAlertTimestamp	<p>This is only used when MonitorOption is passed as 2. If provided, the agent raises the REALTIME_AVAILABILITY_CHANGE event to re-publish inventory availability information which was published between the time that the agent started and FromAlertTimestamp.</p> <p>If not provided, all inventory availability information published before the time that the agent started is re-published.</p>
AllowedOverriddenCriteria	<p>If set to Y, the overridden value for the agent criteria parameters can be provided at the command line while triggering the agent in the following format:</p> <pre><AgentCriteriaAttribute> <OverriddenValue></pre> <p>For more information about passing these attributes, see the <i>Sterling Multi-Channel Fulfillment Solution Installation Guide</i>.</p>
FromLastNumberOfHours	<p>This is only used when MonitorOption is passed as 2 to calculate the FromAlertTimestamp parameter, if necessary.</p> <p>If the FromAlertTimestamp parameter is not provided, it is calculated as current timestamp minus FromLastNumberOfHours.</p>

Table A–264 Real-time Availability Monitor Criteria Parameters

Parameter	Description
CollectPendingJobs	If this parameter is set to N, the agent does not collect information on the pending jobs for this monitor. This pending job information is used for monitoring the monitor in the Sterling Multi-Channel Fulfillment Solution System Management Console.
RaiseEventsOnAllAvailability Changes	When set to Y, REALTIME_AVAILABILITY_CHANGE event is raised on all availability changes regardless of whether availability exceeds or falls below specified thresholds. This is only used when MonitorOption is passed as 1. Valid values: Y or N. Default value: N.

Statistics Tracked

None.

Pending Job Count

None.

Events Raised

The following events are raised by this time-triggered transaction:

Table A–265 Events Raised by the Realtime Availability Monitor Transaction

Transaction/Event	Key Data	Data Published*	Template Support?
REALTIME_AVAILABILITY_CHANGE	None	YFS_REALTIME_ATP_MONITOR.REALTIME_AVAILABILITY_CHANGE.html	Yes
<p>* These files are located in the following directory: <INSTALL_DIR>/xapidocs/api_javadocs/XSD/HTML</p>			

Note: Although described as 'real-time', availability changes may not be triggered immediately as inventory changes occur if the agent has a backlog of messages to process. Furthermore, this monitor exists as a time-triggered transaction, and thus monitors availability of inventory items only when the monitor is triggered based on the configured runtime properties.

A.5.9 Shipment Monitor

This time-triggered transaction reports the states of a shipment, based on rules in the YFS_MONITOR_RULE table. This transaction enables you to monitor the following situations:

- If the Shipment has been in a status for more than a specified amount of time.
- If a specified date that is associated with the shipment is:
 - n hours before another specified date
 - n hours after another specified date
 - n hours not before another specified date
 - n hours not after another specified date
- If the Shipment has been in a hold type for a specified amount of time.
- If the Shipment has been in a hold type for n hours before a specified date.

Monitoring rules can be configured for shipment's origin and destination points.

Monitoring rules cannot be configured for a shipment's intermediate pickup and drop off points. A shipment has intermediate pickup or drop off only if it has multiple pickup or drop off points. For example, a shipment has more than one loads carrying it. The shipment status on first load deposit, second load deposit, and so forth cannot be monitored. Once the last load deposits the shipment at its destination, then the shipment status can be marked and monitored.

This is not a pipeline transaction. It also does not work from the task queue.

For more information about milestones, date types, and monitoring rules, see the *Sterling Supply Collaboration Configuration Guide*, the appropriate section in this guide, and the *Sterling Reverse Logistics Configuration Guide*.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–266 Shipment Monitor Attributes

Attribute	Value
Base Transaction ID	SHIPMENT_MONITOR
Base Document Type	Order
Base Process Type	Order Delivery
Abstract Transaction	No
APIs Called	None

Criteria Parameters

The following are the criteria parameters for this monitor:

Table A–267 Shipment Monitor Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank, it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.

Table A–267 Shipment Monitor Criteria Parameters

Parameter	Description
EnterpriseCode	Optional. Enterprise for which the Shipment Monitor needs to be run. If not passed, then all enterprises are monitored.
CollectPendingJobs	If this parameter is set to N, the agent does not collect information on the pending jobs for this monitor. This pending job information is used for monitoring the monitor in the Sterling Multi-Channel Fulfillment Solution System Management Console.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–268 Shipment Monitor Statistics

Statistic Name	Description
NumShipmentsMonitored	Number of shipments monitored.

Pending Job Count

For this transaction the pending job count is the number of open shipments with the value of NEXT_ALERT_TS less than or equal to (\leq) the current date.

Events Raised

This invokes the actions configured against shipment statuses.

Key Data - Not Applicable.

Data Published - SHIPMENT_MONITOR.xml

Monitor Rule's Condition Template

If a monitor rule contains a condition, the <INSTALL_DIR>/repository/xapi/template/source/sscap/monitor/SHIPMENT_MONITOR_CONDITION.xml template file is used to obtain the shipment details and the evaluating monitor rule details. See the provided <INSTALL_

DIR>/repository/xapi/template/source/sscap/monitor/SHIPMENT_MONITOR_CONDITION.xml.sample file for more details.

If the <INSTALL_

DIR>/repository/xapi/template/source/sscap/monitor/SHIPMENT_MONITOR_CONDITION.xml template file does not exist, the MonitorConsolidation->Shipment element of the default monitor template, the <INSTALL_

DIR>/repository/xapi/template/source/sscap/monitor/SHIPMENT_MONITOR.xml file, is used.

Note: Note: If the default monitor template is used, the MonitorConsolidation->Shipment->MonitorRule element is ignored and is not passed into the condition.

A.5.10 Work Order Monitor

This time-triggered transaction alerts the enterprise when a work order remains in a particular state or hold type for a specific amount of time.

Use this monitor to track how long work orders stay in a particular state or hold type.

Attributes

The following are the attributes for this time-triggered transaction:

Table A–269 Work Order Monitor Attributes

Attribute	Value
Base Transaction ID	WORK_ORDER_MONITOR
Base Document Type	Work Order
Base Process Type	VAS Process
Abstract Transaction	No

Criteria Parameters

The following are the criteria parameters for this monitor:

Table A–270 Work Order Monitor Criteria Parameters

Parameter	Description
Action	Required. Triggers the transaction. If left blank it defaults to Get, the only valid value.
Number of Records To Buffer	Optional. Number of records to retrieve and process at one time. If left blank or specified as 0 (zero), it defaults to 5000.
EnterpriseCode	Optional. Enterprise for which the Work Order Monitor needs to be run. If not passed, then all enterprises are monitored.
Node	Optional. Node for which the Work Order Monitor needs to be run. If not passed, then all nodes are monitored.
CollectPendingJobs	If this parameter is set to N, the agent does not collect information on the pending jobs for this monitor. This pending job information is used for monitoring the monitor in the Sterling Multi-Channel Fulfillment Solution System Management Console.

Statistics Tracked

The following statistics are tracked for this transaction:

Table A–271 Work Order Monitor Statistics

Statistic Name	Description
NumWorkOrdersMonitored	Number of work orders monitored.

Pending Job Count

For this transaction the pending job count is the number of Work Orders that are monitored, where NEXT_ALERT_TS less than or equal to (<=) current date.

Events Raised

No events are raised. Individual actions associated with the monitoring rule are run. Data published to the actions is workOrder_dbd.txt.

Monitor Rule's Condition Template

If a monitor rule contains a condition, the `<INSTALL_DIR>/repository/xapi/template/source/sscap/monitor/monitor/WORK_ORDER_MONITOR_CONDITION.xml` template file is used to obtain the work order details and the evaluating monitor rule details. See the provided `<INSTALL_DIR>/repository/xapi/template/source/sscap/monitor/WORK_ORDER_MONITOR_CONDITION.xml.sample` file for more details.

If the `<INSTALL_DIR>/repository/xapi/template/source/sscap/monitor/WORK_ORDER_MONITOR_CONDITION.xml` template file does not exist, the `MonitorConsolidation->WorkOrder` element of the default monitor template, the `<INSTALL_DIR>/repository/xapi/template/source/sscap/monitor/WORK_ORDER_MONITOR.xml` file, is used.

Note: If the default monitor template is used, the `MonitorConsolidation->WorkOrder->->MonitorRule` element is ignored and is not passed into the condition.

Order Modification Types

The following are the default order modification types and their associated modification levels:

Table 21–14 Order Document Modification Types

Modification Types	Description	Modification Levels
Add Instruction	An instruction can be added to an order document's header, line, or shipment. For example, you may want to add an instruction stating that a line item needs to be gift wrapped.	Header Line Shipment Receipt
Add Line	A line can be added to an order document's header, release, negotiation, or shipment. Important: When adding a line to an order, the Add Line modification type does not get audited, if the prices are not configured.	Header Release Negotiation Shipment
Add Note	A note can be added to an order document's header or release.	Header Release
Add Option	An option can be added to a provided service or delivery service order line.	Line

Table 21–14 Order Document Modification Types

Modification Types	Description	Modification Levels
Add Quantity	Additional quantity can be added to an order document's line or release line.	Line Release Line
Add/Remove Additional Date	A date type used for shipment monitoring (such as, Ship Date) can either be added to or removed from an order document's shipment. For example, you may want to add an additional delivery date used by your organization to monitor shipments.	Shipment
Add/Remove Charge	A charge can either be added to or removed from an order document's shipment. For example, if a shipment contains hazardous materials and your organization has an extra shipping charge for shipment of hazardous materials, you can add an extra charge to the shipment.	Shipment
Add/Remove Container	A container can either be added to or removed from an order document's shipment.	Shipment
Associate Delivery Line With Product Line	When the delivery method of a product order line is delivery, the product line can be associated to a delivery line to indicate how the product line is delivered.	Line

Table 21–14 Order Document Modification Types

Modification Types	Description	Modification Levels
Associate Product Line With Delivery Line	When the delivery method of a product order line is delivery, the product line can be associated to a delivery line to indicate how the product line is delivered.	Line
Associate Product Line With Service Line	A provided service can be associated to a product line to indicate that the service is somehow dependent on the product line.	Line
Associate Service Line With Product Line	A provided service can be associated to a product line to indicate that the service is somehow dependent on the product line.	Line
Attribute Modification	A receipts attributes can be modified. For a list of attributes that can be modified, see the <i>changeReceipt</i> API in the <i>Sterling Multi-Channel Fulfillment Solution Javadocs</i> .	Receipt
Backorder	An order document's line, release, or release line can be backordered. For example, if an order is released to a node and the node does not have enough quantity to fulfill the order, they can backorder the release.	Line Release Release Line
Cancel	An order document's header, line, release, or release line can be manually cancelled from the Application Consoles.	Header Line Release Release Line

Table 21–14 Order Document Modification Types

Modification Types	Description	Modification Levels
Change Additional Address	A modification can be made to the fields of any additional addresses that may have been configured for an order document's header or line.	Header Line
Change Appointment	Appointments can be taken and changed for delivery and provided service order lines.	Line
Change Bill To	A modification can be made to any bill to address field associated with an order document's header or release.	Header Release

Table 21–14 Order Document Modification Types

Modification Types	Description	Modification Levels
Change Bundle Definition	<p>The existing bundle definition can be replaced with the new bundle definition.</p> <p>For example, you can change an existing bundle definition by passing the 'REPLACE_BUNDLE' action to the bundle parent. All the components passed remain with order and as well as with bundle. All remaining components are deleted.</p> <p>Important: In addition to this, the modification type DELETE is executed on all the components getting removed and modification type ADD_LINE is executed on components getting added. This modification is applied to bundle parent's immediate components.</p>	Line
Change Buyer Organization	<p>The buyer organization associated with an order document's header can be changed. This modification can only be made in the Order Detail screen.</p>	Header

Table 21–14 Order Document Modification Types

Modification Types	Description	Modification Levels
Change Carrier	<p>A modification can be made to the Carrier/Service or Carrier field associated with an order document's header, line, or release.</p> <p>For example, you can change the carrier and service from UPS Next Day Air to FedEx Express Saver Pack.</p> <p>Important: If you want this modification type to be allowed, Change Carrier Service Code must also be allowed.</p>	Header Line Release
Change Carrier Account No	<p>A modification can be made to the Carrier Account # field associated with an order document's header, line, or release.</p>	Header Line Release
Change Carrier Service Code	<p>A modification can be made to the Carrier/Service field associated with an order document's header, line, or release.</p> <p>For example, you can change the carrier and service from UPS Next Day Air to FedEx Express Saver Pack.</p> <p>Important: If you want this modification type to be allowed, Change Carrier must also be allowed.</p>	Header Line Release
Change Contact Info	<p>A modification can be made the fields for the Buyer/Seller contact information associated with an order document's header.</p>	Header

Table 21–14 Order Document Modification Types

Modification Types	Description	Modification Levels
Change Cost	A adjustment can be made to the Unit Cost field associated with an order document's release or release line.	Release Release Line
Change Currency	The currency associated with an order document's header can be changed. Upon a change to the currency, the Sterling Multi-Channel Fulfillment Solution automatically re-prices the order. However, pre-existing charges and taxes have to be converted manually.	Header
Change Custom Date	<p>A modification can be made to the date type fields used for order monitoring associated with an order document's header, line, or release.</p> <p>The following custom date fields can be modified when this modification type is allowed:</p> <ul style="list-style-type: none">• Requested• Expected• Actual <p>For example, if there is a delay in a release's processing, you can change the expected delivery date.</p>	Header Line Release

Table 21–14 Order Document Modification Types

Modification Types	Description	Modification Levels
Change Delivery Code	<p>A modification can be made to the Delivery Code field associated with an order document's header, line, or release.</p> <p>For example, if you want to indicate that an order's freight charges are paid by the Enterprise, you can choose the ENTERPRISE delivery code.</p>	Header Line Release
Change Delivery Method	<p>A product order line indicates how the product is sent to its final destination. It can be changed to SHIP, DELIVER, or PICKUP.</p>	Line
Change Expiration Date	<p>A modification can be made to the expiration date associated with an order document's negotiation.</p>	Negotiation
Change Freight Terms	<p>A modification can be made to the Freight Terms field associated with an order document's header, line, or release.</p> <p>For example, you can change an order line's freight term from CIF (Cost Insurance and Freight) to CFR (Cost and Freight).</p>	Header Line Release

Table 21–14 Order Document Modification Types

Modification Types	Description	Modification Levels
Change Instruction	<p>A modification can be made to an instruction associated with an order document's header, line, or shipment.</p> <p>The following instruction fields can be modified when this modification type is allowed:</p> <ul style="list-style-type: none"> • Instruction Type • Text • URL 	<p>Header</p> <p>Line</p> <p>Shipment</p> <p>Receipt</p>
Change Item Description	A modification can be made to the Description field of an item associated with an order document's line.	Line
Change Mark For	A modification can be made to the fields of the mark for address associated with an order document's header, line, or release.	<p>Header</p> <p>Line</p> <p>Release</p>
Change Order Name	A modification can be made to the Order Name field associated with an order document's header.	Header
Change Other Attributes	A modification can be made to fields that do not have system or user-defined modification types associated with them.	<p>Header</p> <p>Line</p> <p>Release</p> <p>Negotiation</p> <p>Negotiation Line</p> <p>Shipment</p>
Change Other Relationships	Not used in this version.	Shipment

Table 21–14 Order Document Modification Types

Modification Types	Description	Modification Levels
Change Payment Method	<p>A modification can be made to the Payment Type field associated with an order document's header or release.</p> <p>For example, you can change an order's payment type from Check to Credit Card.</p>	Header Release
Change Payment Rule ID	<p>The Payment Rule field associated with an order document's header can be changed.</p> <p>For example, you can change the payment rule from the default rule to a custom rule that pertains to the order.</p>	Header
Change Payment Status	<p>The Payment Status field associated with an order document's header can be changed.</p> <p>For example, you can change an order's payment status from Await Authorization to Authorized.</p>	Header
Change Price	<p>Charges can be added to an order document's header or line.</p>	Header Line
Change Receiving Node	<p>The Receiving Node field associated with an order document's line can be changed.</p> <p>For example, if for some reason it has been determined that an order line's original receiving node cannot receive the line, you can change it to another receiving node.</p>	Line

Table 21–14 Order Document Modification Types

Modification Types	Description	Modification Levels
Change References	A modification can be made to the name/value pair in the YFS_REFERENCE_TABLE using APIs.	Header Line
Change Requested Ship Date	A modification can be made to the Requested Ship Date associated with an order document's header, line, or release. For example, if the customer decides they want an order to be shipped on a date later than what they originally requested, you can change the requested shipment date.	Header Line Release
Change Schedule	A modification can be made to schedule attributes, such as expected ship date, expected delivery date, and lot number, associated with an order document's header, line, release, or release line.	Header Line Release Release Line
Change Schedule Rule ID	A modification can be made to the schedule rule associated with an order document's header. This allows the user to select the scheduling rule they want to use for the order from the Scheduling Rule drop-down list on the Schedule Order popup window.	Header

Table 21–14 Order Document Modification Types

Modification Types	Description	Modification Levels
Change Ship Node	<p>The Ship Node field associated with an order document's header or line can be changed.</p> <p>For example, if for some reason it has been determined that an order line's original ship node cannot handle the order line, you can change it to another node.</p>	Header Line
Change Ship To	A modification can be made to the fields of a ship to address associated with an order document's header, line, or release.	Header Line Release
Change Status	<p>The order status (such as, Created) associated with an order document's header, line, release, release line, or negotiation can be changed.</p> <p>Note: Only order statuses existing in process type repositories are affected by this modification type. Actions performed against order documents, such as putting an order on hold or canceling an order, are not impacted.</p>	Header Line Release Release Line Negotiation
Change Tax	A modification can be made to the Tax Amount associated with an order document's header or line.	Header Line
Delete Shipment	An order document's shipment can be deleted.	Shipment

Table 21–14 Order Document Modification Types

Modification Types	Description	Modification Levels
Hold	An order document's header or release can be manually put on hold. For example, you may want to perform a security check on a particular Buyer, you can then place the order on hold until you clear the necessary information before the order is scheduled.	Header Release
Include In Load	An order document's shipment can be included in a load document.	Shipment
Include Shipment in Delivery Plan	An order document's shipment can be included in a delivery plan.	Shipment
Pack Shipment	An order document's shipment can be packed.	Shipment
Price Program	The price program associated with an order document's header can be changed.	Header
Receipt Complete	An order document's receipt can be marked as complete.	Receipt
Release from Hold	An order document's header can be released from hold.	Header
Remove Delivery Line From Product Line Association	Delivery lines can be removed from product order lines.	Line
Remove Line	A line can be removed from an order document's header, line, and shipment.	Header Line Shipment
Remove Option	Options can be removed from delivery and provided services.	Line

Table 21–14 Order Document Modification Types

Modification Types	Description	Modification Levels
Remove Product Line From Delivery Line Association	Product lines can be removed from delivery lines.	Line
Remove Product Line From Service Line Association	Product lines can be removed from provided service order lines.	Line
Remove Service Line From Product Line Association	Provided service lines can be removed from product order lines.	Line
Remove Shipment From Delivery Plan	An order document's shipment can be removed from a delivery plan.	Shipment
Short	An order document's header, line, release, release line, and receipt can be shorted. This occurs when there is a shortage in the expected quantity.	Header Line Release Release Line Receipt
Split Line	An order document's line or release line can be split into multiple lines.	Line Release Line
Unpack Shipment	An order document's shipment can be unpacked.	Shipment
Unreceive	An order document's receipt can be fully or partially unreceived. This moves the quantity you are identifying as unreceived back to Shipped status.	Receipt
Unschedule	An order document's header or line can be unscheduled from a scheduled node. This cancels any inventory that has been reserved for the order at the scheduled node.	Header Line

Condition Builder Attributes

Statements in the condition builder are built using attributes that are defined throughout the Sterling Multi-Channel Fulfillment Solution Configurator. This appendix describes all of those attributes for each process type.

Click one of the links below to be taken to the appropriate condition builder attributes description.

C.1 Sales Order

C.1.1 Order Fulfillment

Table C–1 Order Fulfillment Condition Builder Attributes

Attribute	Description
Order Attributes	
Condition Variable 1	A variable that can be used for condition building. This is an existing field in the YFS_ORDER_LINE database table, and can be used to create conditions without extending the database.
Condition Variable 2	A variable that can be used for condition building. This is an existing field in the YFS_ORDER_LINE database table, and can be used to create conditions without extending the database.
Delivery Method	The delivery method of the order (shipment, pickup or delivery).
Disposition Code	The disposition code of the item. This field is only applicable for Reverse Logistics and Supply Collaboration.
Line Type	The type of the order line. The Sterling Multi-Channel Fulfillment Solution has no application logic associated with the order line type. This field can be set up as per your business practices.

Table C–1 Order Fulfillment Condition Builder Attributes

Attribute	Description
Order Type	The type of the order. The Sterling Multi-Channel Fulfillment Solution has no application logic associated with the order type. This field can be set up as per your business practices.
Payment Status	The payment status of the order.
Sale Voided	The flag indicating whether the order is voided.
Transaction ID	The ID of the last transaction that was run on the order.
Participant Attributes	
Bill To ID	The ID of the bill to address for the order.
Buyer Organization Code	The code of the organization that is buying the goods or services.
Enterprise Code	The code of the enterprise on the order.
Receiving Node	The node that receives the shipment for the order.
Seller Organization Code	The code of the organization that is selling the goods or services.
Ship Node	The node that ships the shipment for the order.
Ship Node Interface Type	The interface type of the ship node on the order (External Application, Sterling Multi-Channel Fulfillment Solution Consoles, Sterling Networked WMS, or WMS 6.2).
Ship To ID	The ID of the ship to address for the order.
Supplier Code	The code of the supplier for the order.
Item Attributes	
Item ID	The ID of the item on the order line.
Item Group Code	The group code of the service item. For example, if the service is a provided service item, then the item group code is PS.
Product Line	The product line of the item on the order line.

Table C–1 Order Fulfillment Condition Builder Attributes

Attribute	Description
Sourcing Attributes	
Fulfillment Type	The fulfillment type of the order.
Intentional Backorder	The flag indicating whether the order was intentionally dropped into backordered status at order creation.
Is Firm Predefined Node	The flag indicating whether the node on the order is a firm predefined node.
Order Sourcing Classification	The order sourcing classification of the order.
Reservation Mandatory	The flag indicating whether the reservation is mandatory.
Related Order Attributes	
Chain Type	The chain type of the order.
Is Chained Line	The flag indicating whether the order line is chained with another order line.
Is Derived Line	The flag indicating whether the order line is derived from another order line.
Order Purpose	The purpose of the order. If this is an exchange order, this field is set to EXCHANGE.
{Enter Your Own Attribute}	<p>A customizable condition builder attribute. For more information about customizing this field, see the <i>Sterling Multi-Channel Fulfillment Solution Customization Guide</i>.</p> <p>Note: This field is limited only to unexposed key attributes that are pre-defined by the Sterling Multi-Channel Fulfillment Solution as opposed to any XML attribute that you can enter.</p>

C.1.2 Order Negotiation

Table C–2 Order Negotiation Condition Builder Attributes

Attribute	Description
Enterprise Code	The code of the enterprise on the order.
Initiator Organization Code	The code of the organization that initiates the negotiation.
Negotiator Organization Code	The code of the organization that can accept, counter-offer, or reject the initiator's offer.
Negotiation Pipeline Key	The key of the negotiation pipeline this order is going through.
Negotiation Number	The negotiation number of this order.
Negotiation Rule Key	The key of the negotiation rule for this order.
Header Entity	The entity for which the negotiation was initiated. Currently, the only applicable entity is Order.
Negotiation Status	The status of the negotiation for this order.
Document Type	The document type for this order. Typical value is Sales Order.
Freight Terms	The freight terms for this order.
Payment Terms	The payment terms for this order.
{Enter Your Own Attribute}	<p>A customizable condition builder attribute. For more information about customizing this field, see the <i>Sterling Multi-Channel Fulfillment Solution Customization Guide</i>.</p> <p>Note: This field is limited only to unexposed key attributes that are pre-defined by the Sterling Multi-Channel Fulfillment Solution as opposed to any XML attribute that you can enter.</p>

C.1.3 Outbound Shipment

Table C–3 Outbound Shipment Condition Builder Attributes

Attribute	Description
Enterprise Code	The code of the enterprise on the outbound shipment.
Buyer Organization Code	The code of the organization that is buying the goods or services.
Seller Organization Code	The code of the organization that is selling the goods or services.
Ship Node	The node that ships this shipment.
Ship Node Interface Type	The interface type of the ship node on the order (External Application, Sterling Multi-Channel Fulfillment Solution Consoles, Sterling Networked WMS, or WMS 6.2).
Receiving Node	The node that receives this shipment.
Ship Mode	The shipment mode that is used for the shipment. For example, Parcel, Truck Load, Less-Than Truck Load.
Freight Terms	The freight terms for this shipment.
Carrier Type	The shipment's carrier type for this shipment.
Hazardous Materials Flag	The flag indicating whether these materials are hazardous.
ESP Check Required	The flag indicating whether an Economic Shipping Parameters check is required at shipment consolidation time.
Is Appointment Required	The flag indicating whether an appointment is required for a service execution.
Routing Guide Maintained	The flag indicating whether a routing guide is maintained for this shipment.
Carrier	The carrier for the shipment.

Table C–3 Outbound Shipment Condition Builder Attributes

Attribute	Description
Real-time Integration with WMS 6.2	The flag indicating whether the node this shipment is shipping from is integrating with the Sterling WMS. Setting this field to N means that you are integrating with WMS 6.2, or any other warehouse management system.
Manually Entered	The flag indicating whether or not the shipment was entered through the Sterling Multi-Channel Fulfillment Solution Consoles.
Delivery Code	The code of the entity that pays for the transportation costs.
Country	The country that the shipment is being shipped to.
Delivery Method	The delivery method of the shipment (shipment, pickup or delivery).
Is Serial Requested	The flag indicating whether the shipment has any line with a specific serial number passed. If that is the case, a different outbound shipment process can be selected in the pipeline.
Is Provided Service	The flag indicating whether the shipment has an associated provided service item.
Shipment Type	Indicates a set of shipments that are of the same nature.
{Enter Your Own Attribute}	<p>A customizable condition builder attribute. For more information about customizing this field, see the <i>Sterling Multi-Channel Fulfillment Solution Customization Guide</i>.</p> <p>Note: This field is limited only to unexposed key attributes that are pre-defined by the Sterling Multi-Channel Fulfillment Solution as opposed to any XML attribute that you can enter.</p>

C.1.4 Sales Order Receipt

The Sales Order Receipt condition builder attributes are identical to the [Return Receipt](#) attributes.

C.2 Planned Order

C.2.1 Planned Order Execution

The Planned Order Execution condition builder attributes are identical to the [Order Fulfillment](#) attributes.

C.2.2 Planned Order Negotiation

The Planned Order Negotiation condition builder attributes are identical to the [Order Negotiation](#) attributes.

C.3 Return Order

C.3.1 Reverse Logistics

Table C–4 Return Fulfillment Condition Builder Attributes

Attribute	Description
Order Attributes	
Condition Variable 1	A variable that can be used for condition building. This is an existing field in the YFS_ORDER_LINE database table, and can be used to create conditions without extending the database.
Condition Variable 2	A variable that can be used for condition building. This is an existing field in the YFS_ORDER_LINE database table, and can be used to create conditions without extending the database.
Delivery Method	The delivery method of the return (shipment, pickup or delivery).
Disposition Code	The disposition code of the item.
Line Type	The type of the return line. The Sterling Multi-Channel Fulfillment Solution has no application logic associated with the return line type. This field can be set up as per your business practices.

Table C–4 Return Fulfillment Condition Builder Attributes

Attribute	Description
Order Type	The type of the return. The Sterling Multi-Channel Fulfillment Solution has no application logic associated with the return type. This field can be set up as per your business practices.
Payment Status	The payment status of the return.
Sale Voided	The flag indicating whether the return is voided.
Transaction ID	The ID of the last transaction that was run on the return.
Participant Attributes	
Bill To ID	The ID of the bill to address for the return.
Buyer Organization Code	The code of the organization that is buying the goods or services.
Enterprise Code	The code of the enterprise on the return.
Receiving Node	The node that receives the shipment for the return.
Seller Organization Code	The code of the organization that is selling the goods or services.
Ship Node	The node that be ships the shipment for the return.
Ship Node Interface Type	The interface type of the ship node on the return (External Application, Sterling Multi-Channel Fulfillment Solution Consoles, Sterling Networked WMS, or WMS 6.2).
Ship To ID	The ID of the ship to address for the return.
Supplier Code	The code of the supplier for the return.
Item Attributes	
Item ID	The ID of the item on the return line.
Item Group Code	The group code of the service item. For example, if the service is a provided service item, then the item group code is PS.

Table C–4 Return Fulfillment Condition Builder Attributes

Attribute	Description
Product Line	The product line of the item on the return line.
Sourcing Attributes	
Fulfillment Type	The fulfillment type of the return.
Intentional Backorder	The flag indicating whether the return was intentionally dropped into backordered status at return creation.
Is Firm Predefined Node	The flag indicating whether the node on the return is a firm predefined node.
Order Sourcing Classification	The order sourcing classification of the return.
Reservation Mandatory	The flag indicating whether the reservation is mandatory.
Related Order Attributes	
Chain Type	The chain type of the return.
Is Chained Line	The flag indicating whether the return line is chained with another return line.
Is Derived Line	The flag indicating whether the return line is derived from another return line.
Order Purpose	This field is only applicable to sales orders.
{Enter Your Own Attribute}	<p>A customizable condition builder attribute. For more information about customizing this field, see the <i>Sterling Multi-Channel Fulfillment Solution Customization Guide</i>.</p> <p>Note: This field is limited only to unexposed key attributes that are pre-defined by the Sterling Multi-Channel Fulfillment Solution as opposed to any XML attribute that you can enter.</p>

C.3.2 Return Shipment

The Return Shipment condition builder attributes are identical to the [Outbound Shipment](#) attributes.

C.3.3 Return Receipt

Table C–5 Return Receipt Condition Builder Attributes

Attribute	Description
Document Type	The document type on the receipt. Typical value is Return Order.
Enterprise Code	The code of the enterprise that owns the receipt.
Seller Organization Code	The code of the organization that is selling the goods or services.
Ship Node	The node where the shipment was shipped out of.
Buyer Organization Code	The code of the organization that is buying the goods or services.
Receiving Node	The node where the shipment was received.
Receiving Node Interface Type	The interface type of the receiving node on the order (External Application, Sterling Multi-Channel Fulfillment Solution Consoles, Sterling Networked WMS, or WMS 6.2).
Ship Mode	The shipment mode that is used for the shipment. For example, Parcel, Truck Load, Less-Than Truck Load.
Freight Terms	The freight terms on the receipt.
Carrier Type	The carrier type on the receipt.
Is Hazardous Material	The flag indicating whether there are hazardous materials that are being received.
Is Inspection Pending	The flag indicating whether there is an inspection pending on this return.

Table C–5 Return Receipt Condition Builder Attributes

Attribute	Description
Is Receiving Node Integrated Real Time	The flag indicating whether the receiving node is integrating with WMS 6.2, or with another WMS system.
{Enter Your Own Attribute}	<p>A customizable condition builder attribute. For more information about customizing this field, see the <i>Sterling Multi-Channel Fulfillment Solution Customization Guide</i>.</p> <p>Note: This field is limited only to unexposed key attributes that are pre-defined by the Sterling Multi-Channel Fulfillment Solution as opposed to any XML attribute that you can enter.</p>

C.4 Template Order

The Template Order condition builder attributes are identical to the [Order Fulfillment](#) attributes.

C.5 Purchase Order

C.5.1 Purchase Order Execution

Table C–6 Purchase Order Execution Condition Builder Attributes

Attribute	Description
Order Attributes	
Condition Variable 1	A variable that can be used for condition building. This is an existing field in the YFS_ORDER_LINE database table, and can be used to create conditions without extending the database.
Condition Variable 2	A variable that can be used for condition building. This is an existing field in the YFS_ORDER_LINE database table, and can be used to create conditions without extending the database.

Table C–6 Purchase Order Execution Condition Builder Attributes

Attribute	Description
Delivery Method	The delivery method of the inbound order (shipment, pickup or delivery).
Disposition Code	The disposition code of the item.
Line Type	The type of the inbound order line. The Sterling Multi-Channel Fulfillment Solution has no application logic associated with the inbound order line type. This field can be set up as per your business practices.
Order Type	The type of the inbound order. The Sterling Multi-Channel Fulfillment Solution has no application logic associated with the inbound order type. This field can be set up as per your business practices.
Payment Status	The payment status of the inbound order.
Sale Voided	The flag indicating whether the inbound order is voided.
Transaction ID	The ID of the last transaction that was run on the inbound order.
Participant Attributes	
Bill To ID	The ID of the bill to address for the inbound order.
Buyer Organization Code	The code of the organization that is buying the goods or services.
Enterprise Code	The code of the enterprise on the inbound order.
Receiving Node	The node that receives the shipment for the inbound order.
Seller Organization Code	The code of the organization that is selling the goods or services.
Ship Node	The node that ships the shipment for the inbound order.

Table C–6 Purchase Order Execution Condition Builder Attributes

Attribute	Description
Ship Node Interface Type	The interface type of the ship node on the inbound order (External Application, Sterling Multi-Channel Fulfillment Solution Consoles, Sterling Networked WMS, or WMS 6.2).
Ship To ID	The ID of the ship to address for the inbound order.
Supplier Code	The code of the supplier for the inbound order.
Item Attributes	
Item ID	The ID of the item on the inbound order line.
Item Group Code	The group code of the service item. For example, if the service is a provided service item, then the item group code is PS.
Product Line	The product line of the item on the inbound order line.
Sourcing Attributes	
Fulfillment Type	The fulfillment type of the inbound order.
Intentional Backorder	The flag indicating whether the inbound order was intentionally dropped into backordered status at inbound order creation.
Is Firm Predefined Node	The flag indicating whether the node on the inbound order is a firm predefined node.
Order Sourcing Classification	The order sourcing classification of the inbound order.
Reservation Mandatory	The flag indicating whether the reservation is mandatory.
Related Order Attributes	
Chain Type	The chain type of the inbound order.
Is Chained Line	The flag indicating whether the inbound order line is chained with another inbound order line.
Is Derived Line	The flag indicating whether the inbound order line is derived from another inbound order line.

Table C–6 Purchase Order Execution Condition Builder Attributes

Attribute	Description
Order Purpose	This field is only applicable to sales orders.
{Enter Your Own Attribute}	<p>A customizable condition builder attribute. For more information about customizing this field, see the <i>Sterling Multi-Channel Fulfillment Solution Customization Guide</i>.</p> <p>Note: This field is limited only to unexposed key attributes that are pre-defined by the Sterling Multi-Channel Fulfillment Solution as opposed to any XML attribute that you can enter.</p>

C.5.2 Purchase Order Negotiation

Table C–7 Purchase Order Negotiation Condition Builder Attributes

Attribute	Description
Enterprise Code	The code of the enterprise on the inbound order.
Initiator Organization Code	The code of the organization that initiates the negotiation.
Negotiator Organization Code	The code of the organization that can accept, counter-offer, or reject the initiator's offer.
Negotiation Pipeline Key	The key of the negotiation pipeline this inbound order is going through.
Negotiation Number	The negotiation number of this inbound order.
Negotiation Rule Key	The key of the negotiation rule for this inbound order.
Header Entity	The entity for which the negotiation was initiated. Currently, the only applicable entity is Order.
Negotiation Status	The status of the negotiation for this inbound order.
Document Type	The document type for this inbound order. Typical value is Purchase Order.
Freight Terms	The freight terms for this inbound order.

Table C–7 Purchase Order Negotiation Condition Builder Attributes

Attribute	Description
Payment Terms	The payment terms for this inbound order.
{Enter Your Own Attribute}	<p>A customizable condition builder attribute. For more information about customizing this field, see the <i>Sterling Multi-Channel Fulfillment Solution Customization Guide</i>.</p> <p>Note: This field is limited only to unexposed key attributes that are pre-defined by the Sterling Multi-Channel Fulfillment Solution as opposed to any XML attribute that you can enter.</p>

C.5.3 Inbound Shipment

The Inbound Shipment condition builder attributes are identical to the [Outbound Shipment](#) attributes.

C.5.4 Purchase Order Receipt

The Purchase Order Receipt condition builder attributes are identical to the [Return Receipt](#) attributes.

C.6 Transfer Order

C.6.1 Transfer Order Execution

The Transfer Order Execution condition builder attributes are identical to the [Order Fulfillment](#) attributes.

C.6.2 Transfer Order Delivery

The Transfer Order Delivery condition builder attributes are identical to the [Outbound Shipment](#) attributes.

C.6.3 Transfer Order Receipt

The Transfer Order Receipt condition builder attributes are identical to the [Return Receipt](#) attributes.

C.7 Load Execution

Table C–8 Load Execution Condition Builder Attributes

Attribute	Description
Load Type	The type of the load document.
Enterprise Code	The code of the enterprise on the load document.
Owner Organization Code	The code of the organization that owns the load document.
Carrier	The carrier used to carry the load.
Carrier Service Code	The code of the carrier service used to carry the load.
Ship Mode	The shipment mode that is used for the shipment. For example, Parcel, Truck Load, Less-Than Truck Load.
Hazardous Material	The flag indicating whether hazardous materials are being carried in this load.
Origin Node	The node where the load originated from.
Destination Node	The node where the load is being shipped to.
Multiple Load Stop	The flag indicating whether or not a shipment goes through multiple stops to load or unload additional shipments.
{Enter Your Own Attribute}	<p>A customizable condition builder attribute. For more information about customizing this field, see the <i>Sterling Multi-Channel Fulfillment Solution Customization Guide</i>.</p> <p>Note: This field is limited only to unexposed key attributes that are pre-defined by the Sterling Multi-Channel Fulfillment Solution as opposed to any XML attribute that you can enter.</p>

C.8 General

Table C–9 General Condition Builder Attributes

Attribute	Description
Enterprise Code	The code of the enterprise.
Organization Code	The code of the organization.
Provider Organization Code	The code of the organization that provides the service.
Ship Node	The node that ships this shipment.
Supply Type	The supply type associated with the inventory status. Typical values are Onhand, Held, etc.
Item ID	The ID of the item on the order line.
Unit Of Measure	The unit of measure of the item.
Product Class	The inventory classification of an item based on the product's characteristics. Typical values are FQ - First Quality, SQ - Second Quality, etc.
Inventory Status	The inventory sub classification of the product, based on the results of the inventory control processes within the warehouse. Typical values are Good - Good Inventory, Damaged - Damaged inventory, Qlty-Hold - Quality Hold, etc.
Adjustment Type	The type of inventory adjustment. Typical values are Cycle Count, Receipt, Picking, Packing, Shipping, etc.
Alert Type	The type of alert raised when an exception occurs.
Carrier	The carrier used to carry the shipment.
Task Type	The Task Type applicable to a task. Typical values are Receipt, QC, Count, Replenishment, Retrieval, Putaway, VAS, Pack, Shipping, and Picking.
Assigned To User ID	The ID of the user to whom the task is assigned.

Table C–9 General Condition Builder Attributes

Attribute	Description
Task Status	The Task Status within the pipeline that the task travels through. Typical values are Open, Suggested, In Progress, Held, Completed, Canceled, etc.
Document Type	The document type for this order. Typical values are Sales Order, Purchase Order, Transfer Order, and Return Order.
Activity Group ID	The identifier for the activity group.
{Enter Your Own Attribute}	<p>A customizable condition builder attribute. For more information about customizing this field, see the <i>Sterling Multi-Channel Fulfillment Solution Customization Guide</i>.</p> <p>Note: This field is limited only to unexposed key attributes that are pre-defined by the Sterling Multi-Channel Fulfillment Solution as opposed to any XML attribute that you can enter.</p>

C.9 WMS Putaway

The WMS Putaway condition builder attributes are identical to the [General](#) attributes.

C.10 WMS Layout Definition

The WMS Layout Definition condition builder attributes are identical to the [General](#) attributes.

C.11 WMS Inventory

The WMS Layout Inventory condition builder attributes are identical to the [General](#) attributes.

C.12 Trailer Loading

The Trailer Loading condition builder attributes are identical to the [General](#) attributes.

C.13 Task Execution

The Task Execution condition builder attributes are identical to the [General](#) attributes.

C.14 Move Request Execution

The Move Request Execution condition builder attributes are identical to the [General](#) attributes.

C.15 Manifesting

The Manifesting condition builder attributes are identical to the [General](#) attributes.

C.16 Over Pack Build

The Over Pack Build condition builder attributes are identical to the [General](#) attributes.

C.17 Count Execution

Table C–10 Count Execution Condition Builder Attributes

Attribute	Description
Enterprise Code	The code of the enterprise for which the count request is created.
Request Type	The type of count requested.
Count Program Name	The name of the count program for which the count request is created.
Node Key	The node where the count request is processed.
Zone ID	The zone where the count must be performed.
Location Size Code	The capacity of the location where the count must be performed.
Is LPN Level	The flag indicating whether the count tasks are performed at the LPN level.

Table C–10 Count Execution Condition Builder Attributes

Attribute	Description
Is Case Level	The flag indicating whether the count tasks are performed at the case level.
Is Pallet Level	The flag indicating whether the count tasks are performed at the pallet level.
Is Item Level	The flag indicating whether the count tasks are performed at the item level.
Is Resolvable	The flag indicating whether variance can be resolved for this count result.
Product Class	The inventory classification of an item based on the product's characteristics. Typical values are FQ - First Quality, SQ - Second Quality, etc.
Unit Of Measure	The unit of measure of the item that was counted.
Item Classification 1	The first item classification attribute for determining the Count Strategy.
Item Classification 2	The second item classification attribute for determining the Count Strategy.
Item Classification 3	The third item classification attribute for determining the Count Strategy.
Has Variance	The flag indicating whether the count request has a variance.
Has Absolute Variance	The flag indicating whether the count request has an absolute variance.
Variance Quantity	The difference in quantity (+/-) between the count result and system quantity.
Absolute Variance Quantity	The absolute difference between the count result and system quantity.
Variance Value	The difference in cost/value (+/-) between the count result and system quantity.
Absolute Variance Value	The absolute difference in cost/value between the count result and system quantity.

Table C–10 Count Execution Condition Builder Attributes

Attribute	Description
Has Variance With Previous Count	The flag indicating whether the variance between the current count result and previous count results displays.
{Enter Your Own Attribute}	<p>A customizable condition builder attribute. For more information about customizing this field, see the <i>Sterling Multi-Channel Fulfillment Solution Customization Guide</i>.</p> <p>Note: This field is limited only to unexposed key attributes that are pre-defined by the Sterling Multi-Channel Fulfillment Solution as opposed to any XML attribute that you can enter.</p>

C.18 Pack Process

Table C–11 Pack Process Condition Builder Attributes

Attribute	Description
Node Attributes	
Ship Node	The node that ships this shipment.
Receiving Node	The node that receives this shipment.
Ship from Ship Node Interface Type	The interface type of the ship node from which the shipment is shipped (External Application, Sterling Multi-Channel Fulfillment Solution Consoles, Sterling Networked WMS, or WMS 6.2).
Ship from Supplier Code	The code of the supplier that is shipping the shipment.
Ship from DCM Integration Real Time	The flag indicating whether the node from which the shipment is shipped uses WMS 6.2.
Ship from Country	The code of the country from which the shipment is being shipped.

Table C–11 Pack Process Condition Builder Attributes

Attribute	Description
Ship to Ship Node Interface Type	The interface type of the ship node to which the shipment is shipped (External Application, Sterling Multi-Channel Fulfillment Solution Consoles, Sterling Networked WMS, or WMS 6.2).
Ship to Supplier Code	The code of the supplier to whom the shipment is being shipped.
Ship to DCM Integration Real Time	The flag indicating whether the node to which the shipment is shipped uses WMS 6.2.
Ship to Country	The code of the country to which the shipment is being shipped.
Organization Attributes	
Enterprise Code	The code of the enterprise that owns the shipment.
Buyer Organization Code	The code of the organization that is buying the goods or services.
Seller Organization Code	The code of the organization that is selling the goods or services.
Shipment Attributes	
Ship Mode	The shipment mode that is used for the shipment. For example, Parcel, Truck Load, Less-Than Truck Load.
Carrier	The carrier used to carry the shipment.
Freight Terms	The freight terms of the shipment.
Delivery Code	The code of the entity that pays for the transportation costs.
Pack And Hold	The flag indicating whether the shipment needs to be packed and put away for retrieval at a later date.
Shipment Container Count	The number of containers in the shipment.

Table C–11 Pack Process Condition Builder Attributes

Attribute	Description
Shipment Containerized Flag	The flag indicating the containerization state of the shipment. The values are: 01 - not containerized, 02 - containerization in progress and 03 - containerization completed.
Container Attributes	
Is Shipment Container	The flag indicating whether the container belongs to a shipment.
Is Load Container	The flag indicating whether the container is part of a load.
Is Inventory Pallet	The flag indicating whether the container is an inventory pallet.
Is Converted From LPN	The flag indicating whether the inventory container has been converted to a shipment container.
Is Serial Capture Pending	The flag indicating whether the serial capture is pending for the container.
Is Pack Process Complete	The flag indicating whether any more pack activities are pending for the container.
Is Product Placing Complete	The flag indicating whether placing the product into the container according to the system's suggestion has been completed.
Requires VAS	The flag indicating whether the container requires value added services.
Has Child Containers	The flag indicating whether a container is a parent container having other containers.
Number of Items	The number of items contained in the container.

Table C–11 Pack Process Condition Builder Attributes

Attribute	Description
Container Type	The attribute that specifies whether a shipment container is a case or pallet.
{Enter Your Own Attribute}	<p>A customizable condition builder attribute. For more information about customizing this field, see the <i>Sterling Multi-Channel Fulfillment Solution Customization Guide</i>.</p> <p>Note: This field is limited only to unexposed key attributes that are pre-defined by the Sterling Multi-Channel Fulfillment Solution as opposed to any XML attribute that you can enter.</p>

C.19 Outbound Picking

Table C–12 Outbound Picking Condition Builder Attributes

Attribute	Description
Activity Group ID	The identifier for the activity group.
Shipment Group ID	The identifier for the shipment group.
{Enter Your Own Attribute}	<p>A customizable condition builder attribute. For more information about customizing this field, see the <i>Sterling Multi-Channel Fulfillment Solution Customization Guide</i>.</p> <p>Note: This field is limited only to unexposed key attributes that are pre-defined by the Sterling Multi-Channel Fulfillment Solution as opposed to any XML attribute that you can enter.</p>

C.20 VAS Process

Table C–13 VAS Process Condition Builder Attributes

Attribute	Description
Enterprise Code	The code of the enterprise that owns the item or license plate.
Provider Organization Code	The code of the organization that provides the service.
Node Key	The node, where the work orders are run.
Purpose	The purpose for the work order (ORDER / STOCK / SHIP)
Service Item Group Code	The code of the service item group (KIT/DKIT/COMPL/INVC/PS)
Service Item ID	The identifier for the service Item.
Segment Type	The type of segment. This may be MTO (made to order) or MTC (made to customer).
Segment	The segment to which the inventory involved in the work order belongs.
Has Components	The flag indicating whether the work order has component items.
Status	The status of the work order.
Pre Call Status	The flag indicating the status of the pre-call process.
Appt Status	The status of the appointment. This is in sync with the service order line. The appointment status is used in case of provided service work order.
Number Of Attempts	The number of attempts made to run the work order.
Number Of Hours until Appointment	The number of hours left before the appointment for the service item.
Number Of Hours After Appointment	The number of hours after the last appointment for the service item.

Table C–13 VAS Process Condition Builder Attributes

Attribute	Description
Number Of Hours After Last Execution	The number of hours after the last attempt to run the service.
Last Execution Success	The flag indicating whether the last attempt to run the service was successful or not.
Open Work Order Flag	The flag indicating whether the execution of the work order has ended or not.
{Enter Your Own Attribute}	<p>A customizable condition builder attribute. For more information about customizing this field, see the <i>Sterling Multi-Channel Fulfillment Solution Customization Guide</i>.</p> <p>Note: This field is limited only to unexposed key attributes that are pre-defined by the Sterling Multi-Channel Fulfillment Solution as opposed to any XML attribute that you can enter.</p>
