Revision Log

Date	Revision
09/10/07	Added two known issues for Desktop eForms: 207484 and 213589. Updated from the old HTML format to the currently supported format, a Word document.
06/06/07	Added one known issue for Desktop eForms: 207515. Updated defects that had incorrect defect identifiers.
01/15/07	Added one known issue for Forms Designer: 197203. Added one resolved defect for Desktop eForms 4.2.0-006: 193959. Added one resolved defect for Forms Designer 4.2.0-006: 190881.
06/23/06	Added one known issue for Forms Designer: 167325.
02/14/06	Added two known issues for Forms Designer. Added one known issue for Desktop eForms. Added resolved known issues for Desktop eForms 4.2.0-005.
12/01/05	Added resolved known issues and one known issue for Desktop eForms. Added resolved known issue (DTS 135584) for Desktop eForms 4.2.0. Added resolved known issues for Forms Designer 4.2.0-004. Added DTS 167325 to the Known Issues section for Forms Designer.
11/04/05	Added resolved known issues and known issues for Forms Manager 4.2.0-005.
05/12/05	Added resolved known issues for Desktop eForms and Forms Designer 4.2.0-003.
04/29/05	Added a resolved known issue for Forms Manager 4.2.0-004 and a known issue for Forms Designer 4.2.0.
04/06/05	Added resolved known issues for Forms Manager 4.2.0-003.
03/31/05	Added known issues and resolved known issues to Desktop eForms and Forms Designer. Added new items for HTML eForms 4.2.0.
02/04/05	Added Known Issues to Desktop eForms and Forms Designer.
01/28/05	Added known issue to Desktop eForms section.
12/13/04	Added known localization issues to the HTML eForms, eForms Central Library, and Desktop eForms sections.
12/09/04	Removed known issue DTS 120582 under eForms Central library and DTS 123047 under HTML eForms.

Date	Revision
12/01/04	Added known issues and resolved known issues for Forms Manager 4.2.0-002.

Date	Revision
11/04/04	<p>Added 4 resolved known issues for Forms Designer 4.2.0-001.</p> <p>Removed DTS 122843 from the Known Issues section.</p> <p>Removed DTS 121979 from the Resolved Known Issues section of Forms Designer 4.2.0 as it is a duplicate of the resolved DTS 122843.</p> <p>Added 2 resolved known issues for Desktop eForms 4.2.0-001.</p> <p>Removed DTS 121725 from the Known Issues section.</p> <p>Added 4 resolved known issues for Forms Manager 4.2.0-001.</p> <p>Added not on overflow printing to the “What’s New” section for Forms Designer.</p>
09/13/04	<p>Removed bug 120522 from the Desktop eForms Known Issues section. This was not a defect and should not have been identified as an issue.</p>
09/03/04	<p>Added the Macintosh content for the Macintosh release.</p>
08/25/04	<p>Added three known issues: for Desktop eForms DTS 121725 (Windows® only), the eForms Central library DTS 121776, and HTML eForms DTS 123047.</p>
08/20/04	<p>Added known issue for Forms Designer DTS 122843 (Windows only).</p>
08/08/04	<p>Created the first version of the Forms Manager 4.2.0 Release Notes.</p> <p>This document succeeds the 4.0 versions of the following: Informed Quadra, Informed Designer for Windows, and Informed Desktop eForms for Windows Readmes.</p>

Introduction

This document contains the following major topics:

- **What's New** – Describes new features in this version of the product.
- **Known Issues** – Lists the current FileNet® Forms Manager, Forms Designer, and Desktop eForms software and associated documentation issues. Later revisions of this document may also discuss workarounds and/or fixes for some of the listed issues.
- **Resolved Known Issues** – Contains the fixed problems that have been reported since the previous release of the product. Later revisions of this document may also discuss workarounds and/or fixes for some of the listed issues.
- **Downloading Documentation Updates** – Provides information about downloading the latest versions of documentation.

You can locate and download FileNet Forms Manager fixes from the [IBM Fix Packs for FileNet eForms](http://www-1.ibm.com/support/docview.wss?&uid=swg27010126) website <<http://www-1.ibm.com/support/docview.wss?&uid=swg27010126>>.

What's new

FileNet Forms Manager (formerly Informed Quadra) has been upgraded with new features for this release. Use this topic to review summary information on features and changes made for this release.

Component name changes

The names have changed for the following components.

Old Component Name	New component name
Informed Quadra	FileNet Forms Manager
Informed Quadra Server	Forms Manager Server
eForms Workplace(s)	eForms Central (libraries)
Workplace Manager	eForms Central Manager
Informed HTML eForms	HTML eForms
Informed Designer	Forms Designer
Informed Desktop eForms	Desktop eForms

File name changes

The names have changed for the following components.

Old name	New name
Informed XML Template (.itx)	ITX Form Template (.itx)
XML Data Document (ifx)	Form Data (.ifx)
Informed Desktop Template (.itp)	Desktop Form Template (.itp)
Informed Data File (.ifm)	Desktop Form Data (.ifm)
Informed Package (.ipk)	Form Package (.ipk)
Informed Interchange (.iif)	Form Interchange (.iif)
Informed Template Reference (.itr)	Template Reference (.itr)

Forms Manager Server

- Forms Manager Server is the new name for the product previously known as Informed Quadra Server. The installation folder names that appear under your Program Files have changed, including "FileNet" (replaces "Shana"), "Forms Manager" (replaces "Quadra"), and "Libraries" (replaces "Workplaces").

eForms Central Manager

- eForms Central Manager is the new name for the product previously known as Workplace Manager. In addition to the name change, the icon for the application and the appearance of the application window have changed.
- On the Desktop Clients page, the URL for the Desktop eForms Installer has changed to Common/Installers/DesktopeForms.exe.
- On the General Page, HTTP protocol is the default that is set for all requests and the I-Sign signature service. HTTPS can now be specified for all requests or only for I-Sign signatures.
- In the Domain Entry dialog box, the 'Domain' drop-down list pre-populates with available domains. If you have credentials for a domain that is not available in the drop-down list, you can now enter the name of the domain in the 'Domain' drop-down list.
- Tool tip and context sensitive help are available. If a user presses the F1 key while the mouse is pointed at an empty spot on the panel, the help topic for that panel appears. If the user presses F1 while the mouse is hovered over a button or clicked in a field, a tooltip message appears for the button, field, or checkbox.
- In the Installation Guide, the four user roles are described: user, form author, form administrator, and account administrator. These roles are also defined throughout the rest of the documentation.
- There are new customization features available for customizing the Library.config file. See the Forms Manager Installation Guide for details.

HTML eForms

- For forms that open in a browser, the buttons on the toolbar have new images.
- Tooltips have been removed to improve performance issues.
- The Print HTML button has been removed to eliminate confusion with the PDF button.
- For boolean data 0 and 1, HTTP data submits display those values as True or False, respectively.

eForms Central Library

- FileNet eForms Central Library is the new name for the product previously known as Informed Quadra eForms Workplace. In addition to the name change, the banner, navigation bar, buttons, and other interface elements have changed.
- The name of the current user and the current date now appear in the banner.
- Color and font settings for the eForms Central library are no longer specified in the Quadra.config file. Instead, the default cascading stylesheet or your own stylesheet is used for color and font settings for toolbars, dialog boxes, and for the navigation bar.
- The Help, Home, Software, Account Information, and Personal Information buttons are now links that appear in the top right corner.

Forms Designer

- Forms Designer is the new name for the product previously known as Informed Designer. In addition to the name change, icons for the application, the file types, and the preferences have changed.
- The ITX Form Template (.itx) format is now a native format for Forms Designer 4.2.0. When you create an ITX Form Template with this version of the product, you can later open and modify it in Forms Designer.

NOTES

- ITX Form Templates that were created using previous versions of Informed Designer cannot be opened in Forms Designer.
- For Desktop Form Templates designed in previous versions of Informed Designer and deployed as ITX Form Templates, you should open the ITP file in the latest version of Forms Designer, save it, and then redeploy it again as an ITX Form Template. This will correct an error that occurs with older templates and overflow printing.
- Template preferences are now handled differently in Forms Designer. When you save a template, a preferences file is created and stored in your Preferences folder. A template preferences file stores information such as graphic defaults (e.g., values that you set for fonts, cell alignment, etc.) and test data. For an ITX Form Template (.itx), the preferences file has the file extension .prx. For an eForms Template (.itp), the preferences file has the file extension .prn.
- New elements have been added to the Page Settings dialog box. A 'Page ID' field holds a unique ID number that is automatically assigned when you create a page in your template. A 'Description' field allows you to enter identifying information about a page.

NOTE In Forms Designer 4.2.0, when you open a template that was created in an earlier version of the software, page ID numbers are automatically assigned to each page in the template.

- The following changes have been made to the Cell Settings dialog box:
 - A 'Display name' field has been added. This allows you to enter the name that you want displayed in the cell title area on the form.
 - The name you enter in the 'Cell name' field must be a valid XML element name. This means that spaces are no longer allowed in cell names.

NOTE Cell names in existing templates may contain spaces. These names continue to be supported in version 4.2.0 of the product. However, if you change the name of a cell or create a new cell on an existing template, you cannot include spaces in the cell name.

- A 'Publish cell' checkbox has been added to the Data Options section. If a cell is of interest to external systems, this option allows you to include the cell in a list of published cells.
- The 'Quick tab' checkbox no longer appears in the Data Options section. The Quick tab feature has been removed from Forms Designer.

NOTE For backward compatibility, Quick tab settings in existing templates continue to be supported in Desktop eForms.

- The following enhancements have been made to extend internationalization functionality in Forms Designer:
 - Improvements have been made to text calculation functions to allow for multi-byte characters.
 - For the Character cell type, character formats now allow the full range of ASCII and multi-byte characters. For more information see "Character Cell Type" in the Forms Designer Help.
 - The Spell Checking feature now skips over ranges of multi-byte characters rather than flagging them as misspelled text.

- The mail cells MailSendTo, MailSubject, MailComment, and MailEnclosure no longer contain spaces. Forms that use these cell names will still work, but if the cell properties are edited using the Cell dialog, the user must remove the spaces before pressing OK. This is documented in the Forms Designer Help in the "Using Mail Cells" and "Routing for ITX Form Templates" topics.
- There are two new topics in the Forms Designer Help "Configuring Lookups for text/xml" and "Configuring Lookups for AppleScript" topics. These two topics as well as the "Configuring HTTP Lookups Text/plain," "Configuring HTTP Lookups JavaScript," and "Configuring HTTP Lookups html" now contain examples.
- The Template Reports feature has been added for Forms Designer for Macintosh.
- Forms Designer for Macintosh now supports the Entrust signing service. The Entrust plug-in is automatically installed when you install Forms Designer.
- For Macintosh, preferences are no longer stored in the "Informed Preferences" files. When you upgrade to Forms Designer 4.2.0, the information in the Informed Preferences files is transferred to the Macintosh preferences system and then the Informed Preferences files are deleted.

Desktop eForms

- Desktop eForms has been updated with new icons for the application, the file types, and the preferences.

Documentation

Forms Manager

- All Forms Manager documentation has been updated to reflect the product's name change from Informed Quadra to FileNet Forms Manager.
- The information in the Account Administrator's Manual and some information in the eForms Designer's Manual is now included in the new Help file called Forms Manager Administrator Help.
- The information in the HTML eForms User's Manual and the Workplace User's Manual is now included in the new Help file called eForms User Help.
- The Account Administrator's Manual, the eForms Designer's Manual, the HTML eForms User's Manual, and the Workplace User's Manual are no longer supplied in PDF format.
- Forms Manager Administrator Help and eForms User Help present as html pages that open in a browser window.
- Information in the Getting Started Guide is now included in the Forms Manager Installation Guide and in the Forms Manager Platform Requirements.
- Information in the API Syntax guide has been updated. Please see this guide for revised examples, parameters, and functionality.

Forms Designer

- All Forms Designer documentation has been updated to reflect the product's name change from Informed Designer to Forms Designer.
- Forms Designer Help has been revised and updated to include information about designing ITX Form Templates (formerly contained in the eForms Designer's Manual). The information in the Forms Automation and Design and Graphics manuals is now included in the Forms Designer Help. These manuals are no longer supplied in PDF format.
- Forms Designer Help now presents as html pages that open in a browser window instead of in a compiled format.
- The Forms Designer Tutorial now includes a section on deploying ITX Form Templates.
- The Entrust third party signing service is now supported for Macintosh. Previously, it was supported only for Windows.
- The following documents are now automatically installed with Forms Designer:AppleScript Reference.pdf (Macintosh only), Forms Designer Tutorial, and the Forms Designer Advanced Tutorial.

Desktop eForms

- eForms User Help (formerly Desktop eForms Help) has been revised and updated to include information formerly contained in the Informed Quadra HTML eForms User's Guide and the Informed Quadra Workplace User's Guide.
- eForms User Help now presents as html pages that open in a browser window instead of in a compiled format.
- The Desktop eForms User's Manual, the HTML eForms User's Guide, and the Workplace User's Guide are no longer supplied in PDF format. The information in these manuals is now available in the eForms User Help.
- There are shortcut keys available for changing pages on a form. See the "Change Pages" topic in the eForms User Help for details.

Known Issues

The following notes describe known issues and critical information for this release. Where applicable, each note includes the associated Defect Tracking System (DTS) number for reference and tracking purposes.

As these known issues are fixed, they will be moved to a corresponding section under Resolved Known Issues.

HTML eForms

Defect ID	Description
213589	The following error occurs after inserting a picture or generating a PDF when a form is open for more than 2 or 3 minutes: " There are no items in the database that match your query..."
207484	When a form is maximized in the Desktop eForms window, the Minimize, Restore Down and Close buttons appear in the menu bar. If the form is then closed, the buttons are not removed. If another form is opened, a second set of buttons appears.
165134	Saving a picture from a picture cell does not work. Saving a picture from a picture cell does not work. (Resolved with the following exception: This is still a known issue on a Mac 10.2 operating system using Internet Explorer 5.2.)
137741	The Acos, Alog, Exp, and LN1 functions do not display accurate values.
137496	ODBC data lookups and submits that contain character or date and time formatted fields are not working as expected with SQL databases. However, if a character formatted field is change to text, the submit and lookup works as expected.
121783	When 0 or -1 are the parameters for an ACos function, the function returns an incorrect result.
121781	The AddHours, AddMinutes, AddSeconds, and MakeTime functions do not display the seconds.
121772	Number constants are not rounded to the correct number of decimal places.
121717	For a localized product, the Japanese currency symbol displays as "\$" instead of "¥" symbol.
121530	A script and Application Object do not open a Microsoft Office application.
121419	The Tracking icon does not appear on forms but the Tracking button does.
121172	When cell data is right-aligned, the last line preceding a hard return is not aligned. When cell data is justified, the periods and commas are not properly justified. In PDFs generated from an HTML eForm, cell data is not justified. If it's set to be justified, vertical alignment (center or bottom) does not work and hard carriage returns (press Enter before text is at the end of a line) are deleted.
46828	Rule lines are displayed on a form in a browser as part of the background image and are obscured by the white default fill color of the cell. As a workaround for this, if you configure a cell with rule lines, set the fill color of the cell to transparent.

Defect ID	Description
24598	If a form contains a field that is set up to convert a number to ASCII, the PDF is not generated.
	Template verification is not available for ITX Form Templates.
	In some Netscape and Internet Explorer browsers, when the user selects a choice from a dynamic choice list, a horizontal scroll bar appears below the choice list.
	With versions of Internet Explorer other than 6.0 SP1, users may not see the titles of some dialog boxes, including I-Sign, Signature Verification, Insert Picture, and Remove Picture.
	Template verification is not available for ITX Form Templates.

eForms Central Library

Defect ID	Description
123574 135175	For the French product, when you close a form, extended characters do not display correctly in the confirmation message.
147321	When a document is added to the library without a title, the filename of the document becomes the default title. However, no results are returned when the user clicks Search to locate the document by its filename.
147224	The "exact phrase" option in the Search action does not perform as expected.
137499	In the Banner area, First and Last names with longer character strings do not wrap text, causing the Home, Help, Software, Account Info, and Personal Info links to move outside of the web page.
137498	When creating user accounts, while a user can be set up with a long password, the user cannot login if the password exceeds 20 characters.
135050	For the French product, a string is not localized in the error message for the Save icon of a picture cell.
135036	On all pages of the French product, the long date format is incorrect.
135033	For the French product, on the Home Page, the word order for the translation of "Click the help link" is incorrect.
134442	For the French product, the currency symbol on a form is displayed before the number.
134111	For the French product, on the search results page, all the text for the search criteria (displayed above the toolbar) may not be visible.
134037	For the French product, on the Accounts page and in the Account Information dialog box, "user" and "default" are not localized.
134029	For the French product, on the form toolbar, the tooltip for the Submit button does not show the shortcut key combination.

Defect ID	Description
133938	For the French product, the drop-down list in the Update Permissions and Search Accounts dialog boxes is not wide enough to display localized strings.
133926	For the French product, information in the error message for the Add Account dialog box is not localized.
133826	For the French product, an error message on the Blank Forms page spells "qu'un" incorrectly.
123675	For the French product, in the Move dialog box, extended characters do not display correctly.
123583	For the French product, a string on the Tracking Status results page is not localized.
123559	For the French product, a string in the Resolve Recipient dialog box is not localized.
123466	For the French product, on the Accounts page, a string on the title bar is not localized.
123393	For the French product, when you change a form's Status property, some text on the form does not display properly.
123386	For the French product, a tracking error message is not localized.
123374	For the French product, on the Accounts page, the text of the column headings and the text in the rows below the headings are not aligned.
123352	For the French product, you cannot create a new account using extended characters.
121816	Template names in the library were not rebranded. In the 'Type' column, ITX Form Templates display with the old name "eForms XML Template" instead of "ITX Form Template" and Desktop Form Templates display as "eForms Template" instead of "Desktop Form Template."
121776	You cannot log in to an eForms Central library using Netscape 6.2.x with a supported Windows operating system.
120523	For a localized product, the side bar is not wide enough to display all translated characters.
64476	For a localized product, there is no horizontal scroll bar in the window.
62820	For a localized product, when you use non-English characters in the Title field of the Search dialog box, the search does not find the form.
24589	Errors occur when the Forms Manager writes to the event log.
	Duplicate folder names and document names are allowed.

Forms Designer

Defect ID	Description
91854	On all browsers and platforms, the EXP and EXP1 functions produce the same results.
72390	On Macintosh, you cannot save files that contain Japanese characters in the file name on a non-Japanese system. With eForms Designer for Macintosh OS X, when a file is saved with a name consisting of multi-byte characters (e.g., Japanese), that filename overwrites its parent directory name. This has been documented in the "Designing International Language Forms" topics in the Forms Designer Help.
24266	When Form package documents are open (.ipk), duplicate template names are created.
19842	On all browsers and platforms, the LN and LN1 functions produce the same results.
197203	Mouse scroll wheel does not work after switching to test mode and back.
167325	Closing a template in FD then dragging and dropping a template causes a second window menu to appear.
167325	With the document window maximized, closing one template then opening another template will cause a second window menu, and the minimize, resize, and close corner buttons to be added again.
156923	When an ODBC auto-increment is configured according the example given in the eForms Designer documentation, it causes the multiple matches dialog to come up. If the user cancels without selecting a match, a runtime error occurs.
154095	The online help for ODBC Lookup refers to submitting data rather than the lookup function.
148990	The following documentation is missing in the Forms Designer help topic "Document Methods" topic: For the export method, the whichCells argument is ignored when exporting to XML format.
142092	The choice list setting "Auto Display Palette" is incorrectly turned off when you select multiple cells on the form template, change the data color, and then click OK.
134699	When a form is generated as a PDF and contains multi-byte text in a static text object with one or more style changes applied to the text (e.g., bold and red text) or contains two or more lines of text, the PDF does not display properly. To generate a PDF that contains multi-byte text in a static text object, copy and paste single lines of text into separate text boxes.
121353	If you select the Complete installation option (which installs all plug-ins), or if you select the Custom option and specify that the Entrust plug-in is to be installed, error messages will appear during the installation if the software does not exist on your system. You can ignore the errors and install the Entrust software later, or you can install it before you install Forms Designer.
120968 121154 121208	Forms Designer does not display Arabic date format.
120924	On Macintosh, the Arabic locale is not supported.

Defect ID	Description
120819	The Japanese date mask format is not working.
118633	HTTP lookups require a forward slash at the end of the host name or the beginning of the CGI query. (DTS 118633)
118395	On Macintosh, Forms Designer "Preference" dialog corrupts extended characters.
118284	The Part function is supported only for printing templates while in test mode in Forms Designer. For an HTML eForm, users cannot see or print multipart pages or the labels that you specify for each part.
104119	When text is viewed in an enlarged view, it is not evenly aligned.
103860	When the 'Print on Overflow Pages' cell setting is selected, overflow pages print only if the 'Include scroll bar' checkbox is selected in the Field Setting dialog box for the cell.
	Template authorization and verification (Form > Authorization > Authorize Template and Verify Template) are not available for ITX Form Templates.
	If you send an ITX Form Template to another form author, any graphic defaults you have set or test data that you have created for the template will be lost. This is because the preferences information is not stored in the template.

Browser issues

Defect ID	Description
103062	When using an eForms Central library, pop-up blocking software should be disabled or some features in the eForms Central library might not work. For more information, see the topics "Deploying Templates" and "About Deployment and Distribution" in the Forms Designer Help.
46828	Rule lines are not supported in browser forms.
25625	The browser determines the horizontal and vertical alignment of the text in a cell.
25617	The delete text function does not work.
25583	In Macintosh 9.2.2 and Netscape Navigator 6.2.3: The Sin function does not correctly round numbers.

Desktop eForms

Defect ID	Description
207515	Data in an expandable table row is truncated when printed.
171465	HTTP autoincrement fires and hangs application when trying to import a text file with multiple records.
167329	Closing a form, then dragging and dropping a form, causes a second window menu to appear.
147101	When a delimited text file is imported with picture and signature data, Desktop eForms ignores the values and an error message appears. Documentation about unsupported formats has been added to the limitations section of the "Delimited text files" topic.
141013	When redirecting folder paths, such as "My Documents," the path does not resolve correctly as Desktop eForms tries to separate the volume and directory strings and filename of the path, rather than treating it as a single path.
140519	The conditional tabbing calculation does not work when tabbing out of a cell contained in a single row table.
136311	The French spelling plug-in is not installed by default.
135584	When you configure the Script menu in Forms Designer, the menus in Desktop eForms revert to English.
135439	For the French product, an incorrect "A" character appears in the Send dialog box.
134441	For the French product, an extended character in the tooltip for the Underline button does not display correctly.
134320	For the French product, duplicate hot keys exist in the File, Edit, and Help menus.
134304	For the French product, in the Set Password dialog box that is accessed from the Preferences dialog box, the text "Confirmer le mot de" is cut off.
134298	For the French product, when you print a multi-page form, part of the print status message is cut off.
134183	For the French product, when you right-click a template, two menu options are not localized. (DTS 134183)
134171	For the French product, a string in the About dialog box is incorrectly localized.
134116	For the French product, some of the dialog boxes that are accessed from the File menu use "Type du Fichier" while others use "Type." (
134098	For the French product, extended characters in the Export dialog box do not display correctly.
134024	For the French product, in the Add dialog box that is accessed from Preferences > Mail > Suggested Routes, some text is cut off.
134022	For the French product, in the Page Setup dialog box, a string is not localized.

Defect ID	Description
133944	For the French product, extended characters in the Auto-increment error message do not display correctly.
133827	For the French product, incorrect icons appear in the Preferences dialog box.
132889	Floating palette windows in Desktop eForms are incorrectly reset to their default positions after the user moves the window, closes the form, and then re-opens it.
123477	For the French product, extended characters in the Description field in the New Data Document > Services > Local Templates Folder dialog box do not display correctly. This occurs also in the Open dialog box that is accessed from the File menu as well as in the local form path that is created when you open a form from an eForms Central library.
123476	For the French product, when you open the New Data Document dialog box, click Add Other Template, and then expand the Files of type drop-down list, the name for Desktop Form Template is incorrect.
122370	When you use an English version of Desktop eForms on a French operating system and you double-click a saved data document, the application opens and then closes without opening the form.
121354	For a localized product on Macintosh, the date, time, number, and currency formats display in US formats only.
120969	For a localized product on Macintosh, the Arabic locale is not supported.
120824	For a localized product on Macintosh, Latin characters appear as Japanese characters in the Open dialog box.
120679	Right-justified numeric values are not properly aligned.
101026	If you select multiple documents to print, only the first one prints.
47122	Arabic text cannot be right aligned.
24570	When using Microsoft Outlook to send emails using the special MailSendTo cell, an error occurs if more than one email address is entered in the MailSendTo cell.
	For the French product, extended characters do not display correctly when you import a .txt file. Extended characters do not display correctly on the Cell menu for the Memorize command.

Resolved known issues

This occurs also in the Open dialog box that is accessed from the File menu as well as in the local form path that is created when you open a form from an eForms Central library.
121354	For a localized product on Macintosh, the date, time, number, and currency formats display in US formats only.

Documentation updates

Downloading documentation files

You can download Forms Manager 4.2.0 documentation from the [IBM Customer Service and Support web site for FileNet customers](http://www.css.filenet.com) <www.css.filenet.com> under Product Tech Info > Products > Forms Manager (FM) > Product Documentation > Forms Manager 4.2.0.

You will need an IBM-issued login name and password to access the web site.

Notices

This information was developed for products and services offered in the U.S.A.

IBM may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not grant you any license to these patents. You can send license inquiries, in writing, to:

IBM Director of Licensing
IBM Corporation
North Castle Drive
Armonk, NY 10504-1785
U.S.A.

For license inquiries regarding double-byte (DBCS) information, contact the IBM Intellectual Property Department in your country or send inquiries, in writing, to:

IBM World Trade Asia Corporation
Licensing

555 Bailey Avenue
San Jose, CA 95141-1003
U.S.A.

Such information may be available, subject to appropriate terms and conditions, including in some cases, payment of a fee.

The licensed program described in this document and all licensed material available for it are provided by IBM under terms of the IBM Customer Agreement, IBM International Program License Agreement or any equivalent agreement between us.

Any performance data contained herein was determined in a controlled environment. Therefore, the results obtained in other operating environments may vary significantly. Some measurements may have been made on development-level systems and there is no guarantee that these measurements will be the same on generally available systems. Furthermore, some measurements may have been estimated through extrapolation. Actual results may vary. Users of this document should verify the applicable data for their specific environment.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

All statements regarding IBM's future direction or intent are subject to change or withdrawal without notice, and represent goals and objectives only.

This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples include the names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to the names and addresses used by an actual business enterprise is entirely coincidental.

COPYRIGHT LICENSE:

This information contains sample application programs in source language, which illustrate programming techniques on various operating platforms. You may copy, modify, and distribute these sample programs in any form without payment to IBM, for the purposes of developing, using, marketing or distributing application programs conforming to the application programming interface for the operating platform for which the sample programs are written. These examples have not been thoroughly tested under all conditions. IBM, therefore, cannot guarantee or imply reliability, serviceability, or function of these programs.
