FILENET®

FileNet Document Publisher 7.5

These release notes are designed to provide information about important features and late changes to FileNet Document Publisher version 7.5.

Compatible with both FileNet repositories

FileNet Document Publisher can retrieve documents from, and publish documents to, FileNet Content Manager and FileNet Content Services (which includes FileNet IDM Desktop). You can choose the repository that you want to be available (or make both repositories available) when you install FileNet Document Publisher.

Improved filters

FileNet Document Publisher translates more than 225 text and graphics formats. For a list of formats, see "File formats and translation" in the Help system.

Installing FileNet Document Publisher

For information on installing and configuring FileNet Document Publisher, see the Installation Guide (available in the Documentation folder on your FileNet Document Publisher installation disc and your FileNet Document Publisher installation directory when you install the product).

Stored Search in FileNet Content Manager

To use the Stored Search feature for documents stored in FileNet Content Manager, you need the patch "P8AE-3.5.0-1007" for P8 Content Manager 3.5. This patch is provided by FileNet.

User Documentation

For a complete summary of the user documentation supplied with FileNet Document Publisher, see Chapter 1 of the Installation Guide. All of the PDF manuals can be found in the Documentation folder of your installation directory and in the Documentation folder on your installation disc. The manuals are designed for viewing in Acrobat Reader version 5.0 or higher.

The PDF manuals can also be opened from the Help system in FileNet Document Publisher Station.
