

# URGENT: FOR YOUR IMMEDIATE ATTENTION AND ACTION

<u>Updated July 20 2005 –</u> Openclient 3.3.0 patch 10 requirement changed

RE: JAVA Security Certificate Expiry- August 25, 2005

### **Product Affected:**

- Application Connector for SAP
- eForms for Web Services
- eProcess
- FileNet P8
- Image Manager Process Analytics
- Image Services Resource Adapter
- Process Analyzer
- Process Simulator
- Records Manager
- Remote Capture Services
- Team Collaboration Manager
- Web Content Manager
- Web Services (Open Client)

### Dear Valued Customer:

FileNet is committed to delivering software in a secure and easy manner, and to protecting software environments against intrusion. The intent of this notification is to alert you of actions required to renew FileNet Security Certificates for select FileNet products.

### SECURITY CERTIFICATE PROCESS OVERVIEW

FileNet software products, including those listed above, require Java components to be downloaded to the browser. In order to guarantee the integrity of these files and to allow proper access to local system resources such as printers or file systems, these files are digitally signed.

Until recently, FileNet has used VeriSign to provide the necessary digital signature. The renewal of VeriSign Signatures is annual and FileNet's current VeriSign certificate will expire on August 25, 2005.

All actions related to the renewal of these certificates MUST be completed before the expiration date.

For this year's renewal, we are changing the certificate authority to one that will decrease the renewal frequency to <u>once every two years</u>. The new certificate authority will be Thawte Consulting (pty) Ltd (<a href="http://www.thawte.com">http://www.thawte.com</a>), which is owned by VeriSign.

# WHAT WILL HAPPEN IF YOU DO NOT INSTALL UPDATED CERTIFICATES BEFORE THE DEADLINE?

The behavior of modules with expired certificates varies based on the nature of the module and the resources it is using. In general, if the digital certificate expires, a Java message dialog is displayed advising the user that the certificate has expired. This dialog will continue to be displayed each time an applet requires access to local system resources. Additionally, for those systems using a unified logon where the network credentials are used to grant access to the system, users will be unable to access the system once the certificate has expired until the Java files are replaced with those possessing updated certificates.

### WHAT IS THE PROCESS TO UPDATE MY FILENET INSTALLATIONS?

The process of updating to the resigned modules is a two-step process.

The first step is to ensure that your FileNet environment is running a version and patch level of the software for which we will be releasing resigned modules. Not all patch levels will be resigned. This document lists the required version and patch levels needed.

The second step will be to install the resigned modules as they become available. At this time, the resigned modules are being tested but are not available for release to customers.

### WHEN WILL THE RESIGNED MODULES BE AVAILABLE?

The process of signing and testing the resigned modules is already underway.

For your planning purposes, FileNet will provide a schedule of availability dates for the resigned modules starting July 1, 2005 on the CSS web site (<a href="http://www.css.filenet.com">http://www.css.filenet.com</a>). Log on to the site, select "Product Tech Info" and then "5) Java Certificate Renewal".

The modules will be available incrementally during the month of July.

### WHAT DO I NEED TO DO RIGHT NOW?

To prepare for the installation of Security Certificate Renewal modules, your FileNet software installation MUST be patched to one of the levels described in this document. If you are not already on one of these patch levels, it is recommended that you proceed with the installation of the patches listed in this document immediately.

If you have already installed one of the patches listed in this document, you do not need to reinstall it. You need only await the release of the resigned modules.

### **HOW DO I OBTAIN FILENET PATCHES?**

All patches listed in this document are available on the FileNet CSS web site. After logging in, look for the "Download Patches" link.

### http://www.css.filenet.com

Direct links to the product areas are included in the following sections for your convenience.

# WHERE DO I GET THE LATEST INFORMATION ABOUT THE 2005 SECURITY CERTIFICATE PROCESS?

As part of our ongoing commitment to ensure the smooth and timely completion of this very important task, FileNet will send you additional updates and reminders.

In addition to direct notification, FileNet will make process updates available via the Internet on the CSS web site (<a href="http://www.css.filenet.com">http://www.css.filenet.com</a>). Log on to the site, select "Product Tech Info" and then "5) Java Certificate Renewal".

### WHAT IF MY PRODUCT OR VERSION IS NOT LISTED?

If your product or version is not listed, it does not require resigned modules. If you have questions, please contact FileNet Customer Support.

## WHO DO I CONTACT IF I HAVE QUESTIONS ABOUT INSTALLING ONE OF THE PATCHES LISTED IN THIS DOCUMENT?

For assistance with patch installation, you should contact FileNet Customer Support.

### WHAT IF I HAVE OTHER QUESTIONS?

If you have any questions about this message or the patch update procedure, please contact your FileNet Response Center (FRC) either by phone: Dublin FRC +353-1-819-0200; Costa Mesa FRC +1-800-624-4877 or +1 714-327-3981 or open a case via the Internet at http://www.css.filenet.com

The remainder of this document is designed to act as a worksheet to help you understand the prerequisites you will need to ensure are in place to allow you to install the resigned modules as soon as they become available.

Sincerely,

FileNet Product Marketing and Support Team
