Enterprise Search and WebSphere Portal: Better Together

Use IBM OmniFind Enterprise Edition to enrich your WebSphere Portal with full-featured enterprise search, driving greater productivity, enhanced business value and lower TCO

You've done it. Your employees, customers, and partners are using your WebSphere Portal environment for improved productivity. But are you really getting the most out of your Portal investment?

How much value would you gain if you could:

Extend Portal search capabilities – securely – to other enterprise information sources

Wouldn't it be great to surface more enterprise information through the Portal? For example, claims processing might require access to accident reports and other vital information residing outside the Portal.

Scale Portal search to meet the needs of a growing business

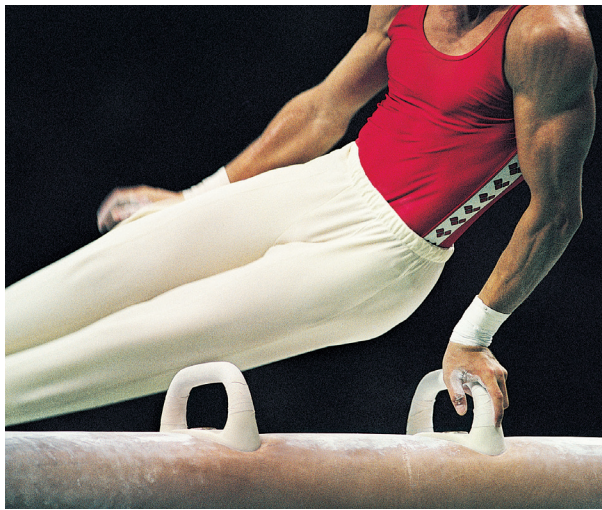

As you roll out the Portal across the enterprise, you may find that you need more scalable search to meet the performance requirements of your growing user base.

Enhance user satisfaction with search

Users are demanding the features they see in external search engines such as Google™ and Yahoo!®. In addition, many search scenarios have requirements that can benefit from the ability to plug in additional functionalities that go beyond simple keyword search to recognize concepts, sometimes called "semantic search."

Uncover business insights from enterprise information

Important business insights are often locked up in the wide variety of content in the enterprise. Customer call records, invoices, claims, blogs, wikis and more – all contain information that can provide insight to improve how you run your business. Now is the time to move beyond basic keyword search and explore the value that text analysis can bring.

WebSphere Portal with IBM OmniFind Enterprise Edition – A powerful combination

Using IBM OmniFind™ Enterprise Edition or Enterprise Starter Edition for your Portal search brings the following benefits:

- **Maximize enterprise content investments** by making large amounts of distributed information searchable from within WebSphere Portal. Search is a way to realize more value from organic information without embarking on costly migration and consolidation projects.
- **Improve knowledge worker productivity** by making it easier to find relevant information regardless of where it is stored. Deliver search results through a robust and customizable user interface with the advanced search features that knowledge workers need. OmniFind Enterprise Edition also comes with configurable semantic search capabilities out-of-the-box, including the ability to recognize phone numbers and email addresses.

- **Achieve breakthrough levels of business insight beyond the portal** by leveraging the OmniFind Enterprise Edition platform and its native support for the Unstructured Information Management Architecture (UIMA) to build high-value, text-analysis-based applications.
- **Minimize TCO, risk and time to value** with the simple, pre-built integrations to WebSphere Portal sources, an out-of-the-box search portlet, and integration with Universal Search Center.

And, if you're still not sure...

Try it risk-free by taking advantage of your limited use license!

There's a great way for you to expose your users to OmniFind Enterprise Edition risk-free. WebSphere Portal 6 Enable and Extend customers are entitled to a limited use license of OmniFind Enterprise Edition (one processor per company). Quick Start and Basic Services packages can help you get up-and-running on a small implementation.

Call your IBM representative or 877-426-3774 for more information.
