In This Hot Fix

This hot fix contains IBM® Sterling Multi-Channel Fulfillment Solution software fixes.

Installation Information

The prerequisites for this hot fix differ, depending on whether you are a new customer or an existing customer.

Prerequisites

Before you begin installing this hot fix feature, complete these prerequisites:

- If you are a new customer
 - Install Sterling Multi-Channel Fulfillment Solution 8.0 before you install this hot fix. For information about installing Release 8.0, see the IBM Sterling Information Center
 - Follow the “Hot Fix Installation Procedure” below.
- If you are an existing customer, follow the “Hot Fix Installation Procedure” below.

Hot Fix Installation Procedure

Installation procedure is available in the hot fix installation instructions file, HotFixInstallation.txt, which is included in the hot fix package.

For more information about the hot fix, contact IBM Technical Support.

Defects Addressed In This Hot Fix

The following defects have been addressed in this and previous hot fixes to Sterling Multi-Channel Fulfillment Solution, Release 8.0. A hot fix when released is listed cumulatively here.

Hot Fix 136

Release 8.0-HF136

Defect ID	404375
PMR #	89134,L6Q,000
Description	SQL query on YFS_CUSTOMER is not well formed as it does not contain a space between the AND conditions. This issue is leading to performance degradation.

Hot Fix 135

Release 8.0-HF135

Defect ID	402540
PMR #	73745,019,866
Description	changeShipment API locks the YFS_INVENTORY_ITEM table, even when no inventory operation is required.

Hot Fix 134

Release 8.0-HF134

Defect ID 402492
PMR # internal
Description Security issues are addressed in this hotfix.
Note: For more information, please contact IBM Support.

Hot Fix 133

Release 8.0-HF133

Defect ID 396659
Case ID 45679,004,000
Description findInventory API displays 8 quantities from N1 and 2 quantities from N3 but it was expected to display 8 quantities from N1 and 2 quantities from N2, since N2 is closer than N3, when a user performs the following sequence of actions:

1. Creates three nodes (N1, N2 and N3) in a DG (with priority as 0,2000,2000) and creates a sourcing rule for the product being shipped.
2. Optimization is set for Cost and Number of shipment in scheduling rules.
3. Enable landed cost configuration.
4. Adjusts the inventory at N1, N2 and N3 as 8,2 and 3 respectively.
5. Calls findInventory API such that the ZIP code of N2 is the nearest.

Hot Fix 132

Release 8.0-HF132

Defect ID 392411
Case ID 02876,L6Q,000
Description Lock contention is detected on YFS_INVENTORY_ITEM, when HotSku is switched "ON" and YFSGetExternalAvailabilityUE user exit is implemented.

Solution: Sterling Multi-Channel Fulfillment Solution does not lock the inventory item from HotSku logic for the following settings:

1. If availability is maintained externally (IsAvailabilityExternal property is true and YFSGetExternalAvailabilityUE is implemented), Sterling Multi-Channel Fulfillment Solution does not lock the inventoryItem from HotSku logic, it skips the checks for demand availability and moves to average calculations.
2. If inventory is not external and item has infinite availability, inventory item is not locked from HotSku logic.

A new property, yfs.hotsku.skipLockInventoryitemList is introduced for the HotSku. This property accepts a list of comma-separated items. **For**

Example :

yfs.hotsku.skipLockInventoryitemList=DVP6723040,TV0001A5F21,A1,A2,B,C,D4,E.
The YFS_INVENTORY_ITEM table is not locked for these items initialized in the property.

Defect ID 392453

Case ID	50096,L6Q,000
Description	<p>The database detects a deadlock and displays an error, when the user performs the following steps:</p> <ol style="list-style-type: none"> 1. Creates 7 items that are tag-controlled and the tag identifier is the lot number. 2. Creates JMS sender to put message in a queue. 3. Creates an asynchronous service with the JMS Receiver component having 5 threads and listening to the queue, The JMS Receiver component then calls the reserveAvailableInventory API. 4. Supplies the Lot Number and adjusts inventory for these items at the ShipNode of choice. 5. Places 5 or more JMS messages into a queue. 6. Starts the integration server.

Defect ID 391932

Case ID 47797,004,000

Description A user has to wait for a long time to view the configuration or cached entities from the cache.

Solution: When Cache-Get is called for a given key, Framework looks for the object within the cache and returns the object that exists in the cache. If the object is not present in the cache, it loads the cache with an object before returning the object. Currently, cacheManager GET is synchronized. However concurrent threads cannot perform GET on a given entity simultaneously. PUT within the GET is synchronized.

- A new cacheManager property "cacheManager.forcesyncloading" is introduced with the default value set to true. To unsynchronize GET, set the cacheManager.forcesyncloading property to false.
- To set this property in customer_overrides.properties, complete the following steps:
 1. For WAR/EAR, prefix the value of this property with 'vendor', the cacheManager property is set during the startup of the application server. For example, if the vendor property is set as "weblogic", the cacheManager property is set as "weblogic.cacheManager.forcesyncloading=false" and if the vendor property is set as shell, then the cacheManager property is set as "shell.cacheManager.forcesyncloading=false".
 2. For Agents or Integration servers, prefix the value of this property with 'shell' so that the cacheManager property is set as "shell.cacheManager.forcesyncloading=false".

Hot Fix 131

Release 8.0-HF131

Defect ID 381273

Case ID 02016,L6Q,000

Description A user must be able to purge records with zero quantity only, from the YFS_ORDER_RELEASE_STATUS table.

Solution: Sterling Multi-Channel Fulfillment Solution is enhanced to support Order Release Status Purge Agent.

Note: For more information on Order Release Status Purge Agent, refer to *Sterling Multi-Channel Fulfillment Solution Documentation Supplement*.

Hot Fix 130

Release 8.0-HF130

Defect ID	382333
Case ID	04685,L6Q,000
Description	<p>The payment execution agent must not process the charge record (that is, the user exit related to payment collection must not be called), when a user performs the following sequence of actions:</p> <ol style="list-style-type: none">1. Creates an order with some order total.2. Runs payment collection, payment execution, and payment collection agent to take authorization.3. Schedules the order.4. Releases and ships the order.5. Calls createShipmentInvoice API and then runs the payment collection agent. The payment collection agent creates a charge.6. Extends the collection time by 5 hours and runs the payment execution agent.

Hot Fix 129

Release 8.0-HF129

Defect ID	379275
Case ID	04157,l6Q,000
Description	<p>The getShipmentList API does not publish TotalNumberOfRecords when ReadFromHistory attribute is set to 'B'.</p>

Hot Fix 128

Release 8.0-HF128

Defect ID	370229
Case ID	94268,L6Q,000
Description	<p>If a large number of cookies are present for the domain which hosts smcfs deployment, and the LoginThroughBrowser feature is enabled, a user is not able to login to Customer Order Management or Store Order Management PCA.</p>
Defect ID	373123
Case ID	79576,L6Q,000

Description	<p>The orderline remains in "Released" status instead of moving to "Sent To Node" status, when a user performs the following sequence of actions:</p> <ol style="list-style-type: none"> 1. Creates an order with 2 orderlines. 2. Schedules the order and releases it. 3. Runs the SHIP_ADVICE agent. The SHIP_ADVICE agent must pick up the record from YFS_TASK_Q table. 4. Records in YFS_TASK_Q table gets processed and order moves to "Sent To Node" status. 5. Creates a shipment with 2 orderlines. 6. Confirms the shipment with 1 orderline. 1 orderline moves to "Shipped" status and the second orderline moves to "Released" status. 7. Inserts records in the YFS_TASK_Q table for SHIP_ADVICE agent to pick up. The SHIP_ADVICE agent picks up the newly added records but does not process them, the order line remains in "Released" status.
Defect ID	373863
Case ID	Internal
Description	<p>Security issues have been addressed. Note: For more details, please contact IBM Support.what</p>

Hot Fix 127

Release 8.0-HF127

Defect ID	367205
Case ID	27876,L6Q,000
Description	<p>The IsBillable and IsDiscount attributes are not populated in the output of the ORDER_CHANGE ON_ADJUSTMENT_INVOICE_CREATION event on calling the changeOrderAPI which results in an adjustment invoice creation, when a user performs the following sequence of actions:</p> <ol style="list-style-type: none"> 1. Configures ORDER_CHANGE ON_ADJUSTMENT_INVOICE_CREATION event. 2. Extends the template to have IsBillable and IsDiscount attributes. 3. Creates a shipment invoice or order invoice. 4. Calls the changeOrder API to change the line charges.
Defect ID	366514
Case ID	Internal
Description	<p>A security issue is addressed in the application console.</p> <p>If a customer has extended any screen in the application console, then they may need to address the issue in their extensions.</p> <p>For more details, please contact IBM Support.</p>
Defect ID	366520
Case ID	Internal
Description	A security issue is addressed in the application console.

Hot Fix 126

Release 8.0-HF126

Defect ID	354620
Case ID	36650,L6Q,000
Description	When connecting through Secure Socket Layer (SSL), the host name does not get validated properly.
	Solution: The custom code is modified, to disable the customhostname verifier and the truststore implementation. The system property DdisableTrustStore must be set to true in the com.ini file, so that the JDK implementation is used to match the host name.
Defect ID	358607
Case ID	90526,L6Q,000
Description	The amount is not refunded to the correct payment method as per the refund sequence, when a user performs the following sequence of actions: <ol style="list-style-type: none">1. Creates a return order against a sales order having multiple payment methods.2. Runs the requestCollection API.

Hot Fix 125

Release 8.0-HF125

Defect ID	355265
Case ID	39519,L6Q,000
Description	The order moves to Draft status and a debit memo is created for the header charge, when a user performs the following sequence of actions: <ol style="list-style-type: none">1. In the Configurator, navigates to Distributed Order Management > Document Specific > Sales Order > Financials > Financial Attributes > Others, and enables the "Invoice Open Header Charges/Taxes on Invoice Complete" option.2. Creates a draft order with header charges.3. Removes the order lines from the draft order.

Hot Fix 124

Release 8.0-HF124

Defect ID	337175
Case ID	91301,033,000
Description	The return order does not go to PAID status and is not getting purged, when a user performs the following sequence of actions: <ol style="list-style-type: none">1. Creates a sales order.2. Creates a derived return and authorizes it.3. Triggers the processOrderPayments agent.4. Creates an invoice.5. Triggers the processOrderPayments agent on sales and return order again.
Defect ID	352063
Case ID	61506,442,000

Description	When a user invokes the getNextException API, if there are many unassigned exception records in the queue which have been subscribed, the getNextException API throws an Out-Of-Memory exception.
--------------------	---

Hot Fix 123

Release 8.0-HF123

Defect ID	350267
Case ID	36207,L6Q,000
Description	<p>The getExceptionListForOrder API does not display the alerts that are not associated with an order, when a user performs the following sequence of actions:</p> <ol style="list-style-type: none"> 1. Creates an Enterprise, E1. 2. Creates a Customer Sales Representative user U1, and associates with E1. 3. Logs in to the Sterling Call Center application as U1. 4. Creates an alert which is not associated to any order. 5. Performs alert search.

Hot Fix 122

Release 8.0-HF122

Defect ID	344546
Case ID	35698,442,000
Description	<p>When a user calls the getShipmentReceiptDiscrepancy API for an inbound shipment which does not have any order, select query YFS_RECEIPT_LINE having blank ORDER_LINE_KEY column is called. This results in increased memory consumption.</p>

Hot Fix 121

Release 8.0-HF121

Defect ID	341843
Case ID	88193,L6Q,000
Description	<p>The getExceptionListForOrder API puts an unnecessary lock on the YFS_ORDER_HEADER table, because of which the system throws an "ORA-00054: resource busy and acquire with NOWAIT specified or timeout expired" exception.</p>

Solution: A new relationship between YFS_INBOX table and YFS_ORDER_HEADER table has been provided. As a result, the getExceptionListForOrder API does not lock the YFS_ORDER_HEADER table while retrieving data.

Defect ID	343246
Case ID	22462,L6Q,000
Description	<p>When scheduleOrder API is run for an item that meets all the conditions for Hot-SKU, but does not have inventory in any one of the nodes of the Distribution Group, the system locks the corresponding YFS_INVENTORY_ITEM record and turns off the Hot SKU feature.</p>

Hot Fix 120

Release 8.0-HF120

Defect ID	320000
Case ID	Internal
Description	A new jar signature must be added to the Sterling Multi-Channel Fulfillment Solution Solution 8.0, as the validity of the jar signature expires on June 03, 2012.
Solution:	A new jar signature has been added to Sterling Multi-Channel Fulfillment Solution Solution 8.0 with validity till May 08 05:29:59 IST, 2015.

Hot Fix 119

Release 8.0-HF119

Defect ID	319507
Case ID	47764,019,866
Description	If a service has JMS receiver or JMS producer or both, such that the JMS session is transacted, then the database connection may get committed successfully, but the JMS receiver or JMS producer might not get committed successfully, because of which the message may get lost or are picked up multiple times.
Solution:	The commit sequence has been changed, so that the system will check if the database connection is active and then commit the JMS receiver session followed by the database connection and JMS sender session. After committing the JMS receiver session, if an exception occurs then a message will be logged in reprocess error queue to avoid loss of message.
	A new property enable.db.check.before.jms.commit property has been introduced. This property can be used to modify the committing order of database connection and JMS sender session. The default value of this property is False. If the property is enabled by setting the yfs.enable.db.check.before.jms.commit to True or 'Y' in the customer_overrides.properties, then the system checks if database connection is active and then commits the JMS sender session first, followed by the database connection.

Defect ID	319656
Case ID	02092,999,000
Description	The Sterling Call Center and Store must be enhanced to provide an ability to enable or disable the Customer Name hyperlink in the Customer Message panel.
Solution:	A new property hideCustomerName has been introduced. In the com.ini file the value of the hideCustomerName property must be set to True to disable the Customer hyperlink and to False to enable it.

Defect ID	320395
Case ID	48316,L6Q,000
Description	In the Sterling Call Center and Store Search List screens, if a column is hidden using customization, then the hidden column must not be displayed in the table filter pop-up .

Hot Fix 118

Release 8.0-HF118

Defect ID	258548
Case ID	Internal
Description	When a SQL query is executed, if the yfs.app.identifyconnection property is set to 'Y', the system attempts to execute connection tracking operation (for Oracle, DBMS_APPLICATION_INFO procedure and for DB2 setDB2ClientApplicationInformation method on connection). This results in performance degradation.

Solution: The system will execute connection tracking operation only once for each transaction, instead of doing it for each SQL execution.

Defect ID	258561
Case ID	Internal
Description	After the database is restarted, the YFS_STATISTICS_DETAIL table does not get updated with the statistics.

Defect ID	258656
Case ID	00383432
Description	confirmShipment API throws java.lang.NumberFormatException.

Hot Fix 117

Release 8.0-HF117

Defect ID	257683
Case ID	00375854
Description	When the Resolve exception is called to resolve the exceptions for a given exception type, it fetches all the records for the given exception type even that are in the Closed status. Later, it locks the selected database records for update, which may lead to unnecessary wait or time-out for other threads invoking the same API at the same time.

Defect ID	258404
Case ID	00380940
Description	If TIBCO JMS is used, the JMS failover does not connect to the configured backup JMS URL in a JMS Sender.

Hot Fix 116

Release 8.0-HF116

Defect ID	255383
Case ID	00354792
Description	The Sterling Call Center and Store PCA 8.0 must be certified on Windows 7 environment.

Hot Fix 115

Release 8.0-HF115

Defect ID	255369
Case ID	00338053

Description	<p>The deleteCountResultRecordsForATask API must be enhanced to modify the "Variance Accepted" field of the count result records matching the input criteria to I (Ignore).</p> <p>Note: Due to an oversight, if a user accepts the variance for such records, the acceptVariance API will not accept the variance for these records.</p>
Defect ID	255919
Case ID	00351448
Description	<p>When a user performs the following sequence of actions, the systems displays a "Quantity greater than the allowed over shipment percentage limit" error message:</p> <ol style="list-style-type: none"> 1. Creates a bundle item with two bundle components in certain ratio. 2. Creates an order for the bundle item along with bundle components using the createOrder API with components ratio same or different than the configured one. 3. Schedules the order and releases it. 4. Confirms the shipment.

Hot Fix 114

Release 8.0-HF114

Defect ID	255271
Case ID	00359041
Description	<p>The APIs listed below must be exposed as transactions and each one of them must have an XML document published by the ON_SUCCESS event.</p> <ul style="list-style-type: none"> • createException • changeException • assignException • resolveException • unAssignException
Defect ID	255297
Case ID	00358623
Description	<p>If the 'Process Reply To Queue' option is selected for a JMSConsumer component and the JMS provider is IBM MQ, the integration server logs 'Resource Allocation' exception after sending a few hundreds of messages to the reply queue.</p>

Hot Fix 113

Release 8.0-HF113

Defect ID	254170
Case ID	00353070
Description	<p>For a backorderable item with an unplanned Inventory and zero lead days, the system logs an error if the Inventory is adjusted and the Real Time Availability Monitor is run.</p>

Hot Fix 112

Release 8.0-HF112

Defect ID	248710
Case ID	00308678
Description	If an exception occurs during initialization of the YCPCContext object after connecting to the database, a connection leak is observed in the application.
	Solution: The issue has been fixed.
	Note: For better analysis of such connection leak issues, a "enable.jdbc.tracking" property has been exposed for enabling the jdbc tracking report. If a user wants to enable the jdbc tracking report, the "yfs.enable.jdbc.tracking=true" property must be set in the customer_overrides.properties file.

Hot Fix 111

Release 8.0-HF111

Defect ID	250243
Case ID	00333059
Description	When a user calls the syncLoadedInventory API to synchronize the mismatched demand and supply for large number of records, the system throws an "ORA-01000: maximum open cursors exceeded" exception.

Hot Fix 110

Release 8.0-HF110

Defect ID	249144
Case ID	00323696
Description	<p>When a user performs the following sequence of actions, the system creates inventory records with zero quantity in both bulk and receiving dock locations:</p> <ol style="list-style-type: none">1. Creates a purchase order.2. Schedules the order and releases it.3. Clicks report/record receipt.4. Starts the receipt and receives the items in a CASE and clicks "Case completely received".5. Ensures that putaway task is created into the bulk location.6. In the "Shipment Detail" screen, clicks "Receipts".7. Leaves the inventory status empty and un-receives the items.8. Closes the receipt.

Hot Fix 109

Release 8.0-HF109

Defect ID	247952
Case ID	00313542

Description If a thread attempts to access a person's record that has been inserted but not committed by a different thread, the system throws an invalid record exception.

Solution: A new 'yfs.waitForPCommit' property has been exposed, if a thread attempts to access a person's record that has been inserted but not committed by a different thread, it will wait till for the specified duration in milliseconds, as defined in the 'yfs.waitForPCommit' property. The default value of this property is 3000 milliseconds. A customer can override the default value by including the 'yfs.yfs.waitForPCommit' property in the customer_overrides.properties file.

Defect ID 248195
Case ID 00316462
Description When a user performs the following sequence of actions, the syncLoadedInventory API picks up the PLANNED_TRANSFER supply records to synchronize even when the value of the SychNonOnHandInventory is set to 'N':

1. Creates an order for an item that is in the 'Awaiting Procurement Transfer Order Creation' status.
A record is inserted in the yfs_inventory_supply table for supply type = 'PLANNED_TRANSFER'.
2. Runs the loadInventoryMismatch API for load inventory in the yfs_inventory_supply_temp table for supplyType=ONHAND for the shipping node.
3. Runs the syncLoadInventory API with SychNonOnHandInventory="N".

The syncLoadInventory API picks up the PLANNED_TRANSFER supply records and synchronizes with the corresponding ONHAND supply record of the yfs_inventory_supply_temp table.

Defect ID 248273
Case ID 00320272
Description If the JMS connection is down when an agent server is run, the agent server throws a NullPointerException while attempting to reconnect.

Defect ID 248318
Case ID 00317351
Description When a user performs the following sequence of actions, the system creates a duplicate bundle components:

1. Creates a bundle parent with 2 components.
2. Calls the createOrder API to create an order with bundle item and 2 regular items (bundle components have relationships with the regular item line).

The order is created with 6 order lines instead of 4 order lines.

Hot Fix 108

Release 8.0-HF108

Defect ID 247830
Case ID 00311510

Description	<p>When a user performs the following sequence of actions, the Line Tax is copied to bundle components of the return order:</p> <ol style="list-style-type: none"> 1. Creates an order for a bundle item having one or more components with Line Tax passed only for the bundle parent. 2. Schedules the order and releases it. 3. Creates a shipment and confirms it. 4. Creates a return order for the bundle item.
--------------------	---

Hot Fix 107

Release 8.0-HF107

Defect ID	246707
Case ID	00286605
Description	<p>When a user performs the following sequence of actions, the SQL Query is fired with "NOWAIT" clause to get the order header information of the return order:</p> <ol style="list-style-type: none"> 1. Creates a sales order. 2. Schedules the order and releases it. 3. Creates a shipment and a shipment invoice. 4. Creates a return order and confirms it. 5. Calls the changeOrder API for the sales order with SelectMethod="WAIT" in the input XML.

Hot Fix 106

Release 8.0-HF106

Defect ID	245281
Case ID	00302202
Description	<p>When both OrderheaderKey and ModificationType attributes are passed in the input XML of the getOrderAuditList API, the getOrderAuditList API does not honor the OrderHeaderKey attribute.</p>

Defect ID	245881
Case ID	00298643
Description	<p>When a user performs the following sequence of actions, the system does not open a charge corresponding to the invoiced amount:</p> <ol style="list-style-type: none"> 1. Creates an order with 2 orderlines. 2. Schedules the order and partially releases the first orderline. 3. Calls the createShipmentinvoice API. 4. Implements the RecalculateLineTaxUE user exit to increase the tax amount. 5. Creates an invoice for an amount that is more than the authorized amount. 6. Calls the requestCollection agent. <p>The charge opened is equal to the authorized amount instead of the invoiced amount.</p>

Defect ID	246759
Case ID	00308087

Description	The system must not allow a user to perform a Putaway task for a serial item that is not present in a node.

Defect ID	224089
Case ID	Internal
Description	The SI_version must be updated for Patch version to indicate the patch number and drop number.

Defect ID	244377
Case ID	00290562
Description	If there is more than one service that has the 'JMS Sender' component, which is invoked from an agent, the system observes a JMS connection leak.

Hot Fix 104

Release 8.0-HF104

Defect ID	245036, 245037, 245038
Case ID	Case ID 00290001, 00290003, 00290005
Description	Description The system must be enhanced to display a warning when a user picks tasks belonging to a single reference, such as, shipment, move request, batch, and so on, into multiple totes.

Solution:

Solution: A property-driven "Confirmation" screen has been provided in the Sterling Multi-Channel Fulfillment Mobile. This screen operates based on the parameter that is set for the "yfs.split.reference.across.totes" attribute in the yfs.properties file. If this property is set to "Y", the system displays a warning when a user picks the same reference into multiple totes or target LPNs through the Sterling Multi-Channel Fulfillment Mobile Application using the Cart Pick functionality.

Defect ID	Defect ID 245098
Case ID	Case ID 00301700
Description	Description When a user runs the Item Based Allocation (IBA) agent, if an exception occurs in the middle of IBA process, the IBA_RUN_REQUIRED and PROCESSING_BY_AGENT fields of the YFS_IBA_TRIGGER table do not rollback. Therefore, a record is not picked up by IBA agent again for processing optimization based on IBA.

Defect ID	Defect ID 245863
Case ID	Case ID Internal
Description	Description When the Adjustment Type is "TRNSFROWNSHIP", the inventory audit log must not throw an error.

Hot Fix 103

Release 8.0-HF103

Defect ID	221544, 245437
------------------	----------------

Case ID	Case ID 00136269
Description	Description The application must be enhanced so that the inventory audit log can be controlled based on the adjustment type.
	Solution:
	Solution: A new "Skip Inventory Audits For Adjustment Types" flag has been introduced under Global Inventory Visibility > Inventory Rules > Other Rules. A user can ignore the inventory audit for the adjustment types, Return, Adjustment, Receipt, and Shipment.
	For more information about the adjustment type, see Section " Skip Inventory Audits For Adjustment Types" of the Sterling Global Inventory Visibility Configuration Guide.

Defect ID	Defect ID 243482
Case ID	Case ID 00292073
Description	Description When optimization is based on cost and number of shipment, the least number of shipments is not found for an order that has many orderlines with the same SKU on each of the orderline.

Defect ID	Defect ID 244752
Case ID	Case ID 00296484
Description	Description The Sterling Mobile application does not provide a user an option to complete an in-progress task executed through the "Request Task Type" menu.

Defect ID	Defect ID 244796
Case ID	Case ID 00286900
Description	Description When a user attempts to execute a count task through the Sterling Mobile application running on the IBM WebSphere Server with count task type "Capture Inventory Attributes" being enabled, the system throws "java.lang.IllegalStateException: jsp.error.attempt_to_clear_flushed_buffer" exception.

Hot Fix 102

Release 8.0-HF102

Defect ID	242443
Case ID	Case ID 00283607
Description	Description When a user runs the CONSOLIDATE ADDITIONAL INVENTORY agent, the supply record in the YFS_INVENTORY_SUPPLY table with availability type=INFINITE does not get updated with availability type=TRACK for the similar supply record in YFS_INVENTORY_SUPPLY_ADDNL table with availability type=INFINITE.

Hot Fix 101

Release 8.0-HF101

Defect ID	241409
Case ID	Case ID 00273873

Description Description An incorrect charge transaction records is created when the requestCollection agent is called in the INVOICE_CREATION event, and RecalculateLineTaxUE user exit is implemented to return tax that is different from the original tax.

Solution:

Solution: The issue has been fixed. Earlier, the manageOrder API was called internally after calling the INVOICE_CREATION event. Therefore, the order information was not being updated by the manageOrder API. After the fix, the manageOrder API is called before the INVOICE_CREATION event. So, the data published in the INVOICE_CREATION event for an order will have the update done during invoicing on an orderline.

Defect ID Defect ID 242383

Case ID Case ID 00282493

Description Description When a user performs the following sequence of actions, the system creates a zero quantity orphan inventory records, which retains after completing the task in the location:

1. 1.Configures two FIFO tracked items, I1 and I2.
2. 2.Configures putaway preference and sets multi SKU Pallet as loose SKU to distinct locations.
3. 3.Configures the 'yfs.deposit.units.separately.for.tasktypes' property to deposit each SKU separately.
4. 4.Creates an inbound shipment for the SKUs and receives the shipment in a pallet.
5. 5.Creates a move request for the pallet.
6. 6.Performs putaway for multi SKU Pallet by overriding the target location of the last SKU being deposited.

Defect ID Defect ID 242435

Case ID Case ID 00251747

Description Description In the YFS_SHIPMENT table the NUM_OF_CARTONS and NUM_OF_PALLETS columns support only 5 digits NUMBER format.

Solution:

Solution: The NUM_OF_CARTONS and NUM_OF_PALLETS columns have been enhanced to support 8 digits NUMBER format.

Hot Fix 84

Release 8.0-HF84

Defect ID 224008

Case ID Case ID 00189493

Description Description When a user packs a serial for a shipment that has segment and segment type stamped and ships the shipment out of a warehouse, if the same serial is received against an inbound shipment the system stamps the same segment and segment type on the received serial that was shipped out of the warehouse.

Solution:

Solution: While receiving an inbound shipment, the system will use the inventory attributes passed by the user and not derive them from the global serial.

Defect ID Defect ID 225022

Case ID Case ID 00194496

Description Description The system should not allow picking and packing of a serial that is not present in a node for a serial-tracked item.

Defect ID	Defect ID 227629
Case ID	Case ID 00206442
Description	Description A security issue has been identified that may allow a cross-site scripting (XSS) attack in the Sterling Multi-Channel Order Fulfillment Solution deployment, and can gain control over the deployment. This security issue has been rectified in this hot fix.
Defect ID	Defect ID 227806
Case ID	Case ID 00207097
Description	<p>Description When a user performs the following sequence of actions, the system throws a null pointer exception:</p> <ol style="list-style-type: none"> 1. Creates an inbound order. 2. Creates an inbound shipment. 3. Creates a load for the shipment without a load stop. 4. Purges the order. 5. Calls the changeshipment API or marks the shipment as delivered.
Defect ID	Defect ID 228061
Case ID	Case ID Internal
Description	<p>Description The Sterling Warehouse Management System: Configuration Guide must be updated with the information about new count request purge criteria parameters.</p> <p>Solution:</p> <p>Solution: The requisite information has been included in Table A-78, "Count Request Purge Criteria Parameters", of the Sterling Warehouse Management System: Configuration Guide.</p>
Defect ID	Defect ID 228077
Case ID	Case ID 00206926
Description	Description When a user implements the YFSBeforeCloseReceiptUE user exit for a particular document type, the YFSBeforeCloseReceiptUE user exit is not called.
Defect ID	Defect ID 228338
Case ID	Case ID 00210073
Description	Description When JBoss JMS is used, if the JMS server goes down and comes up again, the agent servers are not able to reconnect to the JMS server.
Defect ID	Defect ID 228433
Case ID	Case ID 00206537
Description	Description When the recipient details of a shipment do not have information, such as the first name, middle name, or last name, in such a scenario the system replaces it with an additional space while integrating with carrier due to which an incorrect data is transferred to the carrier.

Hot Fix 83

Defect ID	209464	Release 8.0-HF83
------------------	--------	------------------

Case ID	Case ID 00062073
Description	Description The xsdGenerator.xml had hardcoded value set as true for the USETARGETNS and IMPORTXSDTYPES properties.
	Solution: Solution: A user can define the properties in the sandbox.cfg. The default values of these properties will remain same (true).
Defect ID	Defect ID 219933
Case ID	Case ID 00154833
Description	Description When a user calls the getCalendarDayDetails API with 'From Date' and 'To Date' timestamp, if the values fall within the time in which Daylight Savings Time (DST) is activated, an "Invalid Date format" error message is displayed.
Defect ID	Defect ID 220040
Case ID	Case ID 00144585
Description	Description The ability to configure distinct lead days for count request purge based on the count request types must be provided.
	Solution: Solution: Two new agent criteria parameters, "Request Type" and "Override Lead Days" has been provided for the COUNTPRG agent. COUNTPRG agent will purge count requests based on these attributes.
Defect ID	Defect ID 203256
Case ID	Case ID 00099024
Description	Description The Sterling Multi-Channel Fulfillment Solution Upgrade Guide documentation zip must be updated with DeletedComponents.xml file. The Deleted Component file wrongly listed some transactions as deleted in version 8.0, whereas it is still present in the product.
	Solution: Solution: The Sterling Multi-Channel Fulfillment Solution Upgrade Guide documentation zip has been updated DeletedComponents.xml file.
Defect ID	Defect ID 223825
Case ID	Case ID 00186652
Description	Description In an inherited calendar, if a day exception is created in the parent calendar by changing a working day to a non-working day and back again to a working day, the findInventory API does not provide the correct available date when the API is invoked.
Defect ID	Defect ID 224918
Case ID	Case ID 00189864
Description	Description A security issue has been identified that may allow a cross-site scripting (XSS) attack in the Sterling Multi-Channel Order Fulfillment Solution deployment, and can gain control over the deployment. This security issue has been rectified in this hot fix.
Defect ID	Defect ID 226870
Case ID	Case ID 00201553

Description	Description When a user validates the output of the getOrderDetails API for an order that has Orderline Amount as 10\$, Header Discount as 5\$, Grand Total as 5\$, and HdrTotal as -5.00, the validation fails for HdrTotal attribute.
Defect ID	Defect ID 226907
Case ID	Case ID 00202854
Description	Description When a user selects the "Request By Task Type" menu from the Sterling Mobile Application, the task type list displayed on the device does not provide the key board operation capability.
Defect ID	Defect ID 227152
Case ID	Case ID 00202929

Hot Fix 81

Release 8.0-HF81

Defect ID 225318
Case ID Case ID 00197509
Description Description If the JMS session pooling provided by the Sterling Application is disabled, the Integration Server throws AlreadyClosedException or IllegalStateException exceptions.

Defect ID Defect ID 224126
Case ID Case ID 00192295
Description Description The new getAvailableInventory Foundation API for Field Sales Mobile has been introduced. The application has been enhanced to provide the ability to check inventory availability of a model item by specifying a child item, or a set of attributes, such as style, size, and color.

Behavior Changes

In earlier releases, if a customer checked the availability of a model item, information only about the model item was returned. Inventory information about child items was not included, nor was information provided about the model item as defined by a set of attributes. In Release 8.0, if a customer checks the availability of a model item without specifying child items or a set of attributes, inventory information about the model item and all child items is returned. For more information about Inventory Availability of Model Items, refer to the Selling and Fulfillment Foundation: Product Concepts Guide.

Defect ID Defect ID 224212
Case ID Case ID Internal
Description Description The Selling and Fulfillment Foundation: Product Concepts Guide must be updated with the information about new the Foundation API for Field Sales Mobile.

Solution:

Solution: The requisite information has been included in the Section "Checking Inventory Availability of a Model Item", of the Selling and Fulfillment Foundation: Product Concepts Guide.

Description	<p>Description When a user calls the changeOrderStatus API for an order line that are in the 'Released' status and drops multiple quantities of the order line individually to the extended status, the system populates incorrect 'MovedQty' in the ToOrderReleaseStatus element of the published XML.</p>
Defect ID	Defect ID 221847
Case ID	Case ID 00179773
Description	<p>Description When a user receives a serial for a serial-tracked item against a shipment with expected segment and segment type information, the system displays "Inventory for the SKU does not exist in the location or case/pallet to perform the inventory operation" error message.</p>
Defect ID	Defect ID 218669
Case ID	Case ID 00166638
Description	<p>Description When a user performs the following sequence of actions, the sourcing rule does not ignore the options if the number of shipments increases:</p> <ol style="list-style-type: none"> 1. In the Scheduling Rule, selects the "Cost, No. of shipments" radio button to optimize a shipment. 2. Creates three nodes, Node1, Node2 and Node3, and two items, Item1 and Item2. 3. Adjusts the inventory for two items such that: <ul style="list-style-type: none"> • One quantity of Item 1 is present at Node1 and Node2 each. • One quantity of Item 2 is present at Node1 and Node3 each. 4. Calls the findInventory API requesting for all the two items. 5. The system generates a single shipment option such that: Item1 - Node1 and Item2 - Node1 <p>The system also generates three double shipment options such that: Item1 - Node1 , Item2 - Node3 Item1 - Node2 , Item2 - Node1 Item1 - Node2 , Item2 - Node3</p> <p>Solution:</p> <p>Solution: The issue has been fixed such that the following options get generated: Item1 - Node1, Item2 - Node1 - 1 shipment Item1 - Node2, Item2 - Node1 - 2 shipments.</p>
Defect ID	Defect ID 220277
Case ID	Case ID 00174570

Description	Description When a user invokes the getCountResultList API with an input that fetches more than 1000 count requests, the getCountResultList API displays the "ORA-01795 Maximum number of expressions in a list is 1000" error message.
--------------------	---

Defect ID	Defect ID 220317
------------------	------------------

Case ID	Case ID 00157096
----------------	------------------

Description	Description When a user modifies an order from the "Order Details" screen, the "Modification Reason" pop-up window is displayed. However, the pop-up window displays the reason codes that belong to all the enterprises instead of displaying the reason code of an enterprise to which the order belongs.
--------------------	---

Solution:

Solution: A new 'YMRD999' resource ID is provided for the "Modification Reason" pop-up window when an order is cancelled from the "Order List" screen of a sales order. A user must provide appropriate permission for the "Modification Reason" pop-up window when it is accessed through User Group other than SYSTEM.

Case ID Case ID 00154111
Description Description For Oracle database, while extending a table with a nullable column which has the default value as 'NULL', the generated ALTER SQL script takes a lot of time to execute if the table has huge data.

Solution:

Solution: The application has been enhanced such that for a column definition with Nullable="True" and DefaultValue="" the following SQL is generated;

```
ALTER TABLE <TABLE_NAME>  
ADD (  
<COL_NAME> <DATATYPE> NULL  
)
```

Defect ID Defect ID 217790
Case ID Case ID 00150470
Description Description The JMS Consumers should be able to copy the Request JMS MessageID to the Response JMS Correlation ID and configure response message time to live.

Solution:

Solution: The application has been enhanced. The configurator UI has been modified for Asynchronous JMS receive service and Synchronous JMS Send and Receive service. A "Reply Correlation ID must be same as "Request JMSMessage ID" checkbox and "Reply Time to live" textbox has been added to the Asynchronous JMS receive component. The "Is Reply Correlation ID same as Request JMSMessage ID?" checkbox has been added to the Synchronous JMS Send and Receive component

The yfs.jms.replytoqueue.forcesoapspec and yfs.jms.replytoqueue.timetolive properties have been introduced.

If the yfs.jms.replytoqueue.forcesoapspec property is set to Y, the configuration at the service level for "Reply Correlation ID should be same as Request JMSMessage ID" is ignored and all the response messages correlation ID is set to the request JMS Message ID request.

If a value is set for the yfs.jms.replytoqueue.timetolive property, it becomes the default value for the response time to live. If the service configuration defines a different value for the reply time to live, the service value overrides the value in the property file.

Defect ID Defect ID 217955
Case ID Case ID 00161400
Description Description A new attribute must be passed as input to the YFSgetAvailabilityCorrectionsForItemListUE user exit to track the total requested quantity.

Solution:

Solution: A new attribute "TotalRequiredQty" is exposed in the YFSgetAvailabilityCorrectionsForItemListUE user exit. This attribute corresponds to the total requested quantity for an item.

Case ID	Case ID 00162462
Description	<p>Description During order purge the encryption logic is called while purging the payment record into the Payment History table.</p> <p>Solution:</p> <p>Solution: The application has been enhanced. The "yfs.ignorePaymentEncryptionForPurgeAndRestore" property has been introduced in yfs.properties_ysc_ext.in. If this new property "yfs.ignorePaymentEncryptionForPurgeAndRestore" is set to 'Y', the encryption logic will not be called at the time of purge. Also, for the RestoreOrder API the encryption logic will not be called.</p>

Description	<p>Description During HF installation for Release 8.0, sometimes the installation may fail with an Out-Of-Memory error message.</p> <p>Solution:</p> <p>Solution: This issue has been fixed. To further reduce the memory usage during HF installation, a 'SUPPRESS_MUNGE_BACKUP' property with the value as 'true' can be added in the 'sandbox.cfg' file. This skips the creation of the backup files for each script during installation. As this reduces the number of unnecessary files during installation; the memory consumption is further reduced during HF installation.</p>

Description	Description When a user scans serial range for an item that is serialized in the Serial pop-up window, the system throws "Serial_Has_More_than_one_translations" error message.

Hot Fix 63

Release 8.0-HF63

Defect ID	187616
Case ID	Case ID 00045422
Description	<p>Description The application should be able to get information about the availability from an external system.</p> <p>Solution:</p> <p>Solution: The application has been enhanced such that a new user exit YFSGetExternalAvailabilityUE has been introduced. The output of this user exit will be used by the system to determine the availability of the item requested in the input. The YFSGetExternalAvailabilityUE user exit is called by the system whenever availability information is required.</p> <p>A user must perform the following actions:</p> <ol style="list-style-type: none"> 1. Implement the YFSGetExternalAvailabilityUE user exit. 2. Add a new enterprise-level property. This property will be required for being put into the yfs.properties in the following format; <code><EnterpriseCode>.IsAvailabilityExternal=Y</code> <p>For example, DEFAULT.IsAvailabilityExternal=Y</p> <p>Add an entry for each enterprise for which the user exit is implemented in the above format.</p> <ol style="list-style-type: none"> 3. Extend the template of the findInventory API to include all the attributes required in the output template of the YFSGetExternalAvailabilityUE user exit. <p>Note: Note: The consolidation of orderLineReservations will not take place, if the YFSGetExternalAvailabilityUE User Exit is implemented.</p>

Defect ID	Defect ID 203420
Case ID	Case ID 00104104
Description	Description When a user tries to perform the count task in the "Count Criteria" and "SKU Quantity Entry" screens, the "GO" button overlaps the "INFO" button.

Defect ID	Defect ID 204043
Case ID	Case ID 00052814

Description	<p>Description When a user runs the manageLoad API in multithreaded mode with each thread trying to add two different shipments to the same load, multithreading is not achieved because one of the thread locks the load to which shipments are being added. In such a scenario, the other threads cannot work on the same load.</p> <p>Solution:</p> <p>Solution: The manageLoad API has been enhanced to take the AddOnlyShipmentsToLoad flag in its input. If the AddOnlyShipmentsToLoad flag is passed as Y in the input of the manageLoad API, the manageLoad API will not lock the load and will only add the shipments to the load.</p>
Defect ID	Defect ID 204905
Case ID	Case ID 00105906
Description	<p>Description When a task is completed by moving a single segmented inventory from an LPN or a location to another location that has Inventory Transition rules defined, the application creates an inventory mismatch between the Distributed Order Management and the Warehouse Management System.</p>
Defect ID	Defect ID 206713
Case ID	Case ID 00113072
Description	<p>Description When a user tries to create a new count request from the "Count Result List" screen, no link is being created between the original count request and the new count request.</p> <p>Solution:</p> <p>Solution: The application has been enhanced to pass the "OriginalCountRequestNo" and "OriginalTaskID" attributes in the input of the createCountRequest API, when the count request is being created from the "Count Result List" screen. Users can implement the "WMSBeforeCreateCountRequestUE" user exit to have the appropriate link between the original count request and the new count request being created, by prefixing the subsequent count requests with the original count request number.</p>
Defect ID	Defect ID 206714
Case ID	Case ID 00113070
Description	<p>Description When a new count request has been created from the "Count Result" screen variance records should be deleted and variance should not be accepted.</p> <p>Solution:</p> <p>Solution: The application has been enhanced to modify the "Variance Accepted" field of the count result records to I (Ignore) by calling the deleteCountResultRecordsForATask API. Even if a user accepts the variance for such records by mistake, the acceptVariance API has been enhanced to not accept the variance for such records.</p>
Defect ID	Defect ID 207195
Case ID	Case ID Internal
Description	<p>Description When a user tries to on-board a new enterprise and models it as another existing enterprise by selecting the "Model the enterprise as existing relationship" check box, it does not display the already on-boarded enterprises, if the total number of enterprises is more than 75.</p>

Hot Fix 62

Release 8.0-HF62

Defect ID	203943
Case ID	Case ID Internal
Description	Description When the reprintCarrierLabel, addContainerToManifest, and getTrackingNoAndPrintLabel APIs are invoked, the output does not give the label image URL even if the Printer Type of the output is set to Client in the Pierbridge server.
	Solution: Solution: The label fields now get populated as "PierbridgeLabelURL" under the container element of the API output where applicable.

Defect ID	Defect ID 205042
Case ID	Case ID 00108456
Description	Description When a user tries installing 8.0-HF57, the HF installation fails, throwing an ORA-12899 error. This is because Dbverify does not generate the alter script correctly if NLS_LENGTH_SEMANTICS is set to CHAR in Oracle database.

Defect ID	Defect ID 205718
Case ID	Case ID 00109216
Description	Description When a user performs the following sequence of actions, the order goes to Reserved status instead of Scheduled status: <ol style="list-style-type: none">1. Under scheduling rules, selects the "Ship Line Complete" and "Allow Reservation During Scheduling" flags.2. Implements the "YFSGetAvailabilityCorrectionsUE" User Exit, such that the input XML is returned as the output XML.3. Creates an item with "Procurement Allowed" flag unchecked.4. Creates an order for 10 quantities for the item.5. Adjust the inventory for the item for 5 quantities.6. Schedules the order.7. Order goes to partially Backorder status.8. Adjust the inventory for 5 more quantities, so that the order can be fulfilled.9. Schedules the order again.
	Solution: Solution: Now the order gets scheduled. The implementation of the "YFSGetAvailabilityCorrectionsUE" User Exit should not change the value of the OrganizationCode attribute of the supply element passed in the input XML.

Case ID	Case ID 00113044
Description	<p>Description In the "Variance Details" panel of the "Count Result Detail" screen, the "Serial No." level does not have original location break-up.</p> <p>Solution:</p> <p>Solution: The original location break-up has been included in the "Serial No." level of the "Variance Details" panel.</p>

Hot Fix 60

Release 8.0-HF60

Defect ID	149205
Case ID	Case ID Internal

Description	<p>Description The getWorkOrderList API should be able to search for the purged work orders.</p> <p>Solution:</p> <p>Solution: A new "ReadFromHistory" flag has been provided in the input XML of the getWorkOrderList API. When this flag is set to "Y", the records from the history tables are fetched. A new "Search History" check box has been provided in "Search" screens pertaining to work orders in the Sterling Multi-Channel Fulfillment Solution Applications Console. When this check box is selected, all the purged records from the history tables are fetched. The "View Details", "Cancel", "Confirm" actions and so on are not permitted for the purged work orders.</p> <p>Note: Note: When the "ReadFromHistory" flag is set to "B", the work orders from both the current table and the history table are fetched. Currently this is supported in the back end only.</p>
Defect ID	Defect ID 201841
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the order line which has been cancelled when the SplitLine API is called to replace the Item ID, still appears in the order in backordered status:</p> <ol style="list-style-type: none"> 1. Creates an order. 2. Schedules the order. 3. Releases the order. 4. Calls changeRelease API to backorder the release. 5. Calls SplitLine API to modify the Item ID. <p>The SplitLine API adds an order line with different items to an order, but the original order line which has been replaced using the SplitLine API appears in the order in backordered status. This order line should not appear in the order as it has been already cancelled by the SplitLine API.</p>
Defect ID	Defect ID 201916
Case ID	Case ID Internal
Description	<p>Description When the Execute Collection agent is run on an SQL Server database, starting the Health Monitor registers the following YFC0003 exception error message: ErrorDescription="[NTSERV64]Column name 'YFS_CHARGE_TRANSACTION.CHARGE_TRANSACTION_KEY' is invalid in the ORDER BY clause because it is not contained in an aggregate function and there is no GROUP BY clause."</p>
Defect ID	Defect ID 201919
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the value of the TaxExemptionCertificate attribute is shown as null resent in the Database:</p> <ol style="list-style-type: none"> 1. Implements the YFSOrderRepricingUE User Exit. 2. Calls the createOrder API, but in the createOrder XML the 'TaxExemptionCertificate' attribute must not be present. 3. The CreateOrder API will invoke the YFSOrderRepricingUE, where the value of attribute is set as TaxExemptionCertificate. 4. The output of the YFSOrderRepricingUE user exit has the TaxExemptionCertificate attribute stamped (TaxExemptionCertificate="TEC111")

Defect ID	Defect ID 201922
Case ID	Case ID Internal
Description	<p>Description When a user creates an order with a certain unit price, and if the amount is pre-collected using a payment method, the application updates the "MaxChargeLimit" attribute of the payment method to the pre-collected amount even if the "UnlimitedCharges" attribute is set to "Y". In addition, the user does not pass any value for the "MaxChargeLimit" attribute in the input XML of the payment method.</p> <p>Solution:</p> <p>Solution: The application has been enhanced such that when an order is created with pre-collected amount, the "MaxChargeLimit" attribute will be set to zero in the payment method if the user does not pass any value for the "MaxChargeLimit" attribute, and the "UnlimitedCharges" attribute is set to "Y".</p>
Defect ID	Defect ID 202822
Case ID	Case ID 00089748
Description	<p>Description The getTrackingNoAndPrintLabel API should be able add containers to a manifest of the desired date.</p> <p>Solution:</p> <p>Solution: The application has been enhanced such that the "ManifestDate" attribute has been added as an input to the getTrackingNoAndPrintLabel API.</p> <p>Therefore, even if input is not passed in the getTrackingNoAndPrintLabel API, containers will get added to current day manifest. If a particular date is passed in the input, any open manifest for that date will be searched. If open manifests are found, containers will get added to the manifest. Otherwise, a manifest will be opened for that date and containers will get added to that manifest.</p>
Defect ID	Defect ID 202823
Case ID	Case ID 00088051
Description	<p>Description The application should be enhanced so that it enables a user to override the ShipperAccountNumber for more than once, currently when a user calls YCSshipCartonUserExit user exit to override the ShipperAccountNumber for the second time; the system throws an "Invalid Manifest Number" error message.</p> <p>Solution:</p> <p>Solution: The application has been enhanced such that the functionality on the outside remains the same. Internally, there will be two copies of the manifest if a user tries to override the shipper account number twice.</p>
Defect ID	Defect ID 204636
Case ID	Case ID Internal
Description	<p>Description The Java docs are not updated in most of the YCS User Exits.</p>
Defect ID	Defect ID 205044
Case ID	Case ID 00111994

Description	<p>Description When a user runs audit purge agent to purge records in the YFS_AUDIT table and if the number of records is greater than the 'No of records to buffer' value, then in such case some of the records will not get purged.</p> <p>Solution:</p> <p>Solution: This issue occurred due to incorrect ordering of the records fetched from database. As a fix, 'ORDER BY' primary_key has been added in the SQL query to fetch the records eligible for purging.</p>
Defect ID	Defect ID 205309
Case ID	Case ID 00113062
Description	<p>Description The Real Time Availability Monitor (RTAM) does not raise correct alerts when supply at nodes is of INFINITE availability type. Items that are monitored are having Node Level ATP Monitor Rule selected.</p>

Hot Fix 59

Release 8.0-HF59

Defect ID	200309
Case ID	Case ID Internal
Description	<p>Description When a user attempts to create a shipment for which neither the PRO No. nor the BOL No. is defined, the system populates the PRO No. and BOL No. fields with 0 (zero). The system then attempts to locate a matching load for this shipment, and attaches the wrong load.</p> <p>Solution:</p> <p>Solution: The application has been enhanced such that the confirmShipment API, the changeShipment API, and the createShipment API takes the OverrideAddnOfShipmentsToLoad flag in their respective inputs XMLs. If the OverrideAddnOfShipmentsToLoad flag is passed as 'Y' the system will not try to find a matching load for the newly created shipment.</p>

Case ID Case ID 00100411

Description Description Information about creating count requests for all the locations either by Location option or by Aisle, Bay, or Level option must be added to the Sterling Warehouse Management System User Guide.

Solution:

Solution: The requisite information has been included in Section 14.2, "Create Count Request for Location Group", in Chapter 14, "Create Count Request Screens" and Section 15.3, "Count Request Search By Location Group", in Chapter 15, "Count Console Screens" of the Sterling Warehouse Management System User Guide.

Defect ID Defect ID 204509

Case ID Case ID 00108935

Description Description When adding data to a table in the setModel() method call, the viewer.refresh() method is being called by the application. This method is used to display the images stored in the server. If an image server is not configured for any column in the table, the viewer.refresh() method need not be invoked, thus enhancing the performance of the application.

Solution:

Solution: The application has been modified to call the viewer.refresh() method only if a valid image server is configured for a column in the table.

Description	<p>Description The Sterling Distributed Order Management Configuration Guide must be updated with information about the "Invoice Open Header Charges/Taxes On Invoice Complete" check box included in the Others tab in the Financial Attributes screen.</p> <p>Solution:</p> <p>Solution: The "Invoice Open Header Charges/Taxes On Invoice Complete" check box and its description has been added to Table 19-1, "Others Tab" in Section 19.4, "Defining Additional Payment Rules" in Chapter 19, "Configuring a Document's Financial Components" of the Sterling Distributed Order Management Configuration Guide.</p>
Defect ID	Defect ID 195834
Case ID	Case ID Internal

Description	<p>Description When a user performs the following sequence of actions with more than 75 queues for an enterprise, the queue name is not displayed in the “Exception Type Details” screen. However, the database records contain the correct queue for this exception type:</p> <ol style="list-style-type: none"> 1. 4.Creates an exception type for the enterprise. 2. 5.Searches a queue and assigns the queue to this exception type such that the number of the queue is 76 or higher in the searched list of queues. 3. 6.Closes and re-opens the exception type details screen. <p>Solution:</p> <p>Solution: The queue name will be displayed in the “Exception Type Details” screen irrespective of the order or the serial number of the queue in the queue list.</p>
Defect ID	Defect ID 196097
Case ID	Case ID 00078508
Description	<p>Description If a LONG or LOB type value is present before a VARCHAR2 > 4000 chars in an insert statement, Oracle registers an “ORA-24816: Expanded non LONG bind data supplied after actual LONG or LOB column” error message.</p> <p>Solution:</p> <p>Solution: The behavior of the application has been changed to dump the large OUTXML into a file.</p>
Defect ID	Defect ID 196605
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of tasks, the application creates system suggested outbound cases for the shipment:</p> <ol style="list-style-type: none"> 1. 4.Configure the following Batch Picking Task Types: “Pick Into Pallet”, “Pack While Pick”, and “Use System Suggested Containerization”. 2. 5.Create a shipment, include the shipment in a wave, and release the wave. <p>Solution:</p> <p>Solution: The application has been enhanced to support shipping of system suggested outbound pallets.</p>
Defect ID	Defect ID 197715
Case ID	Case ID 00081497
Description	<p>Description When the findInventory API is invoked with the VMI functionality enabled, the findInventory does not give availability of item that does not have any record in YFS_INVENTORY_ITEM for consuming inventory org using inventory of item of consumable inventory org.</p> <p>Solution:</p> <p>Solution: The adjustInventory API has been enhanced so that when inventory is adjusted for an item belonging to a consumable inventory org, the API can also insert record in the YFS_ITEM_INVENTORY table for items belonging to the consuming inventory org that has the same GTIN number as the item for the consumable inventory org. Only after this fix is applied, the findInventory/getATP APIs would give correct availability for item belonging to consuming inventory org, for which there is no supply and demand, but the supply has been adjusted for item having the same GTIN number belonging to the consumable inventory org.</p>

Defect ID	Defect ID 197983
Case ID	Case ID 00076761
Description	<p>Description In a paginated console screen, by default the sorting is of "Server Side Sorting" type. A user must be provided with the capability to sort the data in the screen.</p> <p>Solution:</p> <p>Solution: To switch to the client side sorting (local sort on the displayed page), change the "sc-ui-pagination-sorting-type" parameter to "client" in the web.xml file.</p> <p>Note: Note: All sorting performed on this screen will be lost if the user navigates away from this screen.</p>
Defect ID	Defect ID 199395
Case ID	Case ID Internal
Description	<p>Description When the getExceptionListForOrder API is invoked, the application does not display alerts that are unrelated to the order in the "Alert Search" screen.</p>
Defect ID	Defect ID 199475
Case ID	Case ID 00085050
Description	<p>Description When installing a hot fix, the application displays an unknown option or illegal argument error.</p> <p>Note: Note: If you are using Windows OS with JRockit JRE, and not able to start the HF installer, you must install the Foundation80-HF55 or above and carry out the following manual steps BEFORE applying the HF:</p> <ol style="list-style-type: none"> 1. Open the INSTALL_DIR\bin\tmp.cmd.in file, search for the -Xmn&Windows.INIT_AGE;m string, and replace the string with empty space. 2. Open the INSTALL_DIR\bin\ServiceInstaller.cmd.in file, search for the -Xmn&Windows.INIT_AGE;m string, and replace the string with empty space. 3. Go to INSTALL_DIR\bin directory and run the setupfiles.cmd command.
Defect ID	Defect ID 200086
Case ID	Case ID 00090224
Description	<p>Description If the length of an error code is greater than the length of the corresponding error pop-up window in the RCP application, the complete error code and the "Close" button is not visible unless the user stretches the error pop-up screen.</p> <p>Solution:</p> <p>Solution: The application has been modified to wrap the error code if the length of an error code is greater than the length of the corresponding error pop-up window.</p>
Defect ID	Defect ID 200628
Case ID	Case ID 00091389
Description	<p>Description The application must be enhanced such that the menu from the Sterling Call Center and Store application can be copied to a custom menu.</p>
Defect ID	Defect ID 201014
Case ID	Case ID 00092231

Description	Description When a large number of organizations are administered by a parent organization, if a valid user of the parent organization logs in, and tries to open the "User Details" screen for any other user of the parent organization, the Configurator screen blanks out and the server crashes with an out-of-memory error.
--------------------	---

Hot Fix 54

Release 8.0-HF54

Defect ID	155105
Case ID	Case ID Internal
Description	Description When unpacking a time-sensitive item, the system displays an "Expiration Date Entry" popup window even when the Ship By Date attribute is unique for the item in the container.
Defect ID	Defect ID 155127
Case ID	Case ID Internal
Description	Description When the container that is being unpacked has inventory with the same Ship By Date attribute, the system displays the "Expiration Date Entry" screen.
Defect ID	Defect ID 155531
Case ID	Case ID Internal
Description	Description When a user tries to modify the location dedications for a node that has more than 75 organizations associated with it, the related editable tables do not handle the "Organization" field. In addition, the system converts the drop-down list to a text field and does not display the "Look Up" icon adjacent this text field.
	Solution:
	Solution: The "Look Up" option has been enhanced to be consistent with the behavior of the other fields in the same editable table. The "Organization Search" pop-up window has been exposed with an "Enterprise Look Up" option.
Defect ID	Defect ID 156672
Case ID	Case ID Internal
Description	Description When a user performs the following sequence of actions when counting through the Sterling Supply Chain Mobile Application, the system does not unfreeze the location that has been frozen for variance: <ol style="list-style-type: none"> 1. Configures the pick exception to "Freeze Location for Pick". 2. When picking from the location, enters the pick exception to freeze the location for variance that was configured in step 1. 3. Creates a count request for the frozen location. 4. Cancels the count request created in step 3.
Defect ID	Defect ID 156734
Case ID	Case ID Internal
Description	Description When the system-defined containerization is not enabled, and if a user tries to pack a case or pallet that has a serialized item in an outbound container, the inventory moves from the case or pallet to the container.

Defect ID	Defect ID 163459
Case ID	Case ID Internal
Description	<p>Description To facilitate better performance of the "Create Count Request For Location Range" agent, the "Number of Records To Buffer" parameter for this agent should be set to 5000.</p> <p>Solution:</p> <p>Solution: The "Number of Records To Buffer" parameter for the "Create Count Request For Location Range" agent has been set to a default value of 5000.</p>
Defect ID	Defect ID 199379
Case ID	Case ID Internal
Description	<p>Description The changeShipmentContainer API must populate the ReasonCode and the ReasonText information in the yfs_audit_header when this API is invoked to modify the shipment line quantity by modifying the container details quantity.</p>
Defect ID	Defect ID 199383
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the application does not complete the count task even when the user performs the "Complete" action:</p> <ol style="list-style-type: none"> 1. 7.Creates an LPN in a location with inventory for an item. 2. 8.Logs in to the Sterling Mobile application, and performs a "Manual Count" operation. 3. 9.Scans a location and counts the LPN created in step 1 in the location. 4. 10.Completes the manual count.
Defect ID	Defect ID 199402
Case ID	Case ID Internal
Description	<p>Description When a system-defined containerization is configured, and serial-tracked and serialized items are being packed, the application does not validate the value of the serialized item scanned in the "Serial" pop-up window.</p>
Defect ID	Defect ID 199426
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the application containerizes one of the shipments twice such that the container quantity of this shipment is twice the shipment line quantity:</p> <ol style="list-style-type: none"> 1. 1.Releases a wave that contains two shipments such that a single or multiple item pick tasks are created for this wave. 2. 2.Invokes the containerizeWave API to create containers for the wave released in step 1.
Defect ID	Defect ID 199894
Case ID	Case ID 00089669

Description	Description The application console does not provide an interface that enables a user to enter the serial number of a serial-tracked item for a shipment line.
	Solution: Solution: The application console has been enhanced such that the user can enter the serial number of a serial-tracked item in the “Shipment Line Details” screen.

Hot Fix 53

Release 8.0-HF53

Defect ID	155490
Case ID	Case ID Internal
Description	Description A deadlock is observed in the YFS_TASK table when multiple users are packing using Pack HSDE.
Defect ID	Defect ID 155505
Case ID	Case ID Internal
Description	Description A deadlock is observed in the YFS_NODE_TRAN_ATTR table when operations such as wave release, physical count, and inventory adjustments happen at the same time.
Defect ID	Defect ID 157224
Case ID	Case ID Internal
Description	Description When an RF user scans a Cart ID that is already associated to a batch in the “Induct Cart” screen, the system throws a “Cart Already Inducted” error message.
	Solution: Solution: The system has been enhanced to display the error message along with the batch number to which the cart is already associated.
Defect ID	Defect ID 167774
Case ID	Case ID Internal
Description	Description When two Cart Pick users try to induct their carts at the same time, one of the users fails with a deadlock.
Defect ID	Defect ID 167777
Case ID	Case ID Internal
Description	Description When the replenishment tasks are configured to be completed in three steps, and multiple users have logged in to the system to complete the replenishment tasks, deadlocks are visible in the YFS_Location_Inventory table when users try to complete the second and the third steps of the replenishment tasks.
Defect ID	Defect ID 170376
Case ID	Case ID Internal
Description	Description When a user invokes the receiveOrder API to receive a multi-line, multi-container shipment that has the shipment lines distributed in multiple containers, the application throws an “Overage Not Allowed” error message even if the shipment lines are available for receiving.

Defect ID	Defect ID 176431
Case ID	Case ID Internal
Description	Description The Task Purge agent has performance bottlenecks.
Defect ID	Defect ID 176436
Case ID	Case ID Internal
Description	Description When a user tries to pack an outbound shipment for an item that has multiple tags at a pack location, the application does not invoke the translateBarCode API to validate the tag number that is entered in the "Pack" screen.
Defect ID	Defect ID 176987
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the application creates a new task from L2 with C1 as the suggested LPN:</p> <ol style="list-style-type: none"> 1. Configures the replenishment tasks to be created from a zone with "Do not Split Cases or Pallets" and "Round Up to a Case or a Pallet" enabled in the replenishment strategy. 2. Ensures that a case, for example, C1, exists at a location L1 with 10 units of an item, and similarly, a case, C2, exists at location L2 with 10 units of the same item. 3. Creates a shipment with less than 10 units of the item mentioned in step 2, includes the shipment in a wave, and releases the wave. 4. The application creates a replenishment task for 10 units of the item at location L1, with C1 as the suggested LPN. 5. When executing the replenishment task, the user scans an execution exception code that is configured to suggest an alternative pick location.
Defect ID	Defect ID 192593
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the invoice is not collected against the payment method that has the same MaxChargeLimit as the amount in the invoice, that is, the first invoice is not collected against the second payment method:</p> <ol style="list-style-type: none"> 1. Creates an order with multiple invoices and multiple payment methods. 2. Ensures that the MaxChargeLimit on the second payment method matches with the amount of the first invoice. 3. Invokes the processOrderPayments API.
Defect ID	Defect ID 195633
Case ID	Case ID 00068518
Description	<p>Description The application must be enhanced with an event that can be configured to publish the reservation changes for the INVENTORY_CHANGE transaction whenever there is a change in the inventory reservation.</p> <p>Solution:</p> <p>Solution: A RESERVATION_CHANGE event has been introduced for the INVENTORY_CHANGE transaction.</p>
Defect ID	Defect ID 195844
Case ID	Case ID Internal

Description	<p>Description When the getOrderDetails API is invoked, the output XML of this API does not contain the "TaxableFlag" attribute under the <LineTax> element.</p> <p>Solution:</p> <p>Solution: The "TaxableFlag" attribute has been added under the <LineTax> element in the output template of the createOrder API, the changeOrder API, and the getOrderDetails API.</p>
Defect ID	Defect ID 195946
Case ID	Case ID 00076994
Description	<p>Description When a routing guide is configured for a buyer organization, and the findInventory API is invoked, this API does not determine the carrier based on the routing guide that is configured for the buyer organization.</p> <p>Solution:</p> <p>Solution: The findInventory API has been enhanced such that the value passed in the CustomerId in the input XML will be used to determine the routing guide for the buyer organization.</p>
Defect ID	Defect ID 196592
Case ID	Case ID 00080573
Description	<p>Description The JMS Monitoring Group does not display the correct information pertaining to the JBoss queue in the System Management Console.</p>
Defect ID	Defect ID 196792
Case ID	Case ID Internal
Description	<p>Description The application must be enhanced such that scanning of the corresponding location and item is mandatory when a cart pick operation is performed using the Sterling Mobile Application. Currently, the application does not display an error message if the item and the location are not scanned during cart picking.</p>
Defect ID	Defect ID 197024
Case ID	Case ID 00034477
Description	<p>Description The "Count" screen and the "Putaway Deposit" screen in the RF must be enhanced to display the "DisplayItemId" field and the "DisplayItemDescription" field.</p>
Defect ID	Defect ID 197774
Case ID	Case ID 00080653
Description	<p>Description When a new child organization is added to a seller node, the application displays a "Node Organization cannot have child organization" error message.</p>
Defect ID	Defect ID 199010
Case ID	Case ID Internal
Description	<p>Description When a user purges the batch tasks from the history table, and runs the Task History Purge Agent, the application registers a null pointer exception.</p>
Defect ID	Defect ID 199204

Case ID	Case ID 00086306
Description	<p>Description When a user runs the Person Info Purge agent against the YFS_PERSON_INFO table that contains a large number of records, a couple of queries that do not use the index on the MODIFYTS column in the YFS_PERSON_INFO table are fired. Because of this, the performance of these queries is slow.</p> <p>Solution:</p> <p>Solution: The queries have been modified such that in an Oracle database, the index on the MODIFYTS column will be used.</p>
Defect ID	Defect ID 199386
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the application registers an "Invalid status change" exception during deposit:</p> <ol style="list-style-type: none"> 1. Adjusts inventory for an item in an LPN in a location. 2. Creates a shipment, adds the shipment to a wave, and releases the wave such that a task is created from the location mentioned in step 1. 3. Deletes the LPN and adjusts inventory in another LPN at another location. 4. Logs in to the Sterling Mobile application to complete the task started in step 3. The application suggests another location to pick the inventory from through the Suggest Alternate Location mechanism. 5. Picks inventory from the location suggested by the application, and tries to deposit the inventory.
Defect ID	Defect ID 199398
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the application does not stamp the correct quantity on the task:</p> <ol style="list-style-type: none"> 1. Configures a Pick Exception code with the "Suggest Alternate Location" option enabled. 2. Adjusts inventory for an item in an LPN, for example, C1, in a location. 3. Creates a shipment, adds the shipment to a wave, and releases the wave such that a task is created from the location mentioned in step 2 with the suggested LPN as C1. 4. Adjusts inventory in another LPN, for example, C2, in another location, with a different quantity. 5. Logs in to the Sterling Mobile application and enters the pick exception configured in step 1. <p>The application suggests another location to pick the inventory from through the Suggest Alternate Location mechanism. The new task will be created from another location with the suggested LPN (C2) information, but the quantity remains the same as that of the LPN (C1).</p>
Defect ID	Defect ID 199407
Case ID	Case ID Internal

Description	<p>Description When a user performs the following sequence of actions, the application does not stamp the correct suggested LPN information on the task:</p> <ol style="list-style-type: none"> 1. Adjusts inventory for an item in an LPN, for example, C1, in a location. 2. Creates a shipment, adds the shipment to a wave, and releases the wave such that a task is created from the location mentioned in step 1, with the suggested LPN as C1. 3. Deletes C1 and adjusts inventory in another LPN, for example, C2, in another location, with a different quantity. 4. Logs in to the Sterling Mobile application to complete the task started in step 3. <p>The application suggests another location to pick the inventory from through the Suggest Alternate Location mechanism. The new task will be created from another location without the suggested LPN (C2).</p>
Defect ID	Defect ID 200505
Case ID	Case ID 00091859
Description	<p>Description The application does not allow a user to log in to the Sterling Store Inventory Management client if the LoginThroughBrowser attribute is set to "Y" in the locations.ycfg file.</p>

Hot Fix 52

Release 8.0-HF52

Defect ID	149679
Case ID	Case ID Internal
Description	<p>Description When a user performs picking operations using the Sterling Mobile Application, scans the start location, and picks and deposits inventory from the start location to another location, the system should suggest that the next inventory be picked from the scanned start location instead of the last deposit location.</p>
Defect ID	Defect ID 155108
Case ID	Case ID Internal
Description	<p>Description The Sterling Warehouse Management System Configuration Guide must be updated with information about the "Expired Inventory" event included in the "Location Monitor Rule Details" screen.</p> <p>Solution:</p> <p>Solution: Information about the "Expired Inventory" event has been added to Table 4-19, "List of Valid Events" in Section 4.8.1, "Creating a Monitoring Rule" in the Sterling Warehouse Management System Configuration Guide.</p>
Defect ID	Defect ID 155486
Case ID	Case ID Internal
Description	<p>Description The Sterling Supply Chain Visibility PCA application confirmShipmentFromEDI API throws a null pointer exception when the "Ship Node" attribute is sent in the input parameter.</p>
Defect ID	Defect ID 170345
Case ID	Case ID Internal

Description	Description When a large wave is released in a DB2 environment and a user frequently refreshes the “Wave Summary” screen, the Cancel Shipment transaction that is running concurrently tries to cancel the shipment that is included in the wave. Thus, deadlocks appear between the YFS_Wave table and the YFS_Shipment table, and the wave takes a long time to release.
Defect ID	Defect ID 190020
Case ID	Case ID Internal
Description	Description The application must be able to delete the containers associated to a shipment created by wave containerization if either the shipment is removed from the wave, or the wave is cancelled.
Defect ID	Defect ID 192590
Case ID	Case ID Internal
Description	Description When a user invokes the changeLoadStatus API, a deadlock occurs with the following error message: "[NTSERV64]Transaction (Process ID 80) was deadlocked on lock resources with another
Defect ID	Defect ID 193162
Case ID	Case ID 00055869
Description	Description When the Real Time Availability Monitor agent is run against large volumes of data, the agent registers a null pointer exception.
Defect ID	Defect ID 193646
Case ID	Case ID Internal
Description	Description When the getLPNDetails API is called for a pallet that has more than 100 child cases, and each child case has inventory for a serial-tracked item, one of the child cases in the pallet does not display the serial information in the output XML of this API.
Defect ID	Defect ID 195679
Case ID	Case ID 00074233
Description	Description When the getCompleteItemList API is invoked, the API fetches those child items that are in unpublished or held status. Solution: Solution: The child items in unpublished status are fetched only if the GetUnpublishedItems attribute is set to “Y”. The default value of this attribute is “N”. Note: Note: If you are using the Sterling Call Center and Sterling Store application, and apply this or a higher hot fix of Sterling Multi-Channel Fulfillment Solution, 8.0, you must upgrade to Sterling Call Center and Sterling Store, 8.0-HF33. This is because of a hot fix dependency of child items between Sterling Call Center and Sterling Store and Sterling Multi-Channel Fulfillment Solution.
Defect ID	Defect ID 195685
Case ID	Case ID 00077409
Description	Description When the createOrder API is invoked, the RecalculateHeaderTaxUE user exit is invoked even if the header charge is not present in the order.
Defect ID	Defect ID 195847

Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the containerizeWave API does not stamp the wave information on a shipment container, and subsequently the containers associated with a shipment that is created by wave containerization are not deleted if either the shipment is removed from the wave, or the wave is cancelled:</p> <ol style="list-style-type: none"> 1. Configures a task type to perform pick into equipment. 2. Associates the task type configured in step 1 when configuring the pick location assignment. 3. Creates a shipment, includes the shipment in a wave, releases and containerizes the wave.
Defect ID	Defect ID 196803
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the application fires a query on the YFS_SHIPMENT_CONTAINER table with a join on the YFS_SHIPMENT_LINE. This query takes a large amount of time. In addition, the JOIN to YFS_SHIPMENT_LINE is not required:</p> <ol style="list-style-type: none"> 1. Enables the ON_SUCCESS event of the CONTAINERIZE_WAVE transaction. 2. Enables the verbose trace for the containerizeWave API. 3. Creates a shipment, includes the shipment in a wave, and releases and containerizes the wave.
Defect ID	Defect ID 197087
Case ID	Case ID 00074791
Description	<p>Description The Sterling JavaDocs must be updated with information about only the "Generic" pagination strategy being supported in a multi-component service.</p> <p>Solution:</p> <p>Solution: The following note has been added in the description of the "IsFlow" attribute in the input XML under getPage API:</p> <p>"Only 'GENERIC' strategy is supported while paginating a Service."</p>
Defect ID	Defect ID 197137
Case ID	Case ID 00081147
Description	<p>Description When the yfs_charge_name table is extended, and the manageChargeName API is invoked, the manageChargeName API does not stamp the correct value of the extended attribute.</p>
Defect ID	Defect ID 197324
Case ID	Case ID Internal

Description	<p>Description When a user performs the following sequence of actions, the registerTaskCompletion API registers a “WMS00014: CaseId/PalletId doesn’t exist” exception:</p> <ol style="list-style-type: none"> 1.Moves a task to “In-progress” status by picking the inventory for an item from a multi-SKU LPN. 2.Moves other SKUs from the multi-SKU LPN such that the LPN is deleted when it becomes empty. <p>Solution:</p> <p>Solution: The ProcessAllTasks and CompleteInProgressTasks flags have been exposed in the moveLocationInventory API. These flags, when enabled, prevent the auto completion or auto cancellation of tasks that are associated to an LPN when the LPN is deleted after moving the corresponding inventory.</p>
Defect ID	Defect ID 197607
Case ID	Case ID 00083878
Description	<p>Description When a user performs the following sequence of actions, the “Deposit” screen does not display the item ID that is to be deposited:</p> <ol style="list-style-type: none"> 1.Creates two items such that each item has a different UOM. 2.Receives the two items created in step 1 in a receiving dock such that putaway tasks are created for the two items to separate bulk locations. 3.Logs in to the RF device, navigates to the putaway option in the RF menu, and picks up both the items in an equipment.
Defect ID	Defect ID 197653
Case ID	Case ID 00069533
Description	<p>Description A new entity API is required for the Inventory Alert table.</p> <p>Solution:</p> <p>Solution: A new manageInventoryAlerts API has been included in the application. For more information about this API, see the corresponding section in the Sterling JavaDocs. In addition, the DISTRIBUTION_RULE_ID field and the IS_DEFAULT_DISTRIBUTION_GROUP field have been added to the YFS_INVENTORY_ALERTS table. The manageInventoryAlerts API will invoke the same event as the Real Time Availability Monitor agent when a create or update operation is successful.</p> <p>Note: Note: The new records inserted by the Real Time Availability monitor into the YFS_INVENTORY_ALERTS table will have the IS_DEFAULT_DISTRIBUTION_GROUP field set to “Y”. A script has been provided with this hot fix to update the existing records in this table. If the Real Time Availability Monitor has been configured, this script must be run immediately after installing this hot fix.</p>
Defect ID	Defect ID 197704
Case ID	Case ID 00084028

Description	<p>Description When a user performs the following sequence of actions, a "Permission Denied" message is displayed in the Routing Guides panel of the "Shipment Planning" screen:</p> <ol style="list-style-type: none"> 1. Creates a user group having permission to Logistics Management > Application > Sterling Multi-Channel Fulfillment Configurator > Logistics > Shipment Planning, and creates a user for this group. 2. Logs in as the user created in step 1, and navigates to Applications > Logistics Management > Logistics > Shipment Planning. <p>Solution:</p> <p>Solution: The permission ID for this resource has been changed to the same as that for the "Shipment Planning" screen. In addition, the permission ID in the "Carrier Services" screen of the routing guide has been changed to that of the permission ID of the "Shipment Planning" screen.</p> <p>Therefore, after this fix is applied, the user must have the new permission to view the "Carrier Services" and "Shipment Planning" screens.</p> <p>Additional permissions must also be provided to the user in the following:</p> <ul style="list-style-type: none"> • To set the carrier services in the Create Routing Guideline tab: Logistics Management > Applications > Sterling Multi-Channel Fulfillment Configurator > Cross Application > Carrier Services. • To change or create calendar/Publish date: Platform > Applications > Sterling Multi-Channel Fulfillment Configurator > Participant Modeling > Participant Setup.
Defect ID	Defect ID 197984

Case ID	Case ID Internal

Description	<p>Description The Sterling JavaDocs must be updated with information about only the “Generic” pagination strategy being supported in a multi-component service.</p> <p>Solution:</p> <p>Solution: The following note has been added under the getPage API in the Sterling JavaDocs:</p> <p>By default, only 'Generic' strategy is supported by List APIs. Support for any other strategy for an API has to be evaluated and documented by the respective API.</p>
Defect ID	Defect ID 199429
Case ID	Case ID Internal
Description	<p>Description When the acceptTasks API is invoked through the recordPhysicalCount API in the Sterling Inventory Management application, the acceptTasks API registers a null pointer exception.</p>

Hot Fix 51

Release 8.0-HF51

Defect ID	154536
Case ID	Case ID Internal
Description	<p>Description The performance of the serial-picking task should be enhanced for shipments with multiple lines of serial-tracked items.</p>
Defect ID	Defect ID 154544
Case ID	Case ID Internal
Description	<p>Description When a user unpacks a serial tracked item, the system throws a “WMS00013: Serial Tracking Mandatory” error message for that item.</p>
Defect ID	Defect ID 156772
Case ID	Case ID Internal
Description	<p>Description When a node has more than 75 participating enterprises, the “Enterprise Look Up” icon in the Sterling Warehouse Management System Configurator for a Node/Enterprise combination is disabled.</p>
Defect ID	Defect ID 159830
Case ID	Case ID Internal
Description	<p>Description When a user cancels a shipment from the Sterling Application Console, the system retains the empty container after the outbound container is converted to an inventory container.</p>
Defect ID	Defect ID 168248
Case ID	Case ID Internal
Description	<p>Description When a user completes a task created for a paper-based count request for a location at the classification level, the Items panel in the “Record Count Result Details” screen does not display the amount of system inventory present in a location for the items that are grouped under this classification.</p>
Defect ID	Defect ID 193099
Case ID	Case ID 00068431

Description	<p>Description The reprintCarrierLabel API does not raise a configured ON_SUCCESS event.</p> <p>Solution:</p> <p>Solution: The reprintCarrierLabel API has been enhanced to raise an ON_SUCCESS event, and publish the PrintBuffer attribute and PrinterPreference element in the ON_SUCCESS event.</p>
Defect ID	Defect ID 195729
Case ID	Case ID 00077537
Description	<p>Description When more than 75 enterprises exist in the application, and a user tries to create a new organization, the application does not allow the user to create the new organization, and displays a "Primary enterprise must be specified" error message.</p> <p>This issue exists even if the "Organization Is An Enterprise" option in the "Create Organization" pop-up window is selected during the process of creating a new enterprise.</p>
Defect ID	Defect ID 196046
Case ID	Case ID 00077748
Description	<p>Description When a user tries to cancel all the orders that are in the "Created" status by selecting the corresponding check boxes in the "Order List" window, the application cancels the corresponding order without prompting the user to enter the cancellation reason code.</p>
Defect ID	Defect ID 196396
Case ID	Case ID 00078546
Description	<p>Description When the receiveOrder API, closeReceipt API, changeOrder API (To change an existing sales order to an exchange order of the return order), and the createOrderInvoice API are invoked in a single transaction boundary, the TRANSFER_IN charge type for an exchange order and the TRANSFER_OUT charge type for a return order are not inserted in the YFS_CHARGE_TRANSACTION table.</p>
Defect ID	Defect ID 196446
Case ID	Case ID Internal
Description	<p>Description The INBOXPRG record is not available in the YFS_AGENT_CRITERIA_TEMPLATE database table after a user completes the migration from Release 7.x to Release 8.2. Because of this missing record, upgrading the same database to Release 8.5 results in an upgrade failure.</p> <p>Solution:</p> <p>Solution: A factory setup has been provided for the missing database record. If a user has migrated from Release 7.x to Release 8.2, and later wishes to migrate to Release 8.5 or later versions, this hot fix must be applied to restore the missing database record.</p>
Defect ID	Defect ID 196787
Case ID	Case ID Internal
Description	<p>Description When the supervisory override functionality is enabled in the RCP application, connection leak and end-of-file (EOF) exceptions are registered in the backend console.</p>
Defect ID	Defect ID 196898

Case ID	Case ID 00080648
Description	Description When the -DhideStoreCustomerMessage=true argument is added in the sop.ini file of Sterling Inventory Management, Release 7.2, the application does not hide the customer message.
Defect ID	Defect ID 197281
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the Create Count Task agent does not create the corresponding count tasks:</p> <ol style="list-style-type: none"> 1. Configures a count strategy for a node with the CREATE_COUNT_TASK_79 TransactionId, and associates it to a task type. 2. Creates a count request for an item classification for an entire node. 3. Runs the Create Count Task agent for the count request created in step 2.
Defect ID	Defect ID 198082
Case ID	Case ID 00077748
Description	<p>Description The Sterling Distributed Order Management User Guide must be updated with information about entering the reason code and the reason text in the "Modification Reason" screen when canceling an order.</p> <p>Solution:</p> <p>Solution: The requisite information has been added to the description of the "Cancel" action in Table 10-6, "Order List" in Section 10.6, "Order List", and in Table 10-7, "Detailed Order List" in Section 10.7, "Detailed Order List" of the Sterling Distributed Order Management User Guide.</p>

Hot Fix 50

Release 8.0-HF50

Defect ID	155475
Case ID	Case ID Internal
Description	<p>Description When a user runs the MINE_PRODUCTIVITY agent with a blank agent criteria, this agent pushes too many messages into the queue, thus slowing itself down.</p>
Defect ID	Defect ID 156778
Case ID	Case ID Internal
Description	<p>Description When a user cancels a count request, the cancelCountRequest API cancels the count request without checking for any in-progress count tasks for that count request. Also, the system does not provide a user with the functionality to cancel the in-progress count tasks.</p> <p>Solution:</p> <p>Solution: The cancelCountRequest API has been enhanced to throw an error when a user tries to cancel a count request that has in-progress count tasks.</p>
Defect ID	Defect ID 157267
Case ID	Case ID Internal
Description	<p>Description When executing a count operation through the Sterling Mobile Application, the system does not calculate the sum of the counted quantity when an item is counted multiple times in a location.</p>

Defect ID Defect ID 167771
Case ID Case ID Internal
Description Description The Asynchronous Request Processor agent begins to slow down as the YFS_ASYNC_REQ table fills up.
Solution:
Solution: The following indexes have been added to the table to improve the performance of the get jobs for this agent:
YFS_ASYNC_REQ_I99 (SERVICE_NAME,TRAN_REQ_NO,ASYNC_REQUEST_KEY)
YFS_ASYNC_REQ_I98 (PRIORITY,TRAN_REQ_NO,ASYNC_REQUEST_KEY)

Defect ID Defect ID 167780
Case ID Case ID Internal
Description Description When the Outbound Pick Task Type is configured to “Dispatch Tasks Only When Inventory is Available”, the releaseTask agent moves the tasks to “Held” status even if the corresponding tasks are completed.
Solution:
Solution: The application has been enhanced to verify whether the task is in the Completed, Canceled, or In-Progress status before the task is updated by the releaseTask agent, so that the releaseTask agent ignores such tasks.

Defect ID Defect ID 170343
Case ID Case ID Internal
Description Description When the application creates a new task, for example, move task, count task, pick task, replenishment task, and so on, the application does not stamp the Task Key in the new Task Status Audit record.

Defect ID Defect ID 181020
Case ID Case ID Internal
Description Description The application must be enhanced with the capability to control the logic involved in determining the sequence of the tasks to be derived from the getNextTask API.

Solution:
Solution: A new “OrderBy” child element has been provided in the input XML of the getNextTask API. The user or an external application can invoke the getNextTask API by providing attributes in the <OrderBy> element as a criterion for sequencing the tasks. The getNextTask API will return the tasks based on the criteria provided in the input followed by the default system criterion.
For example, if the user or an external application invokes the getNextTask API with the input criteria as <OrderBy><Attribute Name=“WaveNo”/><OrderBy>, the application will derive the tasks based on the ORDER BY clause as follows:
WaveNo,TaskPriority,ReferenceSortSequence,FinishNoLaterThan,SourceSortSequence,Sou
For more information about the “OrderBy” child element, see the Sterling Javadocs.

Defect ID Defect ID 193928

Case ID	Case ID 00063473
Description	Description When the Configuration Deployment Tool is run with the "Rollback Data to Version Label" option, not all the values in the YFS_ROUTING_GUIDE_DETAIL table are restored.
Defect ID	Defect ID 193958
Case ID	Case ID 00067309
Description	Description If the user login auditing feature is enabled, at every login instance, a query fetches the records from the YFS_USER_ACT_AUDIT table based on the User ID and the Session ID of the logged-in user. This query consumes a lot of time if the number of records in the table is large.
	Solution: Solution: A new index has been added in the YFS_USER_ACT_AUDIT table for the USER_ID column to increase the responsiveness of the query.
Defect ID	Defect ID 194158
Case ID	Case ID 00041826
Description	Description When the recordInvoiceCreation API is invoked to create a DEBIT_MEMO for an imported order that has line charges and taxes, the API does not handle the line taxes.
	Solution: Solution: The application has been enhanced with a new <LineTaxList> element. This element is introduced in the input XML and the template XML of the recordInvoiceCreation API.
Defect ID	Defect ID 194430
Case ID	Case ID 00065940
Description	Description If an item attribute has a Japanese half-size character, a "javax.servlet.ServletException" is registered after an SKU is scanned in the Pack station.
Defect ID	Defect ID 194447
Case ID	Case ID 00072716
Description	Description When a user performs the following sequence of actions, the application does not refund the line level taxes: <ol style="list-style-type: none"> 1. 4.Ensure that neither the YFSRecalculateHeaderTaxUE user exit nor the YFSRecalculateLineTaxUE user exit is implemented. 2. 5.Add tax at the line level. 3. 6.Ship and invoice the item. 4. 7.Invoke changeOrder API to create a full refund. Ensure that the changeOrder API has at least one tax element with zero tax amount and zero tax percentage.
	Solution: Solution: The tax amount will also be included in the Create Adjustment invoice.
Defect ID	Defect ID 194848
Case ID	Case ID 00070125

Description	<p>Description When a user performs the following sequence of actions, the application displays a “Permission Denied” error message in the Routing Guides panel of the “Outbound Constraints” screen:</p> <ol style="list-style-type: none"> 1. Navigates to Application Rules Side Panel > Security > Groups, and creates a new user group in the “Group Details” window that is displayed. 2. In the Permissions tab of the "Group Details" window, navigates to Platform Permissions > Applications > Sterling Multi-Channel Fulfillment Configurator, and grants permission to the following: <ul style="list-style-type: none"> • Distributed Order Management Tree • Cross Application > Logistics > Outbound Constraints 3. Saves the configurations. 4. Creates and assigns a new user to the user group created in step 1. 5. Logs in as the new user created in step 4, and from the Configurator, navigates to Applications > Distributed Order Management > Cross Application > Logistics > Outbound Constraints. <p>Solution:</p> <p>Solution: This issue has been rectified. The following additional permissions must be granted to the user:</p> <p>To set the carrier services in the Create Routing Guideline tab:</p> <p>Logistics Management > Applications > Sterling Multi-Channel Fulfillment Configurator</p> <p>To change or create calendar/Publish date:</p> <p>Platform > Applications > Sterling Multi-Channel Fulfillment Configurator > Partic</p>
Defect ID	Defect ID 194854
Case ID	Case ID 00070954
Description	<p>Description A user who is assigned to multiple user groups does not have complete access to order lines because the read-only permission for the inner panels takes precedence over the write permission on the console UI.</p>
Defect ID	Defect ID 195460
Case ID	Case ID 00069337
Description	<p>Description When the task type allows user to choose from a list of tasks, the application does not display the tasks that have a lower pick sequence.</p>
Defect ID	Defect ID 195540
Case ID	Case ID 00076850
Description	<p>Description The application does not allow a user to cancel an order if the orderRepricingUE user exit is implemented, and the order has header charges and taxes.</p> <p>Solution:</p> <p>Solution: The order can be cancelled when the orderRepricingUE is implemented and order has header charges and taxes.</p>
Defect ID	Defect ID 195659
Case ID	Case ID 00077361
Description	<p>Description When the INVGetDemandCorrectionsUE user exit is implemented to return the input XML as the output XML, and a user navigates to the “Inventory Details” screen for an item for which demand exists, the application crashes with an “Out of Memory” error message.</p>

Defect ID	Defect ID 195906
Case ID	Case ID 00077679
Description	<p>Description The application prints the document even if the document contains more than a million nodes.</p> <p>Solution:</p> <p>Solution: A new yantra.document.suppress.huge.doc.alert property has been included in the yfs.properties file. A user can override the same property in the customer_overrides.properties file with the value of the yfs.yantra.document.suppress.huge.doc.alerts property set to either true or false.</p> <p>If the value of this property is set as true, the document will not be printed, and instead, a "Please disable/set yantra.document.suppress.huge.doc.alerts to N/False to print the offending document with more than one million nodes" warning message will be displayed.</p> <p>If set to false, the application will retain the default behavior.</p>

Defect ID	Defect ID 195915
Case ID	Case ID 00078121
Description	<p>Description When a user performs the following sequence of actions, the application displays an "Either Node or country value is mandatory" error message:</p> <ol style="list-style-type: none"> 1. 1.Navigate to Configurator > Platform > Region Definition > Region Schemas, and create a new region schema. 2. 2.Create more than 75 regions for the region schema created in step 1. 3. 3.Navigate to Configurator > Logistics Management > Logistics > Shipment Planning, and select the region schema defined in step 1 from the "Shipment Planning" window. 4. 4.In the "Shipment Planning" window, create and save a new routing guide. 5. 5.Open the routing guide created in step 4, and add a new routing guideline in the "Routing Guide Details" window. 6. 6.Select the "Node" option in the "When shipping from" panel. 7. 7.Select the "Region" option in the "And shipping to" panel, and click the "Look Up" button. 8. 8.In the search result window, select a region other than the regions between one and 75, and click "Save". 9. 9.Navigate to Configurator > Logistics Management > Cross Application > Carrier Services, add a carrier service and click "Save". <p>Solution:</p> <p>Solution: The "Either Node or country value is mandatory" error message will not be displayed.</p>

Defect ID	Defect ID 196644
Case ID	Case ID Internal
Description	<p>Description The application registers a null pointer exception in a large number of test cases.</p> <p>Solution:</p> <p>Solution: WMSContainerizationUtils.java has NPE in the private void getExtnOnLPNHeaderElem(YFCElement lpnElem, YFS_Shipment_Container oShipmentContainer) method.</p>

Hot Fix 49

Release 8.0-HF49

Defect ID	154499
Case ID	Case ID Internal
Description	Description The changeTask API must allow the “ShipByDate” attribute for a task to change when the inventory for the task is changed to another “ShipByDate” attribute.
Defect ID	Defect ID 154531
Case ID	Case ID Internal
Description	Description In the “Putaway Preference Details” screen, the system should populate the Product Class drop-down list irrespective of the number of product classes defined.
Defect ID	Defect ID 155228
Case ID	Case ID Internal
Description	Description If the YFS_SHIPMENT_CONTAINER table is extended with a column that stores a “Number” data type, and a user attempts to delete a shipment container, the system throws a “ClassCastException” error message.
Defect ID	Defect ID 155492
Case ID	Case ID Internal
Description	Description When a user decreases the value of the Ship By Date attribute from 01/01/2500 to any other lower date for a time-sensitive item, the system throws a “FEFO or ship by date needs to be passed” error message.
Defect ID	Defect ID 157261
Case ID	Case ID Internal
Description	Description When the system is configured as follows, and a user releases a wave for two shipments that have different SKUs, the system does not allow the user to perform the second step, that is, the putaway task, in item pick, if the number of user constraints across the move request exceeds the configured value: <ol style="list-style-type: none">1. Configures for a multistep item pick task type.2. Restricts the number of users who are working on the subsequent putaway tasks to one. Solution: Solution: The system will not insert auto user constraint records if the task references are blank.
Defect ID	Defect ID 160525
Case ID	Case ID Internal
Description	Description When a user deposits an inventory container at a staging location, and if there are any subsequent open tasks for this container, the system should not allow the user to pick more inventory into this container.
Defect ID	Defect ID 161902
Case ID	Case ID Internal

Description	<p>Description When a user logs in to the RCP PCA in the single sign-on mode and invokes the getOrderLineList API, the system throws an "Invalid Session" error message.</p> <p>Solution:</p> <p>Solution: The system has been enhanced to use the Request.getHeader instead of the Request.getParameter.</p>
Defect ID	Defect ID 181229
Case ID	Case ID Internal
Description	<p>Description During the Pick process, when a user scans the serial number of an item in the Sterling Mobile Application and tabs out of the screen, the application accepts the serial number without validating the existence of the serial number at the location.</p>
Defect ID	Defect ID 181849
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the application prompts the user to pick one of the tasks instead of prompting the user to pick one less than the total shipment quantity:</p> <ol style="list-style-type: none"> 1. Configures batch picking to use cart as the equipment. 2. Creates a shipment for a few units of a serial-tracked item. 3. Includes the shipment created in step 2 in a wave, and releases the wave. 4. The wave is containerized such that two containers are created for the shipment, two pick tasks are created for the wave, and a batch is created for this wave. 5. Logs in to the RF device, inducts a tote to the batch created in step 4, and builds a cart for this tote. 6. Navigates to the "Cart Pick" screen and scans the cart ID. 7. The application consolidates both the pick tasks and prompts the user to pick the total shipment quantity. 8. The user scans a serial and then scans the cart location.
Defect ID	Defect ID 182895
Case ID	Case ID Internal
Description	<p>Description When a user enters a duplicate serial number, the application does not validate the serial number immediately after it is entered. After the user specifies the slot location, the application displays a "WMS00014" - CaseId/PalletId exists at a different location" error message.</p>
Defect ID	Defect ID 191576
Case ID	Case ID 00061748

Description	<p>Description When a user performs the following sequence of actions, the application displays a Javascript error:</p> <ol style="list-style-type: none"> 1. Navigates to Internet Explorer 7.0 > Tools > Internet Options > Advanced, and selects the "Disable script debugging" check box. 2. Comments out the "yfcDoNotPromptForChanges" in a .jsp file, for example, the order_detail_orderentry.jsp file. 3. Navigates to the "Order Details" screen, and provides information in the required fields. 4. Navigates away from the "Order Details" screen such that the application displays a pop-up window prompting the user to save the changes. 5. Clicks the "Cancel" button in the pop-up window.
Defect ID	Defect ID 193100
Case ID	Case ID 00068430
Description	<p>Description The ON_SUCCESS event of the addContainerToManifest API and the ON_PACKAGE_SUCCESS event of the getTrackingNoAndPrintLabel API do not publish the PrinterPreference element.</p>
Defect ID	Defect ID 193383
Case ID	Case ID 00068559
Description	<p>Description When an input XML is formed for the getShipmentList API using a complex query, the SQL statement that is generated has an incorrect structure, and does not fetch the corresponding records.</p>
Defect ID	Defect ID 193402
Case ID	Case ID 00066927
Description	<p>Description When a custom error code registers a YFSEException, the application does not retrieve the error message for this exception.</p>
Defect ID	Defect ID 193818
Case ID	Case ID 00057557
Description	<p>Description The PrintMoveTickets.xsl file contains the gettasklist service, but the isNumeric flag is not set to "Y" in the "SourceSortSequence" attribute in this service. Because of this, the batch sheet printed by the application is not sorted on the basis of the pick sequence.</p>
Defect ID	Defect ID 194145
Case ID	Case ID 00044965
Description	<p>Description When a user performs the following sequence of actions, the application does not display item I2 in the RF Console:</p> <ol style="list-style-type: none"> 1. Ensures that three items, for example, I1, I2, and I3 exist with the UOM as, for example, UOM1, UOM2, and UOM3 respectively. 2. Ensures that the putaway strategy is defined appropriately. 3. Dedicates a location each for I1, I2, and I3 in a target zone. 4. Adjusts eight quantities of I1, I2, and I3 in a source location. 5. Logs in to the RF device, and selects the "Adhoc Move" option. 6. Scans the source location, scans the three items mentioned in step 1, and enters the quantity as one for each item. 7. Navigates to the "Deposit" screen, and deposits I1.

Defect ID	Defect ID 194537
Case ID	Case ID 00072995
Description	<p>Description When a user performs the following sequence of actions, the application does not set the value of the Pending_Transfer_In to the refund amount specified in the return order:</p> <ol style="list-style-type: none"> 1. Navigates to Sterling Configurator > Document Specific > Sales Order > Financials, and enables the "Disassociate Payment Processing of Advanced Pre-Paid Exchange Order from Return Order" field in the Others tab of the "Financial Attributes" screen. 2. Creates a draft exchange order with the "ADVANCED Pre-Paid" exchange type. 3. Ensures that the Pending_Transfer_In is set to zero in the draft exchange order. 4. Modifies the exchange type in the draft exchange order to "ADVANCED" exchange type from "ADVANCED Pre-Paid" exchange type. <p>Solution:</p> <p>Solution: The Pending_Transfer_In will be set to zero if the exchange type is modified to "ADVANCED Pre-Paid" exchange type from either "ADVANCED" or "REGULAR" exchange types.</p>

Defect ID	Defect ID 194841
Case ID	Case ID 00073451
Description	<p>Description When a user creates an order, enters an apostrophe in the "City" field of the "Bill To Address" screen and schedules the order, the schedule agent fails. The application registers an exception with the error code as "YFS10310" and the error description as "YFS: User Exit Failed".</p>

Defect ID	Defect ID 194843
Case ID	Case ID Internal
Description	<p>Description When a user configures the application to prevent payment processing at either the enterprise level or the document level, and creates an invoice for an order, the application displays a "YFS: No Record Found" error message.</p>

Defect ID	Defect ID 194982
Case ID	Case ID 00074641
Description	<p>Description When the importOrder API and the recordInvoiceCreation API are invoked for an order, the application executes a query that performs a redundant scan of the entire YFS_PAYMENT table.</p>

Hot Fix 48

Release 8.0-HF48

Defect ID	156639
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions for a count operation, the input XML to the translateBarcode API needs information about the previously scanned Location and the License Plate Number (LPN):</p> <ol style="list-style-type: none"> 1. Creates an LPN with inventory for an item. 2. Creates a count request and creates count tasks. 3. Scans Location, LPN, and item.

Defect ID	Defect ID 161909
Case ID	Case ID Internal
Description	Description When the -Dshowssopreferencedlg parameter is set to false, the -DdefaultEnterprise and -DdefaultNode parameters are not being read from the SOM.ini file.
	Solution: Solution: If the EnterpriseName and Node parameters are not specified in the SOM.ini file, the default parameters will be read from the SOM.ini file.
Defect ID	Defect ID 161913
Case ID	Case ID Internal
Description	Description The additional cookies that are set in the server are missing in the single sign-on mode.
	Solution: Solution: The system has been enhanced to pass the additional cookies that are added by a third party when invoking any API.
Defect ID	Defect ID 162828
Case ID	Case ID Internal
Description	Description When multiple RCP PCA clients with different versions are run on a single server, only the first client works.
Defect ID	Defect ID 163506
Case ID	Case ID Internal
Description	Description When a user who does not have permission to view a procurement order tries to view the procurement order, an error message is displayed in an incorrect format.
	Solution: Solution: The task name that is displayed in the error message in the scenario described here has been localized. The application will add localized bundle entries to all the tasks. When a user attempts to execute a task without the requisite permission, the name of the localized task will be displayed in the error message.
Defect ID	Defect ID 182832
Case ID	Case ID Internal
Description	Description When using an integration server, or an agent, or services that use JMS components to receive messages from MQ Series, Version 5.3, if the MQ GET option is disabled, a "Max active channels reached" error message is observed in the MQ logs. If the MQ GET is re-enabled after this error, the message reception process may either not start on its own, or it takes a long time before it starts to receive messages on its own.
Defect ID	Defect ID 186015
Case ID	Case ID 00023638
Description	Description The application must be enhanced to integrate with the Pierbridge Carrier Server for tasks such as generating prints, adding carton to manifest, and so on. For more information about this enhancement, see the Sterling Parcel Carrier Adapter Guide.
Defect ID	Defect ID 186991

Case ID	Case ID Internal
Description	<p>Description When a user tries to log in to the Sterling Customer Order Management PCA, and if the application displays a custom error message generated by an external authentication system in the “Log In” screen, the size and position of the “Cancel” button is modified.</p> <p>Solution:</p> <p>Solution: The text of the custom error message will henceforth be wrapped in the “Log In” screen, as a result of which, the size and location of the “Cancel” button will not change.</p>
Defect ID	Defect ID 185891
Case ID	Case ID Internal

Description	<p>Description The Sterling Customer Order Management PCA must be enhanced with the capability to customize the login dialog box.</p> <p>Solution:</p> <p>Solution: A new "YRCLoginDialog" interface has been provided to customize the middle composite of the login dialog box that contains the User ID and Password controls with additional controls. An implementation needs to be provided for the YRCLoginDialogExtn extension point using the IYRCLoginDialog interface. The implementation should update the login input document with the requisite attributes or add additional attributes or both.</p> <p>When customizing the login dialog box, the module ID of the extension is the module ID of the application for which the login dialog box is being customized. The module ID of Sterling Customer Order Management PCA's COM client is "ycd", and the module ID of the SOM client is "sop". If the implementation is absent, the application will display the default login dialog box.</p> <p>In addition, the following conditions must be adhered to when extending the login dialog box:</p> <p>The login dialog box extension will have an additional, mandatory "LoadOrder" attribute. When multiple login dialog box extensions exist for the same application, the "LoadOrder" attribute will decide which customization of the Login Dialog must be picked up. The Login Dialog extension with the highest value of the "LoadOrder" attribute will be selected and loaded.</p> <p>The extension of the Login Dialog must be performed in a separate and independent plug-in that does not include any other customizations, such as those pertaining to bundles, commands, and so on.</p> <p>The Sterling JavaDocs have been updated with information about the "YRCLoginDialog" interface.</p>
Defect ID	Defect ID 186808
Case ID	Case ID Internal

Release 8.0-HF44

Defect ID	149207
Case ID	Case ID Internal
Description	Description When a user exit is configured to implement a service that throws a YFSEException, the "Error Code" and "Error Description" is not displayed properly.
Defect ID	Defect ID 154058
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the Create Count Task agent slows down:</p> <ol style="list-style-type: none"> 1. Configures a product line with the classification purpose specified as "Count Classification". 2. Configures multiple items belonging to the classification specified in step 1. 3. Creates a count request at the product line level. 4. Runs the create count task agent.
Defect ID	Defect ID 154064
Case ID	Case ID Internal

Description	Description When a user tries to complete the count tasks for an item classification through the Yantra 7x Mobile Application, the system throws an "Out Of Memory" exception.
Defect ID	Defect ID 154526
Case ID	Case ID Internal
Description	Description When a user accepts the count for a request that is at the item classification level, the system slows down.
Defect ID	Defect ID 163444
Case ID	Case ID Internal
Description	Description In the screens containing an editable table with a drop-down list, if the focus of the cursor is on the drop-down list, and a user clicks on any other screen or its related task, the user interface does not function correctly.
Defect ID	Defect ID 165142
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the application throws an "ORA-00932: inconsistent datatypes: expected DATE got NUMBER" error message:</p> <ol style="list-style-type: none"> 1. Navigates to Platform > Process Modeling > General > General > Transactions, and configures the YCPEXportPurgeAgent, YCPImportPurgeAgent, CPStatisticsPurgeAgent, YCPUserActAuditPurgeAgent, and YCPUserActivityPurgeAgent purge agents. 2. Starts the agent server and the Health Monitor. <p>Solution:</p> <p>Solution: The 'MODIFYTS' value will be enclosed within single quotes. The correct format for the date will be passed in the SQL query.</p>
Defect ID	Defect ID 177210
Case ID	Case ID Internal
Description	<p>Description Information about enabling Anonymous Admin Lookup in the BEA WebLogic Console should be provided in the Sterling Supply Chain Applications System Management Guide.</p> <p>Solution:</p> <p>Solution: The requisite information has been added as a note at the end of Section 3.11, "Monitor Group Details", in Chapter 3, "System Management Console Screens", in the Sterling Supply Chain Applications System Management Guide.</p>
Defect ID	Defect ID 181225
Case ID	Case ID Internal

Description	<p>Description When a user performs the following sequence of actions, the containerizeWave API does not invoke the WMSOverrideContainerizationCategoryUE user exit:</p> <ol style="list-style-type: none"> 1.Implements the WMSOverrideContainerizationcategoryUE user exit. 2.Configures the task type as "Pick Into Equipment" and "Deposit in Pack Station". 3.Configures pack planning as "SCM Required with Content", "Apply SCM on all Shipping Units", and "Use System Suggested Containers". 4.Creates a shipment and includes the shipment in a wave with the shipment group having the task type that is configured in step 2. 5.Assigns a lane to the wave, and releases the wave. 6.Invokes the containerizeWave API.
Defect ID	Defect ID 181232
Case ID	Case ID Internal
Description	<p>Description The application displays alerts of other nodes to the user instead of displaying only those alerts pertaining to the user's node.</p>
Defect ID	Defect ID 182817
Case ID	Case ID Internal
Description	<p>Description When the retrieveShipment API is invoked, the application creates putaway tasks for an outbound shipment that contains zero shipment lines.</p>
Defect ID	Defect ID 182855
Case ID	Case ID Internal
Description	<p>Description For services that use the XSL Component, the XSL is cached in the memory to improve performance, after it is used for the first time. This XSL is cached in the form of a template object, which is created using a third party transformer.</p> <p>When a service is invoked multiple times for different input XML files, with the template object present in the cache, the heap size increases continuously because of a significant increase in the size of the cached template object.</p> <p>Solution:</p> <p>Solution: The application has been enhanced to cache the XSL Component as a java String object, instead of as a template object.</p>
Defect ID	Defect ID 183954
Case ID	Case ID Internal

Description	<p>Description When a user performs the following sequence of actions, the application displays a "Zone-Enterprise constraint violated" error message during the wave release operation:</p> <ol style="list-style-type: none"> 1. Configures two enterprises and a node. 2. Creates two dedicated zones in the node configured in step 1, with each zone dedicated to one enterprise. 3. Configures one PLA UOM condition for a shipment group. The shipment group comprises two PLA rules, with each rule pointing to one of the zones configured in step 2. 4. Creates an item in each of the enterprises configured in step 1, and ensures that the item has the same Item ID in both the enterprises. 5. Creates two shipments for the two enterprises with the order lines having the item configured in step 4. 6. Includes the two shipments created in step 5 in a wave, and releases the wave.
Defect ID	Defect ID 186777
Case ID	Case ID Internal
Description	<p>Description When generating putaway tasks, the application generates a null pointer exception if the getNodeInventory API calls the getLPNList API.</p>
Defect ID	Defect ID 187775
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the application displays an "INV10029 -INV: Missing Inventory Identifier Attribute" error message:</p> <ol style="list-style-type: none"> 1. Creates a serial-tracked, tag-controlled item, for example, ST01 with the batch number as the tag identifier. 2. Adjusts inventory for ST01 in a pack location with a serial number, for example, TAG01S1, and a batch number, for example, TAG01B1. 3. Creates another serial-tracked, tag-controlled item, for example, ST02 with the lot number as the tag identifier. 4. Adjusts inventory for ST02 in a pack location with the serial number as TAG01S1, and a lot number, for example, TAG01L1. 5. Creates a shipment for ST02 with quantity as 1. 6. Scans the shipment at the pack station, and clicks "New Case". 7. Scans ST02 in the "Item" field, and scans TAG01S1 in the "Serial" field.
Defect ID	Defect ID 188941, 189579, 189625
Case ID	Case ID 00043743, 00048157, 00053078

Description	<p>Description When a user performs the following sequence of actions, the amount from the return order is refunded to the payment method defined in the exchange order. Also, the return order invoice does not contain the collection details:</p> <ol style="list-style-type: none"> 1.Ensures that a return order and an advanced prepaid exchange order exist. 2.Invoices and collects both the return order and the exchange order. <p>Solution:</p> <p>Solution: The application has been enhanced with a new "Disassociate Payment Processing of Advanced Pre-Paid Exchange Order from Return Order" rule in the Others tab of the Financial Attributes page, which can be accessed by navigating to Sterling Configurator > Document Specific > (Document Type) > Financials.</p> <p>If this rule is turned on, the payment link between an advanced prepaid order and a return order will be decoupled. The amount from the return order will be refunded to the payment method of the corresponding sales order. In addition, the return order invoice will contain the requisite collection details.</p>
Defect ID	Defect ID 189130
Case ID	Case ID Internal
Description	Description When the value of the "Description" attribute in the input XML of createException API is not provided, it's value should be defaulted to the description corresponding to the value of the ExceptionType attribute provided in the input XML.
Defect ID	Defect ID 189237
Case ID	Case ID 00052771
Description	Description When an item classification is deleted from a classification hierarchy, the classification is also deleted from the corresponding item details.
Defect ID	Defect ID 189899
Case ID	Case ID Internal
Description	Description When the recordInvoiceCreation API is invoked, with the values of the tax amount and the tax percentage as zero, the TaxBreakUpList is incorrectly inserted into the database.
Defect ID	Defect ID 190019
Case ID	Case ID Internal
Description	Description When the header level charges and taxes are changed for a completely invoiced order, all the order lines of this order are displayed in the adjustment invoice.
Defect ID	Defect ID 190187
Case ID	Case ID 00056984
Description	Description When the changeOrder API is invoked to change the unit price of a completely invoiced order that has the values of the tax amount and the tax percentage as zero, the adjustment invoice is not created.
Defect ID	Defect ID 190593
Case ID	Case ID 00053078

Description	<p>Description The Sterling Distributed Order Management Configuration Guide must be updated with information about the "Disassociate Payment Processing of Advanced Pre-Paid Exchange Order from Return Order" field in the Others tab of the Financial Attributes page, which can be accessed by navigating to Sterling Configurator > Document Specific > (Document Type) > Financials.</p> <p>Solution:</p> <p>Solution: Information about the "Disassociate Payment Processing of Advanced Pre-Paid Exchange Order from Return Order" field and its description has been added to Table 19-1, "Others Tab" in Section 19.4, "Defining Additional payment Rules" of the Sterling Distributed Order Management Configuration Guide.</p>
--------------------	--

Hot Fix 43

Release 8.0-HF43

Defect ID	155510
Case ID	Case ID Internal
Description	<p>Description The new "-Dshownaviagtorasmenu" argument that has been provided in the Sterling RCP Infrastructure is incorrectly spelled.</p> <p>Solution:</p> <p>Solution: The spelling has been corrected to "-Dshownavigatorasmenu".</p>
Defect ID	Defect ID 159509
Case ID	Case ID Internal
Description	<p>Description When the system is configured for "Number Of Days To Execute Purge > 0", and a large number of shipment records need to be purged, the Shipment Purge agent slows down and takes a long time to perform the database transactions.</p> <p>Solution:</p> <p>Solution: A new functionality has been added, which allows a user to choose a time window within which the Shipment Purge agent should purge the shipment records. Also, the Shipment Purge agent will proceed to the next time window of the same length when the current purge process is complete.</p>
Defect ID	Defect ID 182886
Case ID	Case ID Internal
Description	<p>Description When a large number of shipment records are purged, the application takes a long time to perform a complete table scan.</p>
Defect ID	Defect ID 185896
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the application fails with an update error during deposition of the last case from the pallet:</p> <ol style="list-style-type: none"> 1. Creates a pallet with multiple cases. 2. Creates a deposit exception code that allows the user to perform a partial deposit. 3. Creates a move request for the pallet created in step 1. 4. Commences deposition of the cases from the pallet, and enters the deposit exception code created in step 2.

Defect ID	Defect ID 187756
Case ID	Case ID Internal
Description	Description The ON_SUCCESS event is not available for the SENT_TO_NODE.0006 transaction for the “Transfer Order Delivery” process type.
	Solution:
	Solution: The application has been enhanced with the ON_SUCCESS event for the SENT_TO_NODE.0006 transaction such that a user can configure this event as required.
Defect ID	Defect ID 189126
Case ID	Case ID 00048679
Description	Description When a user creates an adjustment invoice with the IsPriceForInformationOnly = “Y” for a bundle item, and invokes the changeOrder API, the adjustment invoice considers the change in the unit price of the bundle item in the unit price calculations even if the IsPriceForInformationOnly attribute is set to “Y”.
Defect ID	Defect ID 189322
Case ID	Case ID 00044919
Description	Description When the importShipment API is invoked, it does not populate the OrderHeaderKey attribute in the YFS_SHIPMENT table.
	Solution:
	Solution: When the OrderHeaderKey attribute is not passed at the shipment level in the input XML of the importShipment API, the API will populate this attribute based on the OrderNo, DocumentType, and the EnterpriseCode attributes only if the shipment is a “Single Order” shipment, that is, the IsSingleOrder attribute is passed as “Y” in the input.

Hot Fix 42

Release 8.0-HF42

Defect ID	166776
Case ID	Internal
Description	The “TransactionalLineId” attribute does not work for the “ShipTogether” dependency rule between the order lines.
	Solution:
	A “DependentOnTransactionalLineId” attribute has been added to the changeOrder API and the createOrder API.
Defect ID	167795
Case ID	Internal

Description	<p>When a user performs the sequence of actions described here, the cursor moves to the end of the text box instead of remaining at the beginning of the text in the custom text box:</p> <ol style="list-style-type: none"> 1. Adds a custom text box to an existing screen. 2. In the extension behavior class, implements the getBindingData method for this custom text box. 3. Initiates the YRCTextBindingData object inside this method. 4. Ensures that the setAllCaps method is set to "true". 5. Logs in to the Sterling Order Management System client and enters text in lower case in the custom text box. (When the user enters the text, the typed characters are automatically converted to upper case.) 6. Moves the cursor to the beginning of the entered text and enters another character. (This character is also converted to upper case, after which the cursor moves to the end of the text.)
Defect ID	181042
Case ID	Internal
Description	<p>When a serial tracked kit containing serial tracked components is de-kitted, the parent kit key references are not reset in the component serial records in the database.</p> <p>Solution:</p> <p>The application has been enhanced to remove the parent kit reference from the kit components when de-kitting a serial kit with serial components.</p>
Defect ID	181858
Case ID	Internal
Description	<p>When a custom sorter is implemented using the "TYRCViewerSorter" class, and if a user right-clicks a sortable column in a table, a ClassCast exception occurs.</p>
Defect ID	185893
Case ID	Internal
Description	<p>The application must be enhanced such that a statement is logged in the log file in the client side or server side if an API is invoked in the secure mode. This helps a user to be certain that the API is invoked in the secure mode.</p> <p>Solution:</p> <p>When an API or a command is invoked in the secure mode, a "Trying to open secure connection for command: commandname" trace statement will be logged in the log file.</p>
Defect ID	185930
Case ID	Internal
Description	<p>When a listener has multiple valid pickup statuses, the relevant pickup status must be selected based on the status (the status with the largest value must be picked first), and the expected ship date.</p>
Defect ID	187061
Case ID	00047035

Description	When a user logs in to the application as a node user, and selects the Warehouse Management application from the Applications menu of the Sterling Multi-Channel Fulfillment Solution Configurator, a null pointer exception is registered.
Defect ID	187375
Case ID	00049133
Description	When a screen is extended by adding custom buttons, and the theme binding, for example, an image, of the custom buttons are changed to a value other than the out-of-the-box value, the application persistently displays the custom buttons with the out-of-the-box theme binding.
Defect ID	187526
Case ID	00049700
Description	When a report is executed for the first time from the Sterling Console, Cognos displays an "RSV-DST-0005 - The requested format is not supported" error message. However, if the report is executed again, the report is displayed correctly.
Defect ID	187552
Case ID	Internal
Description	When a user performs the following sequence of actions, the application displays a "Circular dependency exists" error message: <ol style="list-style-type: none"> 1. Creates an order with two order lines. 2. Creates a dependency between the order lines created in step 1 such that the second order line is dependent on the first order line. 3. Invokes the splitLine API to move the first order line to a new order line.
Defect ID	187578
Case ID	00049772
Description	When a user performs the following sequence of actions, the application moves the order to Partially Scheduled status instead of Scheduled status: <ol style="list-style-type: none"> 1. In the Sterling Configurator, navigates to Cross Application > Order Promising > Sourcing And Scheduling > Scheduling Rules. 2. In the "Scheduling Rules Details" screen that is displayed, selects the "Ship from Single Node" check box and the "Line Ship from Single Node" check box in the Constraints panel, and the "Priority" check box in the "Optimize On" panel. 3. Ensures that the INVGetExternalSupplyUE user exit is implemented. 4. Creates an order. 5. Creates an order line reservation for partial order quantity on two different dates. 6. Schedules the order.
Defect ID	187894
Case ID	Internal

Description	The resolveException API must either be enhanced with either a built-in logic for processing 5000 records at a time, or must expose the MaximumRecords attribute. Currently, this API registers an “Out Of Memory” error.
Solution:	The resolveException API has been enhanced to limit the number of exceptions to be resolved using the MaximumRecords attribute in the API input. For more details about this API, see the corresponding section in the Sterling JavaDocs.

Defect ID	188878
Case ID	Internal
Description	When a user performs the following sequence of actions, the application registers a servlet exception: <ol style="list-style-type: none"> 1. Creates a batch for references. 2. Confirms the batch from the Sterling Console. 3. Navigates to the pack station, and scans the batch number in the “Scan Identifier” field. 4. Scans the TargetCaseID in the “SKU” field.

Hot Fix 41

Release 8.0-HF41

Defect ID	154003
Case ID	Case ID Internal
Description	Description When the getDockAppointmentList API is invoked for a date range beyond 30 days, the API throws an “Out of Memory” exception.
Defect ID	Defect ID 155488
Case ID	Case ID Internal
Description	Description When a user performs the following sequence of actions, the system throws an “Out of Memory” exception, and the WebLogic server crashes: <ol style="list-style-type: none"> 1. 1.Configures about 10 Dock Locations and applies the Node Calendar(s) to each Dock Location. 2. 2.Takes more than 15 appointments for a few days. 3. 3.Logs in to the console as a node user and navigates to the “Dock Appointment Details” screen. 4. 4.Queries for more than 5 Dock Locations and more than 10 days from the start date using the "Starts with" option in the “Location ID” field. Also, when the getDockAppointmentList API with Query Type= “FLIKE” is invoked, the getServiceResourceCapacity API is also internally invoked with the same Query Type, and the getServiceResourceCapacity API slows down.
Solution:	Solution: A list of Service Resources is fetched based on the user input within the getDockAppointmentList API. The getServiceResourceCapacity API is invoked on each of the elements in the list. The outputs from all these calls on the list elements are consolidated, and the consolidated output is returned in a single XML file.

Defect ID	Defect ID 161906
Case ID	Case ID Internal
Description	Description When a user receives the expected containers through an inbound shipment, the system receives the containers against incorrect shipment lines.
Defect ID	Defect ID 176742
Case ID	Case ID Internal
Description	Description When calendars are setup for all the dock locations, and the dock appointment day map is loaded in the Sterling Console, the application throws an "Out of Memory" exception error message even if a query type for the location is not passed.
Defect ID	Defect ID 179059
Case ID	Case ID Internal
Description	Description When the application is configured with the Item-Based Allocation (IBA) agent, the IBA agent does not create order line reservation.
Defect ID	Defect ID 182682
Case ID	Case ID Internal
Description	Description If a large Inventory Item Classification exists, that is, a very large number of items are categorized under the same Item Classification, and a user performs a count at the Item Classification level, the application displays an allocation request for a large amount of memory at java.lang.StringBuffer.append.
Defect ID	Defect ID 182908
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the application does not display any inventory for the search criteria entered by the user:</p> <ol style="list-style-type: none"> 1. Configures a serial-tracked item. 2. Creates an LPN with the serial-tracked item configured in step 1 at a location. 3. Breaks the LPN created in step 2. 4. Navigates to Location Inventory Console > By Additional Attributes, and searches for the serial number of the serial-tracked item.
Defect ID	Defect ID 185366
Case ID	Case ID 00037478
Description	<p>Description When a user performs the following sequence of actions, the application displays a pop-up window prompting the user to enter the International Transaction Number (ITN) for the domestic shipment:</p> <ol style="list-style-type: none"> 1. Creates a domestic shipment, for example, S1, for a serialized item. 2. Includes S1 in a wave, assigns a lane for the wave, and releases the wave. 3. Completes picking for S1, and deposits the case at a pack station. 4. Scans the shipment S1 in the "Scan Identifier" field, and the case ID of the case that was deposited in the pack station in the SKU field.
Defect ID	Defect ID 185759
Case ID	Case ID Internal

Description	<p>Description When a user performs the following sequence of activities, the modified primary serial number is lost after the TranslateBarCode API is invoked for the secondary serial number:</p> <ol style="list-style-type: none"> 1. Configures a custom translator that modifies the serial numbers during the serial scan operation. 2. Scans the primary serial number of a serialized item in the pack station for an outbound shipment, and tabs out. 3. Enters the secondary serial number in the Jtxt field.
Defect ID	Defect ID 185899
Case ID	Case ID Internal
Description	<p>Description When a user enters a parent pallet ID in the "Pallet ID / Case ID" field in the Receiving HSDE screen and tabs out, the application immediately sets the "Pallet ID / Case ID" field to blank.</p>
Defect ID	Defect ID 186091
Case ID	Case ID Internal
Description	<p>Description If the input to the getPage API contains an empty "Template" element, the application registers a null pointer exception.</p>
Defect ID	Defect ID 186784
Case ID	Case ID Internal
Description	<p>Description The retrieveShipment API fails to create retrieval tasks for a shipment that contains a shipment line with a "CountryOfOrigin" attribute if the inventory in the node is not associated with this "CountryOfOrigin" attribute.</p>
Defect ID	Defect ID 186814
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the application displays a "Not enough quantity" error message:</p> <ol style="list-style-type: none"> 1. Creates a return order for a sales order, and associates a pickup service to the return order. 2. Creates an exchange order for the return order created in step 1, and associates a delivery service to the exchange order. 3. Creates a work order for both the return order and the exchange order created in steps 1 and 2 respectively. 4. Completes the return order, and tries to cancel the exchange order.
Defect ID	Defect ID 187295
Case ID	Case ID 00048624
Description	<p>Description When creating indexes in the table columns defined in the XML files of the PCA, the dbverify tool displays an "Index column not found in table definition" error message.</p>

Hot Fix 40

Release 8.0-HF40

Defect ID	149181
Case ID	Case ID Internal

Description	<p>Description When the changePriceSet API is invoked, the JVM crashes because the system tries to load the entire price set.</p> <p>Solution:</p> <p>Solution: A new manageItemPriceSet API has been provided. This API handles the price set at the ItemPriceSet level. The user can create, modify, and delete the ItemPriceSet for a price set. For input and output XML, please refer to the Sterling Javadocs.</p>
Defect ID	Defect ID 152037
Case ID	Case ID Internal
Description	<p>Description When a sales order which has a work order, is delivered, the "ConfirmShipment" attribute is not being set to "Y" in the XML file published for the DEMAND_CHANGE event.</p>
Defect ID	Defect ID 157226
Case ID	Case ID Internal
Description	<p>Description The Sterling Distributed Order Management Configuration Guide must be updated with information about the Work Order Product and Delivery Association Rule.</p> <p>Solution:</p> <p>Solution: Description of the Work Order Product and Delivery Service Association Rule has been added, and the vas_rules.gif file (screenshot for VAS Rules: Work Order) has been updated in Section 21.6.2 "Setting Up Value-Added Services Other Rules", in Chapter 21, "Configuring Value-Added Services" of the Sterling Distributed Order Management Configuration Guide.</p>
Defect ID	Defect ID 161462
Case ID	Case ID Internal
Description	<p>Description When counting through the Yantra Mobile Application, the system throws a "WMS00054: Node not passed" exception message if the user is unassigned from the current count task either through the reopen task agent or through the Yantra Application Console.</p>
Defect ID	Defect ID 168073
Case ID	Case ID Internal
Description	<p>Description The application should be enhanced with a provision to enable a user to perform putaway tasks based on the inbound shipment number.</p> <p>Solution:</p> <p>Solution: The "Putaway Criteria" screen has been enhanced to accept the "Task List Number" attribute in which a user can enter an inbound shipment number. The application will suggest putaway tasks based on the inbound shipment number entered by the user.</p>
Defect ID	Defect ID 180632
Case ID	Case ID 00018873

Description	<p>Description When a user performs the following sequence of actions, string sorting occurs instead of numeric sorting for the pick sequence:</p> <ol style="list-style-type: none"> 1. 1.Configures several locations, for example, DL1, DL2, and so on with the corresponding pick sequences, for example, 1, 2, and so on. 2. 2.Adjusts the inventory in the locations configured in step 1. 3. 3.Creates a shipment, includes it in a wave, assigns a lane for the wave, and releases the wave. 4. 4.Invokes the createbatchforreferences API. 5. 5.Navigates to the Wave Console, selects the wave released in step 3, and clicks "Print". 6. 6.Selects the PrintWave service name, assigns a printer, and clicks "OK".
Defect ID	Defect ID 184347
Case ID	Case ID 00036625
Description	<p>Description When a user performs the following sequence of actions, the move operation corrupts the inventory picture:</p> <ol style="list-style-type: none"> 1. 1.Configures a zone with an Inventory Status = to Inventory Status: QC & Supply Type = HELD transition rule. 2. 2.Moves inventory from a location to the location configured in step 1 such that the status of the inventory changes to QC, and that of the supply type to Held.
Defect ID	Defect ID 184596
Case ID	Case ID Internal
Description	<p>Description When the application is configured to raise an alert on release of a wave, and if a user releases a wave without the requisite inventory to fulfill the shipments in the wave, the inbox records of the alert do not contain the Ship Node key.</p>
Defect ID	Defect ID 184940
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the application passes the "Bill To" information from the order header level instead of the payment level in the input to the YFSCollectionCreditCardUE user exit:</p> <ol style="list-style-type: none"> 1. 1.Enables payment processing and credit card payment type. 2. 2.Implements the YFSCollectionCreditCardUE user exit. 3. 3.Creates an order, adds the payment type as Credit Card, and enters the Bill To address for the credit card. <p>Solution:</p> <p>Solution: The application has been enhanced such that if the Bill To address is overwritten at the payment level, the updated Bill To information will be used to populate the Bill To address in the input to the YFSCollectionCreditCardUE user exit.</p>
Defect ID	Defect ID 185310
Case ID	Case ID 00039259

Description	<p>Description When a user performs the following sequence of actions, all the lines are moved to the same status even if the drop status of the removeFromReturn listener is different in the sales order pipeline for the bundle item and the normal item:</p> <ol style="list-style-type: none"> 1. Creates a new "ShippedExt" extended status of the Shipped status. 2. Adds the "ShippedExt" drop status to the removeFromReturn listener. 3. In the removeFromReturn listener details, changes the drop status to "ShippedExt" for the sales pipeline pertaining to the bundle item. 4. Creates an order with the bundle item. 5. Creates a return order for the order created in step 4, and cancels the return order.
Defect ID	Defect ID 185902
Case ID	Case ID Internal
Description	<p>Description When the YFSGetExternalInventoryUE is implemented, and a user invokes the getWorkOrderAppointmentOptions API with the requisite inventory and capacity available, the application does not display any slot as available for an order if the order has been backordered from a node, and the user tries to re-take the appointment for the order.</p> <p>Solution:</p> <p>Solution: The application has been enhanced such that the quantity in the "backorder from node" status will be ignored when calculating the total quantity for an order line that is in a valid status.</p>
Defect ID	Defect ID 185906
Case ID	Case ID 00043736
Description	<p>Description When the routing guide is configured for regions that can be identified with postal zip codes, the determineRouting API does not return any carrier even if the correct parameters are passed in the input to the determineRouting API.</p> <p>Solution:</p> <p>Solution: The parameter corresponding to a region must be passed in the input XML in the ShipTo element to search for that region. For example, if a region can be identified by the zip code, pass the country and zip code in the input XML. If no region-matching preference is configured, the region will be matched based on the zip code.</p>
Defect ID	Defect ID 186025
Case ID	Case ID 00043985
Description	<p>Description When a user performs the following sequence of actions, the application displays the value of the total received quantity as zero in the "Shipment Details" screen:</p> <ol style="list-style-type: none"> 1. Configures a bundle item with two components, for example, two numbers of item I1 and three numbers of item I2. 2. Creates an inbound shipment for two quantities of the bundle item. 3. Confirms the shipment, receives the order, and closes the receipt. <p>Solution:</p> <p>Solution: A new Received Quantity column has been added in the "Shipment Line Details" screen to populate the received quantity. The Quantity column will now display the total receivable quantity, and the Received Quantity column will display the number of received components.</p>

Case ID	Case ID 00042606

Description	Description The "deployer.sh -t entitydeployer" fails with an SQL exception in IBM AIX environments.
--------------------	--

Hot fix 39

Release 8.0-HF39

Defect ID	155478
Case ID	Case ID Internal
Description	Description When the system is configured with a large number of nodes and a user creates or modifies a count program in the Sterling Warehouse Management System, the system throws an "Out of Memory" exception error message.

Solution:

Solution: The Sterling Warehouse Management System has been modified so that the system will not load all the organizations belonging to the enterprise in the model of the count program.

Defect ID	Defect ID 156704
Case ID	Case ID Internal
Description	Description When the Load pipeline is configured with extended statuses and the receiveIntransitUpdates API is invoked, the system does not raise the ON_SUCCESS event that is configured under the RECEIVE_INTRANSIT_UPDATE transaction when the BOL is confirmed.

Defect ID	Defect ID 156730
Case ID	Case ID Internal
Description	<p>Description When a user performs the following configurations and confirms a packed container through the "Confirm Carton Pack Complete" transaction in Weigh Station, the system prints the consignment docket twice:</p> <ol style="list-style-type: none"> 1. 3.Configures a service to invoke the changeShipmentContainer API. (Start > changeShipmentContainer API > End) 2. 4.Configures the ON_SUCCESS event of the Confirm Carton Pack Complete transaction to invoke the service configured in step 1. 3. 5.Configures ON_SHIPMENT_PACK_PROCESS_COMPLETE event of CHANGE_CONTAINER_STATUS transaction to perform docket printing.

Defect ID	Defect ID 160453
Case ID	Case ID Internal
Description	Description The system locks a receipt record from the YFS_RECEIPT_HEADER table when the translateBarCode API is invoked for a serialized item received against a receipt.

Defect ID	Defect ID 161567
Case ID	Case ID Internal

Description	<p>Description The user is unable to unpack a child container from the parent container in the "Pack HSDE" screen.</p> <p>Solution:</p> <p>Solution: The user can unpack the child container from the parent container by scanning the parent container in the "Scan Identifier" field and the child container in the "SKU" field in the "Pack HSDE" screen. Also, the user should have UCC128 Code as the barcode source in the Pack SKU Barcode Type.</p>
Defect ID	Defect ID 161572
Case ID	Case ID Internal
Description	<p>Description Even after a child container is unpacked from a parent container, the child container remains as an outbound container.</p> <p>Solution:</p> <p>Solution: The system has been enhanced so that when a child container is unpacked from a parent container, the child container becomes an inventory case or pallet.</p>
Defect ID	Defect ID 162022
Case ID	Case ID Internal
Description	<p>Description When a parent LPN contains multiple child LPNs, and if one of the child LPNs is deleted using the deleteLPN API, the system tries to update all the LPNs in the parent pallet, resulting in a performance overhead. The system should update only the parent pallet.</p>
Defect ID	Defect ID 162820
Case ID	Case ID Internal
Description	<p>Description When the number of nodes is large, and a user navigates to Sterling Supply Chain Applications Configurator > Warehouse Management and selects the "Show All Nodes" radio button in the "Configure WMS" pop-up window, the Configurator hangs and throws a null pointer exception.</p> <p>Solution:</p> <p>Solution: The number of nodes that are retrieved from the database by the system has been restricted.</p>
Defect ID	Defect ID 164393
Case ID	Case ID Internal
Description	<p>Description When the receiveOrder API is invoked for shipments, for a Sterling Networked Warehouse Management System node, the application does not update the transaction cache for these shipments.</p>
Defect ID	Defect ID 165135
Case ID	Case ID Internal

Description	<p>Description The Sterling Global Inventory Visibility Configuration Guide must be updated with the information about the new "Ignore Prereserved Capacity" flag provided in the "Capacity Rules" window.</p> <p>Solution:</p> <p>Solution: A new "Ignore Prereserved Capacity" column has been added to Table 8-1, "Capacity Rules Window", and the screenshot of the "Capacity Rules" window has been updated in Section 8.1, "Defining Capacity Rules" in Chapter 8, "Configuring Resource Capacity" of the Sterling Global Inventory Visibility Configuration Guide.</p>
Defect ID	Defect ID 167702
Case ID	Case ID Internal
Description	<p>Description When a user who has access to multiple stores performs the following sequence of actions, the application displays the details of the home store in the "UserNamespace" utility:</p> <ol style="list-style-type: none"> 1. 11.Logs in to a store other than the home store. 2. 12.Because of session timeout, the user logs in to the same store again.
Defect ID	Defect ID 168209
Case ID	Case ID Internal
Description	<p>Description When both the following conditions are true, and two users invoke the changeRelease API simultaneously, a deadlock scenario may take place:</p> <ol style="list-style-type: none"> 1. 1.First user invokes the changeRelease API that has the OrderHeaderKey and the OrderReleaseKey in the input XML of the API. 2. 2.The second user invokes the changeRelease API that has the ReleaseNo, EnterpriseCode, DocumentType, and OrderNo in the input XML of the API.
Defect ID	Defect ID 169342
Case ID	Case ID Internal

Description	<p>Description When a user performs the sequence of actions described here, the application truncates the “Quantity Confirmation” screen and the user is unable to see the “Item Quantity” field:</p> <ol style="list-style-type: none"> 1. Creates two time-sensitive items, for example, T1 and T2. 2. Adjusts the inventory in the location, for example, L1 in a warehouse for T1 and T2 as follows: <ul style="list-style-type: none"> L1 - T1 - Quantity: 2 and ShipByDate: 10/30/2008 L1 - T1 - Quantity: 3 and ShipByDate: 11/01/2008 L1 - T2 - Quantity: 2 and ShipByDate: 10/29/2008 L1 - T2 - Quantity: 3 and ShipByDate: 11/01/2008 3. Creates a shipment, for example, S1, with the quantity as 2 for T1 and T2. 4. Adds S1 to a shipment group that has “Batch Pick” as the pick strategy and Task Type details as follows: <ul style="list-style-type: none"> Perform task using the BatchPick Activity. Product is picked into an inventory case. Use QVC-CART as the primary equipment type. Perform task using a mobile device. Dispatch tasks as soon as they are generated. Use the Sterling Warehouse Management System application to plan trips by batching the tasks. The number of shipments allowed per location in the equipment is 1. Use pick sequence for picking. Use putaway sequence for putaway. 5. Releases the wave and invokes the createbatchforreferences API. (The application displays the two open tasks that are created for S1 and the batch number.) 6. Logs in to the LXE device and inducts a cart. (The application displays the “Cart Pick” screen.) 7. Enters the pick location, item ID, item quantity, and tabs out to navigate to the next screen. 8. Enters the tote ID in the “Target LPN” field and clicks the “Go” button to navigate to the next screen. 9. Enters the ShipByDate value and clicks the “GO” button. (The application displays the “Quantity Confirmation” screen. 10. Tries to enter the item quantity for the ShipByDate value entered in step 9.
--------------------	---

Defect ID Defect ID 170044

Case ID Case ID Internal

Description Description The Sterling Distributed Order Management Configuration Guide should be updated with information about providing Oracle Hints to increase the performance of the scheduleOrder agent.

Solution:

Solution: A new sub-section "Providing Oracle Hints" has been added to Section A.2.29, "Schedule" of Appendix A, "Time-Triggered Transaction Reference" in the Sterling Distributed Order Management Configuration Guide.

Defect ID Defect ID 170337

Case ID Case ID Internal

Description	<p>Description When a user performs the following sequence of actions, the application loads all the lines in the order, which in turn slows down the performance of the getOrderLineList API:</p> <ol style="list-style-type: none"> 1. Creates an order with an order line. 2. Associates a provided service with the order created in step 1. 3. Invokes the getOrderLineList API without a template, and with the "OrderLineKey" attribute in the input. <p>Note: Note: The purpose of this fix is to enhance the performance of the getOrderLineList API and not to load all the order lines, unless required. When a user invokes the getOrderLineList API with the "OrderLineKey" attribute for an order line that has a normal item, and the order has multiple order lines, all the order lines will not be loaded if all the following conditions are met:</p> <ul style="list-style-type: none"> • The output template is passed to the getOrderLineList API. • The "OpenQty" attribute is not passed in the output template. • The output template does not contain the <OrderStatuses> element. <p>If conditions other than those mentioned in this list exist, the getOrderLineList API will load all the lines in the order and there will be no significant improvement in the performance of this API.</p>
Defect ID	Defect ID 176316
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the application consumes a large amount of time to process the input values. In addition, multiple APIs were sometimes invoked out of context:</p> <ol style="list-style-type: none"> 1. Ensures that the system suggested containers are created prior to packing. 2. In the "Pack HSDE" screen, enters the Shipment Container Marking (SCM) of the container and tabs out. 3. Enters the SKU ID and tabs out.
Defect ID	Defect ID 176377
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the application does not provide any response to the user:</p> <ol style="list-style-type: none"> 1. Configures a weighing scale device for a Sterling Networked Warehouse Management System node. 2. Uses the out-of-the-box class implementation for the weighing scale device. 3. Associates the weighing scale device to a pack station. 4. Configures the pack station for both packing and weighing. 5. Associates the same location to both the pack stations/weigh stations. 6. Associates the weighing scale device to the second pack station in the alphabetical order. 7. Navigates to the "Pack HSDE" screen. 8. Scans the pack station ID and the case ID. 9. Clicks the "Weigh" button.
Defect ID	Defect ID 176886
Case ID	Case ID Internal

Description	Description When a user navigates from the “Pack HSDE” screen to the “Manifest HSDE” screen and back to the “Pack HSDE” screen using the out-of-the-box manifest client JSP, the debug flag is set to “Y”. This causes a large number of debug traces to be logged, thus degrading the performance of the “Pack HSDE” screen.
Defect ID	Defect ID 178056
Case ID	Case ID Internal
Description	Description The YFS_LANGUAGE_DESCRIPTION table must be enhanced to be extensible such that the localized descriptions of the item details can be stored.
Defect ID	Defect ID 180550
Case ID	Case ID 00023785
Description	<p>Description When a user performs the following sequence of actions, the application releases the order against future inventory:</p> <ol style="list-style-type: none"> 1. 1.Configures an item with a certain quantity of on-hand inventory, and additional quantity of inventory arriving at a future date. 2. 2.Ensures that the order can be released only against the on-hand inventory.
Defect ID	Defect ID 181046
Case ID	Case ID Internal
Description	<p>Description When a serial-tracked item is shipped as part of another shipment, and has the “AtNode” attribute set to “N”, the application does not have any provision for shipping the serial-tracked items that are tracked only in returns and outbound.</p> <p>Solution:</p> <p>Solution: The application has been enhanced to not validate the inventory of the serialized item at the node.</p>
Defect ID	Defect ID 183172
Case ID	Case ID 00033019
Description	<p>Description When a user performs the following sequence of actions, the total amount in the exchange order is authorized against a payment type even if the application has not transferred the amount from the return order:</p> <ol style="list-style-type: none"> 1. 1.Creates a return order. 2. 2.Creates a regular exchange order, and invokes the changeOrder API to convert the exchange order to an advanced exchange order. 3. 3.Runs the processOrderPayments. <p>Solution:</p> <p>Solution: The defer credit functionality has been disabled for advanced exchange orders. The pending “Transfer In” amount will be considered for calculation instead of the deferred credit. This fix is applicable only for the new advanced exchange orders or the advanced exchange orders created through Sterling Call Center and Store. The advanced exchange orders created previously through the Sterling Multi-Channel Fulfillment Console will exhibit a change in behavior.</p>
Defect ID	Defect ID 183958
Case ID	Case ID Internal

Description	<p>Description When a user performs the following sequence of actions, the application does not enable the refund of the credit memo immediately:</p> <ol style="list-style-type: none"> 1.Ensures that the “Deferred Credit on Return Required” check box in the “Payment Rule Details” pop-up window is not selected. 2.Ensures that a credit memo that has a pre-collected amount with the “HoldAgainstBook” attribute set to “Y” exists on a sales order. 3.Invokes the processOrderPayments API. <p>Solution:</p> <p>Solution: A new “Allow Immediate Refund From Hold Amount” check box has been included in the “Payment Rule Details” pop-up window. If this check box is selected, the refund will be enabled immediately in the scenario described. The “Allow Immediate Refund From Hold Amount” check box is mutually exclusive of the “Deferred Credit on Return Required” check box.</p>
Defect ID	Defect ID 183962
Case ID	Case ID Internal
Description	<p>Description The Sterling Distributed Order Management Configuration Guide must be updated with information about the new "Allow Immediate Refund From Hold Amount" flag that has been included in the Payment Rule.</p> <p>Solution:</p> <p>Solution: Information about the "Allow Immediate Refund From Hold Amount" flag has been added to Table 7-2, "Payment Rule Pop-Up Window", in Section 7.3.1, "Creating a Payment Rule", in Chapter 7, "Configuring Cross Application Payment Components" in the Sterling Distributed Order Management Configuration Guide. The screenshot of the Payment Rule Details screen has been updated.</p>
Defect ID	Defect ID 183972
Case ID	Case ID 00023292
Description	<p>Description When a shipment is changed from a higher shipment status to a lower shipment status with the AcceptOutOfSequenceUpdates attribute set to "Y", the application does not include the drop status in the audits.</p>
Defect ID	Defect ID 184769
Case ID	Case ID 00036600
Description	<p>Description When the createOrder API is invoked, the inventory reservation created with a custom demand type is not consumed in the order line reservation that has same demand type.</p> <p>Solution:</p> <p>Solution: It is not mandatory for the demand type used in the order line reservation to be of the same demand type used for inventory reservation. This is because the demand type passed in the order line reservation is the demand type to be placed if the reservation is successful. It does not represent the demand type that is to be considered for inventory reservations.</p> <p>If the reservation ID is passed in the order line reservation, the matching inventory reservation should be used regardless of the demand type. The inventory reservations are sorted on the basis of the shipment date, and only one reservation is consumed at a time.</p>
Defect ID	Defect ID 184912

Case ID	Case ID 00036592
Description	Description The getPersonInfoList API does not sort the results based on the OrderBy attribute.

Case ID	Case ID 00020099
Description	<p>Description If a discrepancy exists in a receipt, and a user invokes the closeReceipt API to close this receipt, or triggers the Receipt Complete agent, the application incorrectly closes the receipt.</p> <p>Solution:</p> <p>Solution: The system has been enhanced to invoke a new YFSBeforeCloseReceiptUE user exit from the closeReceipt API and the Receipt Complete agent.</p> <p>If the YFSBeforeCloseReceiptUE user exit is implemented and invoked from the closeReceipt API with the CanReceiptBeClosed attribute passed as "N" in the output of the YFSBeforeCloseReceiptUE user exit, the application will display a "Receipt cannot be closed" error message.</p> <p>In addition, if the YFSBeforeCloseReceiptUE user exit is invoked from the Receipt Complete agent with the CanReceiptBeClosed attribute passed as "N" in the output of YFSBeforeCloseReceiptUE user exit, the application will ignore this receipt and continue to process other receipts.</p>
Defect ID	Defect ID 183714
Case ID	Case ID 00031667

Description	<p>Description When a user performs the following sequence of actions, the application allows the user to remove 3 units from the shipment:</p> <ol style="list-style-type: none"> 1. Navigates to Sterling Warehouse Management System > Receiving > Document Specific > Purchase Order > Receipt Modification Rules > Group By Status > Received > Receipt, and enables the Disallow modification for Unreceive option. 2. Creates an inbound shipment with the quantity as 10 units, and confirms the shipment. 3. Starts the receipt for the shipment confirmed in step 1, and receives all 10 units as loose SKUs. 4. Closes the receipt such that the inbound shipment moves to the "Receipt Closed" status, and the receipt moves to the "Received" status. 5. Navigates to Receipt Summary > Items panel, and selects the record. 6. Clicks "Adjust Receipt", and selects the inventory status. 7. Specifies the quantity to receive as 3 units, and clicks on Adjust.
Defect ID	Defect ID 184647
Case ID	Case ID Internal
Description	<p>Description When the Apply price change to invoiced quantity option is enabled, and the charge per line and charge per unit are added to a partially invoiced quantity, the charge per line is invoiced even if the order line is only partially invoiced.</p>

Hot Fix 37

Release 8.0-HF37

Defect ID	164009
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the getWorkOrderAppointmentOptions API displays the slot as available even though the YFSGetExternalResourceCapacityUE user exit returns the information that no capacity is available for that slot. The application incorrectly uses the prereserved capacity to display the slot as available:</p> <ol style="list-style-type: none"> 1. Implements the YFSGetExternalResourceCapacityUE user exit. (The YFSGetExternalResourceCapacityUE user exit returns the information that no capacity is available.) 2. Ensures that a work order that has an appointment exists. 3. Invokes the getWorkOrderAppointmentOptions API to request the capacity availability to change the appointment of the work order. <p>Solution:</p> <p>Solution: A new "Ignore prereserved capacity when recomputing appointment options" flag has been exposed in the "Inventory Capacity Rules" screen in the Sterling Supply Chain Applications Configurator. If this flag is selected, the application will not consider the prereserved capacity for capacity calculations.</p>
Defect ID	Defect ID 175974
Case ID	Case ID 00019032
Description	<p>Description After a sales order is created with header charges and is invoiced after upgrading to Sterling Multi-Channel Fulfillment Solution, Release 8.0, and the getOrderInvoiceDetails API is invoked, the application displays an "Invalid Charge Category" error message.</p>

Defect ID	Defect ID 176739
Case ID	Case ID Internal
Description	<p>Description The application does not permit a user to update the expiry date of a credit card.</p> <p>Solution:</p> <p>Solution: The application has been updated such that the user can change the expiry date of a credit card at any time. The "AllowPaymentMethodInfoOverride" payment method level flag must be set to "Y" when changing the expiry date.</p> <p>The "Order Payment Information" screen in the Sterling Console has been modified as follows:</p> <ol style="list-style-type: none"> 1. 7.The "Expiration Date" field is editable. 2. 8.A new "Change Payment Information" check box has been included. This check box must be selected if the user wants to change the expiry date of a credit card.
Defect ID	Defect ID 177199
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the scheduleOrderLines API throws a "Null Pointer" exception:</p> <ol style="list-style-type: none"> 1. 8.Creates a sales order with one order line and an associated delivery line. 2. 9.Ensures that inventory does not exist for the item. 3. 10.Creates a work order. 4. 11.Takes an appointment for a date in the future. 5. 12.Invokes the scheduleOrderLines API to schedule the sales order created in step 1.
Defect ID	Defect ID 178025
Case ID	Case ID Internal
Description	<p>Description When creating a batch for a set of tasks belonging to a task type and associated to an equipment, the application assigns the tasks in a random sequence to the slots that are defined in the equipment.</p>
Defect ID	Defect ID 178047
Case ID	Case ID Internal
Description	<p>Description When a user creates an order with two standalone provided services in two different ship nodes, and invokes the generateWorkOrder API with the ConsolidatePSLinesWithSameAddress set to "Y", the application displays a "Mismatch on the ship nodes of work order and the lines added to the work order" error message.</p>
Defect ID	Defect ID 180287
Case ID	Case ID 00023540

Description	<p>Description When a user performs the following sequence of actions, the application displays the cancellation codes of both the enterprises in the “Cancellation Reason Codes” drop-down list in the “Cancel Selected Shipments” screen:</p> <ol style="list-style-type: none"> 1. 7.Creates two enterprises in the Configurator. 2. 8.Configures the modification reason codes for sales order and transfer order for the two enterprises created in step 1. 3. 9.Creates a shipment for one of the enterprises. 4. 10.Logs in to the Sterling Application Console as a node user. 5. 11.Navigates to the Outbound Shipment Console, and searches for the shipment created in step 3. 6. 12.Clicks the “Cancel” button in the “Shipment Details” screen to cancel the shipment. <p>Solution:</p> <p>Solution: The enterprise code is included in the input XML of the getCommonCodes API to enable the filtering of the reason codes at the enterprise level.</p>
Defect ID	Defect ID 180470
Case ID	Case ID 00021488
Description	<p>Description When a user confirms a work order, the VAS station requires the user to enter the serial number with the corresponding lot and item information of one kit at a time. Thus, if there are a large number of kits, the confirmation process becomes laborious. Therefore, the application must be enhanced with the capability to allow the confirmation of multiple units of serial-tracked kits in a VAS station.</p>
Defect ID	Defect ID 180854
Case ID	Case ID 00024900
Description	<p>Description When a user completes a task, ensures that the requisite serial number is displayed in the “Task Detail” screen, and clicks “Save” in the “Complete Task” screen, the application displays a “Serial tracking mandatory for the Item” error message.</p>

Description Description A new configuration should needs to be exposed for an enterprise in order to indicate whether the "CauseAppointmentChange" flag should be maintained by the system or externally. If it is to be maintained externally, the product should not set or reset this flag in any scenario. The "CauseAppointmentChange" flag should be exposed in the createWorkOrder API and the modifyWorkOrder API.
Note: Note: If the "CauseAppointmentChange" flag is to be maintained externally by an enterprise, for example E1, set E1.CauseApptChangeMaintainedExternally=Y in the yfs.properties file.

Defect ID Defect ID 156660

Case ID Case ID Internal

Description Description Under the following conditions, the SEND_INVOICE agent of return order incorrectly invokes the PUBLISH_INVOICE_DETAIL event configured for sales order:

1. 1.User has configured both the SEND_INVOICE agents of sales and return order to run from the same AgentServer.
2. 2.System has some invoices for both sales and return order, which are not yet processed by the SEND_INVOICE agent.
3. 3.Only SEND_INVOICE agent of return order is executed.

Defect ID Defect ID 156662

Case ID Case ID Internal

Description Description Under the following conditions, the SEND_INVOICE agent of return order picks up both the sales order and the return order and the SEND_INVOICE agent of sales order picks up both the sales order and the return order:

1. 1.User has configured both the SEND_INVOICE agents of sales and return order to run from the same AgentServer.
2. 2.System has some invoices for both sales and return order, which are not yet processed by the SEND_INVOICE agent.
3. 3.Only SEND_INVOICE agent of return order is executed.

Defect ID Defect ID 156693

Case ID Case ID Internal

Description Description When a user performs the following sequence of actions, the system displays the same output. (That is, the system displays the same 5 records that were picked up by the API when it was first invoked instead of the next 5 records):

1. 1.Creates, for example, 10 order lines.
2. 2.Invokes the getOrderLineList API with the "MaximumRecords" attribute set to, for example, 5.
3. 3.The user enters the value of the "LastOrderLineKey" of the Output XML of the API invoked in the previous step in the "OrderlineKey" attribute of the second Input XML
4. 4.Repeats step 2.

Solution:

Solution: A new OrderByOrderLineKey flag has been introduced. If the value of this flag is set to "Y", the retrieved records will be sorted according to the order line key.

Defect ID Defect ID 161501

Case ID Case ID 47049

Description Description When an order has a work order with an existing appointment, and the complete quantity on the order line is scheduled or released, and if a user invokes the getWorkOrderAppointmentOptions API, passes the ReqShipDate in the override element to reschedule an appointment to a date that is earlier than the current appointment date, the system does not return any available slots even if capacity is available for the queried slots.

Solution:

Solution: A new, "Allow appointment date change to an earlier date after schedule" flag has been exposed in the Configurator under the VAS Rules. If this flag is selected, and the ReqShipDate is passed as a date that is earlier than the expectedShipDate, the slot availability is displayed according to the requested capacity.

Defect ID Defect ID 161994

Case ID Case ID 47546

Description Description When a user performs the following sequence of actions, the system throws a null pointer exception:

1. Configures a shipment group to create item pick tasks having the task type configured to "Pick Into a Pallet" and "Complete Tasks in Multiple Steps".
2. Creates two shipments, with each shipment having one shipment line with 10 units, includes this shipment in a wave of the shipment group configured in step 1, and releases the wave.
3. Completes the first step of the item pick task by picking inventory into a pallet, deposits the pallet at the staging location, and packs the shipments by scanning the pallet in the pack station. (The first shipment is packed successfully).
4. Tries to pack the second shipment.

Defect ID Defect ID 164015

Case ID Case ID 45947

Description Description When a user enters an exception code to suggest an alternative pick location with or without short picking, the new task that is created is immediately assigned to the current user.

Solution:

Solution: When a user enters an exception for suggesting an alternative pick location with or without short picking, the new task that is created will not be assigned to any user.

Defect ID Defect ID 164018

Case ID Case ID 47200

Description Description When a user enters an exception code to suggest an alternative pick location, the application updates the current task with the alternative location.

Solution:

Solution: The application has been enhanced to cancel the current task when a user enters an exception code to suggest an alternative pick location, and create a new task with the alternative pick location as the source.

Case ID	Case ID Internal
Description	<p>Description In Conditional Monitoring Rules, if a condition is returned such that an alert is not raised, the NextAlertTs must be set to HIGH_DATE. Also, if a milestone has already been met, the NextAlertTs must be set to HIGH_DATE for the "Milestone Not Reached Within Comparison Milestone" condition.</p> <p>Solution:</p> <p>Solution: In Conditional Monitoring Rules, if a condition is returned such that an alert is not raised, and if the "yfs.monitor.stopprocessing.ifcondition.eval.false" property is set to True in the yfs.properties file, the NextAlertTs will be set to HIGH_DATE.</p>
Defect ID	Defect ID 165190
Case ID	Case ID 47493
Description	<p>Description When an item is configured to have substitutes, and item substitution is allowed at the node level, and if a user invokes the findInventory API for the item with the quantity greater than that currently available onhand, such that the substitutes are used, the findInventory API provides inconsistent results and does not honor the substitution priority.</p>
Defect ID	Defect ID 166773
Case ID	Case ID 00003439

Description Description When more than 500 ChargeNames exist for a ChargeType for DocumentType=0005, and if a user creates an order and invokes the changeOrder API to add header charges to the 501st ChargeName, the application displays an "YFS10346: YFS:Invalid Charge Category and Charge Name Combination" error message.

Defect ID Defect ID 169348

Case ID Case ID Internal

Description Description When a user performs the following sequence of actions, the application does not propagate the "BillToID" attribute and the "CustomerPONo" attribute to the Shipment Advice:

1. Create a sales order by passing the "BillToID" attribute and the "CustomerPONo" attribute.
2. Schedules and releases the sales order.
3. Runs the "Send Release" transaction (Transaction ID SHIP_ADVICE) to generate the Shipment Advice.

Solution:

Solution: The "CustomerPONo" attribute in the Shipment Advice will be populated from the order release. If the "CustomerPONo" attribute in the order release is blank, this attribute will be populated from the order line. If the order release has multiple order lines and each order line has different "CustomerPONo" values, then the "CustomerPONo" attribute will be set to blank in the Shipment Advice. If the "CustomerPONo" attribute in all the order lines are blank, the "CustomerPONo" attribute will be populated from the order header.

Case ID	Case ID Internal

Description Description When a user performs the following sequence of actions, the system does not display the Synchronous/Non-Real-Time services under the “Look Up” criteria in the Execution Exception screen:

- Creates three synchronous services, Synchronous/Real-Time, Asynchronous/Non-Real-Time, and Synchronous/Non-Real-Time.
- Navigates to Execution Exception and tries to associate all the services.

Solution:

Solution: The Search Element for the form has been modified to display only the Synchronous/Real-time and Synchronous/Non-Real-Time services.

Defect ID Defect ID 164012

Case ID Case ID Internal

Description Description The Sterling Warehouse Management System User Guide should provide information about the Wave Audit feature. In addition, information about all the wave audits being purged when the wave is purged should be added to the Sterling Warehouse Management System Configuration Guide.

Solution:

Solution: The documents have been updated with the requisite changes as described below:

- Added a new Section 30.15, "Wave Audit" to Chapter 30, "Wave Console Screens" in the Sterling Warehouse Management System User Guide.
- Added the following new note in section A.3.3.11, "Wave Purge" in Appendix A , "Time-Triggered Transaction Reference" in the Sterling Warehouse Management System Configuration Guide:

Note: Note: When a wave is purged, all the audits related to the wave are also purged.

Defect ID Defect ID 167096

Case ID Case ID Internal

Description Description When a user creates a large number of orders and invokes the getOrderList API, the application throws a timeout error in the “Purchase Order Search” screen.

Solution:

Solution: The application will not display a timeout error.

Note: Note: This fix is specific to Oracle database. In addition, this attribute is specific to a customer. Hence, this attribute is not present in the input XML of the getOrderList API. As part of this fix, a new “OracleHint” attribute is exposed in the root element of the input XML of the getOrderList API. This attribute can be used to pass the Hint to Oracle when querying in the YFS_Order_Header table. For example, if you use the Hint: parallel(YFS_ORDER_HEADER 8) full(YFS_ORDER_HEADER), the input to the getOrderList API is:

```
<Order DocumentType="0001" EnterpriseCode="DEFAULT" ShipNode="N1" OracleHint ="/**+
```

Defect ID	Defect ID 171788
Case ID	Case ID Internal
Description	Description When a sales order has two order lines with charges and taxes defined in these order lines, and if the splitLine API is invoked to split the first line, the taxes in the first line are set to zero.

Solution:

Solution: The application has been enhanced to calculate the tax according to the tax percentage defined for the order line.

Defect ID	Defect ID 172161
Case ID	Case ID Internal
Description	Description The application does not display the IP address of the client in the "Audit" screen when performing the order and shipment audits.

Solution:

Solution: The IP address of the client will be captured and displayed in the audit screens for orders and shipments for the HTTP requests that are routed either through the console screens or through the RCP clients. For the order audit, the IP address of the client will be displayed in the "Order Audit Detail" screen, and for the shipment audit, the IP address of the client will be displayed in the "Shipment Audit" screen.

The new configuration options listed below have been introduced in the yfs.properties file:

1. A user can use the "yfs.clientip.reader" property to set a custom implementation java class to read the IP address of the client from the HTTP request object. A default out-of-the-box "com.yantra.yfs.util.YFSClientIPReaderImpl" implementation has been provided. To write your own implementation class, implement the "com.yantra.yfs.japi.util.YFSClientIPReader" interface. For more information about this interface, see the Sterling JavaDocs.
2. When using the default out-of-the-box implementation, the following properties can be used to read the IP address of the client from the HTTP request:

f.yfs.clientip.httprequest.ipHeaderAttribute - This property can be used to set the
g.yfs.clientip.httprequest.useForwardedFor - This property will be used if the "yfs.clientip.httprequest.ipHeaderAttribute" property is not set.

If the "yfs.clientip.httprequest.ipHeaderAttribute" property and the "yfs.clientip.httprequest.useForwardedFor" property do not yield a value for the IP address of the client, the "remote attr" property that is available in the HTTP request object is used to obtain the IP address of the client.

Defect ID	Defect ID 172164
Case ID	Case ID Internal

Description	<p>Description When a user accesses the application, the IP address of the user is not recorded in the log files.</p> <p>Solution:</p> <p>Solution: The IP address of the user is recorded in a separate configurable log file in addition to the existing application log file. A separate logger configuration is provided in the "log4jconfig.xml.in" file.</p> <ol style="list-style-type: none"> 1. 11.A new "LOGIN_CLIENT_IP_DETAILS" appender tag is introduced in the "log4jconfig.xml.in" file. The log file can be configured to record the IP address of the user. 2. 12.A new "com.yantra.yfs.ui.backend.YFSLoginIPLogger" category tag is introduced. This category tag uses the appender tag that is mentioned above. <p>The "LOGIN_CLIENT_IP_DETAILS" appender tag and "com.yantra.yfs.ui.backend.YFSLoginIPLogger" category tag will be created in the "log4jconfig.xml" file, which is included in the resources.jar file.</p>

Case ID	Case ID 00011877
Description	<p>Description When a user performs the sequence of actions described here, the application does not allow the user to delete the item:</p> <ol style="list-style-type: none"> 1. 14.Ensures that an item with the same name and two different UOMs exists. (One of the UOM is a valid UOM and the other is an invalid UOM, that is, it is not present in the YFS_ITEM_UOM_MASTER table.) 2. 15.Adjusts the inventory for the item with the valid UOM. 3. 16.Navigates to the Configurator and tries to delete the item with the invalid UOM. <p>Solution:</p> <p>Solution: The application has been enhanced such that the user cannot create an item with an invalid UOM.</p>
Defect ID	Defect ID 171609
Case ID	Case ID Internal
Description	<p>Description The system does not generate the correct sequence numbers for sequences that are implemented as tables for the SQL Server and the MySQL databases.</p>
Defect ID	Defect ID 171818
Case ID	Case ID 00012975

Description	<p>Description When a user performs the following sequence of actions, the audits for the order line in the “Order Audit” screen do not contain the modification level and the modification type of the status change:</p> <ul style="list-style-type: none"> • Creates a custom status, for example, 1100.100, that is extended from the “Order Created” status. • Ensures that a sales order exists in “Created” status. • Invokes the changeOrderStatus API to move the status of the order line to 1100.100
Defect ID	Defect ID 171870
Case ID	Case ID Internal
Description	<p>Description The YCPMessageApiOutputUE user exit, if implemented, provides a handle to modify the output of any API before the output is returned. A disclaimer stating that this user exit should not be used to remove any existing attributes in the API output must be added to the Sterling JavaDocs.</p> <p>Solution:</p> <p>Solution: The following note has been added in Sterling JavaDocs for the messageApiOutputBeforeReturning method in the YCPMessageApiOutputUE user exit:</p> <p>Note: Note: The method should be used strictly for validation purposes and capturing extra data only. One should not remove any of the elements or attributes in the output xml.</p>
Defect ID	Defect ID 172028
Case ID	Case ID 00005131
Description	<p>Description A new type of order called master order should be exposed in the application. The master order enables users to specify a series of orders, and time intervals at which these orders will be shipped and charged to customers.</p> <p>The master order is typically created for a customer to purchase a series of products for shipping. For example, a customer can place an order for a product that is to be supplied for a period of six months. The product will be shipped to the customer each month, and the customer will be authorized and billed each month.</p> <p>Solution:</p> <p>Solution: An out-of-the-box solution has been provided with this hot fix.</p>
Defect ID	Defect ID 172611
Case ID	Case ID 00005131

Description Description The Master Order and Continuity Engine functionality must be documented in the following documents:

- 17.Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide
- 18.Sterling Multi-Channel Fulfillment Solution Glossary
- 19.Sterling Multi-Channel Fulfillment Solution Product Concepts
- 20.Sterling Distributed Order Management Configuration Guide

Solution:

Solution: The details of the documentation updates are as follows:
In the Sterling Multi-Channel Fulfillment Solution Platform Configuration Guide:

1. Added Master Order as an example for document types and updated Figure 2-13, "Associated Document Types Window", to include the Master Order (corrected the Master Order number to 0007 from 0011) in Section 2.3.2, "Viewing the Document Types Associated with an Application", in Chapter 2, "Navigating in the Configurator".
2. Added Master Order Fulfillment to the list of process types in Section 4.1, "Document Type Configuration", in Chapter 4, "Configuring Process Models".
3. Added the Completed (3700) status as available for configuration for the Master Order in Section A.3.3.16, "Order Purge", in Appendix A, "Time-Triggered Transaction Reference".
4. Added Actual Next Iteration Date as a system date type that can be monitored by the order monitor in Section A.5.6, "Enhanced Order Monitor", Appendix A, "Time-Triggered Transaction Reference".
5. Corrected the Master Order number to 0007 from 0011 and added the document type, document number, and description for the Master Order in Table E-1, "Document Types", in Appendix E, "Document Types".
6. Added the Master Order Fulfillment condition builder attribute to the list of condition builder attributes, and added a new Section F.7, "Master Order" in Appendix F, "Condition Builder Attributes".

22.In the Sterling Multi-Channel Fulfillment Solution Glossary:

1. Added the term Master Order under "M", in Chapter, "J - M".

In the Sterling Multi-Channel Fulfillment Solution Product Concepts:

1. Added Master Order to the list of document types in Section 4.1, "Base Document Types and Document Types", in Chapter 4, "Process Modelling Concepts".
2. Added details of Master Order Fulfillment to the process type pipelines and derived process types in Table 4-1, "Order Fulfillment Base Process Types", in Section 4.2, "Process Type Pipelines", in Chapter 4, "Process Modelling Concepts".
3. Added Master Order to the list of process-type pipelines and added a new Section 7.3.4, "Master Order Pipeline" in Section 7.3, "Order Pipelines", in Chapter 7, "Order Management".

In the Sterling Distributed Order Management Configuration Guide:

1. Added Master Order as an example for document types and updated Figure 2-13, "Associated Document Types Window" to include Master Order in Section 2.3.2, "Viewing the Document Types Associated with an Application", in Chapter 2, "Navigating in the Configurator".
2. Added Next Iteration Date to the list of system dates that cannot be deleted, in Section 17.7.1.3, "Deleting a Date Type", in Chapter 17, "Configuring an Order Document's Fulfillment Specific Components".
3. Added the Completed (3700) status as available for configuration for the Master Order in Section A.3.3.16, "Order Purge", in Appendix A, "Time-Triggered Transaction Reference".
4. Added Actual Next Iteration Date as a system date type that can be monitored by the order monitor in Section A.6.6, "Enhanced Order Monitor", Appendix A, "Time-Triggered Transaction Reference".

Hot Fix 27

Release 8.0-HF27

Defect ID	141915
Case ID	Case ID Internal
Description	<p>Description The system hangs and throws an “Out of memory” exception when a user cancels a wave that has more than 20,000 shipments using the Sterling Supply Chain Applications Console.</p> <p>Solution:</p> <p>Solution: The wave cancellation process is enhanced to run in offline mode when the wave is not released yet and has more shipments. A new “yfs.cancelwave.offline.shipmentcount.greaterthan” property has been provided in the “yfs.properties” file. When a user cancels a wave that has more shipments than the value configured in this properties file, the wave cancellation process will run in the offline mode. The cancel wave agent picks this wave, removes all of the shipments from the wave, and cancels the wave.</p> <p>For more information about this property, see Section A.2.20, “Cancel Wave”, in the Sterling Warehouse Management System Configuration Guide.</p>
Defect ID	Defect ID 154077
Case ID	Case ID Internal
Description	<p>Description When the getNodeInventory API is invoked under the following conditions, the API consumes a large amount of temporary database space and returns incorrect records:</p> <ol style="list-style-type: none">1. Create an item classification and associate more than 1000 items with the classification.2. Adjust inventory for few of these items at the location.3. Invoke the getNodeInventory API for the classification that was created in step 1.
Defect ID	Defect ID 156668
Case ID	Case ID Internal
Description	<p>Description When a user configures the inventory cost calculation and invokes the adjustInventory API, the inventory organization is not published for the ADJUST_INVENTORY.INVENTORY_VALUE_CHANGE event.</p> <p>Solution:</p> <p>Solution: A new “OrganizationCode” attribute has been added to the XML file that is published by the ADJUST_INVENTORY.INVENTORY_VALUE_CHANGE event for the inventory organization.</p>
Defect ID	Defect ID 156690
Case ID	Case ID Internal
Description	<p>Description When the invoice of a shipment is voided and the shipment is unconfirmed and cancelled, and a user tries to view the collection summary, the getOrderDetails API throws a “Null Pointer” exception.</p> <p>Note: Note: The “Null Pointer” exception will be thrown for the older orders, that is, the orders that were created before this fix was applied, when the getOrderDetails API is invoked.</p>

Defect ID	Defect ID 157270
Case ID	Case ID Internal
Description	Description When the "GenerateWorkOrderUE" user exit is implemented and the generateWorkOrder API is invoked for a product line that has a provided service associated with it, and this product line is consolidated with an existing work order that has another product line and a delivery service, an association between the delivery service and the newly added product line is not created.
Defect ID	Defect ID 157360
Case ID	Case ID Internal
Description	Description When the voidInvoice API and the unconfirmShipment API are invoked in the multiAPI mode, the system throws an "YDM77_00001: Cannot unconfirm the shipment" error message.
Defect ID	Defect ID 160706
Case ID	Case ID 45782
Description	<p>Description When a user performs the following sequence of actions, the system throws an "Invalid Line" error message:</p> <ol style="list-style-type: none"> 1. Implements the "generateWorkOrderUE" user exit to return output=input. 2. Invokes the generateWorkOrder API for a sales order. (The sales order has a work order in "Completed" status. A product line that requires delivery exists on the sales order.) <p>Solution:</p> <p>Solution: When the "generateWorkOrderUE" user exit is implemented, the output of this user exit has a "CreatedOrModified" flag for each of the work order elements. All the work orders that have this flag set to "N" will not be processed after this enhancement. The output of the generateWorkOrder API will display all the work orders on the order.</p>
Defect ID	Defect ID 164780
Case ID	Case ID 00003475
Description	<p>Description The input struct of the "RecalculateHeaderTaxUE" user exit contains only the header level address even if the "Ship To" address in the shipment invoice is different from the "Ship To" address in the order header.</p> <p>Solution:</p> <p>Solution: The input struct of the "RecalculateHeaderTaxUE" user exit will have a template-controlled "eMemo" parameter. The RecalculateHeaderTaxUE template is located in the "<INSTALL_DIR>/repository/xapi/template/merged/api/extn" directory. This template can be used to extract all the required information about a shipment invoice from this parameter. If this file is not found, there will be no change in the behavior of the application.</p> <p>For more information about extending templates, see Section 8.2.10, "Extending an Output XML Template" in the Sterling Multi-Channel Fulfillment Solution Customization Guide.</p>
Defect ID	Defect ID 166222
Case ID	Case ID 00004996

Description	<p>Description The “mail.jar” and “activation.jar” third-party files that are shipped with the product as part of the EMAIL component of the Service Definition Framework are not registered in the classpath in the “AGENTDynamicClasspath.cfg”, “APPDynamicClasspath.cfg”, and “dynamicClasspath.cfg” files.</p> <p>Solution:</p> <p>Solution: When installing the hot fix, the “mail.jar” and “activation.jar” third-party files will be registered in the “AGENTDynamicClasspath.cfg”, “APPDynamicClasspath.cfg”, and “dynamicClasspath.cfg” files.</p>
Defect ID	Defect ID 168086
Case ID	Case ID Internal
Description	<p>Description The “ant_InstallPCAs.xml” file contains entries to migrate the Sterling Store Inventory Management PCA 7.1 from Sterling Supply Chain Application 7.11 to Sterling Multi-Channel Fulfillment Solution 8.0.</p> <p>Solution:</p> <p>Solution: The “SOP” entries have been removed from the “ant_InstallPCAs.xml” file so that Sterling Store Inventory Management PCA 7.1 will not be migrated to Sterling Multi-Channel Fulfillment Solution 8.0.</p>
Defect ID	Defect ID 168341
Case ID	Case ID 00005071
Description	<p>Description A handle should be provided to the output of an API such that the output can be modified before it is returned.</p> <p>Solution:</p> <p>Solution: A “YCPMessageApiOutputUE” user exit has been introduced. If this user exit is implemented, all the API calls will pass through this user exit before returning the output. Based on the name of the API, a user can selectively modify the output for the required APIs. For more information about this user exit, see the Sterling JavaDocs.</p>
Defect ID	Defect ID 168796
Case ID	Case ID 00003964
Description	<p>Description When a user invokes the changeOrder API and modifies the value of the “TaxExemptFlag” in the header level of a sales order, the “RecalculateHeaderTaxUE” user exit and the “RecalculateLineTaxUE” user exit are not invoked.</p>
Defect ID	Defect ID 169481
Case ID	Case ID 00006792

Description	<p>Description When a user tries to paginate a custom service with the “setPaginationRequired” flag set to “true”, the application displays a “Could not find service getPage” error message.</p> <p>Solution:</p> <p>Solution: The pagination of the custom service occurs without any invalid service error messages. The out-of-the-box “getPage” is of type “API”.</p> <p>Note: Note: A workaround to add or configure the “getPage” service to invoke a “getPage” API was suggested when this defect was raised. This workaround is no longer required. Any additional changes made with regard to this workaround should be removed after incorporating this hot fix.</p>
Defect ID	Defect ID 170038
Case ID	Case ID Internal
Description	<p>Description The performance of the scheduleOrder agent is slow when this agent is configured and run.</p> <p>Solution:</p> <p>Solution: The scheduleOrder agent has been enhanced to use Oracle Hints that are specified in the “yfs.properties” file. These Oracle Hints will be used in the SQL queries fired by the scheduleOrder agent. The user should provide the correct Oracle Hints to optimize the performance of this agent.</p> <p>For more information about Oracle Hints, see Section A.2.29, “Schedule” of Appendix A, “Time-Triggered Transaction Reference” in the Sterling Distributed Order Management Configuration Guide.</p>
Defect ID	Defect ID 170307
Case ID	Case ID 00010840
Description	<p>Description The executePaymentTransactions API should be enhanced to pass the “orderNo” attribute and the “orderHeaderKey” attribute to the required collection user exits, for example, “YFSCollectionCreditCardUE” user exit.</p>
Defect ID	Defect ID 170771
Case ID	Case ID 00011332
Description	<p>Description When the “Apply price change for invoiced quantity” rule is enabled and a sales order is invoiced, the application does not update the tax amount in the order or order line, and the adjustment invoice is not created.</p> <p>Solution:</p> <p>Solution: When the “Apply price change for invoiced quantity” rule is enabled for the “Sales Order” document type, and if there is a change in the tax amount in a sales order, the adjustment invoice will be created based on whether the order is fully invoiced or partially invoiced.</p> <p>Note: Note: If the tax amount is used and if the tax percentage is either zero or does not correspond to the tax amount, the application will recalculate the tax amount based on the percentage when creating the invoice. To override this behavior, the “recalculateHeaderTaxUE” user exit and the “recalculateLineTaxUE” user exit must be implemented. The tax information returned by these user exits will be the delta taxes, that is, the difference between the current tax and the invoiced tax.</p>
Defect ID	Defect ID 170824

Case ID	Case ID 00007260
Description	<p>Description When a user performs the following sequence of actions, the application does not invoke the "RecalculateHeaderTaxUE" user exit to recalculate the new taxes that are based on the new charges even if the header charges are changed by the output of the "RepricingUE" user exit:</p> <ol style="list-style-type: none"> 1. Implements the "RecalculateHeaderTax" user exit and the "RepricingUE" user exit. 2. Creates an order. 3. Invokes the changeOrder API to add a new line to the order that was created in step 2.
Defect ID	Defect ID 171005
Case ID	Case ID 00011664
Description	<p>Description When a user cancels a move request or task, the application does not remove the lines that have zero quantity from the "Inventory Details" screen.</p>
Defect ID	Defect ID 171176
Case ID	Case ID 00011326
Description	<p>Description The application throws a null pointer exception when a synchronous service with an API component has a template that contains an XML root element as the node in the Service Definition Framework.</p>
Defect ID	Defect ID 171707
Case ID	Case ID Internal
Description	<p>Description The Sterling Distributed Order Management Configuration Guide should be updated with information about providing Oracle Hints to increase the performance of the scheduleOrder agent.</p> <p>Solution:</p> <p>Solution: A new sub-section "Providing Oracle Hints" has been added to Section A.2.29, "Schedule" of Appendix A, "Time-Triggered Transaction Reference" in the Sterling Distributed Order Management Configuration Guide.</p>

Hot Fix 26

Release 8.0-HF26

Defect ID	166485
Case ID	Case ID 00004936

Description	<p>Description The application should be enhanced with the functionality to postpone a payment to a future date when Payment is enabled.</p> <p>Solution:</p> <p>Solution: The application has been enhanced with the requisite functionality. The main changes in the Sterling JavaDocs and the Yantra Console user interface are as follows:</p> <ol style="list-style-type: none"> 1.The "PaymentDetails" element in the "PaymentMethod" element has been deprecated from the createOrder API, changeOrder API, and the recordExternalCharges API. The "PaymentDetailsList" element has been provided such that multiple payment details can be passed for a single payment method. 2.A new "CollectionDate" field has been provided in the input XML file of the createOrder API, changeOrder API, and the recordExternalCharges API. For further details, see the Sterling JavaDocs. 3.The "CollectionDate" has been exposed in the Yantra Console for the "Charge" pop-up window and the "Authorize" pop-up window. The "Amount" field has been renamed as "Processed Amount". The "Requested Amount" field has been exposed such that the user can enter the amount to be charged or authorized on a future date. 4.The executeCollection API will not process the charge or authorization values until the collection date has been attained. The user should always pass the amount that is to be charged or authorized in the future in the "Requested Amount" field.
--------------------	--

Defect ID	Defect ID 168060
Case ID	Case ID Internal
Description	<p>Description When a user defines 240 locales in the Configurator and ensures that two bundle.properties files exist in the Resources folder for different "language + country code" combinations, the BEA WebLogic server crashes with an "Out of Memory" exception message because of the presence of a very large number of objects in the com.yantra.yfc.util.YFCI18NUtils component.</p> <p>Solution:</p> <p>Solution: Earlier, the "ycpbundle.properties" file was loaded by the application for each locale without considering the language and the country of the locales, resulting in the same message being duplicated.</p> <p>A new "yfs.bundleProperties.multipleLoad" property that is set to "Y" has been added to the "yfs.properties" file. The system now checks whether a "bundle.properties" file, for example, /resources/ycpbundle_jp_JP.properties for a locale with language as "jp" and country as "JP", exists for the "Locale_jp_JP" locale. If the "bundle.properties" file is not present, the messages are not loaded for that locale and the "cpbundle_en_US.properties" file is used to display the literals for that locale.</p>

Defect ID	Defect ID 169013
Case ID	Case ID 00008455
Description	<p>Description When a user configures a BundleParent item, invokes the importOrder API, and passes the BundleParent item, the application throws an "Invalid Kit Code" error message.</p>

Defect ID	Defect ID 169909
Case ID	Case ID Internal
Description	Description The supported version of the BEA WebLogic Application server is incorrectly mentioned as 10.x in the Sterling Multi-Channel Fulfillment Solution Installation Guide.
	Solution: Solution: The correct version of the BEA WebLogic Application Server has been included in Table 2-2, "Supported Application Server Tier" in Chapter 2, "System Requirements" of the Sterling Multi-Channel Fulfillment Solution Installation Guide.
Defect ID	Defect ID 170013
Case ID	Case ID Internal
Description	Description When a user enables inventory costing, creates a price program, and invokes the getItemListForOrdering API with the complete output template, the API occasionally throws a "NumberFormatException" error message for the service items.
Defect ID	Defect ID 170133
Case ID	Case ID 00010430
Description	Description When a user invokes the scheduleOrder API to schedule an order that contains distinct segment for distinct items, only one order line is scheduled; the remaining order lines are backordered even if enough inventory is available to meet the demand.
Defect ID	Defect ID 170135
Case ID	Case ID 00010431
Description	Description When a user invokes the releaseOrder API to release an order that contains distinct segment for distinct items, only one order line is released; the remaining order lines are backordered even if enough inventory is available to satisfy the demand.
Defect ID	Defect ID 170528
Case ID	Case ID 00011042
Description	Description When a user performs the following sequence of actions, the getShipmentLineList API locks the YFS_ORDER_HEADER table: <ol style="list-style-type: none"> 1. 4.Creates an order. 2. 5.Creates a shipment for the order. 3. 6.Invokes the getShipmetLineList API.

Hot Fix 25

Release 8.0-HF25

Defect ID	142320
Case ID	Case ID Internal
Description	Description When a user invokes the getPutawayLocations API multiple times in a single transaction, allocations done by the previous API calls are not considered by the subsequent API call.
	Solution: Solution: If the ClearInventoryCache attribute is passed as "N" in the API input, all of the previous allocations are cached and used by the subsequent API calls.

Defect ID	Defect ID 151128
Case ID	Case ID Internal
Description	Description When complete inventory is reduced from a Case/Pallet, the Case/Pallet should be deleted.
Defect ID	Defect ID 154497
Case ID	Case ID Internal

Description	<p>Description When a user performs the following sequence of actions, the system throws a "WMS0080_307 Target LPN must be passed" error message:</p> <ol style="list-style-type: none"> 1. 5. Configures the Pick Location Assignment (PLA) to perform batch pick. 2. 6. Configures the Pick Exception with "Suggest Alternate Location" and "Freeze For Picking" enabled. 3. 7. Creates a shipment, includes it in a wave, releases the wave, and creates a batch for the wave. 4. 8. Inducts the batch in a cart and performs a short pick by entering the quantity as zero and providing the pick exception code.
Defect ID	Defect ID 154014
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the system throws a "No Open Tasks" error message:</p> <ol style="list-style-type: none"> 1. 1. Configures the "Induct Cart" screen in the Sterling Multi-Channel Fulfillment Solution Application to induct cart, with the "MandateBatch" attribute set to "N" and the "StartPick" attribute set to "Y". 2. 2. Creates a shipment, includes it in a wave, releases the wave, and creates a batch for the wave. 3. 3. Logs in to the Mobile Application, selects the "Induct Cart" option, scans the cart, and picks and deposits the inventory for the batch. 4. 4. Creates another shipment, includes it in a wave, releases the wave, and creates a batch for the wave. 5. 5. Selects the "Induct Cart" option and scans the same cart as in step 3.
Defect ID	Defect ID 156633
Case ID	Case ID Internal
Description	<p>Description When a pick task type is configured to constrain the number of users for the pick task, and when a user, who has performed a few pick tasks for a shipment through the Sterling Mobile Application is deleted from the system and another user logs in to perform the remaining pick tasks for the same shipment, the system throws a null pointer exception.</p>
Defect ID	Defect ID 156644
Case ID	Case ID Internal

Description Description When picking through the Sterling Mobile application, if a user reports a short pick exception that involves the suggestion of an alternate pick location, the system moves the task to “Held” status if the alternate pick location suggestion fails. The system needs to be enhanced to automatically cancel such held tasks for certain task types.

Solution:

Solution: The system behavior has been enhanced. The "yfs.canceltask.onshortpick.tasktypelist" property that needs to be set to comma-separated values of the task types in the yfs.properties file has been provided. If this property is not set or the task is not of the task type mentioned in the list, the system will retain the current behavior.

Defect ID Defect ID 156753

Case ID Case ID Internal

Description Description When a user performs the following sequence of actions, the system throws a “Status is not a valid pipeline pickup status for the transaction” error message:

1. 1.Creates a count request and the count tasks for this count request.
2. 2.Completes the count tasks so that the count request moves to the “Count Task Completed with Resolvable Variance” status. (The system creates a record in the YFS_TASK_Q table for the count request reference with the transaction_id as “AUTO_ACCEPT_VARIANCE”)
3. 3.Cancels the count request.
4. 4.Runs the AUTO_ACCEPT_VARIANCE agent.

Solution:

Solution: When the AUTO_ACCEPT_VARIANCE agent is run for a count request that is in a state that can be purged, the system automatically deletes the task queue record from the YFS_TASK_Q table for a given count request reference instead of processing that task queue record.

Defect ID Defect ID 160448

Case ID Case ID 46888

Description Description When a user packs a container that belongs to an enterprise, and scans the SCM of a container that belongs to another enterprise, the shipment and container details, for example, shipment number, item details, and so on are not being populated in the Pack HSDE.

Defect ID Defect ID 160709

Case ID Case ID 47092

Description	<p>Description When a user performs the following sequence of actions, the releaseTask agent does not release the pick tasks for the second wave's batch even if the inventory is available for this batch:</p> <ol style="list-style-type: none"> 1. Configures the PLA to pick the inventory from the Forward Pick Zone, with TaskType configuration as "Dispatch Tasks only when Inventory is available to Pick". 2. Creates two waves of the same priority, containing a shipment each. (Both these shipments have two items; one distinct item and one item that is common between the shipments.) 3. Ensures that the inventory for the distinct item of the first shipment is not available at the Pick Location. 4. Releases the first wave and creates a batch for the first wave. 5. Releases the second wave and creates a batch for the second wave. 6. Invokes the releaseTask agent. <p>Solution:</p> <p>Solution: If the "yfs.releasetask.ignore.wavesequences" property is set to "Y" in the yfs.properties file, the system will ignore the wave sequence when releasing the tasks. Hence, if there are two waves of the same priority, but different sequence numbers, the system will release the tasks for the wave that has a higher sequence number even though the tasks for the wave with the lower sequence number are not yet released.</p>

Description	<p>Description The Sterling Multi-Channel Fulfillment Solution Installation Guide should be updated with the information about the DB2LOCK_TO_RB parameter.</p> <p>Solution:</p> <p>Solution: Information about the DB2LOCK_TO_RB parameter has been added to Section 5.3, "Installing DB2 (UNIX/Linux)" in Chapter 5, "Installing and Configuring Database Tier Software on UNIX/Linux", of the Sterling Multi-Channel Fulfillment Solution Installation Guide. The updated document is released with this hot fix.</p>
Defect ID	Defect ID 161514
Case ID	Case ID 47350

Description Description When a user performs the following sequence of actions, the system does not remove the associated delivery service from the exchange order:

1. 1.Creates a return order and an exchange order with a product item.
2. 2.Associates a delivery service for both the product items created in step 1.
3. 3.Creates a common work order for both the orders created in step 1.
4. 4.Deletes the product item from the exchange order that is present in the common work order.

Defect ID Defect ID 161912

Case ID Case ID 47676

Description Description When a user performs the following sequence of actions, the application incorrectly suggests a task from another batch:

1. 1.Configures a new resource for the RF Induct Cart with MandateBatch set to "N".
2. 2.Configures Batch Picking using cart equipment.
3. 3.Creates two shipments and includes them in two different waves.
4. 4.Assigns lanes to the waves, releases the waves, and creates a different batch for each wave.
5. 5.Navigates to the "Induct Cart" screen and scans a cart ID.
6. 6.Moves the task that is suggested by the system to the "In-Progress" status and logs out of the RF.
7. 7.Logs in again to RF, navigates to the "Induct Cart" screen, and scans the same cart ID that was scanned in step 5.

Solution:

Solution: The application has been enhanced to throw an error message if all the tasks for the current batch that are inducted into a cart are either canceled or not completed by the user.

Defect ID Defect ID 162785

Case ID Case ID 47635

Description Description When dynamic slotting is configured for the second and subsequent wave releases, the application considers the previously slotted locations to minimize the number of locations. The application should have a provision to not consider the previously slotted locations for the subsequent wave releases.

Solution:

Solution: A new "yfs.allow.reuse.previouswave.slots" property has been provided in the yfs.properties file. This property is set to "Y" by default. If this property is set to "N", the application will not consider the previously slotted locations for the subsequent wave releases.

Description Description The Sterling Supply Chain Applications Customization Guide should be updated with information about the enhancement that enables the application to read and pass the version number of the COM client to the server.

Solution:

Solution: In Chapter 6, "Customizing the Sterling Rich Client Platform Interface" in the Sterling Supply Chain Applications Customization Guide, a new Section 6.3.23, "Version-Based Communication between Client and Server" has been added. The updated document is released with this hot fix.

Hot Fix 20

Release 8.0-HF20

Defect ID 156649

Case ID Case ID Internal

Description	<p>Description The application should be enhanced for the following:</p> <ol style="list-style-type: none"> 1. 9.Allow dynamic naming of the related task menu, based on the context of the current screen. Currently, with a resolution of 800 by 600 pixels, the task menu is displayed with the generic name "Tasks" irrespective of the screen in use. 2. 10.A new command-line parameter (-D option) should be provided to indicate whether the related task menu in a lower resolution of 800 by 600 pixels should be displayed as a sub menu based on the group name or have a flat structure, that is, display all the options in a single menu. <p>Solution:</p> <p>Solution: The application has been enhanced to dynamically name the related task menu based on the screen. The related task menu names are resource bundle-driven and the syntax of the entry key is <TASK_ID>_TASK_MENU. For example, if the task name is YCD_TASK_QUICK_ACCESS, the entry in the bundle should be YCD_TASK_QUICK_ACCESS_TASK_MENU=Quick Access. If the appropriate entry is not present, the related task menu takes the generic name "Tasks".</p> <p>A new "showtasksassubmenu" -D option has been added. If the value of this argument is set to True, the tasks are displayed as sub menus. If the value is set to False, the tasks are displayed as a flat structure. The default value of this argument is True. The new -D option will take effect only when the related tasks are displayed at the top of the screen and not on the left as in screens with a resolution of 1024 by 768 pixels.</p>

Description	<p>Description When the outbound picking and multi-line shipment tasks are configured, and a user scans the Item ID instead of the pallet, the application throws an irrelevant “Quantity not passed in the input” error message.</p>

Hot Fix 19

Release 8.0-HF19

Defect ID	155080
Case ID	Case ID Internal
Description	<p>Description When a user logs in to the Sterling Customer Order Management PCA application and performs the following sequence of actions, the system displays the date (that is, the month, date, and year values) with the date and month values interchanged:</p> <ol style="list-style-type: none"> 1. Selects the “Advanced Order Search” screen. 2. Enters the “Month”, “Day” and “Year” values in the “mm-dd-yyyy” format in the “Order Date From” field. For example, 03-01-2008 to indicate March 01, 2008 (That is, the user enters the month, date, and year values separated by a hyphen). 3. Tabs out of the “Order Date From” field. (The date 03-01-2008 entered by the user changes to 01/03/2008) <p>Note: Note: This defect is present in the Sterling Customer Order Management PCA because of a Foundation issue.</p>
Defect ID	Defect ID 155082
Case ID	Case ID Internal

Description Description When the evaluateDynamicBinding method is computed for any of the Text, Styled Text, Label or Link controls, the layout of the parent composite of the corresponding control is not reset. Because of this, the labels are displayed as right-aligned instead of left-aligned, and the partial string is displayed on the control.

Solution:

Solution: An additional relayoutParent(String controlName) method has been exposed in the YRCExtentionBehavior.java file. Another relayoutScreen() method has also been added to refresh the screen. These two methods can be used to refresh the parent composite of the control or the entire screen, when required.

Defect ID Defect ID 156619

Case ID Case ID Internal

Description Description When a user creates a standard label on an existing screen using the RCP extensibility tool, the extended label does not get wrapped, and the system does not display the entire label.

Solution:

Solution: The “yuix” file has been modified to accept either of the following style specification formats:

```
15.<SetData name="YRCExtnTextStyle" value="BORDER"/>
16.<styles>
<style style="BORDER"/>
</styles>
```

After this fix, if the “yuix” file is modified, the style specification, including the styles of the controls that were added or modified before this fix, will be stored in the second format provided in the preceding list.

Description	Description The RCP JavaDocs is not available in Sterling JavaDocs for Sterling Multi-Channel Fulfillment Solution, Release 8.0
	Solution: Solution: The JavaDocs pertaining to all the RCP classes has been incorporated in Sterling JavaDocs for Sterling Multi-Channel Fulfillment Solution, Release 8.0. This is available at \xapidocs\core_javadocs\rcp\com.
	Note: Note: The RCP JavaDocs will not be accessible from the console Online Help option.

Hot Fix 17

Release 8.0-HF17

Defect ID	158239
Case ID	Case ID Internal
Description	Description The validation formats the erroneous quantity and the application does not display the quantity as entered by a user.
	Solution: Solution: A new isCellInError(Element ,String) method has been added in the IYRCCellModifier.java file. This method returns the boolean value "true" if the editable cell in a table is in error.
Defect ID	Defect ID 160038
Case ID	Case ID 47250
Description	Description The application should provide the user with the ability to override the default "Web Services Description Language (WSDL) style, which is the "rpc" style, for Web services on the JBoss application server.
	Solution: Solution: The buildEAR script has been enhanced to receive a new -Djboss-java2wsdl-style parameter, using which the user can override the default "rpc" style. The valid values for the -Djboss-java2wsdl-style parameter are "rpc" and "document".
Defect ID	Defect ID 161982
Case ID	Case ID Internal
Description	Description When a user performs the following sequence of actions, the application displays a "Mismatch on the ship nodes of work order and the lines added to the work order" error message: <ol style="list-style-type: none"> 1. Creates an order for a product line. 2. Marks the Delivery Method as DELIVERY from the "Line Details" screen for this order. 3. Adds a standalone, provided service line that has a different ship node, to the order. 4. Invokes the generateWorkOrder API with the ConsolidateToExistingWorkOrder flag set to "Y".
Defect ID	Defect ID 162469
Case ID	Case ID 48010

Description	<p>Description When the “Receiving HSDE” screen is used to enter the serial number and secondary serial number for an incoming shipment, and a user uses the Shift+Tab key combination to edit a previously entered value, the application throws a "Secondary Serial #2: {0} must be entered" error message in a pop-up window.</p> <p>If the user clicks the “OK” button in the pop-up window, the application enters into an infinite loop and displays the pop-up window repetitively.</p>
Defect ID	Defect ID 162473
Case ID	Case ID 47854
Description	<p>Description When a user extends the table in the “Advanced Add Item” screen by adding custom columns, and applies the theme, the application does not apply the theme to the extended columns.</p> <p>Solution:</p> <p>Solution: The color theme can be applied to the extended columns. This enables the developer to change the font, the foreground color, and the background color of the extended columns.</p>
Defect ID	Defect ID 162844
Case ID	Case ID 47820
Description	<p>Description When a user performs the sequence of actions described here, the application moves the order to the “Scheduled” status instead of the "Awaiting Chained Order Creation" status. However, if the user clears the “Get External Supply” real-time flag for the node and tries to schedule the order, the application moves the order to the “Awaiting Chained Order Creation” status.</p> <ol style="list-style-type: none"> 1. Creates an enterprise as a legal entity, with the inventory organization as “DEFAULT”. 2. Creates a node for the enterprise that was created in the previous step, and enables the “Get External Supply” real-time flag for this node. 3. Implements the INVGetExternalSupplyUE user exit. 4. Sets the sourcing rules to allow the creation of the chained order. 5. Creates a sales order and tries to schedule the order.
Defect ID	Defect ID 163010
Case ID	Case ID 48128
Description	<p>Description When a user performs the sequence of actions described here, the output of the findInventory API displays the availability from the first node even if it arrives at a later date than the second node. Also, the priority of the second node is incorrect.</p> <ol style="list-style-type: none"> 1. Configures two distribution rules, each with a distribution rule that has a set of common nodes. 2. Ensures that the priorities of the nodes are different in the two distribution rules. 3. Configures the sourcing rule to use only the ONHAND supply for the FIRST distribution rule and All Supply for the SECOND distribution rule. 4. Ensures that future supply exists in both the nodes, with the first node having the necessary supply for a date that is later than that of the second node 5. Invokes the findInventory API.

Defect ID	Defect ID 163062
Case ID	Case ID Internal
Description	Description The application should be enhanced to permit the user to suppress the overage verification when confirming a shipment.
	Solution: Solution: If the value of the OVER_SHIP_PERCENTAGE column in the YFS_SHIPMENT_PREFERENCE table is negative, the application will skip the overage and overship validations.
Defect ID	Defect ID 163104
Case ID	Case ID 48083
Description	Description When the YFSGetSupplyCorrectionsUE user exit is implemented, and a user creates and schedules an order, the "OrderReference" attribute in the input of the YFSGetSupplyCorrectionsUE user exit is missing.
Defect ID	Defect ID 163163
Case ID	Case ID Internal
Description	Description When a load that has multiple load stops is created, and none of the stops have been reached yet, and a user tries to take the dock appointment for a node, which is one of the load stops of the load, the application throws an "Index Out Of Bounds" exception message.

Release 8.0-HF16

Defect ID	151124
Case ID	Case ID Internal
Description	Description When a user performs the following sequence of actions, the system throws an error message: <ol style="list-style-type: none"> 1. In the Yantra Capacity Console, selects the resource pool and clicks "Standard Capacity". 2. In the "Standard Capacity" screen, clicks "Create New", enters a period, and clicks "Save". 3. In the "Current Standard Capacity Details" screen, selects a day that is grayed out, enters the capacity, and clicks "Copy Capacity".
Defect ID	Defect ID 152870
Case ID	Case ID Internal
Description	Description When a user performs the following sequence of actions, the system uses the authorizations corresponding to a payment method even after the payment method is suspended: <ol style="list-style-type: none"> 1. Enables Payment Processing for the seller organization and implements the YFSCollectionCreditCardUE user exit. 2. Creates a sales order with the payment method as credit card. 3. Invokes the processOrderPayments API to move the order to "Authorized" status. 4. Suspends the credit card payment, and then invokes the processOrderPayments API. (The order moves to the "Authorized" status).
Defect ID	Defect ID 153448

Case ID	Case ID Internal
Description	Description When the changeOrder API is invoked twice in the same transaction boundary to cancel the lines belonging to a work order, the new status audit that is created by the first API is also displayed by the subsequent APIs as NewStatusAudit="Y".
Defect ID	Defect ID 156440
Case ID	Case ID Internal
Description	Description The system should be enhanced to pick up the extension provided by the Sterling Customer Order Management plug-in for the Menu Displayer extension point, and to pick up the extension provided by the Infrastructure only when there are no other extensions defined for a given extension point.
Defect ID	Defect ID 156646
Case ID	Case ID Internal
Description	Description When a user creates a sales order with order line reservation, the system incorrectly inserts OPEN_ORDER demand in the YFS_INVENTORY_DEMAND_DTL table instead of RSRV_ORDER demand. Thus, when the sales order is scheduled, the system does not process or remove the OPEN_ORDER demand, and hence, this demand remains beyond the order lifecycle in the YFS_INVENTORY_DEMAND_DTL table.
	Solution: Solution: The entry in the YFS_INVENTORY_DEMAND_DTL table will be correct. There should be only one entry for the SCHEDULED demand type after scheduling.
Defect ID	Defect ID 156651
Case ID	Case ID Internal
Description	Description When a user confirms a return order that is derived from a sales order, which in turn has two lines and different ship nodes, and invokes the startReceipt API and the receiveOrder API for both the order lines, the receiveOrder API of the second order line throws a "Cannot receive in transit shipment" error message.
Defect ID	Defect ID 156934
Case ID	Case ID Internal
Description	Description When using the Genetic Algorithm (GA) to solve a problem, some sections of the code are repetitive, which leads to performance issues in the GA platform. Also, a method to force stop the GA should be provided.
	Solution: Solution: An extra hook has been provided to limit the elapsed time of run of the GA, and the code has been corrected to avoid immature convergence to a non-optimal solution.
Defect ID	Defect ID 157850
Case ID	Case ID 47268
Description	Description The RCP PCA does not call the evaluateDynamicBinding method for the controls added through extensibility.
Defect ID	Defect ID 157996

Case ID	Case ID Internal
Description	Description When the yfs.donot.validate.contactinfo.countrycode property is set to "Y" in the yfs.properties file, the "Address Details" screen in the Yantra Configurator > Platform > Participant Modeling > Participant Setup > Organization Details > Primary Information tab should display the value of the COUNTRY column from the YFS_PERSON_INFO table in the "Country" field instead of the Country Short Description value.
Defect ID	Defect ID 158749
Case ID	Case ID Internal
Description	Description When the calendar of a resource pool is an inherited calendar, the user should be able to adjust the standard capacity for the resource pool.
Defect ID	Defect ID 159415
Case ID	Case ID Internal
Description	<p>Description The system should have the ability to carry out case-insensitive retrieval of data for extended columns.</p> <p>Solution:</p> <p>Solution: The "ForceUpperCase" attribute supports case-insensitive search on varchar columns. To enable this capability, the entity definition should expose a new "ForceUpperCase" attribute that is set to "true" for the columns that need to be case-insensitive.</p> <p>When building the database classes, in buildWLS.xml, buildWS.xml, or buildJBoss.xml, the "yfs.db.ForceUpperCase" system property that is passed to the generator classes in the db-init task should be set to "Y".</p> <p>Note: Note: If any data that needs to be case-insensitive exists in the column, you should manually convert all the existing data to upper case before making the column case-insensitive.</p>
Defect ID	Defect ID 161872
Case ID	Case ID 47938
Description	<p>Description When a user performs the following sequence of actions, the system does not allow the user to deposit the pallet:</p> <ol style="list-style-type: none"> 1. Configures two equipments as locations and points them to separate locations. 2. Configures the pick task type as Batch Pick and Pick Into Pallet, and the pack constraints as No SCM Required. 3. Creates an in-progress task with an equipment, and another pick task with the Pick Into Pallet configuration. 4. Completes the task from the Task Controller and tries to deposit the pallet. <p>Solution:</p> <p>Solution: The system has been enhanced to pass the equipment ID along with the user ID and node.</p>
Defect ID	Defect ID 161974
Case ID	Case ID Internal
Description	Description When the bundle items and sourcing rules are configured, the optimization based on the shipment for bundles does not work when the ShipToAddress is passed at the PromiseLine level of findInventory API.

Defect ID	Defect ID 161976
Case ID	Case ID 47878
Description	Description When a user uses "Adjust Receipt" to unreceive all the items at the receipt level from a received container, thus effectively unreceiving the entire container, the system does not clear the LPN Pend Move records.
Defect ID	Defect ID 162272
Case ID	Case ID Internal
Description	Description The license for a third-party jar file that is being used to display the Map in the "Fulfillment Network Model" in the Configurator will expire on September 16, 2008. This fix includes the updated license jar file in the product.
Defect ID	Defect ID 162472
Case ID	Case ID 47937
Description	Description If a move request for a serial-tracked item that is loose and inside an LPN is created without passing the source location, and when this move request is released, it fails and throws an "Unable to find inventory for serial" exception message. The system gets and identifies the source location, but is unable to process it further.
	Solution: Solution: The relevant location will be stamped on the move request line.
Defect ID	Defect ID 162507
Case ID	Case ID 48024
Description	Description When a user performs the following sequence of actions, the amount gets collected against the voided invoice instead of the respective invoice: <ol style="list-style-type: none"> 1. Enables the payment and implements the YFSCollectionCreditCardUE user exit. 2. Ensures that an order, which has a voided invoice, exists. 3. Invokes the requestCollection API.

Hot Fix 15

Release 8.0-HF15

Defect ID	156503
Case ID	Case ID 46640
Description	Description The optimization of the cost and the number of shipments does not work when the same ShipToAddress is passed at the Promiseline level of the findInventory API for different items. However, the optimization works correctly when the ShipToAddress is passed at the Promise level of the findInventory API.
Defect ID	Defect ID 157868
Case ID	Case ID Internal
Description	Description The Ytimestamp.getYTime() method performs unnecessary initialization of a variable, which in turn affects the performance of the system adversely.
Defect ID	Defect ID 158165

Case ID	Case ID Internal
Description	Description The copyright information in the Java Documentation should display the date range as "1999-2008" instead of "1999-2006".
Defect ID	Defect ID 158218
Case ID	Case ID Internal
Description	Description If a department is associated with an organization, the Configurator throws an error when a user modifies the department or the organization, and tries to save it.
Defect ID	Defect ID 158906
Case ID	Case ID 47406
Description	Description When an asynchronous multithreaded service is configured to read the messages from an MQ queue and invoke the createOrder API for a high volume of records, a few of the create order messages fail and throw a null pointer exception.
Defect ID	Defect ID 158993
Case ID	Case ID Internal
Description	Description The system throws an exception when creating an agent criterion with a trigger interval if another server is created with a specified termination time.
Defect ID	Defect ID 159357
Case ID	Case ID Internal
Description	Description When the task type is configured as Pick to Inventory Container and BatchPick is enabled, and a user completes a BatchPick task that has multiple pick tasks to an inventory container through the Sterling Mobile Application, the system forces the user to scan the inventory container for the next pick task even if the pick task belongs to the same batch.
Defect ID	Defect ID 159603
Case ID	Case ID 47562
Description	Description When a user creates an order with a bundle item and invokes the findInventory API or the getPossibleSchedules API for this order, the nodePriority attribute is displayed as blank instead of zero for the bundle parent in the output XML of these APIs. As the nodePriority attribute is a decimal field, XSD validation fails for the output XMLs.
	Solution:
	Solution: The system has been enhanced to display the nodePriority attribute for normal items and bundle components as "0.00" instead of a blank field. The bundle parent item will also be set to "0.00" instead of being blank.
	Note: Note: If these APIs are already being used in any customizations that deal with bundle items, evaluate the impact of this fix before applying the HF because the bundle parent item will now be displayed as "0.00" instead of a blank field.
Defect ID	Defect ID 159613
Case ID	Case ID 47560

Description Description When a user first invokes the loadInventoryMismatch API and then the syncLoadedInventory API, the data published by the INVENTORY_CHANGE.ON_INV_SYNC_SUCCESS event contains the "<InventoryItem/>" element instead of the "<Item>" element as mentioned in the Java Documentation. Also, the INVENTORY_CHANGE.ON_INV_SYNC_SUCCESS.xsd fails in this scenario.

Solution:

Solution: The Java Documentation has been enhanced to display the "<InventoryItem>" element. The XSD file will now have the "<InventoryItem/>" element.

Defect ID Defect ID 159619

Case ID Case ID 45620

Description Description The ShipNodes list should be exposed as a criteria parameter for the Inventory Monitor agent.

Solution:

Solution: The ShipNodes parameter has been added to the agent criteria template. The user should enter comma-separated shipNode values. The AllowedOverriddenCriteria parameter has also been added to the agent criteria template. The default value of this parameter is " " (blank). It should be set to "Y" in the agent criteria for the trigger agent to override the criteria attributes.

Defect ID Defect ID 160007

Case ID Case ID Internal

Description Description When a user performs the following sequence of actions, the system updates the status date of the YFS_ORDER_RELEASE_STATUS record even if there is no change in the status quantity for the order:

1. Configures "Receiving Preference" with over receipt percentage.
2. Creates a return order and moves the order to Release status.
3. Creates a receipt for the return order.
4. Receives all the items by invoking the receiveOrder API.
5. Unreceives all the items by invoking the unreceiveOrder API.
6. Invokes the receiveOrder API again to receive more quantity than is available in the order.

Defect ID Defect ID 160300

Case ID Case ID Internal

Description Description The scheduleOrderLines API does not schedule the lines that have the same PrimeLineNo and SubLineNo but different extended statuses or when using partial quantity.

Description	<p>Description When the number of dock appointments for a particular consumption date increases, the response time for the manageDockAppointments API increases correspondingly.</p> <p>Solution:</p> <p>Solution: The performance of the manageDockAppointments API has been improved for the described scenario.</p>

Defect ID	Defect ID 102558
Case ID	Case ID Internal
Description	<p>Description When a user deletes a dock that has appointments, the related appointments are not deleted. If the user creates an appointment for a date that is the same as the appointments pertaining to the deleted dock, the system throws an "INV71_6: INV: Invalid service resource" error message.</p> <p>Solution:</p> <p>Solution: The application has been modified to query the database for the deleted service resource with a combination of Res_Pool_Key and Ser_Res_ID. This overrides the error and allows the query to call the database. If the query does not find a record in the YFS_SERVICE_RESOURCE table, the appointment is not added to the resultMap.</p>
Defect ID	Defect ID 102629
Case ID	Case ID Internal
Description	<p>Description When a user performs the following sequence of actions, the agentServer throws an "YFS: Invalid Charge category" error message:</p> <ol style="list-style-type: none"> 1. Creates a new Charge Category and configures the PUBLISH_SHIP_ADVICE event of the sendRelease transaction to publish data. 2. Creates an order that has charges as configured in step 1. 3. Schedules and releases the order. 4. Runs the sendRelease agent.

Case ID	Case ID Internal
Description	<p>Description The Sterling Multi-Channel Fulfillment Solution Installation Guide needs to be corrected for formatting properties.</p> <p>Solution:</p> <p>Solution: The Sterling Multi-Channel Fulfillment Solution Installation Guide has been updated with the necessary rectifications. The updated document is released with this hot fix.</p>
Defect ID	Defect ID 103200
Case ID	Case ID 46816

Description	<p>Description When a user performs the following sequence of actions, the system calls the putAuditElement() method with “null” value for the order line and the audit element for the inventory adjustment is not being populated with the Order Line Key. Therefore the DB query to get the same fails:</p> <ol style="list-style-type: none"> 1. Enables unit costing. 2. Enters order line level cost. 3. Unreceives an order after receiving LPN inventory through a purchase order. (The system throws an “Invalid Line” error message.)
Defect ID	Defect ID 103249
Case ID	Case ID 46820
Description	<p>Description If the Platform module in the Configurator is loaded for an organization which is administrated by the Default enterprise, the system does not allow the user to close the service that contains conditions.</p>
Defect ID	Defect ID 103252
Case ID	Case ID 46676
Description	<p>Description The Sterling Multi-Channel Fulfillment Solution Customization Guide should provide an example about extending an event or xsl template. Also, information about the path to be given in the Service Definition Framework needs to be provided.</p> <p>Solution:</p> <p>Solution: The Sterling Multi-Channel Fulfillment Solution Customization Guide has been updated with the requested examples. The updated document is released with this hot fix.</p>
Defect ID	Defect ID 103264, 103491
Case ID	Case ID 46756, Internal
Description	<p>Description When the classification hierarchy for the extended attributes is defined, and a user performs the following sequence of actions, the system does not display the “Search” icon in the “Extended Attribute” pop-up window:</p> <ol style="list-style-type: none"> 1. Creates an extended attribute of an item. 2. Navigates to Product Management > Products > Items > Item Details. 3. Clicks the “Extended Attributes” button that is displayed at the top of the “Item Details” screen.
Defect ID	Defect ID 103266
Case ID	Case ID Internal
Description	<p>Description When an entire release line that has a sales order in “Released” status is cancelled using the changeRelease API, the audits are not being logged.</p>
Defect ID	Defect ID 103575
Case ID	Case ID 46863
Description	<p>Description If a user exit can be overridden for a document type but not for an enterprise, and this user exit has an implementation for one document type, the system invokes this implementation for all the document types.</p>
Defect ID	Defect ID 103636

Case ID	Case ID 46948
Description	<p>Description When a user performs the following sequence of actions, the changedQuantity attribute in the XML published for the INVENTORY_CHANGE.ON_INV_SYNC_SUCCESS and the INVENTORY_CHANGE.ON_INV_MISMATCH events has both positive and negative values, which do not conform to the changedQuantity datatype in INVENTORY_CHANGE.ON_INV_SYNC_SUCCESS.xsd and INVENTORY_CHANGE.ON_INV_MISMATCH.xsd:</p> <ol style="list-style-type: none"> 1. Configures the INVENTORY_CHANGE.ON_INV_SYNC_SUCCESS and INVENTORY_CHANGE.ON_INV_MISMATCH events. 2. Invokes the syncLoadedInventory API.

Hot Fix 10

Release 8.0-HF10

Defect ID	100909
Case ID	Case ID Internal
Description	<p>Description In the Sterling Multi-Channel Fulfillment Solution Customization Guide, Release 8.0, and Sterling Multi-Channel Fulfillment Solution Installation Guide, Release 8.0, the information about how to make selective SSL calls only for certain commands or sensitive APIs should be removed.</p>

Solution:

Solution: The Sterling Multi-Channel Fulfillment Solution Customization Guide, Release 8.0, and Sterling Multi-Channel Fulfillment Solution Installation Guide, Release 8.0, has been updated with the necessary rectifications. The updated documents are released with this hot fix.

Defect ID	Defect ID 100965
Case ID	Case ID 45402
Description	<p>Description The system should provide the ability to override the default wsdl style of rpc for webservices on the Websphere application server.</p>

Solution:

Solution: The buildEAR scripts have been enhanced to take a new "-Dwebsphere-java2wsdl-style" parameter with the use of which the user can override the default of rpc style. The valid values for the parameter will be rpc and document. Also, for style value rpc, the -use value will be set to encoded, and for style value of document, the -use value will be set to literal.

Defect ID	Defect ID 101471
Case ID	Case ID Internal
Description	<p>Description The Sterling Multi-Channel Fulfillment Solution Installation Guide, Release 8.0 should be updated with the information about localizing the new factory setup after upgrading the Sterling Multi-Channel Fulfillment Solution.</p>

Solution:

Solution: The Sterling Multi-Channel Fulfillment Solution Installation Guide, Release 8.0 has been updated with the necessary rectifications. The updated documents are released with this hot fix.

Hot Fix 3

Release 8.0-HF3

Defect ID	95904
Case ID	Case ID Internal
Description	<p>Description When upgrading from version 7.3 to version 8.0 on the MS SQL Server 2005, a Create Statement for the YFS_SEQ_YFS_SHIP_ADVICE_NO table is generated even though this table already exists in the previous version.</p>
Defect ID	Defect ID 96020
Case ID	Case ID Internal
Description	<p>Description When upgrading from version 7.3 to version 8.0 on the MS SQL Server 2005, the "YFS_INBOX_REFERENCES_I2" index creation fails because the "YFS_INBOX_REFERENCES_I2" index exceeds the maximum permitted length of 900 bytes.</p>
Defect ID	Defect ID 96022
Case ID	Case ID Internal
Description	<p>Description In the MS SQL Server, dbverify creates unnecessary ALTER SQL statements because the default values in columns which were earlier char are now nchar.</p>
Defect ID	Defect ID 96024, 96022
Case ID	Case ID Internal
Description	<p>Description The dbverify tool creates unnecessary ALTER SQL statements for MS SQL Server when any of the following conditions are true:</p> <ul style="list-style-type: none"> • When the data type of a column having a default value with trailing spaces is changed from char to nchar. • When the metadata corresponding to the default value for the date column has "(" and ")" surrounding it.
Defect ID	Defect ID 96389, 96766
Case ID	Case ID Internal
Description	<p>Description When the triggeragent.sh and startIntegrationServer.sh are run, the system throws a "USE_AGENT_JAVA=1 is not an identifier" error message.</p>
Defect ID	Defect ID 98495
Case ID	Case ID 45256
Description	<p>Description The HFInstaller for the 8.0HF1 build fails with an ANT error when building a EAR with Web Services in the IBM WebSphere Application Server environment.</p>
Defect ID	Defect ID 98558
Case ID	Case ID 45304

Description Description When building an application EAR for IBM WebSphere with the “nowebservice” parameter set to “false”, the buildEAR scripts throw a “java.lang.NoClassDefFoundError: com.yantra.api.YSCApi” exception.

Defect ID Defect ID 98588

Case ID Case ID 45306

Description Description The Sterling Multi-Channel Fulfillment Solution Installation Guide should provide instructions for adding custom JAR files when building yantra.ear.

Solution:

Solution: Instructions for adding custom JAR files has been provided in Section 13.1.2, Installing Third-Party JAR files of Chapter 13, Configuring Utilities, in the Sterling Multi-Channel Fulfillment Solution Installation Guide.

Hot Fix 2

Release 8.0-HF2

Defect ID 96289

Case ID Case ID Internal

Description Description When a user invokes the getPossibleSchedules API for a product item that uses unplanned inventory and if the same product item has a delivery service associated with it, a “ClassCastException” error is thrown.

Defect ID Defect ID 96912, 97391

Case ID Case ID Internal

Description Description The Service Definition Framework should allow the configuration of Exception Type for the Alert Flow Component through system arguments. Also, the “ExceptionType” field available under the General tab of the Alert Flow Component should be made optional if the Exception Type is defined through system arguments. The system will throw an error when raising an alert if the “Exception Type” field is not configured either through “ExceptionType” field or through system arguments.

Defect ID Defect ID 97753

Case ID Case ID 45013

Description Description When a user invokes the findInventory API for a bundle item, which is in Deliver Together mode, and whose requested quantity cannot be fulfilled, the findInventory API output allocates two assignments for the parent bundle. Both the assignments have the quantity that can be fulfilled, instead of the empty assignment having the quantity that cannot be fulfilled.

Defect ID Defect ID 98233

Case ID Case ID 43174

Description	<p>Description When a user performs the following sequence of actions, the Ship Date on the order is set to the current date:</p> <ol style="list-style-type: none"> 1. Performs inventory reservation against future inventory. 2. Creates order with OrderLineReservations, which consumes the inventory reservation. 3. Schedules the order. <p>Note: Note: When installing the hot fix, and subsequently building the EAR with web services for WebSphere, the application server will fail with a "class not found" error. This is a pre-existing issue in the product starting with the base release. Please contact Customer Support for work around solutions if you encounter this issue.</p>
--------------------	--

Hot Fix 1

Release 8.0-HF1

Defect ID	96486
Case ID	Case ID Internal
Description	<p>Description The Deliver Together Bundle is being released with limited functionality which will always fulfill bundle components in a ratio, when considering availability across multiple nodes (unlike Ships Together where it is always against the same node). However the Deliver Together Bundle will not ensure that the components are delivered on the same date.</p> <p>There is also a need to document the following limitations of the Deliver Together Bundle functionality:</p> <ul style="list-style-type: none"> • N-level bundles are not supported. • Dynamic bundles are not supported. • Bundles with Delivery service lines or Provided service lines are not supported. <p>Solution:</p> <p>Solution: In the Product Management Configuration Guide, Chapter 4: Configuring Products, Section: 4.1.2.13.1, a new screenshot has been added for the Deliver Together Bundle functionality. Also, the existing description has been modified to include the functionality and limitations of the "Delivers Together" radio button. The revised document is released with this hot fix.</p>

Defect ID	Defect ID 96691
Case ID	Case ID Internal
Description	<p>Description When a user invokes a service for the "End Of File" message for a file adapter, the system throws the following error message:</p> <p>"Missing right parenthesis"</p>

Defect ID	Defect ID 96839
Case ID	Case ID Internal
Description	<p>Description The Cache Manager does not clean up the old cached records properly, eventually causing the system to throw the following error message:</p> <p>"Out of Memory"</p>

Defect ID	Defect ID 96959
Case ID	Case ID Internal

Description	Description When building the EAR with Web services, the buildear.xml file should point to the correct location of the namedwebservices.xml file, which is located in <INSTALL_DIR>/repository/eardata/platform/webservices.
Defect ID	Defect ID 97417
Case ID	Case ID 45010
Description	Description When no components are available for a bundle that is configured as Deliver Together, the output of the findInventory API should display the bundle parent line as one of the unavailable lines.
Defect ID	Defect ID 97675
Case ID	Case ID 44987
Description	Description When creating a deployable application EAR for the IBM WebSphere Application Server, the WSDL file that is generated does not contain the fault information pertaining to the YFSEException.
Defect ID	Defect ID 97710
Case ID	Case ID Internal
Description	Description When installing the nWMS_Add-in.jar for AIX/WebSphere 6.1 using the InstallService scripts, the installation fails, and the system throws the following error message: "java.lang.NoClassDefFoundError: com.sterlingcommerce.woodstock.install.utils.Unin
